I further certify that, at a regular session of The Public Utilities Commission of Ohio, held at Columbus, Ohio, upon the twelfth day of December, A. D. 1917, at which Messrs. Charles C. Marshall, (Chairman), and Beecher W. Waltermire, Commissioners, were present, such Commission entered the following order in the aforesaid proceeding:

This matter came on to be heard upon the evidence, investiga-
s and reports with reference to the inadequate Supply of natural
by The Union Gas and Electric Company to consumers:
Upon consideration whereof, the Commission is of the opinion
finds that an emergency exists with reference thereto, and that, in
r to preserve the public health, welfare and interest, the schedule
ates and regulations of said company on file with the Commis-
should temporarily be altered and amended to include the pro-
ns of the following order. It is, therefore,

"Ordered, That the schedule of The Union Gas and Elec-
tric Company for natural gas service, on file with this Com-
mission, temporarily be altered and amended to include the
wing provisions, to-wit:

'That the service of natural gas to each and every consumer,
r than for use in private residences and in hospitals and similar
itable institutions, may, in the discretion of the Commission be
ediately discontinued without notice, subject, however, to tem-
ry stay of operation of the order of discontinuance in the specific
nces or classes of consumers designated and reported to the
mission by a representative thereof, upon investigation made
ugh such representative.'

is further

Ordered, That this order shall be effective on and after this
and for so long as said emergency shall exist, or until the further
r of the Commission. It is further

Ordered, That The Union Gas and Electric Company im-
iately discontinue and cause to be disconnected so long as neces-
to furnish an adequate supply of gas to domestic consumers,
ervice of natural gas to all consumers comprised in the following
ifications, to wit:

Classification 1: All industrial consumers using natural gas in
r furnaces or in manufacturing or industrial process.

Classification 2: All consumers using natural gas for heating or
er purposes in buildings and offices and establishments other than
ate residences.

Classification 3: All consumers using natural gas for the op-
on of gas engines.

Classification 4: All consumers operating restaurants, hotels, clubs
dining rooms using natural gas in the preparation of food.

Provided: That temporary stay of the immediate operation of
order is hereby granted to such specific consumers, for good
e shown and where necessary to preserve the health, interest and
fare of the public, as shall be designated by the Commission."

ch order was, thereupon, served upon the respondent, said The
on Gas and Electric Company.

In testimony whereof, I have hereunto subscribed my name and affixed the official seal of The Public Utilities Commission of Ohio at Columbus, Ohio, this eleventh day of July, A. D. 1921.

Office of the Public Utilities Commission of Ohio.

I, J. E. Baird, the duly appointed, qualified and acting Secretary of The Public Utilities Commission of Ohio, in whose custody the books, papers, records, documents and files of said Commission are kept, hereby certify that at a regular session of The Public Utilities Commission of Ohio, held at Columbus, Ohio, upon the nineteenth day of December, A. D. 1916, at which Messrs. Beecher W. Waltermire (Chairman), Lawrence K. Langdon and Louis M. Day, Commissioners, were present, such Commission adopted the following order, which was thereupon served upon each and every Natural Gas Company furnishing service to consumers within the State of Ohio:

"Administrative Order No. 28.

"The Commission having under consideration the furnishing of natural gas to consumers within Ohio and having, through its experts and examiners, made a careful investigation of the situation, taken the pressure in various parts of the State, examined conditions and ascertained that there is a stortage of gas in many localities of the State, creating an emergency therein, finds that there is an insufficient supply of natural gas to furnish both domestic and industrial consumers.

"The Commission further finds that the schedules of the various companies, so furnishing said gas, on file with the Commission show that industrial consumers, or the 'non-preferred class,' are, for the most part, furnished service under what is known as a 'uniform contract,' which contract provides that their service is subject to discontinuance and disconnection at any time and under any circumstances upon summary notice by the gas company, subject to the conditions of the 'uniform contract,' or clauses of like import. It is, therefore,

"Ordered, That each and every company furnishing natural gas both domestic and industrial consumers within the State of Ohio ceed, forthwith, to a strict enforcement of the terms of said niform contract' and to enforce the conditions of said schedules the discontinuance of said 'non-preferred' or industrial class in h and every locality where the supply of gas is not adequate and fficient to furnish a reasonable supply to both; and to continue h disconnection until such time as adequate service can be fur-hed to both. It is further

"Ordered, That each and every public utility furnishing natural s as aforesaid in any locality when, after the disconnection of in-strial consumers, the supply is not adequate to supply domestic consumers, forthwith make report of such facts, together with a list of any and all other consumers not within the domestic class but not subject to summary discontinuance, further order of the Commission."

In testimony whereof, I have hereunto subscribed my name and ixed the official seal of The Public Utilities Commission of Ohio Columbus, Ohio, this eleventh day of July, A. D. 1921.

dministration Order, Public Utility Commission of Ohio, Relative to Discontinuing Gas to Industrial Consumers.

OHIO EX. 7.

Office of the Public Utilities Commission of Ohio.

I, J. E. Baird, the duly appointed, qualified and acting Secretary The Public Utilities Commission of Ohio, in whose custody the oks, papers, records, documents and files of said Commission are pt, hereby certify that at a regular session of The Public Utilities mmission of Ohio, held at Columbus, Ohio, upon the twenty-first y of May, 1918, at which Messrs. Charles C. Marshall (Chairman), echer W. Waltermire and Byron M. Clen Dening, Commissioners, re present, such Commission adopted the following order, which s thereupon served upon each and every Natural Gas Company rnishing service to consumers within the State of Ohio:

"Administrative Order No. 34.

The Public Utilities Commission, having under consideration the obable inability of natural gas companies to furnish an adequate

supply to all their consumers during the coming Winter, and the necessity of formulating more definite rules for the guidance of such public utility companies in disconnecting industrial and other consumers from the service, when necessary, during an emergency, to conserve the supply for domestic consumers, and the order in which disconnection should be made, as well as the order in which the service should be restored when the emergency is passed, hereby adopts the following rules and regulations, to wit:

1. That for the purpose of disconnecting or curtailing service to consumers during an emergency, all consumers of natural gas are divided into two general classes, namely: Domestic Consumers and Industrial Consumers.

2. That domestic consumers, for such purposes, include the users of natural gas for heating, lighting and cooking in private homes, boarding houses, and apartment houses; and users of natural gas for lighting and cooking only, in hotels, restaurants, bakeries, eating places, club houses, hospitals and other charitable institutions.

3. That all other consumers shall be designated as "Industrial Consumers"; but for the purpose of disconnecting or curtailment during an emergency, the following subdivisions of industrial
211 consumers may be made, in cases where there is more than a sufficient supply of gas for domestic consumers as herein specified, but not a sufficient supply for all industrial consumers:

A. Users who are not included in the domestic consumers' class, as herein specified, but who are engaged in preparing or preserving foodstuff, or food producing plants, for such purposes only.

B. Industries directly engaged in manufacturing or producing war materials, for such purposes only; and users of gas in gas engines.

C. All other industrial consumers.

When there is not sufficient gas for all industrial consumers, as herein defined, the surplus shall be furnished to industrials in the order above named.

4. This classification is subject to the following exception: Where natural gas is being used in limited quantities for scientific, experimental, or mechanical purposes, and where other means of producing light and heat for such purposes cannot be reasonably substituted, an amount essential to such use, but not to exceed five thousand (5,000) cubic feet per month to each consumer so engaged may be used for such purposes only, and as if they were included in the class of domestic consumers herein specified.

5. If, after disconnecting all industrial consumers, there is not a sufficient supply of gas for the domestic consumers, then all boilers and furnaces not provided with gas fixtures and appliances primarily designed for burning natural gas as a fuel shall be disconnected; and if it becomes necessary to further restrict the use of gas to meet

the emergency, domestic consumers may be limited to the use of thirty-five thousand (35,000) cubic feet per month, in one building, or for one family.

6. A copy of these regulations shall be furnished by each natural gas company to its consumers not later than June 15, 1918.

7. Consumers who do not promptly disconnect or curtail, in accordance with these rules and regulations, when notified by the utility that it is necessary so to do, shall, upon discovery, be wholly disconnected from the service until the emergency is passed."

212 In testimony whereof, I have hereunto subscribed my name and affixed the official seal of The Public Utilities Commission of Ohio at Columbus, Ohio, this eleventh day of July, A. D. 1921.

I, J. E. Baird, the duly appointed, qualified and acting Secretary of The Public Utilities Commission of Ohio, in whose custody the books, papers, records, documents and files of said Commission are kept, hereby certify that at a regular session of The Public Utilities Commission of Ohio, held at Columbus, Ohio, upon the tenth day of June, 1919, at which Messrs. Charles C. Marshall (Chairman), Beecher W. Waltermire and Byron M. Clen Dening, Commissioners, were present, such Commission dopted the following order, which was thereupon served upon each and every Natural Gas Company furnishing service to consumers within the State of Ohio:

Administrative Order No. 41.

"The Commission again having under consideration the probable inability of the natural gas companies to furnish an adequate supply to all consumers during the coming winter season:

It is

Ordered, That Administrative Order No. 34, promulgated by this Commission under date of May 21, 1918, be, and hereby it is re-

newed and continued in full force and effect for the further perio of one year, with the modification that instead of being required t furnish its consumers with a copy of said order, each natural ga company operating in the State of Ohio shall give notice to eac consumer of the extension of said order not later than July 1 1919."

In testimony whereof, I have hereunto subscribed my name an affixed the official seal of The Public Utilities Commission of Ohi at Columbus, Ohio, this eleventh day of July, A. D. 1921.

Administrative Order, Public Utility Commission of Ohio, Relati to Discontinuing Gas to Industrial Consumers.

216 OHIO EX. #9.

Office of the Public Utilities Commission of Ohio.

I, J. E. Baird, the duly appointed, qualified and acting Secretar of The Public Utilities Commission of Ohio, in whose custody th books, papers, records, documents and files of said Commission ar kept, hereby certify that at a regular session of The Public Utilitie Commission of Ohio, held at Columbus, Ohio, upon the 12th da of August, 1920, at which Messrs. Charles C. Marshall (Chairman Beecher W. Waltermire and Byron M. Clen Dening, Commissioners were present, such Commission adopted the following order, whic was thereupon served upon each and every Natural Gas Compan furnishing service to consumers within the State of Ohio:

"Administrative Order No. 46.

The Public Utilities Commission, having under consideration th inability of natural gas companies to furnish an adequate supply t all their consumers during severe weather, and the necessity o formulating more definite rules for the guidance of such public utility companies in disconnecting industrial and other consumer from the service, when necessary, during an emergency, to conserv the supply for domestic consumers, and the order in which discon nections should be made, as well as the order in which the service should be restored when the emergency is passed, hereby adopts th following rules and regulations, to-wit:

1. That for the purpose of disconnecting or curtailing service t consumers during an emergency, all consumers of natural gas are

ivided into two general classes, namely: Domestic Consumers and ndustrial Consumers.

2. That domestic consumers, for such purposes, include the users f natural gas for heating, lighting and cooking in private homes, oarding houses, and apartment houses; the users of natural gas for ighting and cooking only, in hotels, restaurants, bakeries, eating laces, club houses, hospitals and other charitable institutions, and n places of like kind where the element of human welfare is the redominating requirement.

3. That all other consumers shall be designated as "Industrial Consumers"; but for the purposes of disconnecting or cur-
217 tailment during an emergency, the following subdivisions of industrial consumers may be made, in cases where there is nore than a sufficient supply of gas for domestic consumers as herein pecified, but not a sufficient supply for all industrial consumers:

A. Users who are not included in the domestic consumers' class, s herein specified, but who are engaged in preparing or preserving oodstuff, or food producing plants, for such purposes only.

B. Users of gas in gas engines.
(1. Those using 150,000 cu. ft. or less per month.
(2. Those using more than 150,000 cu. ft. per month.

C. All other industrial consumers.

When there is not sufficient gas for all industrial consumers, as herein defined, the surplus shall be furnished to industrials in the order above named.

4. This classification is subject to the following exceptions: Where natural gas is being used in limited quantities for scientific, experimental, or mechanical purposes, and where other means of producing light and heat for such purposes cannot be reasonably substituted, an amount essential to such use, but not to exceed ten thousand (10,000) cubic feet per month to each consumer so engaged may be used for such purposes only, and as if they were included in the class of domestic consumers herein specified.

5. If, after disconnecting all industrial consumers, there is not a sufficient supply of gas for the domestic consumers, then all boilers and furnaces not provided with gas fixtures and appliances primarily designed for burning natural gas as a fuel shall be disconnected, and if it becomes necessary to further restrict the use of gas to meet the emergency, domestic consumers may be limited to the use of thirty-five thousand (35,000) cubic feet per month, in one home, or for one family.

6. Realizing the necessity of conserving natural gas, and that, to
do so, it should be used in the most economical manner, the
218 Commission recommends that all distributing companies make a special study of the best methods of using the same,

and of the most economical appliances which have been designed for such use, and that they notify their consumers of their willingness to make free inspection of premises and give free advice as to such changes, if any, in their present fixtures and appliances as will accomplish that purpose, together with an estimate of the cost of the same; but no such company shall have authority to require any such changes to be made. Any gross wasteful use of gas by a consumer should be reported to the Commission.

7. A copy of these regulations shall be furnished by each natural gas company to its consumers not later than September 1, 1920.

8. Consumers who do not promptly disconnect or curtail, in accordance with the rules and regulations, when notified by the utility that it is necessary so to do, shall, upon discovery, be wholly disconnected from the service until the emergency is passed.

In testimony whereof, I have hereunto subscribed my name and affixed the official seal of The Public Utilities Commission of Ohio at Columbus, Ohio, this eleventh day of July, A. D. 1921.

223 HOPE AND MFG. CO'S AGREEMENT, W. VA. EX. 1.

(Copy.)

(Original Rtd. to Gas Co.)

EXHIBIT WEST VIRGINIA NO. 1. J.

Gas Purchase Agreement.

Hope Natural Gas Company & the Manufacturers Light and Heat Company.

224 This agreement, Made this 1st day of May, A. D. 1910, by and between the Hope Natural Gas Company, a corporation organized and existing under the laws of the State of West Virginia

after called the "Hope Company," and The Manufacturers and Heat Company, a corporation organized and existing the laws of the State of Pennsylvania, hereinafter called the ıfacturers Company,"

nesseth: the Hope Company owns or holds under leases exten- acts of gas-producing territory in the State of West Virginia, vns pipe lines for the transportation of gas from the wells or where same is received from other producers to various points, engaged in the business of producing natural gas and purchas- e same from other producers and selling and delivering the o companies engaged in the business of distributing natural ıd also, through its distributing systems in the State of West ia, to domestic consumers, manufacturers and other consumers ıral gas in that state, and

ıreas, the Hope Company is desirous of extending its natural siness and its markets for the sale of natuarl gas, and

Whereas, the Manufacturers Company owns substantially all of the Capital Stock of the following Companies, to wit:

Manufacturers Light & Heat Company, a corporation organ- ed under the laws of West Virginia;
eling Natural Gas Company;
State Gas Company;
Wetzel Gas Company;
Ohio Valley Gas Company;
Cumberland Water & Gas Company;

e said Manufacturers Company, and the companies aforesaid it controls, owns systems for the distribution and sale of nat- s in the following cities and towns:

burg,
gheny,
hington,
opolis,
evue,
ckley,
ıester,
Brighton,
er,
Castle,
ton,
Liverpool,
sburg,
benville,
ire,
xville,
eling,
Martinsville,
egie,
onald,

and a large number of other cities and towns in the States of West Virginia, Ohio and Pennsylvania, and

Whereas, the Manufacturers Company and the companies which it controls require for the supply of the domestic consumers
226 and other consumers upon the verious distributing systems which said companies own, a large and regular supply of natural gas, and

Whereas, the said companies have heretofore been obtaining the natural gas requisite for the supply of their consumers in part from gas territory leased by one or other of said Companies, and in part under contracts made from time to time with producers on or near lines of pipe owned by one or other of said Companies; but the continuance of an adequate and regular supply of gas from the sources aforesaid could be insured only by large additional investments in gas territory and large and continued expenditures in the construction of additional pipe lines, and

Whereas, contemporaneously with this agreement the Hope Company has purchased or taken over such pipe lines, gas leases and existing contracts for the purchase of gas, as in view of this agreement the said Companies desire to dispose of, and

Whereas, the Manufacturers Company deems that this agreement, together with the gas territory and contracts with other parties for the purchase of gas which are still retained by the Manufacturers Company and the Companies which it controls, will insure to said Companies an adequate, reliable and regular supply of gas for the supply of their consumers;

227 Now, therefore, in consideration of the premises and of the mutual agreements hereinafter contained, the parties hereto agree as follows:

First. From May 1st, 1910, to October 31st, 1910, both dates inclusive, the Hope Company will sell and deliver to the Manufacturers Company, and the Manufacturers Company will purchase and take from the Hope Company on each and every day at least twenty-two million five hundred thousand (22,500,000) cubic feet of natural gas. From November 1st, 1910, to April 30th, 1911, both dates inclusive, the Hope Company will sell and deliver to the Manufacturers Company, and the Manufacturers Company will purchase and take from the Hope Company on each and every day at least forty-five million (45,000,000) cubic feet of natural gas.

From May 1st, 1911, until the expiration of this contract, the Hope Company will sell and deliver to the Manufacturers Company, and the Manufacturers Company will purchase and take from the Hope Company in each year an amount of natural gas at least equal to the amount of natural gas deemed requisite to supply during such year the domestic consumers upon the distributing systems now owned by the Manufacturers Company and the companies which it controls.

Second. Not less than thirty (30) days prior to May 1st, 1911, and not less than thirty (30) days prior to May 1st in each year

during the continuance of this contract, subsequent to May 1st, 1911, the engineers of the parties hereto shall, if possible, agree upon the amount that will be requisite for the supply he domestic consumers aforesaid during the year commencing on May 1st succeeding the time of such agreement. If such agree- t is reached, the amount agreed upon shall be the amount of nat- gas deliverable hereunder during the year as to which such ement is made, unless the parties hereto shall mutually agree a larger amount, in which case such larger amount shall be the unt deliverable hereunder during such year; in case the engi- s of the parties hereto are unable to agree upon the amount that be requisite to supply the consumers aforesaid during any year, no agreement is made between the parties hereto as to the unt to be delivered during such year, the amount deliverable nder during such year shall be the amount which was found sary to supply the consumers aforesaid during the previous year, six per cent (6%) of such amount.

the time of the agreement between the parties hereto as to the nt of gas to be delivered hereunder during any year, said engi- shall, if possible, agree upon the proportion of the total amount rable during such year which is to be delivered during each h of such year, provided, however, that the amount to be deliv- from May 1st to October 31st, inclusive, during such year, shall least one-half of the amount to be delivered between November 1st and April 30th, inclusive, in *in* such year; in case the en- gineers of the parties are unable to agree upon the amounts to be delivered during each month of the year, the proportion total amount deliverable during such year, which shall be de- ble during each month of such year shall be as follows:

th.	Per cent.
y	7½
e	4¾
r	4½
gust	4½
tember	4¾
ober	7½
ember	10½
ember	12
uary	12½
ruary	12
ch	11
il	8½

amount deliverable each month shall be delivered and taken ghout the month, approximately equal amounts being delivered ken each day;

vided, however, that the Manufacturers Company shall have ght to reduce or increase the amount to be delivered during onth so long as the amount delivered and taken is between

95 per cent and 105 per cent of the amount deliverable during such month, determined as hereinbefore provided, and shall have the right to increase or reduce the amount of gas to be delivered on any day of a month so long as the amount delivered and taken on the said day is between 90 per cent and 110 per cent of the average amount per day deliverable during the month, determined as
230 hereinbefore provided; it being understood that the Manufacturers Company shall take during each year the full amount deliverable during such year, determined as hereinbefore provided, and shall take each month at least 95 per cent of the amount deliverable during such month.

Third. The gas deliverable hereunder shall be delivered by the Hope Company and taken by the Manufacturers Company at measuring stations to be located at Sedalia, Doddridge County, West Virginia, and at Morgan, Marion County, West Virginia, and at or near Iuka, Tyler County, West Virginia, and at such other points as may from time to time be agreed upon between the parties hereto; the engineers of the parties hereto shall from time to time agree upon the proportion of such gas to be delivered at each of said stations; in case of the failure of the engineers so to agree, the Hope Company shall deliver the gas at each station in the proportions designated by the Manufacturers Company in so far as it can make such delivery from its current sources of supply without additional investment in pipe lines, compressing stations or transportation facilities.

It is agreed, however, that the Hope Company only undertakes to deliver at Iuka the proportion of gas deliverable and to be taken by the Manufacturers Company at the station at or near Iuka, during the term of the contract between The Freehold Oil & Gas
230½ Company, of the one part, and the Tri-State Gas Company, of the other part, bearing date the 21st day of September, 1909, the Manufacturers Company agreeing to comply with the terms of said contract.

The amount of gas furnished and delivered hereunder at each point of delivery shall be determined as follows: Readings of the Pitot tubes and pressure gauges hereinafter provided for shall be made at regular fifteen-minute intervals throughout the twenty-four hours of each day, and duplicate statements of the readings shall be mailed daily to the Hope Company and to the Manufacturers Company; from such readings of the measuring tubes the amount of natural gas furnished and delivered each month shall be computed on the basis of ten ounces pressure above atmospheric according to Boyle's Law for the measurement of gas at varying pressures. This method of measurement is hereby adopted as the basis of measurement for the purposes of this contract, and payment for gas shall be made upon the monthly statements rendered by the Hope Company to the Manufacturers Company showing the total computation of gas so measured during the month.

Such gas shall be delivered by the Hope Company at the points of delivery at a pressure of at least sixty pounds; and shall be delivered

against the varying pressures in the lines of the Manufac-
31 ers Company not exceeding 200 pounds, so far as such de-
livery can be made under natural pressure from the wells
ithout resorting to artificial means of compression.

The Pitot tubes for the measurement of the gas deliverable here-
nder shall be of standard type. The Hope Company will erect or
use to be erected measuring stations at the points of delivery. All
pparatus and equipment to be installed and operated in said sta-
ons, and the character and efficiency thereof shall be satisfactory to
th parties hereto. One-half the cost of erecting and equipping
d stations shall be paid to the Hope Company by the Manu-
turers Company.

Said stations, equipment and apparatus shall be operated jointly
both companies and the expense of operating and maintaining
d stations after the same shall have been completed and equipped
d in working order, and the expense of checking the operation and
gistration of the measuring apparatus shall be equally divided be-
een the parties hereto.

Fourth. For the purposes of this agreement domestic consumers
ll be deemed to include all such consumers of gas as according
the present system of accounts used by the Manufacturers Com-
pany are classed as domestic consumers.

2 Fifth. The Manufacturers Company, on or before the
tenth day of each month during the continuance of this
tract shall furnish to the Hope Company a statement showing
amount of gas supplied by the Manufacturers Company and
the companies which it controls, during the preceding month,
lomestic consumers upon the systems now owned or controlled by
l companies. Whenever practicable, the amount of natural gas
plied to any such consumers shall be measured by meters of
ndard type.

All meters used for measuring gas delivered to domestic consum-
shall be at all times open to the inspection of the representatives
he Hope Company, and all books and records of the Manufac-
rs Company and of the companies which it controls, shall, like-
e be open to the inspection of the representatives of the Hope
npany at all reasonable times.

ixth. The Manufacturers Company shall pay the Hope Com-
y for all gas delivered hereunder as follows:

all natural gas delivered from May 1st, 1910,
October 31st, 1910, inclusive..... 7½¢ per M cu. ft.
all natural gas delivered from November 1st,
910, to April 30th, 1911, inclusive..... 8¢ per M cu. ft.
all natural gas delivered from May 1st, 1911,
April 30th, 1912, inclusive..... 9¢ per M cu. ft.
all natural gas delivered from May 1st, 1912,
to April 30th, 1913, inclusive..... 10¢ per M cu. ft.
For all natural gas delivered from May
1st, 1913, to April 30th, 1914, inclusive 11¢ per M cu. ft.

For all natural gas delivered from May 1st, 1914, to April 30th, 1915, inclusive..... 12¢ per M cu. ft.
For all natural gas delivered from May 1st, 1915, to April 30th, 1916, inclusive..... 13¢ per M cu. ft.
For all natural gas delivered from May 1st, 1916, to April 30th, 1917, inclusive..... 14¢ per M cu. ft.

and for all natural gas delivered hereunder on and after May 1st, 1917, a price equal to fifty per cent (50%) of the average price realized by the Manufacturers Company and the companies which it controls, for natural gas sold to domestic consumers; Provided, however, that the price paid to the Hope Company shall not be less than fifteen cents (15¢) per thousand cubic feet of gas delivered by the Hope Company to the Manufacturers Company; and provided, further, that in case any tax or assessment is hereafter imposed on natural gas for use in or export from the State, or on the sale or exportation from the State of natural gas, or in any other manner so as to constitute in effect a charge upon the gas delivered hereunder, the amount of such tax or assessment or charge shall be borne by the Manufacturers Company in so far as it affects or relates to or is apportionable to the natural gas deliverable hereunder; and in the event that the Hope Company is required to pay the same, the amount thereof shall be paid by the Manufacturers Company to the Hope Company in addition to the prices above stated; and provided further that in case at any time or
234 times after April 30th, 1917, general conditions affecting the cost of producing natural gas have so changed that the cost of gas to the Hope Company is materially increased, or by reason of it being necessary for the Hope Company to obtain same from greater distances, the cost of obtaining and delivering the same is materially increased, the prices hereinabove specified to be paid to the Hope Company shall be correspondingly increased and that if the parties hereto are unable to agree as to the proper amount of such increase, the question of the proper amount thereof shall be submitted to arbitration and the prices thereafter to be paid by the Manufacturers Company shall be the prices as fixed by such agreement or arbitration.

Seventh. The obligation of the Hope Company to deliver gas hereunder shall be limited to the amount which it is currently able to supply from its own production and such current contracts as it may then have for the purchase of gas, consistently with its present or future contracts with other purchasers, provided, however, that until the present floating indebtedness of the Manufacturers Company is paid off, if it is paid off within seven years from May 1st, 1910, or if such floating indebtedness is not paid off within said seven years, then, until the expiration of said seven years, the Hope Company will supply to the Manufacturers Company under this agreement a proportion of its production of gas
235 not exceeding the domestic consumption of the Manufacturers Company and of the companies controlled by the Manufacturers Company at least equal to the proportion which the num-

ber of domestic consumers supplied by the Manufacturers Company and its subsidiary companies bears to the total number of domestic consumers on all the systems then obtaining their supply of gas from the Hope Company, including the system of the Manufacturers Company and its subsidiary companies. And that after said floating indebtedness has been paid off or said seven years have expired, the Hope Company is to have the right to supply its own domestic consumers in West Virginia, and to supply The East Ohio Gas Company and The Peoples Natural Gas Company to the extent of their requirements for domestic consumers upon the systems now owned or supplied by said companies, in preference to the Manufacturers Company, but otherwise is not to give other purchasers a preference over the Manufacturers Company. It is understood that said preference to The East Ohio Gas Company and The Peoples Natural Gas Company shall not include consumers hereafter obtained by the purchase, absorption or merger of other companies or lines, or by extraordinary extensions of the lines of said companies, but only the ordinary growth and accretions of natural gas companies in the territory now occupied by said companies.

Eighth. The Manufacturers Company will use its best efforts to develop and extend the distribution and sale of natural gas to 36 domestic consumers both on its own systems and on the systems of the companies which it controls, and to this end will make such solicitations and demonstrations as are reasonable and customary to induce the greater consumption of natural gas, and will introduce and furnish such appliances for its uses on reasonable terms; and will at all times during the continuance of this contract use every endeavor to secure domestic consumers and to build up and extend the sale of gas for domestic purposes.

Ninth. At all times during the continuance of this contract, the transportation and distribution of natural gas by the Manufacturers Company, and its transportation and distributing system, and the transportation and distribution of natural gas by each of the controlled companies, and the transportation and distributing systems of each of such companies shall be in charge of an officer appointed by the Board of Directors and subject only to the Board.

Tenth. The Manufacturers Company agrees to set aside and deposit with the Colonial Trust Company or some other trust company or financial institution to be selected by the Manufacturers Company, the sum of Two hundred thousand dollars ($200,000.00) and agrees that all of said sum shall be expended under the direction of the officer to be appointed by the Manufacturers Company pursuant to the preceding paragraph hereof, in the improvement and betterment of its distributing system or the distributing systems of the companies which it controls; and until paid out for such purposes upon the order of such officer, shall remain on deposit with the Colonial Trust Company, or the elected depository; provided, however, that in case John L. Porter, George W. Crawford and John G. Pew, or a majority of them,

shall report in writing to the Manufacturers Company and to the Colonial Trust Company that a smaller amount than two hundred thousand dollars ($200,000.00) is sufficient to effect the requisite improvements and betterments in said distributing systems, the excess over the amount reported by them to be requisite for such purposes shall be at once repaid to the Manufacturers Company.

Eleventh. In case of the acquisition at any time hereafter by the Manufacturers Company or by any of the companies which it controls of an additional distributing system or of stock representing such system, and requiring an additional domestic supply, the amount of natural gas requisite for the supply of the domestic consumers on such system not obtainable from properties or under contracts appurtenant to and taken over in connection with such system, shall, at the option of the Hope Company, be added to the amount of gas to be purchased and taken hereunder; provided, however, that the Hope Company shall, in case of any such system, exercise
238 such option within sixty days after written notice from the Manufacturers Company requiring it so to do.

Twelfth. If at any time during the continuance of this contract the requirements of the Manufacturers Company and the Companies which it controls, exceed the amounts of gas deliverable by the Hope Company hereunder or obtainable by said companies under contracts which they now have with other parties for the purchase of gas, or obtainable from territories now owned or leased by them, the Manufacturers Company will purchase from the Hope Company the amount of such excess requirements so far as the Hope Company is willing to supply the same on terms as favorable to the Manufacturers Company as those on which the same can be obtained from other sources.

Thirteenth. The Hope Company undertakes and agrees that at all times during the continuance of this contract it will use all reasonable diligence in developing and extending its gas leases and properties and in obtaining gas therefrom for the purpose of fulfiling its obligations hereunder, and that it will use all reasonable diligence to drill wells and maintain its pipe lines and wells in good order and condition to supply the gas which it has herein undertaken to deliver.

Fourteenth. Where either party to this contract fails to
239 perform any obligation herein assumed by it, and such failure is due to the Acts of God, or a public enemy, strikes, riots, injunctions or other interferences through legal proceedings, breakage or accident to machinery or lines of pipe, washouts, earthquakes, storms, freezing of lines or wells, failure of gas wells in whole or in part, or to any causes not due to the fault of such party, or is caused by the necessity for making repairs or alterations in machinery or lines of pipe, such failure shall not be deemed to be a violation by such party of its obligations hereunder, but such party shall use due diligence to again put itself in position to carry out all the obligations, which by the terms hereof, it has assumed.

Fifteenth. The gas to be supplied by the Hope Company under this agreement shall be so supplied in the same condition as it leaves the wells except as to such changes as are incident to the usual processes of compression and pumping, or in the course of transportation.

Sixteenth. The amounts payable to the Hope Company hereunder for gas delivered hereunder in each calendar month shall be paid by the Manufacturers Company to the Hope Company on or before the twentieth day of the following month.

Seventeenth. It is mutually understood and agreed that in
240 case the Manufacturers Company shall fail to pay to the Hope Company any amounts that may be due and payable hereunder to the Hope Company within twenty (20) days after such amount becomes due and payable, or to perform the covenants of this agreement, the Hope Company shall have the right, without cancelling this contract or waiving any of its rights hereunder, after ten days' written notice to the Manufacturers Company of its intention so to do, to suspend the delivery of natural gas hereunder until all amounts due to it are paid, or at its option shall have the right to terminate this contract on thirty (30) days' notice to the Manufacturers Company without prejudice to its right to collect the amounts due it at the time of such temination for any gas previously furnished hereunder.

Eighteenth. The Manufacturers Company during the continuance of this contract, shall at all times exercuse due diligence to maintain its distributing system and the distributing systems of the companies owned and controlled by it in good order and condition. The Hope Company will likewise exercise due diligence to maintain in good order and condition its pipe line system so far as necessary for the transportation of the natural gas which it is obligated to deliver hereunder.

Nineteenth. This contract shall be binding upon the parties
41 hereto and their successors and assigns, respectively, provided, however, that in case the gas distributing system now or hereafter owned or controlled by the Manufacturers Company is substantially broken up so that substantial parts thereof are vested in different owners, the Hope Company, at its option, shall have the right to terminate this contract.

Twentieth. The Manufacturers Company represents that Schedule hereto annexed, correctly sets out the floating indebtedness of said ompany; that Schedule B hereto annexed, correctly sets out the ntracts which the Manufacturers Company and the companies hich it controls now have with other parties for the purchase of gas; d that Schedule C hereto annexed, correctly sets out the leases of s territory held by the said companies.

Twenty-first. This contract, unless sooner terminated pursuant to e provisions herein contained or in consequence of the default of her party and the election of the other to treat it as abrogated, all continue for twenty years from the date hereof.

In witness whereof the Hope Natural Gas Company and The Manufacturers Light & Heat Company have caused this agreement to be executed in duplicate in their respective names by their respective Presidents or Vice Presidents, and their respective corporate
242 seals to be hereto affixed and attested by their respective Secretaries this 27th day of June, A. D. 1911, as of the day and year first above written.

245 HOPE AND L., F. & P. CO.S' AGREEMENT, W. VA. EX. 2.

(Introduced at Page 284, Record.)

Copy of West Virginia Exhibit No. 2.

(Original Retd. to Gas Co.)

This agreement, Made and entered into this 22nd day of November, A. D. 1911, by and between Hope Natural Gas Company, a West Virginia corporation, party of the first part, and The Light, Fuel & Power Company of West Virginia, also a West Virginia corporation, party of the second part,

Witnesseth: That whereas, *that* party of the second part, being the owner of a 3 inch pipe line extending from a point near the town of Burnsville, in Salt Lick District, Braxton County, West Virginia, to the towns of Flatwoods and Sutton, with branch lines to the town of Burnsville and intermediate villages, and being the owner of franchises or rights therein to supply natural gas, desires to buy from the party of the first part the natural gas to be supplied to consumers in said towns, and

Whereas, the party of the first part, being the owner of gas leases and wells in Braxton and Lewis Counties, is willing to construct a pipe line from its wells in Lewis County to unite with the line from its wells in Braxton County to connect into the pipe line owned by the party of the second part at Burnsville in order to furnish natural gas for the requirements of the party of the second part;

Now therefore in consideration of the premises, and of the mutual covenants and agreements herein contained, to be
246 faithfully performed by each party, its successors and assigns, to the other, the parties hereto, the party of the first part hereinafter called the "Selling Company" and the party of the second part the "Buying Company," have agreed, and do hereby mutually agree as follows:

First. The selling company undertakes and agrees during the continuance of this contract and beginning on the 1st day of December
F. W. B. C. P. [November],* 1911 to sell and deliver to the buying company and the buying company undertakes and agrees to purchase and take from the selling company all of the natural gas required by the buying company for the supply of all the consumers purchasing gas directly from the buying company which it now has or may hereafter acquire in the cities, towns and villages now furnished with natural gas by the buying company, and the buying company further undertakes and agrees to purchase and take from the selling company, if the latter shall hereafter undertake and agree to sell and deliver the same to it,

[*Word enclosed in brackets erased in copy.]

all of the natural gas required by the buying company for the supply of any other company or distributing system in the general locality aforesaid under any contract now existing or hereafter made between said buying company and such other distributing company at and upon the same terms and conditions as are hereinafter set forth; providing, however, that the selling company shall not be obliged to sell and deliver, or the buying company to purchase and take,
247 gas in excess of the amounts currently required for the aforesaid purpose.

Second. The selling company agrees to construct and put into operation a pipe line extending from its gas fields in Lewis County to connect into the pipe line of the buying company at a point upon the lands of —— ——, situate near the town of Burnsville, in Salt Lake District, Braxton County, West Virginia. The work of constructing said line shall be commenced promptly upon the execution and delivery of this agreement and shall be prosecuted to completion with due diligence, so that the delivery of gas from said Lewis County field to supplement the supply from the Braxton County
F. W. B. C. P. field, shall commence [in ample time to meet not later than February 1st, 1912, the requirements of the buying company before the cold weather begins in the fall of 1911].* The junction point of the pipe lines of the parties hereto shall be known and designated for the purposes of this contract as Burnsville Station and at that point there shall be erected a Pitot tube measuring station for the purpose of measuring the gas sold and delivered to the buying company hereunder; the said station shall be erected by the selling company, connected to the lines of each party and fully equipped, ready to be put into operation on the 1st day of
F. W. B. C. P. [November],' [1911];* the said station shall February 1912 thereafter be maintained and operated by the selling company at all times with the right to employ men
248 to read or check the readings of the Pitot tubes. The reading of the Pitot tubes shall be under the joint control of the parties hereto; and shall be made at 15 minute intervals during each day of 24 hours; duplicate reports of the daily readings shall be mailed to each party.

Third. The buying company undertakes and agrees that it will pay to the selling company for the natural gas sold and delivered to it by the selling company, upon the basis of the measurements recorded by said Pitot tubes, calculated upon a pressure of 10 ounces to the square inch above 14.4 pounds atmospheric, according to Boyle's Law for the measurement of gas at varying pressures, but without allowance for temperature or barometric conditions, the following rates and prices, viz:

(a) For all gas sold and delivered from the 1st day of

[*Words enclosed in brackets erased in copy.]

December
F. W. B. C. P. [November],* 1911, to and including the 31st day of December, 1916, at the rate or price of ten (10¢) per thousand cubic feet.

(*b*) For all gas sold and delivered from and after January 1st, 1917, that price from month to month for each one thousand cubic feet of gas equal to fifty (50) per centum of the average price per thousand cubic feet charged from month to month, during
249 that period, by the buying company to its domestic consumers; provided, always, that during the
November
C. P. F. W. B. period from January 1st, 1917, to [October],*
30th
F. W. B. C. P. [31st],* 1920, both inclusive, the price to be paid by the buying company to the selling company shall at no time be less than twelve and one-half (12½¢) cents for each one thousand cubic feet of gas; and that during the period
December
F. W. B. C. P. from and after [November]* 1st, 1920, the price to be paid by the buying company to the selling company shall at no time be less than 15¢ for each one thousand cubic feet of gas.

Fourth. The buying company agrees to pay to the selling company at its offices in Pittsburgh, Pennsylvania, on or before the
25th
F. W. B. C. P. [15th]* day of each month for all gas sold and delivered to it in the preceding month.

Fifth. No dominion or control over the natural gas delivered under this contract shall remain in the selling company after the gas passes the point of delivery above stated, nor shall the selling company be responsible for or on account of anything that may be done, happen or arise touching said gas after its delivery; and the buying company undertakes and agrees that it will at all times and from time to time keep free, save harmless and indemnify the selling company from any and all manner of claims, suits and damages on account of any conduct, act or thing touching the said
250 gas after it has left the said point of delivery.

Sixth. The Selling company undertakes and agrees that at all times during the continuance of this contract (excepting as provided in the Ninth and Tenth paragraphs hereof) it will deliver gas into the 3 inch line of the buying company so as to maintain a pressure on said line at said Burnsville Station end thereof, of not less than 150 pounds to the square inch, such pressure, however, to be maintained only so long as the pipe line system of the buying company consists of a 3 inch line from said station to Sutton, West Virginia; if the size and capacity of said line is increased then the selling com-

[*Words enclosed in brackets erased in copy.]

any thereafter during the continuance of this contract shall not be ound to maintain said pressure of 150 pounds at Burnsville Station ut shall undertake and agree at all times thereafter to use all rea- nable diligence in developing and extending its gas leases and roperties and in obtaining gas therefrom, and in providing and aintaining in good order and condition compressing stations, pipe nes and other facilities in the State of West Virginia to supply e requirements of the buying company hereunder.

Seventh. It is mutually understood and agreed that if the ca- acity of the main line of the buying company from Burnsville to Sutton is increased, then the buying company shall keep the 51 selling company at all times fully informed of all facts tend- ing to show the amount of natural gas which will be neces- ry from time to time thereafter to supply its requirements here- nder, and will, on or before the 1st day of May in each year make nown to the selling company, in writing, the amount of gas which e buying company estimates will be required from time to time the year beginning with the next succeeding November 1st; and at so long as the selling company exercises due diligence in making ovision to supply, and does supply, the amount of natural gas imated to be necessary to meet such requirements, it shall not be ble by reason of its failure to supply gas in excess of said estimated nount.

Eighth. It is mutually understood and agreed that in so far as the ying company during any period does not obtain from the selling mpany all the gas requisite for the supply of its consumers, it may tain the amount of gas currently required to supplement the sup- during such period from other sources.

Should the buying company at any time purchase additional plants extend its distributing system and embrace any other cities or wns not herein mentioned the selling company shall have the ght to require the buying company to include such additional ies or towns within the terms of this contract.

2 Ninth. Where either party to this contract fails to per- form any obligation herein assumed by it, and such failure is e to the Acts of God, or a public enemy, strikes, riots, injunctions other interferences through legal proceedings, breakage or accident machinery or lines of pipes, washouts, earthquakes, storms, freez- g of lines or wells, sudden or unforseen failure of gas wells, or to y causes not due to the fault of such party, or is caused by the ecessity for making repairs or alterations in machinery or lines of pe, such failure shall not be deemed to be a violation by such party its obligations hereunder, but such party shall use due diligence again put itself in position to carry out all of the obligations, ich, by the terms hereof, it has assumed.

Tenth. This contract shall continue between the parties hereto the term of twenty (20) years from the 1st day of

F. W. B. C. P. December [November],* 1911, but the obligation of the selling company to deliver gas hereunder shall be limited to the amount which it is currently able to supply from its own production consistently with its present or future contracts with other purchasers, Provided, however, that the selling company is to have the right at any and all times to supply the domestic consumers connected to its own system in West Virginia
253 which it is supplying with gas and to The East Ohio Gas Company, The River Gas Company and The Peoples Natural Gas Company, to the extent of their requirements for domestic consumers, in preference to the buying company, but otherwise is not to give other purchasers the preference over the buying company. The selling company reserves the right to surrender, exchange, sell and dispose of any part of the gas properties now or hereafter owned or leased by it; should, however, the selling company desire to sell all of its gas properties situate in Lewis County, West Virginia, it shall do so only subject to this agreement.

Eleventh. It is mutually understood and agreed that in case the buying company shall fail to pay to the selling company any amounts that may be due and payable hereunder to the selling company within twenty (20) days after such amount becomes due and payable, or to perform the covenants of this agreement, the selling company shall have the right, without cancelling this contract or waiving any of its rights hereunder, to suspend the delivery of natural gas hereunder until all amounts due to it are paid, or, at its option, shall have the right to terminate this contract on thirty (30) days' notice to the buying company without prejudice to its right to collect the amounts due it at the time of such termina-
254 tion for any gas previously furnished hereunder.

Twelfth. This contract shall be binding upon the parties hereto and their successors and assigns, respectively, Provided, however, that in case the gas distributing system now or hereafter owned, controlled or supplied by the buying company is broken up, so that parts of the system are disconnected, or are vested in different owners, the selling company, at its option, shall have the right to terminate this contract.

In witness whereof the parties hereto have hereunto caused their corporate names to be signed by their respective Presidents or Vice Presidents, and their respective seals to be hereunto affixed by their respective Secretaries, the day and year first above written.

Executed in duplicate.

256 PGH. & W. VA. AND EQUITABLE CO.'S AGR. NO. 1, W. VA. EX. 3.

W. VA. EX. NO. 3. E. M.

(Introduced at Page 529, Record.)

This agreement made this 31st day of July, A. D., 1914, between the Pittsburgh and West Virginia Gas Company, a corporation of the State of West Virginia, (hereinafter called "Pittsburgh"), party of the first part, and the Equitable Gas Company, a corporation of the Commonwealth of Pennsylvania, (hereinafter called "Equitable"), party of the second part;

Whereas, Pittsburgh controls certain lands and leases situate in Lewis, Gilmer, Wetzel, Doddridge, Tyler, Marshall, Monongalia, Ritchie, Harrison, Marion, Pleasants, Braxton, Taylor, Upshur, Webster, Calhoun, Randolph and Barbour Counties, West Virginia, and now has Seven Hundred Ninety-Five (795) producing gas wells thereon; and

Whereas, Equitable desires the right to purchase from Pittsburgh for the period of thirty-four (34) years from August 1st, 1914, all or so much gas produced from its wells, now drilled, or hereafter to be drilled in the State of West Virginia, remaining after the latter supplies all the customers it now has or hereafter may have in the State of West Virginia, as Equitable may wish to buy, and Pittsburgh is willing to sell the same to Equitable,

Now, this agreement witnesseth, That in consideration of the premises, the covenants hereinafter contained, and the sum of One Dollar ($1.00) by each to the other paid, the receipt whereof is hereby acknowledged, it is agreed by and between the parties hereto as follows:

First. Pittsburgh does hereby sell to Equitable and agrees that Equitable may take, and Equitable does hereby agree to take and pay for as hereinafter set forth so much natural gas as Equitable may require over and above the gas used by it which has been produced in the States of Pennsylvania and Ohio, for the period of thirty-four (34) years from August 1st, 1914, from all of the wells now operated or hereafter operated by Pittsburgh in the State of West Virginia, remaining after Pittsburgh supplies all the customers it now has or hereafter may have in the State of West Virginia.

257 Second. The gas sold shall be delivered into the pipe lines of Equitable against the varying pressures therein, in a dry and marketable condition, at certain points on the dividing line between the States of West Virginia and Pennsylvania. The quantity thereof shall be metered or measured at certain points near said dividing line which points shall be agreed upon by the parties hereto.

Third. Equitable shall have charge of the metering or measuring of all gas sold or to be sold hereunder whenever such metering or measuring is done within the State of Pennsylvania, with the right in Pittsburgh, at all times, to have access to the meters and meter records and measuring devices, with the right to test said meters or measuring devices at all reasonable times.

Pittsburgh shall have charge of the metering or measuring of all gas sold or to be sold hereunder whenever such metering or measuring is done within the State of West Virginia, with the right in Equitable, at all times, to have access to the meters and meter records and measuring devices, with the right to test said meters or measuring devices at all reasonable times.

Fourth. Equitable agrees to pay Pittsburgh at the rate of eleven (11) cents per thousand (1000) cubic feet until February 1st, 1915, for all natural gas delivered to it under this contract, and shall, on the tenth (10th) day of each month, make payment for all gas received by it during the calendar month preceding. On February 1st, 1915 or within five (5) days thereafter, and on the first day of February or within five (5) days thereafter in each third year thereafter, either party hereto may demand a fixing of a new price and the parties hereto shall fix the price to be paid for gas for each

ext succeeding three (3) years, but the price fixed at any period
hall continue until another price is fixed hereunder. All gas de-
vered under this contract, is to be computed at a ten (10) ounce
pressure basis above 14.7 pounds atmospheric pressure ac-
58-259 cording to Boyle's Law for the measurement of gas at
varying pressures, but without allowance either for tem-
erature or barometric conditions.

Fifth. Pittsburgh agrees that it will use due diligence in de-
loping its Leases and further agrees to use its best efforts to main-
in or increase its present production.

Sixth. Pittsburgh shall have entire charge of turning gas into
e lines of Equitable, but such gas shall be delivered according to
e directions of Equitable and Equitable shall be required to take
e gas hereby purchased by it only in such volumes and at such
riods of time as it may deem necessary and proper.

Seventh. In case of any dispute arising hereunder the same shall
referred to the President of the Philadelphia Company, a cor-
ration of the Commonwealth of Pennsylvania, whose decision
ereon shall be final and conclusive.

Eighth. This agreement shall extend to and be binding upon
e parties hereto, their respective successors and assigns.

Witness the due execution and delivery hereof the day and year
oresaid.

260 PGH. & W. VA. AND EQUITABLE COS.' AGR. NO. 2, W. VA. EX. 4.

W. VA. EX. NO. 4. E. M.

(Introducing at Page 529, Record.)

Agreement, made this 3rd day of May, A. D. 1916, between the Pittsburgh and West Virginia Gas Company, a corporation of the State of West Virginia, hereinafter called "Pittsburgh," party of the first part, and the Equitable Gas Company, a corporation of the State of Pennsylvania, hereinafter called "Equitable," party of the second part.

Whereas, by an agreement dated July 31st, 1914, between the parties hereto, Pittsburgh agreed to sell to Equitable, under certain conditions, a supply of natural gas at the rate of eleven (11) cents per thousand cubic feet, from August 1st, 1914 to February 1st, 1915, and at a price to be agreed upon thereafter;

And whereas, Pittsburgh, from August 1st, 1914 to December 31st, 1914, inclusive, sold gas to Equitable at the rate of eleven cents per thousand cubic feet, and on or about December 31st, 1914, by virtue of an oral agreement between the parties hereto, the rate was changed to five cents per thousand cubic feet, and Pittsburgh sold gas to Equitable at that rate from January 1st, 1915 to January 31st, 1916, inclusive, and on or about January 31st, 1916, by virtue of an oral agreement between the parties hereto, the rate was changed to seven and one-half cents per thousand cubic feet, to continue during the year 1916, and Pittsburgh has sold gas to Equitable at that rate from February 1st, 1916 to date;

And whereas, it is the desire of the parties hereto that the aforesaid oral agreements be ratified and reduced to writing:

Now, Therefore, This Agreement Witnesseth, that in consideration of the premises, and the sum of one dollar, by each of the parties to the other in hand paid, receipt of which is hereby acknowledged, the parties hereto agree each with the other as follows:

1st. The oral agreements between the parties hereto, whereby the rate for natural gas delivered by Pittsburgh to Equitable from January 1st, 1915 to February 1st, 1916 was fixed at five
261 cents per thousand cubic feet, and the rate for natural gas delivered from February 1st, 1916 to date was fixed at seven and one-half cents per thousand cubic feet, are hereby ratified and confirmed.

2nd. The rate of seven and one-half cents per thousand cubic feet is to continue during the calendar year 1916.

3rd. Hereafter the parties hereto shall fix the rate to be paid for gas delivered under the aforesaid agreement during the month of December of each year, and the rate so fixed shall continue in force during the following calendar year.

4th. Except as herein modified, all the terms and conditions of e agreement between the parties hereto, dated July 31st, 1914, all be and remain in full force and effect.

5th. All the terms and conditions of this agreement shall extend and be binding upon the successors and assigns of the parties reto.

In Witness Whereof, the said Pittsburgh and West Virginia Gas mpany and the Equitable Gas Company have caused their respec-e corporate seals to be hereto affixed, and duly attested, the day d year first above written.

(Introduced at Page 529, Record.)

Article of Agreement, made and concluded this 1st day of October, 17, by and between the Pittsburgh and West Virginia Gas Com-ny, a corporation of the State of West Virginia, hereinafter called ittsburgh," and the Equitable Gas Company, a corporation of the ate of Pennsylvania, hereinafter called "Equitable:"

Whereas, by an agreement dated July 31st, 1914, between the rties hereto, Pittsburgh agreed to sell natural gas to Equitable at e rate of 11¢ per 1,000 cubic feet, and
Whereas, by the terms of a supplemental agreement dated May d, 1916, the rate which Equitable was to pay for gas received from

Pittsburgh was fixed at 7½¢ per 1,000 cubic feet, which said rate is still in effect, and

Whereas, because of the greatly increased cost of said gas, the parties hereto are desirous of fixing a more equitable rate of payment for gas delivered by Pittsburgh to Equitable:

Now, Therefore, This Agreement Witnesseth that the parties hereto, for and in consideration of the sum of one dollar, by each of the parties to the other in hand paid, agree each with the other as follows, to wit:

1st. Beginning on the date hereof, Equitable agrees to pay to Pittsburgh at the rate of fifteen (15) cents per 1,000 cubic feet for all gas delivered to it under the terms of the aforesaid agreement of July 31st, 1914.

2nd. The said rate of payment shall continue in force until modified by an agreement in writing between the parties hereto.

3rd. Except as herein modified, all the terms and conditions of the said agreement of July 31st, 1914 shall be and remain in full force and effect.

4th. All the terms and conditions of this within agreement shall extend to and be binding upon the successors and assigns of the parties hereto.

In Witness Whereof, the parties hereto have caused their
264 respective corporate seals to be hereto affixed, and duly attested, the day and year first above written.

265 PGH. & W. VA. AND EQUITABLE COS.' AGR. NO. 4, W. VA. EX. 6.

W. VA. EX. 6. E. M.

(Introduced at Page 529, Record.)

Article of Agreement, made and concluded this 6th day of June, A. D. 1918, by and between the Pittsburgh & West Virginia Gas Company, a corporation of the State of West Virginia, hereinafter called "West Virginia," and the Equitable Gas Company, a corporation of the State of Pennsylvania, hereinafter called "Equitable:"

Whereas, by agreement dated July 31st, 1914, between the parties hereto, West Virginia agreed to sell to Equitable natural gas in large quantities, the price for which, by various supplemental agreements, has been changed from time to time to meet market conditions and the cost of service, and

Whereas, on account of the increased cost of production and service, West Virginia is desirous of raising the price to be paid for gas delivered under the said contract and has requested Equitable to agree thereto, and the parties hereto have agreed to an advance in price, to be effective until it has been demonstrated that a greater or less price would be fair:

Now, Therefore, This Agreement Witnesseth that the parties hereto, in consideration of the sum of one dollar, by each to the other in hand this day paid, the receipt of which is hereby acknowledged, agree each with the other as follows, to wit:

1st. Equitable agrees to pay West Virginia at the rate of twenty-one (21) cents per 1,000 cubic feet for all gas delivered to it on and after September 1st, 1918, under the said contract of July 31st, 1914.

2nd. The said rate of payment shall continue in force until modified by the parties hereto, by an agreement in writing.

3rd. Equitable shall have the privilege, if it so desires, from time to time, of paying its monthly bills by trade acceptances running sixty days, and thereupon one per cent shall be added to the invoice price in lieu of interest.

4th. Except as herein modified, all the terms and conditions of the agreement or contract of July 31st, 1914 shall be and remain in full force and effect.

266 & 267 5th. All the terms and conditions hereof shall extend to and be binding upon the successors and assigns of the parties hereto.

In Witness Whereof, the parties hereto have caused their respective corporate seals to be hereto affixed, and duly attested, the day and year first above written.

What were the total gross earnings (including all sums earned or charged ,whether actually received or not, and its proportion of the gross receipts for business done by it in connection with other companies or firms), of the Company, Co-partnership, Association or Corporation making this report, for the year ending

December 31, 1919 in all States? $ 20,051,118.31

in West Virginia $ 20,051,118.31

How much of the gross earnings resulted from business actually done in West Virginia? $ 20,051,118.31

How much of the total gross earnings should properly be credited to West Virginia to give the state a fair share of earnings? $ 20,051,118.31

If this company operates outside of West Virginia, how, or upon what principle were the earnings apportioned, as between this state and other states? —

What were the total operating and maintenance expenses including interest and taxes in all states? $ 16,700,422.00

What were the total operating and maintenance expenses including interest and taxes in West Virginia? $ 16,700,422.00

("Operating and maintenance expenses" is to be understood to mean the actual expenses of operation, and actual expenditures for maintenance. Expenditures for new work (peramnent improvements and additions), and dividends are not to be included as operating expenses.)

If this company operates outside of West Virginia, how, or upon what principle were the operating expenses apportioned as between this state and other states? —

What were the net earnings in West Virginia for the year ending December 31, ? $ 3,350,695.31*

What were the total net earnings, in all states, for the year ending December 31, ? $ 3,350,695.31*

What dividends were declared during the year on common stock? ____ per cent; amount $ None

What dividends were declared during the year on preferred stock? ____ per cent; amount $ "

When were the dividends declared on common stock? ____ Preferred Stock? $ —

Interest paid on Funded Debt during the year $

Interest paid on Unfunded Debt during the year $ 17,895.50

(There should appear on each sheet of this report *some notation* to indicate that the information desired or questions asked have not been overlooked. The word "none" may be used against any particular item or items, where that word expresses the *facts*. If, for any reason, for any item, the exact amount cannot be reported, such an amount as is approximately correct must be reported. In such case, refer by note to "remarks" at the bottom of the sheet on which a diviation occurs, where a brief explanation should be given why specific data called for cannot be returned *exactly as requested*.)

REMARKS. *See note on next page

The Company suffered a decline of 12.14% in the Rock Pressure of its gas fields during the year 1919, and has deducted from Earnings a Depletion of $2,660,619.39 in its return for Federal Income, and Excess Profit Taxes. This depletion is not deducted from the earnings on Page 3 of this return; nor has any account been taken of depletion inany of the statements rendered herein. On Page 4½ the amount of this depreciation is shown to be $1,688,767.92 for the year 1919. This depreciation is applied only to tangible property such as pipe lines and Compressing Stations and not to Leaseholds; and is at conservative rates, for instance:- On Field and Main Lines 5%, on City Plants 3% and somewhat higher rates on automobiles, teaming investment and such property subject to rapid deterioration.

Wish to note also the additions to Investment as shown on Page 5, $1,894,743.65, and that in spite of such expenditures the amount of gas which the Company was able to produce, purchase and sell, was greatly below 1918 deliveries. The Plant was actually worth less as a Gas Plant at the end of the year than at the beginning, the decline in the supply more than overcoming all the money reinvested. The exhaustion of Gas is constantly lessening the value of the tangible investment beyond mere wear and tear, and in spite of maintenance expenditures, it is not possible to avoid depreciation due to either of these causes.

Form No. 3. U—A.

Gas and Oil.

A part of the report of the Hope Natural Gas Company.

THE OPERATING AND MAINTENANCE AND OTHER EXPENSES as shown below should not include expenditures for additions to plant, dividends or any amount for depreciation.

Operating and Maintenance Expenses, Interest, Etc., for the year ending December 31, (Fully itemize.)	Entire Plant	West Va.
General Expenses:

Form No. 9 U.

Public Utility.

A part of the report of the Hope Natural Gas Company.

West Va. EXPLANATORY REMARKS 1920

The Unit prices used on pipe and materials are approximately those approved some years ago by Tax Commissioners Townsend and Dillon; the same prices substantially have been used each year since that time, and have formed a fair guide together with a relatively equal rate on leaseholds for several years for the division of taxes if not for the ascertainment of true and actual value of unit prices in a going concern.

State of Pennsylvania }
County of Allegheny } ss

I, THE UNDERSIGNED, R. D. Beardsley, Treasurer
Name of Officer. *Official Title.*

of the Hope Natural Gas Company Company, on my oath say that the return as shown on this and the foregoing pages of this report, has been prepared from the original books, papers and records of said Company; that I have carefully examined the same, and declare the same and each page thereof to be a complete and correct statement of the business and affairs of said Company in respect to each and every matter and thing therein set forth, and that all property has been reported at its *True and Actual Value*, to the best of my knowledge, information and belief; the words "true and actual value" being understood by me to mean that price for which the beforementioned property would sell if voluntarily offered for sale upon such terms as such property is usualy sold and not the price which might be realized if said property was sold at a forced sale, and that there have been no expenditures for "additions and new work" either within or without the State of West Virginia except as shown on Form No. 4 U. of this report; and that the foregoing return includes all property owned, leased, or operated in the State of West Virginia by said Company during the period for which said return is made.

R. D. Beardsley.

Treasurer
Official Title.

SUBSCRIBED AND SWORN TO before me this 26th day of March 1920

G. A. Kinley.

My Commision Expires March 25, 1921.
Notary Public.

(The return must be verified on the oath of the President, Vice-President, Secretary or Principal Accounting Officer.)

EXPLANATORY REMARKS

State of Pennsylvania }
County of Allegheny } ss

I, *THE UNDERSIGNED*, A. W. Thompson, President
Name of Officer. *Official Title.*

of the Pittsburgh and West Virginia Gas Company, on my oath say that the return as shown on this and the foregoing pages of this report, has been prepared from the original books, papers and records of said Company; that I have carefully examined the same, and declare the same and each page thereof to be a complete and correct statement of the business and affairs of said Company in respect to each and every matter and thing therein set forth, and that all property has been reported at its *True and Actual Value*, to the best of my knowledge, information and belief; the words "true and actual value" being understood by me to mean that price for which the beforementioned property would sell if voluntarily offered for sale upon such terms as such property is usualy sold and not the price which might be realized if said property was sold at a forced sale, and that there have been no expenditures for "additions and new work" either within or without the State of West Virginia except as shown on Form No. 4 U. of this report; and that the foregoing return includes all property owned, leased, or operated in the State of West Virginia by said Company during the period for which said return is made.

A. W. Thompson

President
Official Title.

SUBSCRIBED AND SWORN TO before me this 29th day of March 1920

W. A. Martin,

Notary Public

My Commission Expires March 25, 1921.
Notary Public.

(The return must be verified on the oath of the President, Vice-President, Secretary or Principal Accounting Officer.)

Form No. 9 U.

Public Utility

A part of the report of the United Fuel Gas Company

1919 EXPLANATORY REMARKS 1919

Prices on Pipe Lines are based on actual cost, including all material, labor constructing, rights of way, etc., less five per cent. per year for each year lines have been laid.

Other material is priced at approximately 75 per cent. of cost when new.

Material in stock at cost, Buildings, compressor stations, etc. are included at cost less depreciation.

Office furniture and horses and wagons are priced at 50 per cent. of cost.

State of West Virginia }
County of Kanawha } ss

I, THE UNDERSIGNED, L. A. Seyffert *Name of Officer.* Secretary and Treasurer *Official Title.*

of the United Fuel Gas Company, on my oath say that the return as shown on this and the foregoing pages of this report, has been prepared from the original books, papers and records of said Company; that I have carefully examined the same, and declare the same and each page thereof to be a complete and correct statement of the business and affairs of said Company in respect to each and every matter and thing therein set forth, and that all property has been reported at its *True and Actual Value* to the best of my knowledge, information and belief; the words "true and actual value" being understood by me to mean that price for which the before-mentioned property would sell if voluntarily offered for sale upon such terms as such property is usually sold and not the price which might be realized if said property was sold at a forced sale, and that there have been no expenditures for "additions and new work" either within or without the State of West Virginia except as shown on Form No. 4 U. of this report; and that the foregoing return includes all property owned, leased, or operated in the State of West Virginia by said Company during the period for which said return is made.

L. A. Seyffert,

Secretary and Treasurer
Official Title.

SUBSCRIBED AND SWORN TO before me this 30th day of March 1920

D. C. Jay,

My commission expires March 2, 1925.
Notary Public

Public Utility

A part of report of Reserve Gas Company

WEST VA. 1920

"NOTE FOR FOOT OF PAGE NO. 3"

The company suffered a decline of 21.12% in the rock pressure of its gas fields during the year 1919 and has deducted from Earnings, a Depletion of $891,513.14 in its return for Federal Income and Excess Profit Taxes. This depletion item is not deducted from the earnings on Page 3 of this return; nor has any account been taken of depletion in any of the statements rendered herein. On Page 4½ the amount of this depreciation is shown to be $322,419.43 for the year 1919; this depreciation is applied only to tangible property such as Pipe Lines and Compressing Stations and not to Leaseholds; and is at conservative rates, for instance;- On Field and Main Lines 5%, on City Plants 3% and somewhat higher rates on Automobiles, Teaming Investment and such property subject to rapid deterioration.

Wish to note also the additions to Investment as shown on Page 5, $870,210.19 and that in spite of such expenditures, the amount of gas which the company was able to produce, purchase and sell was greatly below 1918 deliveries, The plant was actually worth less as a gas plant at the end of the year thmat the beginning, the decline in the supply more than overcoming all the money reinvested. The exhaustion of gas is constantly lessening the value of the tangible investment beyond mere wear and tear and in spite of maintenance expenditures, it is not possible to avoid depreciation due to either of these causes.

Reserve Report Bd. Pub. Wks. W. Va. Ex. 12.

Form No. 3. U—A.

Gas and Oil.

A part of the report of the Reserve Gas Company.

THE OPERATING AND MAINTENANCE AND OTHER EXPENSES as shown below should not include expenditures for additions to plant, dividends or any amount for depreciation.

Operating and Maintenance Expenses, Interest, Etc., for the year ending December 31, (Fully itemize.)	Entire Plant	West Va.
General Expenses:		
Salaries and Expenses of General Officers	$ 10,000.00	$
Salaries and Expenses of General Office Employees	43,165.65	
Miscellaneous Expenses of General Office (Office Supplies, Etc.)		Same
Leagl Expenses	1,330.87	
Private Telephone Lines	1,587.34	
		Same
Prospecting and Lease Expenses:		
Salaries	2,748.85	
Purchase of Leases		
Rental of Leases	66,338.56

Public Utility

A part of the report of the Reserve Gas Company.

EXPLANATORY REMARKS

The Unit prices used on pipe and materials are approximately those approved some years ago by Tax Commissioners Townsend and Dillon; the same prices substantially have been used each year since that time, and have formed a fair guide, together with a relatively equal rate on leaseholds for several years, for the division of taxes if not for the ascertainment of true and actual value of unit prices in a going concern.

State of Pennsylvania } ss
County of Allegheny }

I, THE UNDERSIGNED, R. D. Beardsley Treasurer
Name of Officer. *Official Title.*

of the Reserve Gas Company, on my oath say that the return as shown on this and the foregoing pages of this report, has been prepared from the original books, papers and records of said Company; that I have carefully examined the same, and declare the same and each page thereof to be a complete and correct statement of the business and affairs of said Company in respect to each and every matter and thing therein set forth, and that all property has been reported at its *True and Actual Value* to the best of my knowledge, information and belief; the words "true and actual value" being understood by me to mean that price for which the before-mentioned property would sell if voluntarily offered for sale upon such terms as such property is usually sold and not the price which might be realized if said property was sold at a forced sale, and that there have been no expenditures for "additions and new work" either within or without the State of West Virginia except as shown on Form No. 4 U. of this report; and that the foregoing return includes all property owned, leased, or operated in the State of West Virginia by said Company during the period for which said return is made.

R. D. Beardsley

Treasurer
Official Title.

SUBSCRIBED AND SWORN TO before me this 25th day of March 1920

C. A. Kinley.

My Commission Expires March 25, 1921.

Interest paid on Funded Debt during the year $ None

Interest paid on Unfunded Debt during the year $ "

(There should appear on each sheet of this report *some notation* to indicate that the information desired or questions asked have not been overlooked. The word "none" may be used against any particular item or items, where that word expresses the *facts*. If, for any reason, for any item, the exact amount cannot be reported, such an amount as is approximately correct must be reported. In such case, refer by note to "remarks" at the bottom of the sheet on which a diviation occurs, where a brief explanation should be given why specific data called for cannot be returned *exactly as requested*.)

REMARKS.

Form No. 3. U—A.

Gas and Oil.

A part of the report of the Carnegie Natural Gas Company

THE OPERATING AND MAINTENANCE AND OTHER EXPENSES as shown below should not include expenditures for additions to plant, dividends or any amount for depreciation.

Operating and Maintenance Expenses, Interest, Etc., for the year ending December 31, (Fully itemize.)	Entire Plant	West Va.

	119,339.49	83,810.74
Prospecting and Lease Expenses:		
Salaries	7,352.90	7,052.07
Purchase of Leases	4,410.13	2,116.52
Rental of Leases	125,045.01	65,135.00
Drilling unproductive Wells	290,080.30	223,413.84
	426,888.34	297,717.43
Production Expenses:		
Superintendent and Salaries	258,959.68	202,123.93
Royalties	198,053.52	153,045.45
Operating Gas Wells		
Operating Oil Wells	1,084,710.18	837,827.26
Repairs to Gas Wells		
Repairs to Oil Wells	144,234.64	120,564.36
	1,685,958.02	1,313,561.00
Transportation Expenses:		
Superintendence and Salaries	100,498.25	59,119.51
Operating Transportation Lines		
Operating Pump Stations	34,234.32	27,687.06
Operating Pressure Stations		
Repairs of Transportation Lines	109,899.18	94,955.05
Repairs of Pumping Station Equipment	49,321.66	35,259.30
	293,953.41	217,020.92
Carried Forward to Form No. 3 U.—A.—Continued	2,526,139.26	1,912,110.09

Form No. 3—U.—A.—Continued.

Gas and Oil.

A part of the report of Carnegie Natural Gas Company.

Brought forward from Form No. 3 U.—A.	$ 2,526,139.26	$ 1,912,110.09
Taxes: War Income Tax,	32,491.40	27,292.77
License or Charter Taxes	283.76	283.76
General Property Taxes	88,982.92	76,511.69
Federal Excess Profits Tax		
Federal Income Tax	53,507.47	44,946.27
Other Federal Taxes	175,265.55	149,034.49
Miscellaneous Taxes		
Interest and Discount:		
On Bonds and other Funded Debt		
On Unfunded Debt		
Gas Purchased	109,060.69	27,335.81
Miscellaneous Expense which can not be set out under the above headings: (Fully itemize) Do not combine items if by so doing, the total to be entered on any line is in excess of $5000.) (Companies whose total expense for operation and maintenance does not exceed $5000, may itemize all of such expense hereunder if desired instead of using the form above.)		
A * Depreciation.	205,865.30	172,926.85
* A - Have made charge to our Profit and Loss for 1919 of $205,865.30 for estimated general depreciation for 1919. $127,500.00 of which is estimated to be applicable to West Virginia investments as set forth above.		
* B - Opinions differ as to what would be a fair basis. We think average life of wells would be fairest and most equitable basis.		
* C - Uncertainties of the business, abandonment of wells and the rather short life of wells, etc.		
Totals	3,016,330.80	2,261,407.24

What amount, if any, should be charged off for depreciation? $ $

B What is considered a fair rate of depreciation?

C What reason can be assigned for a charge-off for depreciation, considering the maintenance expense set out above?

EXPLANATORY REMARKS

State of Pennsylvania }
County of Allegheny } ss

I, *THE UNDERSIGNED*, H. L. Smith, Auditor
Name of Officer. *Official Title.*

of the Carnegie Natural Gas Company, on my oath say that the return as shown on this and the foregoing pages of this report, has been prepared from the original books, papers and records of said Company; that I have carefully examined the same, and declare the same and each page thereof to be a complete and correct statement of the business and affairs of said Company in respect to each and every matter and thing therein set forth, and that all property has been reported at its *True and Actual Value*, to the best of my knowledge, information and belief; the words "true and actual value" being understood by me to mean that price for which the beforementioned property would sell if voluntarily offered for sale upon such terms as such property is usualy sold and not the price which might be realized if said property was sold at a forced sale, and that there have been no expenditures for "additions and new work" either within or without the State of West Virginia except as shown on Form No. 4 U. of this report; and that the foregoing return includes all property owned, leased, or operated in the State of West Virginia by said Company during the period for which said return is made.

H. L. Smith.

Auditor.
Official Title.

SUBSCRIBED AND SWORN TO before me this 31st day of March 1920

Henry T. Hamilton

My Commission Expires March 3, 1923.
Notary Public.

(The return must be verified on the oath of the President, Vice-President, Secretary or Principal Accounting Officer.)

Form No. 9 U.

Public Utility.

A part of the report of the Columbia Gas and Electric Company.

EXPLANATORY REMARKS

State of Ohio }
County of Hamilton } ss

I, *THE UNDERSIGNED*, Polk Laffoon *Name of Officer.* Secretary *Official Title.*

of the Columbia Gas and Electric Company, on my oath say that the return as shown on this and the foregoing pages of this report, has been prepared from the original books, papers and records of said Company; that I have carefully examined the same, and declare the same and each page thereof to be a complete and correct statement of the business and affairs of said Company in respect to each and every matter and thing therein set forth, and that all property has been reported at its *True and Actual Value*, to the best of my knowledge, information and belief; the words "true and actual value" being understood by me to mean that price for which the beforementioned property would sell if voluntarily offered for sale upon such terms as such property is usualy sold and not the price which might be realized if said property was sold at a forced sale, and that there have been no expenditures for "additions and new work" either within or without the State of West Virginia except as shown on Form No. 4 U. of this report; and that the foregoing return includes all property owned, leased, or operated in the State of West Virginia by said Company during the period for which said return is made.

Polk Laffoon.

Secretary
Official Title.

SUBSCRIBED AND SWORN TO before me this 11th day of February 1920

Stock issued (money value)	$ 23,000,000.00	
Amount realized from sale of bonds	$ 10,500,000.00	
Earnings put into plant	$	
	$	
Total investment or cost (entire plant)		$ 44,078,429.86

What is the actual cost of that part of the plant which is situate in West Virginia, including property of all kinds?	$ (See 8U)
What would be the approximate cost of reproducing the entire plant new?	44,078,429.86
What would be the approximate cost of reproducing that part of the plant which is situated in West Virginia?	$ 14,279,348.32
What is the total value of the entire plant, as shown by the books of the Company?	$ 30,083,755.74
What is the value of that part of the plant situate in West Virginia, as shown by the books of the Company?	$ 9,706,105.79

ALL QUESTIONS ON THIS SHEET MUST BE ANSWERED.

Form No. 3—U.

Public Utility.

A part of the report of The Manufacturers Light and Heat Company.

What were the total gross earnings (including all sums earned or charged, whether actually received or not, and its proportion of the gross receipts for business done by it in connection with other companies or firms), of the Company, Co-partnership, Association or Corporation making this report, for the year ending

December 31, 1919 in all States? $ 11,031,947.58

in West Virginia $ 2,441,556.70

How much of the gross earnings resulted from business actually done in West Virginia? $ 2,441,556.70

How much of the total gross earnings should properly be credited to West Virginia to give the state a fair share of earnings? $ 2,441,556.70

If this company operates outside of West Virginia, how, or upon what principle were the earnings apportioned, as between this state and other states?

Actual Earnings accrued from Sales of Gas to Consumers; the production of Oil and Gasoline within the State, and Income of Sundry Earnings within the State.

What were the total operating and maintenance expenses including interest and taxes in all states? $ 7,083,418.14

What were the total operating and maintenance expenses including interest and taxes in West Virginia? $ 1,627,390.48

("Operating and maintenance expenses" is to be understood to mean the actual expenses of operation, and actual expenditures for maintenance. Expenditures for new work (permanent improvements and additions), and dividends are not to be included as operating expenses.)

If this company operates outside of West Virginia, how, or upon what principle were the operating expenses apportioned as between this state and other states? Operating Expenses apportioned to West Virginia on the basis of its proportion of Gas delivered as to gas delivered entire system.

What were the net earnings in West Virginia for the year ending December 31, 1919 ? $ 814,166.22

What were the total net earnings, in all states, for the year ending December 31, 1919 ? $ 3,998,528.14

What dividends were declared during the year on common stock? 10 per cent; amount $ 2,253,040.00

What dividends were declared during the year on preferred stock? ____ per cent; amount $ None

When were the dividends declared on common stock? Quarterly Preferred stock? $ None

Interest paid on Funded Debt during the year $ 45,930.85

Interest paid on Unfunded Debt during the year $ None

(There should appear on each sheet of this report *some notation* to indicate that the information desired or questions asked have not been overlooked. The word "none" may be used against any particular item or items, where that word expresses the *facts*. If, for any reason, for any item, the exact amount cannot be reported, such an amount as is approximately correct must be reported. In such case, refer by note to "remarks" at the bottom of the sheet on which a deviation occurs, where a brief explanation should be given why specific data called for cannot be returned *exactly as requested*.)

REMARKS.

Gas and Oil.

Form No. 3. U—A.

A part of the report of the The Manufaturers Light and Heat Company.

THE OPERATING AND MAINTENANCE AND OTHER EXPENSES as shown below should not include expenditures for additions to plant, dividends or any amount for depreciation.

Operating and Maintenance Expenses, Interest, Etc., for the year ending December 31, (Fully itemize.)	Entire Plant	West Va.
General Expenses:		
Salaries and Expenses of General Officers	$ 75,856.60	$
Salaries and Expenses of General Office Employees	79,782.51	
Miscellaneous Expenses of General Office (Office Supplies, Etc.)

Form No. 9 U.

Public Utility.

A part of the report of the The Manufacturers Light & Heat Company.

EXPLANATORY REMARKS

Page 7 - Do not understand what meaning is to be taken from "Daily Capacity". The estimated gas production available from wells owned The Manufacturers Light & Heat Company, computed on the first minute raise above line pressure, showing number of cubic feet available under conditions existing per day at time gauges were taken on December 31st, 1919, was, all States, 68,693,000 cu.ft. Estimated West Virginia 29,022,000 cu.ft.

Page 9- Twenty-two lines cross the Ohio river between Chester in Hancock County, W. Va. and New Martinsville in Wetzel County, W. Va. Also pipe lines cross the state line between West Virginia and Pennsylvania at various points in all three states and the gas intermingles and flows through the entire system, sometimes in one direction, sometimes in the opposite direction, depending upon the demand in any particular locality.

State of Pennsylvania }
County of Allegheny } ss

I, *THE UNDERSIGNED*, G. W. Ratcliffe (*Name of Officer.*) Treasurer (*Official Title.*)

of the Manufacturers Light and Heat Company, on my oath say that the return as shown on this and the foregoing pages of this report, has been prepared from the original books, papers and records of said Company; that I have carefully examined the same, and declare the same and each page thereof to be a complete and correct statement of the business and affairs of said Company in respect to each and every matter and thing therein set forth, and that all property has been reported at its *True and Actual Value*, to the best of my knowledge, information and belief; the words "true and actual value" being understood by me to mean that price for which the beforementioned property would sell if voluntarily offered for sale upon such terms as such property is usualy sold and not the price which might be realized if said property was sold at a forced sale, and that there have been no expenditures for "additions and new work" either within or without the State of West Virginia except as shown on Form No. 4 U. of this report; and that the foregoing return includes all property owned, leased, or operated in the State of West Virginia by said Company during the period for which said return is made.

G. W. Ratcliffe

Official Title.

SUBSCRIBED AND SWORN TO before me this 30th day of April 1920

Harry H. Fowler

My Commission Expires December 10, 1923.

Notary Public.

(The return must be verified on the oath of the President, Vice-President, Secretary or Principal Accounting Officer.)

451 W. Va. Ex. 33.

Wheeling Natural Gas Co. et al

to

Hope Natural Gas Co.

Assignment.

Note.—At page 1171 of the printed record the Commissioner suggested that the indenture by the Wheeling Natural Gas Company and others to the Hope Natural Gas Company, dated June 27, 1911, proof of statistical contents of which was offered as tabulation of a voluminous document, be "marked as an exhibit, not to be printed in the record, but to be preserved as an exhibit in the case in the same way that certain maps are being preserved—without preparation to have the same printed or copied into the record. Counsel for the complainant can then have access to the exhibit as part of the case to make any correction of the con sions which the witness, Nease, is prepared to draw from the do ment in his condensed form." Whereupon counsel for the State of West Virginia accepted the suggestion of the Commissioner and offe l in evidence an attested copy of said indenture, marked for identification West Virginia Exhibit No. 33.

452 W. Va. Ex. 34.

Mountain State Gas Co.

to

Hope Natural Gas Co.

Indenture.

Note.—At page 1173 of the printed record, the Commissioner suggested that the same disposition be made of the indenture by the Mountain State Gas Company to the Hope Natural Gas Company, dated April 1, 1910, as was made of the indenture of the Wheeling Natural Gas Company and others to the Hope Natural Gas Company (at page 1171 of the printed record), to be marked as an exhibit, not to be printed in the record, but to be preserved as an exhibit in the case. Whereupon an attested copy of said indenture from the Mountain State Gas Company to the Hope Natural Gas Company was put in evidence to be marked for identification West Virginia Exhibit No. 34.

453 UNITED FUEL AND LOUISVILLE COS.' W. VA. EX. 35.

W. Va. Ex. 35. J. B. S.

(Introduced at Page 1199, Record.)

This agreement, made and entered into this 5th day of July, 1913, by and between United Fuel Gas Company, a West Virginia corporation, party of the first part, hereinafter called "United Company", and, Louisville Gas and Electric Company, a Kentucky corporation, party of the second part, hereinafter call- "second party":

Whereas, United Company is the owner of natural gas wells, gas rights, gas leases and gas producing contracts in the States of West Virginia and Kentucky and is the owner of pipe lines through which the natural gas produced from its properties and leases and purchased under its contracts can be transported to a measuring station in or near the village of Inez, Martin County, Kentucky, hereinafter more particularly referred to; and

Whereas, Second Party owns an extensive distributing system for the distribution of gas in the city of Louisville, Kentucky, and in its neighborhood and desires to supply the consumers upon said system with natural gas; and

Whereas, Second Party has made arrangements for the construction of a twelve-inch pipe line for the transportion of natural gas from the measuring station near Inez, to Louisville, which will be owned or controlled by it, and desires to enter into a contract for the purchase of natural gas at said measuring station.

Now, therefore, this agreement witnesseth that the parties hereto, in consideration of the premises, and of their mutual covenants and agreements herein contained, have agreed and do hereby agree as follows:

First. United Company agrees to construct a measuring station at a convenient point to be agreed upon by the parties hereto at or near the said village of Inez, and to connect same with its own lines and with Second Party's line, so as to be prepared to furnish and deliver gas through said twelve-inch line as soon as said pipe line is fully completed and ready for operation. The said measuring station shall be known as "Inez Station", and shall be equipped with Standard Pitot tubes or such other accurate measuring devices as the parties hereto may subsequently agree upon in substitution for said Pitot tubes; all apparatus and equipment to be installed and operated in said station, and the character and efficiency thereof, shall be satisfactory to Second Party. The cost of erecting and equipping the said station, and of operating and maintaining same, and of reading, checking and registering the measuring devices therein, shall
454 be wholly borne and paid for by United Company. The said station shall be operated by United Company, but shall be open at all times to the inspection of Second Party and its representatives, who shall also have the right to place therein one or more represent-

atives day and night to check the readings of the water tubes and pressure gauges therein made by the representatives of the United Company, and also to make their own readings of the said tubes and gauges, and check and carry away a record thereof, as well as memoranda therefrom and copies of the readings made by the representatives of United Company; but Second Party shall bear and pay the whole expense of Second Party's representatives in such stations.

Second. Second Party agrees to cause the 12-inch pipe line hereinbefore referred to, to be constructed and completed in accordance with the terms of the contract for the construction of the same hereinbefore referred to, or in case the other parties to said contract fail so to construct and complete said pipe line, that it, the said Second Party will nevertheless cause said pipe line to be constructed and completed with all due diligence. It is understood and agreed that the said twelve-inch line is to be used during the life of this contract or any renewal or extension thereof for the sole purpose of delivering the quantities of natural gas deliverable under this contract, and so long as United Company shall be able to comply with the terms and conditions of this contract its capacity shall be reserved for this purpose. United Company undertakes and agrees to sell Second Party, and Second Party agrees to purchase and take from United Company each year during the continuance of this contract (commencing upon the completion of the pipe line hereinbefore referred to, and the necessary connections) natural gas to an amount requisite for the supply of the consumers upon the distributing systems in and about the city of Louisville, now or hereafter owned by Second Party, and Second Party shall also have the right to purchase and take natural gas through said pipe line for the supply of such other consumers beyond the limits of said distributing systems, as can be conveniently supplied with natural gas through said pipe line; provided however, the quantity so taken by Second Party shall not exceed the capacity of the said twelve inch line with a pressure at the initial end thereof of three hundred and fifty pounds to the square inch. Nothing herein contained shall limit the right of the Second Party to purchase elsewhere any quantities of gas over and above the capacity of the said twelve-inch line, with an initial pressure of three hundred and fifty pounds to the square inch, but if the capacity of the pipe lines owned or controlled by Second Party or operated in its interest from the Kentucky-West Virginia border to Louisville, shall at any time or times be increased beyond the capacity of the twelve-inch line above mentioned, by additional construction or otherwise during the continuance of this agreement, then if United Company so elects, but not otherwise, this agreement shall be modified by substituting such increased capacity for the capacity of said twelve-inch pipe line as the limit of the quantity of gas to be taken hereunder, provided, however, that United Company shall in the case of every such increase exercise such election within ninety days after Second Party shall have called upon it so to do, offering to provide the increased capacity with all reasonable diligence.

455

Third. Seven months prior to January 1st during each year of the term of this contract Second Party shall give to United Company written notice specifying the amount of gas that is estimated to be required for the supply of the consumers upon the distributing systems hereinbefore referred to, during the year commencing January 1st, succeeding the time of such notice. United Company agrees to give Second Party written notice not less than five months prior to January 1st if in the judgment of the Manager of United Company the supply of gas available for delivery hereunder has so diminished that United Company will be unable to deliver to Second Party in the year beginning January 1st, following such notice as much gas as is being delivered during the current year; and United Company shall also give to Second Party written notice not less than sixty days after the receipt of said yearly estimate of Second Party if in the judgment of the Manager of United Company the supply of gas available for delivery hereunder is so diminished as to prevent United Company from delivering to Second Party the amount of such estimate United Company shall state in such notice an estimate of the amount of gas which United Company is able to deliver for the year embraced in the notice.

Fourth. The gas deliverable hereunder shall be delivered by United Company and taken by Second Party at the Inez measuring station hereinbefore provided for, and the amount of gas furnished and delivered hereunder at such point of delivery, shall be determined as follows:

Readings of the Pitot tubes or other measuring devices provided for shall be made at regular fifteen minute intervals throughout the twenty-four hours of each day, and duplicate statements of the readings shall be mailed daily to United Company and to Second Party. From such readings of the measuring tubes
456 or devices the amount of natural gas furnished and delivered each month shall be computed on the basis of ten ounces pressure above atmospheric, according to Boyle's law for the measurement of gas at varying pressures. After the installation of the said station the atmospheric pressure and temperature for use in such computations shall be ascertained by actual tests made at the station over a period of time satisfactory to both parties hereto; but until such actual tests are completed 14.4 pounds per square inch is now adopted as the atmospheric pressure for such computations, and 60 degrees Fahrenheit as a fixed temperature. This method of measurement is hereby adopted as the basis of measurement for the purpose of this agreement and payments for gas shall be upon the monthly statements rendered by United Company to Second Party showing the total computation of gas so measured during the month.

Fifth. Second Party undertakes and agrees to pay to United Company for natural gas sold and delivered to Second Party by United Company hereunder the following prices, (the periods of time named are from the time after the first introduction of natural gas into Louisville, through said pipe line):

First six months	7½¢
Second six months	8¢
Second year	9¢
Third year	10¢
Fourth year	11¢
Fifth year	12¢
Sixth year	13¢
Seventh year	14¢
Eighth year	15¢
Ninth year	15¢
Tenth year	15¢
Eleventh year	15½¢
Twelfth year	15½¢
Thirteenth year	15½¢
Fourteenth year	16¢
Fifteenth year	16¢
Sixteenth year	16¢
Seventeenth year and succeeding years of the contract	17½¢

Sixth. The above prices are in each case for one thousand cubic feet of natural gas measured at Inez station near the State Line between West Virginia and Kentucky, and on a basis of ten ounces pressure to the square inch, according to Boyle's law for the measurement of gas at varying pressures.

Seventh. It is further understood and agreed that in case any lawful tax or assessment is hereafter imposed on natural gas in any manner so as to constitute in effect a charge upon the gas delivered hereunder, the amount of such tax or assessment or charges shall be borne one-half by United Company and one-half by Second Party insofar as it effects or relates to, or is ap-
457 portionable to the natural gas deliverable hereunder, and in the event the United Company is required to pay the same, one-half of the amount thereof shall be paid by Second Party to United Company in addition to the prices above stated.

Eighth. It is further understood and agreed that during the first three years after the commencement of the delivery of gas hereunder the difference between the requirements of the domestic consumers supplied from the aforesaid twelve-inch pipe line, and the capacity of the twelve-inch line at three hundred and fifty pounds pressure at Inez station, may be sold to manufacturers and factories, and during said three year period gas purchased by Second Party for such deliveries shall be sold to Second Party at prices ten per cent below the current prices for domestic gas as specified in the above table.

It is understood, however, that the furnishing of the agreed amount of gas at the reduced price is subject to the ability of United Company to furnish same without compression or pumping, and that if compression or pumping is necessary, the cost of such compression or pumping is to be added to the special prices for manufacturers' and factory gas. All gas sold below domestic rates

shall be deemed to be factory or manufacturers' gas within th meaning of this provision.

Ninth. United Company shall on or before the 10th day of eac month render a statement and bill to Second Party for the g purchased and taken during the month next preceding, ascertaine in the manner hereinbefore provided for, and Second Party unde takes and agrees that on or before the 20th day of each month will pay to United Company the amount due to United Compan for all gas so delivered to Second Party during the month ne preceding.

Tenth. At any and all times when gas is being sold to Secon Party for factory purposes at a reduced rate as hereinbefore pr vided, Second Party shall render a statement to United Compan on or before the 5th day of each month showing gas purchase and taken during the month next preceding for factory purposes the reduced rate agreed upon.

The amount of gas so purchased and taken shall be paid for the agreed reduced rate and the balance of the gas as shown b the measurements at Inez measuring station shall be accounte and paid for as domestic gas at the prices provided for in the Fift paragraph hereof.

458 Eleventh. If Second Party sells gas for factory purpos at a greater pressure than eight ounces same shall be reduce to eight ounces by applying the usual multiple to the end th all gas so sold for factory purposes shall be paid for under th terms of this contract on the basis of an eight ounce pressur All gas sold for factory purposes shall be accurately metered b meters or measuring devices mutually satisfactory to the partie hereto, and the meters or other measuring devices set to registe factory consumption shall be read daily. For the purpose of check ing the statements rendered of gas sold for factory consumptio the books of all companies owning the distributing systems throug which said gas is delivered shall be open to the properly accredite representatives of United Company for inspection and audit to sufficient extent only to check up the statements furnished as t the sales of gas for factory purposes upon which the benefit of th reduced rate is claimed, and the meters or measuring devices s for the measuring of factory gas shall be subject to inspection an test by the representatives of United Company at all reasonabl times, and shall also be inspected and tested from time to time b representatives of the several parties and when found to be defectiv or inaccurate the same shall be replaced and corrected.

Twelfth. No dominion or control over the natural gas delivere under this contract shall remain in United Company after the ga passes the point of delivery, nor shall United Company be respons ble for or on account of anything that may be done, happen o arise touching said gas after it is delivered at Inez Station, an second party undertakes and agrees that it will at all times an from time to time keep free, save harmless and indemnify Unite

Company from any and all manner of claims, suits and damages on account of any conduct, act or thing touching said gas after it has left the said point of delivery.

Thirteenth. United Company undertakes and agrees that it will use reasonable diligence in developing and drilling on gas leases and property at the time controlled by it for the purpose of fulfilling its obligations hereunder and enabling it to deliver gas to the full capacity of said pipe line at a pressure of three hundred and fifty pounds to the square inch at the initial end thereof; but such maximum pressure of three hundred and fifty pounds to the square inch need not be maintained except during such periods of time as Second Party may from time to time demand in order to enable it to satisfactorily supply its consumers; and for the above purposes will also build, provide, maintain and operate in good order,
459 condition and manner such compressor stations, pipe lines from its said gas wells, connections and other facilities necessary therefore United Company further agrees that it will also use reasonable diligence consistent with good business judgment in obtaining and developing new gas leases and contracts for gas when the same become necessary in order to enable it to deliver gas under the terms of this contract and such extensions, leases and contracts can be obtained on a basis profitable to said United Company.

Fourteenth. It is mutually understood and agreed that where either party to this contract without fault or neglect on its part fails to perform any obligations herein assumed by it, and such failure is due to acts of God, or to a public enemy, strikes, riots, injunctions or other interference through legal proceedings, breakage, or accidents to machinery or lines of pipe, washouts, earthquakes storms, freezing of lines or wells, sudden, partial or entire failure of gas wells, or any cause beyond its control, or is caused by the necessity for making repairs or alterations in machinery or lines of pipe, such failure shall not be deemed to be a violation by such party of its obligations hereunder; but such party shall use due diligence to again put itself forthwith in position to carry out all the obligations which by the terms hereof it has assumed, and so far as possible shall give the other party notice in writing or by telephone or telegraph of the shutting off of gas to make repairs or alterations.

Fifteenth. Unless previously terminated pursuant to the provisions herein contained or by mutual consent of the parties hereto, this contract shall continue for the term of twenty years from its date. Upon the termination of said contract United Company agrees that it will make a contract with Second Party for a further period, provided United Company then has natural gas available for sale, and Second Party is willing to purchase the same on terms as favorable to United Company as United Company can obtain from other parties. Second Party likewise agrees that after the expiration of said contract period of twenty years it will make a contract with United Company for a further period if Second Party desires to purchase natural gas and United Company will sell the same to

Second Party on terms as favorable to Second Party as it can obtain from other parties.

It is mutually understood and agreed that if either party shall desire to avail itself of the right to a further contract herein
460 given, it shall give notice of its election so to do at least twelve months before the expiration of the period of twenty years.

Sixteenth. The obligations of United Company at any time to deliver gas under this contract shall be limited to the amount of gas produced by United Company from gas fields then owned or leased by it and gas purchased by it under contracts then current for the purchase of gas which shall remain available for delivery hereunder after deducting from the total amount so produced and purchased;

(*a*) The quantities of natural gas necessary to supply at any and all times domestic consumers connected to United Company's own distributing system in West Virginia and domestic consumers in the towns in Ohio and Kentucky where it is now supplying natural gas directly to consumers and also natural gas now supplied to the distributing company in the town of Portsmouth, Ohio;

(*b*) The quantities of natural gas then deliverable to the Columbia Gas & Electric Company under a certain contract between United Company and that Company, dated December 1st, 1909, or under any renewal or renewals of said contract or by reason of the exercise at any time or times heretofore or hereafter by United Company of any of the options given to it by the terms of said contract, United Company hereby reserving to itself the right to extend such contract or hereafter to exercise any or all of said options;

(*c*) Such quantities, not exceeding the capacity of an eighteen inch pipe line, as United Company shall then be delivering to The Ohio Fuel Supply Company;

(*d*) Such quantities, not exceeding the capacity of an eighteen inch pipe line, as United Company shall then be delivering to the Hope Natural Gas Company;

(*e*) Such quantities, not exceeding the capacity of a ten inch pipe line, as United Company shall then be delivering to the Central Kentucky Natural Gas Company.

United Company reserves the right in the usual course of its business to surrender, exchange, sell or otherwise dispose of any part of the gas properties now or hereafter owned or leased by it; should, however, United Company desire to sell its gas properties as a whole it shall do so only subject to this agreement.

Seventeenth. It is mutually understood and agreed that in case Second Party shall fail to pay to United Company any amounts that may be due and payable hereunder to United Company within twenty days after such amount becomes due and payable, United

Company shall have the right, without cancelling this
461 & 462 contract or waiving any of its rights hereunder, to suspend the delivery of natural gas hereunder until all amounts due it are paid, or at i-s option shall have the right to terminate this contract on thirty days' notice to Second Party without prejudice to its right to collect the amoun due to it at the time of such termination of gas previously furnished hereunder.

Eighteenth. The gas to be delivered by United Company hereunder shall be the natural gas as it flows from the wells, except as the same may be changed or altered by the process of compression, pumping and transportation; but Second Party shall not be required to accept hereunder any gas which is not merchantable.

Nineteenth. This contract shall bind and run in favor of the parties hereto, and their respective successors and assigns; but shall not be assigned by either party without the consent of the other.

Twentieth. This contract executed in duplicate.

In witness whereof, the parties hereto have hereunto caused their corporate names to be signed by their respective Presidents or vice-presidents and their respective seals to be hereunto affixed by their respective Secretaries the day and year first above written.

463 UNITED FUEL AND PORTSMOUTH CO.'S W. VA. EX. 36.

(Introduced at page 1199, Record.)

W. VA. EX. #36. J. B. S.

This agreement, Made this 25th day of October, 1915, by and between United Fuel Gas Company, a corporation organized and existing under the laws of the State of West Virginia, hereinafter called the "United Fuel Company," party of the first part, and The Portsmouth Gas Company, a corporation organized and existing under the laws of the State of Ohio, hereinafter called the "Portsmouth Company," party of the second part,

Witnesseth:

Whereas, the United Fuel Company is the successor in interest of the United States Natural Gas Company under a contract bearing

date the 25th day of September, 1905, between said last mentioned Company and the Portsmouth Company for the sale of natural gas to said Portsmouth Company to be distributed by it in the City of Portsmouth, Ohio, for a term of ten (10) years, ending on the 15th day of December, 1915; and

Whereas, the parties hereto have agreed upon terms for the sale of natural gas to the party of the second part by the party of the first part for an additional term of years as hereinafter set forth;

Now, therefore, this agreement witnesseth: That the parties hereto, in consideration of the premises and of their mutual covenants herein contained, have agreed and do hereby agree as follows:

First. The said contract of the 25th day of September, 1905, shall be and the same is, together with all of its terms, provisions and conditions, extended to the 1st day of January, 1916, except that the party of the first part relinquishes the options thereby given to it of renewing said contract for a term of ten (10) years and of purchasing the plant owned by the party of the second part. It is understood, however, that while said contract as extended shall terminate as of January 1, 1916, yet the prices paid by the Portsmouth Company to United Fuel Company for gas shall be governed by the terms of said original contract only to and including the meter readings, in the regular course of business of the Portsmouth Company, for the month of December, 1915, and thereafter for all gas furnished, the price shall be determined by the terms and pro-
464 visions of this indenture.

Second. The United Fuel Company agrees to furnish to the Portsmouth Company at some convenient point near the easterly limit of the City of Portsmouth, to be selected by mutual agreement, and the Portsmouth Company agrees to take from and pay said United Fuel Company for all of the natural gas which the Portsmouth Company may sell or distribute to its class of consumers commonly classified as "domestic consumers" in the present corporate limits of said City of Portsmouth, for a term of ten (10) years, commencing on the 1st day of January, 1916, and ending on the 1st day of January, 1926. The obligation of the United Fuel Company under this paragraph is subject, however, to the limitations hereinafter set forth.

Third. The United Fuel Company agrees that it will construct, at its own cost and expense, at the location to be agreed upon as aforesaid, a suitable measuring station, and will install therein and maintain an orifice, pitot tubes or other standard measuring device for determining the amount of gas delivered to said Portsmouth Company and will furnish to said Portsmouth Company monthly statements of the amounts so delivered, accompanied by the original charts or reports. The amounts so delivered during each month for which such statement shall be furnished, shall be ascertained from the charts of such orifice or meter which may be in use or from the readings of such pitot tubes computed on the basis of ten (10) ounces above the atmospheric pressure of fourteen and four-tenths (14.4)

pounds per square inch according to Boyle's law for the measurement of gas at varying pressures, and on a temperature basis of forty (40) degrees Fahrenheit, flowing, and fifty (50) degrees Fahrenheit, storage, without further allowance for actual temperatures or barometric conditions. The Portsmouth Company shall have constant access to the meters or other measuring devices with the right to have its representatives verify all readings and reports and shall have the further right at any time, upon notice to the United Fuel Company, to require a special test of the meters or measuring devices. The cost of such special tests shall be borne by the Portsmouth Company if the result shows the meters to have been within three (3) per cent correct; otherwise such cost shall be borne by the selling party.

Fourth. The Portsmouth Company undertakes and agrees to pay the United Fuel Company for the natural gas sold and delivered hereunder the following prices:

For all gas delivered during the calendar year of 1916, including that delivered after the meter readings for the month of December, 1915, seventeen (17) cents.

For all gas delivered during the calendar year of 1917, seventeen and one-fourth (17¼) cents.

For all gas delivered during the calendar year of 1918, seventeen and one-half (17½) cents.

For all gas delivered during the calendar year of 1919, eighteen (18) cents.

For all gas delivered during the calendar year of 1920, and each year thereafter of the term of this contract, nineteen (19) cents.

The above prices are in each case for one (1) thousand cubic feet of natural gas, measured in the manner hereinabove set forth.

Provided, however, that in the event the rate charged by the Portsmouth Company for natural gas supplied by it to its domestic consumers in said City of Portsmouth shall be increased to a higher rate than that now so charged, at any time during said term of ten (10) years, then for all the time which such higher rate may be charged by said Portsmouth Company, the latter agrees to pay to said United Fuel Company an additional price per thousand cubic feet to be determined as follows, viz: The additional price to be paid, in such event, by the Portsmouth Company to United Fuel Company shall be an amount per thousand cubic feet equal to thirty (30) per cent of the amount of increase in price per thousand cubic feet over the existing domestic rate charged by said Portsmouth Company for such part of the term of five (5) years, commencing on the 1st day of January, 1916, as the Portsmouth Company may charge a rate higher than the present rate and an amount equal to fifty (50) per cent of the amount of increase in price over said existing rate which may be charged by said Portsmouth Company for such part of the term of five (5) years, commencing on the 1st day of January, 1921, as the Portsmouth Company may charge a rate higher than the present rate.

Fifth. The obligations of the United Fuel Company at any tim to deliver gas under this contract shall be limited to the amount o gas produced by it from gas fields then owned or leased by it an gas purchased by it under contracts then current for the purchase o gas, after deducting from the total amount so produced and pur chased—

(*a*) The quantities of natural gas necessary to supply at any an all times domestic consumers connected to the now existing distrib uting systems of United Fuel Company in West Virginia, Ohio an Kentucky.

(*b*) The quantities then deliverable to the Ohio Fuel Suppl Company under a contract between United Fuel Company and sai Ohio Fuel Supply Company, bearing date the 19th day of September 1910.

(*c*) The quantities then deliverable to the Columbia Gas an Electric Company under a contract between United Fuel Compan and said Columbia Gas and Electric Company, dated January 1 1913.

(*d*) The quantities then deliverable to the Hope Natural Ga Company or its assigns, under contract between United Fuel Com pany and said Hope Natural Gas Company, bearing date the 1st da of July, 1910.

(*e*) The quantities then deliverable to the Central Kentuck Natural Gas Company, under contract between United Fuel Com pany and said Central Kentucky Natural Gas Company, bearing dat the 1st day of November, 1912.

(*f*) The quantities then deliverable to Louisville Gas and Elec tric Company under contract between United Fuel Company an said Louisville Gas and Electric Company, bearing date the 5th da of July, 1913.

The United Fuel Company reserves the right also in the usua course of its business to surrender, exchange, sell or otherwise di pose of any part of the gas properties now or hereafter owned o leased by it; should, however, the United Fuel Company desire to se its gas properties as a whole it shall do so only subject to thi
467 agreement.

Sixth. In addition to the natural gas herein agreed to b sold by the party of the first part to the party of the second part fo the use of consumers classified as domestic in said City of Port mouth, the United Fuel Company further agrees to sell to the Port mouth Company and deliver the same at the measuring station afor said, such additional quantities of natural gas, if any, as said Unite Fuel Company may have available, for sale by said Portsmouth Com pany to industrial or manufacturing consumers, for industrial o manufacturing purposes, in said City of Portsmouth, or in the imm diate vicinity thereof, but only under express contracts between sai

rtsmouth Company and such industrial or manufacturing con-
mers, which have first been approved by the United Fuel Com-
ny, limited as to time and subordinating the service of such con-
mers to the service of domestic consumers. For the gas supplied
der this paragraph for the use of such industrial or manufacturing
nsumers of the Portsmouth Company, the latter agrees to pay to
id United Fuel Company the sum of eight (8) cents per thousand
bic feet, computed according to Boyle's law in the manner above
t forth for the measurement of the gas sold hereunder for domestic
rposes; provided, however, in the event the Portsmouth Company
all at any time during said term of ten (10) years charge for gas
ld by it to such industrial or manufacturing purposes, in the said
ty of Portsmouth, or the immediate vicinity thereof, a higher rate
an that now charged by it to such consumers, then the rate to be
id by the Portsmouth Company to the United Fuel Company shall,
ring such time that said increased rate is so charged, be an amount
excess of said sum of eight (8) cents per thousand cubic feet,
qual to thirty (30) per cent of the increase charged by said Ports-
outh Company for the first five (5) years of said term, and equal
fifty (50) per cent of such increase for the second five (5) year
rm.

Seventh. The United Fuel Company shall on or before the 10th
ay of each month render a statement to the Portsmouth Company
f the gas delivered during the month next preceding, and the Ports-
outh Company agrees that on or before the 20th day of each month
it will pay to the United Fuel Company the amount due for
468 all gas so delivered during the month next preceding, and the
Portsmouth Company agrees that on or before the 20th day of
ach month it will pay to the United Fuel Company the amount due
or all gas so delivered during the next preceding month.

Eighth. At any and all times when gas is being sold to the Ports-
outh Company for industrial or manufacturing purposes at the rate
hereinbefore provided for such gas, the Portsmouth Company shall
render a statement to the United Fuel Company on or before the
5th day of each month showing the amount of gas purchased and
taken during the next preceding month for industrial or manufac-
turing purposes, and the United Fuel Company shall have full right
and authority at any time to inspect the books, accounts, meters and
appliances of the Portsmouth Company for verifying any such state-
ment. The amount of gas sold, purchased and taken for manufac-
turing or industrial purposes each month shall be paid for at the
rate above provided for such gas, and the balance of the gas taken
by the Portsmouth Company as shown by the meter at the measuring
station shall be accounted for and paid for as gas sold for domestic
purposes at the prices provided in the Fourth paragraph hereof. All
gas sold below domestic rates shall be deemed to be sold for manu-
facturing or industrial purposes within the meaning of this pro-
vision.

Ninth. Regardless of the pressure at which the Portsmouth Company may sell gas for manufacturing purposes, the calculation of the amount thereof shall be made on a basis of ten (10) ounces by applying the usual multiple to the end that all gas sold for such purposes shall be paid for under the terms of this contract on the basis of ten (10) ounces pressure. All gas sold for manufacturing or industrial purposes shall be accurately measured by meters mutually satisfactory to the parties hereto and such meters shall be read daily.

Tenth. No control over the natural gas delivered under this contract shall remain in the United Fuel Company after the gas passes the point of delivery in said measuring station, and the Ports-
469 mouth Company undertakes and agrees that it will save harmless and indemnify the United Fuel Company from any and all manner of claims, suits and damages on account of injury or loss, if any, caused by the said gas, or to which the said gas may contribute, after it has passed the said point of delivery, except such as may be occasioned by the negligence or default of the United Fuel Company.

Eleventh. The United Fuel Company undertakes and agrees that it will use reasonable diligence in developing and drilling gas lands at the time controlled by it in order to supply the said Portsmouth Company with the amount of gas required by the domestic consumers of the Portsmouth Company in the present corporate limits of the said City of Portsmouth, and will for the same purpose maintain and operate in good order its pipe lines and plant.

Twelfth. It is mutually understood and agreed that where either party to this contract, without fault or neglect on its part, fails to perform any obligation herein assumed by it and such failure is due to acts of God or a public enemy, strikes, riots, injunctions, breakage or accidents to machinery or pipe lines, earthquakes, storms, freezing of lines or wells, sudden, partial or entire failure of gas wells or any other cause beyond its control or is caused by the necessity for making repairs in machinery or pipe lines, such failure shall not be deemed a violation by such party of its obligations hereunder; but such party shall use diligence in re-commencing the performance of its obligations and shall so far as possible notify the other party in advance of any interruption in the service which can be foreseen.

Thirteenth. It is mutually understood and agreed that should the Portsmouth Company fail to pay to the United Fuel Company any amount which may be due and payable hereunder to the latter Company within twenty (20) days after such amount becomes due and payable, the United Fuel Company shall have the right, without cancelling its contract or waiving any of its rights hereunder, to suspend the delivery of natural gas until all amounts due to it are paid, or, at its option, shall have the right to terminate this contract
470 on thirty (30) days' notice to the Portsmouth Company, without prejudice to its rights to collect the amount due to it at the time of such termination for gas previously furnished here-

nder. It is understood, however, should notice of termination be iven under this provision, the same shall not become effective if the ntire amount due with interest shall be paid by the Portsmouth Company within the thirty (30) days' period above provided for.

Fourteenth. This contract shall bind and extend to the parties hereto and to the successors and assigns of the party of the first part, but the interest of the party of the second part hereunder shall not be assigned without the written consent of the party of the first part.

In witness whereof the parties hereto have caused their corporate names to be signed by their respective officers thereunto duly authorized and their respective corporate seals to be hereunto affixed, all in duplicate, this the day and year first above written.

STATE OF WEST VIRGINIA,
County of Kanawha, ss:

I, D. C. Jay, a Notary Public of said County of Kanawha, do certify the W. Y. Cartwright personally appeared before me in my said County, and being by me duly sworn, did depose and say that he is the Vice-President of United Fuel Gas Company, one of the corporations described in the writing above, bearing date the 25th day of October, 1915, authorized by said corporation to execute and acknowledge deeds and other writings for said corporation, and that the seal affixed to the said writing is the corporate seal of said corporation, and that the said writing was signed and sealed
471 & 472 by him on behalf of said corporation by its authority duly given. And the said W. Y. Cartwright acknowledged the said writing to be the act and deed of said corporation.

Given under my hand and official seal this 28th day of July, A. D. 1916.

[Notarial Seal.] D. C. JAY,
Notary Public.

My commission expires on the 2nd day of March, 1925.

STATE OF MICHIGAN,
County of Wayne, ss:

I, M. J. Tibbals, a Notary Public of said County of Wayne, do certify that J. T. Lynn personally appeared before me in my said County, and being by me duly sworn, did depose and say that he is the President of the Portsmouth Gas Company, one of the corporations described in the writing above, bearing date the 25th day of October, 1915, authorized by said corporation to execute and acknowledge deeds and other writings for said corporation, and that the seal ffixed to the said writing is the corporate seal of said corporation, and that the said writing was signed and sealed by him on behalf of said corporation by its authority duly given. And the said J. G. Lynn acknowledged the said writing to be the act and deed of said corporation.

Given under my hand and official seal this 15th day of June, A. D. 1916.

[Notarial Seal.] M. J. TIBBALS,
Notary Public.

My commission expires on the 7 day of February, 1919.

473 UNITED FUEL AND CENTRAL KY. CO.'S W. VA. EX. 37.

(Introduced at Page 1199, Record.)

W. VA. EX. No. 37. J. B. S.

This agreement, Made and entered into this 1st day of November A. D. 1912, by and between the United Fuel Gas Company, Incorporated, a West Virginia corporation, hereinafter called the "United Company," party of the first part, and the Central Kentucky Natural Gas Company, Incorporated, a Kentucky corporation, hereinafter called the "Kentucky Company," party of the second part;

Witnesseth: Whereas, the United Company is the owner of natural gas wells, gas rights and leases for gas purposes, and gas purchasing contracts in the states of West Virginia and Kentucky, and is the owner of a pipe line extending from its natural gas properties through or near the village of Inez, on the waters of Rock Castle Creek in Martin County, Kentucky; and

Whereas, the Kentucky Company is engaged in the business of producing and distributing natural gas in various cities and towns in the State of Kentucky where it is the owner of franchises, and desires to supplement its supply of natural gas by the construction of a 10 inch pipe line to the said village of Inez for the purpose of purchasing gas from the United Company:

Now therefore, in consideration of the premises and of the mutual covenants and agreements herein contained, the parties hereto have agreed and do hereby agree as follows:

First. The Kentucky Company agrees to construct a 10 inch pipe line from its present main line in Menefee County, Kentucky, to said Village of Inez to the Junction or measuring station which is to be there erected as hereinafter provided; said 10 inch line shall be completed ready to be put into operation on or before December 1st, 1912.

Second. The United Company agrees to construct a measuring station at a convenient point on its main line at or near said
474 village of Inez and to connect said measuring station to its own lines and to the said 10 inch line of Kentucky Company so as to be prepared to furnish and deliver gas to the Kentucky Company on December 1st, 1912. The said measuring station shall be known as "Inez Station" and shall be equipped with orifice meter, standard Pitot tubes or such other accurate measuring devices as the parties hereto may agree upon in substitution for said meter or Pitot tubes; all apparatus and equipment to be installed and operated in said station and the character and efficiency thereof shall be satisfactory to the Kentucky Company, which shall pay to the United Company one half of the cost of erecting and equipping said station and one half of the cost of operating and maintaining the same and of checking the operation and registration of the measuring apparatus. Said station shall, however, be operated by the United Company but at all times shall be open to the inspection of the Kentucky Company and its representatives.

Third. The United Company undertakes and agrees to sell and deliver to the Kentucky Company and the Kentucky Company undertakes and agrees to purchase and take from the United Company during each year (commencing December 1st and terminating November 30th) of the existence of this contract, natural gas of the volume of not less than 720,000,000 cubic feet, the exact amount deliverable each year to be determined in the manner hereinafter set forth; Provided, however, that the United Company shall not be obligated to sell and deliver to the Kentucky Company gas in excess of the amount which can be delivered at Inez Station under a pressure of 300 pounds to the square inch in the initial or Inez end of the said 10 inch line of the Kentucky Company, as now about to be constructed from Menefee County, nor in excess of the amount
475 of gas which the United Company may have available for delivery as limited and defined in the Fifteenth article of this agreement.

Fourth. The amount to be delivered and purchased hereunder from December 1st, 1912, to November 30th, 1913, inclusive, is hereby fixed at 720,000,000 cubic feet and the proportion of the total volume to be delivered and taken in each month of each year during the continuance of this contract shall be as follows:

Month.	Per cent.	Month.	Per cent.
January	12.50	July	4.50
February	12.00	August	4.50
March	10.50	September	5.00
April	9.50	October	8.00
May	8.00	November	9.50
June	5.00	December	11.00

Fifth. If the Kentucky Company shall desire to purchase and take from the United Company in the year beginning December 1st, 1913, and in any year thereafter during the existence of this contract, a volume of gas in excess of 720,000,000 cubic feet and shall give written notice to the United Company not less than seven months prior to the 1st day of December of each year, specifying the amount of additional gas so desired, then the United Company agrees to sell and deliver and the Kentucky Company to purchase and take such additional volume upon the terms and prices herein stated, Provided that the United Company shall not be obligated to sell and deliver to the Kentucky Company gas in excess of the amount which can be delivered at Inez Station under a pressure of 300 pounds to the square inch in the Inez end of the said 10 inch line of the Kentucky Company, nor in excess of the amount of gas which the United Company may have available for delivery as limited and defined in the fifteenth article of this agreement.

The Kentucky Company after giving notice as aforesaid,
476 may from time to time thereafter further increase the amount of gas to be sold and taken hereunder by giving similar notices and subject to the same terms, limitations and conditions, but if no such notice is given seven months before December 1st of any year, then the amount deliverable during such year shall be the amount actually delivered during the preceding year; and the Kentucky Company shall not have the right by notice or otherwise to reduce the amount of gas deliverable in any year to an amount less than 720,000,000, nor to an amount more than 10% less than the amount taken in the next preceding year.

It is further provided that if the amount which the Kentucky Company estimates it will require for any year proves to be insufficient during December, January and February of such year and the United Company is able to and does furnish a larger amount of gas during such months than the estimate calls for, then and in that event the Kentucky Company shall take during the remaining months of such year an amount of gas as much greater than its estimate for such months as the amount of gas actually taken during the months of December, January and February of such year exceeded the amount of gas estimated to be required for such three months. But if the amount which the United Company is able to deliver in December, January and February of any year proves to be less than the proportion deliverable during such months of the whole amount deliverable for such year, then and in that event the Kentucky Company shall not be obligated to take during the remainder of such

ar gas in any greater proportion of the amount deliverable for such
maining part of the year than the amount actually taken in
ecember, January and February bears to the amount deliverable
r such months, determined as hereinafter provided.

The United Company agrees to give to the Kentucky Company
written notice not less than seven months prior to December
7 1st if the supply of gas available for delivery hereunder has
so diminished as in the judgment of the Officers of the United
mpany to prevent the United Company from delivering to the
ntucky Company for the year beginning December 1st following
h notice as much gas as is being delivered during the current year;
d the United Company shall also give to the Kentucky Company
itten notice not less than 30 days after receipt of the estimate of
e Kentucky Company of its requirements for the year commencing
ecember 1st following such estimate, if the supply of gas available
r delivery hereunder has so diminished as to prevent the United
mpany from delivering to the Kentucky Company the amount of
h estimate; the United Company shall state in such notices an
imate of the amount of gas which the United Company is able to
liver for the year embraced in the notice. After the supply of
e United Company has failed in any year to fulfill the require-
nts of the Kentucky Company hereunder, the Kentucky Com-
ny shall not be obligated to take thereafter in any succeeding year
ore gas than was delivered by the United Company in such pre-
ous year.

Sixth. The amount deliverable each month shall be delivered and
ken throughout the month so far as practicable equal amounts
ing delivered and taken each day, provided, however, that the
ntucky Company shall have the right to reduce or increase the
nount to be delivered during any month, so long as the amount
livered and taken is between 90 per cent and 110 per cent of the
nount deliverable during such month, determined as hereinbefore
ovided; the Kentucky Company shall not be obligated to take and
e United Company to deliver during any day or month more
than the Kentucky Company shall currently require for all of
consumers and all of the consumers of companies supplied by it
with gas, but it is understood that the Kentucky Company
3 shall take during each year the full amount deliverable dur-
ing such year, determined as hereinbefore provided.

Seventh. The gas deliverable hereunder shall be delivered by the
ited Company and taken by the Kentucky Company at the Inez
asuring station hereinbefore provided for, and the amount of
furnished and delivered hereunder at such point of delivery
ll be determined as follows:

f Pitot tubes are installed readings thereof shall be made at
ular 15 minute intervals throughout the 24 hours of each day,
duplicate statements of the readings shall be mailed daily to the
ited Company and to the Kentucky Company, but if orifice or
er recording meters or devices are used, the pressure charts shall
lifted daily or as often as necessary by the United Company;

from such readings or charts and records of the measuring tu
or devices the amount of natural gas furnished and delivered e
month shall be computed on the basis of 10 ounces pressure ab
atmospheric, according to Boyle's Law for the measurement of
at varying pressures. Fourteen and four tenths pounds per squ
inch is adopted as atmospheric pressure for such computatio
This method of measurement is hereby adopted as the basis
measurement for the purposes of this agreement and payments
gas shall be made upon the monthly statements rendered by
United Company to the Kentucky Company showing a compu
tion of the total amount of gas so measured during the month; w
said monthly statements the United Company shall send to
Kentucky Company for inspection the current meter charts,
meters are used in place of Pitot tubes, and such charts shall
finally lodged with the United Company within 30 days after th
receipt by the Kentucky Company.

Eighth. The Kentucky Company undertakes and agrees that
will pay to the United Company for the natural gas sold a
479 delivered to it by the United Company hereunder, at t
following prices:

For all gas sold and delivered to it up to and including Novemb
30th, 1913, 9 cents per thousand cubic feet;

From December 1st, 1913, to and including November 30th, 19
10 cents per thousand cubic feet;

From December 1st, 1914, to and including November 30th, 19
11 cents per thousand cubic feet;

From December 1st, 1915, to and including November 30th, 19
12 cents per thousand cubic feet.

From December 1st, 1916, to and including November 30th, 19
13 cents per thousand cubic feet;

From December 1st, 1917, to and including November 30th, 19
14 cents per thousand cubic feet;

From December 1st, 1918, to and including November 30th, 192
15 cents per thousand cubic feet;

And for all natural gas sold and delivered to it from and aft
November 30th, 1922, during the existence of this contract, a pri
equivalent to 50 per cent of the average domestic rate in all of t
distributing systems of the Kentucky Company, which price sh
not in any event be less than 17½ cents per thousand cubic fe
net, to the United Company; such average domestic rate shall
ascertained each month by dividing the total charges of the Ke
tucky Company for all gas sold during the month for domest
purposes including minimum rate charges for domestic natur
gas service but excluding premium charges against consumers d
linquent in payments, by the total amount of natural gas sold
the Kentucky Company during the same month for domestic pu
poses; and in case the Kentucky Company is selling gas to any oth
Company which in turn distributes the gas to the domestic consume
no account of the rate at which such gas is sold in wholesale quant

gas by the Kentucky Company or the volume of gas so sold, shall be taken in ascertaining such average domestic rate, but the charges of such distributing company to consumers using gas for domestic purposes and the amount of gas sold by such distributing company for domestic purposes shall be taken into the computations in the same respect as if such gas was being distributed and charged for by the Kentucky Company directly to the domestic consumer.

Ninth. The United Company shall on or before the 10th day of each month render a statement and bill to the Kentucky Company for the gas purchased and taken during the month next preceding, ascertained in the manner hereinbefore provided for, and the Kentucky Company undertakes and agrees that on or before the 20th day of each month it will pay to the United Company the amount due to the United Company for all gas so delivered to the Kentucky Company during the month next preceding.

For each month beginning with the month of December, 1922, and thereafter during the continuance of this contract, the Kentucky Company shall furnish to the United Company on or before the 10th day of the month, a statement showing the amount of gas ascertained to have been delivered during the previous month to domestic consumers of the Kentucky Company, the total charges for gas sales to domestic consumers including minimum charges for gas service, but excluding premiums charges against consumers delinquent in payments, the gross receipts from sales of gas to domestic consumers, the number of domestic consumers so supplied and the amount ascertained to have been delivered during the previous month to other consumers; and the statement and bill to be rendered to the Kentucky Company by the United Company for gas purchased and taken during the month of December, 1922, and for each month thereafter, shall be based upon the average domestic rate computed from the records of gas sold to domestic consumers so recorded by the Kentucky Company.

Whenever called upon so to do by the United Company, the Kentucky Company shall furnish to United Company a state-
481 ment showing the cities, towns and villages in which it is supplying gas to domestic consumers, the number of domestic consumers in each of said cities, towns and villages, and the rates at which it is furnishing gas in each of said places.

Tenth. For the purposes of this agreement domestic consumers shall be deemed to be all such consumers as according to the system of book-keeping heretofore used by the Kentucky Company have been classed as "domestic consumers:" domestic consumers supplied by the Kentucky Company shall be deemed to include domestic consumers upon distributing systems owned, leased, operated or controlled by the Kentucky Company, and domestic consumers upon distributing systems in any way or upon any plan supplied with natural gas by the Kentucky Company, and the charges for gas sold by the Kentucky Company for domestic purposes, shall, for the purposes of this agreement be deemed to include the charges

made by the Kentucky Company and by any such distributing com panies for natural gas sales to domestic consumers including min mum charges for natural gas service to such consumers, but exclu ing premium charges against consumers delinquent in payments.

Eleventh. The amount of gas supplied by the Kentucky Com pany, or by companies distributing natural gas obtained from i to domestic consumers from and after December 1st, 1922, shall b accurately ascertained by meters, and an accurate record kept o such measurements, and all the records relating to the amount s supplied shall at all times after December 1st, 1922, be open to th inspection of representatives of the United Company.

Twelfth. No dominion or control over the natural gas delivere under this contract shall remain in the United Company after th gas passes the point of delivery, nor shall the United Com
482 pany be responsible for or on account of any thing that ma be done, happen or arise touching said gas after it is delivere at Inez Station; and the Kentucky Company undertakes and agree that it will at all times and from time to time keep free, save harm less and indemify the United Company from any and all manne of claims, suits and damages on account of any conduct, act o thing touching the said gas after it has left the said point of de livery.

Thirteenth. The United Company undertakes and agrees that i will at all times during the continuance of this contract provide an maintain in good order and condition all such compressing station pipe lines, connections and other facilities as may be requisite i order to enable it to carry out its obligations under this contrac and will use all reasonable diligence in developing and extending it gas leases and properties and in obtaining gas therefrom for th purpose of fulfilling its obligations hereunder, and will, if and whe required so to do, to enable the Kentucky Company to give goo service to its patrons, deliver the gas, up to the amount deliverabl under the terms of this contract, at a pressure of 300 pounds pe square inch at the initial end of the Kentucky Company's 10 inc line at Inez station.

Fourteenth. It is mutually understood and agreed that whe either party to this contract fails to perform any obligation herei assumed by it, and such failure is due to Acts of God, or a publi enemy, strikes, riots, injunctions or other interferences throug legal proceedings, breakage or accident to machinery or lines of pipe washouts, earthquakes, storms, freezing of lines or wells, sudde partial or entire failure of gas wells, or to any cause not du
483 to the fault or neglect of such party, or is caused by the neces sity for making repairs or alterations in machinery or line of pipe, such failure shall not be deemed to be a violation by such party of its obligations hereunder, but such party shall use due dili gence to again put itself in position to carry out all of the obligation which by the terms hereof it has assumed.

Fifteenth. In case the supply of gas available for delivery hereunder to the Kentucky Company so diminishes that the United Company is unable to deliver two million cubic feet on the average per day during the six winter months from November to April, inclusive, in any year and the Kentucky Company determines to take up its said 10 inch line and abandon its transportation of natural gas from Inez and tributary fields because it is unable to use a lesser amount under this contract to profitable advantage, then, and in that event the Kentucky Company shall have the right upon six (6) months' written notice to cancel this contract upon the payment of all sums which may be due for gas delivered to the day and time when such cancellation becomes effective. Unless previously terminated pursuant to the provisions herein contained or by mutual consent of the parties hereto, this contract shall continue for the term of 20 years from its date and so long thereafter as the United Company produces gas in marketable quantities from its gas properties in West Virginia and Kentucky. The obligation of the United Company at any time to deliver gas under this contract shall be limited to the amount of gas produced by the United Company from gas fields then owned or leased by it and gas purchased by it under contracts then current for the purchase of gas, consistently with its present or future contracts with other purchasers; provided, however, that the United Company is to have the right at any
484 and all times to supply the domestic consumers connected to its own system and to the systems in West Virginia which it is supplying with gas, and to the Columbia Gas & Electric Company, the Ohio Fuel Supply Company, and Hope Natural Gas Company to the extent of their requirements for domestic consumers, in preference to the Kentucky Company, (after which preferences however the requirements of the Kentucky Company are to be supplied in preference to other purchasers), and Provided also that the obligations of the United Company to sell and deliver gas to the Kentucky Company hereunder are subject to its obligations to sell and deliver gas to the Columbia Gas & Electric Company under a certain contract with the Columbia Gas & Electric Company dated December 1st, 1909, and the United Company reserves the right to exercise the option to extend said contract therein contained and to exercise the other options given to it by the terms of said contract, and this contract is subject to all obligations incurred by the United Company by reason of the exercise of such options.

This contract is further subject to all the existing contracts of the United Company for the sale and delivery of gas to companies other than the Kentucky Company, all of which contracts have been submitted to and are known to the Kentucky Company.

This contract is also subject to the contract of the United Company with The Ohio Fuel Supply Company dated September 19th, 1910, and to the right of the United Company to enter into a contract or contracts with the Hope Natural Gas Company for the sale of gas to said Company in accordance with the provisions of a contract bearing date the 1st day of July, 1910.

The United Company reserves the right to surrender, exchange,

sell and dispose of any part of the gas properties now or hereafter owned or leased by it; should, however, the United Company desire to sell all of its gas properties, it shall do so only subject to this agreement.

485 Sixteenth. It is mutually understood and agreed that in case the Kentucky Company shall fail to pay to the United Company any amounts that may be due and payable hereunder to the United Company within 20 days after such amount becomes due and payable, the United Company shall have the right, without cancelling this contract or waiving any of its rights hereunder, to suspend the delivery of natural gas hereunder until all amounts due it are paid, or, at its option shall have the right to terminate this contract on 30 days' notice to the Kentucky Company without prejudice to its right to collect the amount due to it at the time of such termination for any gas previously furnished hereunder, and to recover such damages as it may sustain by the breach of this contract by the Kentucky Company.

Seventeenth. This contract shall be binding upon the parties hereto and their successors and assigns respectively, provided, however, that in case the gas distributing system now or hereafter owned or controlled by the Kentucky Company is broken up so that parts thereof are vested in different owners, the United Company at its option, shall have the right to terminate this contract; excepting that if under the terms of any city franchise now held by the Kentucky Company any city has the right to appraise and take and does appraise and take any city plant of the Kentucky Company, the Kentucky Company shall have the right at its option either to cut off such city from its distributing system or to continue gas service to such city, in either of which events the United Company shall not have the right to terminate this contract under this provision.

In witness whereof the parties hereto have hereunto caused their corporate names to be signed by their respective Presi-
486 & 487 dents and their respective seals to be hereunto affixed by their respective Secretaries the day and year first above written.

UNITED FUEL AND OHIO FUEL COS.' W. VA. EX. 38.

[Introduced at Page 1199, Record.]

W. VA. EX. No. 38. J. B. S.

This contract, made and entered into this Nineteenth day of September, 1910, by and between the United Fuel Gas Company, a West Virginia Corporation, hereinafter called the "United Company", and The Ohio Fuel Supply Company, an Ohio Corporation, hereinafter called the "Ohio Company",—

Witnesseth:

Whereas, the United Company is the owner of natural gas wells, rights and leases for gas purposes in the State of West Virginia and is the owner of a pipe line extending from its natural gas territory in the State of West Virginia to the Ohio River at a point near Kenswood, West Virginia; and,

Whereas, the Ohio Company holds franchises and owns distributing systems for the distribution of natural gas in various cities, villages and towns in the State of Ohio, and is also the owner of a trunk pipe line extending from the Ohio River (where it connects with lines of the United Company) through the State of Ohio to or connected with the distributing system owned by the said Ohio Company in the various cities, villages and towns in the State of Ohio, hereinabove referred to:

Now, therefore, in consideration of the premises and of the mutual covenants and agreements herein contained, the parties hereto have agreed and do hereby agree as follows:

First. It is mutually understood and agreed that all the rights of the parties hereto in respect to natural gas sold and delivered by the United Company to the Ohio Company from, on and after September 1, 1909, shall be ascertained and determined by and in accordance with the provisions of this agreement.

Second. The United Company undertakes and agrees during the continuance of this contract to sell and deliver to the Ohio Company and the Ohio Company undertakes and agrees to purchase and take from the United Company during each year (commencing July 1st and terminating June 30th) of the existence of this contract,—

(*a*) An amount of natural gas equal to the amount of natural gas found necessary during the preceding year to supply two-third of the domestic consumers connected to its system, plus ten per cent of such amount;

(*b*) Two-thirds of the total amount taken during the year is to be purchased and taken between November 1st and May 1st of each year, and one-third is to be purchased and taken between May 1st and November 1st of each year;

(c) The proportion of the total amount to be taken during any year which shall be taken in each month of such year, shall be, unless otherwise agreed as follows:

Month.	Per cent.
May	7½
June	4¾
July	4½
August	4½
September	4¾
October	7½
November	10½
December	12—
January	12½
February	12—
March	11—
April	8½

Provided, however, that except as hereinafter stated the United Company shall not be obligated to sell and deliver to the Ohio Company gas in excess of the amount which can be delivered at the Ohio River through the existing pipe line of the United Company from Spencer to the Ohio River under a pressure of 300 lbs. at the easterly end of the 18" line near Spencer, and the Ohio Company shall not be obligated to purchase and take gas in excess of the amount which can be transported through the existing trunk line of the Ohio Company as at present constructed from the Ohio River to Sugar Grove, Ohio, under a pressure of 275 lbs. at the Ohio River.

Third. It is understood and agreed between the parties hereto that the United Company will erect or cause to be erected a measuring station at the point of delivery at or near Ravenswood, West Virginia, which shall be equipped with standard Pitot Tubes, or such other measuring device as the parties hereto may desire. All apparatus and equipment to be installed and operated in said station and the character and efficiency thereof shall be satisfactory to the Ohio Company. The Ohio Company shall further pay to the United Company one-half of the cost of erecting and equipping said station.

Said station shall, however, be operated by the United Com-
490 pany but at all times shall be open to the inspection of the Ohio Company and its representatives and the expense of operating and maintaining said station and of checking the operation and registration of the measuring apparatus shall be divided between the parties hereto.

Fourth. The gas deliverable hereunder shall be delivered by the United Company and taken by the Ohio Company at the measuring station hereinbefore provided for and the amount of gas furnished and delivered hereunder at such point of delivery shall be determined as follows:

Readings of the Pitot Tubes or pressure gauges hereinbefore provided for shall be made at regular fifteen-minute intervals through-

ut the twenty-four hours of each day, and duplicate statements of
ie readings shall be mailed daily to the United Company and to
ie Ohio Company. From such readings of the measuring tubes or
evices, the amount of natural gas furnished and delivered each
ionth shall be computed on the basis of ten ounces pressure above
tmospheric according to Boyle's law for the measurement of gas at
arying pressures. This method of measurement is hereby adopted
s the basis of measurement for the purposes of this agreement and
ayments for gas shall be made upon the monthly statements ren-
ered by the United Company to the Ohio Company showing the
otal computation of gas so measured during the month.

Fifth. No dominion or control over the natural gas delivered
nder this contract shall remain in the United Company after the
as passes the points of delivery, nor shall the United Company be
esponsible for or on account of anything that may be done, happen
r arise touching said gas after its delivery; and the Ohio Company
ndertakes and agrees that it will at all times and from time to time
eep free, save harmless and indemnify the United Company from
ny and all manner of claims, suits and damages on account of any
onduct, act or thing touching the said gas after it has left the said
oints of delivery.

191 Sixth. The United Company undertakes and agrees that at all times during the continuance of this contract it will pro-
ide and maintain in good order and condition all such compressor
tations, pipe lines, connections and other facilities as may be re-
uisite in order to enable it to carry out its obligations under this
ontract; and will use all reasonable diligence in developing and ex-
ending its gas leases and properties and in obtaining gas therefrom
or the purpose of fulfilling its obligations hereunder and will, if
nd when required so to do by the Ohio Company, deliver the gas to
e supplied by it hereunder at a pressure equivalent to 300 lbs. at the
nitial point of its 18" trunk line 22 miles East of Ravenswood.

Seventh. It is mutually understood and agreed that where either
arty to this contract fails to perform any obligation herein assumed
y it, and such failure is due to acts of God, or a public enemy,
trikes, riots, injunctions or other interference through legal pro-
eedings, breakage or accident to machinery or lines of pipe, wash-
uts, earthquakes, storms, freezing of lines or wells, sudden partial
r entire failure of gas wells, or to any cause not due to the fault or
neglect of such party, or is caused by the necessity for making re-
pairs or alterations in machinery or lines of pipe, such failure shall
not be deemed to be a violation by such party of its obligations here-
under, but such party shall use due diligence to again put itself in
position to carry out all of the obligations which by the terms hereof
it has assumed.

Eighth. Unless previously terminated pursuant to the provisions
herein contained, or by mutual consent of the parties hereto, this
contract shall continue so long as the United Company produces gas
in marketable quantities from the gas fields owned by it in West

Virginia; but the United Company reserves the right in the ordinary course of its business to sell and dispose of the gas properties now or hereinafter owned or leased by it.

492 The obligations of the United Company to sell and deliver gas hereunder to the Ohio Company at any time are limited to the gas produced by the United Company from gas fields then owned or leased by it and gas purchased by it under contracts then current for the purchase of gas. The obligations of the United Company to sell and deliver gas to the Ohio Company hereunder are subject to its obligations to sell and deliver gas to the Columbia Gas & Electric Company, under a certain contract with the Columbia Gas & Electric Company, dated December 1st, 1909; and the United Company reserves the right to exercise the option to extend said contract therein contained and to exercise the other options given to it by the terms of said contract, and this contract is subject to all obligations incurred by the United Company by reason of the exercise of such options. This contract is further subject to all the existing contracts of the United Company for the sale and delivery of gas to companies other than The Ohio Fuel Supply Company and Hope Natural Gas Company, all of which contracts have been submitted to and are known to The Ohio Fuel Supply Company. This contract is also subject to the right of the United Company to enter into a contract or contracts with the Hope Natural Gas Company for the sale of gas to said Company, pursuant to which contract or contracts the United Company will be obligated to deliver to the Hope Natural Gas Company fifty-one (51) per cent of the amount of gas available for delivery to The Ohio Fuel Supply Company and the Hope Natural Gas Company, in case the requirements of the Hope Natural Gas Company under said contract or contracts equal fifty-one (51) per cent of said amount and said amount is not sufficient to fully supply the requirements of the Hope Natural Gas Company and The Ohio Fuel Supply Company. The United Company also reserves the right to supply all of its domestic consumers in West Virginia and the domestic consumers in West Virginia of all
493 companies whose capital stock, or a majority thereof, is owned by the United Company. The United Company shall have the right to use the gas obtained by it from the sources aforesaid for the purposes above specified and the rights of the Ohio Company hereunder shall be limited to the balance of the gas so obtained.

Ninth. The Ohio Company undertakes and agrees that it will pay to the United Company for natural gas sold and delivered to it by the United Company hereunder as follows:

For all natural gas sold and delivered to it up to and including December 31st, 1910, 8c per 1,000 cu. ft.

For all gas sold and delivered to it on and after January 1st, 1911, a price per 1,000 cu. ft. to be named by the Directors of the United Company; which price, however, the United Company covenants and agrees shall not exceed the cost of natural gas to it at the point of delivery hereinbefore specified, plus twenty-five per cent of such cost,

and shall not at any time prior to October 1st, 1914, exceed 10c per 1,000 cu. ft.

The cost to the United Company, upon which the price of natural gas to be delivered hereunder during each calendar year shall be based, shall be the cost of the gas produced and delivered during the twelve months ending on September 30th of the preceding year.

In reckoning the cost of natural gas to the United Company due consideration and allowance shall be made to cover depreciation of plant and diminution of value of plant and gas territory as gas is drawn from the field and the supply in the ground is reduced.

The United Company, shall, on or before the 1st day of December, in each year, notify the Ohio Company of the price to be charged for gas delivered during the next calendar year. If the Ohio Company claim that the price so fixed is in excess of cost plus twenty-five per cent, the Board of Directors of the United Company, on or before the 1st day of January, shall determine the cost to the United Company of gas produced and delivered hereunder during the year end-
494 ing on the 30th day of the preceding September, and the determination of the Board of Directors of the United Company as to such cost made in good faith shall be final and conclusive.

Tenth. The United Company shall, on or before the tenth day of each month, render a statement and bill to the Ohio Company for the gas purchased and taken during the month next preceding, ascertained in the manner hereinbefore provided for; and the Ohio Company undertakes and agrees that on or before the fifteenth day of each month it will pay to the United Company the amount due to the United Company for all gas so delivered to them during the month next preceding.

Eleventh. It is mutually understood and agreed that in case the Ohio Company shall fail to pay to the United Company any amounts that may be due and payable hereunder to the United Company within twenty (20) days after such amount becomes due and payable, the United Company shall have the right, without cancelling this contract or waiving any of its rights hereunder, to suspend the delivery of natural gas hereunder until all amounts due to it are paid, or, at its option, shall have the right to terminate this contract on thirty (30) days' notice to the Ohio Company without prejudice to its right to collect the amounts due to it at the time of such termination for any gas previously furnished hereunder.

Twelfth. This contract shall be binding upon the parties hereto and their successors and assigns, respectively, provided, however, that in case the gas distributing system now or hereafter owned or controlled by the Ohio Company is broken up, so that parts thereof are vested in different owners, the United Company, at its option, shall have the right to terminate this contract.

Thirteenth. In case the Ohio Company hereafter, during the continuance of this contract, shall desire to purchase from the United Company a larger amount of gas than it is entitled, by the provisions

of the Second Paragraph hereof, to purchase and take,
495 the United Company will sell and deliver to the Ohio Company such larger amount of gas upon the following terms and conditions:

(*a*) The Ohio Company shall give to the United Company at least six (6) months' notice of its desire to take such larger amount of gas.

(*b*) In such notice the increased amount which the Ohio Company desires to take shall be defined in such manner that the amount to be purchased and taken during each year can be ascertained prior to the commencement of such year.

(*c*) The Ohio Company after giving such notice shall be obligated from the dates named therein to purchase and take the amount of gas therein specified and to purchase and take the same during each month in the proportions specified in sub-divisions (*b*) and (*c*) of the Second Paragraph hereof.

(*d*) Insofar as the delivery of such larger amount of gas requires the United Company to construct additional trunk pipe lines from its gas fields to the point of delivery thereof, the Ohio Company shall pay to the United Company an amount equal to the entire cost of constructing and equipping such additional pipe lines; but thereafter, in computing the cost to the United Company of gas sold and delivered to the Ohio Company hereunder, the cost of such additional pipe lines and the depreciation thereof shall not be taken into account. In case the United Company shall cease to deliver gas through any such additional trunk line built and equipped at the entire expense of the Ohio Company, the United Company may at its option purchase said line at its junk value; or, in the event of the United Company electing not to purchase said line, the United Company shall, if required so to do by the Ohio Company, take up and deliver said line to the Ohio Company and the Ohio Company shall re-pay to the United Company the entire cost of so doing.

(*e*) The obligations of the United Company to deliver such larger amount of gas shall be subject to all the limitations set forth in Paragraph Eighth hereof.

The Ohio Company, after giving notice as hereinbefore provided, may from time to time thereafter further increase the amount of gas to be sold and taken hereunder by giving similar notices and upon similar terms and conditions.

Fourteenth. The Ohio Company shall, on or before the 20th day of each month during the continuance of this contract, furnish to the United Company a statement showing the amount of gas ascertained to have been delivered during the previous month to the domestic consumers and the amount ascertained to have been delivered during the previous month to other consumers; and whenever called upon
so to do by the United Company, shall furnish to the
496 United Company a statement showing the cities, towns and villages in which it is supplying gas to the domestic consum-

and the number of domestic consumers in each of said cities, ns and villages and also showing the mains and location of the s other than the domestic consumers' to whom it is supplying

ifteenth. For the purposes of this agreement domestic consumers l be deemed to be all such consumers as according to the system ookkeeping heretofore used by the Ohio Company have been ed as domestic consumers. The domestic consumers supplied by Ohio Company shall be deemed to include domestic consumers n distributing systems now owned by the Ohio Company and the estic consumers upon distributing systems now owned by dis- uting companies (other than The North-Western Ohio Natural Company) of which the Ohio Company owns a majority of the k, and also the domestic consumers in the City of Cincinnati as supplied by the Ohio Company through the Union Gas & Elec- Company of Cincinnati.

ixteenth. The amount of gas supplied by the Ohio Company to estic consumers shall be accurately ascertained by meters or by r appropriate means of measurement, and all the records re- ng to the amount so supplied shall at all times be open to the in- tion of the representatives of the United Company.

eventeenth. The books and records of the United Company in- r as the same in any way relate to the cost of the United Com- y of the gas supplied by it to the Ohio Company hereunder, or he amount of gas available for delivery hereunder to the Ohio pany, shall at all times be open to the inspection of the repre- atives of the Ohio Company.

In witness whereof, the parties hereto have hereunto caused their corporate names to be signed by their respective Vice sidents and their respective seals to be hereunto affixed by their ective Secretaries the day and year first above written.

Columbia Gas & Electric Company,
Attention Mr. W. Y. Cartwright, Vice President,
Fourth & Plum Sts., Cincinnati, Ohio, and

Ohio Fuel Supply Company,
Attention Mr. L. B. Denning, Assistant to President,
2017 Farmers Bank Bldg., Pittsburgh, Pa.

DEAR SIRS:

As a memorandum of the oral agreement reached on yesterday in pursuance of previous negotiations, with reference to the price to be paid to the United Fuel Gas Company for gas supplied by it to the Columbia Gas & Electric Company and the Ohio Fuel Supply Company, during the calendar year 1918, I would thank you to advise me whether the following is a correct statement of this agreement, and if so, entries covering the matter will be made upon our books:

First. For the first 10,000,000,000 cubic feet taken by the Columbia Gas & Electric Company and the first 9,800,000,000 cubic feet taken by the Ohio Fuel Supply Company, they are to pay respectively the sum of 7c per thousand cubic feet; and for any excess over 10,000,000,000 cubic feet taken by the Columbia Gas & Electric Company, or for any excess over 9,800,000,000 cubic feet taken by the Ohio Fuel Supply Company, during the calendar year 1918, they shall pay at the rate of 11c per thousand cubic feet, the latter being the price, during the year 1918, charged to the Hope Natural Gas Company and the Pittsburgh & West Virginia Gas Company. The foregoing, however, is subject to the qualification that, should the Columbia Gas & Electric Company take during said year less than 10,000,000,000 cubic feet, or should the Ohio Fuel Supply Company take less than 9,800,000,000 cubic feet, then the quantity which each of said Companies shall have the right to purchase
499 at the rate of 7c per thousand shall be limited to an entire quantity, of which the Columbia Gas & Electric Company shall have 51% and the Ohio Fuel Supply Company 49%. That is to say, if one of said Companies shall take less than the quantity above mentioned to which it is entitled at the 7c rate, then the other Company shall be entitled to take, at such 7c rate, either 2% more or 2% less, as the case may be, at the same rate. For all gas taken during said year by the Columbia Gas & Electric Company in excess of that to which it may be entitled under the last mentioned provision at the rate of 7c, but not in excess of the entire quantity of 10,000,000,000 cubic feet in said year, it shall pay at the rate of 10c, and for all gas taken by the Ohio Fuel Supply Company during said year in excess of the quantity to which it may be entitled at the 7c rate, but not in excess of the entire quantity of 9,800,000,000 cubic feet, it shall pay at the rate of 10c.

Second. For the gas taken by each of you during the remainder of this year, you will be billed at the rate of 7c per thousand cubic

eet, subject to such adjustment at the end of the year as may be equired to meet the foregoing stipulation. It is understood that ach of you have been charged for the gas previously taken during his year at the rate of 10c, and a refund will be made to each of ou at the rate of 3c per thousand as soon as this Company has the vailable cash for the purpose. We will make this refund to you atably, so as to give no preference to one Company over the other, ut we do not agree to pay interest to either of you upon the amount be refunded.

Third. In consideration of these concessions, each of you agree to elinquish any claim to the gasoline produced by this Company from he gas sold to each of you during this year, and you concede, for the time being, our right to extract the gasoline before deliver-00 ing to you the gas. This agreement is made only for the year 1918, however, and is not to be used against either of ou as an admission of our right to extract said gasoline in future ears, nor as an admission against us of any right on your part to revent our extraction of said gasoline, or of any right on your part participate in the proceeds of said gasoline.

Fourth: The rights of all parties with reference to the subject atter of the foregoing shall continue to be governed by the pro-isions of the contract of July 31, 1916, except as modified by the greement above recited as applicable to the year 1918.

Very respectfully yours,

(Signed) UNITED FUEL GAS COMPANY,
By R. G. ALTIZER,
Vice President.

R. G. A./A.

Exhibit "Modification of Ohio Fuel Supply Company and olumbia Gas & Electric Company contracts."

01 [Endorsed:] United Fuel Gas Company and The Ohio Fuel Supply Company. Agreement.

02 UNITED FUEL AND HOPE COS.' (1916) W. VA. EX. 39.

(Introduced at Page 1199, Record.)

W. VA. Ex. No. 39. J. B. S.

This agreement, made and entered into this 25th day of August, 916, by and between the United Fuel Gas Company, a West Vir-inia corporation, hereinafter called the "Selling Company," party f the first part, and the Hope Natural Gas Company, also a West irginia corporation, hereinafter called the "Buying Company," arty of the second part;

Witnesseth, Whereas, the "Selling Company" is the owner of natural gas wells and properties in the States of West Virginia, Ohio and Kentucky, and of contracts for the purchase of natural gas from other producers, and has a supply available for a large market, and

Whereas, the "Buying Company" in its business of distributing natural gas in towns and cities in West Virginia and of supplying other companies serving large communities in West Virginia, Ohio and Pennsylvania, requires additional gas for its customers, and

Whereas, the "Selling Company" is willing to construct a 20-inch pipe line from its properties a distance of about 40 miles to a point 2 miles east of Cedarville, in Gilmer County, West Virginia, providing the "Buying Company" will construct its pipe lines to said junction point, and will purchase gas to the extent of one-half of the delivery capacity of said 20-inch line, upon terms that the "Selling Company" may dispose of the remainder through similar contracts,

Now, therefore, in consideration of the premises and of the mutual covenants herein contained, the parties hereto have covenaned and agreed and do hereby covenant and agree as follows:

First. The "Selling Company" agrees to construct said 20-inch pipe line from its gas properties to a junction point about two miles east of Cedarville in Gilmer County, West Virginia, and to
503 construct and equip a gas measuring station at the northern terminus; all of such work is to be commenced promptly upon the execution of this contract and completed so that gas delivery may commence on or before November 1, 1916, but unavoidable delays including the prosecution of such condemnation proceedings as may be necessary in the securing of pipe line easements are excepted. The measuring station shall be known as Cedarville Station and shall be equipped with Venturi or orifice meters or pitot tubes or such other devices of standard type as may be mutually agreed upon, for accurately measuring and recording the pressures and deliveries of gas. The "Selling Company" shall house and employ the men to operate the station, but all employes shall be satisfactory to the "Buying Company," which shall have the right of access at all times to the station and every part of it and its appliances for the purpose of inspecting, checking and testing registrations. One-half of the actual cost of equipping the station for the measurement of gas delivered solely to the "Buying Company" shall be paid by the "Buying Company" which shall also pay monthly one-fourth of the cost and expense of maintaining and operating the entire station. The "Buying Company" shall not be charged any part of the cost of the station site and buildings, but shall pay a rental, during each year of the term of this agreement, equal to 4⅓% of the actual cost of acquiring the station site and constructing the buildings. The "Buying Company" agrees to extend its pipe lines to said "Cedarville Station" and to be prepared to take the gas which it has purchased hereunder, on or before November 1, 1916, like allowance being made for unavoidable delays as aforesaid.

Second. The "Selling Company" agrees to sell and deliver to the "Buying Company," and the "Buying Company" agrees to purchase and take, each year during the continuance of this contract, six billion two hundred million (6,200,000,000) cubic feet of
504 natural gas, and such larger amount each year as may be determined by the further provisions of this agreement, subject always to the amount which the "Selling Company" has available for delivery as defined in the Eighth Article hereof.

Third. The proportion of the total amount deliverable during the year which shall be delivered in each month is set forth in the following table:

Month.	Percentage.
January	12½
February	12
March	11
April	8½
May	7½
June	4¾
July	4½
August	4½
September	4¾
October	7½
November	10½
December	12

The amount deliverable during any month shall be delivered substantially in uniform daily amounts during such month, but the deliveries in any day may, however, vary between 80% and 120% of the amount deliverable for such day ascertained as above provided; and the amount deliverable during any month may be increased or reduced so long as the amount delivered and taken is between 90% and 110% of the amount deliverable during such month determined as above; provided, however, that the full quantity designated to be taken during the calendar year is delivered and taken, and that the amount taken from the first day of each year to the end of October of such year shall be the total amount designated for such ten months' period by the above table, excepting that the variation of 10% shall be allowed from the amount apportioned to the said month of October.

Fourth. It is estimated by the engineers of the parties hereto that the one-half of the capacity of the 20-inch line to be constructed by the "Selling Company" for the purposes of this
505 contract is a twenty-four hour delivery of 25,000,000 cubic feet, plus a variation of 20%, or 30,000,000 cubic feet, being the amount apportioned to a day in January according to the above table. But the "Buying Company" shall have the right to take in January, February and March of the year 1918, notwithstanding the above table of percentages, and the "Selling Company" agrees to deliver to the "Buying Company" if the latter so requires, the one-

half of the capacity of the said 20-inch line at a delivery gauge pressure of 225 pounds to the square inch. The amount so taken by the "Buying Company" in such three months shall be computed as 35½% of the amount deliverable in the year and if the computation makes the yearly amount greater than six billion two hundred million, then the greater amount shall be substituted and be the yearly amount agreed to be delivered and taken each year under this contract. Nothing herein contained however shall prevent the "Selling Company" from furnishing gas for said 20-inch line to such domestic consumers along the route thereof, which the "Selling Company," as a public service corporation, may be under lawful obligation to supply, and the capacity of said line above referred to is intended to mean the amount of gas deliverable through the same after deducting any amount taken by such domestic consumers.

Fifth. In case the "Buying Company" takes from the "Selling Company" and the "Selling Company" delivers in the three months of greatest demand, viz: January, February and March, of any year during the term of this contract, more gas than is apportioned by the above table of percentages to said months, considering the variations annexed to the table a part thereof, then the "Selling Company" shall have the right to require the "Buying Company" to take during the remaining nine months of said calendar year the same rate of excess over the amount fixed by said table for said period. And further, if during the months of January,
506 February and March of any year the "Buying Company" shall be ready, able and willing to take and purchase the quantities specified by said table to be taken during such months, and the "Selling Company" shall fail to deliver the entire amount deliverable during said period, then the "Buying Company" shall have the right at its option to take in the remaining nine months of said year either the volume apportioned to such nine months by the said table, or an amount less by the same ratio as the amount of the deficiency occurring in said months of January, February and March. In case the "Selling Company" fails to deliver six billion two hundred million cubic feet in any year, it is agreed that it shall use diligent effort to increase its deliveries to said amount in the next and succeeding years by the operation of its properties in the manner hereinafter stipulated.

Sixth. The gas sold and to be delivered hereunder shall be delivered by the "Selling Company" at said Cedarville Station at a gauge pressure of not less than 225 pounds to the square inch at the discharge end of the "Selling Company's" 20-inch line, and the "Selling Company" undertakes to compress the gas, if necessary, to meet this pressure obligation. The measurement of the gas in said station shall be computed according to Boyle's Law on a basis of ten ounces above atmospheric pressure, 14.4 pounds per square *square* inch being adopted as atmospheric pressure, and 40 degrees Fahrenheit flowing and 50 degrees Fahrenheit storage, as temperature basis, without further allowance for actual temperature and barometric conditions. Joint monthly tests of the specific gravity

f the gas delivered shall be made by the parties hereto during the rst year of the deliveries, and thereafter the tests shall be quarterly. ests of the meters and measuring apparatus shall be made jointly or by competent authority satisfactory to both parties, as often 07 as either party may desire, the cost of such tests to be borne equally. Daily reports of the readings of the meter or meters hall be mailed to each party and the "Selling Company" shall give omplete and immediate information by telegraph or telephone as to ourly pressures and deliveries when requested by the "Buying Company."

Seventh. At the end of each month the "Selling Company" shall ender to the "Buying Company," a statement, accompanied by eter charts, showing the deliveries of gas during the month, and he "Buying Company" agrees to pay for the gas so delivered, at he following rates and prices per thousand cubic feet for each year ommencing on the day of the first delivery of gas:

10 cents, the first year.
11 cents, the second and third years.
12 cents, the fourth and fifth years.
13 cents, the sixth and seventh years.
14 cents, the eighth and ninth years.
15 cents, during the remainder of the term of this contract.

Said payments shall be made monthly on or before the 20th day of the month for the gas supplied in the preceding month, and shall be by check or voucher drawn to the order of the "Selling Company" and mailed to it at Charleston, West Virginia.

Eighth. The "Selling Company" agrees to use diligent effort during the entire term of this contract to deliver the quantity of gas hereinbefore agreed to be delivered and at the stipulated pressure and for that purpose to construct and operate in good order, condition and manner, adequate compressing stations, to maintain its properties and make such additions of lands, mineral rights, leaseholds and pipe lines as may in its judgment, exercised in good faith, strengthen its gas resources, to drill such wells as may be reasonably necessary and promptly connect the same to its pipe lines by field gathering lines of adequate size, to maintain its wells in proper producing condition and in connection, excepting during necessary repairs, at all times with the pipe line system discharging 508 into said 20-inch line if the wells are located where they may be available for that purpose. But the obligation of the "Selling Company" to deliver gas hereunder shall be limited to the amount of gas currently produced from its gas properties and gas purchased by it from other producers, after deducting from the total amount so purchased and produced (*a*) the quantities of natural gas required to supply at any and all times domestic consumers connected to its own distributing systems not including consumers added by the acquisition of companies or properties not within its present territory of production and distribution, or by extensions of pipe

lines beyond the ordinary and natural growth of its present communities, and (*b*) the following contracts insofar as the "Selling Company" has thereby obligated itself to give any preference or fulfill prior demands on its supply, viz:

(1) A contract with the Ohio Fuel Supply Company, dated the 19th day of September, 1910, as modified by contract dated July 31, 1916; (2) A contract with the Columbia Gas & Electric Company dated January 1, 1913, as modified by contract dated July 31, 1916, and including the option contained in said original contract of renewing same; (3) A contract with the Central Kentucky Natural Gas Company dated November 1, 1912; (4) A contract with the Louisville Gas & Electric Company, dated July 5, 1913; (5) A contract with the Portsmouth Gas Company dated October 25, 1915.

It is understood and agreed, however, that the "Selling Company" shall, in any contract hereafter made by it for the sale of gas other than as above excepted, subordinate the obligations created in any such contract to those assumed under this agreement.

Ninth. The "Selling Company" agrees to use such methods and devices as may be customary or proper at the time for the delivery of said natural gas in a dry and merchantable condition, and the "Buying Company" shall not be required to accept gas of unmerchantable quality. As between the parties hereto, the "Selling Company" shall be in control and possession of said gas and responsible for any damage or injury caused thereby until
509 the same shall have been delivered to the "Buying Company" at said measuring station, after which delivery the latter company shall be deemed to be in exclusive control and possession thereof, and responsible for any such injury or damage. Where either party to this contract without fault or neglect on its part fails to perform any obligation hereunder assumed by it and such failure is due to acts of God or a public enemy, strikes, riots, injunctions or other interference through legal proceedings, breakage or accident to machinery or lines of pipe, washouts, earthquakes, storms, freezing of lines or wells, sudden, partial or entire failure of gas wells, or any cause beyond its control, or is caused by the necessity for making repairs or alterations in machinery or lines of pipe, such a failure shall not be deemed to be a violation by such party of its obligation hereunder; but such party shall use due diligence to again put itself forthwith in position to carry out all of the obligations which by the terms hereof it has assumed, and so far as possible shall give the other party notice in writing or by telephone or telegraph of the shutting off of gas to make repairs or alterations.

Tenth. It is understood and agreed that, in case the one-half of the capacity of the 20-inch pipe line of the "Selling Company" at the pressure herein stipulated does not yield a delivery of six billion two hundred million cubic feet per year under the agreed table of percentages, or in case the amount of gas available for delivery as herein defined and limited is or becomes such that the one-half

thereof is less than six billion two hundred million cubic feet per year under the agreed table of percentages, then and in both said events the "Buying Company" shall only be entitled to one-half of the entire amount available for delivery at Cedarville Station, inasmuch as the other one-half has been sold by the "Selling Company" or reserved for sale out of this contract for other purchasers.

510 Eleventh. This contract shall continue from the commencement of the delivery of gas hereunder until the expiration of ten years from and after the 31st day of December, 1916, but it is agreed that in the event a pipe line shall at any time prior to January 1, 1919, be constructed from the gas fields of West Virginia to the City of Baltimore, Maryland, under such circumstances that the "Selling Company" or any company affiliated with it may be able to sell for use in the City of Baltimore natural gas produced or acquired by said "Selling Company," then it shall have the right or option to terminate this agreement by giving one year's written notice to the "Buying Company" so to do. Such notice may be given before the completion of any such pipe line leading to said City of Baltimore, but shall not be effective unless such a line shall be actually built.

Twelfth. This contract and all of its covenants, limitations and conditions shall extend to and be binding upon the successors and assigns of the parties.

In witness whereof, the corporations parties hereto have hereunto caused *there* corporate seals to be affixed and the same to be attested by their respective Presidents or Vice Presidents the day and year first above written.

John G. Pew, Vice President.

August 25, 1916.

Mr. W. Y. Cartwright, Vice Pres.
United Fuel Gas Company,
Cincinnati, Ohio.

MY DEAR MR. CARTWRIGHT:

In connection with the contract, bearing even date, for the delivery of gas by the United Fuel Gas Company to Hope Natural Gas Com-

pany, at Cedarville, West Virginia, there has been some discussion about the possibility of a special tax being placed in some form on the natural gas business.

The contract prices have been made without reference to any tax, other than those collectible under the plan of taxation now in force so that if an additional special tax should be imposed it might place an inequitable burden on one or the other parties. We feel that such a tax is unlikely, but to carry out the intention of our agreement, this letter is written to assure you that the Hope Natural Gas Company agrees with your Company that in case any lawful tax or assessment is hereafter imposed on natural gas in any manner, so as to constitute in effect a charge upon the gas deliverable hereunder, the amount of such tax or assessment or charges shall be borne, one-half by your Company and one-half by the Hope Natural Gas Company insofar as it affects or relates to, or is apportionable to the natural gas deliverable hereunder, and in the event your Company is required to pay the same, one-half of the amount thereof shall be paid by the Hope Natural Gas Company to your Company in addition to the prices for gas fixed by the above mentioned contract.

Please advise if this is satisfactory to your Company.

(Signed) HOPE NATURAL GAS COMPANY,
By JOHN G. PEW,
Vice President.

513 [Endorsed:] United Fuel Gas Company and Hope Natural Gas Company. Agreement.

514 UNITED FUEL AND HOPE COS.' (1920) W. VA. EX. 40.

(Introduced at Page 1199, Record.)

W. VA. EX. No. 40. J. B. S.

This agreement, made and entered into this 1st day of May, 1920, by and between United Fuel Gas Company, a corporation of West Virginia (hereinafter called the "Selling Company"), party of the first part, and Hope Natural Gas Company, also a corporation of West Virginia (hereinafter called the "Buying Company"), party of the second part,

Witnesseth:

Whereas, by a certain written agreement, bearing date the 25th day of August, 1916, between the parties hereto, the "Selling Company" agreed to sell, and the "Buying Company" agreed to purchase, certain quantities of natural gas at a point near Cedarville, in Gilmer County, West Virginia, to which point the "Selling Company" agreed to construct a pipe line from its gas fields for the purposes of said contract, which said pipe line has since been constructed and natural gas delivered under said agreement since early in the year 1917 until the present time; and,

Whereas, the "Selling Company" has not had available for delivery, and has failed to deliver during the past winter, the quantity

of natural gas daily contemplated by said contract to be delivered, and the exhaustion of the natural gas fields operated by the "Selling Company", together with the increased expense of producing natural gas under present circumstances and conditions, will require greater expenditures on the part of the "Selling Company" in the performance of said contract than were contemplated at the date thereof by the parties thereto; and,

Whereas, the "Buying Company," recognizing the existing conditions surrounding the fields operated by the "Selling Company", both as to the depletion of the supply and the increased cost of operations, has consented to a certain increase in the price to be
515 paid for the gas delivered under said original contract from and after this date, with the understanding that the "Selling Company" will enlarge its facilities for the delivery of said gas to the extent hereinafter specified;

Now, therefore, in consideration of the premises, it is agreed between the parties hereto as follows:

First. In lieu of the price specified in said original contract to be paid by the "Buying Company" to the "Selling Company", the "Buying Company" will pay for all gas delivered to it between midnight of April 30, 1920, and April 30, 1922, a price of fourteen (14) cents per thousand cubic feet for the first twelve (12) million cubic feet delivered each day; fifteen (15) cents for the thirteenth million, sixteen (16) cents for the fourteenth million; seventeen (17) cents for the fifteenth million; and eighteen (18) cents for all above fifteen (15) million cubic feet delivered each day. The quantity of gas delivered in any one of the two entire years provided for in this supplemental agreement shall be apportioned, as nearly as practicable, between the several months of the year and with the same allowance for variations between the days of each month, as specified by said original contract, and it is estimated by the parties hereto that the "Selling Company" will be able to deliver to the "Buying Company" during the winter months of each of said two years, an average of at least twenty (20) million cubic feet of gas daily.

Second. In consideration of the foregoing, the "Selling Company" expressly covenants and agrees that it will enlarge its principal compressor station used in the delivery of the gas sold under this contract (known as its "Cobb Station"), by adding additional units
516 thereto of approximately twenty-seven hundred (2,700) horsepower, the same to be completed by November 1, 1920, unless delayed by unavoidable accident or other circumstances over which it has no control, and will also enlarge its auxiliary compressor station known as "Buff Lick" station, located south of said Cobb station, by adding additional units thereto amounting to four hundred and eighty-five (485) horsepower, to be completed within the same time and subject to the same reservations as those mentioned above in reference to Cobb station; and further, that it will complete, by January 1, 1921, at least twenty-five (25) additional wells in search of gas, and connect the same with the pipe line system through which

s is delivered to the "Buying Company" by the "Selling Company", being understood that said pipe line system is also used for the pplying of gas to others, as recited in said original contract.

Third. It is further agreed that the said written agreement bear- g date the 25th day of August, 1916, between the parties hereto, and shall remain in full force and effect in all of its terms, pro- sions, conditions and stipulations for the full term thereof, ex- pting as herein expressly modified.

Witness the common and corporate seals of the corporations parties reto, duly affixed and attested by their proper officers, the day d year first above written.

519 UNITED FUEL AND PGH. COS.' (1916) W. VA. EX. 41.

(Introduced at Page 1199, Record.)

W. VA. EX. No. 41. J. B. S.

This agreement, made this 25th day of August, A. D. 1916, by and between the United Fuel Gas Company, a corporation of West Virginia, hereinafter called "United Company," party of the first part, and the Pittsburgh and West Virginia Gas Company, also a West Virginia Corporation, hereinafter called "Pittsburgh Company", party of the second part, witnesseth:

That, in consideration of the mutual covenants and agreements herein contained, the United Company agrees to sell and deliver and the Pittsburgh Company agrees to purchase and accept certain quantities of natural gas produced or acquired by said first mentioned Company, and the parties hereto have further agreed and do hereby agree as follows:

First. United Company agrees to construct a pipe line twenty (20) inches in outside diameter, leading from the lands operated by it, a distance of about forty (40) miles to a point on Cedar Creek, County of Gilmer and State of West Virginia, being approximately two miles in an easterly direction from the village of Cedarville in said County. At the northern terminus of said line the said United Company will construct and install the necessary buildings, meters and appliances for maintaining a station for the measurement of the gas hereby agreed to be sold. The work of

laying said pipe line and of constructing said measuring station shall be commenced promptly upon the execution of this agreement and shall be completed by November 1st, 1916, or as early thereafter as is reasonably possible, allowance being made for any necessary delay in acquiring right of way by condemnation. Pittsburgh Company agrees to build at the same time, with like allowance for necessary delay, such pipe line as may be required from its present system of lines to said measuring station, for the purpose of receiving and transporting therefrom the gas agreed to be purchased by it hereunder. The delivery of gas under this agreement shall commence immediately upon the completion of said lines and station.

520 Second. United Company shall purchase or acquire the necessary land and buildings, including two dwelling houses for employees, for maintaining said measuring station in a suitable manner, and shall also purchase and install the necessary meters, appliances and equipment for the proper operation of said station. The said land and buildings shall be the sole property of the United Company, but during the term of this agreement it shall be used only for the purposes of measuring and delivering gas to the Pittsburgh Company and to the Hope Natural Gas Company, under an agreement of even date herewith.

The work of measuring the gas delivered under this agreement shall be performed by the United Company, which Company shall have entire and unrestricted charge of said measuring station and also of the men employed thereat, but all such employees shall be satisfactory to Pittsburgh Company. A duly authorized representative of Pittsburgh Company shall have access to every part of said measuring station, including its records, at any time, for the purpose of observation and inspection, it being the intention of this agreement that United Company shall operate said measuring station in a manner satisfactory to Pittsburgh Company.

Pittsburgh Company agrees to pay one-half (½) of the actual cost of equipping said station with meters, measuring devices and appliances (other than land and buildings) installed for measuring the gas delivered solely to said Pittsburg Company, and one-fourth (¼) the cost and expense of maintaining and operating said entire station for the measurement and delivery of gas to both the Pittsburgh Company and the Hope Natural Gas Company.

Pittsburgh Company further agrees to pay to United Company, as an annual rental, during each of the ten (10) years in which this agreement is to remain in force, for the joint use of said ground and buildings, a sum equal to fo-r and one-third (4⅓) per centum of the actual cost and expense of acquiring said land and
521 constructing said buildings. The first annual rental shall be due as soon after the completion of said station as gas is delivered, and subsequent payments annually thereafter.

The amount due from Pittsburgh Company as its share of the cost of acquiring and installing said meters, measuring devices and appliances shall be paid promptly after the installation thereof,

and the amount due from Pittsburgh Company as its share of the cost of operating and maintaining said station shall be paid monthly upon accurate statements thereof to be furnished to it by United Company.

Third. United Company undertakes and agrees (subject to the qualifications hereinafter mentioned) to sell and deliver to Pittsburgh Company at said measuring station, and Pittsburgh Company undertakes and agrees to purchase and to take from United Company during each year, for a period of ten (10) years following the date that actual delivery of gas commences under this agreement, six billion two hundred million (6,200,000,000) cubic feet of natural gas, to be delivered during the several months of each year in the proportions hereinafter specified, provided, however, that United Company shall not be obligated to deliver more than its available supply as hereinafter set forth.

Fourth. The gas so sold shall be delivered into the pipe line of Pittsburgh Company, against the varying pressures therein, so far as is possible without interruption of the flow, in amounts which shall continue steadily in the same volume throughout every hour of the day, and also continue steadily in the same volume throughout every day of each month, but the proportionate part of said entire amount to be taken during each calendar month is hereby fixed as follows:

Month.	Per cent.
November	10½
December	12
January	12½
522 February	12
March	11
April	8½
May	7½
June	4¾
July	4½
August	4½
September	4¾
October	7½

The amount deliverable during any month shall be delivered substantially in uniform daily amounts during such month, but the deliveries in any day may, however, vary between 80% and 120% of the amount deliverable for such day, ascertained as above provided, and the amount deliverable during any month may be increased or reduced so long as the amount delivered and taken is between 90% and 110% of the amount deliverable during such month, determined as above, provided, however, that the full quantity designated to be taken during the calendar year is delivered and taken, and that the amount taken from the first day of each year to the end of October of such year shall be the total amount designated for such ten months' period by the above table, excepting

that the variation of 10% shall be allowed from the amount apportioned to the said month of October.

Fifth. United Company shall take care of all wells and control all water that may accumulate therein and also in the lines leading from said wells, and shall keep the twenty (20) inch pipe line hereinbefore mentioned free from water, so that the gas may be delivered at the meter in a dry and marketable condition, and Pittsburgh Company reserves the right to refuse to accept all gas that is not in a dry and marketable condition.

United Company shall have dominion and control over the natural gas delivered under this agreement until after the said gas passes through the meter and into the pipe line of Pittsburgh Company, and United Company shall be responsible for and on account of anything that may be done, happen to or arise, touching said gas until it is delivered into the pipe line of Pittsburgh
523 Company, and Pittsburgh Company undertakes and agrees that it will at all times and from time to time save harmless the United Company from any and all manner of claims, suits and damages on account of any conduct, act or thing touching said gas after it has passed into the pipe line of Pittsburgh Company.

Sixth. While this agreement does not obligate United Company to deliver nor Pittsburgh Company to purchase more gas than that hereinbefore specified, yet if by mutual agreement United Company shall deliver and Pittsburgh Company shall take during January, February and March of any year more than the combined amount agreed to be delivered and taken during said three months, or if Pittsburgh Company shall be ready and willing to take, but United Fuel Company shall be unable to deliver during said three months the combined quantity hereinbefore specified to be delivered, then in either such event the amount to be taken in the remaining nine months of each calendar year shall be determined as follows: The total quantity to be taken during each calendar year shall be increased or diminished from that hereinbefore specified so that the amount actually taken during said three months of January, February and March shall constitute thirty-five and one-half (35½) per cent of the total quantity to be taken during each calendar year and the remaining sixty-four and one-half (64½) per cent of such total quantity shall be taken during the remaining nine months in the percentages of such entire quantity for each of said nine months as are specified in the table embraced in the fourth paragraph hereof.

Seventh. Said gas shall be compressed if necessary by United Company and shall be delivered by United Company at said measuring station at a pressure of not less than two hundred and twenty-five (225) pounds to the square inch, and shall be measured at said station by means of Venturi Meters or other meters to be mutually agreed upon, and the quantity thereof shall be
524 computed on a basis of ten (10) ounces above the atmospheric pressure of fourteen and four-tenths (14.4) pounds

per square inch, according to Boyle's Law for the measurement of gas at varying pressures, on a temperature basis of forty (40) degrees Fahrenheit flowing and fifty (50) degrees Fahrenheit storage, without further allowance for actual temperatures and barometric conditions.

The specific gravity of said gas shall be determined for the purpose of measurement by monthly tests to be made jointly by the parties hereto during the first year this agreement is in force, and thereafter quarterly if the variation is found to be small.

If either party challenges the accuracy of any meter in use under this agreement and desires to have the meter tested or repaired, such tests or repairs as are necessary shall be made by a competent authority, to be mutually agreed upon, in the presence and to the satisfaction of the party desiring the same to be made, and the cost of such testing and repairing shall be borne equally by the parties hereto.

United Company shall give complete information when requested in regard to the hourly pressures and deliveries, shall mail to Pittsburgh Company daily reports of pressures and deliveries, and shall on or before the tenth day of each month render to Pittsburgh Company statements, accompanied by meter charts, showing the actual amount of gas delivered during each day of the next preceding calendar month, and Pittsburgh Company agrees to pay for all gas so delivered at the following rates and prices:

For all gas delivered during the first year after the actual commencement of deliveries, at the rate of ten cents per thousand cubic feet.

For all gas delivered during the second and third years after the actual commencement of deliveries, at the rate of eleven cents per thousand cubic feet.

525 For all gas delivered during the fourth and fifth years after the actual commencement of deliveries, at the rate of twelve cents per thousand cubic feet.

For all gas delivered during the eighth and ninth years after the actual commencemnt of deliveries, at the rate of fourteen (14) cents per thousand (1,000) cubic feet.

For all gas delivered during the tenth year after the actual commencement of deliveries, at the rate of fifteen (15) cents per thousand (1,000) cubic feet.

The amount due for gas supplied during each month shall be paid on or before the twentieth (20) day of the following month, and shall be paid by check or voucher drawn to the order of the United Fuel Gas Company and mailed to it at Charleston, West Virginia.

Eighth. It is further understood and agreed that in case any lawful tax or assessment is hereafter imposed upon natural gas in any manner so as to constitute, in effect, a charge upon gas delivered hereunder, the amount of said tax or assessment shall be borne, one-half (½) by United Company and one-half (½) by Pittsburgh Company, in so far as it affects, relates to or is apportionable to the amount of gas delivered hereunder, and in the event that United

Company is required to pay the same, one-half (½) of the amount thereof shall be refunded by Pittsburgh Company to United Company, in addition to the prices hereinbefore set forth.

Ninth. United Company covenants that it will use diligence in the laying and maintaining of pipe lines and in the operating of the lands under its control during the term of this agreement for the purpose of enabling itself to deliver the amount of gas to Pittsburgh Company hereinbefore agreed by it to be delivered, but it is understood and agreed that the obligations of United Company hereunder are limited to the amount of gas produced by it from lands upon which it shall have the right to operate during the term of this agreement and to the gas which it may obtain by purchase from others, and further that its obligations here-
526 under shall be subordinate, and shall be subordinate only, to those previously assumed, including the following:

(*a*) Supplying consumers connected at any time directly to its distributing systems in West Virginia, Ohio and Kentucky, which obligation shall not include consumers hereafter obtained by the purchase, absorption or merger of any other companies or lines outside of its present territory or by the extraordinary extensions of the lines of said Company, but only the ordinary growth and accretions of said Company in its present territory.

(*b*) The performance of a contract for the sale of gas to the Ohio Fuel Supply Company, dated September 19th, 1910, as modified by an agreement dated July 31st, 1916.

(*c*) The performance of a contract for the delivery of gas to the Columbia Gas & Electric Company, dated January 1st, 1913, as modified by an agreement dated July 31, 1916, including the option of renewing the same contained in said original contract.

(*d*) The performance of a contract for the delivery of gas to the Central Kentucky Natural Gas Company, dated November 1st, 1912.

(*e*) The performance of a contract for the delivery of gas to the Louisville Gas & Electric Company, dated July 5th, 1913.

(*f*) The performance of a contract for the delivery of gas to the Portsmouth Gas Company, dated October 25th, 1915.

(Copies of the foregoing contracts, certified to be correct by the Secretary of the United Company, have been this day filed with the Secretary of the Pittsburgh Company).

Tenth. It is further agreed and understood that in the event a pipe line shall at any time prior to January 1st, 1919 be constructed from the gas fields of West Virginia to the City of Baltimore, Maryland, under such circumstances that the United Company or any

company affiliated with it may be able to sell for use in the said City of Baltimore natural gas produced or acquired by said United Company, then it shall have the right or option to terminate this agreement by giving one year's written notice of its intention so to do to Pittsburgh Company. Such notice may be given before the completion of any such pipe line leading to the said City of Baltimore, but shall not be effective unless such a line shall be actually built.

Eleventh. It is understood that contemporaneously with the execution hereof, United Company has entered into a written
527 agreement with the Hope Natural Gas Company, a West Virginia corporation, for the delivery to said last mentioned company of an equal amount of gas to that to be delivered hereunder, and that said pipe line twenty (20) inches in diameter, hereinbefore agreed to be constructed by United Company to said measuring station near Cedarville, is to be used for the transportation to said station of the gas agreed to be sold both to said Pittsburgh Company and to said Hope Natural Gas Company.

It is further understood and agreed that in the event United Company shall not be able to deliver at said measuring station the entire amount agreed to be delivered, together with a like amount to said Hope Natural Gas Company, then the entire amount available for delivery shall be divided equally between Pittsburgh Company and Hope Natural Gas Company unless said companies shall direct a different division thereof as between themselves, it being understood, however, that United Company shall, in any contract hereafter made by it for the sale of gas, other than with consumers supplied directly from its lines, subordinate the obligations created in any such contract to those assumed under this agreement.

It is further understood and agreed that should United Company desire to deliver and sell at said measuring station a greater quantity of gas than that hereinbefore mentioned and intended to be delivered both to Pittsburgh Company and to Hope Natural Gas Company, and in the further event that both Pittsburgh Company and Hope Natural Gas Company shall desire to take and purchase quantities in excess of that agreed to be taken and purchased by them respectively, then Pittsburgh Company shall have the right at its option to purchase one-half (½) of said additional quantity, on equal terms with said Hope Natural Gas Company.

Twelfth. It is agreed that United Company shall have the
528 right to extract from the natural gas sold under this agreement, previous to its delivery to Pittsburgh Company, the gasoline obtainable therefrom by what is known as the "Absorption System" or any other system now or hereafter in common use

Thirteenth. All the terms and conditions, stipulations, covenants and agreements herein contained shall extend to and be binding upon the successors and assigns of the parties hereto.

In witness whereof, the parties hereto have caused their respective porate seals to be hereto affixed, and duly attested, the day and r first above written.

530 [Endorsed:] United Fuel Gas Company and Pittsburgh and West Virginia Gas Company. Agreement.

531 UNITED FUEL AND PGH. CO.'S (1920) W. VA. EX. 42.

(Introduced at Page 1199, Record.)

W. VA. EX. No. 42. J. B. S.

This agreement, made and entered into this 1st day of May, 1920, by and between United Fuel Gas Company, a corporation of West Virginia (hereinafter called the "Selling Company"), party of the first part, and Pittsburgh & West Virginia Gas Company, also a corporation of West Virginia (hereinafter called the "Buying Company"), party of the second part,

Witnesseth:

Whereas, by a certain written agreement, bearing date the 25th day of August, 1916, between the parties hereto, the "Selling Company" agreed to sell, and the "Buying Company" agreed to purchase, certain quantities of natural gas at a point near Cedarville, in Gilmer County, West Virginia, to which point the "Selling Company" agreed to construct a pipe line from its gas fields for the purposes of said contract, which said pipe line has since been constructed and natural gas delivered under said agreement since early in the year 1917 until the present time; and,

Whereas, the "Selling Company" has not had available for delivery, and has failed to deliver during the past winter, the quantity of natural gas daily contemplated by said contract to be delivered, and the exhaustion of the natural gas fields operated by the "Selling Company", together with the increased expense of producing natural gas under present circumstances and conditions, will require greater expenditures on the part of the "Selling Company" in the performance of said contract than were contemplated at the date thereof by the parties thereto; and,

Whereas, the "Buying Company", recognizing the existing conditions surrounding the fields operated by the "Selling Company", both as to the depletion of the supply and the increased cost of

operations, has consented to a certain increase in the price
2 to be paid for the gas delivered under said original contract
from and after this date, with the understanding that the
elling Company" will enlarge its facilities for the delivery of said
s to the extent hereinafter specified;
Now, therefore, in consideration of the premises, it is agreed be-
een the parties hereto as follows:

First. In lieu of the price specified in said original contract to be
id by the "Buying Company" to the "Selling Company", the
uying Company" will pay for all gas delivered to it between mid-
ght of April 30, 1920, and April 30, 1922, a price of fourteen
4) cents per thousand cubic feet for the first twelve (12) million
bic feet delivered each day; fifteen (15) cents for the thirteenth
llion; sixteen (16) cents for the fourteenth million; seventeen
7) cents for the fifteenth million; and eighteen (18) cents for all
ove fifteen (15) million cubic feet delivered each day. The
antity of gas delivered in any one of the two entire years pro-
ded for in this supplemental agreement shall be apportioned, as
arly as practicable, between the several months of the year and
th the same allowance for variations between the days of each
onth, as specified by said original contract, and it is estimated by
e parties hereto that the "Selling Company" will be able to deliver
the "Buying Company", during the winter months of each of said
o years, an average of at least twenty (20) million cubic feet of
s daily.

Second. In consideration of the foregoing, the "Selling Company"
pressely covenants and agrees that it will enlarge its principal
mpressor station used in the delivery of the gas sold under
this contract (known as its "Cobb Station"), by adding ad-
33 ditional units thereto of approximately twenty-seven hundred
(2,700) horsepower, the same to be completed by November
1920, unless delayed by unavoidable accident or other circum-
ances over which it has no control, and will also enlarge its aux-
iary compressor staton known as "Buff Lick" station, located
uth of said Cobb station, by adding additional units thereto
mounting to four hundred and eighty-five (485) horsepower, to be
mpleted within the same time and subject to the same reserva-
ons as those mentioned above in reference to Cobb station; and
rther, that it will complete, by January 1, 1921, at least twenty-
ve (25) additional wells in search of gas, and connect the same
ith the pipe line system through which gas is delivered to the
Buying Company" by the "Selling Company", it being understood
hat said pipe line system is also used for the supplying of gas to
thers, as recited in said original contract.

Third. It is further agreed that the said written agreement bear-
ng date the 25th day of August, 1916, between the parties hereto,
s and shall remain in full force and effect in all of its terms, pro-
isions, conditions and stipulations for the full term thereof, except-
ng as herein expressly modified.

Witness the common and corporate seals of the corporations parties hereto, duly affixed and attested by their proper officers, the day and year first above written.

COLUMBIA AND UNITED FUEL COS.' W. VA. EX. 43.

(Introduced at Page 1199, Record.)

W. VA. EX. No. 43. J. B. S.

reement made this 1st day of January, 1913, between the Columia Gas & Electric Company, hereinafter called the "Columbia Company," and the United Fuel Gas Company, hereinafter called he "United Company," corporations organized under the laws of Vest Virginia, modifying the agreement between the same parties lated the 1st day of December, 1909.

st. Whereas, by agreement dated the 1st day of December, 1909, Columbia Company agreed to purchase and take from the United mpany, and the United Company agreed to sell and deliver ural gas in the amounts and at the prices and upon the terms d conditions in said agreement stated; and

Whereas, contemporaneously with the said agreement dated the day of December, 1909, the Columbia Company sub-leased to the ited Company a gas compressing station known as Kenova Sta-n, located on the Big Sandy River in Wayne County, West Virnia, and an eighteen inch pipe line extending therefrom eastwardly Balls Gap in Ceredo District, Wayne County, West Virginia, with line branching towards the Griffithsville gas field, and a line anching towards Dunlow, West Virginia, in said sub-lease and in id agreement more particularly described, and said agreement conined various provisions relating to the operation of said compressg station and said pipe lines by the United Company for the transrtation of the gas produced by each of the parties; and

Whereas, the Columbia Company has not succeeded in marketing atural gas in the volume and to the extent anticipated, and the olumbia Company has requested the United Company to make conssions in the terms of the said agreement dated the 1st day of Deember, 1909, in order that the Columbia Company may increase its eliveries of natural gas and may otherwise enlarge its markets and profitably extend its business; and

37 Whereas, pursuant to said request the United Company has agreed with the Columbia Company to modify the said agreeent dated the 1st day of December, 1909, and contemporaneously ith the execution of this agreement has surrendered to the Columbia ompany the sub-lease above referred to, and possession of the com-

pressing station and pipe lines covered thereby to the end that the Columbia Company shall operate the same and transport therein and thereby the gas herein agreed to be delivered to it, as well as the gas produced from its own properties:

Now, this agreement witnesseth: That the agreement between the parties hereto dated the 1st day of December, 1909, has been and the same hereby is modified as of January 1st, 1913, so that all the terms, provisions and conditions therein contained have been and the same hereby are superseded by the terms, provisions and conditions hereinafter set forth.

2nd. The Columbia Company agrees to purchase and take from the United Company, and the United Company agrees to sell and deliver to the Columbia Company subject to the provisions of the 11th Paragraph hereof, natural gas in the amounts and at the prices following, viz:

For the year ending—	Cubic feet of natural gas.	Price per one thousand cubic feet.
December 31, 1913	Six billion	8 cents.
December 31, 1914	Six billion	8½ cents.
December 31, 1915	Six and one-half billion	9 cents.
December 31, 1916	Six and one-half billion	10 cents.
December 31, 1917	Seven billion	11 cents.
December 31, 1918	Eight billion	12½ cents.
December 31, 1919	Ten billion	12½ cents.

3rd. This agreement shall terminate on December 31, 1919, unless the United Company on or prior to December 31, 1917, shall give written notice to the Columbia Company of its election to continue the same until December 31, 1924; in case the United Company gives such notice of its election to continue this contract until December 31, 1924, then the same shall terminate on December 31,
538 1924, unless the United Company on or prior to December 31, 1922, shall give written notice to the Columbia Company of its election to continue the contract until December 31, 1929, in which event this contract shall terminate on that date. In case of the exercise of said election and the continuance of this agreement until December 31, 1924, the United Company shall sell and deliver and the Columbia Company shall purchase and take during each year from December 31, 1919, until December 31, 1924, subject to the provisions of the Eleventh Paragraph hereof, Ten Billion (10,000,000,000) cubic feet of natural gas at twelve and one-half (12½) cents per one thousand cubic feet; and in case of the exercise of said election and the continuance of this agreement from December 31st, 1924, to December 31st, 1929, then the United Company shall sell and deliver and the Columbia Company purchase and take during each year from December 31st, 1924, until December 31st, 1929, subject to the provisions of the Eleventh Paragraph hereof, Ten Billion (10,000,000,000) cubic feet of natural gas at twelve and one-half (12½) cents per one thousand cubic feet.

4th. The said natural gas shall be delivered at the existing Pitot
ube measuring station at Balls Gap, West Virginia, and at such
ther points of delivery as may be hereafter agreed upon.
The Columbia Company shall have the right to require that the
ressure at which said gas is to be delivered is such as to produce and
aintain when said gas is commingled with gas which the Columbia
ompany takes from other sources into its said eighteen inch pipe
ne, an efficient working pressure of not less than sixty pounds to
he square inch upon said line, gauged at the intake side of the high
tage compressors of said Kenova station, but the Columbia Company
agrees that it will not produce and maintain at any time on
39 its line or lines at any delivery point under this contract, a
pressure higher than is necessary to produce and maintain
n said eighteen inch pipe line at said intake side of the high stage
ompressors of said compressing station, said pressure of sixty pounds
o the square inch if any higher pressure prevents the United Com-
any from delivering any part of the gas which it has herein under-
aken to deliver.
It is further agreed that if at any time the supply and pressure of
as which the Columbia Company is able to secure at natural well
ressure from sources other than United Company, with the addition
f such supply as the United Company is able to deliver hereunder
t natural well pressure, becomes insufficient without additional
neans of compression to produce and maintain the sixty pounds
ressure at the intake side of the high stage compressors of said
Kenova Station, the Columbia Company shall install at and in con-
nection with the said compressing station such necessary sub-pump-
ng stations or low stage compressors as will enable it thereby to
roduce and maintain the required efficient working pressure on said
ighteen inch line at the intake side of its high stage compressors at
aid Kenova Station, and the gas to be taken from the United Com-
pany shall be taken by means of such sub-pumping stations or low
tage compressors to be installed by the Columbia Company, and
nder the same pressure conditions as the gas which the Columbia
Company takes from other sources.
It is agreed that for the purpose of determining whether or not
the United Company is delivering gas at the agreed delivery pres-
sure, the compressors in Kenova Station shall be operated only to
the extent reasonably necessary to handle the amount of gas which
the United Company is currently required to deliver, in addition to
the amount of gas which the Columbia Company at the same time
is marketing from other sources.

540 5th. If any measuring stations shall hereafter be constructed
they shall be constructed at the joint expense of the parties
hereto, each party paying one-half of such construction. The ex-
pense of operating and maintaining the measuring station at Balls
Gap, and the additional measuring stations, if any are hereafter con-
structed, shall be borne jointly by the parties hereto, each paying
one-half thereof, but the United Company shall be in charge of such
stations and shall appoint the operatives, but the operatives shall be
satisfactory to the Columbia Company.

6th. Readings of the Pitot tubes shall be made at regular fifteen minute intervals throughout the twenty-four hours of each day, and duplicate statements of the readings shall be mailed daily to the Columbia Company and to the United Company; from such readings of the measuring tubes the amount of natural gas furnished and delivered each month shall be computed on the basis of eight ounces pressure above atmospheric, according to Boyle's law for the measurement of gas at varying pressures; 14.4 pounds per square inch is adopted as atmospheric pressure for the purpose of this contract, and no other allowance shall be made for temperature or barometric conditions.

7th. The United Company on or before the 10th day of each month shall send to the Columbia Company a statement and bill for the the amount of gas delivered during the preceding month, ascertained as above provided, and the Columbia Company shall pay the United Company the stipulated price therefor within ten days after the delivery of such statement.

8th. During the years 1913 to 1915, inclusive, the amounts deliverable in each year shall be delivered in the different months of the year according to the following table:

Month.	Per cent.
January	13½
February	13½
March	12
April	7
May	6½
June	4½
July	4
August	4
September	5
October	7½
November	9½
December	13

During the years 1916 to 1919, inclusive, the amount deliverable in each year shall be delivered during the different months of the according to the following table of percentages:

Month.	Per cent.
January	12½
February	12½
March	11
April	8½
May	7
June	5
July	4½
August	4½
September	5
October	8
November	9½
December	12

In case the agreement is continued after December 31st, 1919, the amount of gas deliverable in such year thereafter, shall be delivered in the different months of the year according to the table of percentages for the years 1916 to 1919 inclusive. The amount deliverable during any month shall be delivered substantially in uniform daily amounts during such month, but the deliveries in any day may, however, vary between 80% and 120% of the amount deliverable for such day ascertained as above provided. Beginning with the 31st day of December, 1915, and thereafter during the continuance of this contract, the Columbia Company shall have the right to reduce or to increase the amount to be delivered and taken during any month so long as the amount delivered and taken is between 90% and 110% of the amount deliverable during such month determined as above, provided, however, that during each year ending December 31st, the full quantity designated as the amount to
542 be delivered and taken for any year, is delivered and taken, and provided also that during each six months' period ending October 31st, 35% of the amount designated as the amount to be delivered and taken in the same calendar year, is delivered and taken, notwithstanding any variation that there may have been in the quantity taken in any one month of such period.

9th. No dominion or control over the natural gas delivered under this contract shall remain in the United Company after the gas passes the point of delivery, nor shall United Company be responsible for or on account of anything that may be done, happen or arise touching said gas thereafter; and the Columbia Company undertakes and agrees that it will at all times and from time to time keep free, save harmless and indemnify United Company from any and all manner of claims, suits, and damages on account of any accident, act or thing touching said gas after it has left the said point of delivery.

10th. United Company undertakes and agrees that it will use reasonable diligence in developing and drilling on gas leases and property from time to time controlled by it for the purpose of fulfilling its obligations hereunder and enabling it to deliver the amounts of gas which in and by the terms hereof it undertakes and agrees to deliver, and for such purposes will build, provide, maintain and operate in good order, condition and manner such compressor stations, gathering pipe lines, connections and other facilities as may be necessary therefor, and will use all reasonable diligence consistent with good business judgment in obtaining and developing new gas leases and contracts for gas when the same become necessary in order to enable it to deliver gas under the terms of this contract, and such extensions, leases and contracts can be obtained on a basis profitable to said United Company.

543 11th. The obligation of the United Company to furnish and deliver the amounts of gas specified in the 2nd and 3rd Paragraphs hereof, shall be limited to the amount of gas produced by the United Company from gas fields then owned or leased by it, and gas purchased by it under contracts then current for the purchase of gas, which the United Company shall have available for de-

livery hereunder, after deducting from the total amount so purchased and produced the quantities of natural gas required to supply at any and all times domestic consumers connected to the United Company's own distributing system; and in case the quantities so available for delivery are less than the amounts deliverable under the provisions of the 2nd and 3rd Paragraphs hereof, the Columbia Company shall nevertheless purchase and take the quantities so available for delivery, and the same as nearly as may be shall be delivered and taken in the proportions specified in Paragraph 8th hereof. The United Company reserves the right in the usual course of its business to surrender, exchange, sell or otherwise dispose of any part of the gas properties now or hereafter owned or leased by it; should, however, United Company sell its gas properties as a whole, such sale shall be made subject to this agreement.

12th. It is mutually understood and agreed that where either party to this contract without fault or neglect on its part fails to perform any obligations herein assumed by it, and such failure is due to Acts of God, or to a public enemy, strikes, riots, injunctions or other interferences through legal proceedings, breakage or accidents to machinery or lines of pipe, washouts, earthquakes, storms, freezing of lines or wells, sudden partial or entire failure of gas wells, or any cause beyond its control, or is caused by the necessity for making repairs or alterations in machinery or lines of pipe, such failure shall not be deemed to be a violation by such party of its obli-
544 gation hereunder; but such party shall use due diligence to again put itself forthwith in position to carry out all of the obligations which by the terms hereof it has assumed, and so far as possible shall give the other party notice in writing, or by telephone or telegraph of the shutting off of gas to make repairs or alterations.

13th. In ase any lawful tax or assessment is hereafter imposed on natural gas in any manner so as to constitute in effect a charge upon the gas delivered hereunder, the amount of such tax or assessment or charges shall be borne one-half by the United Company and one-half by the Columbia Company, insofar as it affects or relates to or is apportionable hereto, and in the event that the United Company is required to pay the same, one-half the amount thereof shall be paid by the Columbia Company to United Company in addition to the prices above stated.

14th. In case the Columbia Company shall fail to pay to the United Company amounts that may be due and payable hereunder to United Company within twenty days after the same become due and payable, the United Company shall have the right without cancelling this contract or waiving any of its rights hereunder to suspend the delivery of natural gas hereunder until all amounts due to it are paid, and at its option shall have the right to terminate this contract on thirty days' notice to Columbia Company without prejudice to its right to collect the amounts due to it at the time of such termination for gas previously delivered hereunder, and to recover such damage as it may sustain by the breach of this contract by the Columbia Company.

15th. This contract shall bind and run in favor of the parties hereto, and their respective successors and assigns, but shall not be assigned by either party without the consent of the other.

345 In witness whereof the parties hereto have hereunto caused their corporate names to be signed by their respective Presidents and their respective seals to be hereunto affixed by their respective Secretaries the day and year first above written.

DEAR SIRS:

As a memorandum of the oral agreement reached on yesterday in pursuance of previous negotiations, with reference to the price to be paid to the United Fuel Gas Company for gas supplied by it to the Columbia Gas & Electric Company and the Ohio Fuel Supply Company, during the calendar year 1918, I would thank you to advise me whether the following is a correct statement of this agreement, and if so, entries covering the matter will be made upon our books:

First. For the first 10,000,000,000 cubic feet taken by the Columbia Gas & Electric Company and the first 9,800,000,000 cubic feet taken by the Ohio Fuel Supply Company, they are to pay respectively the sum of 7c. per thousand cubic feet; and for any excess over 10,000,000,000 cubic feet taken by the Columbia Gas & Electric Company, or for any excess over 9,800,000,000 cubic feet taken by the Ohio Fuel Supply Company, during the calendar year 1918, they shall pay at the rate of 11c. per thousand cubic feet, the latter being the price, during the year 1918, charged to the Hope Natural Gas Company and the Pittsburgh & West Virginia Gas Company. The foregoing, however, is subject to the qualification that, should the Columbia Gas & Electric Company take during said year less than 10,000,000,000 cubic feet, or should the Ohio Fuel Supply Company take less than 9,800,000,000 cubic feet, then the quantity which each of said Companies shall have the right to purchase at the rate of 7c. per thousand shall be limited to an entire quantity, of
547 which the Columbia Gas & Electric Company shall have 51% and the Ohio Fuel Supply Company 49%. That is to say, if one of said Companies shall take less than the quantity above mentioned to which it is entitled at the 7c. rate, then the other Company shall be entitled to take, at such 7c. rate, either 2% more or 2% less, as the case may be, at the same rate. For all gas taken during said year by the Columbia Gas & Electric Company in excess of that to which it may be entitled under the last mentioned provision at the rate of 7c., but not in excess of the entire quantity of 10,000,000,000 cubic feet in said year, it shall pay at the rate of 10c., and for all gas taken by the Ohio Fuel Supply Company during said year in excess of the quantity to which it may be entitled at the 7c. rate, but not in excess of the entire quantity of 9,800,000,000 cubic feet, it shall pay at the rate of 10c.

Second. For the gas taken by each of you during the remainder of this year, you will be billed at the rate of 7c. per thousand cubic

feet, subject to such adjustment at the end of the year as may be required to meet the foregoing stipulation. It is understood that each of you have been charged for the gas previously taken during this year at the rate of 10c., and a refund will be made to each of you at the rate of 3c. per thousand as soon as this Company has the available cash for the purpose. We will make this refund to you ratably so as to give no preference to one Company over the other, but we do not agree to pay interest to either of you upon the amount to be refunded.

Third. In consideration of these concessions, each of you agree to relinquish any claim to the gasoline produced by this Company from the gas sold to each of you during this year, and you concede, for the time being, our right to extract the gasoline before delivering to you the gas. This agreement is made only for the year
548 1918, however, and is not to be used against either of you as an admission of our right to extract said gasoline in future years, nor as an admission against us of any right on your part to prevent our extraction of said gasoline, or of any right on your part to participate in the proceeds of said gasoline.

Fourth. The rights of all parties with reference to the subject matter of the foregoing shall continue to be governed by the provisions of the contract of July 31, 1916, except as modified by the agreement above recited as applicable to the year 1918.

Very respectfully yours,

(Signed) UNITED FUEL GAS COMPANY.

DEAR SIRS:

As a memorandum of the oral agreement reached on Yesterday in pursuance of previous negotiations, with reference to the price to be paid to the United Fuel Gas Company for gas supplied by it to the Columbia Gas & Electric Company and the Ohio Fuel Supply Company, during the calendar year 1918, I would thank you to advise me whether the following is a correct statement of this agreement, and if so, entries covering the matter will be made on our books:

First. For the first 10,000,000,000 cubic feet taken by the Columbia Gas & Electric Company and the first 9,800,000,000 cubic feet taken by the Ohio Fuel Supply Company, they are to pay respectively the sum of 7c. per thousand cubic feet; and for any excess over 10,000,000,000 cubic feet taken by the Columbia Gas & Electric Company, or for any excess over 9,800,000,000 cubic feet taken by the Ohio Fuel Supply Company, during the calendar year 1918, they shall pay at the rate of 11¢ per thousand cubic feet, the latter being the price, during the year 1918, charged to the Hope Natural Gas Company and the Pittsburgh & West Virginia Gas Company. The foregoing, however, is subject to the qualification that, should the Columbia Gas & Electric Company take during said year less than 10,000,000,000 cubic feet, or should the Ohio Fuel Supply Company take less than 9,800,000,000 cubic feet, then the quantity which each of said Companies shall have the right to purchase at the rate of 7¢ per thousand shall be limited to an entire quantity, of
551 which the Columbia Gas & Electric Company shall have 51% and the Ohio Fuel Supply Company 49%. That is to say, if one of said Companies shall take less than the quantity above mentioned to which it is entitled at the 7¢ rate, then the other Company shall be entitled to take, at such 7¢ rate, either 2% more or 2% less, as the case may be, at the same rate. For all gas taken during said year by the Columbia Gas & Electric Company in excess of that to which it may be entitled under the last mentioned provision at the rate of 7¢, but not in excess of the entire quantity of

0,000,000,000 cubic feet in said year, it shall pay at the rate of 0¢, and for all gas taken by the Ohio Fuel Supply Company during aid year in excess of the quantity to which it may be entitled at the ¢ rate, but not in excess of the entire quantity of 9,800,000,000 ubic feet, it shall pay at the rate of 10¢.

Second. For the gas taken by each of you during the remainder f this year, you will be billed at the rate of 7¢ per thousand cubic eet, subject to such adjustment at the end of the year as may be equired to meet the foregoing stipulation. It is understood that ach of you have been charged for the gas previously taken during his year at the rate of 10¢, and a refund will be made to each of ou at the rate of 3¢ per thousand as soon as this Company has the vailable cash for the purpose. We will make this refund to you atably, so as to give no preference to one Company over the other, ut we do not agree to pay interest to either of you upon the amount be refunded.

Third. In consideration of these concessions, each of you agree relinquish any claim to the gasoline produced by this Company rom the gas sold to each of you during this year, and you concede, or the time being, our right to extract the gasoline before delivering to you the gas. This agreement is made only for the year 52 1918, however, and is not to be used against either of you as an admission of our right to extract said gasoline in future ears, nor as an admission against us of any right on your part to revent our extraction of said gasoline, or of any right on your part participate in the proceeds of said gasoline.

Fourth. The rights of all parties with reference to the subject atter of the foregoing shall continue to be governed by the pro-isions of the contract of July 31, 1916, except as modified by the greement above recited as applicable to the year 1918.

Very respectfully yours,
(Signed) UNITED FUEL GAS COMPANY,

553 RESERVE V. MCKINLEY COND., W. VA. EX. 45.

EX. W. VA. NO. 45. O. L. H.

RESERVE GAS COMPANY

vs.

FRANKLIN MCKINLEY et al.

Condemnation Proceeding.

Petition Filed November 26, 1912.

To the Honorable Charles W. Lynch, Judge of the Circuit Court of Lewis County, West Virginia:

Your petitioner, Reserve Company, a corporation created, organized and existing under and pursuant to the laws of the State of West Virginia, respectfully represents unto your Honor that it is such corporation created, organized and existing under the laws of said state; that it obtained its original certificate of incorporation or charter from the Secretary of State of said State on the 16th day of April, 1902, by which the corporators are declared to be from the said date until the 1st day of January, 1952, a corporation by the name of Reserve Gas Company.

That for the purpose of enlarging and modifying its powers, rights and privileges, and with a view of investing itself with additional powers, rights and privileges, a resolution was adopted by the stockholders of your petitioner in stockholders' meeting assembled on the 9th day of September, 1908, providing that the objects and purposes for which said corporation was incorporated be enlarged and modified in accordance with and by virtue of the authority of Section 10 of Chapter 54 of the Code of West Virginia, so that said objects and purposes should be those set forth in a new agreement (which was then adopted), and which new agreement is by said resolu-
554 tion adopted in lieu and instead of the one under which said corporation was theretofore organized.

That the said new agreement so adopted by said resolution in lieu and instead of the one under which petitioner corporation was organized, was duly executed and acknowledged by the stockholders signing the same; and the said resolution and new agreement duly acknowledged, and accompanied by the proper certificates and affidavits were delivered to and filed with the Secretary of State of said State of West Virginia in his office on the 29th day of October, 1908; and thereupon the said Secretary of State, on the said resolution and new agreement, and certificates and affidavits accompanying the same, issued to the stockholders named in said new agreement, and all the other stockholders of said corporation, and their successors and assigns, an amended or modified charter or certificate of incorporation of this petitioner, thereby declaring the stockhold-

ers named in said new agreement and all the other stockholders of said corporation and their successors and assigns to be, from the date thereof (October 29th, 1908), until the 1st day of January, 1952, a corporation by the name and for the purposes and objects set forth in the said new agreement; and further thereby declaring that the said corporation shall henceforth be subject to such new agreement as set forth in said certificate in lieu of its original certificate of incorporation.

Your petitioner if required will file as part of this petition duly certified copies of the said original charter or certificate of incorporation and the said new or amended and modified charter or certificate of incorporation, marked and designated "Exhibit No. 1;" and prays that the same if, and when, filed may be taken, read and considered as part hereof, and your petitioner invites the
555 attention of the Court especially to the said resolution and new agreement and the said new or amended and modified charter or certificate of incorporation.

That as shown by said resolution and new agreement and the said new or amended and modified charter or certificate of incorporation, petitioner is thereby continued as such corporation by the name of Reserve Gas Company; and that petitioner is incorporated for the objects and purposes following:

For drilling, boring, mining and operating for the production of natural gas; the producing, dealing in, buying and selling, acquiring, storing, transporting by pipes and other wise natural gas for its own use and for the selling and supplying of natural gas for industrial, commercial, domestic and other public and private uses for heat, light, fuel and power to persons, firms, partnerships, corporations and other consumers and purchasers for use in cities, towns, villages, districts and other municipalities and places in the State of West Virginia, as well as elsewhere, where the said natural gas may be discovered, purchased, stored or transported by the said Reserve Gas Company; for the erecting, laying, maintaining, operating, repairing and removing derricks, pipes, lines of pipes, connections and regulators, pump stations, buildings, shops, structures, tanks, pumps, compressors, cooling plants, gasometers, valves, gates, telegraph and telephone poles and lines, and all other structures and appliances, including street mains, pipes and conduits necessary, incident and convenient to the production, storage, piping and transporting and conveyance of natural gas and petroleum oil; for the production, saving, storing, dealing in and selling petroleum oil, gasoline and such other substances as may be found in the drilling and mining for or handling of natural gas and oil. Also for the
556 purchasing, leasing, acquiring, holding, owning, granting and conveying all such lands and leaseholds for oil and gas purposes and such other real and personal property, including rights of way, as may be necessary and convenient for the purpose of producing, transporting, selling and supplying natural gas and petroleum oil, and for the full and complete exercise and enjoyment of each and all of the powers and purposes hereinbefore as well as hereinafter set forth, and with the right and power, from time to time, to sell, lease, surrender and dispose of any or all of such

real and personal property. Also to have, exercise and enjoy the right of eminent domain, and in the exercise of such right to take, condemn, use and enjoy such lands, rights of way, easements and property as shall be necessary to enable it to lay and construct its mains, pipes and conduits, pump stations, telegraph and telephone lines, dams and other structures and appliances necessary and required or convenient to the producing, storing, cooling and transporting of natural gas; and also to have the right and power to subscribe for and purchase and acquire and transfer the stocks, bonds and securities of other companies, and to have the right and power to do all other acts, and to have and possess all other powers and privileges, necessary for the carrying out of the objects and purposes of this corporation, as above set forth.

Petitioner further shows and represents that since the granting to it of the said new or amended and modified certificate of incorporation, it has been operating under the same and exercising the powers, rights and privileges thereby conferred upon it and with which it is thereby invested.

That since the granting of said new or amended and modified charter or certificate of incorporation, as well as for several years before, petitioner has been, and is engaged in the business of selling and supplying natural gas for industrial, commercial,
557 domestic and other public and private uses for heat, light, fuel and power to persons, firms, partnerships, corporations and other consumers and purchasers for use in incorporated cities, towns, villages, districts and other municipalities and places in the State of West Virginia, and has been and is supplying natural gas to the public for fuel, illuminating and other purposes, and has been, and is still, at great expense and cost to it, erecting, laying, maintaining and operating pipes and lines of pipe, etc., for transporting natural gas with which to supply the public and said other purchasers and consumers with natural gas for fuel, illuminating, heat, power and other purposes; and that it has been and is transporting natural gas to be supplied to the public and said other purchasers and consumers for fuel, heat, illuminating, power and other purposes by and through its said pipes and pipe lines.

That petitioner in the exercise of its rights, powers and privileges, and in the conduct of its business, has been and is supplying natural gas for public use for the purpose of heating and illumination to the town of Wilsonburg, in the State of West Virginia, and to the inhabitants thereof.

That in addition to the above town, petitioner supplies natural gas for heating, illuminating, power, fuel and other purposes to the citizens of a large number of unincorporated towns and villages in the State of West Virginia, and to persons residing in and inhabitating such unincorporated towns and villages.

That in addition to the unincorporated towns and villages and the inhabitants thereof, aforesaid, to which petitioner supplies natural gas for the purposes aforesaid, it also supplies natural gas for
558 such purposes to various school houses and school sub-districts in the counties of Lewis and Harrison, in the State of West

irginia; and to a large number of contractors and persons, firms
d corporations drilling oil, gas and other wells in said counties,
d to a large number of other persons, firms and corporations for
e in pumping, operating water stations, oil pumping stations, man-
facturing plants, etc.

That natural gas so supplied by petitioner to unincorporated
wns and villages and the inhabitants thereof for heating and illu-
inating purposes, as well as to school sub-districts and houses, indi-
iduals, water stations, oil pumping stations and other consumers is
supplied under contracts; and that where the same is supplied for
ating and illuminating purposes to unincorporated towns and vil-
ges, it is done under contract with such towns and villages, and
here the same is supplied to school houses, it is so supplied under
ntract with the proper school officers. That petitioner has existing
lid contracts extending into the future, for supplying natural gas
said towns, inhabitants and consumers.

That petitioner in supplying natural gas to the said unincorporated
wns and villages, and their inhabitants, for the purpose of heating,
umination, etc., has been and is occupying the public highways,
reets and alleys of such incorporated towns and villages for the
rpose by means of the location therein of its pipes, connections,
xes, valves and other fixtures, under authority of a franchise from
e county court of said counties, respectively. That in the county
Harrison, petitioner has and is the owner of a franchise from the
unty court authorizing it to locate, lay and maintain in the roads,
streets and alleys thereof pipes, connections, boxes, valves and
59, other fixtures for the purpose of supplying natural gas to the
inhabitants of said county. That petitioner has and is the
wner of a franchise from the county court of Lewis County author-
ing it to lay, maintain and operate, across the public highways in
id county pipes and other fixtures for the purpose of supplying nat-
al gas for public use.

That petitioner supplies, under valid contracts, natural gas to vari-
us village and town settlements in Lewis and Harrison Counties,
d to the inhabitants thereof, and to a large number of individual
nsumers therein, for use for heat, light, power and other purposes;
d it also supplies, under valid contracts, natural gas to a large
mber of individual consumers in Lewis and Harrison Counties,
d to manufacturing plants therein, for heat, light, manufacturing
d other purposes; it also furnishes and supplies from time to time,
other incorporated gas companies, under valid contracts, natural
as for consumption and use by a large number of individuals, firms,
artnerships, corporations and associations in the City of Manning-
n, and the towns of Littleton, Pine Grove, Smithfield, Wileyville,
undred, Fairview, and West Milford, and the unincorporated
wns of Wallace, Folsom, Metz, Glovers Gap and Wadestown, in the
tate of West Virginia; and that said other incorporated gas com-
anies, so supplying said last named cities and towns, supply gas to
he inhabitants thereof under valid franchises and contracts.

That petitioner, as is its bounden duty, furnishes, and is ready and
illing to furnish, at uniform and reasonable rates, natural gas for

heating, illuminating, fuel, power and other purposes to every inhabitant of the said unincorporated villages and towns above
560 named who applies therefor and who complies with the lawful and reasonable rules and regulations of petitioner, and also furnishes and is willing to furnish all other consumers therewith, at uniform and reasonable rates.

That it became necessary for petitioner, in order to supply natural gas to the said several unincorporated villages and towns, and their inhabitants, as well as the several other towns, individuals, firms, corporations, co-partnerships, etc., for heating, fuel, illuminating, power and other purposes, and to keep up the required and necessary supply of such gas, that it discover and produce an additional supply of natural gas; that to discover and produce the same, it became necessary for petitioner to drill, at large cost and expense, new wells for the purpose in the county of Lewis and several other counties in the State of West Virginia, and to acquire other wells in said counties; and that petitioner has drilled several new wells in said several counties and has discovered and found a large supply of natural gas in the said wells, and has acquired sundry other wells producing natural gas. That from said wells so drilled by it, as well as from said wells so acquired by it, petitioner produces natural gas with which to supply the said unincorporated villages and towns and the said inhabitants thereof, aforesaid, as well as said other purchasers and consumers. And that in order to supply said unincorporated villages and towns and the inhabitants thereof, as well as other consumers and prospective consumers in Lewis county, and elsewhere, with such natural gas produced from said last mentioned wells, for heating, illuminating and other purposes it is necessary that petitioner lay, construct and maintain an additional line of pipe from some of the wells in said several counties, through a portion of said Lewis county, and portions of other counties in the State of West
561 Virginia, so as to reach the above-mentioned unincorporated villages and towns, and the inhabitants thereof, as well as said other consumers in Lewis county and elsewhere, with said pipe line for the purpose of transporting such natural gas; and it is also necessary that petitioner transport such natural gas through said pipe line and supply the same for said purposes to said incorporated cities and towns, and the inhabitants thereof, and said other consumers in said Lewis county and elsewhere.

Petitioner avers that it has valid subsisting contracts with inhabitants in said Lewis and other counties, which contracts require petitioner to supply said last-named inhabitants with natural gas, and that in order to enable petitioner to perform the obligations of said contracts and to furnish gas to said inhabitants and other prospective consumers, it is necessary that petitioner lay and construct its pipe line along the route and over, in and through the piece, parcel or strip of land hereinafter particularly described.

That petitioner has surveyed a route for laying and constructing said pipe line from its gas wells through a portion of said county of Lewis as well as portions of others of said counties in the State of West Virginia, and proposes to, and it is necessary for it to lay and

onstruct a six-inch line of wrought iron or steel pipe for transporting
atural gas for public use along the route so surveyed and marked
ut for that purpose; and petitioner has procured rights of way or
asements for the laying, constructing and maintenance of such pipe
ine over and through several of the tracts of land through which the
ame passes on the line or route so surveyed; and that petitioner has
egun, and is now engaged in, the actual laying and construction of
the said pipe line on the route so selected and surveyed for
562 that purpose through a portion of said Lewis county and por-
tions of other said counties in the State of West Virginia;
hat among the lands over and through which the said route for said
ipe line has been selected, and over and through which it was and
s necessary that said pipe line be laid, constructed and maintained
re three tracts of land containing in the aggregate about 44 acres,
nd situated in said Lewis County, said State of West Virginia, ad-
oining lands of R. H. Hall and Sim Hall.

Which said tract of land is owned in fee simple as follows: Frank-
in McKinley is the owner in fee simple of a 19-acre tract, part of said
4 acres, known as Lot No. 1, except that Alrose Lucile McKinley,
n infant, and Lessie Rill McKinley, an infant, own in fee simple all
f the oil and gas within and underlying said Lot No. 1, and all the
oal and other minerals under said 19 acres below the level of the bed
f the creek which runs through said land, and all the oil and gas
entals and royalties, together with necessary rights to produce, mine
nd carry away said oil and gas, coal and other minerals, subject to
he dower right in said oil, gas, coal and other minerals which is
ested in Flora A. Smith as the widow of George McKinley, de-
eased. Franklin McKinley is the owner in fee simple of an 8-acre
ract, part of said 44 acres, known as Lot No. 4, except that Alrose
Starcher is the owner in fee simple of all of the coal below the level
f the stream in said Lot No. 4, with mining rights, and also one-
ixteenth of all the oil within and underling said lot and the one-
half of all the royalties and delay rentals to be paid for all of the
gas produced from said Lot No. 4, and that A. S. Starcher is the hus-
band of said Alrose Starcher. Franklin McKinley is the owner in
fee simple of a 17-acre tract, the remaining part of said 44 acres,
known as Lot No. 3, except that Aldo McKinley is the owner in fee
simple of all the oil and gas within and underlying said Lot
563 No. 3, and all the coal lying below the level of the bed of the
run at the public road, with mining rights and privileges.

That said Lots Nos. 1, 4 and 3, containing 19, 8 and 17 acres, re-
spectively, or a total of 44 acres, is owned in fee simple as aforesaid,
with the exception of certain leases and leasehold rights and estates
for oil and gas purposes which are owned as follows: Petitioner,
Reserve Gas Company, is the owner of a certain leasehold estate in
the oil and gas in said Lot No. 1, containing 19 acres, and has one
producing gas well thereon, and is in the possession thereof, oper-
ating the same for gas. West Virginia Central Gas Company, a cor-
poration, is the owner of certain leasehold estates in the gas, and
Eastern Oil Company is the owner of certain leasehold estates in the
oil, in said Lots Nos. 4 and 3, containing 8 acres and 17 acres, re-

spectively, and said West Virginia Central Gas Company has a producing gas well upon each of said two lots, and is in the possession thereof, operating the same for gas; and with the further exception that West Virginia Central Gas Company, a corporation, owns a right of way or easement over, through and across said Lot No. 1 to maintain, operate and remove a pipe line for the transportation of natural gas.

That it is necessary for petitioner to, and it proposes to construct, lay, maintain and operate its said pipe line in said county of Lewis over and through the said last named three tracts of land of said Franklin McKinley and the oil, gas, coal and other minerals of said Alrose Lucile McKinley, an infant, Lessie Rill McKinley, an infant, Alrose Starcher, Aldo McKinley, and the dower right of Flora A. Smith in said Lot No. 1, and over the leasehold rights of said petitioner, and said West Virginia Central Gas Company and
564 Eastern Oil Company, and over the easement or right of way of said West Virginia Central Gas Company, as to Lot No. 1, and that it desires to proceed with the laying and construction of said pipe line over and through the said lands.

That petitioner desires and proposes to take for the purpose of constructing, laying and maintaining its said pipe line, a right of way or easement to lay, construct, operate and maintain over and in the certain piece, parcel or strip of said land hereinafter described, along the center line hereinafter set out of the survey over said land, such six inch line of wrought iron or steel pipe for transporting natural gas for public use; which said piece, parcel or strip of said land is bounded and described as follows, to-wit: A strip of land situated in Freemans Creek District, Lewis County, West Virginia, 20 feet in width, being in line 10 feet on each side of a center line, which said center line begins at a point in the line between the lands of Franklin McKinley and R. H. Hall, said point standing N. 10° E. 709 feet from a fence post corner of R. H. Hall and George McKinley heirs, thence extending across the lands of Franklin McKinley South 74° 30′ east 230 feet to a stake; thence South 66° 30′ east 871 feet to a point on the boundary line between the lands of said Franklin McKinley and Sim Hall, which point stands on said boundary line S. 8° E. 172 feet from a fence post, a common corner between lands of Franklin McKinley and Sim Hall.

Your petitioner files herewith as part hereof a plat of said piece, parcel or strip of said land through which it proposes to take said right of way or easement, which plat is marked "Plat" for identification.

That the said right of way or easement for such line of pipe over and in said piece, parcel, or strip of said land is proposed to be taken by your petitioner, and is intended by your petitioner
565 to be appropriated for the purpose of constructing, laying, maintaining and operating such pipe line for transporting natural gas for public use, under and by virtue of its new or amended and modified charter or certificate of incorporation, under the laws of said State. That petitioner will appropriate and use said right

of way or easement for such line of pipe over and in said piece, parcel or strip of land for public use and for the purpose of constructing, laying, maintaining and operating such pipe line for transporting natural gas for public use, and intends to, and will, use said line of pipe for transporting natural gas for public use.

That petitioner proposes to and will bury the said line of pipe where the same is laid and constructed through said strip, piece or parcel of said land) at a depth of at least twelve inches under the surface, and all excavations will be well filled by petitioner and so kept by it. And that the said owner of said land, and others interested, after said line of pipe has been laid and buried, are to, and will, have the full use and enjoyment of the surface of said land for agricultural and other purposes in like manner as before the entry of your petitioner on the same, and are to, will and shall have the full use and enjoyment of said land in all other respects after said line of pipe is laid, the same as before, except as to the space under the surface occupied by said line of pipe, and except as to such temporary use as shall be necessary in maintaining said line of pipe and in taking up and removing the said line of pipe after the abandonment of said line and easement.

That an easement or right of way in, over and through said strip of said land is essential and necessary for the use of petitioner in the construction and maintenance of its pipe line, and it
566 cannot construct and maintain such line without said easement or right of way.

That the use and purpose to which petitioner intends and proposes to, and will, put and appropriate said easement or right of way is a public use and purpose.

That the said Franklin McKinley is the sole owner of said land, and Alrose Lucile McKinley, an infant, and Lessie Rill McKinley, an infant, and Flora A. Smith, are the sole owners of said oil, gas, coal and minerals in said Lot No. 1, and that Alrose Starcher is the sole owner of said oil, gas, coal and minerals in said Lot No. 4, as hereinbefore shown, and that Aldo McKinley is the sole owner of the oil, gas, coal and minerals in said Lot No. 3, as hereinabove shown, so far as known to petitioner, and that (as above shown) the nature of the interests of said owners is fee simple title, except that Flora A. Smith has a dower right only in the oil, gas, coal and minerals in Lot No. 1, as above shown, and except that West Virginia Central Gas Company has an easement only in Lot No. 1, as above shown. And your petitioner further avers and shows that petitioner owns and holds a lease for oil and gas purposes upon said Lot No. 1, containing 19 acres, and that West Virginia Central Gas Company as to the gas, and Eastern Oil Company, as to the oil, own and hold leases for oil and gas purposes upon said lots No.'s 4 and 3, containing 8 acres and 17 acres, respectively, which leases are, as petitioner is advised, in full force and effect. That the same are made upon the usual terms of oil and gas leases in that neighborhood, and grant to said lessees, respectively, the rights and privileges for operating, developing and producing the oil and gas in said lands. If insisted upon, your petitioner will file as parts of this

petition certified copies of said oil and gas leases, and the record evidence of the title to said lessees.

567 That petitioner does not find upon the records of said Lewis County any lien, except the following recorded lien, upon and against said 44 acres of land and upon and against the interests of all of the owners thereof, or of interests and rights therein as hereinbefore shown, that is to say: A vendor's lien to secure the title to another tract of land, reserved in a conveyance of 200 acres, which included said 44 acres, in a deed dated July 20, 1846, executed by James Woofter and wife to Evan Carmack, of record in Lewis County Clerk's office in Deed Book "S," page 11; but petitioner avers that said lien has been fully discharged and satisfied, and that the persons in whose favor said lien was retained have long since died, and that the rights and liabilities of all persons under said lien have long since terminated, and that in fact the same constitutes no present lien upon the said 44 acres of land, or of any interest therein. That petitioner does not find upon the records of said Lewis County any other claims to said land, or to any interest therein, or to any part thereof, than those hereinabove set out. That it does not find any conflicting claims thereto, or to any interest therein, or any part thereof.

That J. H. Smith is the guardian of said Alrose Lucile McKinley, an infant, and of Lessie Rill McKinley, an infant, and A. S. Starcher is the husband of Alrose Starcher.

That what is hereinbefore said in respect to the nature of the respective interests of the owners of said land, is all the information possessed by petitioner, or ascertainable by it touching the same; and the same is correct so far as known to your petitioner.

Petitioner further shows and represents that it has attempted to, but is unable to, agree with the owners of said land and the persons owning the said oil, gas, coal and mining rights and privileges

568 underlying the same, and the owners of said easement or right of way across Lot No. 1, and the owners of said oil and gas leases upon said land, aggregating 44 acres, an easement or right of way through which is so proposed to be taken by petitioner for the said public use and purposes as aforesaid, as to the amount of compensation for said easement or right of way in and through said parcel or strip of said land so proposed to be taken. That said owners will not agree to a fair price for said easement or right of way in, over and through said strip or parcel of said land so proposed to be taken; and also refuse to give your petitioner a right of way or easement over, in or through said land.

That the survey, location and route of petitioner's said pipe line aforesaid, so located and surveyed through the said county of Lewis, as well as through the said tracts of about 44 acres of land aforesaid in such county, and the aforesaid strip, piece or parcel of such land, has been regularly and duly authorized, selected, located, approved and adopted by the proper officers of petitioner and by its Board of Directors.

Petitioner further represents and avers that it has caused notice to be given to said owners of its intention to file this petition and make this application, as will more fully appear from said notice itself,

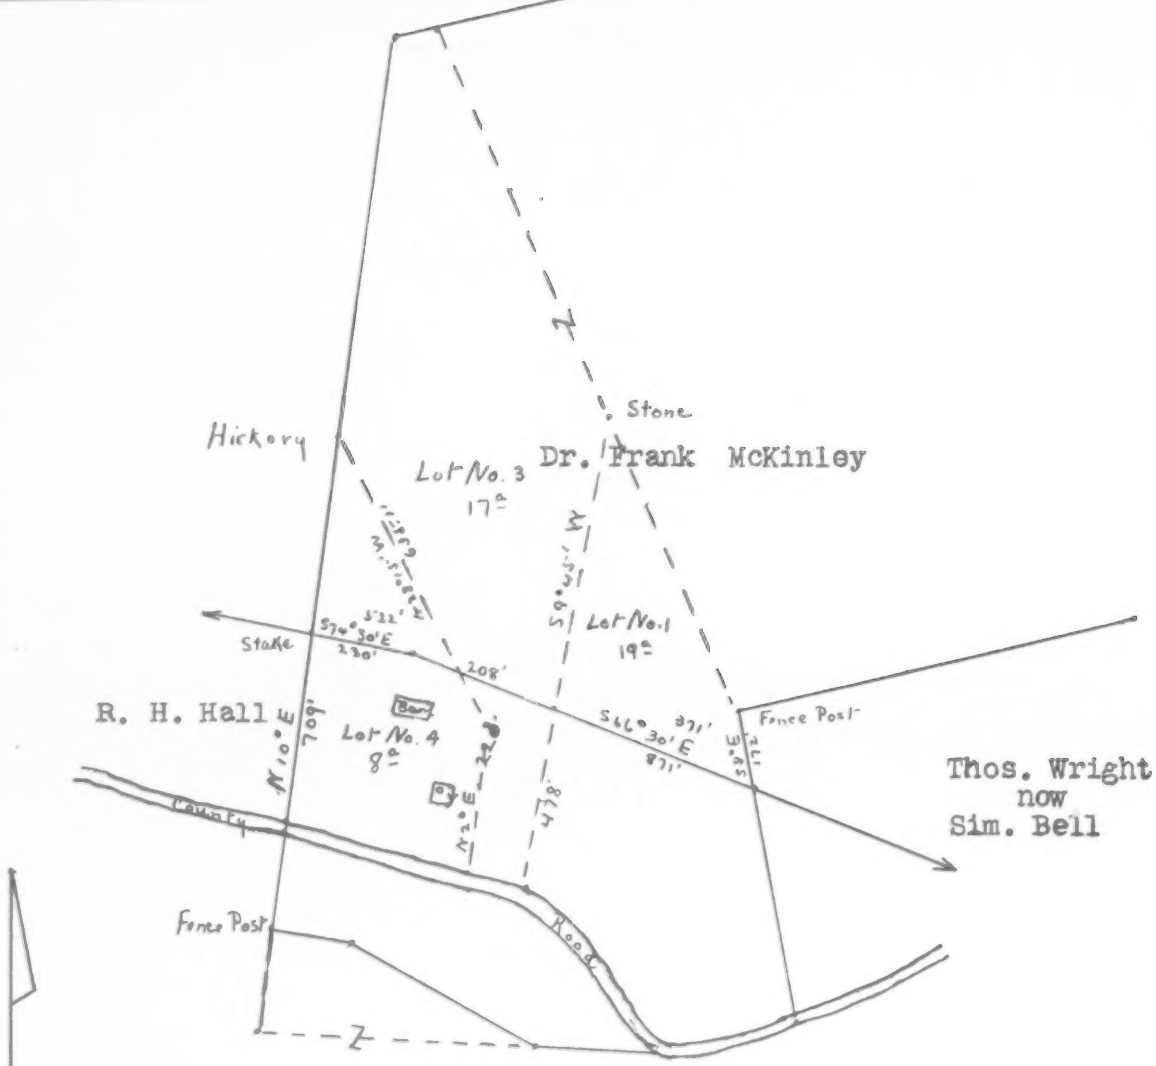

Exhibit "Plat" filed with the Petition.

Survey for proposed 6" gas line
for the Reserve Gas Co., across the
lands of Dr. Frank McKinley
Freeman's Creek Dist., Lewis Co.,
Surveyed Oct.7th, 1912, by J.P.McClintock
Scale 1" = 400' Bk.104, Pp.33-34.

and the evidence of the service of the same endorsed thereon, herewith filed marked "Notice," and here made part of this petition.

That in taking the said easement or right of way aforesaid, so proposed to be taken by petitioner, it will not be necessary to take any dwelling house, yard or garden, nor will any such be taken therein or thereby; and in taking the said easement or right of way, and appropriating and putting the same to the public use and purpose to which petitioner proposes to and will appropriate and put
569 the same and in which it will use the same, it is not, and will not be, necessary to erect or lay any oil tank or gas or oil pipe line within one hundred feet of any occupied dwelling house, nor shall any oil tank, gas or oil pipe line be erected or laid within one hundred feet of any occupied dwelling house.

That said tract of about 44 acres of land aforesaid does not lie within any municipal corporation.

That petitioner has the right to acquire and take said right of way or easement in and by this petition and application under the law.

Petitioner therefore prays that commissioners may be appointed by this Court to ascertain a just compensation to the persons entitled thereto for the said easement or right of way over, in and through the land hereinbefore described, proposed to be taken by your petitioner for the purpose and use aforesaid; that such proceedings may be had in the premises as conform to law; and that upon the payment of the compensation by your petitioner the said above described easement or right of way in, over and through said land may be vested in your petitioner. And your petitioner also asks such other and general relief as the Court may deem proper to award in the premises.

(Here follows diagram marked page 570.)

571 (EXHIBIT "NOTICE" FILED WITH THE FOREGOING PETITION.)

To Franklin McKinley, Alrose Lucile McKinley, an Infant; Lessie Rill McKinley, an infant; J. H. Smith, guardian of said Alrose Lucile McKinley and Lessie Rill McKinley, infants; Flora A. Smith, Alrose Starcher, and A. S. Starcher, her husband; Aldo McKinley, West Virginia Central Gas Company, a corporation; Eastern Oil Company, a corporation:

You will please take notice that on the 26th day of November, 1912, at 10 o'clock A. M., an application by petition will be made by the undersigned to the Circuit Court of Lewis County, West Virginia, at the Court House of said county, for the appointment by said Court of commissioners to ascertain a just compensation to the persons entitled thereto, for a right of way or easement to lay, construct, operate and maintain across, in and through the certain piece, parcel or strip of land hereinafter described, situated in Lewis County, West Virginia, (in which some of you are interested as owners in fee, others of you as owners and holders of easements upon portions thereof, and others of you as owners and holders of leases and leasehold rights and estates upon said land, and upon portions thereof, along the center line hereinafter set out of the survey over said land, a six inch line of wrought iron or steel pipe for transporting natural gas for public use, to be buried at a depth of at least 12 inches under the surface; and for such orders and proceedings to be then and there entered and had as may be necessary to condemn the said right of way or easement for such public use and purpose; the said piece, parcel or strip of land being bounded and described as follows, to-wit:

A strip of land situated in Freemans Creek District, Lewis County, West Virginia, 20 feet in width, being in line 10 feet on each side of a center line, which said center line begins at a point in
572 the line between the lands of Franklin McKinley and R. H. Hall, said point standing N. 10° E. 709 feet from a fence post corner of R. H. Hall and George McKinley heirs, thence extending across the lands of Franklin McKinley South 74° 30′ east 230 feet to a stake; then South 66° 30′ east 871 feet to a point on the boundary line between the lands of said Franklin McKinley and Sim Hall, which point stands on said boundary line S. 8° E. 172 feet from a fence post, a common corner between lands of Franklin McKinley and Sim Hall.

The plat of said land marked "Plat" is filed with the application in writing in the case.

And which right of way or easement for such line of pipe across, through, in and over said piece, parcel or strip of land is proposed to be taken by the undersigned Reserve Gas Company, a corporation duly created and acting under and by virtue of the laws of the State of West Virginia, and is intended by said Company to be appropriated for the purpose of constructing, operating and maintaining such pipe line for transporting natural gas for public use, under and by virtue of its charters, under the laws of said State.

You, the said owners of said land, and of portions thereof, and of interests, rights and estates therein and thereto, and portions thereof, and persons holding easements therein, after said line of pipe has been laid and buried, to have the full use and enjoyment of the surface of said piece, parcel or strip of land for agricultural and other purposes in like manner as before the entry of the undersigned, and to have the full use and enjoyment of said land in all other respects after said line of pipe is laid, the same as before,
573 except as to the space under the surface occupied by said line of pipe, and except as to such temporary use as shall be necessary in maintaining said line of pipe, and in taking up and removing said line of pipe after the abandonment of said line of pipe and easement.

Dated this 13th day of November, 1912.

575 RESERVE GAS COMPANY

vs.

FRANKLIN MCKINLEY et al.

Upon Proceeding to Take an Easement in, Over, and Through Land for Public Use.

(*Order Entered November* 29, 1912.)

This day came Reserve Gas Company, a corporation, by A. B. Fleming, W. W. Brannon, E. A. Brannon, Charles Powell and Kemble White, its attorneys, and presented a notice given by it to Alrose Lucile McKinley, an infant, Lessie Rill McKinley, an infant, J. H. Conrad, Guardian of said Alrose Lucile McKinley, infant, and of Lessie Rill McKinley, infant, and to Flora A. Smith, notifying them that said Reserve Gas Company would at this time and place file its application by petition for the appointment by the court of commissioners to ascertain a just compensation to the persons entitled thereto for a right of way or easement to lay, construct, operate and maintain across, in and through that certain piece, parcel or strip of land in said notice particularly described, along the center line particularly described therein, a line of wrought iron or steel pipe of the diameter of six inches for transporting natural gas for public use, to be buried at a depth of at least twelve inches below the surface; and for such orders and proceedings to be entered and had as may be necessary to condemn the said right of way or easement for such public use or purpose.

And thereupon the petitioner and applicant moved the court that said notice be filed and made part of the record herein.

And the court having seen and inspected said notice and return of service endorsed thereon, and it appearing that the said
576 notice was duly served upon said Alrose Lucile McKinley, an infant, Lessie Rill McKinley, an infant, J. H. Smith, Guardian of said Alrose Lucile McKinley, infant, and of Lessie Rill McKinley, infant, and upon Flora A. Smith, in Wirt County, West Virginia, on the 18th day of November, 1912, and that each of said four persons has had more than ten days' notice of the filing of said petition and application in writing, for the purposes mentioned in said notice; it is therefore ordered that the said notice be and the same is hereby filed, and made part of the record of this proceeding.

On motion of said petitioner and applicant, John H. Conrad is appointed Guardian ad litem for the two infant defendants, Alrose Lucile McKinley, infant, and Lessie Rill McKinley, infant.

Thereupon came the said John H. Conrad, Guardian ad litem as aforesaid, and filed in open court his answer as such guardian ad litem for said two infant defendants, duly verified by affidavit, to the petition and application of the applicant herein, to which answer the applicant replies generally. And came also the defendant Franklin McKinley in person and by Thomas I. Cummings, his counsel.

And it further appearing to the court that this proceeding is regularly matured for hearing upon the application and petition, as to all defendants; and the court having read and inspected said petition and application and plat and exhibits therewith, finds that it describes the said lands, a right of way or easement across, through and in which, for laying, constructing, operating and maintaining a line of wrought iron or steel pipe of the diameter of 6 inches, for transporting natural gas for public use, it proposed to take, and states the name of the owners of said land and the
577 nature of the interest of said parties therein, and the purpose for which said easement or right of way is proposed to be taken, and that said applicant has been unable to, and has failed to, agree with said owners as to the compensation to be paid them therefor, and also states the other matters and things required by law to be stated in such application, the court doth therefore find and order that the use for which the land or easement sought to be appropriated by the applicant in this case is to be taken is a public use, and that said land or easement or right of way is necessary to be taken by said applicant for the use and purposes as in said application and petition alleged, and that this case is one in which the applicant has the right to condemn for the use and purposes averred in its said application the said easement therein set out, and has a lawful right to take the said easement or right of way, that is to say: An easement or right of way for the purpose of laying, constructing, maintaining, operating and removing a line of wrought iron or steel pipe of the diameter of 6 inches of the applicant for transporting natural gas for public use in, over and through a certain piece, strip or parcel of land (containing about 44 acres) belonging to said Franklin McKinley, Alrose Lucile McKinley, an infant, Lessie Rill McKinley, an infant, J. H. Smith, Guardian of said Alrose Lucile McKinley and Lessie Rill McKinley, infants, Flora A. Smith, Alrose Starcher and A. S. Starcher, her husband, Aldo McKinley, West Virginia Central Gas Company, a corporation, Eastern Oil Company, a corporation, bounded and described as follows, viz: A strip of land situated in Freemans Creek District, Lewis County, West Virginia, 20 feet in width, being in line 10 feet on each side of a center line, which said center line begins at a point in the line between the lands of Franklin McKinley and R. H. Hall, said point standing N. 10° E. 709 feet from a fence
578 post corner of R. H. Hall and George McKinley heirs, thence extending across the lands of Franklin McKinley South 74° 30′ east 230 feet to a stake; thence South 66° 30′ east 871 feet to a point on the boundary line between the lands of said Franklin McKinley and Sim Hall, which point stands on said boundary line

S. 8° E. 172 feet from a fence post, a common corner between land of Franklin McKinley and Sim Hall.

And the said Reserve Gas Company now asking by petition th appointment of five disinterested freeholders to serve as commissio ers to ascertain what will be a just compensation to the perso entitled thereto for the easement so to be taken and appropriat by said Reserve Gas Company as aforesaid, &c.; and the court pr ceeding to the appointment of commissioners as so asked, do hereby nominate thirteen disinterested freeholders in this coun as follows: J. Goodloe Jackson, J. S. Turner, Perry E. Fetty, Fran L. Taylor, John B. Watson, J. E. Swisher, A. M. McQuain, W. Harold, Lee A. Beach, T. J. Lough, George L. Post, Luke Whi and J. W. Duncan, and the said applicant and the defendant Fran lin McKinley now appearing by their respective counsel, and th guardian ad litem also now appearing, proceeded to ascertain, provided by law, from said thirteen disinterested freeholders the fi to act as commissioners, which lot and choice fell upon the follo ing named five freeholders (of said thirteen) to act as such co missioners: Perry E. Fetty, Frank L. Taylor, J. E. Swisher, W. Harold and T. J. Lough.

Thereupon it is further ordered by the court that said five fre holders so selected as such commissioners shall act as such, and th after being duly sworn for the purpose, they do proceed with all co venient speed and after viewing said premises and hearin
579 any proper evidence offered, ascertain according to law wh will be a just compensation to the parties entitled thereto f the right of way or easement to lay, construct, operate and maint said line of wrought iron or steel pipe for transporting natural g for public use on, over and through the said strip or parcel of lan so proposed to be taken by the applicant in this case, as well damages to the residue of said real estate beyond the peculiar benef which will be derived in respect to such residue from the work to constructed, or from the purpose to which the part to be taken the applicant is to be appropriated, and make report of their pr ceedings to this court according to law.

580 RESERVE GAS COMPANY

VS.

FRANKLIN MCKINLEY et al.

Upon Proceeding to Take an Easement in, Over, and Throu Land for Public Use.

(*Order Entered December* 23, 1912.)

This day came the applicant, Reserve Gas Company, by A. Fleming, W. W. Brannon, E. A. Brannon, Charles Powell an Kemble White, its attorneys, and came also the defendant Fran lin McKinley by Thomas I. Cummings, Esq., his attorney, and cam also John H. Conrad, Guardian ad litem for the infant defendan

Alrose Lucile McKinley and Lessie Rill McKinley, and on motion of the applicant the oath taken by the commissioners appointed in this case, duly certified, as required by law, is now filed in the papers of this case. And upon like motion of said applicant, the report of the four of said commissioners who acted (the other commissioner not having acted), which was filed in the clerk's office December 20, 1912, is now filed in the papers of this case, said report bearing date December 20, 1912; and to which report the defendant, Franklin McKinley, has made and filed exceptions and demanded that the question of compensation to be paid for the land or easement proposed to be taken by the applicant in this proceeding be ascertained by a jury of twelve freeholders to be selected and empaneled for the purpose in the manner provided by law, which said exceptions to said report, as well as said demand, are attached to the said report. And on the further motion of the applicant, it is ordered that the said report of commissioners, together with the oath so taken
581 by said commissioners and certified as aforesaid and filed by this order, and the said exceptions made and filed to said report, be recorded in full in the law order book of this court, all of which is now done; said report, oath and exceptions being in the words and figures following, to-wit:

(*Oath.*)

"RESERVE GAS COMPANY, a Corporation,

vs.

FRANKLIN MCKINLEY and Others.

Upon Proceeding to Take an Easement in, Over, and Through Land for Public Use.

STATE OF WEST VIRGINIA,
County of Lewis, To wit:

I, John H. Conrad, Clerk of the Circuit Court of Lewis County, West Virginia, do hereby certify that Frank L. Taylor, J. E. Swisher, W. C. Harold and T. J. Lough, Commissioners appointed by the Circuit Court of Lewis County, West Virginia, upon the application of the Reserve Gas Company, a corporation, to ascertain a just compensation to the said Franklin McKinley and others, owners of land proposed to be taken by said Company for public purposes, and described in the petition of said Company, led in the said Court on the 26th day of November, 1912, personally appeared before me in my said County on this day, and each of them, before entering upon the discharge of his duties as such Commissioner, made oath that he will honestly and impartially perform his duties as such Commissioner to the best of his skill and judgment.

Given under my hand this 20th day of December, 1912.

(Signed) JOHN H. CONRAD,
Clerk Circuit Court Lewis County, West Virginia.

582 (*Report.*)

RESERVE GAS COMPANY, a Corporation,

vs.

FRANKLIN MCKINLEY and Others.

Upon Proceeding to Take an Easement In, Over, and Through Lan for Public Use.

Report of Commissioners.

To the Honorable Charles W. Lynch, Judge of the Circuit Cou of the County of Lewis, State of West Virginia:

We, the undersigned Commissioners, appointed by the Circui Court of Lewis County, West Virginia, by an order made on th 29th day of November, in the year 1912, on the application of th Reserve Gas Company, a corporation, respectfully report, that, hav ing been first duly sworn, we viewed the real estate owned by Frank lin McKinley and others, as fully mentioned and described in th petition and application of the Reserve Gas Company, filed in th above styled proceeding, on the 26th day of November, 1912, an are of opinion that One Hundred and Thirty-three and 40/10 ($133.40) Dollars will be a just compensation for so much of th said real estate as is proposed to be taken by the said applicant; tha is to say: The right of way or easement to lay, construct, maintain operate and remove, in and through that certain parcel or strip o land hereinafter described, situate in Lewis County, West Virginia along the center line hereinafter set out, on the survey over sai land, a line of wrought iron or steel pipe, six inches in diameter of the applicant for transporting natural gas for public use, the sai parcel of land being bounded and described as follows, to wit:

A strip of land situated in Freeman's Creek District, Lewis County West Virginia, twenty-feet in width, being in line ten feet on each side of a center line, which said center line begins at a poin

583 in the line between the lands of Franklin McKinley an R. H. Hall, said point standing N. 10 E. 709 feet from fence post, corner of R. H. Hall and George McKinley heirs thence extending across the lands of Franklin McKinley, South 7 30′ E. 230 feet to a stake; thence South 66 30′ East 871 feet to point on the boundary line between the lands of said Franklin Mc Kinley and Sim Hall, which point stands on said boundary lin S. 8 E. 172 feet from a fence post and common corner between land of Franklin McKinley and Sim Hall; which said piece, parcel o strip of land is fully described in the petition filed by the Reserv Gas Company in the Circuit Court of Lewis County, West Virginia as aforesaid, and on the plat filed therewith, which plat is marked "Plat," for identification, as well as for damages to the residue o the said real estate beyond the peculiar benefits which will be derive

in respect to such residue from the work to be constructed or from the purpose to which the part to be taken by the said applicant is to be appropriated.

Given under our hands, this 20th day of December, 1912.

(Signed) F. L. TAYLOR,
J. E. SWISHER,
W. C. HAROLD,
T. J. LOUGH,
Commissioners.

Costs and Expenses:

Frank L. Taylor, 2 days, 14 miles	$5.40
J. E. Swisher, 2 days, 15 miles	$5.50
W. C. Harold, 2 days, 37 miles	$7.70
T. J. Lough, 2 days, 13 miles	$5.30
	$23.90

584 (*Exception.*)

The defendant, Franklin McKinley, excepts to the within report of Commissioners upon the ground the amount ascertained by them and therein reported as compensation and damages to exceptor and defendant is entirely too small and insufficient.

And the said Franklin McKinley demands that the question of the said compensation be ascertained by a jury of twelve freeholders to be selected and empaneled in the manner provided by law.

(Signed) FRANKLIN McKINLEY,
By THOMAS I. CUMMINGS,
W. J. SMITH,
His Attorneys."

And thereupon the said applicant, Reserve Gas Company, paid into court to the Clerk thereof, the said sum of $133.40, that being the sum ascertained by said commissioners as compensation and damages to the persons entitled thereto (being the defendants, or such of them as may be entitled to the same) for the land proposed to be taken in and by the petition and application of said Reserve Gas Company, &c.

And the said applicant, Reserve Gas Company, having so as aforesaid paid into court the said compensation and damages so ascertained by said commissioners, it is further considered and ordered that the said Reserve Gas Company, notwithstanding the pendency of further proceedings, enter upon, take and use for the purposes specified in its said application and petition that part of the land in respect to which such payment is made, and generally that the said applicant shall have all such rights, privileges and franchises as in the said application and petition are asked and as are conferred upon it by Section 20 of Chapter 42 of the Code of West Virginia as amended.

And the said Franklin McKinley having filed exceptions to said report of said commissioners, and demanded that the question
585 of compensation to be paid by the applicant be ascertained by a jury, it is further ordered that the question of the compenstion to be paid by said Reserve Gas Company for said land proposed to be taken by it in and by this proceeding and its application herein, be ascertained by a jury of twelve freeholders, who shall be selected and empaneled for the purpose in the manner provided by law.

It is further ordered that the Clerk of this court do take charge of and hold the said sum of $133.40 subject to the further order of the court.

586 STATE OF WEST VIRGINIA,
County of Lewis, To wit:

I, Geo. Woofter, Clerk of the Circuit Court of Lewis County, State of West Virginia, do certify that the foregoing are true, correct and complete copies of the petition and exhibits therewith filed on November 26, 1912, and of the orders made and entered on November 29, 1912, and December 23, 1912, in the condemnation proceeding of Reserve Gas Company, a corporation, versus Franklin McKinley and others, lately pending in said Circuit Court, as the same remain of record in my said office.

In testimony whereof I have hereunto set my hand and affixed the seal of said Court, at the Courthouse of said County, on this the 31st day of January, 1921.

[Seal of the Circuit Court, Lewis County, West Virginia.]

GEO. WOOFTER,
Clerk.

STATE OF WEST VIRGINIA,
County of Harrison, To wit:

I, Haymond Maxwell, Judge of the Circuit Court of Lewis County, State of West Virginia, do certify that George Woofter, by whom the foregoing attestation was made, was, at the date thereof, clerk of said Court duly qualified, and that said attestation is in due form of law and made by the proper officer.

Witness my hand and seal on this the 31st day of January, 1921.

HAYMOND MAXWELL. [SEAL.]

587 STATE OF WEST VIRGINIA,
County of Lewis, To wit:

I, Geo. Woofter, Clerk of the Circuit Court of Lewis County, State of West Virginia, do certify that the Honorable Haymond Maxwell, by whom the above certificate was given, and whose name is thereto subscribed in his own proper handwriting, was, at the date

thereof, Judge of the said Circuit Court of Lewis County, duly commissioned and sworn and acting.

In witness whereof I have hereunto set my hand and affixed the seal of said Court, at the Courthouse of said County, on this the 31st day of January, 1921.

[Seal of the Circuit Court, Lewis County, West Virginia.]

GEO. WOOFTER,
Clerk.

589 HOPE V. RHODES COND. W. VA. EX. 46.

EX. W. VA. NO. 46. O. L. H.

HOPE NATURAL GAS COMPANY

v.

ARTHUR W. RHODES, et al.

Condemnation.

Petition for Condemnation of Right of Way for Pipe Line for Transportation of Natural Gas.

Filed in the Circuit Court of Harrison County December 29, 1909.

To the Honorable Charles W. Lynch, Judge of the Circuit Court of Harrison County, West Virginia:

Your petitioner, Hope Natural Gas Company, a corporation created, organized and existing under and pursuant to the laws of the State of West Virginia, respectfully represents unto your Honor that it is such corporation created, organized and existing under the laws of said State; that it obtained its original certificate of incorporation or charter from the Secretary of State of said State on the 17th day of September, 1898, by which the corporators are declared to be from the said date until the 1st day of August, 1948, a corporation
590 by the name of Hope Natural Gas Company.

That for the purpose of enlarging and modifying its powers rights and privileges, and with a view of investing itself with additional powers, rights and privileges, a resolution was adopted by the stockholders of your petitioner in stockholders' meeting assembled on the 21st day of January, 1904, providing that the objects and purposes for which said corporation was incorporated be enlarged and modified in accordance with and by virtue of the authority of Section 10 of Chapter 54 of the Code of West Virginia, so that said objects and purposes should be those set forth in a new agreement

(which was then adopted), and which new agreement is by said resolution adopted in lieu and instead of the one under which said corporation was theretofore organized.

That the said new agreement so adopted by said resolution in lieu and instead of the one under which petitioner corporation was organized, was duly executed and acknowledged by the stockholders signing the same, and the said resolution and new agreement duly acknowledged, and accompanied by the proper certificates and affidavits, were delivered to and filed with the Secretary of State of said State of West Virginia in his office on the 1st day of February, 1904; and thereupon the said Secretary of State, on the said resolution and new agreement, and certificates and affidavits accompanying the same, issued to the stockholders named in said new agreement, and all the other stockholders of said corporation, and their successors and assigns, an amended or modified charter or certificate of incorporation of this petitioner, thereby declaring the stockholders named in said new agreement and all the other stockholders of said corporation and their successors and assigns to be, from the date thereof (February 1st, 1904), until the 1st day of August, 1948, a corporation by the name and for the purposes and objects set forth in the said new agreement; and further thereby declaring that the said corporation shall henceforth be subject to such new agreement as set forth in said certificate in lieu of its original certificate of incorporation.

591 Your petitioner if required will file as part of this petition duly certified copies of the said original charter or certificate of incorporation and the said new or amended and modified charter or certificate of incorporation, marked and designated "Exhibit No. 1;" and prays that the same if, and when, filed may be taken, read and considered as part hereof, and your petitioner invites the attention of the Court especially to the said resolution and new agreement and the said new or amended and modified charter or certificate of incorporation.

That as shown by said resolution and new agreement and the said new or amended and modified charter or certificate of incorporation, petitioner is thereby continued as such corporation by the name of Hope Natural Gas Company; and that petitioner is incorporated for the objects and purposes following:

For drilling, boring, mining and operating for the production of natural gas; the producing, dealing in, buying and selling, acquiring, storing, transporting by pipes and otherwise natural gas for its own use and for the selling and supplying of natural gas for industrial, commercial, domestic and other public and private uses for heat, light, fuel and power to persons, firms, partnerships, corporations and other consumers and purchasers for use in cities, towns, villages, districts and other municipalities and places in the State of West Virginia, as well as elsewhere, where the said natural gas may be discovered, purchased, stored or transported by the said Hope Natural Gas Company; for the erecting, laying, maintaining, operating, repairing and removing derricks, pipes, lines of pipes, connections and regulators, pump stations, buildings, shops, structures, tanks, pumps,

compressors, gasometers, valves, gates, telegraph and telephone poles and lines, and all other structures and appliances, including street mains, pipes and conduits necessary, incident and convenient to the production, storage, piping and transporting and conveyance
592 of natural gas and petroleum oil; for the production, saving, storing, dealing in and selling petroleum oil and such other volatile substances as may be found in the drilling and mining for the production of natural gas. Also for the purchasing, leasing, acquiring, holding, owning, granting and conveying all such lands and leaseholds for oil and gas purposes and such other real and personal property, including right-of-way, as may be necessary and convenient for the purpose of producing, transporting, selling and supplying natural gas and petroleum oil, and for the full and complete exercise and enjoyment of each and all of the powers and purposes hereinbefore as well as hereinafter set forth, and with the right and power, from time to time, to sell, lease, surrender and dispose of any or all of such real and personal property. Also to have, exercise and enjoy the right of eminent domain, and in the exercise of such right to take, condemn, use and enjoy such lands, rights-of-way, easements and property as shall be necessary to enable it to lay and construct its mains, pipes and conduits, pump stations, telegraph and telephone lines and other structures and appliances necessary and required for the transportation of natural gas; and also to have the right and power to subscribe for and purchase and acquire the stocks, bonds and securities of other companies, and to have the right and power to do all other acts, and to have and possess all other powers and privileges necessary for the carrying out of the objects and purposes of this corporation, as above set forth.

Petitioner further shows and represents that since the granting to it of the said new or amended and modified certificate of incorporation, it has been operating under the same and exercising the powers, rights and privileges thereby conferred upon it and with which it is thereby invested.

That since the granting of said new or amended and modified charter or certificate of incorporation, as well as for several
593 years before, petitioner has been, and is, engaged in the business of selling and supplying natural gas for industrial, commercial, domestic and other public and private uses for heat, light, fuel and power to persons, firms, partnerships, corporations and other consumers and purchasers for use in incorporated cities, towns, villages, districts and other municipalities and places in the State of West Virginia, and has been and is supplying natural gas to the public for fuel, illuminating and other purposes, and has been, and is still, at great expense and cost to it, erecting, laying, maintaining and operating pipes and lines of pipe, etc., for transporting natural gas with which to supply the public and said other purchasers and consumers with natural gas for fuel, illuminating, heat, power and other purposes; and that it has been and is transporting natural gas to be supplied to the public and said other purchasers and consumers for fuel, heat, illuminating, power and other purposes by and through its said pipes and pipe lines.

That petitioner in the exercise of its rights, powers and privileges, and in the conduct of its business, has been and is supplying natural gas for public use for the purpose of heating and illumination to the following named incorporated cities and towns in the State of West Virginia, and to the inhabitants thereof, that is to say: The City of Mannington, in Marion county, West Virginia; the incorporated towns of Smithfield, Pine Grove, Wileyville, Hundred and Littleton, in the county of Wetzel, in the State of West Virginia; the incorporated town of Fairview, in Marion County, West Virginia, and the incorporated town of West Milford, in Harrison county, West Virginia. That petitioner supplies the greater number of said incorporated cities and towns with natural gas for street lights and other heating and illuminating purposes and public uses.

594 That in addition to the above enumerated incorporated cities and towns, petitioner supplies natural gas for heating, illuminating, power, fuel and other purposes to the citizens of a large number of unincorporated towns and villages in the State of West Virginia, and to persons residing in and inhabitating such unincorporated towns and villages; that among the latter are the villages and towns of Wallace, in Harrison county; Folsom, in Wetzel county; Metz and Glover's Gap, in Marion county; Wadestown, in Monongalia county.

That in addition to the incorporated cities and towns, and the inhabitants thereof, and the unincorporated towns and the inhabitants thereof, aforesaid, to which petitioner supplies natural gas for the purposes aforesaid, it also supplies natural gas for such purposes to various school houses and school sub-districts in the counties of Harrison, Wetzel, Monongalia and Marion, in the State of West Virginia; and to a large number of contractors and persons, firms and corporations drilling oil, gas and other wells in said counties (or a part of them), and to a large number of other persons, firms and corporations for use in pumping wells, operating water stations, oil pumping stations, manufacturing plants, etc.

That natural gas so supplied by petitioner to incorporated cities and towns and the inhabitants thereof for heating and illuminating purposes, as well as to school sub-districts and houses, individuals, water stations, oil pumping stations and other consumers is so supplied under contracts; and that where the same is supplied for heating and illuminating purposes to incorporated cities and towns, it is so done under contract with such cities and towns, and where the same is supplied to school houses, it is so supplied under contract with the proper school officers. That petitioner has existing valid contracts extending into the future, for supplying natural gas to said towns, inhabitants and consumers.

595 That petitioner in supplying natural gas to the said incorporated cities and towns, and their inhabitants, for the purpose of heating, illumination, etc., has been and is occupying the streets and alleys of such incorporated cities and towns for the purpose by means of the location therein of its pipes, connections, boxes, valves and other fixtures, under (in most instances) an ordinance of the said city or town. That in the City of Mannington and the

towns of Littleton, Fairview, Wileyville and West Milford aforesaid, in particular, petitioner has ordinances authorizing it to locate, lay and maintain in the streets and alleys thereof pipes, connections, boxes, valves and other fixtures for the purpose of supplying natural gas to the city and town and their inhabitants.

That in the said incorporated towns of Hundred and Fairview, petitioner has the due and legal authority of each of said towns to supply natural gas thereto, and to the inhabitants thereof, by means of occupying the streets and alleys with its pipes, connections, etc., for the purpose; and it repeats that it supplies the said towns and other towns under contract with natural gas for heating and illuminating purposes.

That the above named towns of Smithfield and Pine Grove have each been incorporated since the pipes, connections, boxes, valves and other fixtures of petitioner were laid in the streets and roads which now comprise the streets and alleys of said towns; and that petitioner both before and since the incorporation of such towns, has been and is occupying and using the said streets and alleys with its said pipes, connections, etc. That petitioner is advised that having the right to so occupy said streets and roads before the incorporation of said towns, that it still has the right and authority so to do, notwithstanding the incorporation thereof, and without obtaining specific ordinances from the said municipalities authorizing it to continue to so occupy and use said streets and alleys. However, it avers that it has the consent and approval of the municipal authorities in 96 so doing.

That petitioner, as is its bounden duty, furnishes, and is ready and willing to furnish, at uniform and reasonable rates, natural gas for heating, illuminating, fuel, power and other purposes to every inhabitant of the several incorporated cities and towns above named who applies therefor, and complies with the regulations prescribed by the ordinances of such of said cities and towns as have fixed ordinances authorizing the same, and who complies with the regulations fixed by the council of such of said towns as have not a specific ordinance, and also furnishes and is willing to furnish all other consumers therewith, at uniform and reasonable rates.

That petitioner is the owner of the ordinances and franchises above specified granted and enacted by the council of the said City of Mannington and of the said town of Littleton, and of the franchises, rights, privileges and ordinances granted, allowed and permitted in regard to the supplying and using of natural gas by the said other incorporated towns aforesaid.

That the said franchises and ordinances of said City of Manningon and said town of Littleton, as well as the franchises, rights and privileges granted to and allowed and permitted to be used and exercised by petitioner in said other incorporated towns by the council thereof, are still in full force and effect, and have never been revoked, annulled, forfeited to or declared void by any of the said councils. That said Mannington and Littleton franchises were made and granted to Flaggy Meadow Gas Co., and have passed by deed and assignment to petitioner. If required a certified copy of said Man-

nington franchise and a true copy of said Littleton franchise will be filed as parts hereof, marked "Exhibits Nos. 2 and 3."

597 That it became necessary for petitioner, in order to supply natural gas to the said several incorporated cities and towns, and their inhabitants, as well as the several other towns, individuals, firms, corporations, co-partnerships, etc., for heating, fuel, illuminating, power and other purposes, and to keep up the required and necessary supply of such gas, that it discover and produce an additional supply of natural gas; that to discover and produce the same, it became necessary for petitioner to drill, at large cost and expense, new wells for the purpose in the county of Harrison and several other counties in the state of West Virginia, and to acquire other wells in said counties; and that petitioner has drilled several new wells in said several counties and has discovered and found a large supply of natural gas in the said wells, and has acquired sundry other wells producing natural gas. That from said wells so drilled by it, as well as from said wells so acquired by it, petitioner produces natural gas with which to supply the said incorporated cities and towns and the said inhabitants thereof, aforesaid, as well as said other purchasers and consumers. And that in order to supply said incorporated cities and towns and the inhabitants thereof, as well as other consumers and prospective consumers in Harrison county, and elsewhere, with such natural gas produced from said last mentioned wells, for heating, illuminating and other purposes it is necessary that petitioner lay, construct and maintain an additional line of pipe from some of the wells in said several counties, through a portion of said Harrison county and portions of other counties in the state of West Virginia, so as to reach the above mentioned incorporated cities and towns, and the inhabitants thereof, as well as said other consumers in Harrison county and elsewhere, with said pipe line for the purpose of transporting such natural gas; and it is also necessary that petitioner transport such natural gas through said pipe line and supply the same for said purposes to said incorporated cities and towns, and the in-

598 habitants thereof, and said other consumers in said Harrison county and elsewhere.

Petitioner avers that it has valid subsisting contracts with inhabitants in said Harrison and said other counties, which contracts require petitioner to supply said last named inhabitants with natural gas, and that in order to enable petitioner to perform the obligations of said contracts and to furnish gas to said inhabitants and other prospective consumers, it is necessary that petitioner lay and construct its pipe line along the route and over, in and through the piece, parcel or strip of land hereinafter particularly described.

That petitioner has surveyed a route for laying and constructing said pipe line from its gas wells through a portion of said county of Harrison as well as portions of others of said counties in the state of West Virginia, and proposes to, and it is necessary for it to, lay and construct for the greater part of the distance along said route an eighteen inch, and for the residue of said distance a twelve inch, line of wrought iron or steel pipe for transporting natural gas for

public use along the route so surveyed and marked out for that purpose; and petitioner has procured rights-of-way or easements for the laying, constructing and maintenance of such pipe line over and through several of the tracts of land through which the same passes on the line or route so surveyed; and that petitioner has begun, and is now engaged in, the actual laying and construction of the said pipe line on the route so selected and surveyed for that purpose through a portion of said Harrison county and portions of other said counties in the state of West Virginia; that among the lands over and through which the said route for said pipe line has been selected, and over and through which it was and is necessary that said pipe line be laid, constructed and maintained, are two tracts of land containing about 226 acres and about 99¼ acres, respectively, lying adjoining, and situated in said Harrison county, said state of West Virginia, adjoining lands of James S. Law and others, which said tracts of land are owned in fee simple by Arthur W. Rhodes, subject to the rights hereinafter set out of Albert L. Green and J. A. Hardaway, with the exception of a certain lease and leasehold rights and estates for oil and gas purposes, which is owned by South Penn Oil Company and Hope Natural Gas Company, your petitioner.

That it is necessary for petitioner to, and it proposes to construct, lay, maintain and operate its said pipe line in said county of Harrison over and through the said last named tracts of land of said Arthur W. Rhodes, and over the leasehold rights of said South Penn Oil Company and Hope Natural Gas Company, your petitioner. That the said line over and through the said 99¼ acre tract is to be of the diameter of eighteen inches and over and through said 226 acres is to be of the diameter of twelve inches. That it desires to proceed with the laying and construction of said pipe line over and through the said lands.

That petitioner desires and proposes to take for the purpose of constructing, laying and maintaining its said pipe line, a right-of-way or easement to lay, construct, operate and maintain over and in the certain piece, parcel or strip of said two tracts of land hereinafter described, along the center line hereinafter set out of the survey over said lands, such line of wrought iron or steel pipe for transporting natural gas for public use; which said piece, parcel or strip of said land is bounded and described as follows, to-wit:

A strip of land situated in Union District, Harrison County, West Virginia, 20 feet in width, being in line 10 feet on each side of a center line, which said center line begins at a point in the center of the West Fork River, where said river forms the boundary line between the lands of Arthur W. Rhodes and James Q. Musser; thence across a tract of 226 acres owned by said Arthur W. Rhodes, N 37° 57′ W 120 feet; thence N 39° 34′ W 958 feet to a point on the boundary line between said Rhodes tract of 226 acres and a tract of 99¼ acres lately owned by William E. Hacker and by him sold, (though not conveyed by deed of record), to said Arthur W. Rhodes; thence across the said tract of 99¼ acres, N 39° 34′ W 265 feet; thence N 19° 51′ W 1371 feet to the

boundary line between said tract of 99¼ acres and the land of William J. Law, at a point which is N 53° E 36 feet from a white oak corner on said boundary line; the said line of pipe to be twelve inches in diameter where it crosses said tract of 226 acres and eighteen inches in diameter where it crosses said tract of 99¼ acres.

Your petitioner files herewith as part hereof a plat in two sections of said piece, parcel or strip of said two tracts of land through which it proposes to take said right-of-way or easement, which plat is marked "Plat" for identification.

That the said right of way or easement for such line of pipe over and in said piece, parcel or strip of said two tracts of land is proposed to be taken by your petitioner, and is intended by your petitioner to be appropriated for the purpose of constructing, laying, maintaining and operating such pipe line for transporting natural gas for public use, under and by virtue of its new or amended and modified charter or certificate of incorporation, under the laws of said state. That petitioner will appropriate and use said right-of-way or easement for such line of pipe over and in said piece, parcel or strip of land for public use and for the purpose of constructing, laying, maintaining and operating such pipe line for transporting natural gas for public use, and intends to, and will, use said line of pipe for transporting natural gas for public use.

601 That petitioner proposes to and will bury the said line of pipe (where the same is laid and constructed through said strip, piece or parcel of said land) at a depth of at least twelve inches under the surface, and all excavations will be well filled by petitioner and so kept by it. And that the said owner of said land, and others interested, after said line of pipe has been laid and buried, are to, and will, have the full use and enjoyment of the surface of said land for agricultural and other purposes in like manner as before the entry of your petitioner on the same, and are to, will and shall have the full use and enjoyment of said land in all other respects after said line of pipe is laid, the same as before, except as to the space under the surface occupied by said line of pipe, and except as to such temporary use as shall be necessary in maintaining said line of pipe and in taking up and removing the said line of pipe after the abandonment of said line and easement.

That an easement or right-of-way in, over and through said strip of said land is essential and necessary for the use of petitioner in the construction and maintenance of its pipe line, and it cannot construct and maintain such line without said easement or right-of-way.

That the use and purpose to which petitioner intends and proposes to, and will, put and appropriate said easement or right-of-way is a public use and purpose.

That the said above named Arthur W. Rhodes is the owner of said two tracts of land, subject to the rights of said Albert L. Green and J. A. Hardaway hereinafter set out.

That when the notice hereinafter set out was given, the legal title to said 99¼ acre tract had not been conveyed by William E. Hacker to said Arthur W. Rhodes, but since the giving of said notice

proper deed of conveyance for said land has been made and delivered by said Hacker to said Rhodes.

That (as above stated) the nature of the interests of said owner is fee simple title to said lands.

And your petitioner further avers and shows that South Penn il Company and Hope Natural Gas Company, your petitioner, rn and hold a lease for oil and gas purposes upon each of the said acts of land, containing 226 acres and 99¼ acres, respectively, hich said leases are, as petitioner is advised, in full force and fect. That the same are made upon the usual terms of oil and s leases in that neighborhood, and each grants to the lessee the ghts and privileges for operating developing and producing the l and gas in the land. If insisted upon, your petitioner will file parts of this petition certified copies of said oil and gas leases.

That petitioner does find upon the records of said county the llowing liens and charges upon and against the said lands of rthur W. Rhodes, that is to say:

1. Under the will of Thomas A. Horner certain provisions are ade in favor of Emma A. Horner and Mary V. Horner (now hodes) whereby should they at the death of their mother not be arried they, or either of them, that may be single, is to have the arm as a home and support for either one or both of them as ng as they may remain unmarried, which said provision petitioner advised was meant to and did and does apply to the said 226 acres f land. Petitioner has named the said Emma A. Horner and the id Mary V. Rhodes in its notice hereinafter referred to and made hem parties hereto, because of said provision, and if it is or beomes necessary in this proceeding to determine whether or not he marriage of said Mary V. Horner terminates her rights under id provision of said will, then petitioner submits the said question o the determination of this Honorable Court.

2. There exists in favor of Nathan Goff a vendor's lien for $650.00 with interest from July 12th, 1883, reserved in deed made by said Goff to Philip H. Hilkey for said 99¼ acres, earing date July 12th, 1883, and recorded in the Clerk's office of he County Court of Harrison County in Deed Book No. 67, page 93.

3. There exists in favor of Phillip H. Hilkey, now deceased, and whose administrator is M. J. Francis, Sheriff of Harrison County nd as such administrator of the personal estate of said Hilkey, a endor's lien in the sum of $875.00, with interest thereon from the 4th day of December, 1885, reserved in a deed of conveyance of aid 99¼ acres executed by said Phillip H. Hilkey and wife to W. S. Horner, bearing date December 14th, 1885, and recorded in the ame office in Deed Book No. —, page 152.

In this connection petitioner further shows and avers that at the ime it gave the notice hereinafter referred to W. S. Horner, who is named in said notice, appeared to have a vendor's lien upon the aid 99¼ acres of land in the sum of $2,200.00, but petitioner avers

that the said Horner has released the same since the giving of the said notice; that the money secured by said lien has been fully paid to said Horner and he has released the same, and has no interest in the said land or this proceeding, and is not a necessary or proper party to the same. Petitioner will, if required, file as a part hereof a duly certified copy of the said release of said lien so executed by the said W. S. Horner.

Petitioner further shows and avers that William E. Hacker named in the said notice, now has no interest in either of the said two tracts of land, and is not a necessary party hereto, the said Hacker having as above stated conveyed the said 99¼ acres
of land in fee simple to the said Arthur W. Rhodes
604 since the giving of said notice.

That J. A. Hardaway, named in said notice, owned the said 99¼ acres of land at one time, and that he conveyed the same to William E. Hacker by deed bearing date the 19th day of April, 1901, and of record in said Clerk's office in Deed Book No. 123, page 173, and that in and by said deed the said J. A. Hardaway reserved from the property conveyed unto himself the ½ of the royalty on the oil and ½ of the rental on each gas well,—reciting in the said deed that the said tract of land is (at the date of said deed) under lease to the South Penn Oil Company.

That while the said William E. Hacker owned the said 99¼ acres of land, to wit, on the 28th day of September, 1903, he and his wife executed to Albert L. Green (named in said notice), a paper writing which was on 4th day of November, 1904, recorded in the Clerk's office of the County Court of Harrison County in Deed Book No. 145, page 218, whereby they released to said Green for building and til-ing purposes only, a lot of land (being a part of said 99¼ acres), bounded as follows: On the east by West Fork River; on the south by lands of Arthur Rhodes; on the north and west by county road. To have and to hold from the date of said writing so long as said Green is an employe at the water station near said lot on Arthur Rhodes' land. And petitioner has made the said Albert L. Green a party to said notice and this proceeding because of his interest and rights under the said paper in and to the said lot or parcel of said 99¼ acres of land.

That James M. Riffee, named in the said notice is, as petitioner is informed and believes, and on such information and belief avers, a tenant of the surface of a portion of said 226 acres of land, in
possession thereof as such tenant.
605 Petitioner further avers and shows that the said vendor's liens of said Nathan Goff and Phillip Hilkey have long since been paid off and discharged as this petitioner is informed and believes, and that the same, and each of them, should be released.

That petitioner does not find upon the records of said Harrison County any other liens or charges upon or against said tracts of land, or either of them, of the said Arthur W. Rhodes, or upon or against any interest therein, other than those hereinabove set out; and does not find upon said records any other claims to said lands, or either tract thereof, or to any interest in either tract thereof, or to

any part of either tract thereof, or any conflicting claims to either of said tracts, or to any interest in or part of either of said tracts, than those hereinbefore in this petition set forth and shown.

That said Emma A. Horner, Mary V. Rhodes, Nathan Goff, M. J. Francis, James M. Riffee, J. A. Hardaway and Albert L. Green each and all reside in said Harrison County, West Virginia.

That what is hereinbefore said in respect to the nature of the respective interests of the owners of said land, is all the information possessed by petitioner, or ascertainable by it touching the same; and the same is correct so far as known to your petitioner.

Petitioner further shows and represents that it has attempted to, but is unable to, agree with the owners of said land, and the owner of said oil and gas lease upon the said land, an easement or right-of-way through which is so proposed to be taken by petitioner for the said public use and purposes as aforesaid, as to the amount of compensation for said easement or right-of-way in and through said parcel or strip of said land so proposed to be taken. That said owners will not agree to a fair price for said easement or right-of-way in, over and through said strip or parcel of said land so
606 proposed to be taken; and also refuse to give your petitioner a right-of-way or easement over, in or through said land.

That the survey, location and route of petitioner's said pipe line aforesaid, so located and surveyed through the said county of Harrison, as well as through the said two tracts of land aforesaid in such county, and the aforesaid strip, piece or parcel of such land, has been regularly and duly authorized, selected, located, approved and adopted by the proper officers of petitioner and by its Board of Directors.

Petitioner further represents and avers that it has caused notice to be given to said owners and lienors and other claimants aforesaid of its intention to file this petition and make this application, as will more fully appear from said notice itself, and the evidence of the service of the same endorsed thereon, herewith filed marked "Notice," and here made part of this petition.

That in taking the said easement or right-of-way aforesaid, so proposed to be taken by petitioner, it will not be necessary to take any dwelling house, yard or garden, nor will any such be taken therein or thereby; and in taking the said easement or right-of-way, and appropriating and putting the same to the public use and purpose to which petitioner proposes to and will appropriate and put the same and in which it will use the same, it is not, and will not be, necessary to erect or lay any oil tank or gas or oil pipe line within one hundred feet of any occupied dwelling house, nor shall any oil tank, gas or oil pipe line be erected or laid within one hundred feet of any occupied dwelling house.

607 That said tracts of land aforesaid do not lie within any municipal corporation.

That petitioner has the right to acquire and take said right-of-way or easement in and by this petition and application under the law.

Petitioner therefore prays that commissioners may be appointed by

this Court to ascertain a just compensation to the persons entitled thereto for the said easement or right-of-way over, in and through the land hereinbefore described, proposed to be taken by your petitioner for the purpose and use aforesaid; that such proceedings may be had in the premises as conform to law; and that upon the payment of the compensation by your petitioner the said above described easement or right-of-way in, over and through said land may be vested in your petitioner. And your petitioner also asks such other and general relief as the Court may deem proper to award in the premises.

o Arthur W. Rhodes, Mary V. Rhodes, Emma A. Horner, James M. Riffee, William E. Hacker, J. A. Hardaway, Albert L. Green, Nathan Goff, W. S. Horner, M. J. Francis, sheriff and as such administrator of the personal estate of Philip Hilkey, deceased, and South Penn Oil Company, a corporation:

You will please take notice that on the twenty-ninth day of De-mber, 1909, at 9:00 o'clock A. M. or as soon thereafter on said y as counsel may be heard, an application by petition will be made the undersigned to the Circuit Court of Harrison County, West irginia, at the Court House of said County, for the appointment by id court of commissioners to ascertain a just compensation to the rsons entitled thereto for a right of way or easement to lay, con-ruct, operate and maintain, across, in and through that certain rcel or strip of land hereinafter described, situate in said Harrison unty, of which some of you are the owners in fee simple, and upon hich others of you have liens, and two of you are tenants, and in part of which one of you owns an interest in the oil and gas, and pon all of which you, South Penn Oil Company, own all the interest t owned by the undersigned in certain leasehold estates for oil and as purposes, along a center line hereinafter set out of the survey er said land, a line of wrought iron or steel pipe, twelve inches in ameter for the first 1,078 feet of said line as hereinafter described nd eighteen inches in diameter for the remaining length, for trans-rting natural gas for public use, to be buried at a depth of at least elve inches under the surface; and for such orders and proceedings to be then and there entered and had as may be necessary 10½ to condemn the said right of way or easement for such public use and purpose; the said parcel of land being bounded and escribed as follows, to-wit:

A strip of land situate in Union District, Harrison County, West irginia, 20 feet in width, being in line 10 feet on each side of a enter line, which said center line begins at a point in the center of he West Fork River, where said river forms the boundary line be-ween the lands of Arthur W. Rhodes and James Q. Musser; thence cross a tract of 226 acres owned by said Arthur W. Rhodes, N. 7° 57′ W. 120 feet; thence N. 39° 34′ W. 958 feet to a point on he boundary line between said Rhodes tract of 226 acres and a tract f 99¼ acres lately owned by William E. Hacker and by him sold, though not conveyed by deed of record), to said Arthur W. Rhodes; hence across the said tract of 99¼ N. 39° 34′ W. 265 feet; thence N. 19° 51′ W. 1,371 feet to the boundary line between said tract of 99¼ acres and the land of William J. Law, at a point which is N. 53° E. 36 feet from a white oak corner on said boundary line; the said line of pipe to be twelve inches in diameter where it crosses said tract of 226 acres, and eighteen inches in diameter where it crosses said tract of 99¼ acres.

A plat of the survey of said land and proposed line marked "Plat will be filed with the application in writing by petition as aforesaid

The said right of way or easement for such line of pipe across through, in and over said parcel or strip of land is proposed to b taken by the undersigned, Hope Natural Gas Company, a corpora tion, duly created and acting under and by virtue of the laws of th State of West Virginia, and is intended by said Company to be ap
propriated for the purpose of constructing, operating and
611 maintaining such pipe line for transporting natural gas for
public use, under and by virtue of its charters under the laws of said State.

You, owners of said land, and others interested therein, after said line or pipe has been laid and buried, to have the full use and en joyment, according to your respective interests, of the surface of said parcel or strip of land for agricultural and other purposes in like manner as before the entry of the undersigned, and to have the full use and enjoyment of said land in all other respects after said line of pipe is laid, the same as before, except as to the space under the surface occupied by said line of pipe, and except as to such temporary used as shall be necessary in maintaining said line of pipe, and in taking up and removing said line of pipe after the abandonment of said easement.

Dated this 16th day of December, 1909.

HOPE NATURAL GAS COMPANY,
By A. B. FLEMING,
CHARLES POWELL,
KEMBLE WHITE,
Counsel.

612 On the 16th day of December, 1909, in Harrison County, West Virginia, I served the within notice on the within named M. J. Francis, Sheriff, and as such administrator of the personal estate of Philip Hilkey, deceased, by delivering to him in person a true copy hereof; and

On the 16th day of December, 1909, in Harrison County, West Virginia, I served the within notice on the within named Nathan Goff by posting and leaving posted a true copy hereof at the front door of the usual place of abode of the said Nathan Goff, he not being found nor any member of his family above the age of sixteen years being found at his usual place of abode, and the said Nathan Goff not being found; and

On the 17th day of December, 1909, in Harrison County, West Virginia, I served the within notice on the within named Mary V. Rhodes by delivering to her in person a true copy hereof; and

On the 17th day of December, 1909, in Harrison County, West Virginia, I served the within notice on the within named Arthur W. Rhodes by delivering a true copy hereof to Mary V. Rhodes, his wife, a member of his family above the age of sixteen years, giving to her information of the purport thereof, he the said Arthur W. Rhodes not being found at his usual place of abode;

On this 18th day of December, 1909, in Harrison County W. Va., I served the within notice on the within named Albert L. Green at his usual place of abode by delivering to Undine Green a true copy hereof and giving to her information of the purport thereof she being a member of his, the said Albert L. Green's family, and over the age of sixteen years, the said Albert L. Green not being found.

(Signed) J. C. ROBINSON,
Deputy Sheriff, for M. J. Francis,
Sheriff Harrison County, West Virginia.

614 HOPE NATURAL GAS COMPANY, a Corporation,

vs.

ARTHUR W. RHODES, MARY V. RHODES, EMMA A. HORNER, JAMES M. Riffee, William E. Hacker, J. A. Hardaway, Albert L. Green, Nathan Goff, M. J. Francis, Sheriff and Administrator, and South Penn Oil Company, Defendants.

Upon Proceeding to Take Right of Way or Easement In, Over, and Through Land for Public Use.

This day came Hope Natural Gas Company, a corporation, by A. B. Fleming, Chas. Powell and Kemble White, its attorneys, and presented to the court a notice given by it to the above named defendants, notifying them that on this day it would make an application by petition to this Court for the appointment of Commissioners to ascertain a just compensation to the persons entitled thereto, for a right of way or easement to lay, construct, operate and maintain in and through the certain piece, parcel or strip of land therein described a pipe line therein described for transporting natural gas for public use, and for such orders and proceedings to be had as may be necessary to condemn the said right of way or easement for such public use and purpose. And it appearing to the court that the said notice was duly served according to law upon the said persons above named and service thereof duly accepted by and on behalf of South Penn Oil Company, more than ten days prior to this date as appears from the returns of service of said notice endorsed thereon, and that they have each had more than ten days notice of said application by petition, it is ordered that the said notice be and the same is hereby filed and docketed.

615 And the said Hope Natural Gas Company, a corporation, in pursuance of said notice, this day presented its application in writing by petition describing the said lands, a right of way or easement in, over and through which for laying, constructing, operating and maintaining said pipe line it proposes to take, with the *plant* of said lands and certain exhibits therewith, and stating in said application the names of the owners thereof, and the nature of the interests of said parties therein, and also stating the purposes for which said easement or right of way is proposed to be taken, and that said corporation has been unable to agree with the owners as to the compensation to be paid therefor. Thereupon, upon motion of the said Hope Natural Gas Company, it is ordered that said application in writing, by petition, and the said plat and exhibits therewith, be and the same are here now filed; and it is further decreed that this proceeding be and the same is here now docketed.

616 And thereupon came the defendant, Arthur W. Rhodes and Mary V. Rhodes, by John Bassel, their attorney. And the court doth find that the use for which the land or easement, or right of way sought to be appropriated by the applicant in this case

is to be taken, is a public use, and that said land, or easement, or right of way, is necessary to be taken by said petitioner or applicant, for the use and purposes as in its petition alleged, and that the applicant has the right to condemn the same for such purposes.

And the said applicant, or petitioner, in pursuance of its notice and application, insisting upon and praying the appointment of commissioners to ascertain a just compensation to the parties entitled thereto for the said right of way, or easement sought to be taken in this case, and it appearing to the court that the petition of the applicant filed herein describes fully the lands in and through which the said easement, or right of way, is proposed to be taken, and states the names of the owners thereof, the nature of the interests of the said parties therein, and the purpose for which said easement, or right of way, is proposed to be taken, and that it will be used therefor, and that said corporation has been unable to agree with the owners as to the compensation to be paid therefor, the court doth further find and order that this case is one in which the applicant has a lawful right to take the said easement or right of way on, over and through the said property described in the said petition for the purposes set out therein. And the court doth hereby nominate thirteen disinterested freeholders of this county, as followers: Perry C. Williams, Charles A. Short, Austin H. Davisson, Lloyd M. Allen, Burgett Swisher, Wesley L. Steel, David L. Hall, Morgan R. Lodge, Cyrus Thompson, Lucian J. Davisson, Samuel S. Faris, Cree B. Bartlett and S. A. Smith. And said appli-
617 cant and the defendants, appearing by their counsel, proceeded to ascertain as provided by law from said thirteen freeholders the five to act as commissioners, while lot and choice fell upon the following named five freeholders, (of said thirteen) to act as said commissioners: Perry C. Williams, Chas. A. Short, Lloyd M. Allen, Morgan R. Lodge, and S. A. Smith. Thereupon it is further ordered by the court that the said five freeholders so selected as such commissioners, shall act as such, and that after being duly sworn for the purpose, they do proceed with all convenient speed, and after viewing said premises, and hearing any proper evidence offered, ascertain according to law what will be a just compensation to the parties entitled thereto for the right of way, or easement, to lay, construct and maintain said line of wrought iron, or steel pipe for transporting natural gas for public use on, over and through the said strip, or parcel, of land so proposed to be taken by the applicant in this case; and make report of their proceedings to this court according to law.

(The foregoing order was entered by the court December 29th, 1909, and is recorded in Law Order Book No. 34, at page 336.)

618 (*Order Entered Jany.* 29. 1910, *Recorded in Law Order Book No.* 34, *Page* 414.)

HOPE NATURAL GAS COMPANY, a Corporation, Applicant,

vs.

ARTHUR W. RHODES et als.

Application and Proceeding to Condemn an Eastment for Pipe-line Purposes.

This day came the applicant, Hope Natural Gas Company, by A. B. Fleming, C. Powell and Kemble White, its attorneys, and came also the defendant Arthur W. Rhodes, by John Bassel, his attorney, and on motion of the applicant the oath taken by Charles A. Short, Morgan R. Lodge, Perry C. Williams, Lloyd M. Allen and S. A. Smith, the commissioners appointed in this case, duly certified by I. Wade Coffman, Clerk of the Circuit Court of Harrison County, as required by law, is now filed in the papers of this case.

And upon like motion of said applicant, the report of said commissioners Charles A. Short, Morgan R. Lodge, Perry C. Williams, Lloyd M. Allen and S. A. Smith is now filed in the papers of this case, said report bearing date the 26th day of January, 1910, and to which report the defendant Arthur W. Rhodes has made and filed exceptions and demanded that the question of compensation to be paid for the land or easement proposed to be taken by the applicant in this proceeding be ascertained by a jury of twelve freeholders to be selected and empaneled for the purpose in the manner provided by law,—which said exceptions to said report, as well as said demand, are attached to the said report. It is ordered that the said report of said commissioners be recorded in the Law Order Book of this court, together with the oath so taken by said com-
619 missioners and certified as aforesaid, and the said exceptions made and filed to said report, and the said demand for a trial by jury of the question of compensation, all of which is now done; said report, oath and exceptions and demand being in the words and figures following, to-wit:

(*Oath.*)

"In the Circuit Court of Harrison County, West Virginia.

HOPE NATURAL GAS COMPANY

vs.

ARTHUR W. RHODES et als.

Condemnation Proceedings.

I, I. Wade Coffman, Clerk of the Circuit Court of Harrison County, do certify that Charles A. Short, Perry C. Williams, L. M. Allen,

Morgan R. Lodge and S. A. Smith, Commissioners appointed by the Circuit Court of Harrison County upon the application of Hope Natural Gas Company to ascertain a just compensation to the persons entitled thereto for a right-of-way or easement in, over and through certain lands of the defendants in the above styled proceeding, described in the petition of the said Hope Natural Gas Company filed in said court on the 29th day of December, 1909, personally appeared before me in my said County and each of them before entering upon the discharge of his duties as such, made oath that he will honestly and impartially perform his duties as such Commissioner to the best of his skill and judgment.

Given under my hand this 25th day of January, 1910.

(Signed) I. WADE COFFMAN,
Clerk of the Circuit Court of Harrison County."

620 (*Report.*)

"To the Circuit Court of Harrison County:

We, the Commissioners appointed by the Circuit Court of Harrison County by an order made on the 29th day of December, 1909, on the application of Hope Natural Gas Company, respectfully report:

That having been first duly sworn, we viewed the real estate owned by Arthur W. Rhodes, J. A. Hardway (as to part of oil and gas royalty), Albert L. Green (as to easement), Nathan Goff and M. J. Francis, Sheriff and administrator of Phillip Hilkey, deceased, (holding liens on portions thereof), Mary V. Rhodes and Emma A. Horner (holding charges on portions thereof), South Penn Oil Company and Hope Natural Gas Company (lessees of the oil and gas), James M. Riffee (as tenant of the surface), mentioned in said application, and are of opinion that $342 will be a just compensation for so much of the said real estate as is proposed to be taken by the said applicant, that is to say: The right of way or easement to lay, construct, operate and maintain across, in and through that certain parcel or strip of land hereinafter described situate in Harrison County, West Virginia, along the center line hereinafter set out on the survey over said land the line of wrought iron or steel pipe, 12 inches in diameter where it crosses said tract of 226 acres, and 18 inches in diameter where it crosses said tract of 99¼ acres, of the applicant for transporting natural gas for public use, the said parcel of land being bounded and described as follows, to-wit: A strip of land situated in Union District, Harrison County, West Virginia, 20 feet in width, being in line 10 feet on each side of a center line, which said center line begins at a point in the center of the West Fork River, where said river forms the boundary line between the lands of Arthur W. Rhodes and James Q. Musser; thence
621 across a tract of 226 acres owned by said Arthur W. Rhodes N 37° 57′ W. 120 feet; thence N. 39° 34′ W. 958 feet to a point on the boundary line between said Rhodes tract of 226 acres and a tract of 99¼ acres lately owned by William E. Hacker and by

him sold, (though not conveyed by deed of record), to said Arthur W. Rhodes; thence across the said tract of 99¼ acres N. 39° 34′ W. 265 feet; thence N. 19° 51′ W. 1,371 feet to the boundary line between said tract of 99¼ acres and the land of William J. Law, at a point which is N. 53° E. 36 feet from a white oak corner on said boundary line; the said line of pipe to be twelve inches in diameter where it crosses said tract of 226 acres and eighteen inches in diameter where it crosses said tract of 99¼ acres.

As well as for damages to the residue of the said real estate beyond the peculiar benefits which will be derived in respect to such residue from the work to be constructed or from the purpose to which the part to be taken by said applicant is to be appropriated.

Given under our hands this 26 day of January, 1910.

(Signed) CHARLES A. SHORT,
MORGAN R. LODGE,
PERRY C. WILLIAMS,
LLOYD M. ALLEN,
S. A. SMITH,
Commissioners.

Costs and Expenses:

Charles A. Short, 1 day's	$2.00
Morgan R. Lodge, 1 day's	2.00
Perry C. Williams, 1 day's	2.00
Lloyd M. Allen, 1 day's	2.00
S. A. Smith, 1 day's	2.00"

622 (*Exception and Demand.*)

"Arthur W. Rhodes hereby excepts to the within report of commissioners Charles A. Short, Morgan R. Lodge, Perry C. Williams, Lloyd M. Allen and S. A. Smith, upon the ground that the amount ascertained by them and therein reported as compensation and damages to the persons entitled thereto, viz: $342.00, is not sufficient and is entirely too low.

And he demands that the question of the said compensation be ascertained by a jury of freeholders to be selected and empaneled in the manner provided by law.

(Signed) ARTHUR W. RHODES,
By JOHN BASSEL,
His Attorney."

And thereupon the said applicant, Hope Natural Gas Compa. paid into Court the said sum of $342.00, that being the sum ascertained by said commissioners as compensation and damages to the persons entitled thereto (being the defendants above named, or such of them as may be entitled to the same) for the land proposed to be taken in and by the petition and application of said Hope Natural Gas Company, &c.

And said applicant, Hope Natural Gas Company, having so as aforesaid paid into court the said compensation and damages so as-

certained by said commissioners, it is further considered and ordered that the said Hope Natural Gas Company may, notwithstanding the pendency of further proceedings, enter upon, take and use for the purposes specified in its said application and petition that part of the land in respect to which such payment is made, and generally that the said applicant shall have all such rights, privileges and franchises as in the said application and petition are asked and as are conferred upon it by Section 20 of Chapter 42 of the Code of West Virginia as amended.

623 And the said Arthur W. Rhodes having filed exceptions to said report of said commissioners, and demanded that the question of compensation to be paid by the applicant be ascertained by a jury, it is further ordered that the question of the compensation to be paid by said Hope Natural Gas Company for said land proposed to be taken by it in and by this proceeding and its application herein, be ascertained by a jury of twelve freeholders, who shall be selected and empaneled for the purpose in the manner provided by law.

It is further ordered that the Clerk of this court do take charge of and hold the said sum of $342.00 subject to the future order of the court.

624 HOPE NATURAL GAS COMPANY, a Corporation,

vs.

ARTHUR W. RHODES et al.

Condemnation.

This day came Hope Natural Gas Company, by A. B. Fleming, C. Powell and Kemble White, its attorneys, and also the defendants Arthur W. Rhodes and Mary V. Rhodes, by John Bassil, Esq., their attorney, and thereupon the petitioner and applicant tendered and asked leave to file herein as part of the record an agreement in writing dated the 23rd day of March, 1910, signed by said defendants Arthur W. Rhodes and Mary V. Rhodes, which is now filed, and from which it appears that the matters in difference in this proceeding have been amicably adjusted and settled between the petitioner and the said defendants and that the said defendants have received from the petitioner a just compensation for the right of way or easement sought to be appropriated in this proceeding, and that by the said agreement in writing the said defendants direct the Clerk of this Court to return to said Hope Natural Gas Company the sum of money heretofore paid into court by it in this proceeding; and it also being now admitted by the applicant and the said defendants that the matters in controversy herein have been settled and that the said Hope Natural Gas Company is entitled to the money so paid into court. It is therefore ordered, by and with the consent of the applicant and said defendants, that the Clerk of this Court do, and he is hereby so directed, return and repay to said Hope Natural Gas Company the sum of $342.00 heretofore paid

into court by it in this proceeding and that this proceeding be and is hereby dismissed.

(The foregoing order was entered by the court April 4th, 1910, and is recorded in Law Order Book 34, at page 483.)

625 STATE OF WEST VIRGINIA,
County of Harrison, To wit:

I, I. Wade Coffman, Clerk of the Circuit Court of Harrison County, State of West Virginia, do certify that the foregoing are true, correct and complete copies of the petition and exhibits therewith filed on December 29, 1909, and of the orders made and entered on December 29, 1909, January 29, 1910 and April 4, 1910, in the condemnation proceeding of Hope Natural Gas Company, a corporation, versus Arthur W. Rhodes and others, lately pending in said Circuit Court of Harrison County, as the same remains of record in my said office.

In testimony whereof I have hereunto set my hand and affixed the seal of said Court, at the Courthouse of said County, on this the 29th day of January, 1921.

[Seal of Circuit Court, Harrison Co., West Virginia.]

I. WADE COFFMAN,
Clerk.

STATE OF WEST VIRGINIA,
County of Harrison, To wit:

I, Haymond Maxwell, Judge of the Circuit Court of Harrison County, State of West Virginia, do certify that I. Wade Coffman, by whom the foregoing attestation was made, was, at the date thereof, Clerk of said court duly qualified and that the said attestation is in due form of law and made by the proper officer.

Witness my hand and seal on this the 31st day of January 1921.

HAYMOND MAXWELL. [SEAL.]

626 STATE OF WEST VIRGINIA,
County of Harrison, To wit:

I, I. In witness whereof I have hereunto set my hand and affixed the seal of said Court, at the Courthouse of said County, on this the 31st day of January, 1921.

[Seal of Circuit Court, Harrison Co., West Virginia.]

I. WADE COFFMAN, *Clerk.*

[Endorsed:] Hope Natural Gas Company vs. Arthur W. Rhodes et al. Condemnation.

PGH. V. MORRISON COND. W. VA. EX. 47.

EX. W. VA. No. 47. O. L. H.

Petition.

Filed January 31, 1916, in Circuit Court of Harrison County, West Virginia.)

PITTSBURGH & WEST VIRGINIA GAS COMPANY

vs.

ARRIE MORRISON, HARRY C. MORRISON and JAMES E. MORRISON.

Condemnation Proceeding.

The petition of the Pittsburgh & West Virginia Gas Company spectfully represents:

1st. That petitioner is a corporation duly organized and existing nder and by virtue of the laws of the State of West Virginia, for ie purpose of transporting carbon oil and natural gas, or both, by eans of pipe lines, or otherwise, for public use; that petitioner is ow engaged in the business of producing, transporting and selling atural gas for public use and is now producing large quantities of atural gas within the state of West Virginia, and is transporting ie same to market by means of certain pipe lines constructed and aintained by it; that the natural gas so transported by said lines being sold to the public in the following incorporated cities, towns nd villages, to wit: Grafton, Enterprise, Shinnston, Lumberport, aywood, Colfax, Worthington, Simpson, Pruntytown, Blueville, hornton and Flemington, all within the state of West Virginia, nd other places in the state of West Virginia not incorporated nd many persons not living in any city, town or village, are like- ise being supplied with natural gas for domestic and industrial es by this petitioner, by means of its said system of pipe lines; at the transportation of said natural gas and the sale thereof is r the use of the public generally for the purpose of supplying light nd heat to such public; and that your petitioner is ready and willing at all times, and has so held itself out, to sell said gas to the public, or any portion thereof, upon the payment of a reasonable price therefor.

2nd. That petitioner is now engaged in constructing lines of ping over and through the county of Harrison, in the state of est Virginia, as it is by law authorized to do; that when the same re completed it is petitioner's purpose and intention to operate and aintain said pipe lines for the purpose of supplying natural gas the inhabitants of the various incorporated cities, towns and vil-

lages hereinbefore mentioned, and to the public generally and for other lawful uses; that it desires to proceed with the construction of its said pipe line through the lands of said parties (Carrie Morrison), lying in the District of Coal, county of Harrison, and state of West Virginia; that for the purpose of constructing, building and maintaining its said pipe line for the transportation of natural gas for the public uses hereinbefore set out, it desires to acquire an easement or right of way, over across and upon that portion of the land of the person hereinbefore named described particularly as follows:

Beginning on line of lands of H. C. Morrison, at a point located N. 84° E. 350 feet from corner to lands of Prunty & Jacobs, H. C. Morrison and Carrie Morrison, thence S. 0° 30′ E. 466 feet; S. 7° 30′ W. 521 feet to right of way of the B. & O. R. R. Co., at a point located 498 feet in an easterly direction along said right of way from corner to lands of W. M. Joyce and B. & O. R. R. Co., a total distance of 987 feet.

3rd. That petitioner files herewith as part of this petition a plat of said land over which the said easement is proposed to be taken, marked "Gas Company Exhibit No. 1."

4th. That the strip of land hereinbefore described, upon which said easement is proposed to be taken, is owned by the following named persons, to wit: Carrie Morrison, widow of James H. Morrison, deceased, as tenant for life, with remainder in fee
630 simple to Harry C. Morrison and James E. Morrison, jointly, as heirs at law of said James H. Morrison, dec'd.

5th. That there are no liens upon said land, or claims thereto or outstanding estates therein or in any part thereof except as follows:

6th. That all pipe lines to be laid or constructed by it in, upon and through said lands hereinbefore described, are to be and will be buried under the surface of the ground to such a depth as not to interfere with the use of said land for agricultural purposes; that the pipe which petitioner intends to lay and will lay upon said right of way will be 12 inches in diameter; that your petitioner intends to use and will use the said easement or right of way over and upon the land hereinbefore described for the purpose of constructing, maintaining and operating its said pipe line; which pipe line will be used for the public uses hereinbefore set forth; and that the said easement or right of way is necessary for such purpose.

7th. That in taking the said easement or right of way, so proposed to be taken by petitioner, it will not be necessary to take any dwelling house, yard or garden, nor will such be taken therein or thereby; that in taking said easement or right of way and appropriating the same to the public use hereinbefore set forth, it is not and will not be necessary to erect or lay any oil tank or gas or oil pipe within one hundred feet of any occupied dwelling house, nor shall any

oil tank, gas or oil pipe line be erected or laid within one hundred feet of any occupied dwelling house; and that the parcel of land hereinbefore described does not lie within any municipal corporation.

8th. That the survey, location and route of petitioner's pipe line, upon and over the parcel of land hereinbefore described, has been regularly and duly selected, located, approved and adopted
631 by the proper officers of the petitioner thereunto duly authorized by its Board of Directors.

9th. That petitioner, in pursuance of the provisions of Section 20 of Chapter 74 of the Acts of West Virginia for the year 1907, attempted to agree with the said owners of said land over which said easement or right of way is proposed to be taken, as aforesaid, as to the amount of damages or compensation for the said easement or right of way so proposed to be taken; that petitioner was, nevertheless, unable to agree with said owners, and the said owners failed and refused to accept a reasonable price for said easement or right of way; that petitioner thereupon offered to pay to the said owners the sum of one hundred and seventy-nine and 45/100 Dollars ($179.45), for said easement or right of way, but the said owners refused to accept the same; that petitioner thereupon tendered to the said owners, to wit, on the 11th day of November, 1915, a bond in the penalty of $1,000.00, with the National Surety Company as surety therein, conditioned according to law; which penalty petitioner avers to be more than sufficient to cover or secure any damages which the said owner may sustain in the premises, and the surety in which bond is sufficient. The said bond, together with a plan thereto attached, and an affidavit showing a proper tender thereof, is filed herewith as part of this petition, marked "Exhibit Bond and Tender," and petitioner asks that the recitals in said affidavit may be read as part of this petition. And the said bond is here now presented to your Honor's court.

10th. That petitioner has caused notice to be given to the said owners and to all persons having liens upon, interests in or claims against the land upon which the said easement or right of way is proposed to be taken, of petitioner's intention to file this petition and make this application, as will more fully appear from said notice and the evidence of the service thereof thereon en-
632 dorsed, which is hereby filed and prayed to be read as part hereof marked "Exhibit Notice."

Petitioner therefore prays that said bond may be approved and that the same, together with the plan thereto attached, may be filed for the benefit of the owners of said land and of this petitioner, and that petitioner may be authorized to enter upon the enjoyment of said easement or right of way described in this petition and said bond; that after the filing of said bond, if any party in interest require it, commissioners may be appointed by this court to ascertain a just compensation to the owners thereof for the easement or right of way hereinbefore described and proposed to be taken by your

petitioner for the purpose aforesaid; that such other proceedings may be had in the premises as conform to law; and that upon the payment or securing of compensation by your petitioner in the manner required by law, the title to the above described easement or right of way may be decreed to be vested in your petitioner for the uses and purposes aforesaid; and that such other, further and general relief may be granted as to the court may seem proper or the nature of the case may require.

Gas Company Exhibit No. 1.

Survey of Pittsburgh and West Va. Gas Co's. 12 in. line crossing over lands of Carrie Morrison, Coal Dist., Harrison Co., W. Va.

Scale: 1" = 200'

November 5, 1915.

634 ("EXHIBIT BOND AND TENDER" FILED WITH THE PETITION).

Bond.

Know all men by these presents:

That we, Pittsburgh & West Virginia Gas Company, a corporation under the laws of the State of West Virginia, as principal, and National Surety Company, of New York, its surety, are held and firmly bound unto Carrie Morrison, Harry C. Morrison and James E. Morrison, in the sum of One Thousand and No/100 ($1,000.00) Dollars, for the payment whereof, well and truly to be made, we bind ourselves, our successors and assigns, jointly and severally, by these presents.

In testimony whereof these presents are signed with our corporate names and sealed with our corporate seals, by our proper officers, respectively, thereunto duly authorized, this 9th day of November, 1915.

The condition of the above obligation is such that whereas the above bound Pittsburgh & West Virginia Gas Company, being a pipe line company organized under the laws of the State of West Virginia for the purpose of transporting carbon oil and natural gas by means of pipes, and being desirous of securing an easement or right of way over the lands of said obligees situate in Coal District, Harrison County, West Virginia, for the purpose of laying and constructing a pipe line twelve inches in diameter for the transportation of natural gas for public use, has attempted to agree with the said owners of said land as to the damage properly payable for such easement or right of way, and whereas, the said Pittsburgh & West Virginia Gas Company and the said owners have failed to agree
635 as to the said damages and the said Pittsburgh & West Virginia Gas Company is desirous of taking possession of the said right of way or easement, at once, as provided by Section 20 of Chapter 74 of the Acts of 1907 of West Virginia, in advance of fixing of said damages, in the manner provided by said Chapter:

Now, therefore, if the said Pittsburgh & West Virginia Gas Company shall pay to the said Carrie Morrison, Harry C. Morrison and James E. Morrison, owners as aforesaid, any and all damages which said owners may sustain or incur by reason of the said Pittsburgh & West Virginia Gas Company taking possession of the said easement or right of way and laying a pipe line upon the same, as well as any and all damages which may hereafter be assessed by any court in favor of the said owners by reason of the taking of said easement or right of way, and any and all costs properly chargeable against the above bound Pittsburgh & West Virginia Gas Company, then this obligation to be void, otherwise to remain in full force and effect.

A plan is hereto attached showing the route of the proposed pipe line over said land, marked for identification, "Gas Company Exhibit No. 1."

Notice.

To Carrie Morrison, Harry C. Morrison, and James E. Morrison:

Take notice, that on the 17th day of November, 1915, at 9 o'clock A. M., or as soon thereafter as the matter can be heard, the undersigned will present to the Honorable Haymond Maxwell, Judge of the Circuit Court of Harrison County, West Virginia, in vacation of said court at Weston, West Virginia, for approval, that certain bond, in the penalty of $1,000.00, this day tendered to you, which bond is conditioned for the payment to you of such damages as you may sustain by reason of the appropriation by the undersigned of an easement or right of way for a pipe line over lands owned by you or in which you are interested, the route and location of said pipe line being shown by a plan attached to the said bond tendered to you as aforesaid. Take notice further, that unless exceptions to the form, amount or surety of said bond shall be filed within three days after its presentation, the said bond will be approved by the court. Take notice further, that at the time and place above stated the undersigned will tender and ask leave to file its petition against you, and will ask the court to take such other proceedings against you as conform to law and are necessary for the lawful appropriation of said easement by the undersigned.

Yours, etc.,

639 *Affidavit.*

STATE OF WEST VIRGINIA,
County of Harrison, To wit:

I, E. B. Templeman, a notary public in and for the said County of Harrison, do certify that J. A. Joliffe, this day personally appeared before me in my said county, and being by me first duly sworn, did depose and say: That he is agent of Pittsburgh & West Virginia Gas Company, duly authorized by said Company to agree, if possible, with the owners of land for easements or rights of way in, on and over their lands for the construction of pipe lines for the transportation of natural gas, and upon failing to agree with said land owners,

to tender bonds to secure to said owners the payment of damag
properly payable for such easement.

That affiant, in pursuance of his said duties, on the 11th day
November, 1915, called upon Carrie Morrison, Harry C. Morris
and James E. Morrison the parties named as obligees in the fo
going bond, and attempted to agree, on behalf of said company,
to the damages properly payable to the said owners for the easeme
described in the foregoing bond and plan thereto annexed; that t
said owners refused to agree upon such damages with affiant; th
afterwards, to wit, on the day and year last aforesaid, affiant offer
to the said owners the fair market price of said easement or right
way, to wit, the sum of one hundred seventy-nine and 45/100 D
lars, ($179.45), which offer was refused; that thereafter, on the d
and year last aforesaid, affiant tendered to the said owners the bo
hereto annexed, and the said owners refused to accept said bond.

That affiant thereupon served the notice hereto annexed upon t
said owners, in the manner and at the time and place hereinaft
stated, that is to say: Upon the within named Carrie M
640 rison, Harry C. Morrison and James E. Morrison by deliv
ing to them and each of them in person, in Harrison Count
a true copy thereof, on the 11th day of November, 1915.

No.* 38, *Page* 161.)

In the Circuit Court of Harrison County, West Virginia

PITTSBURG & WEST VIRGINIA GAS COMPANY

vs.

HARRY MORRISON et al.

Condemnation Proceeding.

This day came the petitioner, Pittsburg & West Virginia G
Company, by Davis, Swartz & Templeman, its attorneys, and th
defendants, Carrie Morrison, Harry C. Morrison and James E. Mo
rison, by Ray L. Strother, their attorney, and upon motion of th
said petitioner it is ordered that the petition of the said Pittsburg
West Virginia Gas Company which was lodged in the office of th
clerk of this court by vacation order entered on the 17th day
November, 1915, be and it is here now filed in open court and th
proceeding is, upon like motion, placed upon the docket of th

court. It is further ordered that the bond heretofore tendered herein be, and the same is hereby approved and filed for the benefit of said landowners.

Thereupon the said petitioner by its said attorneys and the said defendants by their said attorney, concurrently, moved the court for the appointment of commissioners to ascertain a just compensation to the parties entitled thereto, the owners of the land in the petition described, for the right of way or easement sought to be taken in this proceeding. Whereupon the court nominated thirteen disinterested freeholders of this county, to-wit: Cree M. Bartlett,
642 Clarence W. Leggett, Charles L. Ladwig, Scott H. White, Okey B. Lawman, P. C. Sturm, Nelson Robinson, Perry C. Williams, Howard B. Post, John J. Dolan, Truman J. Lynch and John C. Johnson. And the parties, by their counsel, proceeded to ascertain as provided by law from said thirteen freeholders, the five thereof to act as commissioners, which choice and lot fell upon the following named, to-wit: Clarence W. Leggett, Okey B. Lawman, Perry C. Williams, Howard B. Post and Truman J. Lynch.

And thereupon it is ordered by the court that said five freeholders so selected to act as such commissioners do proceed with all convenient speed and after viewing said premises and hearing any proper evidence offered, ascertain according to law what will be a just compensation to the parties entitled thereto for the easement so proposed to be taken as aforesaid, and make report of their proceedings to this court according to law.

In the Circuit Court of Harrison County, West Virginia.

PITTSBURG & WEST VIRGINIA GAS COMPANY

vs.

CARRIE MORRISON et al.

Condemnation.

This day came the parties by their attorneys, and it appearing to the court that the commissioners appointed to ascertain the compensation to which the defendants are entitled for the easement sought to be taken in this proceeding, filed their report with the Clerk of this court on the 19th day of February, 1916, which report bears date the 15th day of February, 1916, fixing the compensation of the said defendants for the easement taken, as well as for damages to the residue of their land beyond the peculiar benefit which will be derived in respect to such residue from the work to be constructed, at Two Hundred and Twenty-five Dollars, ($225.00), and the said defendants, Carrie Morrison, Harry C. Morrison and James

E. Morrison, by Ray L. Strother, their attorney, having excepted to the said report and award of commissioners because the same is inadequate, and having demanded that the compensation to which the said defendants are entitled by tried by jury at the bar of the court; now, therefore, it is ordered that a jury be summoned to try said issue in the manner provided by law and that this proceeding be continued until the next term of court.

In the Circuit Court of Harrison County, West Virginia.

PITTSBURG & WEST VIRGINIA GAS COMPANY

vs.

CARRIE MORRISON et al.

Condemnation.

This day came again the parties by their attorneys and the defendants, Carrie Morrison, Harry C. Morrison and James E. Morrison by Ray L. Strother, their attorney, asked leave to withdraw their exception to the report of commissioners filed in this court on the 19th day of February, 1916, which report bears date the 15th day of February, 1916, which leave is hereby granted and said exception is withdrawn.

And there being no other or further exceptions to said report of commissioners and the same appearing to be in all respects regular, the said report is, on motion of the petitioner, hereby ratified, approved and confirmed and ordered to be recorded in the law order book of this court, which report is in the words and figures following, to-wit:

(*Report of Commissioners.*)

651 PHILA. V. CURRY COND. W. VA. EX. 48.

EX. W. VA. NO. 48. O. L. H.

(*Petition. Filed June* 22, 1912.)

In the Circuit Court of Harrison County, West Virginia.

THE PHILADELPHIA COMPANY OF WEST VIRGINIA

vs.

W. M. CURRY.

Condemnation of Pipe Line Right of Way.

To the Honorable Charles W. Lynch, judge of said court:

The petition of The Philadelphia Company of West Virginia respectfully represents:

1st. Your petitioner is a corporation organized under the laws of the state of West Virginia, having been incorporated September 26th, 1895, for the purpose of mining, boring, digging for or otherwise obtaining from the earth petroleum, rock or carbon oils and natural gas, and manufacturing, buying, selling and transporting the same in the crude and in the refined states; for the purpose of constructing and maintaining lines of tubing and piping for the transportation of such oils and gas, or either of them, for the public generally, as well as for the use of said corporation; for the purpose of transporting such oil or gas, or either of them, by means of such pipes or otherwise and selling and supplying the same to others; and generally for the purpose of doing such acts and carrying on such business as pertains to such works and improvements; a true and correct copy of its certificate of incorporation being attached hereto, made a part hereof, and marked "Exhibit A." Your petitioner is,
by virtue of the laws of said state, a common carrier of
652 natural gas; and is recognized by the Administrative Department of said State as the owner and operator of pipe lines within said state used for the transportation of gas for public use and the said petitioner, as such pipe line company and public service corporation, regularly makes to the Board of Public Works of said State a return in writing, required by Section 84, Chapter 29 of the Code of said state; and the said petitioner is by said Board of Public Works duly and regularly assessed for taxation as such pipe line company and public service corporation. Its tax paid to the said state for such purpose during the year 1911 amounted to $49,993.15.

2nd. Your petitioner since its incorporation has been engaged in the business of producing and marketing natural gas and is supplying gas to thirty-four school houses, four churches, five manufacturing concerns, three hundred thirty dwellings and four gas com-

anies, a true and correct list of said consumers being attached hereto, ade a part hereof, and marked "Exhibit B."

3rd. Your petitioner is constantly increasing the number of its onsumers and is desirous of largely increasing its sales of gas in the arious counties of West Virginia traversed by its lines. Your peti- oner is ready and willing to sell gas to all parties within reaching istance of its pipe lines, who apply for the same, at reasonable rates. our petitioner, being a public service corporation, as hereinbefore ated, is ready and willing to furnish gas at all times to the public, aforesaid.

4th. Your petitioner, during some of the winter months of 1909, as not able, because of the inadequacy of its pipe lines, to supply sufficient quantity of gas to a number of its consumers, among em being the Grafton Electric Railway, Thornton Fire Brick Com- any, Beaumont Glass Company, Baltimore & Ohio Railroad Com-
pany, Grafton Window Glass Company, Crystal Ice Company,
53 Grafton Wood Working Company, Grafton Gas & Electric Light Company, Fairmont Gas & Light Company and the hiladelphia Company. At times such shortage amounted to from ree to five million cubic feet of gas per day, and your petitioner, ecause of the fact that its present lines are not sufficient to supply e anticipated demand for gas during the coming winter, due to the ct that the condition of its wells is causing it to go further afield ch year for its supply of gas, finds that it is necessary for it to uild certain additional pipe lines to convey to its consumers a pply of gas during the coming winter.

5th. The Board of Directors of The Philadelphia Company of est Virginia, by a resolution unanimously adopted at a meeting f said Board on June 6th, 1912, having decided that it would be ecessary in the conduct of its business to have a pipe line from its ump Station No. 18, Freemans Creek District, Lewis County, West irginia, to connect with the sixteen-inch line on the Sarah Maloney arm, McClellan District, Doddridge County, West Virginia, had a rvey made for said proposed line, which survey was adopted by e said company and determined upon as the route best adapted r the company's purpose and is located so that the same does not ass within one hundred feet of any occupied dwelling, nor does it ke or pass through any dwelling house, yard or garden, nor does it e wholly or in part in any municipal corporation. The only pipe ne which your petitioner intends to lay upon said route will be ixteen inches in diameter; will be used exclusively for the trans- ortation of natural gas; is necessary to supply with gas the afore- id consumers and such new consumers as your petitioner expects to ecure in the near future and will be buried under the surface to uch a depth as will not interfere with the use of the land for gricultural purposes.

54 6th. The said proposed line passes over and upon lands be-
longing to W. M. Curry situate in Union District, Harrison County, West Virginia, bounded by lands of H. Richards, B. F.

Boner, E. D. Ferris et al., the route described being as follows, to-wit:

Beginning at the line of H. Richards, at a point S. 45° 45′ E. 395 feet distant from Post, corner to B. F. Boner, H. Richards and W. M. Curry; thence N. 19° 45′ W. 224 feet to a point; N. 10° 00′ W. 273 feet to a point; N. 10° 15′ E. 59 feet to line of B. F. Boner, at a point N. 32° 30′ E. 309 feet distant from Post, corner aforesaid, a total distance of 556 feet. And thence beginning again at the line of B. F. Boner, at a point S. 14° E. 80 feet from stone, corner to E. D. Ferris, B. F. Boner and W. M. Curry thence N. 5° 00′ W. 71 feet to line of E. D. Ferris, at a point S. 86° 30′ E. 17 feet distant from said corner. A total distance of 71 feet. And the right of way sought to be taken is twenty feet in width or ten feet on each side of said center line.

7th. Your petitioner, through its field agent, R. E. Clark, attempted to purchase from the said W. M. Curry an easement or right of way over his land for the purpose of constructing thereon a pipe line as hereinbefore described for the transportation of gas along the route aforesaid, and the said R. E. Clark offered to the said W. M. Curry a fair market price for said easement, to-wit: the sum of Three and no/100 (3.00) Dollars per rod; but the said W. M. Curry refused to grant to your petitioner a right of way or easement for said pipe line, and thereupon the said R. E. Clark tendered to the said W. M. Curry a bond from The Philadelphia Company of West Virginia in the sum of One Thousand and No/100 (1,000.00) Dollars, with the Citizens Trust and Guaranty Company of West Virginia as surety, together with a plan attached thereto showing the location of said proposed pipe line, in accordance with the
655 terms of the Act of the Legislature of West Virginia in such cases made and provided, which bond, with plan attached thereto, is attached hereto, made a part hereof, and marked "Exhibit C." The said Citizens Trust and Guaranty Company of West Virginia is a trust company duly authorized under the laws of the state of West Virginia to do business in that state; the said company has in all respects complied with the requirements of the laws of the said state and is, and has for many years, been amply solvent and well able to perform all of its obligations, and the said company is in fact a good and sufficient surety for the bond above mentioned.

8th. The said W. M. Curry refused to accept the said bond and thereupon the said R. E. Clark served upon him a notice that the said bond would be presented to court to be approved and filed for his benefit, on the 22nd day of June, A. D. 1912, a copy of said notice, together with proof of service thereof, is attached hereto, made a part hereof, and marked "Exhibit D."

9th. The said W. M. Curry is the owner of the land hereinbefore described, over which a right of way is proposed to be taken. There are no liens upon the said real estate, created by judgment, deed of trust or otherwise, nor conflicting claims thereto.

10th. Your petitioner avers that the pipe line which it proposes to build is an internal improvement for public use; that delay in

securing the said right of way will interfere with the proper development of its gas territory in this vicinity and will interfere with the performance of its duties to the land owners who have made oil and gas leases to your petitioner and will also injuriously delay its consumers in obtaining the necessary supply of gas.

11th. Your petitioner, under the law, has the right to acquire and take the said right of way or easement in and by this peti-
656 tion, application and bond.

Wherefore, your petitioner prays this Honorable Court to approve said bond and to direct that the same be filed for the benefit of the said W. M. Curry, in accordance with the Act of the Legislature of West Virginia in such cases made and provided. Your petitioner further prays that it be allowed to enter upon the easement as soon as the said bond has been approved, for the purpose of constructing its pipe line without delay; and your petitioner further prays that commissioners may be appointed by this Court to ascertain a just compensation to the said W. M. Curry for the said easement or right of way, in and through the land hereinbefore described and proposed to be taken by your petitioner for the purpose and use aforesaid, and that such proceedings may be had in the premises as conform to law; and your petitioner also asks such other and additional relief as the Court may deem proper to award in the premises.

I, William H. Coleman, Clerk of the Court of Quarter Sessions in and for the County of Allegheny, in the Commonwealth of Pennsyl-

vania, the same being a Court of Law and Record, do by these presents certify that Howard K. Bragdon, Esquire, before whom the foregoing affidavit was taken, and who has hereunto, in his own proper handwriting, subscribed his name, was at that time and is a notary public in and for said county of Allegheny duly commissioned and sworn, and authorized by law of the Commonwealth of Pennsylvania to take affidavits and acknowledgments of deeds for lands and real estate in said Commonwealth of Pennsylvania, and to all whose acts as such due faith and credit are, and of right *out* to be given throughout the United States and elsewhere. And further, that I am acquainted with his handwriting and verily believe the signature thereto to —.

658 I further certify that the foregoing affidavit was taken in accordance with the laws of the state of Pennsylvania.

In testimony whereof, I have hereunto set my hand and affixed the seal of the Court, at Pittsburgh, this 20th day of June, A. D. 1912.

[Official Seal.] (Signed) W. H. COLEMAN,
Clerk.

659 "EXHIBIT A."

Certificate of Incorporation.

State of West Virginia.

The Philadelphia Company of West Virginia.

I, W. E. Chilton, Secretary of State of the State of West Virginia, hereby certify that an agreement, duly acknowledged and accompanied by the proper affidavits, has been this day delivered to me, which agreement is in the words and figures following:

The undersigned agree to become a corporation by the name of The Philadelphia Company of West Virginia, for the purpose of constructing and maintaining lines of tubing and piping for the transportation of such oils and gas, or either of them, for the public generally, as well as for the use of said corporation; for the purpose of transporting such oil or gas, or either of them, by means of such pipes or otherwise and selling and supplying the same to others; and generally for the purpose of doing such acts and carrying on such business as pertains to such works and improvements.

Which corporation shall keep its principal office or place of business at Pittsburgh, in the County of Allegheny and State of Pennsylvania, and is to expire on the 31st day of December, 1944. And for the purpose of forming the said corporation, we have subscribed the sum of Five Hundred Dollars to the capital thereof, and have paid in on said subscriptions the sum of Fifty Dollars, and desire the privilege of increasing the said Capital, by the sale of additional shares from time to time, to One Million Dollars, in all. The Capital so subscribed is divided into shares of Fifty Dollars each, which are held by the undersigned respectively, as follows, that is to say:

660

Names.	Residence.	No. of shares.
By Geo. H. Browne.....	Pittsburgh, Pa.	2
" J. R. McGinley.....	" "	2
" W. D. Uptergraff	" "	2
" T. W. Siemon.....	" "	2
" W. P. Hubbard	Wheeling, W. Va.	2

And the Capital to be hereafter sold is to be divided into shares of the like amount.

Given under our hands this 23rd day of September, 1895.

GEO. H. BROWNE.
J. R. McGINLEY.
W. D. UPTERGRAFF.
T. W. SIEMON.
W. P. HUBBARD.

Wherefore, The corporators named in the said agreement, and who have signed the same, and their successors and assigns, are hereby declared to be from this date until the thirty-first day of December, nineteen hundred and forty-four, a corporation by the name and for the purposes set forth in said agreement.

Given under my hand and the Great Seal of the said State, at the City of Charleston, this twenty-sixth day of September eighteen hundred and ninety-five.

[SEAL.] (Signed) W. E. CHILTON,
Secretary of State.

668 ("EXHIBIT C" WITH THE FOREGOING PETITION.)

EXHIBIT "C."

Know all men by these presents:

That the Philadelphia Company of West Virginia, a corporati of the State of West Virginia, and the Citizens Trust and Guaran Company of West Virginia, of Parkersburg, West Virginia are he and firmly bound unto W. M. Curry in the sum of One Thousa and No/100 (1,000.00) Dollars, lawful money of the United Stat of America, to be paid to the said W. M. Curry, his heirs, executo administrators and assigns, to which payment, well and truly to made, the said The Philadelphia Company of West Virginia and t

Citizens Trust and Guaranty Company of West Virginia bind themselves, their successors and assigns, jointly and severally, firmly by these presents.

Witness the common seal of The Philadelphia Company of West Virginia and the hand of its President, and the corporate seal of said surety, this 17th day of June, A. D. 1912.

Whereas, the said The Philadelphia Company of West Virginia, under lawful authority, has surveyed a route for, and is about to construct a sixteen-inch pipe line for the transportation of natural gas from its Pump Station No. 18, Freemans Creek District, Lewis County, West Virginia, to connect with the sixteen-inch line on the Sarah Maloney farm in McClellan District, Doddridge County, West Virginia, over and upon, inter alia, certain lands of W. M. Curry situate in Union District, Harrison County, West Virginia, bounded by lands of H. Richards, B. F. Boner, E. D. Ferris et al., the route described being as follows, to-wit:

Beginning at the line of H. Richards, at a point S. 45° 45′ E. 395 feet distant from Post, corner to B. F. Boner, H. Richards and W. M. Curry; thence N. 19° 45′ W., 224 feet to a point N. 10°
669 00′ E., 273 feet to a point N. 10° 15′ E., 59 feet to line of B. F. Boner, at a point N. 32° 30′ E., 309 feet distant from Post, corner aforesaid, a total distance of 556 feet.

And thence beginning again at the line of B. F. Boner, at a point S. 14° E., 80 feet from Stone, corner to E. D. Ferris, B. F. Boner and W. M. Curry.

Thence N. 5° 00′ W., 71 feet to line of E. D. Ferris, at a point S. 86° 30′ E., 17 feet distant from said corner.

A total distance of 71 feet.

And whereas, the said The Philadelphia Company of West Virginia is desirous of obtaining an easement or right of way over the said land twenty (20) feet in width, or ten (10) feet on each side of the above described center line, and is unable to agree with the said W. M. Curry upon the amount to be paid for the said right of way, and is condemning, under its power of eminent domain, the said right of way, in accordance with the provisions of the Act of 1907:

Now the condition of this obligation is such that if the above bounden The Philadelphia Company of West Virginia, its successors and assigns, or the said Citizens Trust and Guaranty Company of West Virginia, its successors and assigns, or either of them, shall and do well and truly pay, or cause to be paid unto the said W. M. Curry the damages he may sustain by reason of the construction of the said pipe line over the property aforesaid, and all the damages he may sustain by reason of the entering upon said land by The Philadelphia Company of West Virginia, and shall pay all
670 such sums as are by law payable by reason of the premises, then this obligation to be void; otherwise to be and remain in full force and virtue.

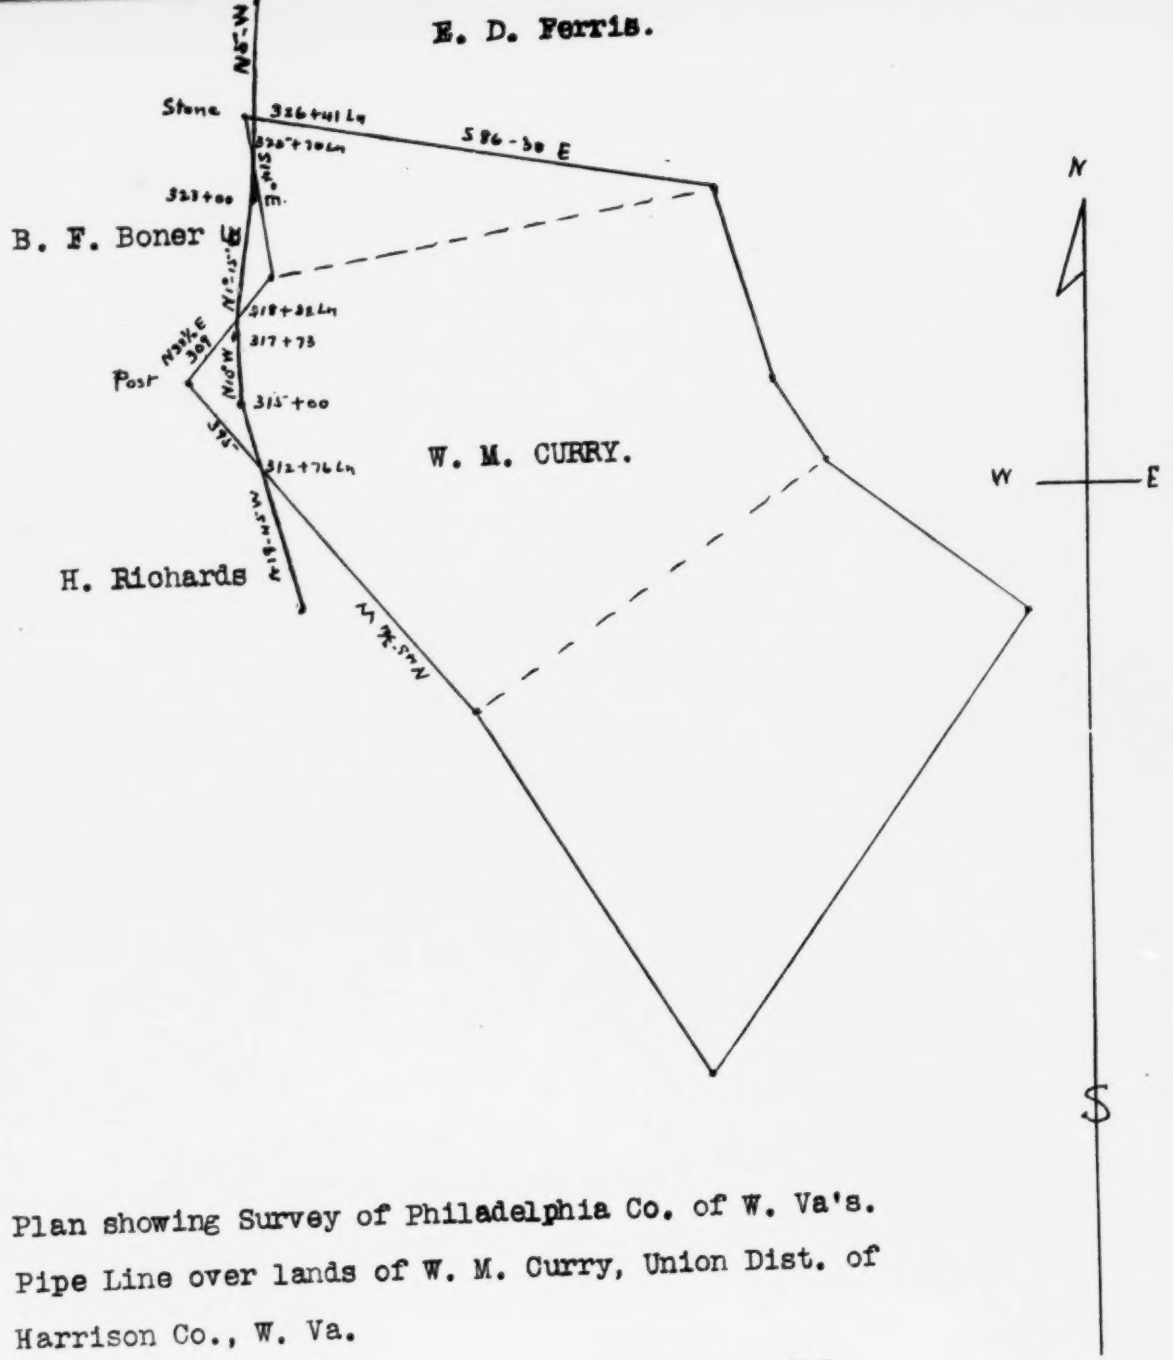
[SEAL.] THE PHILADELPHIA COMPANY OF WEST VIRGINIA,
By J. F. GUFFEY,
President.

Attest:
W. B. CARSON,
Secretary.

[SEAL.] CITIZENS TRUST AND GUARANTY COMPANY OF WEST VIRGINIA,
By WM. H. TAYLOR,
Its Attorney in Fact.

Attest:
W. FRANK DENNISON,
Agent.

(Here follow plans of survey of Philadelphia Co. of West Va., marked pages 671-671½.)



Plan showing Survey of Philadelphia Co. of W. Va's. Pipe Line over lands of W. M. Curry, Union Dist. of Harrison Co., W. Va.

Scale: 1" = 40 rods. June 4th, 1912.

672 ("EXHIBIT D" WITH THE FOREGOING PETITION.)

W. M. Curry:

You are hereby notified that on the 22nd day of June, A. D. 1912, at 9 o'clock A. M., or as soon thereafter as counsel can be heard, The Philadelphia Company of West Virginia will present to Honorable Charles W. Lynch, Judge of the Circuit Court of Harrison County, West Virginia, at Clarksburg, West Virginia, for the approval of said Court, the bond of said Company, with surety, in the sum of One Thousand Dollars and no/100 ($1,000.00), to secure to you the damage properly payable for an easement in your land situated in Union District, Harrison County, West Virginia, for the construction of a sixteen inch pipe line for the purpose of transporting natural gas.

A plan will be attached to said bond showing the route of the said pipe line over your land.

A petition will be presented at the same time and place, praying the Court, inter alia, that the said bond be approved; that the possession of the said easement be at once given to the petitioner, and that commissioners be appointed to determine the amount to be paid for said easement.

Unless exception to the form, amount of surety be filed within three (3) days after presentation, the said bond may be approved by the Court.

This 17th day of June, A. D. 1912.

THE PHILADELPHIA COMPANY OF WEST VIRGINIA,
By DAVIS & DAVIS,
Counsel.

673 STATE OF WEST VIRGINIA,
County of Harrison, ss:

R. E. Clark, being duly sworn, deposes and says:

That he is the Agent of The Philadelphia Company of West Virginia, duly authorized by the said Company to agree, if possible, with the owners of land for easement in, on or over their land for the construction of pipe lines for the purpose of transporting natural gas and failing to agree, to tender bonds to secure to the owners the payment of damages properly payable for such easements; and he further says that in pursuance of his duties, he, on the 17th day of June, 1912, called upon W. M. Curry of Union District, Harrison County, West Virginia, and then and there attempted to agree, in behalf of the said Company, with the said W. M. Curry as to the damage properly payable to him for an easement over certain land in Union District, Harrison County, West Virginia, for the construction of a sixteen-inch pipe line for the purpose of transporting natural gas on the lines, courses and distances described in the bond hereto annexed, but the said W. M. Curry refused to agree therefor, after he had offered to him the fair market price for said easement,

to-wit: the sum of Three Dollars per rod; that failing to agree h
then and there tendered the annexed bond to the said W. M. Curr
to secure to him the payment of damages properly payable for suc
easement, but the said W. M. Curry refused to accept the said bond
and that thereupon he served the annexed notice on the said W. M
Curry, on the 17th day of June, A. D. 1912, about the time o
2.30 o'clock P. M.

(Signed) R. E. CLARK.

Sworn to and subscribed before me this 18th day of June, 191
(Signed) S. P. CARNEY,
Notary Public.

My Commission expires: January 26, 1921.

674 (*Order. Entered June* 22, 1912; *Recorded in Law Orde*
Book No. 36, *Page* 64.)

In the Circuit Court of Harrison County, West Virginia. In
Vacation.

THE PHILADELPHIA COMPANY OF WEST VIRGINIA, a Corporation

VS.

W. M. CURRY et als.

Condemnation Proceeding.

This day came The Philadelphia Company of West Virginia, b
counsel, and tendered to the judge of said Court, in vacation, its bon
in the penalty of One Thousand Dollars ($1,000.00) with Citizen
Trust & Guaranty Company of West Virginia, a corporation, a
surety, to secure W. M. Curry in the payment of any damages prop
erly payable to him by reason of said The Philadelphia Company o
West Virginia, taking possession of an easement or right of wa
through the lands of the said W. M. Curry, situate in Union Distric
of Harrison County, West Virginia, for the purpose of constructing
operating and maintaining a pipe line for the transportation o
natural gas, to which bond a plan is attached showing the route o
the proposed line over said land; and at the same time tendered t
the Court and asked leave to file its petition, duly verified, with th
exhibits filed therewith, praying inter alia that the said bond b
approved and that possession of the said easement be given to th
said The Philadelphia Company of West Virginia; and in support o
the said petition tendered and asked leave to file the affidavit o
Robert E. Clark.

And it appearing from proper return thereof that five days' notice
has been given by the said The Philadelphia Company of West
Virginia to the said W. M. Curry that it would on this day
675 present said bond to the Judge of said Court, which notice
states the time and place for the presentation of said bond,
and would also present its petition praying the court among other

things to approve the said bond and give immediate possession of the said easement to the said applicant, it is ordered that the said notice, said petition and exhibits and the said affidavit be and the same are hereby filed and this proceeding docketed.

On consideration whereof the Court is of opinion to approve the said bond unless within three days from this date the defendant shall except to the form, amount or surety of the said bond and file such exceptions with the Clerk of this Court. And to this end the further hearing of this proceeding is continued until the 29 day of June, 1912, in chambers.

Given under my hand this the 22nd day of June, 1912.

(Signed) CHARLES W. LYNCH,
Judge Circuit Court of Harrison County.

To I. Wade Coffman, clerk:

Enter the foregoing order as a vacation order this 22nd day of June, 1912.

(Signed) CHARLES W. LYNCH,
Judge of the Circuit Court of Harrison County, West Virginia.

676 (*Order. Entered June 29th, 1912; Recorded in Law Order Book No. 36, at Page 69.*)

In the Circuit Court of Harrison County, West Virginia. In Vacation.

THE PHILADELPHIA COMPANY OF WEST VIRGINIA, a Corporation,

vs.

W. M. CURRY et als.

Condemnation Proceeding.

This day again came The Philadelphia Company of West Virginia, by counsel, and moved the Court for an order approving the bond heretofore tendered in this case, and asked that the same be filed for the benefit of the said W. M. Curry and of said applicant. And no exceptions to the form, amount or surety of said bond having been filed by the said W. M. Curry before the Clerk of this Court within the time specified by former order entered herein, and the said defendant having failed to appear the Court is of opinion to approve the said bond and both hereby approve the same. And it is ordered that the said bond, with the plan thereto attached be and the same is hereby filed for the benefit of the said W. M. Curry and of said applicant.

And the Court doth find and orders and directs that the petitioner, The Philadelphia Company of West Virginia, is a pipe line Company organized for the purpose of transporting carbon oil and

natural gas or both, and as such has the right to and may at any time, immediately if necessary, enter upon the said easement and right of way for the purpose of constructing the pipe line mentioned and described in said petition: which easement or right of way is twenty (20) feet in width, or ten (10) feet on each side
677 of the center line, which center line is described as follows:

Beginning at the line of H. Richards at a point S. 45° 45′ E. 395 feet distant from a post, corner to B. F. Boner, H. Richards and W. M. Curry; thence N. 19° 45′ W. 224 feet to a point; N. 10° 00′ W. 273 feet to a point; N. 10° 15′ W. 59 feet to the line of 30′ E. 17 feet distant from said corner, being a total distance of 71 feet.

Given under my hand this the 29th day of June, 1912.

(Signed) CHARLES W. LYNCH,
Judge of the Circuit Court of Harrison County, West Virginia.

To I. Wade Coffman, clerk:

Enter the foregoing order as a vacation order this 29th day of June, 1912.

CHARLES W. LYNCH,
Judge of the Circuit Court of Harrison County, West Virginia.

678 STATE OF WEST VIRGINIA,
County of Harrison, To wit:

I, I. Wade Coffman, Clerk of the Circuit Court of Harrison County, State of West Virginia, do certify that the foregoing are true, correct and complete copies of the petition and exhibits therewith filed on June 22, 1912, and of the orders made and entered on June 22, 1912 and June 29, 1912, in the condemnation proceeding of The Philadelphia Company of West Virginia, a corporation, versus W. M. Curry, lately pending in said Circuit Court of Harrison County, as the same remains of record in my said office.

In testimony whereof I have hereunto set my hand and affixed the seal of said Court, at the Courthouse of said County, on this the 29th day of January, 1921.

680 [Endorsed:] The Philadelphia Company of West Virginia vs. W. M. Curry. Condemnation of Pipe Line Right of Way.

681 CARNEGIE v. SWIGER COND. W. VA. EX. 49.

EX. W. VA. No. 49. O. L. H.

In the Circuit Court of Harrison County, West Virginia.

CARNEGIE NATURAL GAS COMPANY

v.

A. G. SWIGER et al.

Condemnation for Pipe Line Right of Way.

Petition.

Filed July 11, 1911.

To the Honorable Chas. W. Lynch, Judge of said Court:

The petition of the Carnegie Natural Gas Company respectfully represents;

1st. Your petitioner is a corporation organized under the laws of the state of Pennsylvania and authorized to do business in the state of West Virginia under the laws of said State, for the purpose of mining, boring, digging for or otherwise obtaining from the earth petroleum rock or carbon oils and natural gas and manufacturing, buying, selling and transporting the same in the crude and the refined states; for the purpose of constructing and maintaining lines

of tubing and piping for the transportation of such oils and gas or either of them, for the public generally as well as for the use of said corporation; for the purpose of transporting such oil or gas or either of them by means of such pipes and selling and supplying the same to others and generally for the purpose of doing such acts and carrying on such business as pertains to such works and improvements. Your petitioner is by virtue of the laws of said state of West Virginia a common carrier of natural gas; and is recognized by the administrative department of said state as the owner and operator of pipe lines within said state used for the transportation of gas for public use, and the said petitioner, as such pipe line company and public service corporation, regularly makes to the Board of Public Works of said state a return in writing required by Section
682 84 Chapter 29 of the code of said state; and the said petitioner is by said Board of Public Works duly and regularly assessed for taxes as such pipe line company and public service corporation. Its tax paid to the said state for such purpose during the year 1910 amounted to $23,441.02.

2nd. Your petitioner since its incorporation and since receiving its authority to do business in the state of West Virginia, has been engaged in the business of producing and marketing natural gas and at present is supplying gas to 8 school houses, one church, 65 dwelling houses, 2 oil and gas companies, and 5 drilling contractors within the state of West Virginia, a true and correct list of which consumers is attached hereto and made part hereof, marked Exhibit "A," that your petitioner is also supplying gas to 770 customers outside of said state of West Virginia.

3rd. Your petitioner is constantly increasing the number of its consumers and it is desirous of largely increasing its sales of gas in the various counties of West Virginia traversed by its lines. Your petitioner is ready and willing to sell gas to all parties within reaching distance of its pipe lines who apply for the same at reasonable fixed rates which are in general effect throughout the state of West Virginia, and which rate is as follows: 25 cents per thousand cubic foot of gas; also flat rate of $1.50 per month for one fire. Your petitioner being a public service corporation as hereinbefore stated is ready and willing to furnish gas at all times to the public, as aforesaid.

4th. Your petitioner is the owner of seven producing gas wells in and about Logansport in Harrison County, West Virginia, and desires to connect said gas wells with the main pipe line of your petitioner near Dola in said Harrison County. The only practical route from said gas wells to said main pipe line, passes through the lands of A. G. Swiger, hereinafter more particularly described.
683 Your petitioner is now and has been paying rentals on said gas wells amounting to $2,500.00 per year, and has been getting no gas for the reason that it has had no pipe line through which to transport same, while the gas from said wells is being drained by other gas wells upon other and neighboring lands.

5th. Desiring to construct such pipe line as aforesaid, the officers of the said Carnegie Natural Gas Company, your petitioner, provided for the construction of a pipe line from the said seven wells near Logansport, Harrison County, West Virginia, to the main line of your petitioner at or near Dola, for the purpose of transporting gas from said seven wells and furnishing and selling said gas to such persons within and without the state of West Virginia as might desire the same.

6th. In compliance with said order the Carnegie Natural Gas Company, your petitioner, had a survey made of the said proposed pipe line, which survey was adopted by the said Company and determined upon as the route best adapted to the Company's purposes, and was located so that the same does not pass within one hundred feet of any occupied dwelling house, nor does it take nor pass through any dwelling house, yard or garden, nor does it lie wholly or in part in any municipal corporation. The only pipe line which your petitioner intends to lay upon said route will be six inches in diameter; will be used exclusively for the transportation of natural gas; it is necessary to supply with gas the aforesaid consumers and such new consumers within said county and state and elsewhere as your petitioner expects to secure in the near future; and it will be buried under the surface of the ground to such a depth as not to interfere with the use of the land for agricultural purposes.

7th. The said proposed pipe line passes over and upon land belonging to A. G. Swiger, situate in Eagle District, Harrison
684 County, West Virginia, and bounded as follows: On the north by lands of J. N. Swiger and J. C. Bartlett, on the east by lands of C. D. Robinson, on the south by lands of Josephine Swiger heirs, A. G. Swiger and others, and on the west by lands of Omer Swiger, S. R. Michael and others, and the route of said pipe line through said land of A. G. Swiger is described as follows: beginning in the division line between the said land of A. G. Swiger and the land of C. G. Robinson 264 feet distant from the north end of said division line, which north end is a stake corner between said Robinson and Swiger and 99 feet distant from a stone corner to said C. D. Robinson and A. G. Swiger at the southern end of said division line, thence through the lands of said A. G. Swiger N. 84° 25′ W. 1,268 feet to a stake, thence N. 71° 50′ W. 603 feet to a stake, thence S. 84° 35′ W. 304 feet to a stake, thence S. 62° 35′ W. 405 feet to a stake, thence S. 54° W. 208 feet to a point in the division line between the lands of said A. G. Swiger and S. R. Michael, which point is 346½ feet distant from the southern end of said division line and 106 feet distant from the northern end of said division line, which northern end is a white oak corner tree between said Swiger and Michael, a total distance of 2,788 feet. No oil tank, station or building is to be erected or placed upon any part of the said premises sought to be taken by the peitioner.

8th. Your petitioner attempted to purchase from said A. G. Swiger an easement or right of way over his lands for the purpose of con-

structing thereon a pipe line as above described for the transportation of gas along the route aforesaid, and your petitioner offered to said A. G. Swiger a fair market price for the said easement, and through its agent, F. M. Kellar, made a- offer in writing to the said A. G. Swiger, and offered him the sum of $225.00 for such easement and right of way, and in said writing made a tender of such sum for such purpose, but the said A. G. Swiger would not agree with
685 your petitioner upon the damage properly payable for such easement, and would not agree with your petitioner upon a fair price for such easement and right of way, and refused to accept said offer of $225.00 for said easement and right of way, and refused to accept said sum so tendered to him for such purpose, and has refused to give and grant to your petitioner a right of way or easement for said pipe line; your petitioner thereupon, through its agent F. M. Kellar, tendered to the said A. G. Swiger a bond executed by petitioner, Carnegie Natural Gas Company, in the sum of $700.00 with the Fidelity Trust and Deposit Company of Maryland as surety, together with a plan attached thereto showing the location of said proposed pipe line in accordance with the terms of the act of the legislature of West Virginia in such cases made and provided which bond with plan attached thereto is herewith filed made part hereof, marked Exhibit "B". The said Fidelity Trust & Deposit Company of Maryland, is a trust company duly authorized under the laws of West Virginia, and doing business in said state; the said company has in all respects complied with the requirements of said state, and is and has for many years been amply solvent and well able to perform all of its obligations, and the said company is in fact a good and sufficient security for the bond above mentioned. Said written offer and tender made by your petitioner to said A. G. Swiger hereinbefore set forth is herewith filed, marked Exhibit "C" and made part hereof.

9th. The said A. G. Swiger refused to accept the said bond and thereupon said F. M. Kellar on the — day of July, 1911, served upon the said A. G. Swiger a notice that the said bond would be presented to court to be approved and filed for his benefit on the 11th day of July, 1911, a copy of which notice together with proof
686 of service sent out is herewith filed, made part hereof, and marked Exhibit "D".

10th. The said A. G. Swiger is the sole owner of the land hereinbefore described over which said right of way is proposed to be taken by your petitioner. The only liens on said real estate are th following: vendor's lien reserved in deed of Elisha P. Hall and wife to A. G. Swiger bearing date of 30th day of April, 1888, and recorded in the office of the Clerk of the County Court of Harrison County, West Virginia, in Deed Book No. 74, page 332, and vendor's lien in deed of John T. Swiger to A. G. Swiger, bearing date of 29th day of September, 1891, and recorded in said County Clerk's office in Deed Book No. 83, page 506. That the only claims against said real estate are the following: the Hope Natural Gas Company is the

owner of oil and gas rights upon said land by virtue of a lease from said A. G. Swiger, bearing date of 21st day of December, 1908, and recorded in said County Clerk's office in Deed Book No. 176, page 162. Your petitioner is informed and believes that the Swiger Coal Company is the owner of certain coal rights in said lands, the nature of which is unknown to your petitioner. The said Swiger Coal Company is a corporation organized under the laws of the state of West Virginia. There are no other liens against said real estate nor conflicting claims thereto. The said John T. Swiger has departed this life and J. Allen Swiger was appointed his administrator by the County Court of Harrison County, West Virginia, and duly qualified as such according to law. Your petitioner also caused to be served upon the said Elisha P. Hall, J. Allen Swiger, Administrator of John T. Swiger, deceased, Hope Natural Gas Company and Swiger Coal Company the same notice that was served upon said A. G. Swiger aforesaid, as will appear from the return endorsed upon the back of said notice, marked Exhibit "D".

887 11th. Petitioner avers that the pipe line which it proposes to build is an internal improvement for public use; that delay in securing said right of way will interfere with the proper development of its gas territory in this vicinity, and will interfere with the performance of its duty to the land owners who have made oil and gas leases to your petitioner, and will also injuriously delay its consumers in obtaining the necessary supply of gas. Your petitioner further avers that no other market is available for the product of the aforesaid seven wells near Logansport in said Harrison County, and that said wells are at present and have been for a long period of time shut in because of the fact that their products cannot be market without use of the pipe line hereinfore described.

12th. Your petitioner under the law has the right to acquire and take the said right of way or easement in and by this petition, application and bond.

Wherefore, your petitioner prays this Honorable Court to approve said bond and to direct that the same be filed for the benefit of the said A. G. Swiger, and for the benefit of said Elisha P. Hall, J. Allen Swiger, Administrator of John T. Swiger, deceased, Hope Natural Gas Company and Swiger Coal Company, if they or any or either of them are entitled to any benefit, in accordance with the act of the Legislature of West Virginia in such cases made and provided. Your petitioner further prays that it be allowed to enter upon said easement through the lands of said A. G. Swiger as soon as the said bond has been approved, for the purpose of constructing a pipe line without delay; your petitioner further prays that commissioners may be appointed by this court to ascertain a just compensation to said A. G. Swiger, and to said Elisha P. Hall, J. Allen Swiger, Administrator of John T. Swiger, deceased, Hope Natural Gas Company and Swiger Coal Company, if they are entitled to any compensation, for the use of said easement or right of way over, in and upon the lands hereinbefore described and proposed to

888

be taken by your petitioner for the purpose and use aforesaid, and that such proceedings may be had in the premises as conform to law. And petitioner prays for such other further and general relief as the nature of its case may require. And it will ever pray, etc.

695 (EXHIBIT "B" FILED WITH THE PETITION.)

Know all men by these presents, that we, the Carnegie Natural Gas Company a corporation, principal, and Fidelity and Deposit Company of Maryland sureties, are held and firmly bound unto A. G. Swiger in the just and full sum of ($700.00) Seven Hundred Dollars, to the payment whereof well and truly to be made to the said A. G. Swiger, as aforesaid, we bind ourselves, our executors, administrators and assigns, jointly and severally, firmly by these presents. Sealed with our seals and dated this 16th day of March, 1911.

The condition of the above obligation is such, that whereas the above bound and named, Carnegie Natural Gas Company, is derirous of securing an easement for a right of way over the lands of the said A. G. Swiger, situate in Eagle District, Harrison County, West Virginia, for the purpose of laying and constructing a pipe line for the purpose of transporting natural gas and constructing telegraph and telephone lines,—a plan or plat of which easement and right of way is attached to and made a part of this bond,—and marked for identification exhibit "A." And whereas the said Carnegie Natural Gas Company has attempted to agree with said Swiger upon a price or upon the damages, or both for said easement or parcel of land. And whereas said company and said Swiger have failed to agree upon the said price and damages. And whereas said gas company is desirous of taking possession of said parcel of land or easement at once for the purpose of laying a pipe line upon the same, as provided by Section 20 of chapter 74 of the Acts of 1907 of West Virginia, in advance of the fixing of the said damages or price, in the manner provided by said chapter.

Now, therefore, if the said Carnegia Natural Gas Company
696 shall pay to said A. G. Swiger any and all damages which he might sustain or incur by reason of said Carnegie Natural Gas Company taking possession of said easement and right of way and laying a pipe line upon the same, then the above obligation to be void, otherwise to remain in full force and effect.

703 CARNEGIE NATURAL GAS COMPANY

VS.

A. G. SWIGER et al.

Upon Condemnation.

(*Order Entered Sept.* 29, 1911.)

The court having maturely considered the motion of defendants A. G. Swiger and the Swiger Coal Company made at a former day, for a continuance in order that they might be given further time to take additional testimony, which motion was supported by the affidavit of Charles G. Coffman, which was heretofore tendered and lodged with these papers, and is now filed, and is marked for identification "Affidavit of Charles G. Coffman relative to taking depositions of Norwood Johnson et als.," doth overrule the same, to which ruling of the court the said defendants except. Thereupon this proceeding came on to be further heard upon the pleas heretofore filed, issues joined thereon, upon the testimony taken upon the part of the petitioner, and upon the part of the defendants A. G. Swiger and the Swiger Coal Company, and upon all motions of whatever nature made by any of the defendants, heretofore. On consideration of said matters, and of the bond heretofore filed by the petitioner, Carnegie Natural Gas Co., with its petition, the court is of the opinion and doth find that the petitioner has the right to condemn in this proceeding, for the purposes set forth in its petition, the right of way and easement which it seeks to condemn herein, and which is fully described in the petition of said Carnegie Natural Gas Company, and the plat and bond filed heretofore herein. Thereupon the defendants A. G. Swiger and the Swiger Coal Company made a motion that the amount of the bond be ascertained by a jury, which motion the court overruled, to which ruling of the court the said defendants A. G. Swiger and the Swiger Coal Company except. The court is further of the opinion to, and doth hereby approve the bond heretofore tendered by the said Carnegie Natural Gas Co., the court finding the same sufficient in all particulars. And the court directs
704 that the said bond, with the plan thereto attached, be filed for the benefit of the owner, A. G. Swiger, and said Carnegie Natural Gas Company, and doth find, order and direct that the petitioner, Carnegie Natural Gas Company, has the right to, and may at any time, immediately, if necessary, enter upon said easement and right of way for the purpose of constructing the pipe line mentioned and described in the said petition of said Carnegie Natural Gas Company, which easement or right of way is described as follows: Beginning in the division line between the land of A. G. Swiger and the land of C. D. Robinson, 264 feet distant from the north end of said division line, which north end is a stake corner between said Robinson and said Swiger, and 99 feet distant from a stone corner to said C. D. Robinson and said A. G. Swiger at the southern end of said

division line, thence through the alnds of said A. G. Swiger N. 84 degrees, 25 Min. W. 1,268 feet to a stake thence N. 71 degrees 50 min., W. 603 feet to a stake thence S. 84 degrees and 35 min. W. 304 feet to a stake, thence S. 62 degrees and 35 min. W. 405 feet to a stake, thence S. 54 degrees W. 308 feet to a point in the division line between the lands of said A. G. Swiger and S. R. Michael, which point is 346½ feet distant from the southern end of said division line, and 106 feet distant from the northern end of said division line, which northern end is a white oak corner tree between said Swiger and said Michael, making a total distance of 2,788 feet; and the said easement or right of way passes over a certain tract of land of said A. G. Swiger, situate in Eagle District, Harrison County, West Virginia, which said tract is bounded as follows, to-wit: on the north by lands of J. N. Swiger and J. C. Bartlett, on the east by lands of C. D. Robinson, on the south by lands of Josephine Swiger heirs, A. G. Swiger and others, and on the west by lands of Omar Swiger, S. R. Michael and others.

705 To which rulings of the court in finding and adjudging that the petitioner Carnegie Natural Gas Company had the right to condemn said right of way and easement, and of the court in approving the said bond tendered by said Carnegie Natural Gas Company, and in adjudging that said Company had the right to enter upon said easement or right of way for the purpose of laying a pipe line thereon, the defendants, A. G. Swiger and Swiger Coal Company except.

Thereupon A. G. Swiger and the Swiger Coal Company moved the court for a rehearing of its findings and judgments in relation to the motion for a continuance, the right to condemn by the plaintiff, the approval of the bond tendered by plaintiff, and the right of the plaintiff to enter upon the lands of said A. G. Swiger, which motion is overruled, to which ruling of the court the said A. G. Swiger and the Swiger Coal Company object and except.

The defendants A. G. Swiger and Swiger Coal Company indicating a desire and intention to apply for an appeal and supersedeas in this proceeding, this order is suspended for a period of thirty days from the rise of this court for the purpose of allowing them to make application to the Supreme Court for said appeal and supersedeas. But this suspension is granted upon condition that the said A. G. Swiger and the Swiger Coal Company, or some one for them file with the Clerk of the Court a suspending bond in the penalty of five hundred dollars, conditioned according to law, within five days from this date, with good and sufficient surety, to be approved by the Clerk of this Court.

CARNEGIE NATURAL GAS COMPANY

vs.

A. G. SWIGER et als.

Condemnation.

It appearing to the court that the commissioners heretofore appointed in this cause, returned their report to the clerk's office of this court on the 8th day of January, 1914, which report is ordered to be

and the same is filed herein. Thereupon came the defendant, A. G. Swiger, by his counsel, as well as Carnegie Natural Gas Company, by its counsel, and the said Swiger moved the court to set aside said report and recommit this cause to the same commissioners or to new commissioners selected according to law, and tendered and offered to file herein to support said motion, the affidavits of D. W. Kemper, Isaac L. Davisson and Marion T. Cunningham, which affidavits having been seen and inspected by the court are ordered to be and the same are hereby filed, and Carnegie Natural Gas Company by its counsel resisted said motion.

Upon consideration whereof, the court is of the opinion to and doth sustain said motion; and it is therefore ordered that said report be and the same is hereby set aside and that this cause be and the same is hereby recommitted to a new set of commissioners, to be ascertained according to law.

Thereupon, the court doth hereby nominate thirteen disinterested free holders of this county, to wit: Emery F. Monroe, T. J. Parrish,
C. E. Rogers, Henry Bennett, Jefferson Robinson, J. Fred
709 Dye, James F. Griffin, Marcus L. Riblett, Cree M. Bartlett,
Lee Boggess, Ferd Gore, Temple Smith and Clarence T. Harbert. And the petitioner, Carnegie Natural Gas Company, and defendant, Swiger, proceeded by counsel to ascertain, as provided by law, five of said thirteen free-holders to act as commissioners, which lot and choice fell upon the following named persons, to wit: Emery F. Monroe, Jefferson Robinson, Cree M. Bartlett, Ferd Gore and Clarence T. Harbert. And therefore, it is ordered by the court that the said five free-holders so selected to act as commissioners, after having been sworn according to law, do proceed with all convenient speed to view said premises and hear any proper evidence offered, and ascertain according to law, what will be a just compensation to the parties entitled thereto, for said right-of-way or easement proposed to be taken by the said applicant, that is to say, an easement or right-of-way for the construction, operation and maintenance of a pipe line, six inches in diameter, for the transportation of natural gas, to be laid on the line of said right-of-way as now located by courses and distances set out in a former order entered herein, including as well the damages, if any, to the residue of said real estate, on account of the work to be constructed. But deducting therefrom, the peculiar benefits, if any, to be derived in respect to such residue from the work to be constructed, and that the said commissioners do make report of their proceedings to this court in the manner required by law. But before said commissioners shall act, three days' notice in writing shall be served upon the defendant, A. G. Swiger, or his attorney of record.

710 (*Order Entered May* 8, 1914; *Recorded in Law Order Book No.* 37, *Page* 112.)

In the Circuit Court of Harrison County, West Virginia.

CARNEGIE NATURAL GAS COMPANY

vs.

A. G. SWIGER et als.

Condemnation.

This day came the Carnegie Natural Gas Company by its counsel, as well as A. G. Swiger by his counsel, and reported to the Court that an agreement had been reached by the respective parties, relative to the amount of compensation for the easement or right-of-way proposed to be taken by said applicant heretofore adjudicated, as well as for damages to the residue of said land beyond the peculiar benefits which will be derived in respect to such residue from the work to be constructed; and that said amount for the purposes aforesaid, shall take the place and be in lieu of an assessment by the commissioners heretofore appointed, and the same to be in full force and effect as if ascertained and reported by said commissioners, and the amount thereof and the purposes therefor as follows, to-wit: Four Hundred & Twenty-two and 40/100 Dollars will be a just compensation for the easement or right-of-way proposed to be taken by the said applicant, that is to say, an easement or right-of-way for the construction, operation and maintenance of a pipe line, six inches in diameter, for the transportation of natural gas, to be laid on the line of said right-of-way, as now located, said line being designated as follows, to-wit:

Beginning in the division line between the land of A. G. Swiger and the land of C. D. Robinson, 264 feet distant from the north end of said division line, which north end is a stake corner between said Robinson and said Swiger, and 99 feet distant from a stone, corner to said C. D. Robinson and said A. G. Swiger at the southern end of the said division line; thence through the lands of A. G. Swiger N. 84° 25′ W. 1,268 feet to a stake; thence 71° 50′ W. 603 feet to a stake; thence S. 84° 35′ W. 304 feet to a stake; thence S. 62° 35′ W. 405 feet to a stake; thence S. 54° W. 308 feet to a point in the division line between the lands of said A. G. Swiger and S. R. Michael, which point is 346½ feet distant from the southern end of said division line and 106 feet distant from the north end of said division line, which northern end is a white oak, corner tree between said Swiger and said Michael, making a total distance of 2,788 feet, including as well the damages to the residue of said real estate beyond the peculiar benefits which will be derived in respect to such residue from the work to be constructed.

And it appearing to the Court that the petitioner on the 5th day

of May, 1914, paid to A. G. Swiger the sum of Four Hundred & Twenty-two and 40/100 Dollars, being the amount of compensation which was agreed upon, as hereinbefore set out, and to which said defendant is entitled for the easement proposed to be taken and damages to the residue as aforesaid, it is ordered that a right of way or easement to lay, construct and maintain in, over and through the lands in the papers and proceedings in this cause described, and at the places designated by courses and distances aforesaid, a pipe line, six inches in diameter, for the purpose of transportation of natural gas for public use, so paid for by said applicant, for the purpose set out in the petition and application and the orders and proceedings herein, be and the same are hereby fully vested in the said petitioner, Carnegie Natural Gas Company, and that said Car-
712 negie Natural Gas Company do take and use for the purpose specified in said application and petition, that part of the land in respect to which such payment is made, and that said applicant shall do and have all the rights and privileges and franchises as heretofore adjudicated to said applicant and conferred upon it by law.

It is further ordered that the said applicant do pay all the costs of this proceeding which accrued in the Circuit Court of this county, the same to be taxed by the clerk, but is not to be taxed with any costs made by virtue of an appeal of this cause to the Supreme Court of this state.

Nothing further remaining to be done in this case, it is ordered that the same be and it is hereby dropped from the docket of the court.

713 STATE OF WEST VIRGINIA,
County of Harrison, To wit:

I, I. Wade Coffman, Clerk of the Circuit Court of Harrison County, State of West Virginia, do certify that the foregoing are true, correct and complete copies of the petition and exhibits therewith filed on July 11, 1911, and of the orders made and entered on September 29, 1911, May 27, 1913, February 7, 1914 and May 8, 1914, in the condemnation proceeding of Carnegie Natural Gas Company, a corporation, versus A. G. Swiger and others, lately pending in said Circuit Court of Harrison County, as the same remains of record in my said office.

In testimony whereof I have hereunto set my hand and affixed the seal of said Court, at the Courthouse of said County, on this the 29th day of January, 1921.

716 FAIRMONT V. THOMPSON COND. W. VA. EX. 50.

EX. W. VA. NO. 50. O. L. H.

(*Petition. Filed July* 2, 1910.)

In the Circuit Court of Harrison County, West Virginia.

THE FAIRMONT & GRAFTON GAS CO.

vs.

RICHARD V. THOMPSON, Guardian, &c.

Condemnation.

To the Honorable Charles W. Lynch, judge of the Circuit Court of Harrison County:

The undersigned petitioner, The Fairmont & Grafton Gas Company respectfully represents:

I. That petitioner is a corporation duly organized and existing under and by virtue of the laws of the State of West Virginia, for the purpose of transporting carbon oil, and natural gas or both, by means of pipes, or otherwise, for public use, as will appear from the charter granted to it by the State of West Virginia, on the 12th day of March, 1894.

II. That this petitioner was duly organized under and by virtue of its charter and proceeded to engage in the business and undertakings thereby allowed and is now so engaged; that it is producing large quantities of natural gas within the State of West Virginia, and is engaged in the business of transporting the same to market by means of certain lines or iron pipe or tubing constructed and maintained by it and that the natural gas so transported by said lines is being sold to the public in the following named incorporated cities, towns and villages, to-wit: the City of Grafton and the towns of Lumberport, Shinnston and Enterprise, all in the State of West Virginia, and other places in the State of West Virginia not incorporated and many persons not living in any city, town
717 or village are likewise being supplied with natural gas both for domestic and industrial uses by this petitioner, by means of its said system of pipe lines; that the transportation of said natural gas and the sale is for the use of the public generally for the purpose of supplying light and heat to such public; and that your petitioner is ready and willing at all times, and has so held itself out, to sell said gas to the public or any portion thereof, upon the payment of a reasonable price therefor.

III. That petitioner is now engaged in constructing lines of piping over and through the county of Harrison in the State of West Virginia, as it is by law authorized to do; that when the same are completed it is petitioner's purpose and intention to operate and maintain said pipe lines for the purpose of supplying natural gas to the inhabitants of the various incorporated cities, towns and villages hereinbefore mentioned, and to the public generally and for other lawful uses; that it desires to proceed with the construction of its said pipe line through the lands of Opal G. Thompson, Worthy R. Thompson and Ethel L. Thompson, all of whom are infants, and whose guardian is Richard V. Thompson, lying in the District of Clay, County of Harrison and State of West Virginia; that for the purpose of building, constructing and maintaining its said pipe line for the transportation of natural gas for the public uses hereinbefore set out, it desires to acquire an easement or right-of-way over, across and upon that portion of the land of the persons hereinbefore named, described particularly as follows:

Beginning at a point in line between lands of E. W. Thompson and of Worthy R. Thompson and others, which point is N 16° 45′ W 243 feet distant from a stone corner; thence with said line, N 16° 45′ W 31 feet to a point; thence S 57° 35′ E 397.5 feet to a point; thence S 65° 35′ E 485 feet to point in line of Nancy Rector; thence

with same N 78° 45′ W 88 feet to a point N 78° 45′ E 605 feet from a stone corner to E. W. Thompson; thence N 65° 35′ W 401 feet to a point; thence N 57° 35′ W 376.5 feet to the place of beginning, containing 38/100 of an acre, more or less.

IV. That petitioner files herewith as a part of this petition a plat of the said lands over which the said easement is proposed to be taken, marked "Thompson Plat."

V. That the strip of land hereinbefore described, upon which said easement is proposed to be taken, is owned in fee simple by the following named persons, to-wit: Worthy R. Thompson, Opal G. Thompson and Ethel L. Thompson, each of whom owns the undivided one-third of said land.

VI. That there are no liens upon the said land or claims thereto or outstanding estates therein or in any part thereof except as follows:

(*a*) an estate in all of the natural gas and the undivided sevenighths of the oil held by T. J. Parrish and F. L. Grove under a onveyance made to them by Richard V. Thompson, Guardian and pecial commissioner, dated the 2nd day of May, 1910, and of ecord in the office of the Clerk of the County Court of Harrison ounty in Deed Book 186, page 318.

(*b*) a right of way for a pipe line supposed to be held by the outh Penn Oil Company under and by virtue of a conveyance from ichard V. Thompson, Guardian, dated the 6th day of August, 909, and of record in said Clerk's office in Deed Book No. 179, age 174.

VII. That all pipe lines to be laid or constructed by it in, upon nd through said lands hereinbefore described and the right-of-way ver which is now sought to be acquired, are to be and will be uried under the surface of the ground to such a depth as not to nterfere with the use of the said land for agricultural purposes; that the pipe line which petitioner intends to lay and will lay upon the said right-of-way will be ten (10) inches in diameter; that your petitioner intends to use and will use he said easement or right of way over and upon the land hereinefore described for the purpose of constructing, maintaining and perating its said pipe line; which pipe line will be used for the ublic uses hereinbefore set forth; and that said easement or right f way is necessary for such purposes.

VIII. That in taking the said easement or right of way, so proosed to be taken by petitioner, it will not be necessary to take any welling house, yard or garden, nor will such be taken therein or hereby; that in taking said easement or right of way and appropriting the same to the public use hereinbefore set forth, it is not and ill not be necessary to erect or lay any oil tank or gas or oil pipe ine within one hundred feet of any occupied dwelling house, nor

shall any oil tank, gas or oil pipe line be erected or laid within one hundred feet of any occupied dwelling house; and that the parcel of land hereinbefore described does not lie within any municipal corporation.

IX. That the survey, location and route of petitioner's pipe line, upon and over the parcel of land hereinbefore described, has been regularly and duly authorized, selected, located, approved and adopted by the proper officers of the petitioner and by its Board of Directors.

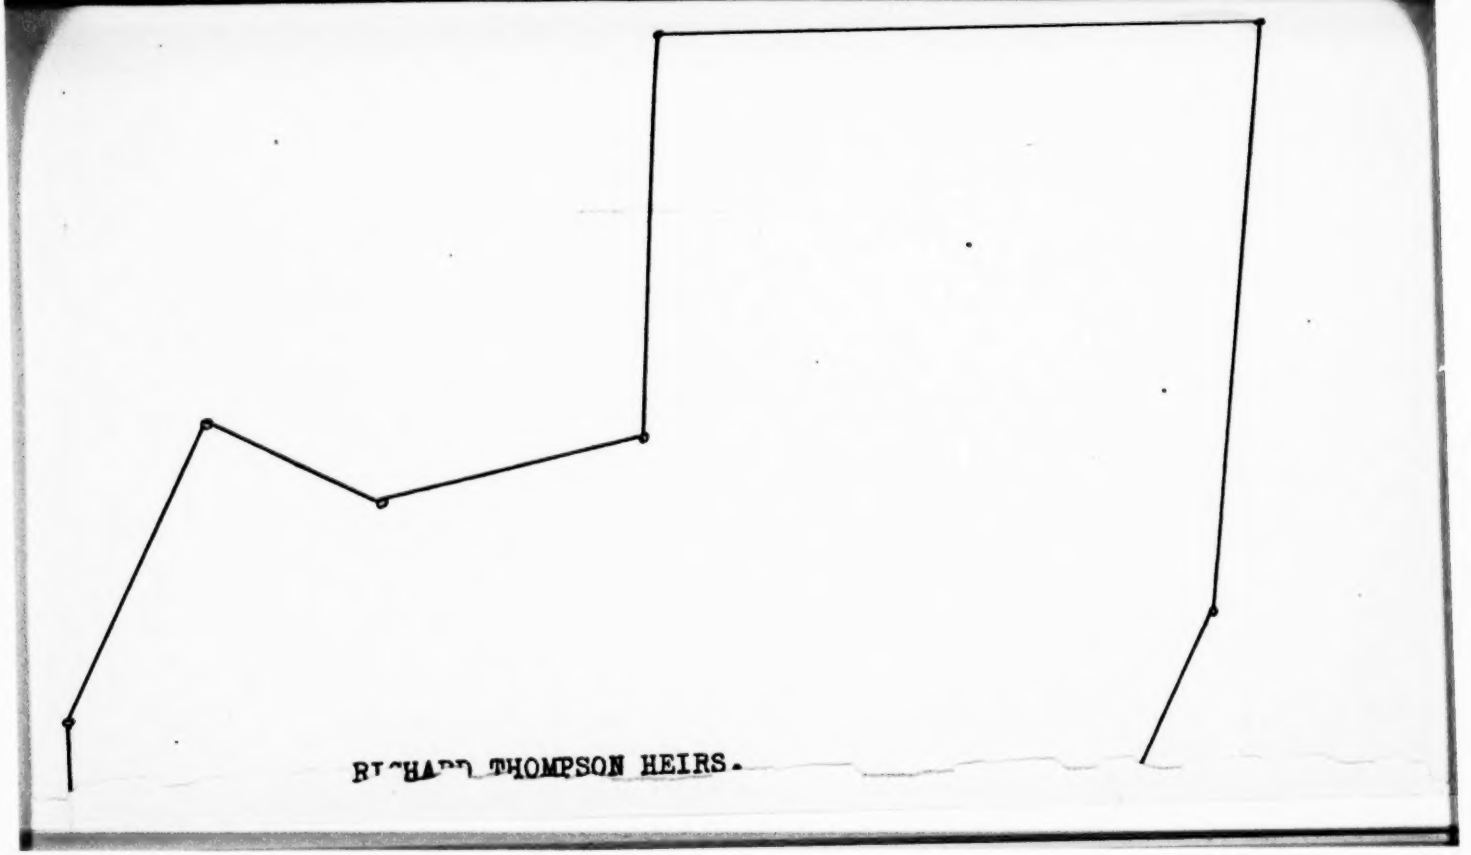
X. That petitioner is unable to agree with the owners of said land over which the easement aforesaid is proposed to be taken as aforesaid, as to the amount of compensation for the said easement or right of way proposed to be taken; that petitioner has offered to pay the sum of $1.00 per lineal rod of pipe line, but the said owners will not agree to said price and have refused to give your petitioner the easement or right of way here now sought to be taken.

720 XI. That petitioner has caused notice to be given to Richard V. Thompson the guardian of said owners, and to all persons having liens upon, interests in or claims against the land upon which said easement or right of way is proposed to be taken, of petitioner's intention to file this petition and make this application, as will more fully appear from the said notice and the evidence of their service thereof thereon endorsed, which is herewith filed and prayed to be read as a part hereof, marked "Exhibit Notice."

Petitioner therefore prays that commissioners may be appointed by this court to ascertain a just compensation to the owners thereof for the easement hereinbefore described and proposed to be taken by your petitioner for the purposes aforesaid; that such other proceedings may be had in the premises as conform to law, and that upon the payment of compensation by your petitioner the title to the above described easement or right of way may be declared to be vested in your petitioner for the uses and purposes aforesaid. And that such other, further and general relief may be granted as to the court may seem proper or the nature of the case may require.

(Signed) THE FAIRMONT & GRAFTON GAS COMPANY,
By DAVIS & DAVIS,
Its Attorneys.

(Here follows Exhibit Thompson Plat, marked page 721.)



RICHARD THOMPSON HEIRS.

22 ("EXHIBIT NOTICE" FILED WITH THE FOREGOING PETITION.)

o Richard V. Thompson, guardian of Worthy R. Thompson, Opal G. Thompson, and Ethel L. Thompson, and to Worthy R. Thompson, Opal G. Thompson, and Ethel L. Thompson, South Penn Oil Company, T. J. Parrish, and F. L. Grove:

You and each of you are hereby notified that on Saturday, the 2nd ay of July, 1910, at 9 o'clock A. M., or as soon thereafter as the natter can be heard, the undersigned, The Fairmont & Grafton Gas ompany, will make application by petition to the Circuit Court of larrison County, West Virginia, at the Court House thereof at larksburg, for the appointment of commissioners to ascertain a just ompensation to the persons entitled thereto, for an easement or ght of way over, across and upon a certain piece or parcel of land, ereinafter mentioned; and for such proceedings to be then and there ad as may be necessary to condemn said easement for public uses ereinafter mentioned. Said piece or parcel of land is situated in lay District, Harrison County, West Virginia, on the waters of oon's Run; is part of a tract of 37.55 acres of land which was set part to Worthy R. Thompson, Opal G. Thompson and Ethel L. hompson, by a decree of Circuit Court of Harrison County made on he 21st day of September, 1899, in the chancery cause of Joshua H. hompson vs. Cyrus Thompson et al.; which decree is of record in he office of the Clerk of the County Court of Harrison County in eed Book No. 109, page 462; and is bounded and described as folws, to wit:

Beginning at a point in line between lands of E. W. Thompson nd of Worth- R. Thompson and others, which point is N. 16° 45' . 243 feet distant from a stone corner; thence with said line N. 16° 45' W. 31 feet to a point; thence N. 57° 35' E. 397.5 feet to a 23 point; thence S. 65° 35 E. 485 feet to point in line of Nancy Rector; thence with same N. 78° 45' W. 88 feet to a point S. 8° 45' E. 605 feet from a stone corner to E. W. Thompson; thence . 65° 35' W. 401 feet to a point; thence N. 57° 35' W. 376.5 feet to he place of beginning containing 0.38 acres, more or less.

The parcel of land above described is owned jointly in fee simple y Worthy R. Thompson, Opal G. Thompson and Ethel L. Thompon, all of whom are infants; but their said estate is subject to a conveyance of all of the natural gas and seven-eighths of the oil, made y Richard V. Thompson, Guardian and Special Commissioner, to . J. Parrish and F. L. Grove, which conveyance bears date the 2nd lay of May, 1910, and is of record in said Clerk's office in Deed Book No. 186, page 318; and is supposed to be subject to a claim of South Penn Oil Company for a right of way for a pipe line thereon, under and by virtue of a conveyance made by Richard V. Thompson, Guardian, dated the 6th day of August, 1909, and of record in said Clerk's office in Deed Book No. 179, page 174.

A plat of said land, marked "Thompson Plat" will be filed with the written application in this case.

The easement in the parcel of land aforesaid is proposed to be taken by The Fairmont & Grafton Gas Company, a corporation under the laws of the State of West Virginia engaged in supplying gas for public use, and is intended by said Company to be appropriated for the purpose of constructing, operating and maintaining thereon a pipe line, ten inches in diameter, for the transportation of natural gas, under and by virtue of its charter and of the laws of said State.

(Signed) THE FAIRMONT & GRAFTON GAS COMPANY,
By DAVIS & DAVIS,
Its Attorneys.

June 17th, 1910.

724 STATE OF WEST VIRGINIA,
County of Harrison, To wit:

THE FAIRMONT & GRAFTON GAS COMPANY

vs.

WORTHY R. THOMPSON et al.

Condemnation.

(*Order. Entered July* 2, 1910.)

This day came the Fairmont & Grafton Gas Company, a corporation, by Davis & Davis, its attorneys, and presented in open court its application or petition in writing praying for the appiontment of commissioners to ascertain a just compensation to the persons entitled thereto, for a right of way or easement to construct, maintain and operate a pipe line, ten inches in diameter, for the transportation of natural gas for public use, over, through and across a certain strip or parcel of land owned by Worthy R. Thompson, Opal G. Thompson, and Ethel L. Thompson, infants, in said petition fully described and for such further orders and proceedings as may be necessary to condemn and appropriate said right of way or easement for the public use aforesaid; with which petition the said petitioner presented a notice with return of service thereon showing that notice of this application was duly served upon Richard V. Thompson, guardian of said Worthy R., Opal G. and Ethel L. Thompson, and on T. J. Parrish and F. L. Grove, owners of the oil and gas, more than ten days prior hereto. It is therefore ordered that said petition and notice be filed and this proceeding docketed; and that said defendants and their guardian still failing to appear to said application, on motion of the petitioner it is ordered that I. Wade Coffman be and he is hereby appointed guardian ad litem for said infant defendants and required to protecct their interests in this behalf. Thereupon came the said guardian ad litem and appeared to said petition on behalf of his said wards. Thereupon came the defendants South Penn Oil Company and Hope Natural Gas Company and appeared in this case and waived service of notice upon them. Thereupon came
726 Richard V. Thompson, Guardian, by Fred L. Shinn, his attorney, and filed his demurrer to said petition, which demurrer, having been argued by counsel, is overruled.

Thereupon this cause came on to be heard upon the said notice, the petition and exhibits therewith filed, upon consideration whereof the court doth find and adjudge that this case is one in which the applicant has a lawful right to take the said easement or right of way over, through and across the parcel of land in said petition described for the purposes in said petition set forth, and the court doth hereby appoint thirteen disinterested freeholders of this county, to wit: Perry C. Williams, William C. Hiskman, Arthur K. Thorn, Linn K. Richards, A. D. Fitzhugh, E. W. Williams, Corbin B. Bradford, J. H. Somerville, B. M. Despart, Jno. D. McReynolds, Chas. H. Pike,

Jno. W. Stewart and Harry G. Johnson. And the defendants now appearing by Fred L. Shinn, their attorney, the parties proceeded to ascertain as required by law, five of said thirteen freeholders to act as commissioners, which choice and lot fell upon the following named five freeholders, to wit: Perry C. Williams, Corbin B. Bradford, J. H. Somerville, John D. McReynolds and John W. Stewart. Thereupon it is ordered by the court that said five freeholders so selected as such commissioners shall act as such and that after being duly sworn for the purpose, they do proceed with all convenient speed and after viewing said premises and hearing any proper evidence offered, do ascertain according to law what will be a just compensation to the parties entitled thereto for the right of way or easement to construct, maintain and operate said pipe line, for the uses aforesaid, over, through and across the strip or parcel of land proposed to be taken by the applicant and fully described in its petition in this case; and that they do make report of their proceedings to this court.

727 (*Order Entered Sept.* 10, 1910; *Recorded in Law Order Book No.* 35, *Page* 132.)

In the Circuit Court of Harrison County, West Virginia.

FAIRMONT & GRAFTON GAS CO.

vs.

WORTHY R. THOMPSON et al.

This day came the parties, by their attorneys, and thereupon it appearing to the Court that the Commissioners appointed to ascertain the compensation to which the land owner is entitled for the land sought to be taken in this proceeding, filed their report with the Clerk of this Court on the 15th day of July, 1910, and which report bears date the 15th day of July, 1910, fixing the compensation of the said defendant for the easement taken, as well as the damages to the residue beyond the peculiar benefits which will be derived in respect to such residue from the work to be constructed, at the sum of $75.00, and the said Worthy R. Thompson, Opal G. Thompson and Ethel L. Thompson, by Fred L. Shinn, their attorney, having excepted to the said report of the commissioners and demanded that the amount of compensation to which said landowner is entitled for the easement or right of way to be taken, as well as for the damages to the residue of said real estate beyond the peculiar benefits which will be derived in respect to such residue from the work to be constructed, be tried by a jury at the bar of this Court.

Now, therefore, it is ordered that a jury be summoned to try said issue in the manner provided by law.

728 And it is further ordered that the applicant be allowed to pay into Court the sum of $75.00, and thereupon the said applicant may take immediate possession of the easement or right of way involved in this proceeding; and the Clerk of this Court is or-

ed to receive the same and execute and deliver to the applicant a per receipt therefor, which has heretofore been done by him.

THE FAIRMONT & GRAFTON GAS COMPANY

v.

RTHY R. THOMPSON, OPAL G. THOMPSON, and ETHEL L. THOMPSON, Infants and RICHARD V. THOMPSON, Guardian.

Condemnation Proceeding.

(*Order Entered June* 6, 1911.)

his day came again the parties by their attorneys, and the Court ing considered the matters arising on the motion of the applicant et aside the verdict of the jury heretofore returned in this proling and award it a new trial and the argument of counsel thereon, overrule said motion.

nd, proceeding to enter judgment on the verdict of the jury in r of the land owners for the sum of one hundred and fifty dollars 50.00), and it appearing to the Court that the applicant has tofore paid into court to the clerk the sum of seventy-five dollars 5.00), it is therefore considered by the Court that the clerk of court be and he is hereby ordered to pay to the said land owners, o their attorneys of record in this proceeding, the said sum of nty-five dollars ($75.00), and that the said land owners recover he said applicant the sum of seventy-five dollars ($75.00) with rest thereon from the 10th day of May, 1911, until paid, and r costs by them in this behalf expended.

nd it is adjudged and ordered that the said applicant do take hold an easement or right of way over, across and upon that por- of the land of the said owners, lying in the District of Clay, in rison County, described particularly as follows: Beginning at a t in line between lands of E. W. Thompson and of Worthy R. mpson and others, which point is N. 16° 45′ W. 243 feet distant a stone corner; thence with said line N. 16° 45′ W. 31 feet to int; thence S. 57° 35′ E. 397.5 feet to a point; thence S. 65° 35′ E. 485 feet to point in line of Nancy Rector; thence with same N. 78° 45′ W. 88 feet to a point N. 78° 45′ E. 605 feet from a stone corner to E. W. Thompson; thence N. 65° 35′ 01 feet to a point; thence N. 57° 35′ W. 376.5 feet to the place eginning, containing 38/100 acres, more or less, for the pur- set out in its petition and application herein.

nd nothing further remaining to be done in this proceeding, the is now retired from the docket.

EX. W. VA. NO. 51. O. L. H.

Compared.

WHEELING NATURAL GAS COMPANY

vs.

ENOS D. TENNANT AND OTHERS.

Condemnation.

The petition in the above-styled case, filed in the Circuit Court of Marion County, in Open Court, on the 12th day of October, 1906, is in words and figures following:

To the Honorable John W. Mason, judge of the Circuit Court of Marion County, West Virginia:

Your petitioner, The Wheeling Natural Gas Company, a Corporation created, organized, existing and doing business under and pursuant to the laws of the State of West Virginia, having its principal office in the City of Wheeling, West Virginia, respectfully represents unto your Honor that it is such corporation duly created, organized, existing and doing business under the laws of the said State; that by its charter it is authorized and is organized for the purpose of boring, digging for or otherwise obtaining from the earth petroleum, rock or carbon oils and natural gas, and manufacturing, buying, selling and transporting the same in the crude and in the refined states; for the purpose of constructing and maintaining lines of tubing and piping for the transporting of such oils and gas, or either of them, for the public generally, as well as for the use of said corporation; for the purpose of transporting such oil and gas, or either of them, by means of such pipes or otherwise, and selling and supplying the same to others; and generally for the purpose of doing such acts and carrying on such business as
735 pertains to such works and improvements.

That petitioner in the exercise of its rights, powers and privileges and in the conducting of its business has been and is supplying the incorporated cities, towns and villages of Benwood, Chester, McMechen, Moundsville, Newell, and other towns and vicinities and manufactories within the State of West Virginia, and the inhabitants of said cities, towns and villages, with natural gas, for heating, fuel, illumination, power and other purposes, under ordinances of said several cities, towns and villages, as well as a large number of unincorporated towns and villages in the said State of West Virginia, and persons residing in and inhabiting such unincorporated towns and villages, and any and all persons residing along the lines of your petitioner, desiring natural gas.

That it is necessary for your petitioner, in order to supply natural gas to the said several incorporated cities, towns and villages, and their inhabitants, as well as the several unincorporated towns and villages, manufactories and persons desiring natural gas for heating, fuel, illumination power and other purposes, and in order to keep up the required and necessary supply of such gas to drill new wells for that purpose, and to acquire by purchase or otherwise other wells from which such supply of natural gas may be obtained.

That your petitioner has acquired sundry wells in the County of Marion, in the said State of West Virginia, producing natural gas, and in order to supply said incorporated cities, towns and villages, and the inhabitants thereof, as well as other consumers and manufactories, with natural gas for heating, fuel, illumination, power and other purposes, it is necessary that petitioner lay,

736 construct and maintain a line of pipe from said wells in the said county of Marion through the said county of Marion and the county of Wetzel, in the said State of West Virginia, to connect with and connecting with its lines of pipe already laid, so as to supply the above named inco-porated cities, towns and villages, and the inhabitants thereof, as well as said other consumers and manufactories, with natural gas, for heating, fuel, illumination, power and other purposes.

That your petitioner has surveyed a route for laying and constructing said line of pipe from said gas wells in said Marion County through a portion of said Marion County, and through a portion of said Wetzel County, and proposes to, and it is necessary for it to, lay and construct a line of pipe for transporting natural gas for public use along the route so surveyed and marked out for that purpose.

That your petitioner desires to proceed with the construction of its said line of pipe in the said County of Marion, and through the lands of Enos D. Tennant, situate lying and being in the District of Lincoln, in said County and State.

That the piece, parcel or section of land belonging to the said Enos D. Tennant, which is proposed to be taken by your petitioner for the purpose of constructing, maintaining and operating its said line of pipe, is particularly described as follows, to-wit:

A strip of land a part of a farm owned by the said Enos D. Tennant, situate in the District of Lincoln, County of Marion, and State of West Virginia, which said strip so proposed to be taken is 24 feet in width and lies one-half thereof on either side of a center line, which said center line is particularly described as follows:

737 (Beginning at a point in the division line between the lands of said Enos D. Tennant and the heirs of Elijah Toothman, who join said land on the northwest, which point is on the northwesterly side of the land of said Enos D. Tennant and 45 rods measured along said division line northeasterly from a C. O. a corner in the division line between the lands of said Enos D. Tennant, Elijah Toothman's heirs and John G. Myers; thence S. 45° E. 80½ rods to a stake in the division line between the

ands of said Enos D. Tennant and John G. Myers; who joins said and on the southerly side and 16 rods measured along said last named division line southeasterly from a W. O. a corner in said division line, and contains .73 acres.)

Your petitioner files herewith as part hereof a plat of the piece, parcel or section of land so proposed to be taken by it, which plat is marked "Plat."

Your petitioner avers that it intends to use the land hereinbefore described for the purpose of constructing, maintaining and operating its said line of pipe, and that said land is necessary for such purpose; that said land so asked to be taken is for public purposes and for public uses; that petitioner expects and intends to use the same for such public purposes and public uses, and that said land is needed for such public uses; and petitioner avers that the said land is such as it has a right to condemn under the provisions of the law and under its charter.

Your petitioner avers that said Enos D. Tennant is the owner of said land in fee simple; that the Nine foot or Pittsburg vein of coal within and underlying said piece, parcel or section of land is owned in fee by the Saint Louis Union Trust Company, a
738 corporation; that James M. Guffey is interested in said Nine Foot or Pittsburg vein of coal by reason of having a purchase money lien upon and against the same; that Alcinda Tennant, Malinda Tennant and Louise A. Ammons are interested in the oil and gas within and underlying said piece, parcel or section of land by reason of a conveyance to them of an interest therein by the said Enos D. Tennant.

Your petitioner further alleges that the foregoing named persons and corporations are the only owners of said land and the only persons interested in or holding liens upon or against the same, so far as known to it; and that there are no conflicting claims to the said land, or to any part thereof, so far as known to it.

Your petitioner further represents that it is unable to agree with the said owners of said land so proposed to be taken by it for the public uses and purposes aforesaid as to the amount of compensation for said piece, parcel or section of land so proposed to be taken, and that the owners of said land refuse to give your petitioner a right of way over the same.

Your petitioner avers that it has caused notice to be given said owners, lienors and parties in interest of its intention to file this petition and make this application, as will more fully appear by said notice and the evidence of service of the same endorsed thereon and therefrom appearing herewith filed marked "Notice" and made a part of this petition.

Your petitioner is willing to take the above described piece, parcel or section of land subject to the conveyance of the Nine Foot or Pittsburgh vein of coal within and underlying the same, together with the mining rights and privileges belonging thereto, and
739 also subject to the rights of said Alcinda Tennant, Malinda Tennant and Louise A. Ammons in the oil and gas underlying the same.

Your petitioner therefore prays that Commissioners may be appointed by this court to ascertain a just compensation to the persons entitled thereto for the land hereinbefore described and proposed to be taken by your petitioner for the purposes aforesaid, subject to, however, and excepting the Nine Foot or Pittsburg vein of coal within and underlying the same; that such proceedings may be had in the premises as conform to law; and that upon the payment of the compensation by your petitioner, the title to the above described piece, parcel or section of land may be vested in your petitioner in fee simple, subject to the conveyance of the Nine foot or Pittsburgh vein of coal within and underlying the same and the mining rights and privileges belonging thereto. And your petitioner also asks for such other, further and general relief as the court may deem proper to award in the premises.

THE WHEELING NATURAL GAS COMPANY,
By C. C. NEWMAN &
G. M. ALEXANDER,
Its Attorneys.

Plat filed with foregoing petition is in the words and figures following:

Morgantown, West Virginia,
October 1st, 1906.

We hereby accept service of the within notice.

FRAZER & FRAZER,
Counsel for St. Louis Union Trust Company.

I, James M. Guffey, hereby accept service of the within Notice this 1st day of October, 1906.

J. M. GUFFEY.

744 At another day of said Circuit Court to wit, on the 12th day of October, 1906, the following order was entered:

THE WHEELING NATURAL GAS COMPANY, a Corporation,

vs.

ENOS D. TENNANT, SAINT LOUIS UNION TRUST COMPANY, a Corporation, James M. Guffey, Alcinda Tennant, Malinda Tennant and Louise A. Ammons.

Upon a Proceeding to Take Land for Public Use.

This day came The Wheeling Natural Gas Company, a corporation, by its attorneys, and presented in open Court its application in writing by petition describing certain lands situate in Lincoln District, Marion County, West Virginia, which it proposes to take, with a plat of said land so proposed to be taken, and stating the names of the owners thereof, the nature of the interest of said parties therein, and also stating the purposes for which said land is proposed to be taken, and that said corporation has been unable to agree with the owners as to the compensation to be paid therefor, and it appearing to the Court that legal notice has been given by said applicant by legal service thereof to the said Enos D. Tennant, Saint Louis Union Trust Company, a corporation, James M. Guffey, Alcinda Tennant, and Louis A. Ammons, and that said Enos D.

nant, Saint Louis Union Trust Company, James M. Guffey, inda Tennant and Louise A. Ammons, have each had at least days' notice of the intention of said applicant to file said petition. pon motion of said applicant, it is ordered that said notice and said application in writing and the said plat exhibited with said tion, be and are here now filed, and that this proceeding be and is here now docketed.

Defendant Saint Louis Union Trust Company appeared by James C. Frazer, its attorney; also defendant Enos D. nant appeared by B. F. Ramage, his attorney.

t being made to appear to the Court that the said Alcinda Ten- t. Malinda Tennant and Louise A. Ammons no longer own or l any interest in and to the real estate so sought to be taken or he oil and gas within and underlying the same. On motion of applicant, and with the consent of the said Enos D. Tennant, proceeding is dismissed as to the said Alcinda Tennant, Malinda nant and Louise A. Ammons.

Thereupon defendant Enos D. Tennant demurred to said petition writing, in which demurrer the applicant joined. And the e was argued to the court.

pon consideration of which demurrer, the court is of opinion to rrule, and doth overrule, the same, to the action of the court in rruling said demurrer said defendant excepts.

nd it appearing to the Court that the case is one in which the licant has a lawful right to take said property described in said tion and notice for the purposes set out in said petition, and that l land so proposed to be taken is necessary for the purposes a resaid, and will be used therefor. And the said defendants not iring to further plead or answer, and said petitioner praying for appointment of commissioners to ascertain a just compensation he said parties hereinbefore named, the owners of said land, by ing the same for the said purposes as in the said petition asked, court doth hereby nominate thirteen disinterested freeholders said county as follows: H. T. Lough, H. Clark Jones, Eldridge ter, M. V. Millan, W. G. Reese, J. T. Martin, W. B. Charlton, Ward Beaty, J. A. Hess, Robert Reed, J. N. Wood, H. T. Watson, and A. B. Joliff.

And the said applicant and the said defendant Enos D. nant, appearing by counsel, proceeded to ascertain, as provided law, from said thirteen freeholders the five thereof to act as com- sioners, which lot and choice fell upon the following named freeholders, of said thirteen to act as such commissioners, to wit: T. Lough, H. Clark Jones, Eldridge Carter, W. B. Charlton and bert Reed.

And thereupon it is ordered by the Court that the said five free- ders so selected to act as such commissioners do proceed, after ing been duly sworn for the purpose, with all convenient speed, l after viewing said premises and hearing any proper evidence ered, ascertain, according to law, what will be a just compensation the parties entitled thereto for so much of the said real estate as is pposed to be taken by the said applicant, that is to say: A strip

of land a part of a farm owned by the said Enos D. Tennant, situate in the District of Lincoln, County of Marion, and State of West Virginia, which said strip so proposed to be taken is 24 feet in width and lies one-half thereof on either side of a center line, which said center line is particularly described as follows: Beginning at a point in the division line between the lands of said Enos D. Tennant and the heirs of Elijah Toothman, who join said land on the northwest, which point is on the northwesterly side of the land of said Enos D. Tennant and 45 rods measured along said division line northeasterly from a C. O. a corner in the division line between the lands of said Enos D. Tennant, Elijah Toothman's heirs and John G. Myers; thence S. 45° E. 80½ rods to a stake in the division line between the lands of said Enos D. Tennant and John G. Myers, who joins said land on the southerly side and 16 rods measured along said last named division line southeasterly
747 from a W. O. a corner in said division line, and contains .73 acres. Subject to and excepting the Nine foot or Pittsburg vein of coal within and underlying the said strip or parcel of ground, together with the mining rights and privileges belonging thereto. As well as for damage to the residue of said tract. And make report of their proceedings to this court according to law.

This order should have been entered on October 11th 1906, but by inadvertance the entering of the same was overlooked, it is therefore entered on this 12th day of October, 1906, now for then.

748 At another day of said Circuit Court, to wit on the 29th day of October, 1906, the following order was entered:

THE WHEELING NATURAL GAS COMPANY

vs.

ENOS D. TENNANT, SAINT LOUIS UNION TRUST COMPANY, and JAMES M. GUFFEY.

Condemnation Proceeding.

This day came the applicant, The Wheeling Natural Gas Company, by C. C. Newman and G. M. Alexander, its attorneys and came also defendant Enos D. Tennant by B. F. Ramage and Ira L. Smith, his attorneys, and defendant Saint Louis Union Trust Company by J. C. Frazer, its attorney, and by consent of the parties hereto, the following agreement is here now filed in the papers of this cause and made a part of the record of the same; and by like consent, it is ordered that the said agreement be recorded in the Law Order Book of this Court, which is accordingly done. Said agreement being in the words and figures following, to-wit:

THE WHEELING NATURAL GAS COMPANY

vs.

ENOS D. TENNANT & Others.

Condemnation Proceeding.

It is hereby agreed by and between the applicant, The Wheeling Natural Gas Company, and the defendant Enos D. Tennant, that the name of J. Clark Jones selected as one of the commissioners in this proceeding by order entered on the 12th day of October, 1906, should be H. Clark Jones; and that the said H. Clark Jones was the person intended to be selected, and who was in fact selected, and who in fact served, as such commissioner; and that no exception or objection shall be made by any of the parties because
749 of the misdescription or mis-naming of the said H. Clark Jones in the said order.

It is further agreed that Robert Reed, one of the Commissioners named in said order of October 12th, 1906, and R. L. Reed who signed the report of Commissioners in the above case, is one and the same person; and that no exception or objection shall be made by reason thereof.

Witness the signatures of said parties hereto by their attorneys, this 29th day of October, 1906.

THE WHEELING NATURAL GAS COMPANY,
By G. M. ALEXANDER,
Its Attorney.
ENOS D. TENNANT,
By RAMAGE & SMITH,
His Attys.

And on motion of said applicant, the oath taken by H. T. Lough, H. Clark Jones, Eldridge Carter, W. B. Charlton, and Robert Reed, duly certified by R. B. Parrish, Clerk of the Circuit Court of Marion County, West Virginia, as required by law, is now filed in the papers of this cause. And upon like motion of said applicant, the report of said commissioners H. T. Lough, H. Clark Jones, Eldridge Carter, W. B. Charlton and Robert Reed, which bears date the 23rd day of October, 1906, and which was returned and filed with the Clerk of this Court on the 23rd day of October, 1906, to which report no exceptions were taken or filed, is also filed.

And the Court finding that the said report of said commissioners is in all respects regular, it is accordingly considered, adjudged, and ordered that the same be and is hereby confirmed and ap-
750 proved. And it is further ordered that the said report of said commissioners be recorded in the Law Order Book of this Court, together with the oaths so taken by said commissioners and

certified as aforesaid, all of which is now done. Said report and oaths being in the words and figures following, to-wit:

THE WHEELING NATURAL GAS COMPANY

vs.

ENOS D. TENNANT and Others.

Condemnation Proceeding.

STATE OF WEST VIRGINIA,
County of Marion, To wit:

I, R. B. Parrish, Clerk of the Circuit Court of Marion County, West Virginia hereby certify that H. T. Lough, H. Clark Jones, Eldridge Carter, W. B. Charlton and Robert Reed, Commissioners appointed by the Circuit Court of Marion County, upon the application of The Wheeling Natural Gas Company in the above styled proceeding to ascertain what is a just compensation to the above named owners of land proposed to be taken by said Company for its pipe line purposes, and described in the petition of said Company filed in said Court on the 12th day of October, 1906, for so much of said land as is proposed to be taken, as well as for damage to residue of the said real estate beyond the peculiar benefits which will be derived in respect to such residue from the work to be constructed, this day personally appeared before me in my said County, and each of them, before entering upon the discharge of his duties as such, made oath that he will honestly and impartially perform his duties as such commissioners to the best of his skill and judgment.

Given under my hand this 16th day of October, 1906.

R. B. PARRISH,
Clerk of the Circuit Court, Marion Co., W. Va.

751 To the Circuit Court of Marion County:

We, the Commissioners appointed by the Circuit Court of Marion County, by an order made on the 12th day of October, 1906, upon the application of The Wheeling Natural Gas Company, respectfully report:

That having been first duly sworn, we have viewed the real estate owned by Enos D. Tennant mentioned in said application, the Nine Foot or Pittsburg vein of coal underlying which, with the mining rights and privileges belonging thereto, being owned by the Saint Louis Union Trust Company, James M. Guffey, holding a purchase money lien on said coal, and are of the opinion that $691.00 will be a just compensation for so much of the said real estate as is proposed to be taken by the said applicant, that is to say: a strip of land a part of a farm owned by the said Enos D. Tennant, situate in the District of Lincoln, County of Marion, and State of West Virginia, which said strip so proposed to be taken is 24 feet in width and lies one-half thereof on either side of a center line, which said

center line is particularly described as follows: Beginning at a point in the division line between the lands of said Enos D. Tennant and the heirs of Elijah Toothman, deceased, who joins said land on the northwest, which point is on the northwesterly side of the land of said Enos D. Tennant and 45 rods measured along said division line northeasterly from a C. O., a corner in the division line between the lands of said Enos D. Tennant, Elijah Toothman's heirs and John G. Myers; thence S. 45 E. 80½ rods to a stake in the division line between the lands of said Enos D. Tennant and John G. Myers, who joins said land on the southerly side and 16 rods measured along said last named division line southeasterly from a W.
752 O., a corner in said division line and contains .73 acres.

Subject to and excepting the Nine foot or Pittsburg vein of coal within and underlying the same, together with the mining rights and privileges belonging thereto, and also subject to and excepting the oil and gas and oil and gas rights and interests upon, within and underlying the same.—as well as for the damage to the residue of said real estate beyond the peculiar benefits which will be derived in respect to such residue from the work to be constructed.

Given under our hands this 23 day of October, 1906.

W. B. CHARLTON.
H. T. LOUGH.
ELDRIDGE CARTER.
R. L. REED.
H. CLARK JONES.

And thereupon the said applicant, The Wheeling Natural Gas Company, paid into Court the said sum of $691.00 that being the sum ascertained by said commissioners as compensation and damages to the persons entitled thereto for the land proposed to be taken in and by the said petition and applicant and also in the said report mentioned and described.

And said applicant, The Wheeling Natural Gas Company, having so as aforesaid paid the said compensation and damages so ascertained by said commissioner as coming to said Enos D. Tennant, Saint Louis Union Trust Company and James M. Guffey, into court for the said defendants Enos D. Tennant, Saint Louis Union Trust Company and James M. Guffey, or such of them as may be entitled to the same; it is further considered and ordered that the title to that part of said land so paid for, for the purpose set out,
753 stated and described in the petition and application of said applicant, and also in the said report mentioned and described, be vested in said petitioner and applicant, The Wheeling Natural Gas Company, subject to the reservations and exceptions set out in said petition and application and in said report of said commissioners; and that said applicant do and shall have all such rights, privileges and franchises as are asked in and by said petition and application and as are by law conferred upon it.

It is further considered and ordered that said applicant, The Wheeling Natural Gas Company, do pay the costs of this proceeding to and including this order

754 At another day of said Circuit Court, to wit, on the 29th day of October, 1906, the following order was entered:

THE WHEELING NATURAL GAS COMPANY

vs.

ENOS D. TENNANT and Others.

Condemnation Proceeding.

This day came the applicant by its attorney, and came also the defendant Enos D. Tennant by his attorneys, and Saint Louis Union Trust Company by J. C. Frazer, its attorney. And it appearing to the Court that the amount of compensation and damages awarded the defendant in this proceeding is the sum of $691.00, and that the same was paid into Court and is now in the hands of the Clerk.

From an inspection of the papers in this proceeding, the Court doth ascertain that the said sum of $691.00 is going to and is properly payable to said Enos D. Tennant.

It is therefore adjudged, and ordered that the Clerk of this Court do pay to said Enos D. Tennant the said sum of $691.00 compensation and damages awarded in this proceeding, taking receipts in duplicate therefor.

755 STATE OF WEST VIRGINIA,

758 HIGHWAY FRANCHISES W. VA. EX. 52.

EX. W. VA. NO. 52. O. L. H.

STATE OF WEST VIRGINIA:

At a regular term of the County Court of Harrison County, West Virginia, continued and held at the court house of said County, on the 18th da yof July, 1906, the following order was made and entered:

Reserve Gas Company Granted Permission to Lay Pipe Lines.

The Reserve Gas Company, a corporation doing business in this county this day made application to the Court for license and permission to lay and maintain pipe lines in any of the public roads in this county, for the conveyance of gas, from any well or wells of said company, it is ordered that the said applicant, The Reserve Gas Company, be and it is hereby granted license and permission to lay and maintain in any of the public roads of this county pipe lines for the conveyance of gas from any well or wells of the said company, said pipe lines to be so laid as not to interfere with the use of said public roads and for that purpose to be covered with a covering of not less than twelve inches above said pipe line and also to be laid in such manner as not to interfere with any other pipe line, now laid in or along said road. If at any time, by reason *or* working the roads it should become necessary to lower said pipe, at any point, said company shall lower it at its own expense. This franchise is to expire in fifty years from the date hereof.

759 STATE OF WEST VIRGINIA:

At a regular term of the County Court of Harrison County, Wes Virginia, continued and held at the court house of said county, or the 3d of April, 1907, the following order was made and entered:

Hope Natural Gas Company Franchise Granted.

This day came Hope Natural Gas Company, a corporation, by John G. Pew, its Vice President, and by Kemble White of counsel and asked leave of the court to have docketed for a hearing its peti tion executed under the seal of said corporation, which was filed in the Clerk's office of this court on the 12th day of February, 1907.

And it appearing to the Court that the said petition has been properly filed, and that notice of the application of said Hope Natura Gas Company for a franchise as set up in said petition has been prop erly published according to law, which notice together with the proo of publication thereof was filed in the Clerk's office of this court on the 22nd day of March, 1907.

It is therefore ordered that said petition be filed and that said notice and proof of publication thereof be filed with said petition.

And the court considered the matters arising upon said petition as well as the vari*uos* protests filed against the said petition, and the matters arising thereon were argued at length by counsel for peti tioner as well as by various protestants, and the public at large was given opportunity and was heard on said matters.

Upon consideration whereof, in consideration of the agreements and restrictions hereinafter contained on the part of the Hope Natural Gas Company, a corporation created, organized and
760 existing under the laws of the State of West Virginia, it is ordered that there be and is hereby granted on the part of the County Court of Harrison County to the said Hope Natural Gas Company, such corporation, its successors and assigns, the right and privilege of laying, constructing, maintaining, operating and re-claiming pipe lines of the diameter of Two inches, and smaller for the transportation of natural gas, steam and water, along & across the public roads of Harrison County, and the right and privilege of laying, constructing, maintaining, operating and reclaiming pipe lines for the transportation of Natural Gas, steam and water across the public roads of Harrison County upon such routes as may be necessary or convenient to the business of said Hope Natural Gas Company, for the terms of fifty years (50) from the date of this order, subject, however, to the agreements, conditions and restrictions which are imposed and contained in this ordnance.

(1) The said pipe lines shall not be placed, put or laid along or in said public roads in such a way as to at any point or place obstruct or impair said roads or the ditches, sewers, drains, or culverts thereof, and shall be so laid as not to interfere with public travel on, along or over the said roads as at present afforded by said roads.

(2) Said pipe lines shall be at all places, including any and all places where they cross the said roads, buried at a depth of at least two feet beneath the surface of said roads; the said pipe lines shall be so laid as not to interfere with the proper equipping, keeping, maintaining the said roads, sewers, drains, ditches and culverts of the same.

(3) If at any time by reason of working the roads it should become necessary to lower said pipes at any point or points said Hope Natural Gas Company, upon five days' notice, shall lower said pipes
761 at its own expense, and in the event said Hope Natural Gas Company shall fail to make said changes the County Court of Harrison County may do so at the expense of said Hope Natural Gas Company, which acknowledges itself indebted to said county in such sum as said change may cost said county.

(4) All lines shall be laid and placed along the edge of said road.

Whenever and wherever the words "Hope Natural Gas Company" occur in this ordinance it is understood "its successors and assigns" immediately follow and are to be so construed.

This franchise or ordinance shall become a valid and binding contract when said Hope Natural Gas Company shall have filed with the County Court of Harrison County a written acceptance of this ordinance of franchise over the seal of the Company on or before the 1st day of July, 1907; in which it shall agree to do the things required of it, and to in good faith comply with the provisions of this order.

762 (*Order Entered June* 19, 1907.)

Hope Natural Gas Company Franchise Accepted.

This day came Hope Natural Gas Company, a corporation by its attorneys, A. B. Fleming, Charles Powell and Kemble White, and filed in open court a written acceptance of the ordinance or franchise granted by the County Court of Harrison County to said Hope Natural Gas Company, its successors or assigns, on the 3rd day of April, 1907, which acceptance bears date the 3rd day of May, 1907, and is duly executed over the seal of said Hope Natural Gas Company, by John G. Pew, Vice President, and attested by Christy Payne, Secretary. And it appearing to the Court that the said written acceptance complies in all respects with the requirements of said franchise, it is ordered that said written acceptance be filed with the papers in this matter, and that said Hope Natural Gas Company, its successors and assigns, be allowed to exercise the rights granted by said franchise.

763 STATE OF WEST VIRGINIA:

At a regular term of the County Court of Harrison County, West Virginia, continued and held at the court house of said County, on

the 14th day of September, 1908, the following order was made and entered:

Hope Natural Gas Company, Hutton Gas Company, Franchise Partly Revoked.

This day came William Jarvis, Hannibal Perine and others and presented their petition asking the court to revoke and annul the order entered on the 27th day of June, 1905, directing and authorizing the grant of license and permission to Hutton Gas Company and its assigns to lay pipe lines, for purposes in said order prescribed, in the public roads of said county, and to revoke any license that may exist in pursuance of said order; and presented with said petition a notice to the Hope Natural Gas Company, a corporation, of intention of petitioners to present said petition to the court on this day, on which said notice there appears an acceptance of service thereof by M. J. Rathbone, attorney in fact, of record, for said Hope Natural Gas Company, the 11th day of September, 1908; and the said petition and notice are now here filed. And it appearing to the Court that the said Hutton Gas Company has transferred, or attempted to transfer, to the said Hope Natural Gas Company all of the privileges, if any, of said former company under the order of court aforesaid, and that said privileges are now claimed by said Hope Natural Gas Company by virtue of said assignment, and that it was not necessary or proper for petitioners to give notice of the presentation of this petition of any person, firm or corporation, other than said
764 Hope Natural Gas Company, thereupon, upon argument of counsel for petitioners as well as for said Hope Natural Gas Company, the court, upon consideration of the matters herein presented, is of opinion to, and doth hereby revoke and annul the said order of June 27, 1905, in so far as the same has not been accepted by said Hutton Gas Company and is now in actual use by said Hope Natural Gas Company.

765 STATE OF WEST VIRGINIA:

At a regular term of the County Court of Harrison County West Virginia, continued and held at the court house of said County, on the 27th day of June, 1905, the following was made and entered:

The Hutton Gas Company Franchise Granted.

Upon the application of Hutton Gas Company for license and permission to lay and maintain pipe lines in any of the public roads and bridges of this county, for the conveyance of gas, and the Court having considered such application, it is ordered that the said applicant or his assigns, be granted the right to use the public roads and bridges of Harrison County, where it is a matter of necessity, for the purpose of laying pipe lines through, upon and along the same to transport oil and gas; upon the condition that the said Hutton Gas Co. or his assigns shall so use the said roads and bridges as to cause the least possible damage to the same, and so as not to interfere

with the rights of the public. Said applicant, or assigns shall restore and leave said roads in as good condition after laying such pipe lines as they were before, said pipe lines to be covered with a covering of not less than twelve inches and also to be laid in such manner as not to interfere with any other pipe line now laid in or along said road. And if at any time by reason of working the said roads, it should become necessary to lower such pipe line, at any point, said company shall lower the same at its own expense. It is understood that in the granting of this franchise the said Hutton Gas Company, their successors or assigns, shall, where it is a matter of necessity, to cross any bridge or bridges of this county to lay said line or
766 lines under the floors of said bridges, and to restore the floor- of the same in as good condition as they were before, if in any way injured. And it is further agreed and understood that the traveled bed of any road or roads used by the said Hutton Gas Company, their successors or assigns, shall not be used except where it is unavoidable.

This franchise to expire in fifty years from the date hereof.

Notice of said application was published for 30 consecutive days as required by law in The Clarksburg News, prior to application to the County Court.

767 STATE OF WEST VIRGINIA,
County of Harrison, To wit:

I, Clair N. Parrish, Clerk of the County Court of Harrison County, State of West Virginia, certify that the foregoing are true, correct and complete copies of the following orders made and entered by said County Court, as follows:

1. Order granting franchise to Hope Natural Gas Co., on April 3, 1907, and order recording acceptance thereof by Hope Natural Gas Co. entered on June 19, 1907.

2. Order granting franchise to Reserve Gas Co. entered on July 18, 1906.

3. Order granting franchise to Hutton Gas Co. entered on June 27, 1905.

4. Order entered Sept. 14, 1908, revoking in part said Hutton Gas Co. franchise as against Hope Natural Gas Co., assignee thereof.

In Testimony Whereof I have hereunto set my hand and affixed the seal of said court, at the court house of said county, on this the 7th day of February, 1921.

[Seal of the County Court, Harrison County, West Virginia.]

Clerk.

770 HOPE RATE APPLICATION, W. VA. EX. 53.

EX. W. VA. NO. 53. O. L. H.

(Copy.)

State of West Virginia,

Public Service Commission,

Division A, Public Service Corporation

No. 663.

In the Matter of the Application of HOPE NATURAL GAS COMPANY for Authority to Change Its Rates, Tolls, and Charges.

Comes now the above named Hope Natural Gas Company, the Petitioner herein, and respectfully shows to the Commission as follows:

(1) That it is a corporation organized and doing business under the laws of the State of West Virginia.

(2) That its principal place of business is in the following towns here it distributes natural gas and in neighboring country dis-icts and villages, viz: Belmont, Clarington, Colliers, Eureka, Fair-ew, Friendly, Glovers Gap, Littleton, Lima, Lost Creek, Mt. Clare, annington, Metz, Minora, Parkersburg, Paden City, Pine Grove, . Marys, Sistersville, Smithfield, Williamstown and Wileyville, est Virginia, and that is a public service corporation engaged in e management and operation of a natural gas plant in said cities d towns and that as such public service corporation in the service natural gas to the domestic consumer it is subject to the provisions Chapter 9, Acts of the Legislature of West Virginia for 1913 d 1915, and of the Code of West Virginia, applicable to this class corporations.

(3) That on the date hereof it has in effect the schedule of rates d charges shown on its Rate Schedule No. 4 attached hereto and arked Exhibit 1."

(4) That it applies to The Public Service Commission for au-ority to change its rates for the following reasons:

(*a*) To reimburse the company for the expense incurred in ex-aordinary drilling operations in the search for, production and ansportation of gas.

(*b*) To reimburse the company for the increasing cost of gas, bor, materials and operations.

(*c*) To reimburse the company for the increased cost of main-ining its supply by reason of the necessity for drilling and in-easing number of wells by reason of the depletion of the fields.

(*d*) To secure a fair return on capital invested.

(*e*) To secure a fair and reasonable return for the value of the rvice rendered.

(*f*) To obtain a readjustment of rates on an equal basis between ifferent localities and on a fair basis between classes of con-mers.

71 (*g*) To meet changing conditions imposed by reason of communities and industries working upon Federal and war ontracts.

(5) That application is hereby made for authority to change the ates of said applicant and to put into effect the following schedule o become operative and effective on the 1st day of January, 1918:

Rates—Class 1: Domestic Consumers.

Parkersburg, Williamstown, Sistersville, Friendly, Belmont, Paden City, Eureka, Lima, St. Marys, Clarington and neighboring country districts and villages:

25 cents per thousand cubic feet less 2 cents per thousand cubic feet for payment within the discount period. (A.)

Mannington, Mt. Clare, Minora, Lost Creek, Pine Grove, Smithfield, Littleton, Wileyville, Metz, Glovers Gap, Fairview, and neighboring country districts and villages:

23 cents per thousand cubic feet, less 2 cents per thousand cubic feet for payment within the discount period. (A.)

Colliers:

32 cents per thousand cubic feet, less 2 cents per thousand cubic feet for payment within the discount period. (A.)

Discount Period.

The scheduled discount is allowed upon each month's gas bill if paid on or before the last day noted on such bill for the allowance of discount, with the day following as a day of grace; in case of the day of grace falls on Sunday or a legal holiday, the next following business day is recognized as the day of grace. Patrons in order to secure the discount, must make payment of bills during the regular office hours of the Company or during the regular office hours of the banks or offices authorized as collecting agents. A remittance through the mail is not deemed payment within the discount period unless it is received by the Company at one of its offices during business hours before the end of the day of grace. No discounts are allowed unless the current as well as all previous bills are paid in full. Meters are read monthly and bills are rendered as nearly as practicable on the same day of each month and so as to allow for discount, ten days, excluding the day of grace. Patrons are required to pay monthly, and in case bills are not received at the usual time, patrons should inquire for the same within the discount period in order to be entitled to the discount upon payment. (N.)

Rates—Class II: Gas Engines.

Same as for Class I for the first 500,000 cubic feet used in each calendar month, and for all over 500,000 cubic feet used in a calendar month, 5 cents less per thousand cubic feet, subject to the Class I discount. (A.)

772

Rates—Class III.

Parkersburg, Williamstown, St. Marys, Sistersville, Friendly, Paden City, Belmont, Eureka, Lima, Clarington, and neighboring country districts and villages; also Wood and Pleasants Counties; and Calhoun, Ritchie, Wirt, southwest portion of Tyler and western portion of Gilmer Counties, known as Schultz and Southern Districts on the books of the company (including gas by meter for field operations in said districts, such as drilling wells, cleaning out, pumping oil and water, etc.):

24 cents per thousand cubic feet for the first 150,000 cubic feet consumed in a calendar month; 17 cents per thousand cubic

et for the second 150,000 cubic feet consumed in a calendar
onth; 14 cents per thousand cubic feet for all over 300,000
ubic feet consumed in a calendar month. (A.)

ton, Mt. Clare, Minora, Lost Creek, Pine Grove, Smithfield,
on, Wileyville, Metz, Glovers Gap, Fairview, and neigh-
districts and villages, and places included within the
isions known on the books of the company as the fol-
working districts: Bridgeport, Buffalo, Fairview, Fink,
ha, Pine Grove, Mannington, Littleton, Salem, Shirley,
and Wetzel (Including also gas by meter for field opera-
uch as drilling wells, cleaning out, pumping oil and water,
said districts.):
nts per thousand cubic feet for the first 150,000 cubic feet
nsumed in a calendar month; 17 cents per thousand cubic
et for the second 150,000 cubic feet consumed in a calendar
onth; 13 cents per thousand cubic feet for all over 300,000
bic feet consumed in a calendar month.* (A.)

ndow Glass Company near West Union:
nts per thousand cubic feet for the first 150,000 cubic feet
nsumed in a calendar month; 17 cents per thousand cubic
et for the second 150,000 cubic feet consumed in a calendar
onth; 11 cents per thousand cubic feet for all over 300,000
bic feet consumed in a calendar month.* (A.)

Rates—Class IV.

rritory excepting places noted under exceptions:
nts per thousand cubic feet, net. (A.)

Note—Exceptions.

Borough Buildings:
nts per thousand cubic feet net, until expiration of ten
ar contract.

unty Public Jail and Court House:
nts per thousand cubic feet, net. Right of way contract
e. (A.)

Rates—Class V.

rg City Hall and City Utilities, and Sistersville City Water

III Parkersburg and Sistersville rate. (A.)

on Water Works:
ts per thousand cubic feet, net.

: Less 1 cent per thousand cubic feet for payment on or before the
the month following that in which the gas is supplied.

Note to All Meter Service.

Meter service is based upon a meter pressure not exceeding 5 ounces. If gas is supplied at a higher pressure, the meter measurements are corrected according to Boyle's Law.

Flat rate service:

Field operations, such as drilling wells, cleaning out, pumping oil and water, etc., applicable only in the case of isolated wells, all others being embraced in the meter rate for Class III:

Entire territory:

Drilling or cleaning out wells, boiler, single tour of 12 hours or less, $4.00, double tour	$7.50
Forge for drilling or cleaning out, per tour of 12 hours or less	.50
Lawn lights for drilling well, per night	.50
Heating stove with mixer, Nov. 1st to April 1st, per month	7.50
Pumping water for drilling or cleaning out, per day for total days of drilling or cleaning out	1.00
Pumping wells with boiler and engine, per month, steam **	15.50
Pumping wells with gas engine, first well, per month	7.50
Each additional well on same gas engine	3.00
Cleaning out wells, per tour 12 hours or less, gas engine	1.50
Steaming oil, pumping out oil, per tank of 600 bbls., each service	4.00
Steaming oil, pumping out oil, per tank of 250 bbls., each service	1.75
Steaming oil, pumping out oil, per tank of 100 bbls., or under each service	1.00
Pumping water, Donkey pumps, jetting water, steam, per tour 12 hours or less	2.00
Pulling casing rods *, or tubing wells *, 12 hours or less, steam	3.50
Pulling casing, rods, or tubing wells *, 12 hours or less, gas engine	2.00
Drilling machines, 10 H. P. or less, per tour 12 hours or less	3.00

774 NOTE.—The above rates are for low pressure burners only; high pressure burners using 2 pounds or more gauge pressure to the square inch are not permitted; in other respects the rates apply to the customary gas burning appliances in general use; if special appliances are used rates will be quoted on application.

**Charge for pumping wells is $15.50 per month each, whether gas is used one day or a full month.

*No charge for tubing or pulling rods or pumping wells when rate is $15.50 per month for pumping same is paid.

NOTE.—The lawn lights hereinbefore mentioned are Irwin's lawn ghts or burners of like capacity.

Street Lighting.

The rates for street lighting service, based upon the use of natural s from 5 P. M. to 7 A. M. of each day from April 1st to October t, and from 4 P. M. to 8 A. M. each day from October 1st to pril 1st, the consumer furnishing and maintaining the lamps, are follows:

ntire territory, excepting in places noted under exceptions:

$5.00 per year for each lamp with one mantle, and $2.50 per year in addition for each additional mantle in each lamp. (A.)

Note—Exceptions.

irview:

Ten cents per mantle per month, until June 23, 1919; thereafter at the published rate above set forth for the entire territory.

Special Flat Rates.

nnington:

One garbage fire, $10 per month.

All rates are subject to change on notice given according to law d subject to the rules and regulations published on contracts.

(6) The definition of the classification of Class III, Manufacers and other large consumers, is changed to read as follows:

'Class III. Manufacturers and Other Large Consumers (such as sumers using gas for manufacturing purposes and for fuel ler boilers and manufacturing furnaces) who can be shut immediately in order to provide an ample supply to Classes I, and IV. Contracts to be made for short term only. The cots in this class must contain the following clause:

'That the party of the first part shall have the right to discontinue supply of gas under this agreement temporarily, whenever it l deem it necessary to do so in order to deliver a full supply to consumers classified by it as Domestic and Special Consumers.'

This company in selling gas to Classes II and III is not engaged ublic service and does not hold itself out as able or willing to ly patrons with gas for such purposes by special contract; the so sold is surplus gas over and above the amount available for the preferred or domestic service, and being variable in amount can only be contracted to be sold limited as to time, volume and place of delivery but in contracting for the servniformity of price and equality of service is attempted as far as ible. Where application is made by a Class III consumer at a

time when the company is carrying its peak load, conditions n require a refusal of the application or its acceptance on special c ditions as to time and volume."

(7) No other public service corporations are interested in t schedule or change of rates.

Whereas, the said Hope Natural Gas Company prays that af due hearing and investigation, the Public Service Commission n make an order granting the application herein and establish the proposed rates and charges, or such rates and charges as it n find to be equitable within its jurisdiction

Dated at Pittsburgh, Pennsylvania this 26th day of Novemb 1917.

776 STATE OF WEST VIRGINIA, *To wit:*

The Public Service Commission.

I, R. B. Bernheim, Secretary of The Public Service Commissio of West Virginia, do hereby certify that the foregoing is a true an correct copy of the application filed by the Hope Natural Gas Co pany in: Case No. 663, Hope Natural Gas Company, application change rates, now pending before said Commission.

I do hereby certify that the seal of The Public Service Commi sion of West Virginia was lost in the fire which destroyed the Sta House on January 3, 1921.

Given under my hand at the offices of the Commisison in the Cit of Charleston, this 7th day of February, 1921.

[SEAL.] H. B. BERNHEIM,
Secretary.

777 UNITED FUEL RATE APPLICATION, W. VA. EX. 54.

Ex. W. Va. No. 54. O. L. D.

State of West Virginia,

The Public Service Commission,

Charleston.

No. 585.

In the Matter of the Application of UNITED FUEL GAS COMPANY for Authority to Change Its Rates, Tolls, and Charges.

Comes now the above named United Fuel Gas Company, the Petitioner herein, and respectfully shows to the Commission as follows:

(1) That it is a corporation organized and doing business under the laws of the State of West Virginia.

(2) That its principal place of business is in the City of Charleston, West Virginia, and that it is a Public Service Corporation engaged in the management and operation of a natural gas plant in said City and elsewhere, and that as such public service corporation it is subject to the provisions of Chapter 9, Acts of the Legislature of West Virginia for 1913, as subsequently amended.

(3) That the following is a correct schedule of the rates at this time charged by Petitioner for natural gas at the several places mentioned below, to-wit:

Kenova, Wayne County.

Domestic service:

22 cents per thousand cubic feet, subject to a discount of 2 cents per thousand cubic feet for payment on or before the 10th day of the month following that in which the gas is consumed.

Manufacturing service:

First 150,000 cu. ft. each calendar month 21¢ per M cu. ft.
Second 150,000 cu. ft. each calendar month 16¢ per M cu. ft.
All over 300,000 cu. ft. each calendar month 11¢ per M cu. ft.
All subject to a discount of 1¢ per thousand cubic feet if paid on or before the 20th day of the month following that in which the gas is consumed.

778 Ceredo.

Same rate for domestic service as Kenova. No rate for manufacturing service.

Huntington and Barboursville, Cabell County.

Domestic service:

16 cents per thousand cubic feet, subject to a discount of 1 cent per thousand for payment on or before the 10th day of the month following that in which the gas is consumed.

Manufacturing service:

First 150,000 cu. ft. each calendar month 16¢ per M cu. ft.
Second 150,000 cu. ft. each calendar month 15¢ per M cu. ft.
All over 300,000 cu. ft. each calendar month 11¢ per M cu. ft.
All subject to a discount of 1¢ per thousand cubic feet if paid on or before the 20th day of the month following that in which the gas is consumed.

Hurricane, Culloden, Poca, and Ona, Putnam County.

Domestic service:

22 cents per thousand cubic feet, subject to a discount of 2 cents per thousand for payment on or before the 10th day of the month following that in which the gas is consumed.
Rate for street lamps at Hurricane, 25 cents per lamp per month.
No rate for manufacturing service at Hurricane, Culloden, Poca or Ona.

Charleston and Coalburgh, Kanawha County.

Domestic service:

17 cents per thousand cubic feet, subject to a discount of 2 cents per thousand for payment on or before the 10th day of the month following that in which the gas is consumed.

Manufacturing service:

First 150,000 cu. ft. each calendar month 16¢ per M cu. ft.
Second 150,000 cu. ft. each calendar month 12¢ per M cu. ft.
All over 300,000 cu. ft. each calendar month 8¢ per M cu. ft.
779 All subject to a discount of 1 cent per thousand cubic feet if paid on or before the 20th day of the month following that in which the gas is consumed.

(4) Petitioner now applies to The Public Service Commission for authority to change its rates for the reasons that the present rates do not afford to Petitioner an adequate return for the service rendered nor upon its capital invested for the purpose of maintaining such service; that the return to Petitioner from said present rates is not commensurate with the value of the service rendered by it to its patrons, and that the proposed new rates are just and reasonable.

In this connection, Petitioner avers that it purchased the natural gas plant used in the service of all the localities above mentioned in the year 1909, at which time the rates charged by the predecessor of your Petitioner at the places aforesaid was greater than that now charged by Petitioner, notwithstanding the fact that the natural gas supply has, since the acquisition of said plant by your Petitioner, been diminished and the cost of producing natural gas greatly increased. That at the time of the purchase of said plant by Petitioner in the year 1909, the rate charged for domestic service in the City of Huntington and in the smaller towns in the same general vicinity, was thirty cents per thousand cubic feet, with a discount of five cents per thousand for prompt payment, while at the same time the rate charged in the City of Charleston and the smaller towns in that general vicinity for domestic service was twenty-three cents per thousand cubic feet, subject to a discount of three cents per thousand for prompt payment. Petitioner further shows that the rates now charged by it at the several places above mentioned are less than the intrinsic value of the service furnished, and lower than the rates generally charged by other companies, engaged in the same business as your Petitioner, for like service in a greater number of the localities in which natural gas is supplied.

(5) That application is hereby made for authority to change the rates of said applicant and put into effect the following schedule at the several places above mentioned, to become operative and effective on the 1st day of July, 1917, or as soon as authorized by this Commission, except that, for reasons hereinafter mentioned, the proposed new rate for manufacturing service in Charleston
780 and vicinity, including Coalburgh, is not desired to become operative until the 1st day of October, 1917.

Kenova, Huntington, and Barboursville.

Domestic service:

25 cents per thousand cubic feet, subject to a discount of two cents per thousand cubic feet for payment on or before the 10th day of the month following that in which the gas is consumed.

Manufacturing service:

First 150,000 cu. ft. each calendar month 24¢ per M cu. ft.
Second 150,000 cu. ft. each calendar month 19¢ per M cu. ft.
All over 300,000 cu. ft. each calendar month 11¢ per M cu. ft.
All subject to a discount of 1 cent per thousand cubic feet for payment on or before the 20th day of the month following that in which the gas is consumed.

Ceredo.

Domestic service:

25 cents per thousand cubic feet, subject to a discount of 2 cents per thousand cubic feet for payment on or before the 10th day of the month following that in which the gas is consumed.

Hurricane, Culloden, Poca, and Ona.

Domestic service:

24 cents per thousand cubic feet, subject to a discount or 2 cents per thousand for payment on or before the 10th day of the month following that in which the gas is consumed.

Street lamps at Hurricane, 25 cents per lamp per month.

Charleston and Coalburgh.

Domestic service:

22 cents per thousand cubic feet, subject to a discount of 2 cents per thousand cubic feet for payment on or before the 10th day of the month following that in which the gas is consumed.

Manufacturing service:

First 150,000 cu. ft. each calendar month 21¢ per M cu. ft.
Second 150,000 cu. ft. each calendar month 15¢ per M cu. ft.
All over 300,000 cu. ft. each calendar month 9 — per cu. ft.
781 All subject to a discount of 1 cent per thousand cubic feet for payment on or before the 20th day of the month following that in which the gas is consumed.

NOTE.—The proposed new rates set forth in the foregoing schedule relate mainly to domestic service and no change is embodied in said schedule in the rate for manufacturing service at any of said localities, except to change the rate for the first 150,000 cubic feet of gas used during any month to the proposed new domestic rate and to increase the rate for the second 150,000 cubic feet proportionately.

In this connection, your Petitioner shows that on the — day of November, 1916, it filed its application with this Commission to increase the rate charged by it for manufacturing service in the City of Charleston, and vicinity, including Coalburgh, the said application being known as proceeding No. 508. That, during the pendency of said proceeding, your Petitioner made an agreement with its manufacturing consumers in said City of Charleston by which the rate now charged for manufacturing service in said City, as hereinbefore set forth, was fixed by consent to be operative until the 1st day of October, 1917, and said manufacturing consumers in said City of Charleston agreed that they would not oppose a further increase to be operative October 1st, 1917, of an additional one cent per thousand cubic feet for all gas used during any calendar month in excess of 300,000 cubic feet. Because of said arrangement, Petitioner does not now desire that the increased rate for manufacturing service in the City of Charleston and vicinity, including Coalburgh, applied for in this petition, shall be operative prior to October 1st, 1917, but Petitioner prays that the said increased rate herein

pplied for shall be operative in said City of Charleston and vicinity, ncluding Coalburgh, on and after October 1st, 1917. Petitioner erewith refers to the said proceeding known as No. 508 and the rec- rd thereof, and prays that the same may be read as a part of this, s application.

(6) Petitioner says that no other public service corporation has ny direct interest in the schedule or change of rates above set forth, xcept that Huntington Gas and Development Company is engaged in supplying natural gas in competition with your Petitioner 82 in the City of Huntington and the vicinity thereof. Your Petitioner has, for several years, charged the same rate in the aid City of Huntington as its competitor and its present rate in said ity of Huntington was put into operation to meet the said com- etition.

Wherefore, the said United Fuel Gas Company prays that after due hearing and investigation, the Public Service Commission may make an order granting the application herein and establishing the proposed rates and charges, or such rates and charges as it may find o be equitable in the premises, all to be effective as of July 1st, 1917, except the proposed new rate for manufacturing service in the City f Charleston and vicinity to be effective as of October 1st, 1917.

Dated at Charleston, West Virginia, this 21st day of May, 1917.

UNITED FUEL GAS COMPANY,
Applicant,

By R. G. ALTIZER,
Vice President.

STATE OF WEST VIRGINIA,
County of Kanawha, To wit:

R. G. Altizer, Vice President of United Fuel Gas Company, the pplicant named in the foregoing petition, being duly sworn, says hat he is Vice President of the said corporation, and knows the con- ents of said petition, and that the facts and allegations therein con- ained are true, except such as are therein stated upon information nd belief, and that as to such allegations he believes them to be rue.

R. G. ALTIZER,
Vice President.

Taken, sworn to and subscribed before me this 21 day of May, 1917.

D. C. JAY,
Notary Public in and for said County.

My commission expires on the 2d day of Marcy, 1925.

783 STATE OF WEST VIRGINIA, *To wit:*

The Public Service Commission.

I, R. B. Bernheim, Secretary of The Public Service Commission of West Virginia, do hereby certify that the foregoing is a true and correct copy of the application filed by the United Fuel Gas Company in: Case No. 585, United Fuel Gas Company, application for authority to increase rates, lately pending before said Commission.

I do hereby certify that the seal of The Public Service Commission of West Virginia was lost in the fire which destroyed the State House on January 3, 1921.

Given under my hand at the offices of the Commission in the City of Charleston, this 7th day of February, 1921.

[SEAL.] R. B. BERNHEIM,
Secretary.

784 PGH. & W. VA. RATE APPLICATION, W. VA. EX. 55.

EX. W. VA. No. 55. O. L. H.

Before the Public Service Commission of the State of West Virginia.

No. 1105.

In re Application of PITTSBURGH AND WEST VIRGINIA GAS COMPANY for Authority to Change Rates and Charges for Gas Service in the Counties of Harrison, Doddridge, Lewis, Marion, Monongalia, Taylor, Tyler, Gilmer, and Wetzel, West Va.

Comes now the above named Pittsburgh and West Virginia Gas Company, the petitioner herein and respectfully shows to the Commission as follows:

(1) That it is a public service utility, doing business under the laws of the State of West Virginia.

(2) That its principal place of business is in the City of Pittsburgh, Pennsylvania, and that it is a public service corporation engaged in the production, transportation and sale of gas in the Counties of Harrison, Doddridge, Lewis, Marion, Monongalia, Taylor, Tyler, Gilmer, and Wetzel, West Virginia, and furnished gas in the following Cities and Towns in the said Counties: Grafton, Shinnston, Blueville, Boothville, Burton, Colfax, Daybrook, Enterprise, Fetterman, Fleming, Gypsy, Haywood, Hutchinson, Lumberport, Pruntytown, Rosebud, Rosemont, Thornton, Worthington, Industrial, Weston and Mannington, and other towns, and to many consumers in towns and villages along its lines in the Counties aforesaid, and as such public service corporation it is subject to the provisions of Chapter 15-0 of the Code of West Virginia, 1916, applicable to this class of public service utilities.

(3) That at this time it has in effect the following schedule of tes for gas:

ıte for Gas Supplied for Domestic Service, Use in Public Buildings, Industrial Purposes, Drilling Wells, and All Other Purposes.

The rate for natural gas sold for domestic service, for use in pub- buildings, for industrial purposes, for the drilling of wells, and r all other purposes, is thirty-two cents per thousand cubic feet, ss a discount of two cents per thousand cubic feet for prompt pay- ent of monthly bills.

These rates are effective in all localities served by the said Pitts- ırgh and West Virginia Gas Company, with the exception of the wn of Industrial, in Harrison County, West Virginia and also with the exception of Taylor County, West Virginia.

55 In Taylor County, West Virginia, the following rates are in force:

Class 1. Domestic.—The rate for natural gas for domestic con- ımption is thirty cents per thousand cubic feet, less a discount of wo cents per thousand cubic feet for prompt payment of monthly ills.

Class 2. Public Schools, Public Buildings (National, State, County, nd City), Public Hospitals and Churches.—The rate for natural gas twenty eight cents per thousand cubic feet, less a discount of two ents per thousand cubic feet for prompt payment of monthly bills.

Class 3. Industrial and Drilling Service.—The rate for natural gas ıpplied during each calendar month is twenty-five cents per thou- and cubic feet, less a discount of two cents per thousand cubic feet or prompt payment of monthly bills.

(4) That it applies to the Public Service Commission for authority o change its rates for the reason that said rates are inadequate and in- ufficient to meet the increase in the cost of production of its product, nd the sale of its product to the consumers, and to provide a fair re- ırn to applicant for its services. The rapid increase in the cost of naterials, the rise in the rate of wages which must be paid all labor, he increased cost of drilling wells and the decreased production of vells are some of the factors which make necessary the increase to onsumers in the rates here applied for. The Company must also ıow pay a higher price for gas purchased in the field which is a large tem of its costs.

(5) That application is hereby made for authority to change the ates of said applicant in the Counties of Harrison, Doddridge, Lewis, Marion, Monongalia, Taylor, Tyler, Gilmer and Wetzel, in the State of West Virginia and to put into effect the following schedules:

Domestic service:

The rates for gas sold for domestic service, and for use in Public Buildings, Hospitals, Schools and Churches and for all use except Industrial and Drilling service is as follows:

1. A readiness-to-serve charge to each consumer of fifty cents per meter per month, on which there is no discount for prompt payment. This charge is is addition to the charge for gas consumed.

2. A Quantity Charge for gas consumed each month as follows:

For the first 10,000 cubic feet in each month, forty two cents per thousand cubic feet.

For the next 10,000 cubic feet in each month, forty seven cents per thousand cubic feet.

786 For the next 5,000 cubic feet in each month, fifty two cents per thousand cubic feet.

For all over 25,000 cubic feet in each month, fifty seven cents per thousand cubic feet.

The Quantity Rate is subject to a discount of Two Cents per thousand cubic feet for payment of monthly bills within the discount period provided in the Rules and Regulations.

Industrial and drilling service:

The Rate for gas sold for Industrial Service and for Drilling of Wells, is forty-two cents per thousand cubic feet less a discount of two cents per thousand cubic feet for payment of monthly bills within the discount period provided in the contract or the Rules and Regulations. The Company reserves the right to curtail or discontinue the supply of gas to industrial and drilling consumers whenever it shall be necessary to do so in order to supply gas to its domestic consumers.

Flat rate for incandescent street lamps:

Where gas is used for lighting street lights the rate is twelve ($12.00) dollars per year for single mantle lamps, and for each additional single mantle burner on the same lamp the rate is six ($6.00) dollars per year. The Company reserves the right to discontinue service to lamps persistantly left burning during the daytime. This rate is for street lights where it is not practicable to measure the gas by meter.

The rates are effective in all localities served by the Pittsburgh and West Virginia Gas Company, in the State of West Virginia.

(6) Applicant believes that no other public service utility is interested in this proposed change of rates except the Monongahela Valley Traction Company at Fairmont, West Virginia.

Wherefore the said applicant prays that after due hearing and investigation the Public Service Commission may make an order granting the application herein and establishing the proposed rates

and charges or such rates and charges as it may find to be equitable in the premises.

Dated at Pittsburgh, Pennsylvania, this — day of August, A. D. 1920.

Case No. 1071.

MANUFACTURERS LIGHT & HEAT COMPANY.

Application for Authority to Change Its Rates, Tolls and Charges

This cause came on this day to be finally heard upon the application of the Manufacturers Light & Heat Company for authority to change its rates, tolls and charges for natural gas served by it to various communities in said application set out; upon the order of the Public Service Commission on said application entered on the 24th day of June, 1920; upon notices published and served as required by said order; upon the appearances by the City of McMechen, in Marshall county, and the Town of Middlebourne, in Tyler County, protesting against the increases applied for; upon evidence of witnesses for applicant company, together with numerous exhibits filed therewith, and upon the withdrawal of all objections by counsel for said protestants, and was argued by counsel;

Upon consideration of all of which it is ordered that the applicant, Manufacturers Light & Heat Company, be, and it is hereby, authorized to publish and put into effect the following schedule of rates, to wit:

Schedule of Rates for Domestic Service.

For all gas furnished and delivered in any one month to domestic consumers in Chester, Congo, Fairview, Follansbee, Hollidays Cove, Newell, New Cumberland, Weirton, Wellsburg, Brooke county and Hancock county:

Forty-seven (47¢) cents per thousand cubic feet, subject to a discount of two (2¢) cents per thousand cubic feet for payment of bill on or before the 10th day of the month following that in which such gas in furnished.

For all gas furnished and delivered in any one month to domestic consumers in Benwood, Glendale, Glenova, McMechen, Moundsville,

Warwood, West Liberty, Marshall county (Clay, Union, Washington, Sand Hill and Webster Districts) and Ohio county:

Forty-five (45¢) cents per thousand cubic feet, subject to a discount of three (3¢) cents per thousand cubic feet for payment of bill on or before the 10th day of the month following that in which such gas in furnished.

796 For all gas furnished and delivered in any one month to domestic consumers in Blacksville, Brooklyn, Cameron, Glen Easton, Hundred, New Martinsville, Sedalia, Doddridge county, Harrison county, Marion county, Marshall county, (Cameron, Franklin, Liberty and Meade districts), Monongalia county, Tyler county and Wetzel county:

Thirty-seven (37¢) cents per thousand cubic feet, subject to a discount of three (3¢) cents per thousand cubic feet for payment of bill on or before the 10th day of the month following that in which such gas is furnished.

Minimum monthly charge to all domestic consumers, 80¢.

The foregoing rates are based upon meter pressure not exceeding eight ounces.

The foregoing rates shall become effective as of August 1, 1920, and shall include all gas consumed after the meter readings of July, provided said meter readings shall not antedate the 25th day of July, 1920.

It is further ordered that in so far as said applicant company seeks, by its application, to have applied rates known as the "sliding scale upward," by which it would be authorized and permitted to charge all consumers to whom it delivers more than 40,000 cubic feet of gas per month a higher rate for such excess, be denied, but the determination of the matters arising thereon is reserved by the Commission for its future decision and order, with leave to the applicant to offer testimony in support of said proposed rates, and for this purpose only this cause is retained on the docket.

It is further ordered that said applicant company shall forthwith file with the Secretary of this Commission its schedule of rates in accordance with the foregoing order, as required by law.

A copy.

Secretary,
The Public Service Commission of the Commonwealth of Pennsylvania.

800 The Public Service Commission of the Commonwealth of Pennsylvania.

Complaint Docket, 1098.

LOUIS FRANKE

vs.

JOHNSTOWN FUEL SUPPLY COMPANY, PEOPLES NATURAL GAS COMPANY.

Order of the Commission.

This matter being before The Public Service Commission of the Commonwealth of Pennsylvania upon complaint and demurrer on file, and having been duly heard and submitted by the parties and full investigation of the matters and things having been had, and the Commission having found that the service which the Peoples Natural Gas Company is engaged in is a public service, and that the Peoples Natural Gas Company is a public service company within the meaning of The Public Service Company Law.

Now, to-wit, December 4th, 1917, it is ordered: That the demurrer of the Peoples Natural Gas Company, be and the same hereby is overruled.

It is further ordered: That the Peoples Natural Gas Company file, post and publish according to law, its tariff and schedule of rates covering the service complained of in this complaint within fifteen days after the service of this order.

And it is further ordered: That the application of the Johnstown Fuel Supply Company requesting permission to put into effect its schedule of increased rates in advance of the final finding and de-

termination of the Commission, be and the same hereby is denie
By the Commission:

vs.

FAYETTE COUNTY GAS COMPANY.

Complaint Docket, No. 1433.

JOHN DUGGAN et al.

vs.

FAYETTE COUNTY GAS COMPANY.

A foreign corporation cannot carry on business in Pennsylvani without complying with the laws of this State which practi cally places it in the category of a domestic corporation. It foreign character does not put it beyond the control of th Public Service Commission. Without the approval of th Commission it cannot exercise its powers and franchise within the State. The Public Service Company Law specifi cally places foreign corporations under the control of the Pub lic Service Commission in the same manner as domestic cor porations.

Natural gas is an article of commerce and it may be transported, and when so transported from one State to another or between States, is a subject of interstate commerce. It is, however, ex cepted from the provisions of the Interstate Commerce Act by Act of Congress of June 26, 1906.

A foreign corporation lawfully engaged in furnishing natural gas produced outside of the State of Pennsylvania to consumers within the State of Pennsylvania, is subject to the control of the Pennsylvania Public Service Commission, and the said Commission has jurisdiction in the matter of a complaint al leging that the rates charged by said corporation are excessive, unreasonable and unjust.

Report of the Commission.

ALCORN, *Commissioner:*

These cases are before us on demurrers to complaints against an increase in the price of natural gas from 30 cents to 35 cents per thousand cubic feet. The respondent filed a new tariff effective the 26th day of April, 1917. The complaints were filed April 21st, 1917, and April 25th, 1917, respectively.

The parties filed a stipulation wherein it is agreed as follows: The respondent is a corporation created by letters patent of the State of West Virginia, dated October 18, 1900; that it has been duly authorized to do business in the Commonwealth of Pennsylvania; that it obtains a supply of natural gas distributed to consumers in the State of Pennsylvania from wells in the State of Pennsylvania owned by it, and from wells in the state of West Virginia under contract with the Hope Natural Gas Company; that the gas from West Virginia commingles with that from the wells in Pennsylvania in respondent's pipe lines within the latter state; that of the gas purchased by the respondent 83.12 per cent is from wells in West Virginia and 16.88 per cent from wells in Pennsylvania. The main leading from the wells in West Virginia to the station on the boundary line between West Virginia and Pennsylvania, called Core Station, belongs to the Hope Natural Gas Company, and the main from that station to the consumers in Pennsylvania belongs to the respondent. That respondent is a purchaser of natural gas from the Hope Natural Gas Company and pays therefore 50 per cent of the
802 average price charged to domestic consumers from May 1, 1910, to the 30th day of April, 1920, and the respondent agrees that from 1910 to 1915 the price which the Hope Natural Gas Company shall receive shall be not less than 12½ cents per thousand cubic feet, and from 1915 to 1920 not less than 14 cents per thousand cubic feet.

The respondent in its demurrer denies the jurisdiction of the Commission for the following reasons, to wit:

1. The respondent is a non-resident corporation created and organized under and according to the laws of the State of West Virginia.

2. The business in which the respondent is engaged, being that transporting and furnishing natural gas produced outside of t State of Pennsylvania to consumers within the State of Pennsylvani constitutes interstate commerce and the fixing of rates for the sa commodity does not come within the jurisdiction of the State Co mission.

Prior to filing the demurrer the respondent has filed an answ denying that the proposed increase of rates was unfair and unre sonable and thus submitting itself to our jurisdiction. It subs quently made a motion to be permitted to withdraw the answer an file a notice in the nature of a demurrer.

As the jurisdiction of the Commission is questioned we deem advisable to have that disposed of before proceeding with a hearin on the merits.

The respondent is a foreign corporation. It is carrying on busine in the State of Pennsylvania, furnishing natural gas for light, hea and power to customers in Pennsylvania. It could not do this wit out complying with the laws which practically place it in the cat gory of a domestic corporation. Its foreign character does not put beyond the control of the Public Service Commission. The Publi Service Company Law, Act of July 26, 1913, includes foreign corp rations under the term "corporation" as used in that Act. Withou the approval of the Commission it cannot exercise its powers an franchises within the State. The Act specifically places foreign co porations under the control of the Public Service Commission in th same manner as domestic corporations. We are of opinion tha though the respondent is a foreign corporation it is still subject t our control.

If the respondent as it alleges, is engaged in interstate busines then we would be without jurisdiction unless the business is of such a purely local nature that it still remains within the control of th State in the absence of any legislation on the part of Congress.

The business of the respondent is the furnishing of natural gas t customers for light, heat and power. It is not a transportation company. The gas is transported in pipes from its own wells i Pennsylvania and from the central station where it receives gas from the State of West Virginia. The Hope Natural Gas Company, the producer of gas in West Virginia, transports this natural gas to the respondent and delivers it at the boundary line between the two states. The rate which the respondent proposes to increase and against which increase the complaints are filed, are for the gas which is used by the consumers. The gas is delivered by the respondent into the dwellings or places of business of the consumers through pipes owned by the consumer and is measured near the place of consumption. Natural gas is an article of commerce and it may be transported and when so transported from one state to another or between states is a subject of interstate commerce. It is however excepted from the provisions of the Interstate Commerce Act by Act of Congress of June 26, 1906. Section 1 of that Act provides:

"That the provisions of this act shall apply to any corporation or person or persons engaged in the transportation of oil or other commodity, except water and except natural or artificial gas, by means of pipe lines, or partly by pipe lines and partly by railroad, or partly by pipe lines and partly by water, within the meaning and purpose of this act, and to any common carrier or carriers engaged in the transportation of passengers or property * * *

So far as natural gas is concerned it is not a question of Congress having failed to legislate, but Congress has legislated and has excepted natural gas from the provisions of the Interstate Commerce Law. Were it a question of transportation which we had before us we would be obliged to hold that it was beyond the control of the State, even though no regulation has been provided by Congress. The business of this respondent company so far as it is affected by the rates in question does not partake of the nature of interstate commerce. It is purely a local matter. The respondent carries on this business by permission of the State and its present operations are restricted to consumers within the State. The gas in its wells in Pennsylvania flows through the same pipes as the gas from West Virginia. It is delivered to the customer where the connection is made at the main. The fixing of the price which the customer must pay does not in any manner affect transportation of the gas from West Virginia to Pennsylvania. It places no burden whatever upon interstate commerce. Were the furnishing of gas to local consumers a matter subject to the control of Congress, it is of such a local character that under all the authorities, in the absence of congressional action, the State would have the right to regulate it. The business of natural gas companies is not the same in all localities. It could not be the subject of uniform regulation. It is purely a local matter and comes more properly within control of the State or local governments.

803 In the Minnesota Rate Case, 230 U. S., 352, Mr. Justice Hughes said:

"But within these limitations there necessarily remains to the states until Congress acts a wide range for the permissible exercise of power appropriate to their territorial jurisdiction although interstate commerce may be affected. It extends to those matters of a local nature as to which it is impossible to derive from the constitutional grant an intention that they should go uncontrolled pending Federal intervention."

In Jamieson vs. Indiana Natural Gas Co., 128 Ind., 555, 28 N. E., 76, the Supreme Court of Indiana said:

"We affirm that natural gas is characteristically and peculiarly a local product; that its production is confined to a limited territory; that because of its local characteristics and peculiarities it is a proper subject for state regulation, and cannot, so far as regards local production, be made the subject of general legislation by Congress or,

at all events, that it does not require a uniform system as between the states for its regulation."

In State vs. Flannely, 152 Pac., 22 (Pur. 1916 C 810), the Supreme Court of Kansas stated the principle in the following language:

"Assuming that the sale of natural gas produced in Oklahoma, from there imported into this state through pipe lines and here sold to consumers throughout the state is interstate commerce; it is not national in its nature; it does not admit of one uniform system of regulation; it is not the kind of interstate commerce which requires exclusive legislation by Congress, and until Congress acts it is under the control of this state."

While the precise question before us has not been decided by the United States Supreme Court, it has been determined in two cases, one in the United States District Court of the Northern District of West Virginia and the other in the Supreme Court of the State of Kansas. In these, the jurisdiction of the Utilities Commission to regulate the rates charged by a natural gas company was sustained. Manufacturers Heat and Light Co., vs. Ott, and the P. S. C. of West Virginia, 215 Fed., 940 State, ex rel. vs. Flannely et al., supra.

In Washington Water Power Co. vs. Montana Power Co., Pur. 1916, E. 144, the Idaho Public Utilities Commission made a very clear distinction between the transportation of electricity and its distribution for retail within a state after having been transmitted from another state, and held that such distribution was not interstate commerce and that state regulation thereof was valid.

An opposite view has been taken by the United States District Court of Kansas in Langdon vs. Public Utilities Commission et al. This case has only been decided recently and has not yet been reported, but a copy of the opinion of Judge Booth is on file with the papers. The facts in that case are to some extent similar to the case before us and also to the case in West Virginia hereinbefore cited. It is the same case in which the Supreme Court of Kansas in State vs. Flannely, supra, decided the question in a different way. Kansas Natural Gas Company had wells in the State of Kansas and also in Oklahoma. It distributed the natural gas through distributing agents in various cities of Kansas and Missouri. About 85 per cent of the gas sold was produced in Oklahoma and 15 per cent in Kansas. The proportions are about the same as in the present case. The United States District Court held that the distribution of the gas to the consumers in Kansas was interstate commerce and enjoined the Public Utilities Commission of the State of Kansas from enforcing the rates which it had ordered the Kansas Natural Gas Company to put into effect. An attempt was made to distinguish this case from the decision in West Virginia because there a very small proportion of the gas sold came from the State of Ohio and in the Kansas case the larger part of the gas came from the State of Oklahoma. It does not appear logical or sound to determine the question on the propor-

tion of the gas that may be produced in a foreign state. To do so would not be deciding any principle and would make its application depend upon the facts of each case. There would be no certain rule to guide as it would depend upon the opinion of the trial judge as to what proportion of the gas sold produced in a foreign state would determine whether the transaction was interstate or intrastate.

In supporting his opinion in the Kansas case, Judge Booth says:

"It appears from the evidence in the case that gas transported by the receiver from Oklahoma costs at the initial point 5 to 7 cents per 1,000 cubic feet. The difference between this cost price and the selling price to the consumer is largely, if not wholly, made up of the cost of transportation. It would seem to require no argument to establish that in any status or order fixing the price at which gas may be sold to the ultimate consumer is, under the circumstances, disclosed by the present record, in fact a fixing of rates for the transportation of the gas."

The reverse of this would serve to be the case; that is, that the cost of transportation would be an element in determining the price to be paid by the consumer and not that the price charged the consumer would fix the cost of transportation. He considers the distribution of natural gas as interstate in this case on the ground that the distributing parties were not purchasers of the gas from the Kansas Natural Gas Company, the producer, but were merely agents. If there be any force in that view then we can very readily distinguish the present case from that as the respondent here is the
804 purchaser of the natural gas from the Hope Natural Gas Company, and in the contract made a part of the stipulation filed by the parties it is particularly designated as the buyer and the Hope Company as the seller.

If the doctrine of original package has any application it would be in favor of our right to regulate the rates which the respondent charges. It purchases natural gas from the Hope Natural Gas Company of West Virginia. The gas is transported by the Hope Company in its own pipes to Core Station on the boundary between the two states; is there delivered to the respondent and commingled with the natural gas from wells in Fayette county and through pipes of the respondent in transported to the consumers in Fayette, Westmoreland and Greene counties in the State of Pennsylvania, being delivered to them either at their houses or at the burners. The consumer in such a case is very much like the customer of the merchant to whom goods have been shipped from a foreign state and are at the time on his counter or shelves ready for sale.

If the contention of the respondent be sustained, then a natural gas company distributing gas to consumers in the State of Pennsylvania would be free from any control if any of the gas came from a foreign state. This would be contrary to sound public policy.

We are of opinion that the respondent company is subject to our jurisdiction and we have the right to regulate the rates which it charges the consumers in the State of Pennsylvania. The demurrers

in both cases are therefore overruled, and we order the proceeding to a hearing upon the complaint and answers filed.

Order.

These matters being before the Public Service Commission of the Commonwealth of Pennsylvania upon complaints and demurrers on file, and having been duly heard and submitted to the parties, and full investigation of the matters and things involved having been had, and the Commission having on the date hereof filed of record its report containing its findings of fact and conclusions thereon, which said report is hereby approved and made a part hereof:

Now, to wit: October 29, 1917, it is ordered: That the demurrers in these cases be, and the same hereby are overruled.

And it is further ordered: That the parties complainants and respondents proceed to a hearing upon the complaints and answers filed.

By the Commission:

No. 134.

The Public Service Commission of the Commonwealth of Pennsylvania.

Complaint Docket, No. 431, 1915.

JOHN O. ULRICH

vs.

EASTERN PENNSYLVANIA LIGHT, HEAT & POWER CO.

The Complainant owns and operates a printing establishment on Lafayette Street, in the Borough of Tamaqua, a distance of about 350 feet from the terminus of the gas main of the Eastern Pennsylvania Light, Heat and Power Company, located on said street. The complaint alleges that the Respondent company refuses to extend its gas main and furnish him service. The Company claims that the laying of the additional main would not be compensatory. Held: That the rights, powers and privileges which are conferred upon public service companies are likewise accompanied with duties and obligations. It is a part of the contract with the Commonwealth that they should perform the service undertaken as a whole.

public service company cannot be permitted, holding a monopoly as it does, to select the most profitable parts of the service and, supplying them, treat such performance as a compliance with its duty.

ile that which is unreasonable will not be required, it may be stated as a general proposition that a corporation which undertakes to light a Borough must be ready to furnish reasonable lighting to all parts of the Borough.

Report of the Commission.

Appearances:

O. Ulrich, Representing the Complainant.
tto E. Farquhar, Representing the Respondent.

NYPACKER, *Commissioner:*

he Borough of Tamaqua has a population of about twelve thou- persons. In it Lafayette Street runs east and west, and Pitts et, north and south. Along the south side of Lafayette Street he tracks of the Philadelphia and Reading Railway Company. he north side of Lafayette Street, three hundred and fifty feet Pitts Street, the Complainant has a printing establishment in h job printing is done and a weekly newspaper is published. It been in existence for about six years, and it employs six men. een it and Pitts Street there are on the north side thirteen es, and on the south side there is also one house. The printing t is two blocks from the main street of the town. Lafayette et is an unpaved dirt street.

he Respondent is a Light, Heat and Power Company supplying a tory which includes the whole of Schuylkill and a part of Northerland County. By merger it absorbed a gas company which monopoly of supplying light in the Borough of Tamaqua. It main on Pitts Street. It has another on Clay Street, parallel Lafayette Street, two blocks away. It has another on Lafayette et which approaches from the west to within four hundred and ty-five feet of the plant of the Complainant, but between this and Pitts Street no pipes are laid.

he Complainant in his petition asks that the Respondent may be ted "to furnish and maintain such service as may be sufficient pply gas for the accommodation of his printing establishment." he Respondent objects to being required to lay this additional on the ground that it would not be compensatory. It is estid that the cost including a sum required to be paid to the Bor- upon opening the street, would be from $500.00 to $575.00. Respondent has indicated a willingness to lay the main if people deposits of cash with it sufficient to guarantee the outlay, and ought to ascertain how many were willing without much success. he 21st of July, 1915, it made a proposition to the Complainant fect that he pay the expense of getting a permit from the Bor-

ough (about $195.00); that he pay the cost of the extension
806 of the gas main which it should lay to be treated as a payment for the gas he should consume in eighteen months; that if the gas so consumed should not equal the amount of the deposit, the difference to be forfeited to it, and that if the amount consumed should exceed the deposit, he to pay the excess. This manifestly one-sided and unfair proposition was rejected, and the matter after repeated attempts at an amicable settlement, is now before the Commission for its determination.

The rights, powers and privileges which are conferred upon public service companies are likewise accompanied with duties and obligations. It is a part of the contract with the Commonwealth that they should perform the service undertaken. That service must be regarded with some breadth of view. The undertaking is to perform the service as a whole. The public service company cannot be permitted, holding a monopoly as it often does, to select the most profitable parts of the service, and supplying them, treat such performance as a compliance with its duty. While that which is unreasonable will not be required of it, and care will always be taken to see that unnecessary imposition upon it are not permitted, it may be stated as a general proposition, that a corporation which undertakes to light a Borough must be ready to furnish reasonable lighting to all parts of the Borough.

In the present case the Respondent has a monopoly for lighting the Borough of Tamaqua, and its citizens are prevented from securing their light in any other way. Within a distance of three hundred and fifty feet there are a printing house and fourteen dwellings which may be in need of light. In the future there will doubtless be more. The Complainant describes his business as profitable, and it has existed for six years. He estimates that he will use ten dollars' worth of gas each month, and this estimate is based on the amount of gasoline now consumed. The extension of the main will be in the direction of the Respondent's main already laid on Lafayette Street, at the other end of the block, with which it may be presently connected.

It is the opinion of the Commission that the prayer of the Complainant's petition ought to be granted, and an Order in accordance therewith be issued.

Order.

This case being at issue upon complaint and answer on file, and having been duly heard and submitted by the parties, and full investigation of the matters and things involved having been had, and the Commission having, on the date hereof, made and filed of record a report containing its findings of fact and conclusions thereon, which said report is hereby referred to and made a part hereof.

Now, to wit, November 23, 1915, it is ordered: That the Eastern Pennsylvania Light, Heat and Power Company shall, on or before January 24, 1916, lay and maintain its gas main and other facilities on Lafayette Street, in the Borough of Tamaqua, to the plant of

John O. Ulrich, the Complainant, and furnish and maintain such service as will be sufficient to supply gas for the accommodation of his printing establishment.

By the Commission:

Secretary.

807 No. 273.

The Public Service Commission of the Commonwealth of Pennsylvania.

Complaint Docket, No. 1073.

JOHN O. ULRICH

vs.

EASTERN PENNSYLVANIA LIGHT, HEAT & POWER COMPANY.

The mere fact of having corporate rights and authority to exercise the same within a borough is not in and of itself a sufficient and compelling reason, under all circumstances and conditions, why a public service company should be required to extend its service to any portion of the town on the application of a prospective consumer within the borders of the municipality. There should appear in the petition for the proposed extension of facilities some evidence that the service desired contains some elements of remuneration within a reasonable period of time, and that if granted, it would not prove chiefly or wholly an economic waste.

Appearances:

Otto E. Farquhar, Representing the Respondent.

Report of the Commission.

BRECHT, *Commissioner:*

The complainant is the owner of premises consisting of five dwellings on the south side of Van Gelder street, between Green and Nesquopec streets, in the borough of Tamaqua, Schuylkill county. The said Van Gelder street in that vicinity is not supplied with a gas main, and it appears the complainant has not been able to obtain service from respondent at the rates usually charged other citizens of the said borough for the use of gas.

In the complaint filed it is alleged that respondent offered to supply gas on the aforesaid premises of complainant if he would "guar-

antee one hundred dollars per year, in equal monthly installment for a period of ten years," which offer was refused. It is furth alleged that the Eastern Pennsylvania Light, Heat and Power Co pany, respondent, is the only company which furnishes gas in t borough of Tamaqua, and that by the refusal of said company furnish gas as requested, the complainant suffers great "inconve ience, damage and injury."

The respondent in its answers avers that it is "ready and willing to furnish gas to complainant's premises on Van Gelder street upo "reasonable terms and conditions;" and that the petition of the co plainant does not set forth all the material parts of respondent offer, in that the said one hundred dollars would be reduced by t amount received from other consumers who took service along t proposed extension.

When the hearing was held the complainant failed to appear be represented. Subsequently another opportunity was given him present testimony in the case if he so desired. In reply complainan stated that he did not appear at the hearing because he believed a the material matter involved was found in the record, and that h would have no brief to file. Later he filed a statement of facts whic he intended to prove at a hearing and stated that trouble and ex penses would be saved if respondent would agree that such facts a therein contained could be proved.

Subsequently the aforesaid statement of facts submitted by com plainant was signed by both parties in interest and filed with th record in this case. The material facts set forth in the stipulatio are substantially the same as were recited by complainant in hi petition. In addition thereto it was agreed that complainant wa willing to pay the usual rates of respondent for all gas consumed b him, and that he declined to pay the sum of $100.00 for the propose service; that there are thirteen dwellings in Van Gelder street be tween Green and Nescopec streets; that Van Gelder street is an un opened street except between said Green and Nescopec streets; and that there are now six persons residing on Van Gelder street wh expressed a desire to use gas and have the same installed.

The evidence submitted by respondent is substantially as follows: The section of Tamaqua lying in the vicinity of complainant's prem ises is situated on the slope of a hill and is built up sparsely. N gas mains have been installed within a radius of practically one thousand feet from the dwellings of complainant. To furnish him with service, connection with respondent's gas main must be
808 made at one of three points. The shortest and cheapest construction is to connect with the supply main at Hunter and Spruce streets and run the extension west 410 feet on Spruce street to Nescopec street, north 200 feet on Nescopec street to Van Gelder street, and then west 384 feet on Van Gelder street to the dwelling houses of complainant, a total distance of 994 feet. The next best route is to connect with the company's main at Green and Penn streets and run the extension north on Green street, and then east on Spruce street, then north on Nescopec and west on Van Gelder street to the place of service, a total distance of 1,318 feet. Another

way in which it might be done is to connect with the gas main on the north at Broad and Nescopec streets and install an extension south on Nescopec to Van Gelder street and then west on Van Gelder street to the premises in question, a distance of 1,145 feet. Along this route there are no houses between Broad street and Van Gelder street. Over all the foregoing routes the work of laying a pipe would be expensive since the ground is largely composed of shale rock and at some points of hard rock which would make blasting frequently necessary to get a proper depth of trench.

Items of expense covering the probable cost of pipe, labor and excavating, tools used, drayage and freight paid, were submitted by respondent. These figures show that it would cost $932.73 to make the pipe extension of 994 feet from Hunter and Spruce streets to the premises of complainant on Van Gelder street. It was held that this was the cheapest route over which the extension could be made. The contract agent of respondent testified that along this route there are 37 residences, 28 occupied by tenants, 5 by the owners and 4 of them unoccupied. Of the 33 occupants of the aforesaid premises respondent after a careful canvas made for the purpose of securing customers had succeeded in getting only seven (since then increased to eight) prospective consumers of gas if the proposed pipe line should be laid. But according to the testimony offered neither the complainant nor any of the others would give any assurance as to the probable amount of gas they would use in a year nor as to the length of time they would desire service, and consequently respondent was left without any definite means of knowing or ascertaining what probable amount of revenue it would receive if the proposed improvement were made.

The testimony offered also attempted to show that because of the comparatively cheap price of coal at Tamaqua, the consumers along the route proposed would use gas chiefly for cooking and other domestic purposes during three or four months in summer, and very little if any during the balance of the year. From an estimate submitted by one of the witnesses based upon the records of the company showing the actual gas consumed by that class of consumers it appears that 31 cents would be about the average monthly income received from each consumer in this instance. The total revenue upon that basis of which the respondent has some assurance would therefore amount in this case to approximately $30 per annum. Against this amount of gross income respondent claims that a conservative estimate of the cost of installing the improvement, places the amount in round numbers at about $925.00, making the annual expense not including cost of operation at least $150.00.

The data presented in this case giving the length of extension required, the cost of laying the pipe, the probable annual revenue and expense to be attributed to the new installation of service are wholly ex parte having been prepared by one party in interest without any attempt by the other side to check or disprove their accuracy. The only matter which the complainant brought to the attention of the Commission is in effect that he desired respondent to install a supply pipe and furnish service on his premises at the usual rates charged other consumers, and further that he refused to pay and

would not consider any proposition to pay any additional compensation for the installation of said service.

Apparently the complainant concluded to rest his case on the assumption that inasmuch as respondent is a public service corporation engaged in the business of manufacturing and selling artificial gas in the borough of Tamaqua, it is bound under its charter and franchise rights to extend its pipes and furnish service within the bounds of the borough when requested so to do by any citizen of the municipality who may desire to use gas, regardless of the revenue that may be derived from such extension of its facilities. The sole question therefore for the Commission to determine in this proceeding is whether a gas company under its corporate rights and obligations is required to extend its service whenever the same is so desired by a prospective consumer residing in the municipality within which the said corporation is doing business.

In Ulrich vs. Eastern Pennsylvania Light, Heat and Power Company, C. D. 431, 1915, the Commission in requiring respondent to build an extension pipe to supply service to complainant held that:

"The rights, powers and privileges which are conferred upon public service companies are likewise accompanied with duties and obligations. It is a part of the contract with the Commonwealth that they should perform the service undertaken. That service must be regarded with some breadth of view. The undertaking is to perform the service as a whole. The public service company cannot be permitted, holding a monopoly as it often does, to select the most profitable parts of the service and supplying them, treat such performance as a compliance with its duty. While that
809 which is unreasonable will not be required of it, and care will always be taken to see that unnecessary impositions upon it are not permitted, it may be stated as a general proposition, that a corporation which undertakes to light a borough must be ready to furnish reasonable lighting to all parts of the borough."

In the foregoing proceeding the conditions and circumstances were substantially different from those present in the case here pending. In the report of that case it appears that the extension asked for was in the direction of respondent's main at the other end of the block on the same street, that the length of the extension was only three hundred and fifty feet, that along the proposed extension there were complainant's printing house and fourteen dwellings which could use service, that in the near future there would doubtless be more users, that the printing plant in question is two blocks from the main street of the town, and that complainant estimated that he would use ten dollars' worth of gas each month.

The record in the present case shows that the block in Van Gelder street where the service is desired is some distance from the main portion of the town, that the line necessary to reach complainant would be the nearest route measure 994 feet, that by reason of the rocky character of the ground the cost of installing a pipe would be comparatively expensive, that the pipe laid would terminate in a

block beyond which on the north, west and south sides there are no homes or other buildings, and no prospect looking toward the erection of dwellings in that vicinity in the near future. It also appears that there is no business place located along the route of the proposed extension, that while there are some thirty dwellings along the line the occupants with perhaps a few exceptions would not consume gas to any appreciable extent owing to local conditions, that respondent after a diligent canvass succeeded in getting only eight parties who indicated that they were willing to use gas if the supply pipe is installed, and that neither the complainant nor any of the others would give respondent any estimate or idea of the probable amount of gas they would purchase during a year.

These differences in the conditions and circumstances underlying the two cases are sufficient to explain what the Commission had in mind when it said in the case cited above "That a corporation which undertakes to light a borough must be ready to furnish reasonable lighting to all parts of the borough." It is clearly an attempt by the Commission to indicate that conditions might prevail under which the service furnished if required could not be defined or described as "reasonable lighting" to all parts of the borough. This principle was recognized and set forth more at length and in more explicit language by the Commission in Fisk vs. Abington Electric Company, C. D. 358, 1915, where this phraseology is used:

"That a public service company should have the right to pick out the profitable customers and leave all others without service, would not, in our opinion, be rendering such public service as the law contemplates. Of course, just now far a public service company should be required to go in making extensions to serve its patrons is often a difficult matter to determine and each extension must be determined from the facts surrounding the same. Any unreasonable extension should not be required; on the other hand, when a public service company enters upon its duties to render a public service in a community it should be compelled to render such a general service as the reasonable demands of the community *as* such time and in the near future may require, and proper provision should be made therefor, even to the extent of making extensions that will meet reasonable demands that will be made of it in the future."

Substantially the same question was passed upon by the Commission in Bixler, et al., vs. United Electric Company of Lemoyne, C. D. 331, 1915, where it took occasion to say:

"Under conditions so uncertain and precarious, the Commission would not feel warranted in requiring the respondent to install the service requested by complainants, unless it were to append to the order some guaranty or element of protection somewhat similar to the one contained in the offer submitted by respondent. The proposition suggested by the company can not be considered extravagant under existing circumstances, and seems to be about the only feasible method respondent could take to protect itself against furnishing a

service that might, in spite of intentions and assurances to the contrary, prove to be comparatively transient."

The position taken in the above cited cases is an attempt to give all parties in interest a just and equitable deal in the matter. It is holding in effect that the desired facilities should be installed whenever it is found practicable to do so without destroying property values or impairing the efficiency of the general service; but it is also recognizing the fact that certain local conditions may exist that would make it unduly burdensome upon the operating company to make extensions to its plant equipment without some estimate or assurance of the probable consumption from the consumer for a comparatively limited period, that might be taken as an index of the prospective earnings from such extension.

The mere fact, therefore, of having corporate rights and authority to exercise the same within a borough is not in and of itself a sufficient and compelling reason under all circumstances and conditions why a public service company should be required to extend
810 its service to any portion of the town on the application of a prospective consumer residing within the borders of the municipality. There should appear in the petition for the proposed extension of facilities some evidence that the service desired contains some elements of renumeration within a reasonable period of time, and that if granted it would not prove chiefly or wholly an economic waste.

From the record and testimony appearing in this case the Commission is not persuaded that it is warranted under the facts submitted to require the respondent to install the supply pipe prayed for by the complainant, and an order will accordingly be made dismissing the complaint.

Order.

This matter being before The Public Service Commission of the Commonwealth of Pennsylvania upon complaint and answer on file, and having been duly heard and submitted by the parties and full investigation of the matters and things involved having been had, and the Commission having on the date hereof made and filed of record a report containing its findings of fact and conclusions thereon, which said report *it* hereby approved and made a part hereof:

Now, to wit, April 3rd, 1917, it is ordered, that the complaint in this case be, and the same is hereby, dismissed.

FRED PALMER-PORONER

vs.

THE CONSUMERS' GAS COMPANY OF READING.

tility cannot under all circumstances refuse to make an extension of its service until the same becomes compensatory. A public utility engaged in the business of the respondent is required to furnish service in all parts of the municipality in which it is operating whenever a reasonable demand or prospect for such service is shown to exist. The service cannot be restricted to sections or neighborhoods from which the larger returns will flow, but must also be extended to localities where the business will not be immediately profitable or perhaps even self-sustaining until a later period in the growth and development of the community. Where circumstances so shaped the development of the utility's business that small central blocks or areas containing desirable homes and sites, particularly in a large city, have not been supplied with service, it is only a matter of simple justice that the residents on any such block, if they so desire, should be accorded the same privileges and conveniences that their neighbors in adjacent streets are permitted to enjoy. But where there is no demand for service from the residents themselves, and there is no prospect of securing at present more than six small consumers who will use gas for fuel during the summer only, the Commission will not compel the gas company to install a new gas main 580 feet in length at a cost of approximately $800 until it can be shown by evidence that the persons directly affected desire the service.

Report of the Commission.

BRECHT, *Commissioner:*

Complainant is the owner of a property on Walnut Street between Eleventh and Twelfth Streets in the City of Reading. No gas main has been laid in this particular block on Walnut Street although on streets lying immediately adjacent pipes have been installed and service is furnished. It is alleged by complainant that he made application to The Consumers Gas Company, respondent, for the installat-on of a gas main in front of his premises and was refused the service he desired.

The testimony offered in the case is very meagre. It appears from the facts submitted that the block on Walnut Street in question is located in the central part of the city; that it has sixteen houses used as dwellings on the North side and none on the South side, being bounded on that side by the city park; that seven of the houses are occupied by the owners and nine by tenants, and that there are gas mains in place on Eleventh and Twelfth Street- which are about 580 feet apart at that point.

On behalf of the respondent it was testified that it would cost approximately $800.00 under present conditions to install a 4-inch main to supply the premises on this block, although two years ago it could have been done for about $400.00. No data were submitted giving items of labor and material and unit prices to show how this estimate was obtained. Complainant offered no evidence upon the cost of installation nor attempted to show that the cost figures given were too high or in error.

It appears that the property of complainant is occupied by a tenant who has not made any request for service. There is nothing in the record or testimony to show that any one outside of the complainant was making any demand for gas, or appeared at the hearing. However, it was shown from a careful canvass made for the respondent of the people residing in this block that six of the occupants would take gas for fuel purposes in the spring or summer of 1918, and the remaining nine thought they would not take it at all. It was alleged that the tenant of complainant stated during this canvass that he might use gas for illumination on the second floor of his home whenever service could be furnished. In six of the houses electricity is used.

812 It was further shown on behalf of the respondent that the gas company has been reasonably diligent to extend its service into sections and neighborhoods of the city not now furnished with gas. Apparently the various sections of the municipality not piped or furnished with facilities to supply gas have been canvassed every summer for the past five or six years to secure consumers, and thus far the respondent has been unable to get a sufficient number of patrons to warrant it in putting in a gas main on this section of Walnut Street.

Respondent's engineer estimated that it would require approximately fifteen consumers using an average consumption of about

20,000 cubic feet of gas per year to pay the company to make the proposed extension. There were no figures of plant investment or valuation of property submitted, nor any offer made to show annual receipts and operating expenses, or net earnings and dividends of the company. Consequently no data are available by which the figures of the engineer may be tested and their accuracy in some measure determined. It is quite evident that six or seven consumers using gas only for cooking during the summer months would provide only a fractional part of the revenue which is claimed to be necessary in order to make the proposed extension self-sustaining.

The respondent, however, cannot under all circumstances refuse to make an extension of its service until the same becomes compensatory. A public utility engaged in the business of the respondent is required to furnish service in all parts of the municipality in which it is operating whenever a reasonable demand or prospect for such service is shown to exist. The service cannot be restricted to sections or neighborhoods from which the larger returns will flow, but must also be extended to localities where the business will not be immediately profitable or perhaps even self-sustaining until a later period in the growth and development of the community. Where circumstances so shaped the development of the utility's business that small central blocks or areas containing desirable homes and sites, particularly in a large city, have not been supplied with service it is only a matter of simple justice that the residents on any such block, if they so desire, should be accorded the same privileges and conveniences which their neighbors on adjacent streets are permitted to enjoy.

But in the present case there is no demand for service from the residents themselves, nor does it appear that there is any prospect of securing at present more than six small consumers if the proposed extension is made, and they would use gas only for fuel during the summer. Under these circumstances the complaint should be dismissed. It would be unjust to the respondent to impose upon it the burden of installing a new gas main 580 feet in length at a cost of approximately $800.00 until it can be shown by evidence that the persons directly affected desire the service.

Order.

This matter being before the Public Service Commission of the Commonwealth of Pennsylvania upon complaint and answer on file, and having been duly heard and submitted by the parties and full investigation of the matters and things involved having been had, and the Commission having on the date hereof filed of record its report containing its findings of fact and conclusions thereon, which said report is hereby approved and made a part hereof.

Now, to-wit, October 29th, 1917, it is ordered: That the complaint in this case be, and the same hereby is dismissed.

T. D. WASHBURN et al.

vs.

MCKEAN NATURAL GAS COMPANY.

Complaint was made that the respondent natural gas company intended to discontinue its service to the ten complainants, and from the testimony it appeared that the proposed discontinuance was due to the desire of the company to remove the pipe lines serving the complainants and re-located for the purpose of reaching new gas wells.

The Commission found that the continuance of service to the complainants was a reasonable requirement, and directed the company to cease and desist from making the changes proposed.

Appearances:

R. R. Lewis,
A. F. Jones,
Representing the Respondent.

Report of the Commission.

RILLING, *Commissioner:*

On August 17th, 1917, ten residents of Ceres township, McKean County, filed a complaint alleging that the respondent, the McKean Natural Gas Company had served a notice upon them, threatening to discontinue their service, and asked the Commission to issue an order compelling respondents to continue to serve them. By the answer filed by the respondent, it was admitted that such a notice was given, and it is alleged therein that the respondent was about to drill additional gas wells to maintain its supply: that the location of these new wells is such that by relocating some of the lines of the respondent, a saving of about one thousand dollars might be effected. No itemized statement was furnished the Commission, showing how that amount was determined. The line which the respondent proposes to relocate and thereby discontinue its service to complainants extends through private property for about seventeen hundred feet and along a State highway in Ceres township for about twenty-six hundred feet, passing the residence of six of the complainants, the rest of the complainants being reached by a private line connecting with said line of respondent on said highway. Three of the complainants are receiving free gas from the respondent under agree-

ment or lease. The income of respondent from other complainants served by meter, amounts to about one hundred dollars annually. The complainants alleged that the line along said State highway was originally laid as a supply line to serve them. It appears, however, that at the present time it is also used as a suction line to transport the gas from the well or wells to respondent's compressor station; that the pressure therein varies from five to twenty-eight pounds per square inch, depending upon whether or not the compressor pumps are in operation. The complainants do not object to the variation in pressure, nor does it appear that the service to complainant interferes with the distribution of gas from the wells to the compressor station. The main reason given for discontinuing the service is the saving that might be effected by relocating said line.

The respondent is a corporation organized September 27th, 1906, under the provisions of the so called Natural Gas Act of May 29th, 1885, P. L. 29, and the supplement thereto of May 11th, 1897, P. L. 52. It is engaged in producing and selling natural gas in McKean and Potter Counties, and is now selling over ninety per cent of its production to a New York Gas Company for consumption in New York State. Its gross receipts for gas sold for consumption in New York State for the year 1916 were $58,603.69. The respondent has no indebtedness and is in a prosperous condition. At the present time it is serving only forty patrons in Pennsylvania, two of whom are industrial and thirty-eight domestic consumers.

The respondent being a public service company, is required to render service to all persons who desire it in the territory from which it is chartered that by a reasonable outlay can be reached.

Under all the evidence the Commission is of opinion that the service to complainants should be continued, and an order to that effect will be issued.

814 *Order.*

This matter being before the Public Service Commission of the Commonwealth of Pennsylvania on complaint and answer on file, and having been duly heard and submitted by the parties, and full investigation of the matters and things involved having been had, and the Commission having, on the date hereof, made and filed of record a report containing its findings of fact and conclusions thereon, which said report is hereby approved and made a part hereof:

Now, to-wit, January 14th, 1918, the McKean Natural Gas Company is ordered and directed to continue its service to the complainants in accordance with the findings contained in said report.

WILLIAM B. HORTON

vs.

SHENANGO VALLEY ELECTRIC LIGHT COMPANY.

Filed September 21, 1918. Alleging Refusal to Extend Service to Residence of Complainant in Farrell, Mercer County.

A utility company enjoying an exclusive franchise, may not choose and serve only sections of their territory immediately remunerative. Reasonable extensions, determined from the facts in each case, may be ordered.

A company will not be permitted to impose a condition requiring patrons to furnish capital necessary for reasonable additions and extensions, such as it has tried to do in this case.

Service ordered at cost of respondent company.

Appearances:

B. J. Jarrett,
Representing the Complainant.

Ralph J. Baker,
Representing the Respondent.

Report of the Commission.

RILLING, *Commissioner:*

The complainant, William B. Horton, is owner of premises and resides at No. 1208 Washington Street, in the borough of Farrell, Mercer county, Pennsylvania. The respondent, the Shenango Valley Electric Light Company, exclusively serves said borough. Respondent solicited the service of complainant who signed an application therefor. It was, however, not furnished.

Complainant has a new frame dwelling house of five rooms and bath, which he first occupied November 20, 1917. It is situate in one of the new and growing sections of Farrell which, on account of the great mills operated there, is rapidly increasing in population. The American Sheet and Tin Plate Company is now constructing one hundred new houses a short distance beyond the residence of complainant, which is the third house and 110 feet from Stambaugh Avenue, upon which street respondent has a line and is rendering service. There are at least nine new houses in the immediate

ty of complainant's residence, and three more being con-ed. Others will soon be located there, all of which will require e of respondent.

pondent contends that its line on Stambaugh Avenue, 110 feet complainant's residence, is not of such character that it can y complainant therefrom. In order to render proper service n and others in the vicinity it made a proposition, whereby it sed to make the necessary extension, the total cost of which, at t high prices, would be $417. This sum complainant and others in his immediate neighborhood would be required to pay respondent. Of this amount $253.00 would be returned to who advanced the same by refunding to them twenty per cent amount of the bills paid by them; the difference between $417 nd $253 refunded to be retained by respondents. New patrons s locality requiring service from such extension could be sup- without any contribution toward the cost of such extension; atement being made by respondent's representative that the s paying the difference between $417 and $253 might collect portion thereof as they saw fit from any new patrons of re-ent.

e position of respondent cannot be better stated than by quoting stimony of its Superintendent, Mr. Kemmery:

ge 17:)

. Your proposition to Mr. Freeble was in accordance with the al practice of the Company as well as its allied concerns, and hat you would (render) the service provided the people to re- the service as a group would pay the company $417, the then ated cost of the extension line without the meters?

. Correct.

. And you furthermore agreed if that were done you would re- to this group $253 out of the $417 by allowing them 20 per f their bills for service?

"A. Correct.

"Q. And that the balance of the $417 represented the ex-ess cost of this installation based on the difference between of July, 1914, and prices of the date of the estimate?

. Correct.

. That was your agreement or tender of agreement, as the terms tting the installation?

. Yes, sir.

. Mr. Horton wasn't actually asked to pay $417? That was rice to the whole group?

. Yes, sir.

. And they were to get back $253?

. Yes, sir; that is correct.

. State whether or not that proposition in its essentials is the ard practice of this Company?

. Absolutely.

* * * * * * *

(Page 27:)

"Q. Suppose this proposal of the Company were accepted and you furnished the light, and the next week somebody else would want light, under what conditions would you serve them?

"A. Serve them from the line without any expense to them provided we were not required to increase our facilities to serve them."

The respondent has the sole right to serve Farrell borough. In the construction and operation of its plant it is required to provide for all of the service reasonably demanded of it in the district for which it is chartered. It cannot choose and serve only the sections immediately remunerative. Whenever required so to do, it should, at its own cost and expense, make all reasonable needed extensions. The law does not contemplate that the patron provide the capital to make reasonable additions or extensions. What is or is not a reasonable extension can only be determined from the facts in each particular case. On account of existing conditions an unprofitable extension may, in some instances, be required. The location, future prospects and all other conditions must be considered. There is, however, no contention in the case that the extension asked will be unprofitable. The necessity therefor is admitted.

The high prices prevailing, as well as the scarcity of labor and the difficulty in securing capital, do not alone constitute a sufficient ground to determine a proposed extension to be unreasonable. The abnormal conditions now existing should be given due considerations in compelling any particular extensions to be made at this time, but under no circumstances do we think that the burdens thereby imposed should all be passed over and placed upon the shoulders of the patrons, as respondent seeks to do in this case. Under the undisputed evidence, the conclusion of the Commission is that the extension needed to serve the complainant is a reasonable one and should be promptly made by respondent at its own cost. The amount of capital required is not large. An order requiring the extension be made will be issued accordingly.

Order.

This matter being before The Public Service Commission of the Commonwealth of Pennsylvania upon complaint and answer on file, and having been duly heard and submitted by the parties, and due investigation of the matters and things involved having been had, and the Commission having on the date hereof made and filed a report containing its findings of fact and conclusions thereon, which said report is hereby approved and made part hereof:

Now, to wit, December 10th, 1918, it is ordered: That the respondent, the Shenango Valley Electric Light Company, at its own cost, make the extension to its line and facilities necessary to provide the service applied for, within thirty days from the date of service of this order.

Report of the Commission.

ILLING, *Commissioner:*

J. F. Baxter and B. W. Thompson, complainants, allege that the espondent, the City of New Castle Water Company, refuses to exend its mains in order that they may obtain its service.

Clayton Street in New Castle extends eastwardly and westwardly, s paved, and respondent has a six-inch main therein. Fifth Street, ommencing at Clayton Street, extends northwardly at right angles herefrom. It is not paved, has a sewer laid therein connecting ith the sewer in Clayton Street. Complainants own two new ouses on the west side of Fifth Street. The South line of the Baxter lot is 136 feet, and the south line of the Thompson lot 222 eet from the north line of Clayton Street, there being one vacant lot etween complainants. J. F. Baxter occupies his new house without

any water service. The house of B. W. Thompson is vacant by reason of there being no water service therein. Both houses have bath rooms and street sprinklers, besides the other ordinary service connection. Both complainants made application to respondent for its service. Mr. Baxter paying $20.00 and Mr. Thompson $25.00 at the time of making the application. It appears this was paid to cover the cost of laying one-half inch service pipe from the street to the curb-line, and is to be returned to complainants by allowing a discount on their future water rates. To serve both complainants would require the extension of respondent's main 268 feet.

By a contract made by respondent with the City of New Castle, it is agreed, inter alia, that respondent shall extend its main at the request of private consumers when the consumption from the extended main, during the first year after any such extension is made, shall pay at the rate of ten cents for each lineal foot of such extension, and a guarantee of such amount per foot from the city or other private consumers shall require respondent to make such extension. It is also agreed that extensions for fire service shall be laid in like manner. Said contract expires January 1st, 1922, and specifies both the flat and meter rates to be charged by respondent.

Complainants are not parties to this contract, and the city and respondent are not in accord as to the legal effect of its terms. We are of opinion that the reasonableness of the extension to be made by the respondent, under its charter duties as a public utility, like the reasonableness of rates cannot be made the basis of contractual relations, but must be determined from the necessity therefor under all the facts in connection therewith.

Respondent filed a new schedule of rates, effective March 1st, 1918, increasing the rates specified in the contract about twenty-five per cent. A complaint has been filed by the city, alleging these increased rates to be excessive and unreasonable, which complaint is now pending.

By an agreement made between the parties, respondent agreed to extend its main 50 feet from its Clayton Street main. The remaining part of the main required to serve complainants was to be laid by and at their expense. This they were prepared to do at the time the sewer was laid in Fifth Street, intending to lay the same on a shoulder in the sewer trench. Respondent would not consent to the laying of the main in the sewer trench, alleging that it was not proper practice for the reason that if a break should occur the water instead of coming to the surface, and thereby giving notice of the break, would sink to the sewer and follow the same and might only be discovered after a long period. Respondent has a
818 rule to lay its main in the street eighteen feet distant from the curb line. This would not correspond with the location of the sewer in Fifth Street. Respondent offered to lay fifty feet of its main from Clayton Street, and then with the money paid by applicants, lay a service from the end of said fifty foot main to the curb line where it would place the meter to be furnished by complainants. From that point the complainants might carry the water

to their dwellings in such manner as they determined. This is not satisfactory to complainants.

It appears from the evidence that the laying of the two-inch main from Clayton Street will meet the needs of complainants as well as of other takers of water in said square. At the present time they are the only persons having dwellings fronting on Fifth Street. The cost of laying a two-inch main 268 feet in length at present high prices, according to an estimate made by respondent, would be $254.40. Respondent contends, however, that said extension should be a six-inch main for the reason that when said street is improved and built upon, the city would require a fire hydrant placed thereon, somewhere on Fifth Street, and that a six-inch main would then be needed, and it would, therefore, be necessary to duplicate a two-inch main if laid. The cost of the 268 feet of six-inch main at present high prices as estimated by respondent would be $669.33. The expenditure of this amount respondent claimed would be an unwarranted and unreasonable expenditure for it to make.

The annual amount which each of complainants would pay for water at their new residence, according to the former flat rate service, would be $18.00, and according to the new schedule $22.50. Should they desire to take service from respondent by meter, they would be required to furnish the meter at their own cost.

The only definite proposition that respondent has made is to lay, at its own cost, fifty feet of the needed 268 feet extension. It was not definitely shown whether this was to be a two or six-inch main. The locality in which complainants' two houses are erected is improving and in the near future there will be other buildings erected along Fifth Street requiring service from respondent. Under this state of facts is the extension asked for by complainants a reasonable one to be made by respondent?

The rule controlling, as this Commission has repeatedly held, is that where a public utility serves a community, there is imposed upon it the legal duty to make at its own cost all reasonable extensions. What is or is not a reasonable extension can only be determined from the facts in each case. Where a utility assumes to serve a community it should consider its obligation to serve the entire district described in its charter, and should so plan its affairs that it will be able so to do, within reasonable grounds. It cannot select and serve only the profitable patrons. Respondent has the right to collect a revenue sufficient to pay for operation, depreciation and a fair return upon its fair value. This protection and return enables it to maintain its credit and thereby secure additional capital to make reasonable extensions and additions when and as needed.

We have no hesitancy in reaching the conclusion that under all the evidence in this case the extension asked for by complainants is a reasonable one, and should be made by the respondent at its own expense. It should lay either a two-inch or six-inch main as it may itself determine. An order will issue requiring the laying of said main within sixty days from the date thereof.

Order.

This matter being before The Public Service Commission of th Commonwealth of Pennsylvania upon complaint and answer on file and having been duly heard and submitted by the parties, and du investigation of the matters and things involved having been had and the Commission having on the date hereof made and filed o record a report containing its findings of fact and conclusion thereon, which said report is hereby approved and made a par thereof;

Now, to wit, March 31, 1919, the City of New Castle Water Com pany is ordered and directed to serve the complainants with wate by laying from Clayton Street, northward on Fifth Street in th City of New Castle, for a distance of two hundred and sixty-eigh (268) feet, either a two-inch or six-inch main as it may itself de termine.

And it is further ordered: That said main shall be laid withi sixty days from the date of this order.

vs.

THE UNION HEAT AND LIGHT COMPANY.

Where the gas supply of a section or locality is rapidly diminishing, it is not discriminatory on the part of a gas company to restrict its supply to one locality.

Appearances:

James M. Galbreath,

Representing the Respondents.

Report of the Commission.

RILLING, *Commissioner:*

The respondent, the Union Heat and Light Company, was organized umder the Natural Gas Act of 1885 on November 4th, 1888, for the purpose of serving Harrisville borough and other communities in Butler and Mercer counties. Its supply was originally secured from the Keister field, so-called, near Harrisville. Later its charter was amended to permit it to supply other towns in Venango county, and it also made a contract with the United Natural Gas Company for an additional supply of gas, which, by the terms thereof, is to be distributed only to towns therein specified. Harrisville is not included. The contract further provides that the United Natural Gas Company may at any time terminate the same.

The supply of respondent at the Keister field has practically failed, and as a result respondent's patrons, at Harrisville and other places served from said source, have little or no gas. This was especially true during the severe winter of 1917-1918, and is likely again to occur. Many of the houses in Harrisville and other points served by respondent have no other means of heating, lighting or cooking, except by natural gas. To use any other fuel would involve much expense in refitting their premises.

The complaint filed alleges that the service of respondent is inadequate, that it discriminates against the residents of Harrisville, by not supplying them with the gas obtained from the United Natural Gas Company.

The complainants in this case are confronted with a condition that will, to a greater or less extent, present itself to other communities in western Pennsylvania enjoying natural gas service. Natural gas is one of Pennsylvania's greatest assets. For many years it has been supplied over an extended area for both domestic and industrial purposes. Its real value at first was little appreciated and it was wasted in a most profligate manner. All indications point to a fast decreasing supply thereof. It is apparent that it will be only by concerted effort, on the part of all who use natural gas, to curtail its consumption, that its continued supply may be extended. It is obtained by drilling wells of various depths, which can only be done, particularly at the present prevailing high prices, at considerable expense, and wells that are found to produce are generally limited in their supply both in amount and time.

The testimony adduced shows that not only the respondent but others have caused additional gas wells to be drilled in the territory within a reasonable distance of Harrisville, but without securing any supply. It is evident that the supply of natural gas in that territory is being rapidly exhausted. Respondent endeavored to secure a supply of gas for complainants by contracting for same from other gas companies, but was unable so to do.

The efforts respondent has made to secure gas in the vicinity of Harrisville, as shown by the evidence, convince us that respondent

has complied with its charter duty to secure a further supply of nat
ural gas for its patrons at Harrisville and adjacent territory and i
has been unable to do so by reason of the failure of natural gas in tha
locality. To compel it to make a more extended attempt to secur
such supply would impose upon it a greater expense than it shoul
be called upon to make.

820 The gas supplied by the United Natural Gas Company t
respondent for its patrons at Grove City and other communi
ties, is found some distance northward of Grove City. The amoun
of gas received by respondent is insufficient to serve all of its patron
at Grove City, Harrisville and other points, and is also decreasing
On account of its extent we are of opinion that by restricting th
same to its Grove City patrons, respondent is not discriminatin
against complainants.

The complaint is therefore dismissed, and an order will accord
ingly issue.

Order.

This matter being before The Public Service Commission of th
Commonwealth of Pennsylvania upon complaint and answer on file
and having been duly heard and submitted by the parties, and ful
investigation of the matters and things involved having been had
and the Commission having on the date hereof made and filed o
record a report containing its findings of fact and conclusion
thereon, which said report is hereby approved and made a par
hereof:

Now, to wit, April 15th, 1919, it is ordered: That the complain
in this case be, and the same is hereby dismissed.

Complaint Docket, No. 2576.

C. W. DEAN

vs.

ABINGTON ELECTRIC COMPANY.

The Commission can make no order requiring an electric company to render service in a territory in which it has no charter right to engage in business.

Appearances:

George Morrow,
Representing the Complainant.

F. C. Hanyen,
Representing the Respondent.

Report of the Commission.

By the COMMISSION:

The complainant, C. W. Dean, resides in West Abington Township, Lackawanna County, where he owns two dwelling houses, a barn, a garage and a blacksmith shop which he has wired and equipped for electric lights and for other household conveniences. He has constructed a pole line about one and two-tenths miles in length to the service wires of respondent company and now complains that the respondent has refused to render him service over this line.

The respondent admits some of the allegations and denies others, and offers to render service but upon terms which the complainant says would be objectionable to him and therefore prohibitive. It appears from the evidence and from an inspection of the respondent's articles of incorporation that the latter is authorized to furnish electric service in South Abington Township (out of which the borough of Clark's Summit was erected), and in the boroughs of Dalton and Waverly, in Lackawanna County, and in the borough of Factoryville, in Wyoming County, but not in West Abington Township, where complainant resides.

It further appears that for a year and a half prior to the filing of this complaint, the complainant was negotiating with respondent for electric service under circumstances substantially as follows: The respondent manufactures no electricity, but procures the current which it distributes to its patrons from the Scranton and Bingham-

ton Railway Company. Near the borough of Factoryville, o
branch of the railway company's power line extends to that borou
and beyond, while the other branch passes through the complai
ant's farm and near the buildings for which service is desired, e
tending on to Lake Winola. On this latter line the railway compa
has not strung any service wires by which it could supply the r
spondent with current, and because of the high cost of materia
labor, etc., and later receivrship, it has declined and perhaps has be
unable to do so, although it entered into some kind of an agreeme
by which it was to supply respondent with current along this line.

When it became evident that this method of reaching complai
ant was not immediately feasible, complainant and respondent ca
ried on negotiations for some other means of providing servi
Finally the complainant undertook the construction at his own e
pense, which amounted to a little more than $800.00, of a pole li
properly insulated and wired to a point where the service wi
supplying respondent on the poles of the railway company could
conveniently reached. This construction was made under a priva
contract with the respondent's superintendent of construction; t
wires, pins, cross-arms and insulators were purchased by complai
ant of respondent under circumstances which justified the complai
ant in the conclusion that when his line was completed it would
satisfactory to respondent and enable him to receive the desired el
tric service. There was some conflict of testimony with respect to
contract or contracts which were prepared by an officer of the r
spondent company, one of which contracts was signed by bo
parties, but these do not appear to be very material to the issues i
volved, except as they disclose the respective attitudes of the parti
hereto. When the complainant's line was completed, the responde
refused to render service except by transforming the current fro
2,200 volts, as it is received from the railway company, to the r
quired voltage at the junction point with complainant's line a
there metering it, whereas the complainant demands that t
822 current be transformed and metered in proximity to h
buildings. The essential differences was shown to be that
transformed one and two-tenths miles away, the line loss at such
low voltage would be so considerable that the current delivered
complainant's buildings would be inadequate to his needs either wi
respect to light or small power, whereas the line loss on 2,200 vol
over the same wires, transformed near the complainant's building
would be so inconsiderable as not to be appreciable. The responde
objected to transforming or metering off its own lines because
claims that it might thereby be subject to damages sustained b
reason of faulty or badly maintained lines over which it had no co
trol, but this was answered in part by complainant's offer at the tim
of hearing:

"The complainant agrees to maintain this line and to pay all th
expenses of furnishing the current between the junction and M
Dean's house and to indemnify the company against any loss su
tained to persons or property caused by this line; and the complai

ant also agrees to allow the respondent to use this line for the purpose of furnishing other consumers along the line, or accessible thereto, without any other cost than to refund to him such an amount as the revenue warrants over and above what the company would be entitled to until such time as the line is paid for and made the property of the electric company."

Under all the circumstances in this case, the Commission would unhesitatingly make an order requiring respondent to render this service, transforming the current from 2,200 volts to the required voltage in the vicinity of complainant's buildings, were it not for the legal obstacles which stand in the way. The respondent has no charter obligation to render service in West Abington Township, and so far as the evidence discloses has never undertaken to exercise any rights to distribute electric current therein. There is, however, no legal obstacle except of its own making to its so doing.

The equities of the case, therefore, constrain the Commission to suggest for favorable consideration by respondent, that this service to complainant be undertaken with meter and transformer located on or near complainant's premises so that current at the required voltage may be delivered to his buildings. In the event of respondent's so doing, it should be indemnified against claims for damages. It is undisputed that the revenue assured to respondent from this service would be as much as it could exact from any patrons along its own service wires for similar demands.

The complaint, however, under the law controlling the case, must be dismissed. An order will be entered accordingly.

Order.

This matter being before The Public Service Commission of the Commonwealth of Pennsylvania upon complaint and answer on file, and having been duly heard and submitted by the parties, and full investigation of the matters and things involved having been had, and the Commission having on the date hereof made and filed of record a report containing its findings of fact and conclusions thereon, which said report is hereby approved and made a part hereof;

Now, to wit, May 13, 1919, it is ordered: That the complaint in this case be, and the same is hereby dismissed.

C. H. English,
Representing the Respondent.

Order.

This matter being before The Public Service Commissioner of the Commonwealth of Pennsylvania upon complaint alleging that the respondent, the Pennsylvania Gas Company, refused to extend its gas mains to properties of the complainants situate in the City of Erie, and answer on file, and having been duly heard and submitted by the parties, and full investigation of the matters and things involved having been had, and it appearing to the Commission that the complainants had erected buildings after they had entered into an agreement with the Pennsylvania Gas Company to extend its mains so as to serve the properties of the complainants, and that said extension was delayed on account of war, wherefore the complaint in this case should be sustained on account of the unusual conditions presented, but in so doing the Commission is not to be considered as committing itself to a policy of general extension;

Now, to-wit, August 26, 1919, the respondent, the Pennsylvania Gas Company, is ordered to extend its main in Thirteenth Street, in the City of Erie, so as to furnish the complainant an adequate supply of natural gas.

H. N. FLEMING

vs.

HOME HEATING COMPANY.

The Commission ordered the Home Heating Company of Erie to extend its steam heating main so as to adequately supply the apartment house of the complainant situate at the corner of Eighth and Sassafras Streets in said city.

Appearances:

Charles P. Hewes,
Representing the Complainant.

Charles S. English,
Representing the Respondent.

Report of the Commission.

AINEY, *Chairman:*

The complainant, who is the owner of apartment buildings containing eighty-two rooms and twenty apartments, located at the corner of Eighth and Sassafras Street in the City of Erie, seeks to compel the Home Heating Company to extend its steam heating mains some 437 feet so as to serve his property.

The respondent company has mains on Sixth and Ninth Streets, parallel to Eighth; and on Peach Street, which is parallel to and one block removed (660 feet) from Sassafras Street. On Sassasfras Street, and connecting with its Sixth Street main, the company has laid a six inch pipe in the direction of complainant's property. The numbered streets are about 330 feet apart, and complainant can be served by a line on Sassafras Street connecting with the Ninth Street line, or by one on the same street running in the opposite direction, connnecting with the six inch main leading into Sixth Street.

Sassafras Street is closely built up, is in the central part of the city and in the heart of respondent's steam heating system. The complainant is within comparatively easy service access of existing mains from three different sides or points.

1919

Negotiations between the parties have been going on for some time, but without effective results, and hence the pending complaint was filed. The respondent offered testimony to show that the cost of laying the required main would be $4,900.00, and that the revenues from complainant's property would be about $1,200.00 per year, which would be supplemented by rates paid by other consumers along the proposed line. The complainant's estimate, based upon the rates imposed upon other and smaller apartments, was that his annual charge for heat consumed would be nearer $1,650.00 to which other consumer revenues would be added.

The company offered evidence to the effect that the taking on this additional service would overload its lines, and would require plant expenditures making up a total of $11,000.00, but this was disputed.

Under all the evidence in the case, we are of the opinion that respondent's obligation to render public service requires this extension to be made. It, of course, may do so by extending its mains from any convenient point if the service given is adequate. The laying of these mains should be accompanied by some assurance of continued patronage and consequent revenue, and the complainant should give, in writing to the respondent, a guaranty, or other appropriate undertaking, that the revenues from his own and other consumers, who may be attached to the proposed extension, will for a period of five years from the time service is installed be not less than $1,650.00 annually.

It appears that complainant made some offer to help the respondent finance this undertaking, and we are of the opinion that this too, should be carried out if respondent desires temporary assistance, upon the following terms: complainant to loan respondent $2,500.00 at six per cent interest, to be repaid by credit $500.00 per year in addition to annual interest, on complainant's bill.

825 An order to make the extension to the complainant's property, upon the acceptance by complainant of the conditions herein imposed, will be entered.

(Commissioner Rilling did not participate in the discussion or vote on this report.)

Order.

This matter being before The Public Service Commission of the Commonwealth of Pennsylvania upon complaint and answer on file, and having been duly heard and submitted by the parties, and full investigation of the matters and things involved having been had, and the Commission having on the date hereof made and filed of record a report containing its findings of fact and conclusions thereon, which said report is hereby approved and made a part hereof;

Now, to-wit, October 28, 1919, the respondent, the Home Heating Company, is ordered: To immediately extend its steam heating mains so as to furnish adequate service to the apartment house of the complainant, situate on the corner of Eighth and Sassafras Streets in the City of Erie, upon the acceptance by the complainant of the following conditions, to-wit:

(*a*) That the complainant give, in writing, to the respondent, a guaranty, or other appropriate undertaking, that the revenues from his own and other consumers, who may be attached to the proposed extension, will for a period of five years from the time service is installed be not less than $1,650.00 annually.

(*b*) That the complainant lend the respondent $2,500 at six per cent interest, to be repaid by crediting $500.00 per year, in addition to annual interest, on complainant's bill.

vs.

UNION HEAT AND LIGHT COMPANY.

In re Application of UNION HEAT AND LIGHT COMPANY for Approval of Amendment to Charter (A. D. 2807-1919).

Complaints were made against the proposed discontinuance by respondent of natural gas service in certain districts covered by its charter, and, at the same time, application was made by the respondent to amend its charter so as to alter its territory of production and supply for consumption by abandoning all of its franchises and charter rights necessary for supplying said districts with natural gas.

The undisputed testimony showed that respondent company's gas supply was practically exhausted; that it had no available gas producing territory and was unable to produce by drilling its territory or by purchase from other companies, the gas necessary to adequately, efficiently and safely serve the territory proposed to be abandoned; and that the only reason for not surrendering all of its franchises and charter rights, by dissolution of the corporation, was because it had contracts with other gas companies.

Report of the Commission and Orders.

REED, *Commissioner:*

The Union Heat and Light Company was incorporated in 1886, under the Natural Gas Act of May 29, 1885, P. L. 29, for the purpose of producing, dealing in, transporting, storing and supplying natural gas for heat and light; the gas to be mined for and produced in the township of Mercer, in the county of Butler and the vicinity thereof, and to be supplied to consumers in the towns of Grove City, in the county of Mercer, and Harrisville, in the county of Butler, and other boroughs, towns and places in the counties of Butler, Mercer and Venango.

In August 1919, the Company gave notice that it intended to discontinue service in certain districts which resulted in F. L. Williams, et al. filing complaints against such discontinuance; the company then gave notice to consumers that it intended to make application, pursuant to Section 5 of the Act under which it was incorporated, to alter its territory of production and supply for consumption by abandoning all of its franchises and charter rights except as to that part of the territory covered by its charter which included the boroughs of Grove City, Stoneboro and Sandy Lake, and it thereafter filed in the office of the Secretary of the Commonwealth a copy of the resolutions passed by its stockholders expressing its desire to make the proposed alteration, specifically designating the pipe lines and branches proposed to be abandoned, to become effective from and after September 25, 1919.

Included in this proposed abandoned territory are Harrisville, Butler County, Hallville, a suburb of Grove City, Mercer County, the village of Forrestville and a few consumers along its main supply line. The application for the alteration of territory was protested against by consumers in Harrisville and in Hallville. The complaints against the discontinuance of service, the application for the alteration of the territory of production and supply, and the protests against this application were heard together and will be severally considered and disposed of by this report and the order of the Commission.

The following facts are found from the undisputed testimony, viz: The Company has 35 wells tied to its gas line in the territory proposed to be abandoned; 27 of these wells, although drilled for gas are producing oil. A small quantity of gas is produced with the oil and this is turned into the gas line. The entire gas production in this territory is confined to what is referred to in the testimony as the "Keister Gas Field," where the company has 1.051 acres of land under lease. After extended drilling, explorations
890 and efforts to obtain additional gas to furnish an adequate and safe supply to the complainants and protestants, the company has been unable to amplify the supply beyond that obtained from the Keister Field. This entire production is supplied to the consumers within the territory which the company now asks leave to surrender and abandon, and it is wholly inadequate to meet the

needs of these consumers and is so far exhausted in quantity and pressure as to make its use unsafe and dangerous.

The company has two or three gas wells in the Stoneboro and Sandy Lake district, but the production is not sufficient to supply its consumers in these places, and the deficiency is made up by purchase from the Clarion Gas Company. There is no gas line connection between the Stoneboro and Sandy Lake district and what may be termed the "Keister District," which districts are separated by an intervening distance of about 12 miles. The company also has a contract with the United Natural Gas Company to sell it all the gas required to fully supply its consumers within the borough of Grove City. This contract, by its terms, expires in March 1924, and is subject to cancellation by the United Natural Gas Company whenever its supply of gas is required to meet the demands of its own customers. The gas supplied to consumers in Grove City is purchased from the United Natural Gas Company and the New Wilmington Gas Company. The latter company has a very limited supply of gas, and the quantity which the Union Heat and Light Company can obtain from it could not be advantageously used for any other purpose than that for which it is now used in supplementing the supply obtained from the United Natural Gas Company for consumption in Grove City. On application the United Natural Gas Company has refused to sell any additional gas to be used outside the limits of the borough of Grove City, and the evidence conclusively establishes that the Union Heat and Light Company is unable to obtain by drilling its chartered territory, or by purchase, the necessary gas to adequately and safely supply consumers within the territory proposed to be abandoned.

The present supply to these consumers is not only inadequate to meet the requirements, but has become so reduced in quantity and pressure as to make it unsafe for use for any purpose. The diminished flow and pressure will not admit of any regulation, and in order to furnish the gas to the consumers it is necessary to allow it to flow direct from the wells without any regulation whatsoever. Moreover, if there is any very general use made of the gas by consumers the quantity and pressure are so reduced that lights go out and no gas can be obtained for either heat or light. This creates an unsafe and dangerous condition, and is liable to result in asphyxiations or explosions causing loss of life and property, if some of the consumers on the line turn off the gas when their lights go out and others neglect to do so.

The only use that can be made of the present gas supply is for light and cooking, and the supply is not sufficient for these purposes. For cooking it has to be supplemented with some other combustible material. The cost to the company to furnish this insufficient and irregular supply of gas to these consumers greatly exceeds the revenue received from it. It is not the purpose of the company in surrendering its franchises and charter rights in this territory to make any other commercial use of the gas now produced therein, and the only reason for not surrendering all its franchises and charter rights, by a dissolution of the corporation, is because it has

contracts with other gas companies whereby it can continue for the present to supply its consumers in the boroughs of Grove City, Stoneboro and Sandy Lake with gas.

In view of the undisputed testimony that the company's gas supply is practically exhausted; that it has no available gas producing territory and is unable to produce by drilling its territory, or by purchase from other companies, the gas necessary to adequately, efficiently and safely serve the territory proposed to be abandoned, there appears to be no other alternative than to dismiss the complaints against the discontinuance of service and to grant approval of its application to alter its territory of production and supply as prayed for, and it will be accordingly so ordered.

Order.

These matters being before The Public Service Commission of the Commonwealth of Pennsylvania upon complaints and answers on file, and having been duly heard and submitted by the parties, and full investigation of the matters and things involved having been had, and the Commission having on the date hereof made and filed of record a report containing its findings of fact and conclusions thereon, which said report is hereby approved and made a part hereof;

831 Now, to-wit, November 25, 1919, it is ordered: That the complaints in these cases be, and the same are hereby dismissed.

Report of the Commission.

By the COMMISSION:

This is an application for the issuance of a certificate of public convenience evidencing the Commission's approval of a charter and the beginning of the exercise of the rights thereunder, in territory for which another and protesting company has secured such rights.

The Thornbury Township Electric Company was incorporated in February, 1915, and obtained a certificate of public convenience to render electric service in Thornbury Township, Delaware County. This corporation and its rights were in due form of law by merger, with the approval of the Commission, incorporated into the Delaware County Electric Company in August, 1916.

With the exception of stringing a few short spans of wire, entirely disconnected from any electric circuits, the Delaware County Electric Company apparently made no serious attempt to exercise its acquired rights or to render to the public the service which under the charter of its constituent company, the Thornbury Township Electric Company, it was obligated to perform, until about the period the Glen Mills Electric Company presented the pending application for approval of its charter.

In other words, the Thornbury Township Electric Company or the Delaware County Electric Company have permitted a period of over four years to elapse without making any substantial efforts to function in public service in the territory in question. The testimony discloses that not until notice that a competing company was prepared to enter the field did the protestant company take on activity to comply with its public obligations. Such a situation, under anything like normal or usual circumstances, should not and could not be tolerated. It would be the plain duty of this Commission to grant public relief, either by giving another company the right to enter into the territory competitively, or by compelling the recreant company by appropriate order to extend its service.

Certificates of public convenience are not granted by this Commission in order that legal rights may be acquired by corporate interests and then held for the purpose of exploitation or development at a later period. Certificates are granted only if and when public convenience or necessity is shown to demand their issuance. When issued, it follows as a matter of good faith and legal obligation that immediate efforts should be put forth to care for the public requirements. If such obligations are not fulfilled, it follows that the Commission may, in a proper case, permit the territory to be served by a competing company.

In this case the Delaware County Electric Company, apart from general disavowal of neglect in the exercise of its rights, sets up the claim that it was prevented by war conditions and the demands upon its equipment for war work, from extending its service into Thornbury Township. There is sufficient in the testimony to lead the Commission, if not to absolve the protestant entirely, at least to give it

the benefit of the doubt and to afford it a further opportunity to exercise its rights, now that war priority demands no longer prevail.

In so concluding, we are placing emphasis upon the fact that
834 the non-competitive rule is one that ought not to be lightly set aside, because it is a rule of regulatory policy inuring to the benefit of the public and the utility. Competition in public service, with its attendant evils of duplication of plant investment, the burden of which ultimately falls upon the rate payers, is of course to be avoided.

In the circumstances the Commission is unable to find, upon a consideration of all the evidence that the approval of the pending application is necessary or proper for the service, accommodation, convenience or safety of the public, and it is therefore refused.

Order.

This matter being before The Public Service Commission of the Commonwealth of Pennsylvania upon application and protest on file, and having been duly heard and submitted by the parties, and full investigation of the matters and things involved having been had, and the Commission having on the date hereof made and filed of record a report containing its findings of fact and conclusions thereon, which said report is hereby approved and made a part hereof;

Now, to-wit, February 3, 1920, it is ordered: That the prayer of the petition for a Certificate of Public Convenience be, and the same is hereby refused and the application dismissed.

THE PUBLIC SERVICE COMMISSION OF THE COMMONWEALTH OF PENNSYLVANIA.
MILTON J. BRECHT,
Acting Chairman.

Acting Secretary.

835 No. 778.

The Public Service Commission of the Commonwealth of Pennsylvania.

Complaint Docket, No. 3147.

AUSTIN BOROUGH COUNCIL

vs.

POTTER GAS COMPANY.

Natural Gas Companies—Service—Indequacy of Pressure and Supply.

Upon a complaint alleging insufficient supply of the natural gas furnished to complaining borough, due to the small size distribution pipes installed by respondent and the inadequate pressure caused thereby, the Commission found that owing to the general exhaustion of the gas fields the replacing of the entire pipe line of respondent would be unwarranted, but ordered certain specific replacements to be made.

Decided April 20, 1920.

S. C. Bayless and Dr. F. W. Orwan for Borough Council.
E. B. Reeser for Respondent.

Report of the Commission.

BRECHT, *Commissioner:*

This complaint alleges that the respondent's supply of natural gas to the public in the borough of Austin, Potter county, has been entirely inadequate for the purpose of heating and cooking in cold weather; that due to the proper service furnished, the public schools had to be dismissed on certain days in November and December last; and that in many of the homes the occupants have been unable to maintain a temperature of 60 degrees in extreme winter weather. As a result of the poor service it is further alleged that a situation exists in Austin that is detrimental to the health of its citizens. The insufficient supply of gas complainants contend is due to inadequate pressure resulting from the failure of the company to lay 6-inch distributing pipes as required under a borough ordinance, and the replacement of a 5⅝-inch supply pipe leading from the gas fields by a 3-inch line.

In its answer respondent admitted that its supply of gas in Austin has not been adequate to meet all demands of the service during certain hours of certain days in the month of December, 1919, but attributed such inadequacy in Austin and other places to a reduced field supply. It averred that it has not extended its distributing

lines into any additional communities since 1908, and that it has not entered into new contracts for service recently except such as it was required to make in compliance with its duties as a public service company. It maintains that the Austin situation is due to a diminution in the supply of natural gas in the fields, and not to any neglect or negligence in the rendition of respondent's service.

The borough of Austin has a population of approximately 1,450, and 348 service connections with the plant of respondent. It is located about 12 miles from the natural gas fields in the vicinity of Roulette, and is supplied with current through a 3-inch pipe from a compressor station at the latter point. The line into Austin is a branch of a main artery leading into respondent's primary trunk line which extends from the borough of Shingle House to Elmira, New York. The latter with its chain of feeders and laterals to Pennsylvania and New York towns constitutes the plant system of the Potter Gas Company. In the borough of Austin the supply is distributed from two regulators through a series of 5-inch, 3-inch and 2-inch pipes gridironed together into one system of delivery. The service pipes owned by the consumers are mostly 1-inch and nearly all house piping is ⅜ inch.

It appears that respondent began doing business in Austin in the latter part of 1899, obtaining its supply through a 3-inch pipe from gas fields in McKean county by way of Coudersport. According to the record the original company operating under a franchise in the borough of Austin was the Consumers Gas Company whose rights and privileges were ultimately absorbed by the respondent. Under an ordinance passed in June, 1901, that company was granted the right to enter upon the streets of Austin for the purpose of supplying natural gas to the public on condition that the company's mains from the wells to the borough limits shall not be less than
836 4-inch pipes, and upon the principal streets of the borough not less than 6-inch pipes laid 12 inches underground. In due course of time a 5⅝-inch supply main was installed from the gas fields which has since been practically all replaced by respondent with a 3-inch line and a compressor station at Roulette. There were no 6-inch pipes laid in the borough as called for in the ordinance.

From an inspection of respondent's pressure records at Austin it has been ascertained that during the past winter of 1919-1920, there were nineteen days at least when the pressure was insufficient to maintain a proper temperature in the homes or provide adequate heat for the purpose of cooking. In the winter of 1916-1917 the pressure as found recorded was sufficient to provide adequate service. In 1917-1918 slight trouble occurred in January but of short duration, while in 1918-1919 no periods of low pressure appear to have occurred. It was conceded on behalf of complainant that when the weather is not very cold the supply of gas seems to be sufficient to answer all essential needs.

The pressure gauge of the company upon which the records are made is located at its office in the center of the town and was found in a test check made upon it to be accurate in its registration. Dur-

ing the 19 days of low pressure at Austin indicated above, the records for Galeton a town similarly situated and supplied by respondent show a pressure as low as Austin and on some of the days even lower. But at Port Allegany and Coudersport both supplied through larger mains but located closer to the source of supply the pressure for the same intermittent period was sufficiently high to give satisfactory service.

The witnesses for complainant maintained that the shortage in the gas furnished at Austin is due chiefly to the small size pipes installed by respondent in its supply and distribution system for that community. Respondent admits an inadequate supply at certain stated times but ascribes it to the general depletion or exhaustion of the gas fields, contending that the pipes now laid are large enough to carry an adequate flow when there is a sufficient volume of gas obtainable from the wells. The insufficient supply of gas at Austin during periods of extremely cold weather when Coudersport with a 5⅝-inch feeding main experienced no trouble, would appear to indicate quite clearly that the 3-inch line supplying complainant is not large enough to carry the volume of gas required a distance of approximately 12 miles when a low temperature is prevailing. But the question of replacing the existing line by a larger one involving an outlay especially under present day prices of many thousands of dollars, would be difficult to justify in this instance in view of the comparatively few days of the year during which a larger main would be found necesary, more especially when considered from the angle of what is generally regarded as a depletion of the gas fields, and the consequent uncertainty as to the future of the natural gas situation.

It would appear from the evidence that in a situation like the one at Austin where the trouble experienced is limited at the utmost to a comparatively few days in the year, the patron through a proper cooperative spirit could accomplish much to reduce to a negligible quantity the occasional inconvenience which may arise. This could be brought about in large measure if the consumer were to provide himself with proper auxiliary heating appliances to be utilized during days of extreme winter weather.

It is incumbent upon all patrons in natural gas territory in these days of conservation and economy campaigns encouraged in more or less all communities affected because of a gradually diminishing supply of gas, to recognize the importance of carrying a certain share of the burden imposed under the changed and changing conditions controlling the supply and consumption of this natural commodity. The extravagant and wasteful habits bred as it were in the bone through long years of an unlimited supply of this gas must give way to an era of prudent and cooperative economy in its use and distribution.

In the present instance it was ascertained from a field inspection made by an engineer of the Commission that the fixtures of consumers are typical of those usually found in natural gas territories. The service lines are nearly all ⅜ inch and therefore too small to

serve their purpose adequately. The cook stoves and heaters are largely neglected, the air mixtures being incorrectly adjusted causing wasteful red flames to predominate. The range burner flames are generally too long and lick the base of cooking utensils instead of being so adjusted that the flame tips will just touch the vessel about being heated. In many of the converted ranges and heaters the draft from the chimney sweeps the flame away from the object to be heated.

In view of the tense situation now obtaining throughout natural gas territory by the apparent shrinkage in the volume of gas obtainable, it would appear to the Commission under the combination of circumstances here present, which it is safe to assume are duplicated in other communities served by the same company, that the respondent in the interest of protecting its own property and promoting the efficiency of its public service, should inaugurate and encourage a campaign of education in the way of suggestions and helpful advice which would look towards the use of more economic heating and cooking appliances by the consumer, and the installation of service lines and house piping better suited for their purposes. This could be done in various ways and at such opportune times as the
837 season may require either through one of its engineers or its local superintendent under some system of inspection and regulation at a modicum of additional expense.

Under all the circumstances as they appear in the record and evidence, supplemented by supporting data discovered from a survey of the local situation by its expert, the Commission finds that as a partial remedy to increase and equalize the pressure at points of consumption, certain 2-inch pipes and one section of 3-inch pipe used as connecting links in respondent's distribution system at Austin should be replaced by larger pipe. An order will issue directing the Potter Gas Company, respondent, to replace in its distribution system in the borough of Austin:

(*a*) The 2-inch lines from the 3-inch supply line to its 3-inch regulators with 3-inch lines.

(*b*) The 3-inch section of the low pressure line on Main Street with a section of 5-inch line.

(*c*) The 2-inch low pressure line on Elliott Street with a 3-inch line.

(*d*) The 2-inch low pressure line at the Swedish Lutheran Church with a 3-inch line.

With respect to the prayer for relief in other features the complaint is dismissed with the suggestion that respondent put into active effect some plan of education or supervision that will show the consumer the advantages that would accrue from the installation of a better system of pipage on his premises and from having a more modern adjustment made in his equipment for heating and cooking. It is believed where the patron is approached upon this matter in the proper spirit and shown how his gas troubles may be materially re-

ıced, he will be found in a receptive state of mind and make some fort to co-operate. The Commission is fully persuaded that a reprocal attitude of this kind must ultimately be established between e utility and the user before a workable solution will be found of e problem now rapidly developing in the natural gas situation roughout the country.

Order.

This matter being before The Public Service Commission of the ommonwealth of Pennsylvania upon complaint and answer on file, d having been duly heard and submitted by the parties and full vestigation of the matters and things involved having been had, d the Commission having on the date hereof made and filed of cord a report containing its findings of fact and conclusions ereon, which said report is hereby approved and made part hereof;

Now to wit, April 20, 1920, it is ordered: That the Potter Gas ompany, respondent, on or before October 1, 1920, make the folwing pipe line replacements in its distribution system in the orough of Austin:

(*a*) The 2-inch lines from the 3-inch supply line to its 3-inch egulators with 3-inch lines.

(*b*) The 3-inch section of the low pressure line on Main Street ith a Section of 5-inch line.

(*c*) The 2-inch low pressure line on Elliott Street with a 3-inch ne.

(*d*) The 2-inch low pressure line at the Swedish Lutheran hurch with a 3-inch line.

It is further ordered: That the complaint in so far as it relates all other matters be, and the same is hereby dismissed.

IN THE

Supreme Court of the United States

OCTOBER TERM, 1921.

Number 17—Original

COMMONWEALTH OF PENNSYLVANIA, Complainant

vs.

STATE OF WEST VIRGINIA, Defendant.

Complainant's Digest of Evidence

I.

DESCRIPTION OF WITNESSES AS EXPERTS, THEIR EXPERIENCE, THEIR OPPORTUNITIES FOR OBTAINING INFORMATION RELATING TO THE NATURAL GAS INDUSTRY, &c., AND THE CONTRAST IN THESE RESPECTS OF THE WITNESSES FOR COMPLAINANTS AND THE WITNESSES FOR DEFENDANT.

Witnesses Produced by Plaintiffs.

HARRY A. QUAY.

(Pages 4-5):

General Manager of The Manufacturers Light & Heat Company (a Pennsylvania corporation). Has been in the natural gas business for about 25 years. Has served as Assistant General Manager, District Manager, General Foreman and Chief Inspector for numerous gas companies in Pennsylvania, Ohio and West Virginia, to-wit, The Oil City Fuel Supply Company, The East Ohio Gas Company, Irriquois Natural Gas Company, Peoples Natural Gas Company, Northwestern Natural Gas Company, River Natural Gas Company, Mountain State Gas Company, Hope Natural Gas Company, Clarksburg Light & Heat Company, Keener Oil & Gas Company and South Penn Oil Company.

T. O. SULLIVAN.

(Pages 183-184):

Vice-President and General Manager of the Hope Natural Gas Company. Connected with the natural gas

business for about 35 years. Had been General Manager of The Manufacturers Light & Heat Company for about eight years; has been Superintendent of the Peoples Natural Gas Company, in Pittsburgh, and has served in various capacities for the Central Kentucky Natural Gas Company, the Reserve Gas Company, the United Natural Gas Company and the Buffalo Natural Gas & Fuel Company.

JOHN B. CORRIN.

(Pages 316-317):

Assistant Manager and Vice President of the Hope Natural Gas Company, Manager of the Reserve Gas Company, Vice-President and Manager of the Connecting Gas Company, Vice-President and Manager of the River Gas Company, Vice-President of the Clarksburg Light & Heat Company. Has been in the oil and natural gas business for about 30 years.

H. A. WALLACE.

(Pages 358-359):

General Manager of the United Fuel Gas Company, President of the Cabin Creek Gas Company. Has had 30 years' experience in the oil and gas business. Has served in various capacities for the Hope Natural Gas Company and has been Division Superintendent for said Company in West Virginia.

JOHN B. TONKIN.

(Page 416):

Vice-President and General Manager of the Peoples Natural Gas Company. Has been in the natural

gas business for 26 years. For 16 years was the Treasurer of the Hope Natural Gas Company, the Reserve Gas Company, the Connecting Gas Company, the River Gas Company and the Marion Oil Company. Prior to that was the General Bookkeeper of the East Ohio Gas Company and the Hope Natural Gas Company, and prior to that was in the purchasing department and in field work for the River Gas Company.

W. W. FREEMAN.

(Page 453):

President of the Union Gas & Electric Company of Cincinnati, Vice-President of the Columbia Gas & Electric Company and Vice-President and Director of the Cincinnati Gas Transportation Company.

JUDGE JAMES H. REED.

(Page 483):

Senior Vice-President of the Philadelphia Company.

J. E. ANGLE.

(Pages 533-534):

General Superintendent of the Fayette County Gas Company. Has been in the gas industry for 24 years. Prior to being connected with the Fayette County Gas Company had been connected with the Corning Natural Gas Company, in Ohio, and with the Youngstown Fuel Supply Company, in Pennsylvania.

MARTIN B. DALY.

(Pages 563-564):

President of the East Ohio Gas Company. Has served as President and General Manager, and in an executive capacity has participated in the general management of all the affairs of said Company. Has been individually connected with the natural gas business in all its aspects for 37 years.

T. J. JONES.

(Pages 629-630):

Manager of the natural gas properties of the Pure Oil Company, which includes Columbus, Dayton and Springfield. From 1913 has been connected with gas companies in the vicinity of Columbus, Ohio. From 1898 to 1913 engaged in the artificial and manufactured gas business.

L. B. DENNING.

(Pages 650-651):

Vice-President and Director of the Ohio Fuel Supply Company. Actively identified with this Company since its organization in 1902. From 1902 to 1910 counsel of the Southern District of Ohio for said Company. 1910 General Counsel and Director. 1918 Assistant to President and Secretary of Company and made Director of the Company. In June, 1918, Vice-President of the Company.

J. W. McMAHON.

(Pages 716-717):

Manager of the Northwestern Ohio Natural Gas Company. Identified with same since 1902. Has had experience in the oil and gas business since 1895. Has worked as fuel agent in Ohio and Indiana and in 1902 became Manager of the Northwestern Ohio Natural Gas Company located at Toledo.

G. F. BATCHELOR.

(Page 741):

President of the Natural Gas Company of West Virginia since 1915. Connected with said Company for 33 years. Acted as Secretary and Treasurer for 12 years.

EUGENE B. WHITCOMB.

(Page 747):

President of the Union Natural Gas Corporation. Has had experience in the natural gas industry in Ohio and Pennsylvania for about 45 years. Has been Secretary and Treasurer and Assistant to the General Manager of the Manufacturers Gas Company, Warren and Chautauqua Gas Company, the Northern Oil Company and the Southern Oil Company. From 1902 to 1907 Secretary and Treasurer of the Union Natural Gas Company. From 1907 to 1917 General Manager and Vice-President of the Union Natural Gas Company. In 1917 made President of said Company.

J. K. ANDERSON.

(Pages 808-811 Inc.):

Consulting Engineer and senior member of the firm of Anderson & Taylor, Consulting Engineers, at Charleston, W. Va. Has acted as Consulting Engineer for the Public Service Commission of West Virginia and has had experience in that connection in the matter of the valuation of natural gas utilities. From July, 1913, to October, 1919, acted as Chief Engineer of the Public Service Commission of West Virginia and spent considerable time in matters concerning natural gas utilities. Has had considerable experience in the production of natural gas and has a general knowledge of the gas industry, especially in West Virginia. Is a member of the American Institute of Mining and Metallurgical Engineers, American Society of Civil Engineers, American Association of Engineers and the West Virginia Engineers Association, being President of the latter association. Also a member of the Natural Gas Association of America. Has a particular knowledge of the conditions obtaining in some of the large gas utilities and some of the large industrial consumers of those utilities in West Virginia.

SAMUEL S. WYER.

(Pages 860-865, Inc.):

Consulting Engineer of Columbus, Ohio. An expert on gas questions. Member of American Society of Mechanical Engineers, American Institute of Mining Engineers and American Association for Advancement of Science, and of the American Gas Association. During

the war was in charge of the natural gas affairs of the United States Fuel Administration. All his professional life has been devoted to natural gas problems, since graduating from the College of Engineering of Ohio State University in 1903. Author of numerous treatises on the subject of natural gas and kindred subjects, as per the following:

A textbook on Producer Gas and Gas Producers; a pamphlet on Rate Regulation and Electric power; a treatise on Regulation, Valuation and Depreciation of Public Utilities; a pamphlet on Depreciation of Natural Gas Wells; a pamphlet on Natural Gas Service; compilation of all of the leading cases relating to the use of gas compressors; paper before the American Institute of Mining Engineers on "Is it Feasible to Make Common Carriers of Natural Gas Transmission Lines?"; paper before the American Institute of Mining Engineers on "Development of the Law Relating to the use of Gas Compressors in Natural Gas Production;" paper before the American Institute of Mining Engineers on "Effect and Necessary Use of Gas Compressors in Natural Gas Production;" paper before the American Society of Mechanical Engineers (jointly with Prof. Robert F. Earhart, Professor of Physics, Ohio State University, Columbus, Ohio), on "Deviation of Natural Gas from Boyles' Law;" paper on "Criteria for Making Public Utility Service Extensions," published in Case and Comment; paper on "The Reasonableness and legal Right of the Minimum Charge in Public Utility Service;" paper before the American Institute of Mining Engineers on "Principles of Natural Gas Leasehold Valuation;" paper on "Electrolysis Damages from Stray Electric Currents from Single Trolley Elec-

tric Railways," published in Case and Comment; paper on "Effect of Gas Pressure on Natural Gas Cooking Operations in the Home," (jointly with Edna Noble White and Grace Linder, of the Department of Home Economics, Ohio State University), —this was published as Ohio State University Bulletin No. 28; Digest of all the publication of the Bureau of Standards on Electrolysis of Undergraund Structures, caused by the Disintegrating Action of Stray Electric Currents from Electric Railways; paper before the Natural Gas Association of America, on "Elimination of Discrimination in Public Utility Rates by Readiness-to-Serve Charges;" paper on "Natural Gas, Its Production, Service and Conservation," published as Part 7, Bulletin 102, of the Smithsonian Institution, Washington, D. C.; pamphlet on "Use and Conservation of Natural Gas," published by the United States Fuel Administration; paper on "Fire Hazard due to Stray Electric Currents from Single Trolley Electric Railays," published by National Fire Protection Association; Compilation of Cases Relating ot Off-Set Well Drilling; pamphlet on "Waste and Correct Use of Natural Gas in the Home," published as Technical Paper No. 257, United States Bureau of Mines; Catechism on Natural Gas, prepared especially for those teaching conservation of natural gas, published and printed as part of the natural gas conservation program of the United States Bureau of Mines.

Has studied production, transportation and distribution of natural gas and has made an examination of the plants of natural gas companies in practically every section of the United States.

At the present time is Consulting Engineer for the United States Bureau of Mines, is in charge of the natural gas conservation activities of this Bureau all over the United States, and is working with various other Federal departments on important gas questions. Has been employed from time to time as natural gas expert on the production, transportation and distribution of natural gas to the Federal Government by various States, by a number of Public Service Commissions and by most of the larger natural gas companies of the United States and Canada.

EDWIN ROBINSON.

(Page 1372):

Secretary of the West Virginia Oil and Natural Gas Association since it was organized in 1915. The purpose of this organization is to gather information of the oil and gas industry of the State, and gather statistics that is vital to the oil and gas industry in West Virginia. There are about 2,000 members in this organization, producers of oil and gas, in the State of West Virginia.

ROBERT CUMMINS.

(Page 1444):

Secretary and member of the Board of Directors of and counsel for the South Penn Oil Company. Has kept these official positions for about nineteen years.

Compare foregoing witnesses with those of Defendant as to experience and knowledge of the Gas Industry.

DEFENDANT'S WITNESSES.

H. E. NEASE.

(Pages 976, 977, 978,979,980) :

Has been Chief Statistician of the Public Service Commission of West Virginia for the past seven years. Prior to that time was connected with the office of the State Tax Commissioner for eight years, making a total of 15 years in which he has been connected with the executive departments of the State of West Virginia, i. e., the Board of Public Works or the Public Service Commission. As State Tax Commissioner had charge of the reports made by the public utilities of the State for tax purposes, all public utilities being required to report to the Board of Public Works under the laws of West Virginia. As Statistician is in charge of the Commission's Public Service Department of Statistics and Accounts. Is frequently called upon in an official capacity to make investigations in connection with the rates and service of public service corporations, which investigations involve examination of the books and records of the utilities with respect to their financial operations. Prior to service with the West Virginia Public Service Commission and the Tax Commission was engaged in the lumber manufacturing business as a bookkeeper and assistant manager, and prior to that was a school teacher. Has had no practical experience in the oil and gas business, other than that stated. For 15 years has sat in an advisory capacity with the Board of Public Works. Has never made any personal investigation of gas companies except those that had rate cases pending. In case of appeals from assessments by the Board of Public Works has had occasion to make some further investigations.

CHARLES E. KREBS.

(Pages 1083 to 1086):

By profession, General Engineer and Geologist. In 1909 was appointed as assistant state geologist to Dr. I. C. White of the West Virginia Geological Survey; was assistant to Dr. White until 1915. Work here consisted in gathering data for detailed geological reports that were published by the West Virginia Geological Survey under the direction of Dr. I. C. White. From 1909 to 1915 his work took him over a great part of the State of West Virginia. In 1906 took up general geological work leaving the West Virginia Geological Survey, and during 1917 worked in West Virginia, Ohio and some in Kentucky, in which considerable work was done in studying the general structure of oil and gas for different operating companies. In 1918 continued on the same work in West Virginia, Ohio and Kentucky. In 1919 worked along the same line in Ohio, West Virginia, Kentucky, Texas and Louisiana. In 1920 still continued the same. During the past year has done work in West Virginia, Ohio, Kentucky, Texas, Louisiana, Mississippi and a little work in Florida. The data collected in the years 1911 to 1916 related to the study of the general structure of the different counties of West Virginia, making structural maps on which were indicated the anticlines and synclines, and in gathering data for oil and gas wells, their records, elevations, studying the sands where they could get production. His work with the West Virginia Survey has brought him into actual personal experience with and examination of the minerals of West Virginia, including oil and gas.

J. S. LAKIN.

(Page 1138):

Has been a member of the State Board of Control of West Virginia since June 30, 1909. The State Board of Control has charge of the financial and business affairs of the State educational insitutions, and has full power to govern, manage and control all the penal, charitable and correctional institutions. It has charge of the property of the State owned away from the capitol. It has charge of the financial and business affairs of any officer, board or agent of the State of West Virginia not having offices at the capitol. It has charge of the State insurance.

JOHN J. CORNWELL.

(Page 1193):

Governor of the State of West Virginia. Governor since March 4th, 1917.

B. F. ROBINSON.

(Page 1202):

Resides in Clarksburg, West Virginia. Has resided there all his life. Is President of the Clarksburg Light & Heat Company. Has been connected with that Company since its organization in 1904. Prior to the organization of the Clarksburg Light & Heat Company was an officer, for four years, in the West Fork Oil and Gas Company, a local organization. Is a stockholder in the Clarksburg Light & Heat Company.

W. C. ALLMAN.

(Page 1214):

Resides at Weston, West Virginia. Was Clerk of the Circuit Court of Lewis County for six years, term having expired January 1st, 1921.

I. WADE COFFMAN.

(Page 1216):

Resides in Clarksburg, West Virginia. Clerk of the Circuit Court of Harrison County for the past 12 years.

R. T. CUNNINGHAM.

(Page 1217):

Age 46. Secretary and Treasurer of the Monongah Glass Company, located at Fairmont. Has been interested in the glass business since 1910 and an officer of that Company, devoting all his time to it since 1914. Prior to 1914, about 1894, was employed in the coal business, with the Fairmont Coal Company, Consolidation Coal Company and kindred companies.

CHARLES M. SNAITH.

(Page 1251):

Has been engaged in the production of oil and gas for about 10 years. Prior to that time was in the business of drilling oil and gas wells for about a period of 25 to 28 years. Has drilled wells in Lewis, Gilmer and Braxton Counties, West Virginia, for the Hope Natural Gas Company, South Penn Oil Company, Crude

Oil Company and several independent producers. Together with other associates is at present drilling and producing principally in Lewis County, also in Braxton and Gilmer Counties. Together with his associates has a lease of 1378 acres of gas territory in Lewis, Braxton and Gilmer Counties. Is also producing gas from the Smith Farm of about 200 acres, two and a half miles from Weston in Lewis County. Also producing oil from three farms on Sand Fork in Gilmer County, the acreage there being about 268 acres. As a result of experience gained in drilling for others and in operating on his own behalf, has had occasion to look for leases and is more or less familiar with the oil and gas territory of Lewis, Braxton and Gilmer Counties.

CHARLES A. SHORT.

(Page 1274):

Has resided within four miles of Shinnston all his life. At present is a contractor and dealer in lumber and builders' supplies. Since October 2nd, 1902, has been interested in the development and furnishing of gas to the town of Shinnston. The Home Petroleum Gas Company, with which he is connected, has an acreage of about 250 acres in Eagle District, Harrison County, about four miles from Shinnston, and 40 acres at the edge of Marion County, two miles beyond the former acreage; 32 acres about two miles North of Shinnston. Is familiar with the section surrounding Shinnston with respect to oil and gas territory and the development of it. Is at present the Vice President of the Home Petroleum Gas Company and a large stockholder in said Company.

E. D. LEWIS.

(Page 1297) :

A member of the Public Service Commission of West Virginia since June 1st, 1919.

GEORGE W. WILSON.

(Page 1298) :

A resident of Weston, West Virginia. Associated in business with Charles M. Snaith. Has been in the gas business for about 10 years. Prior to that time was in the oil business and real estate business. Had no experience in connection with the production of natural gas until within the last 10 years. Is interested with Mr. Snaith and others in the 1378-acre lease and a little gas well near Weston, in Lewis County.

VANCE L. HORNER.

(Page 1304) :

Resident of Lumberport, West Virginia. Has lived in Harrison County, West Virginia, all his life. Has been interested in the oil and gas business since 1907. Is connected with the Lumberport Gas Company as Vice President, and President of the Shinnston Gas Company and President and Manager of the Eagle District Gas Company and Manager of the Horner Gas Supply Company and has some outside wells in partnership with Shaffner Brothers.

PARKE BOWSER.

(Page 1324):

Resident of Parkersburg, West Virginia, Wood County. Has been engaged in the oil and gas business all his life. Began work at the age of 14 handling wells, and as an owner at the age of 15 or 16. Started in pumping and roust-about work. Worked in the oil and gas fields in Pennsylvania, West Virginia and California for about 20 years. At the present time is engaged in pumping and roust-about work and general work for the different companies and some office work, foreman and superintendent and as owner. Worked first in the oil business as a pumper. In Ohio and in California worked in drilling wells. Then worked for the South Penn Oil Company in Lewis County, West Virginia; did some lease work, office work and foreman work for this Company in the years 1901, 1902 and 1903. Then with the Guarantee Oil Company in Calhoun County, as foreman. Following that looked after his own interests in oil and gas from about 1904 up to the present time. Has worked for others or operated on his own behalf in Lewis, Calhoun, Ritchie, Gilmer and Wood Counties. At the present time is operating in Calhoun, Ritchie and Gilmer Counties, where he has about 70 oil and gas wells. All of these wells produce some gas, but about 15 produce gas alone.

F. C. DEVERICKS.

(Page 1340):

Is a resident of Clarksburg, Harrison County, West Virginia. Is a native of West Virginia. Has lived practically all his life in the vicinity of Clarksburg. At

present is engaged in producing gas. His experience in the oil and gas industry dates back to 1897. Was first employed by the South Penn Oil Company, in Doddridge County, as a grader on the roads. Next was employed by the Carter Oil Company, pumping, in Doddridge County, Then went to dressing tools. Later worked with the Eastern Oil Company. Later came to Clarksburg and began to look up leases. Has been engaged in the real estate business and the taking of leases in connection with various parties in Clarksburg for about 16 years. Has been interested in the development of gas territory in Doddridge County, and has been engaged in the production of gas in Harrison, Ritchie and Doddridge Counties.

II.

HISTORICAL AND DESCRIPTIVE OUTLINE OF DEVELOPMENTS OF AND OPERATING METHODS EMPLOYED IN NATURAL GAS INDUSTRY. THE DISCOVERY OF NATURAL GAS AND DEVELOPMENT OF NATURAL GAS FIELDS WERE INCIDENT TO OIL DEVELOPMENT AND AT FIRST GAS WAS OF NO VALUE THERE BEING NO MARKET FOR THE SAME.

HARRY A. QUAY.

Pages 10 to 12; 18 to 20; 23, 24; 126, 127; 128, 129, and 153 to 155.

T. O. SULLIVAN.

Pages 193, 194; 196 to 203; 249 to 253; cross-examination; 284, 285, 314.

JOHN B. CORRIN.

Pages 329, 330, 345, 346—cross-examination.

MARTIN B. DALY.

Pages 579, 584:

L. B. DENNING.

Page 683.

J. K. ANDERSON.

Pages 818, 827.

The testimony of the above witnesses is summarized as follows:

The only way to determine the presence of gas in any particular field or territory is by drilling a hole down into the various gas bearing sands. No other way has been discovered by the trade. Natural gas is found in a comparatively small number of fields, all being small, in Pennsylvania, Ohio and West Virginia.

How long the supply of gas from a particular field or territory will last is indefinite, impossible of determination, but some indication may be furnished by the ratio of decrease in rock pressure. By "rock pressure" is meant the pressure under which the gas is confined in the gas bearing sands. When these sands are tapped by the drill in the well the natural tendency of gas to expand drives the gas to the mouth of the well.

As the supply in a particular sand becomes depleted, the pressure decreases accordingly, owing to the fact that a lesser amount of gas is confined in a given space.

Rock pressure indications are by no means infallible, and wells which have started off with a high pressure have produced less gas than wells which when first drilled showed a low rock pressure. Sometimes the hardness of the sand has some effect upon pressure.

The discovery of gas in any field does not necessarily prove that the drilling of more wells in the same field will result in finding more gas. It is impracticable to shut in wells for the purpose of conserving one's gas since the operations on the adjoining land, will drain the entire gas bearing sand, including that extending

under the land of others as well. Sometimes also rock pressure decreases in a well which has been shut in when there are no operations in the same territory draining the sand. It has been conjectured that this may sometimes be due to the "drowning out" of the wells, that is, the settling of moisture in the well which has been shut in.

In the days preceding the establishment of the gas industry, drilling operations were carried on for the sole purpose of finding oil. In drilling for oil quantities of gas were encountered. At that time the gas was considered useless. As a matter of fact it was a source of constant danger, inasmuch as the gas was liable to ignite and destroy the oil derrick, causing accidents and delaying operations. Ordinarily the gas was taken off to one side of the regular derrick, lighted and permitted to burn. This was the condition until about 1890.

At about this time, however, the potentialities of natural gas as fuel for cooking, heating and lighting purposes began to be observed. The men working on the oil leases took some of the gas to their shanties or to boiler houses and used it for these purposes. Gradually the use extended to homes in the vicinity, later on to little settlements and finally the gas was piped to larger towns. Although the crudeness of the appliances in the early days prevented the service from being altogether satisfactory, still it was noted that the use of this fuel was unaccompanied by soot or dirt, and that it necessitated less work and trouble than did other fuels. The gas was used wastefully because of its abundance and the general impression that the supply was unlimited. This condition was corrected to some extent by installing regulators and meters and other appliances.

When a gas company decides to explore in any given field or territory the first step is to send out representatives to obtain a block of leases. The leases are between the company and the owners of the land, generally farmers. The companies pay rent to the owner of the land for the period between the date of the lease and commencement of operations, sometimes called "delay rentals." If gas is discovered and taken out there is a rental or royalty paid to the owner.

Leases are generally secured over a block of territory to protect wells when drilled from being drained by adjacent operations. A derrick or rig is built on a spot decided upon, generally by the engineering department, if there is one, and a well drilled. The method of drilling is utilizing the force of a body falling through space; in other words, heavy tools, or drills, are repeatedly raised by means of pulleys, ropes, etc., and dropped. These tools or drills or bits, with their stems and jars, weigh perhaps two tons. With each impact of the bit the hole is deepened.

In some districts, as in Louisiana for instance, a different method of drilling, to-wit, rotary drilling, is employed, but the object is always to make a hole in the ground down into the gas bearing sands.

Gas fields are depleted steadily. From this rule there is no variation. This process has been noted in every field which has ever been discovered. As has been indicated above, gas exists in the sands in limited quantities and every foot of gas taken out decreases the supply available by an equal amount.

Gas is not always found at the same distance beneath the earth's surface. Gas has been encountered

in Pennsylvania at a depth of 6,500 to 7,000 feet. However, it is generally found at from 3,000 to 3,500 feet below the surface in Southwestern Pennsylvania and Northern West Virginia. The cost of drilling a well runs between $15,000 and $18,000, depending in some measure on the depth to which it is necessary to drill. When gas is found in a well it is usually shut in until a market can be found for it or it can be connected to the pipe lines of a distributing company.

The rock pressure of gas wells varies greatly in different localities and in different sands. It is generally defined as the pressure which will accumulate in a well when the gate or valve at the top of the well is closed and no gas is taken from the well. In other words, it means the pressure at which the gas is confined in the rock.

Storage of gas is possible to perhaps a small extent; that is, limited quantities of gas may be stored in special holders built for the purpose, but one difficulty is that a holder cannot be built that will hold sufficient gas that will make it of any benefit to the trade. A holder containing 10,000,000 cubic feet of gas would be an unusually large one, and that would permit the gas company to operate only a few hours. As a consequence, companies producing gas are constrained to market what gas they obtain quickly, and to secure leases on territory surrounding producing wells in order to prevent other operators from draining the gas from under their leases.

Where wells are drilled in the same territory it is the tendency of the rock pressure in the respective wells to equalize itself throughout a fairly well operated field, although this result might depend also upon the porosity of the sand. Therefore, as a practical proposition, it is

advisable for a gas company, which is operating in a territory where other companies are conducting operations, to drill enough wells in that territory to get its share of the gas as soon as it can.

Gas possesses the property of limited self-transmission, and it usually leaves the well at a pressure sufficient to transmit itself through pipe lines for some distance. Artificial means are employed by the gas companies in order to create a pressure in the lines sufficient to transmit it to distant points. For this compressing stations are employed.

The pressure of gas in the lines is reduced in direct proportion to the distance which it has traveled. It is, therefore, obvious that a point will be reached in the lines where the pressure is insufficient to carry the gas to consumers. This difficulty is overcome by means of compressing stations. The "compressing stations take the gas out of the low pressure, squeeze it or compress it so that it reaches a considerably higher pressure, and is then discharged into what is styled the main lines, main transporting lines." "Compressing stations" reduce the volume of gas in the chamber of the compressor, so that in accordance with well recognized physical laws the gas is raised to a high pressure by being reduced in volume. Compressing stations are placed at intervals along the lines wherever necessary; that is, wherever such a distance had been traversed that the pressure has become too low for proper or further transmission of the gas.

In general, the systems of the gas producing and distributing companies consist of gathering lines, which are lines leading to the main transportation lines; main

transportation lines, compressor stations; further transportation lines, leading to other compressor stations or to the various communities where gas is supplied by the companies, and the distributing systems in those communities, by which is meant a system of line regulators and curb boxes through which the gas is reduced in pressure and fed directly to the consumer's home or plant.

Compressing stations aid materially in the transmission of gas. It is not possible, however, to estimate just what distance the gas would go without compressing stations. In winter when the demand for gas is very heavy, many shortages are avoided by the use of compressing stations.

They serve more than one purpose. It has been explained that they are used to increase the gas pressure in order to permit its transmission for a greater distance. The stations are also utilized, however, in this way: By the installation and operation of compressing stations the pressure in the line between that station and the mouth of the gas well is reduced. Now, the lower the pressure at the mouth of the well, or in the lines leading from the well, the larger will be the amount of gas discharged from the well, since any discharge from the well must operate against whatever the resisting pressure is at the mouth. If, therefore, the latter is reduced, the result is a greater production of gas from that particular well. The operation of any compressing station affects the gas as to its pressure throughout the entire system. The gas passes back and forth through the pipe line system according to the point of lowest pressure upon the line.

HARRY A. QUAY.

Pages 153-155:

"Q. Very well, then, using the nomenclature of the trade, the effect is to reduce the pressure in the suction lines, so as to enable the gas from the oil sands to pass up through the gas sands, and pass up to a point where the compressor station will affect that gas, and then compress it in the compressing cylinders, so that when it is discharged into the transmission lines, it has an initial pressure of the amount to which it has been compressed by the compressors, so as to pass through those transmission lines to some other point distant therefrom?

A. That is correct. That is the effect the operation of the station has on the gas."

Compressing stations were first installed some 30 years ago in fields where gas had commenced to decline. The first models of stations have been very much improved.

If two companies are operating in any one gas territory, the installation by one company of compressing stations practically necessitates their installation by the other company, since the first company would be enabled by means of the stations to get more gas, other things being equal, than the company without such stations.

Assuming an initial rock pressure of 100 pounds constantly maintained, an outlet pressure of 25 pounds at which to deliver the gas to a distributing company, a 10-inch pipe line 100 miles in length would deliver in 24 hours 3,144,000 cubic feet of gas.

the same line 25 miles in length with the same pressures as above would deliver in 24 hours 8,640,000 cubic feet of gas.

The stations materially increase the distance through which gas can be transmitted. Without their operation thousands of wells today producing gas in West Virginia would long ago have been abandoned. They "permit the gas to come from the wells and go to market that otherwise would not have gone to market at all." (John B. Corrin—329 and 330).

In no case of which the witness (Mr. Corrin) knew had the Hope or Reserve Companies ever resorted to suctions or to vacuums on their wells. Other companies, however, may have done so. It is possible by means of compressor stations, however, to create a vacuum and to use said vacuum to extract gas from a well at a point below atmospheric pressure. The creation of a vacuum at the mouth of a well is merely the reduction of the pressure at that point below atmospheric pressure, the effect of which is to draw the gas up out of the well. The gas business will eventually arrive at a point where suctions or vacuums will have to be made use of in order to get as much production as possible from the lines. Much gas was wasted during the years 1892 to 1896 which had been discovered in drilling for oil.

MARTIN B. DALY.

Pages 579, and 581:

The consumer located nearest to the point of distribution between the high and low pressure gets a better supply of gas than those furthest away. The pressure is

lessened to a certain extent by each one taking out a little gas. It may not be noticeable until you get a considerable distance away, but it is a natural result that the nearer to the distributing point from the high to the low pressure, the greater the pressure to the consumer. If there were adequate pressure to go around, the man getting lower pressure would be served as well as the man getting higher pressure; but if there is a demand and gas is taken out of the wells to the extent that there is not enough left naturally the man farthest away does not get any service. In times of shortage of supply the consumers nearest the wells or source of supply have the better service.

SAMUEL S. WYER.

Pages 865 to 876:

> "• • • gas is a fluid composed of a large number of molecules which are vehicles of energy continually in motion, and having an inherent tendency to get farther and farther apart. The range of motion of the molecules is limited only by the volume of the closed containing vessel in which they constantly move to and fro. Every molecule possess the inherent power of energy and is eternally energetic within itself—that is the molecules are in a state of constant bombardment against each other and against the sides of the containing vessel. The most distinguishing characteristic of gas is its universal property of completely filling an enclosed space."

The term "natural gas" is used to denote a gas that is highly combustible and made by a secret process

of nature. Like water, it always seeks the lowest level; confined gas always tends to expand to lower pressures and this inherent tendency is the basic cause of all gas flow. Invariably gas flows in pipes or underground reservoirs from between openings of higher to openings of lower pressure and invariably this flow is accompanied by a decrease in pressure. The volume of any given mass of gas is inversely proportional to the pressure.

An illustration of one of the fundamental features of natural gas transmission, and one of the fundamental principles on which the whole transmission problem is predicted, is afforded by Pennsylvania Exhibit No. 35, appearing at page 1577, offered at page 867, which is a diagram showing that raising the pressure of a given mass of gas from 4 ounces per square inch to 300 pounds per square inch contracts the volume of that gas from 1,000 cubic feet to 46 cubic feet.

Given the thickness of a gas bed or sand, its degree of porosity, the limits of the gas pool and the rock pressure, a rough estimate might be made as to the amount of gas that is stored under ground. In no way, however, is such estimate to be depended upon as accurate. Furthermore, there is no way of determining accurately the degree of hardness or porosity of the gas sand or rock under any given area.

Fields drilled within 500 or 1,000 feet of each other display great variations in the amount of gas obtainable from each respective well. This is a common phenomenon. The only way of computing the potential productivity of a well is by actually drilling and testing it. The supply of gas produced by any given well is not directly proportionate to the rock pressure. Natural gas is

severed rom the soil in two different steps. After the well is drilled the first step is to place what is known as a packer at or near the bottom of the well, and the second step is the delivery of the gas into the well discharge line: Exhibit 36, offered at page 870, appearing at page 1578—diagrams of mechanical devices employed in first severing the gas from the soil, which merely means the puncturing of the gas bearing sand and affording the gas an outlet, and, second, bringing the gas under control by means of gates or valves and affording it a further outlet to the transmission lines of the Company.

See Pennsylvania Exhibit 37, offered at page 871, appearing at page 1579. This diagram shows how natural gas from West Virginia is directly transmitted to the consumer in another State. It shows the transmission of gas from the gas well to the gas measuring station in field; thence to the gas compressing station; thence to the gas cooling basin; thence by the main transmission lines to the gas measuring station at the gates of the various distributing plants where it is measured and then delivered to the medium pressure regulator; thence to the low pressure regulator and into the service line, and thence into the lines of the consumers.

Pennsylvania Exhibit No. 38, offered at page 874, appearing at page 1580, is a diagram showing the action of a natural gas compressor.

Page 876:

"Q. And to bring out—in view of the objection that has been made—the purpose of this distinction [between the terms 'transmission' and 'transportation'

and their respective significations]: if there are being transported over a line of railway a thousand cars of coal, when you take out in the State of West Virginia 100 of those cars, it does not affect the delivery of the other 900 cars, does it?

A. That is correct.

Q. But if you take out of the line through which gas is being transported, out of a thousand feet thus being transported, 100 feet before it leaves the line of the state of West Virginia, what is the effect on the other 900 feet which was being transported through that line?

A. You immediately disturb the pressure conditions, and thereby alter the flow capacity of the line—that is, the diversion of natural gas from a transmission line is not merely a separation of the commodity from the line, but by virtue of that separation, you get an inevitably disturbed pressure condition, which, if the amount of gas diverted is large enough, may annihilate the service at the extreme end of the line to the ultimate consumer.

Q. Even though the amount of gas taken out would not be the entire capacity of the lnie?

A. That is correct."

Page 908:

"Q. If the gas going from the well into the field to the ultimate consumer ever at rest?

A. It is not."

HARRY A. QUAY.

Page 18.

"* * * Natural gas in our lines is never at rest."

Page 909:

There is no such thing as the regeneration of natural gas in the sands from which it has once been removed.

Page 910:

"Q. Has the capacity of the transmission lines through which the gas is at the present time being transmitted for service in other states than West Virginia, been computed and fixed and arranged for the purpose of supplying that service?

A. It has."

Pages 1419 and 1420:

"A. In most cases the gas in the transmission line always goes in one geographical direction. There are, of course, a number of cases in West Virginia, and more in West Virginia than in all other parts of the United States combined, where there is a reversal of gas flow in the same transmission line; the gas may go in one direction part of the day, and in a diametrically opposite direction during another part of the day, but of course, in one direction only at one time, as contrasted with the constant current of trains going in both directions on railroads."

There is no way of calling into use extra equipment to carry the commodity transported in the case of pipe lines as there is in the case of railroads, where extra trains may be put on to handle heavy traffic or overloads. The variation in the transmission of gas between peak loads and normal loads is on an average of 700 per cent.

In transmission agencies, other than gas lines, such as railroads and traction lines, delays in rendering service are possible and universally practiced. For instance, a railroad can start a train one hour behind its schedule in case of congestion; natural gas service, however, must be instantaneous, for gas needed to cook breakfast cannot be furnished an hour late as the supply would then be useless.

Because of the uncertain life of gas wells, it is practically financially impossible for gas transmission companies to build additional lines to take care of all common carrier gas that might be offered them in view of the large indebtedness that would have to be incurred without any prospect of a fair return.

Another feature which renders a distinction or classification of pipe lines as common carriers unfeasible is the unsurmountable difficulty offered by the great fluctuations from normal to peak load, in that the pressure which can be placed on the gas is limited by the strength of the pipe lines.

Page 1421:

"The market for natural gas is not fixed, but varies largely with the season of the year, time of day. * * *"

It is impossible to forecast what the demand on the gas supplied by the companies by their domestic or industrial consumers will be at any given time.

Leakage in transit must be taken care of.

Natural gas cannot be readily stored.

Page 1422:

Gas being volatile and invisible cannot be transported or identified or measured in bulk as coal or oil or other commodities, and apparatus for measuring gas in large quantities is expensive to install and operate.

Pennsylvania Exhibit No. 55, offered at Page 1442, appearing at page 1619 (Exhibits Vol. 1): "Natural gas production, service and conservation. This exhibit embraces on pages 30 to 34 of the discussion heretofore cited.

JOHN B. CORRIN.

322—324:

The South Penn Oil Company was the Pioneer operator in West Virginia for oil. Its primary object in going there was to operate for and produce petroleum, but in its operations they got some dry holes and they got a lot of gas wells. The great problem was what to do with the gas wells. Many of the smaller operators abandoned these gas wells, but the South Penn Oil Company retained them and endeavored to get a market for gas around West Virginia. A company was formed called the Flaggy Meadow Gas Company to take over these gas wells and supply small West Virginia towns with gas, and also to supply the drilling wells and pumping wells. About 1894 the same owners that owned the South Penn and the Flaggy Meadow Companies formed the Mountain State Gas Company to produce natural gas and supply it to some of the river towns like Sistersville and Parkersburg. It was soon found, however, that the gas wells were accumulating so fast, both from the South Penn, Flaggy Meadow and Mountain State companies, that another market had to be sought, and the

Hope Natural Gas Company looked to Ohio and Pennsylvania for a further market. In Harrison and Lewis Counties, which territory the South Penn Oil Company had acquired, there was another heavy operator named T. N. Barnsdall, who had drilled quite a lot of territory for oil and had found gas. This territory of Mr. Barnsdall's was interlocked with the territory of the South Penn Oil Company.

In 1898 the Hope Natural Gas Company was formed, and the territory that the South Penn had held was transferred to the Hope Natural Gas Company. The territory of the Hope Company interlocked with Mr. Barnsdall's territory, and both were supplying gas to quite a number of towns in Ohio. At this time it was decided to join the interests of the Standard Oil Company and the Barnsdall interests in Harrison and Lewis Counties and form the Reserve Company and transport gas to Ohio, so that the Standard Oil Company interests might have a share of gas out of this field that was being transported to Toledo, and the Barnsdall interests might have their share of the gas transported to Ohio. The Barnsdall interests were later transferred to the Union Natural Gas Corporation.

The Connecting Gas Company was formed by the same interests that formed the Reserve Gas Company, and was intended to transport gas from the Ohio River or the division line between the states of Ohio and West Virginia to two points in Ohio, one of which is called Sugar Grove, where the Barnsdall interests or the Union Gas Corporation was to take its gas. The other point was at Wheeler, where the Standard Oil interest was to take its share of gas for transportation to Toledo.

The parties who were at that time interested in

the Northwestern Ohio Natural Gas Company transferred their interest in that company to the people who now own the Ohio Fuel Supply Company. This transfer was made in about 1910 or 1911.

Page 332 to 333:

(Note: The companies referred to below are the South Penn Oil Company, the Flaggy Meadow Company, the Mountain State Company, the Hope Natural Gas Company, the East Ohio Company and the Peoples Gas Company.)

"Q. These companies which you have mentioned were to a considerable extent, were they not, the pioneers that invested millions, and tens and hundreds of millions of dollars, in finding markets for the use of this gas that was being developed at that time in the State of West Virginia?

A. They certainly were the pioneers, there is no question about it; and if it hadn't been for these companies or companies similar to them, with a good backing of capital, why, I don't think that West Virginia would have been advanced to where it is to-day. * * *"

CHARLES M. SNAITH.

(Defendant's Witness—Cross Examination).

Page 1260.

The operations in Lewis, Braxton and Gilmer Counties by the early companies or individual operators in West Virginia, even though they resulted in the discovery of gas, were originally commenced for the pur-

pose of oil development, and as a matter of fact it was considered a misfortune when a prospector looking for oil discovered gas instead.

Page 1265.

About 1900, when gas was first found in Lewis County, independent producers flocked to that territory, hoping, however, to discover oil and drilling for it and sometimes finding gas instead although the discovery of gas was not the object of their operations.

Pages 1269, 1270:

Independent producers, drilling for oil and finding gas instead, regarded this as an unfortunate circumstance inasmuch as a market for the gas was not at that time available. This refers to independent operators in West Virginia.

PARKE BOWSER.

(Defendant's witness—Cross Examination).

Pages 1331, 1332:

The small independent producers of gas have no pipe line systems of their own, their property having been developed merely by reason of their having drilled test wells for oil and struck gas and then tried to obtain markets for gas. At such times when gas was struck in testing for oil the pipe line companies would afterwards come in and furnish the market for the gas.

Pages 1335, 1336:

The witness is a small producer. His purpose, as well as that of the majority of independent producers,

in taking up leases and going out for the purpose of drilling wells, was to find oil and not gas. However, when gas is discovered, although this is incidental to oil operations, an effort is made by such independent producers to find a market for the gas found. Independent producers do not as a rule set out deliberately for the purpose of obtaining a block of territory for the production of gas alone. As a matter of fact, independent producers were wont to consider discovery of a supply of natural gas as worse than a dry hole because of the trouble of plugging same.

F. C. DEVERICKS.

(Defendants' witness—Cross Examination)

Pages 1351 to 1354:

The South Penn Oil Company and the Southern Oil Company, which was one of Barnsdall's interests, operated originally in Tyler County, Preston County and Doddridge County, West Virginia. They took up a number of leases in that territory which were acquired primarily for the purpose of obtaining oil and not for obtaining gas although the leases covered both subjects. The companies, however, were originally oil development companies, and in those days natural gas was not regarded as a valuable find.

III.

THE LATER DEVELOPMENT OF THE NATURAL GAS FIELDS OF WEST VIRGINIA WAS MADE BY THE GREAT INTERSTATE TRANSPORTING COMPANIES FOR THE PURPOSE OF OBTAINING GAS TO BE TRANSMITTED TO MARKET IN OTHER STATES, WHICH MARKETS HAD BEEN SOUGHT SO AS TO GIVE VALUE TO THE NATURAL GAS PRODUCED IN WEST VIRGINIA.

HARRY A. QUAY.

Pages 18-20, 20-21:

It was about 1888 that the Manufacturers Company entered West Virginia and began operating there, and this was just a little after the propensities and potentialities of natural gas had been discovered.

At the present time the gas companies are supplying large and small communities located anywhere near their lines with natural gas.

Page 63-67:

The Manufacturers Light & Heat Company, which has been in the natural gas business since 1885, was incorporated under the laws of Pennsylvania, and has been engaged in the production and transportation of gas in West Virginia since 1902. By purchase or merger they secured the Tri-State Gas Company, the Wheeling Natural Gas Company and the Fort Pitt Company, which were operating in West Virginia in the Proctor, Hundred and Sedalia Fields and in certain other fields in Pennsylvania and Ohio.

Page 25:

"Q. Do you know for what purpose these investments were made with reference to the use of gas—as to where it was to be transported and sold—as to the Manufacturers Light and Heat, and as to all of these companies?

A. Speaking for the Manufacturers Light and Heat Company, this money was expended, and the developments made, for the purpose of supplying all of its customers as much gas as it could possibly secure for their use.

Q. And what as to the other companies, if you know?

A. Those that I am familiar with (Hope Company, Philadelphia Company, Ohio Fuel Supply Company, United Natural Gas Company), it was the same condition."

JOHN B. CORRIN.

Pages 210 to 211:

There are no known fields tributary to the cities and towns now being supplied by the large companies with natural gas which are not being developed and occupied by the various gas producing companies. Practically all the big operating companies and many of the smaller have been conducting pioneer development for the purpose of discovering new gas deposits or fields, which development work is known as "wild-catting."

Pages 319-320:

The Connecting Gas Company and the River Gas Company do not purchase any gas in West Virginia but secure all their West Virginia gas from the Hope Company, and, as has been testified to previously, have been organized for the purpose of furnishing the Peoples Gas Company with gas.

Pages 322-323:

The Reserve Company was formed by joining the Barnsdall interests in Harrison and Lewis Counties, and the Standard Oil Company interests, in order to transport gas to Ohio.

Page 325:

The Eastern Ohio Natural Gas Company was organized as a part of the operations of the Hope Natural Gas Company as an outcome of the operations of it and of the South Penn Oil Company in an endeavor by those interests to obtain an outlet for the gas they had secured and expected to secure in West Virginia. The East Ohio Company, supplying Cleveland, Canton, Akron and thirty or forty other cities in Ohio, afforded the market they desired to find for that gas.

Pages 331-332:

At the time of the organization of these companies gas was plentiful in West Virginia and the State did not afford a sufficient market for the gas available. It was necessary to find markets quickly and the organization of the companies above mentioned was for the purpose of seeking new markets in other States.

Pages 340-341:

The South Penn Oil Company, operating in West Virginia, had discovered large supplies of gas and the Flaggy Meadow Gas Company and the Mountain State Gas Company were organized for the purpose of "taking care of" the gas discovered by the South Penn; that is, finding a market for that gas.

H. A. WALLACE.

Pages 390-391 (Cross-examination):

Some of the predecessors of the United Fuel Gas Company, that is, some of the companies later taken over by that company, had built lines and conducted their operations for the purpose of supplying gas to consumers in West Virginia before the construction of the line to furnish gas to Cincinnati or to Louisville. The lines and systems of these predecessors were later acquired by the United Fuel Gas Company and made a part of their system.

JOHN B. TONKIN.

Pages 424-427:

In 1903 the Hope Natural Gas Company had a surplus of natural gas. The Peoples Natural Gas Company had the market but not the gas, consequently the Standard Oil Co. of N. J. purchased the Peoples Company. Immediately after the purchase the Hope Company started to lay a 16-inch line from Hastings Station up to Brave, Pennsylvania, a 16-inch line from Wilsonburg, Harrison County, West Virginia, also to Brave, Pennsylvania. The People Company at the same time started to build a 20-inch line from Pittsburgh to Brave to get this gas. The line was about 60 miles long.

The Hope Company was originally organized for the purpose of supplying the East Ohio Company with gas. The Standard Oil Company of New Jersey was the parent organization, acting through another subsidiary, the National Transit Company. Lines were built by both the Hope and East Ohio companies from West Virginia to Akron, Ohio, and later, in 1902, a line was built paralleling this line, and continuing through to Cleveland, Ohio. Later on an 18-inch line was built by the Hope Company from Hastings across the river near Clarington, Ohio, some ten or fifteen miles distant from the original river crossing, and also continued through to Cleveland. Later on a 20-inch line and another 18-inch line were built.

Pages 424-425:

In 1903, when the Standard Oil interests purchased the Peoples Company, the Hope Company had a large surplus of gas and the reason for the purchase was their desire to market this gas in States other than West Virginia. At this time the Peoples Company also had franchises in Pennsylvania and the opportunity to market large quantities of gas there, especially in the vicinity of Pittsburgh. The Hope Company, on the ther hand, had a large amount of gas for which it was otherwise unable to find a market.

Pages 614 to 617:

Statement showing acreage, gas wells and gas production in Pennsylvania and West Virginia, the number of producing gas wells, number of wells drilled, number of consumers,—domestic, industrial and other companies,—and the amount of sales,—domestic, industrial and other companies, fuel used in pumping stations, and

pumping and drilling wells, for the years 1910 to 1919, inclusive, of the Peoples Natural Gas Company: The statement for 1918 and 1919 is as follows:

	1918	1919
Operated Acreage—Acres	82,277	85,819

Total Gas for Operations	1,833,737	824,062

W. W. FREEMAN.

Page 456:

The investments made by the Columbia Company in West Virginia and by the Cincinnati Gas Transportation Company in laying gas lines was for the express purpose of bringing natural gas from West Virginia to the city of Cincinnati and the surrounding territory.

JUDGE REED.

Pages 487-488:

The first gas company acquired in West Virginia by the Philadelphia Company was the Fairmont and Graf-

ton Gas Company in 1905. The latter is now known as the Pittsburgh and West Virginia Gas Company. The Philadelphia Company also acquired in 1913 the stock of the Monongahela Natural Gas Company, the title actually passing, however, to the Pittsburgh & West Virginia Gas Company. In 1896, about the time of the organization of the Philadelphia Company in West Virginia, that company acquired 6,000 acres of gas in Tyler County, West Virginia, and about 34 miles of pipe line in that County, and 76 miles of pipe line in Green County. About 1900 the Philadelphia Company bought the Union Gas Company of McKeesport.

Pages 521 to 524:

Sometime in 1901 the Philadelphia Company acquired 30,693 acres of leases of productive gases in Lewis and Gilmer Counties, West Virginia. Some insufficiency of gas supply had manifested itself as early as 1891, and Mr. George Westinghouse, President of the Philadelphia Company, was considering the necessity of extending lines of the company southward and of establishing a fuel gas plant. By 1894 Brunot Island had been bought for the purpose of erecting such a plant. The gas business was increasing fast and it was necessary to get more gas. Therefore, subsequent to 1894 the Philadelphia Company gradually extended its own acquisition of other fields and other territory in a southward direction.

Page 486:

At the time the Philadelphia Company commenced operations in West Virginia, the Pennsylvania gas fields were becoming exhausted and insufficient to supply the consumers of the Philadelphia Company in Pennsylvania. The Company proceeded to lay lines in

West Virginia and extended their business into Pennsylvania territory for the purpose of supplying West Virginia gas there.

MARTIN B. DALY.
(East Ohio Gas Company)

Page 582:

"Q. Now, from your Ohio Exhibit No. 1 give the extent of your company's main lines and connecting lines that were designed and constructed and are being operated for the purpose of transporting and distributing natural gas from the Hope Natural Gas Company in West Virginia.

A. These pipe lines, with the exception of the Imperial line running from Youngstown to the southeasterly corner of Mahoning County, being an 8-inch pipe, and the pipe line from Ashland County to Barberton, a 12-inch pipe line, were all constructed with a view of bringing gas from West Virginia and distributing and delivering it to the various municipalities. The line known as the Imperial lines was formerly bringing gas into Pennsylvania. That is no longer available. The quantity was very small. A line from Loudonville to Barberton is transporting gas now from our producing fields; otherwise all the pipe lines were constructed with a view of transporting gas from the West Virginia fields.

L. B. DENNING.

Pages 664-665:

The cost of the main lines of the Ohio Fuel Supply Company for the purpose of transporting and distributing West Virginia gas in Ohio is as follows:

"Line E from the Ohio River to Wheeler Station at Sugar Grove; used exclusively for the transportation of gas out of West Virginia, 63.9 miles in length, 18-inch in size, cost $879,902.96.

Line D from Wheeler Station to Valley Crossing just to connect into the Columbus feed system at Valley Crossing, 12-inch, 33.26 miles long, cost $280,043.91.

Line F from the junction point on Line E neat Chester to Pomeroy, and extending beyond Pomeroy to Gallipolis and into Jackson County, and consisting of part 6-inch and part 4-inch, 61.19 miles long, used in transportation of West Virginia gas exclusively, cost $226,450.11.

Line A from Columbus to Norwood, known as the Cincinnati 18-inch, which was not built exclusively for the transportation of West Virginia gas, but which we estimate as devoted fifty per cent. of its cost to the transportation of West Virginia gas, being 18-inch in size, 54.30 (?) miles long, cost $762,177.56. * * *"

Page 665:

The Northwestern investment for West Virginia gas represents their entire investment, or $6,112,730.48.

The Northwestern has some slight production in Northern Ohio, but that is small and limited, and for all general intents and purposes it is correct to say that the entire investment of the Northwestern is devoted to West Virginia gas.

Pages 665-666:

"Q. And originally those main transportation lines from the Sugar Grove Station through the State of Ohio to the Northwestern were laid for the purpose solely of transporting West Virginia gas to the Toledo country?

A. The 18-inch line of the Ohio Fuel Supply Company extending from Wheeler Station southeasterly to the Ohio River, and connecting with the 18-inch line of the United Fuel Gas Company, was laid, built, and the investment made for the express and only purpose of procuring and transporting gas from West Virginia. The line of the Northwestern—its transmission system—was built and laid exclusively and for the sole and only purpose of obtaining gas from West Virginia.

Q. Then, Mr. Denning, the lines which you have just described, giving the cost thereof and the location, with the exceptions you have noted, both as to the Ohio Fuel Supply Company and the Northwestern Ohio Natural Gas Company, were designed, constructed, and are being maintained for the purpose of handling and marketing West Virginia gas?

A. Yes."

Page 712:

> "The Cincinnati line was built as a part of the plan, relying on obtaining gas from West Virginia, as I said this morning."

Pages 683 to 685:

The Ohio Fuel Supply Company, organized in 1902, was substantially a consolidation of a number of smaller

companies operating in Southern Ohio, including the Mt. Vernon Natural Gas Company, the United Gas Company, the Corning Natural Gas Company, the Roseville and Crooksville Gas Company, the Bremen and Rushville Gas Company and the Great Southern Gas and Oil Company, all of which had been producing and distributing natural gas. After being taken over, the smaller companies were all consolidated into one service, and the Ohio Fuel Supply Company proceeded to extend its lines. About 1903 or 1904, the Ohio Company bought the Federal Gas and Supply Company in Columbus with its fields in the Sugar Grove district and with a 12-inch line extending from Sugar Grove up to Columbus. In 1907 an 18-inch line was constructed from Columbus to Norwood. In 1909 an 18-inch line was constructed from Sugar Grove to the Ohio River to connect with the line of the United Fuel Gas Company bringing gas from West Virginia.

The Ohio Fuel Supply Company originally constructed the entire line into West Virginia and into the West Virginia field and afterwards sold it to the United Fuel Gas Company. In 1910 the Ohio Fuel Supply Company acquired the Ohio Southern Gas Company, embracing the territory or towns in Jackson and Vinton Counties. In 1917 the company bought the property of the Central Contract and Finance Company, which embraced acreage and producing wells in Vinton County, Ohio, and a pipe line extending from Sugar Grove to Sidney. The Company first received gas from West Virginia when the 18-inch line was completed in 1909.

EUGENE P. WHITCOMB.

Pages 781-782:

"Q. Now, Mr. Whitcomb, to what extent has your companies lines been designed and constructed and being maintained for the purpose of receiving and marketing West Virginia gas?

A. The constructing of a 16-inch line north from Sugar Grove, connecting with the intake of Bangs Compressing Station in Knox County, Ohio, was laid exclusively for the transportation of gas to our Central and Northern Divisions. The construction of the 18-inch Sugar Grove-Dayton line, a distance of about 84½ miles to the City of Dayton, with an extension of about 78 miles of 16-inch line to the City of Muncie, Indiana, together with its branch line connections to cities and towns in the State of Ohio and State of Indiana, principally the City of Dayton in Montgomery County, Ohio; the City of Anderson in Madison County, Indiana; New Castle in Henry County, Richmond in Wayne County, Indiana, and Greenville in Darke County, Indiana, was laid particularly for that purpose and for no other.

LOGAN NATURAL GAS & FUEL COMPANY AND AFFILIATED OHIO GAS COMPANIES.

Summary of Investment for Delivery of Gas From West Virginia.

J. W. McMAHON.

Page 719:

"Q. Tell its starting history. (of the Northwestern Ohio Natural Gas Company)?

A. At that time they produced the gas from northwestern Ohio. They acquired thousands of acres of land in fee and by lease throughout the counties of Wood, Hancock, Seneca and the northwestern counties of Ohio. They drilled thousands of wells and piped the cities and supplied natural gas to the consumers. About 1900, 12 years after they began exploiting for gas, the gas supply of northwestern Ohio was becoming exhausted. The gas was found in the Trenton rock field only in northwestern Ohio and the oil was also found in that same formation, and in drilling for oil, which was the most valuable commodity at that time, they drilled so many thousands of

wells that the gas was permitted to escape and did escape into the air. It created a back pressure upon the oil wells and they let it out. Efforts were made at that time by the passage of laws by the legislature of this State to prohibit the wastage of gas, but those efforts did not seem to prolong the life of the gas field a great deal, and it began to become exhausted very rapidly. At that time the City of Toledo was engaged in the natural gas business as a municipality. They bonded themselves I think for $1,500,000.00, which bonds are still outstanding and not paid, and went into the natural gas business. I believe the city of Fremont did the same, as well as Findlay,—the northwestern cities. But almost before the City of Toledo got to producing gas the field from which they expected to draw was about exhausted, and they went out of business; sold their lines practically for junk, I believe, and discontinued. The Northwestern Ohio Natural Gas Company then had two lines, one a ten-inch line and one a twelve-inch line running from the City of Toledo south to the then known gas fields of Ohio.

Q. In the counties which you have already named?

A. Yes, sir. They were confronted with a possibility of losing their entire investment, or getting gas elsewhere. They then entered into a contract with The Hope Natural Gas Company, whereby they were to lay a line or lines south from Tonkin Station, which was 38 miles from Toledo, to a point known as Sugar Grove, in Fairfield County, Ohio, where they were to connect with or receive gas from The Hope Natural Gas Company, which company, in turn, was to procure that gas from West Virginia."

Page 724:

"Q. And is it a fact that your company's lines extending southward from Tonkin Compressing Station to the Wheeler Compressing Station, a distance of A 160 miles, and being two in number were designed, constructed and have been operated exclusively for the purpose of conveying natural gas to the consumers of the company whom you have described?

A. Yes."

G. F. BATCHELOR.
Of the Natural Gas Company of West Virginia.

Page 744:

"As of December 31, 1919, the company held in Greene County, Pennsylvania, 9,042 acres of operated leases, 5,700 unoperated, total of 14,732 acres; in Washington County, Pennsylvania, 4,172 operated, 19,373 unoperated, total of 23,545; in Belmont County, Ohio, 7,296 operated, 20,279 unoperated, total of 27,575; Monroe County, Ohio, 105 operated, 32 unoperated, total 137 acres; in Marshall County, West Virginia, none operated, unoperated 12,146; in Ohio County, West Virginia, none operated, unoperated 130, making a total acreage in all the places of 20,615 operated, 57,660 unoperated, total of 78,275 acres."

J. K. ANDERSON.

S. S. WYER.

Page 877:

The Fayette County Gas Company connects with the Hope Natural Gas Company, and receives from the Hope Natural Gas Company at the Wade Measuring Station gas which is here taken into Pennsylvania.

Page 969:

"The enforcement of the Act would place a premium on improvident operation, because the ones that would most directly be benefited are the ones that would in

the past not have made provision for the future in the way of carrying reserve acreage or reserve lines or looking for reserve feeders for the future, but have built only for the immediate present, and the enforcement of the Act would require those who have gone into West Virginia on the faith that their property rights would not be disturbed, and have invested large sums, first in the acquisition and second in the carrying of large amounts of reserve territory for future operation to surrender such territory secured originally for interstate purposes solely to intrastate use."

Page 908:

"Q. Have the compressing stations that have been constructed for the South of West Virginia on these various transmission lines been constructed for the purpose of transmitting gas in the State of West Virginia on through these interstate transmission lines?

A. Most compressing stations built in West Virginia have been built for the purpose of transmitting natural gas through the interstate transmission lines to other states."

Page 910:

"Q. Has the capacity of the transmission lines through which the gas is at the present time being transmitted for service in states other than West Virginia been computed and taxed and arranged for the purpose of supplying that service?

A. It has."

H. E. NEASE—DEFENDANT'S WITNESS.

Page 1003:

STATEMENT SHOWING ACREAGE HELD IN WEST VIRGINIA BY SEVEN COMPANIES DECEMBER 31, 1919.

	Undeveloped.	Developed.	Total
Hope Natural Gas Company	690,094	338,776	1,028,870

Percentage held by operarators than the 7 companies without the estimate of those unascertained.	43.2%	43.1%	43.2%
Percentage with the estimate of those unascertained	47.5%	47.9%	47.9%

IV.

THE AMOUNT OF THE INVESTMENT OF THE COMPANIES PRODUCING GAS IN WEST VIRGINIA AND TRANSPORTING IT TO OTHER STATES IN OBTAINING AND CARRYING LEASES, DRILLING WELLS AND LAYING PIPE LINES, &c.

HARRY A. QUAY.

Pages 5-6:

The Manufacturers Light & Heat Company has about 147,000 acres of gas territory under lease and about 457 gas wells in West Virginia.

Pages 24-25:

The Manufacturers Light & Heat Company has expended some thirty millions of dollars or more on various operations in West Virginia, these operations including the taking of territory, making leases, drilling wells, laying lines, building compressing stations, and so on. The investments of the other large companies in West Virginia must have run into tens of millions of dollars.

Pages 81 to 83:

In the year 1919, the Manufacturers Company was operating 461 wells and 48,155 acres in West Virginia, and had under lease 94,280 unoperated acres, having increased to that extent from 278 wells in 1910 and 33,918 acres operated and 60,704 acres unoperated in 1913 in the same State.

T. O. SULLIVAN.

Pages 184-185:

The Hope Natural Gas Company held under lease in West Virginia in 1919 about 1,010,000 acres of land, including operated and unoperated acreage, and 3440 producing gas wells. The operated acreage amounted to 322,777 acres.

Pages 206-207:

The Hope Natural Gas Company has invested an amount exceeding $100,000,000.00 in the gas business in West Virginia. This includes the acquisition of land, drilling of wells, laying of pipe lines, royalties, pumping stations, compressing stations, etc. The investment in capital concrete property used in the construction of the plant, which included wells, acreage, pipe lines, compressor stations, and other paraphernalia and appliances connected with the business, was estimated at approximately $37,000,000.

Pages 232-233:

In 1910 the Hope Natural Gas Company held under lease 151,838 operated acres, 842,987 unoperated acres, total 994,825 acres, and 1,326 gas wells. By 1919 this had increased to 322,777 acres operated, 687,155 acres unoperated, total 1,009,933 acres under lease, and 3,440 gas wells.

Pages 248-249:

Compressing stations are costly affairs, one 5,000 H. P. station costing about $750,000. One of the Hope Company stations—the Hastings Station—must have cost several millions of dollars.

Pages 268-275:

In the course of its operations the Hope Company acquired by purchase, by buying the stock, or by other methods, the Mountain State Gas Company, the Rural Gas Company, the Berea Light, Heat and Power Company, and the Mt. Clair Gas Company.

JOHN B. CORRIN.

Page 324:

The present investment of the Reserve Gas Company in West Virginia is about $7,000,000.00.

Pages 335-336:

The Reserve Gas Company has in West Virginia 56,000 acres of land. Of this acreage, 4,000 acres is unoccupied territory. The Hope Company has about 1,100,000 acres, and of this about 700,000 acres is unoperated. The oil and gas companies operating in West Virginia have paid at least sixty million to seventy-five million dollars in rental money in the last twenty years.

Pages 356 to 358:

The large gas companies, not including those affiliated with the Standard Oil Company of New Jersey, have invested over $100,000,000 in West Virginia in rentals alone, among them the Philadelphia Company, the Carnegie Natural Gas Company, the United Fuel Gas Company, the Manufacturers Light and Heat Company, the West Virginia Central Company, and the Fayette County Gas Company.

H. A. WALLACE.

Pages 359 to 361:

The United Fuel Gas Company invested about $1,000,000 in West Virginia up to 1909 without receiving any revenue therefrom up to that time. The total acreage of the United Fuel Gas Company in West Virginia is 806,785 acres. The Company has 626 gas wells in West Virginia.

Pages 367-368:

By the end of 1909 the United Fuel Gas Company had invested between 23 and 24 million dollars in actual cash in West Virginia. The valuation of the property owned by the company in West Virginia, as shown on the books of the company, is about $50,000,000.00.

Pages 373-374:

The United Fuel Gas Company expends annually in the laying of lines, drilling of wells, maintaining and building compressor stations, and in general to maintain gas lines, from two to three million dollars. This sum will increase as the fields get older.

JOHN B. TONKIN.

Page 425:

The Peoples Natural Gas Company, which was later acquired by the Standard Oil Co of N. J., had expended about $1,800,000 in laying pipe lines. A pipe line built by the Hope Company to Wilsonburg cost about $1,500,000.

Page 427:

The total investment of the Peoples Natural Gas Company, as of December 31, 1919, was $16,442,234.71, representing money sunk in main lines, field lines and city plants. Of this about 600,000 had been invested in gasoline plants and oil wells. The capital stock of the Peoples Natural Gas Company was $11,000,000.

W. W. FREEMAN.

Page 455:

The investment of the Columbia Gas and Electric Company, as of December 31, 1919, in wells, territory, pipe lines, compressor stations, etc. was at least $11,000,000. The company owned, as of the same date, 253 gas wells, 29,000 acres operated, 221,000 acres unoperated.

Page 456:

The investment of the Cincinnati Gas Transportation Company in West Virginia in similar property was approximately two and one-quarter million dollars. The entire investment of the company all the way through to Cincinnati was about seven and one-quarter million dollars.

Pages 463 to 465 to 472 (Cross-examination):

In 1915 the Columbia Gas and Electric Company had under lease 19,424 acres operated, 216,357 acres unoperated. By 1919 these figures had increased to 28,737 acres operated and 180,932 acres unoperated. All figures are for acreage leased in West Virginia. The figure of $11,000,000 previously testified to as representing the investment of the Columbia Gas and Electric Company in West Virginia represents both money invested and

the actual valuation of the Company's property. Valuations of $200 per acre have been put on the operated acreage and $10 per acre on the unoperated acreage. The investment had been ascertained upon a basis of replacement cost as of September 1917.

JAMES H. REED.

Pages 488 to 490:

The Philadelphia Company was running 13 compressing stations in West Virginia and 10 in Pennsylvania. The Company had expended something over $20,000,000 in West Virginia since the beginning of their operations there for leases, rentals, payrolls and taxes, and an equal sum for improvements.

In 1910 the Company had under lease in West Virginia acres operated 47,240; acres unoperated 424,355; total 471,596. By 1919 acreage unoperated had decreased to 209,127; acreage operated had increased as steadily to 108,198; total 317,326.

Gas Wells. In 1911 the Company had 487 gas wells in West Virginia. This number had increased to 1238 in March 1919.

Pages 504 to 505:

The total investment of the Philadelphia Company including that of the Equitable Gas Company, the Allegheny Heating Company, the Monongahela Natural Gas Company, the Pittsburgh and West Virginia Gas Company, the Philadelphia Company of West Virginia, and the Philadelphia Oil Company in Pennsylvania and West Virginia, was $45,000,000 according to the balance sheet for the year ending December 31, 1919. If the

amounts expended upon extensions were included the total would be around $60,000,000.

Page 522:

The Philadelphia Company had acquired from March 31, 1900 to March 31, 1901 over 30,000 acres of leases of productive territory in Lewis and Gilmore counties, West Virginia.

J. E. ANGLE.

Pages 536-537:

The investment of the Fayette County Gas Company in its transporting and distributing systems and field operations, as of December 31, 1919, was $1,567,-449.15.

MARTIN B. DALY.

Pages 581-582:

The East Ohio Gas Company has in its main transportation system approximately 860 miles of pipe line. This does not include the gathering lines in the fields. In the towns and cities, for the distributing systems said company has approximately 3,000 miles, making a total of 3800 (3860) miles. This does not include anything below 2 inches, and if the smaller pipe were added it probably would increase that mileage by 300 miles.

Page 584:

The physical valuation of the plant of the East Ohio Gas Company is approximately $47,000,000. This does not include good will, franchise value or govern-

ment bonds,—includes nothing but physical property. The present capital stock outstanding is about $38,000,000.

Page 603 (Cross-examination):

Stock in the form of stock dividends has been issued to the amount of $4,500,000.

"The Peoples Natural Gas Company.

STATEMENT SHOWING AMOUNT OF INVESTMENT JAN 31st, 1903, to DEC. 31st, 1919.

January 31, 1903	2,866,168.37
December 31, 1903	3,356,291.66
" " 1904	5,542,687.20
" " 1905	5,720,388.09
" " 1906	5,840,844.73
" " 1907	6,166,291.77
" " 1908	6,926,445.78
" " 1909	7,711,793.13
" " 1910	8,895,543.06

" " 1912	9,713,904.90
" " 1913	10,736,887.28
" " 1914	11,855,830.50
" " 1915	12,324,018.03
" " 1916	13,409,435.93
" " 1917	14,207,497.76
" " 1918	14,955.003.89
" " 1919	16,442,234.71

L. B. DENNING.

Page 664:

The Ohio Fuel Supply Company has invested approximately $3,505,526.82 in its various lines and transmission systems for the purpose of transporting West Virginia gas to consumers in Ohio.

Page 707:

The original capital investment, or at least the approximate amount thereof, of the Ohio Fuel Supply Company is, as of May, 1920, for physical properties, $24,588,676.99; material in stock, $1,159,729.92. A total would approximately be $28,284,696.00. The figure of $24,588,676.99, as given above, represents simply the cost value of the actual physical property, main lines, transmission lines and distributing property, but said company is interested in other properties through stock ownership which would increase the total valuation of their property to about $34,574,960.99.

J. W. McMAHON.

Page 726:

The capital stock of the Northwestern Ohio Natural Gas Company is $2,750,000.00, and there has been invested as capital account in the construction, extending and building up of the property of said company to its present state, between six and a half and seven million dollars The present value would be greater than the amount here stated.

Page 737 (Cross-examination):

The six million dollars above stated covers physical

property. In addition to this, the said company carries a surplus of less than a million dollars.

EUGENE P. WHITCOMB.

Page 750:

The capitalization of the Union Natural Gas Corporation on May 24, 1902, was $6,000,000. In September, 1902 this was increased to $8,000,000; in June, 1903, this was increased to $9,000,000; and in March, 1913, to $10,000,000, which is the authorized capitalization at the present time. Said corporation has authorized bonds in the amount of $6,000,000. The amount in the treasury at the present time is $1,422,000; cancelled, $178,000; redeemed, $2,822,000, and outstanding as of this date, $1,578,000.

"A. The investment in stock of Reserve Gas Company and Connecting Gas Company by Union Natural Gas Corporation during the period from December 31, 1902, to December 31, 1914, both years inclusive, amounted to $3,650,000, of which amount $1,250,000 was paid in cash for stock of Reserve Gas Company and 15,000 shares of the par value of $100 per share of the stock of the Union Natural Gas Corporation."

Page 785:

"Q. Can you give us an estimate, or the exact value, of your investments made by reason of the fact that you have received and are receiving West Virginia gas?

A. The total investment in pipe lines to towns of other companies is $3,478,250.86; in the pipe lines to our own towns—or, rather, the towns in which we own the distributing plants $1,091,176.66; in the Sugar

Grove Compressing Station, $736,853.28; and in our distributing plants which are distributing West Virginia gas, $1,214,966.28; or a total of $6,521,254.08."

H. E. NEASE—DEFENDANT'S WITNESS.

Pages 1051 to 1053:

The Ohio Fuel Company and the South Penn Oil Company produce considerable gas which is sold to other companies, but on the list of natural gas utilities operating within State of West Virginia as of December 31, 1919, these companies have not been included because they are not required to make reports to the Board of Public Works. The same applies also to the Owens Bottle Machine Company.

Note: The total of the foregoing investments as shown by the testimony of the witnesses exceeds $350,000,000. Of this amount the same testimony shows over a half or about $200,000,000 is invested in West Virginia.

HARRY A. QUAY.

Pennsylvania Exhibit No 1, offered at page 30, appearing at page 1493, replaced by Pennsylvania No. 39-E, offered at page 876 (Wyer), appearing at page 1585.

This is a map showing the main lines of The Manufacturers Light & Heat Company in Ohio, Pennsylvania and West Virginia. Testimony on page 30 gives the size of the various lines, which run from 6 to 20 inches. The map shows the pipe lines crossing the boundaries between Ohio, Pennsylvania and West Virginia over forty times.

Pages 16 to 18:

The Hope Company delivers gas to the Manufacturers Company at the Sedalia station in Doddridge County, West Virginia in large amounts. Gas from the well of the Manufacturers Company itself is delivered to the same station. The gases commingle and enter the compressor, where they are discharged and enter the same main line or distributing system leading to the various communities served. The same situation exists in the station at Wetzel County, West Virginia and at the Porter Falls station. All these gases with the exception of the Porter Falls gas, join and meet and enter the main discharge line of the Manufacturers Company at or near Ludenville, Marshall County, West Virginia. The gas leaves the Hundred station, passes through the balance of Wetzel County, enters and crosses the Pennsylvania State Line at Greene County, Pennsylvania, passes out of the State of Pennsylvania and again enters the State of West Virginia, and meets with the line coming from the Sedalia station at Ludenville.

The gas from the two stations commingle, then pass northeast through Marshall County, West Virginia, and again cross the state line.

Pages 15 to 16:

The distance from the most southern point of the pipe lines of the Manufacturers Light and Heat Company to the most northern point is approximately 168 miles. The most southern point is Sedalia Station, Doddridge County, West Virginia, and the most northern is in Mercer County, Pennsylvania. The Manufacturers Company receives gas which it either purchases or produces in West Virginia, into its own transmission or main lines in West Virginia and transports that gas from West Virginia into Pennsylvania.

The Manufacturers Company "produces gas in the three states (Pennsylvania, Ohio and West Virginia) in which it operates, buys gas in the three states in which it operates, transports and sells gas in the three states in which it operates."

"Q. Without the intervention of any other Company?"

A. Yes, sir."

In general, gas in the lines of the Company crosses and recrosses both the West Virginia-Pennsylvania and the West Virginia-Ohio State Lines.

Page 114:

There are other companies whose pipe lines cross and recross the Pennsylvania West Virginia State Line, although this condition does not exist to the extent of a single pipe line system crossing and recrossing a state

line 43 times, as is the case with the system of the Manufacturers Company.

Page 131:

The upper end of West Virginia, principally the towns of Chester and Newell, are supplied with gas from lines leaving the State of Pennsylvania and re entering the State of West Virginia, and from lines coming from Ohio and entering the State of West Virginia.

Pages 146-147:

Among the companies whose lines cross and recross the state line of Pennsylvania and West Virginia are the Equitable Gas Company, the Carnegie Natural Gas Company, the United Fuel Gas Company. These companies sell gas to the States of Pennsylvania, West Virginia and Ohio, and West Virginia and Pennsylvania, respectively.

Pages 105 and 106:

As a general rule, once gas is discharged from the various compressing stations of the Manufacturers Company, it is impossible to tell where that gas is going; that is, any particular volume or mass of gas starting out from the compressing station might reach any of a number of destinations in widely divergent places.

Pages 109 and 110:

Although by making a direct manipulation it might be possible to send gas for instance from one of the Company's lines to feed consumers in the town of Chester, West Virginia, it still is by no means the invariable rule that such gas starting from the same point does go to that town.

Page 155:

"Q. Are the lines connecting your system of gas transportation to these respective compressing stations (in Doddridge County, Wetzel County and Marshall County, West Virginia, and Greene County and Washington County, Pennsylvania,) all connected into one system?

A. They are all connected together.

Q. And when these compressing stations are in operation, what is the effect thereof on the entire system, with reference to the influence of each of these stations?

A. The gas is permitted to discharge from the various compressing stations, enters the main lines at that point, and goes to whatever source it moves to.

Q. Do these compressor stations, when in operation, therefore, all of them, affect the gas in the entire system?

A. Any station operating, or not operating, would have its influence on the general system.

Q. The gas throughout the system, if I understand you correctly, passes back and forth according to the point of lowest pressure upon the line?

A. Yes, sir.

Q. And is influenced by the operation of any one or all of these stations?

A. As stated, any station operating or not operating would affect the flow of the gas."

Pages 49 and 50:

"Q. Mr. Quay, are your main transmission lines, or practically all of your transmission lines from West Virginia, connected onto the general transmission system of the company that runs into Pennsylvania, or are they separate main lines which have no connection one with the other?

A. They are connected one with the other.

Q. So as to constitute one general transmission system?

A. One large general system.

Q. What effect would the removal of gas from any portion of that system in West Virginia have upon the transmission of the gas into Pennsylvania? In other words, would it affect it?

A. It would.

Q. Would you be able to tell, or could you tell in any way, or have you any devices upon the lines by which you could tell as to where the effect would be most appreciable in Pennsylvania, if thus removed in West Virginia?

A. If I get the question right,—in fact, I don't get it right.

Q. Well, I will put it in a different form then: Is there any means of ascertaining, where any portion of gas is removed from the system in West Virginia, where it will have its greatest effect in Pennsylvania.

A. There is.

Q. Just tell us about that.

A. To remove,—I presume you mean if taken out and transported to other points in the lines in West Virginia, where it would have its effect in Pennsylvania?

Q. Where, yes,—where it would have its effect in Pennsylvania.

A. It would have its effect in all the lines in Pennsylvania, more particularly at the extreme end.

Q. And the extent of that effect, I presume, naturally would depend upon the quantity thus taken out?

A. It would.

Q. And if a large enough quantity was taken out,—that is, a large quantity, was taken out, could you then tell—and if so, how—where it would have its effect in Pennsylvania?

A. If a large quantity of gas is taken, of course it creates shortages in certain portions of the system, depending entirely upon the quantity taken out.

Q. And where, what points in the system would it chiefly affect—I mean, in Pennsylvania?

A. The farthest point away from the source of supply."

Page 99:

"* * * Ordinarily on our system the gas all comes in together and goes wherever it pleases, unless the line breaks or a compressing station is flooded out, or some break in the line which necessitates the handling of the gas in a different manner."

T. O. SULLIVAN.

Pages 204-205, 297-298:

Gas produced in West Virginia and sent through the lines of the producing comany, to-wit, the Hope Natural Gas Company crosses the State line of Pennsylvania and crosses back into West Virginia, simply following the direction which the pipe lines themselves take. Also gas furnished the Hope Company by the River Gas Company, which gas is produced in Ohio, is fed into the lines of the Hope Company, crosses the State line from Ohio into West Virginia and is commingled with other gas in the general system of lines of the Hope Company. So far as the direction of the flow of the gas is concerned, it depends entirely on the points of lowest pressure, and the witness knew of no appliance which could be installed, other than a compressing station, which would cause gas to flow from one line into another when the pressure on the receiving line was greater than it was on the delivering line.

Pennsylvania Exhibit No. 15, offered at page 186, appearing at page 1509, replaced by Pennsylvania Exhibit No. 48, offered at page 974 (Wyer), appearing at page 1600.

This exhibit is a map of the main lines of the Hope Natural Gas Company, the Reserve Natural Gas Company and the Peoples Natural Gas Company.

Page 189:

Size and length of the various pipe lines appearing on the map above mentioned, their locations, directions and routes. The pipe lines cross the State lines between West Virginia and Pennsylvania and West Virginia and Ohio.

Page 190:

The Hope Natural Gas Company delivers gas through its own lines in West Virginia to the Brave Station of the Peoples Natural Gas Company, which station is in Pennsylvania, a short distance from the State Line, and the lines of the Hope Company extend across that state line. Brave Station is in Greene County, Pennsylvania. There is also some gas delivered by the Hope Company in its own lines at the extreme southwestern corner of Greene County, Pennsylvania. The Hope Company also delivers gas to the East Ohio Company, near Moundsville and near Clarington, Ohio, the gas passing from West Virginia over into Ohio through the pipe lines of the Hope Company.

Pages 253 and 254:

"Q. The figures you have given are illustrative of calculations made which could be extended to various size lines and various pressures and various distances?

A. It could.

Q. I believe you stated that the system of the Hope Company was one complete system?—not separate units separately operated?,

A. It is.

Q. It is operated as whole?

A. It is.

Q. So that the gas received into the system can be, if desired, diverted to any given point or any given transmission line?

A. It can be diverted into any transmission line. It can be diverted into any of the transmission lines connected with the general system throughout the field. After the gas passes through compressing stations, it then enters the lines leading to certain cities or towns, and cannot be diverted, the way the lines are connected, after that occurs."

Page 258:

The various pipe lines of the Hope Company are equipped with gates, or valves, which may be operated to some extent so as to throw supplies of gas in various directions; that is, into certain of the transmission lines of the Company, and to shut off other transmission lines. The gates are generally used in case of breaks on any particular line, when the flow of gas in such line is thereby shut off.

Pages 309 and 310:

"* * * The discharge line from Craig Station connects into the suction at Schultz Station, when

it is provided, so that it can be by-passed around that station The second line and the other lines leading south from Schultz Station are suction lines proper for Schultz Station. These lines are connected together — paralleling each other on the map, are connected together, so that the double line for some distance south of Schultz Station can be used as a discharge line from Graig Station. To give you some idea how the plant is constructed, I might say that it is somewhat similar to a railroad system. Switches are provided for passing trains at certain points, and the same thing is provided in a natural gas system,—connections put in so that the gas can be by-passed from one point to another. Take the case of a railroad, sometimes a double track is built; trains going in one direction go out one track, and in the opposite direction on the other track, but at certain points switches or connections are provided, so that those trains can be switched over in case of emergencies The same thing is true in a natural gas system; certain provision is made for switching the gas through certain lines. But the most efficient way to operate it is the way in which it is designed, just the same as it is with the railroad; the most efficient operation is the way in which the plant is designed; but other provision is made whereby it can be utilized, not so efficiently, but to some advantage in case of emeregncy."

Page 314:

"Q. Now, Mr. Sullivan, these in-take lines, as to which you have been examined as to the number and so forth, consist of lines, in the first instance, that are connecte with each well, do they not? Each well has a line connected to it, to take the gas from the well?

A. It has.

Q. And some of these well lines are run into and connected with each well, do they not? Each well has are connected or run, and thus the gas is transmitted to the compressor station?

A. Yes, sir.

Q. That constitutes the system, does it not?

A. It does. Each well has a line leading from the well. In some instances, if there is only one well, this line might extend entirely to the compressor station, but if there are a number of wells in that locality, they would no doubt be connected into a larger main line that runs centrally through the territory, so as to take the gas from a number of wells. They are all—however, a part of the intake system, taking the gas from the wells to the compressor stations."

JOHN B. CORRIN.

Page 318:

The Connecting Gas Company is a transporting company not a producing company. It owns neither territory nor gas wells. It transmits gas produced by the Reserve Gas Company in West Virginia from the State Line between the states of Ohio and West Virginia to Sugar Grove, Ohio and Wheeler, Ohio.

H. A. WALLACE.

Page 364:

A line connecting with line "A" of the United Fuel Gas Co. near Kenova, West Virginia runs south to Inez, Kentucky and re-enters West Virginia ending at

Kermit, West Virginia; it crosses the State Line or River near Leach, Kentucky and Kenova, West Virginia, and subsequently crosses and recrosses the State Line several times. What is known as Line B 19 of the Reserve Company conducts gas from Wayne County, West Virginia across the river to a point at Wallbridge, Kentucky. No West Virginia consumers are on this line.

Pages 375 to 376:

When gas flows through a measuring station there is no stoppage or cessation in the flow, and the movement of the gas is continuous. As a matter of fact the gas cannot be measured except while in motion, and in the case, therefore, of a measuring station upon a State Line, gas flowing from the first state into the second would at no time suffer any stoppage or halt in its movement.

Pages 374 and 375; 376 and 392:

The Kermit field, a field of gas operating strata situate in Mingo County, West Virginia, and Martin County, Kentucky, has a gas bearing sand extending in one continuous stratum underneath the bed of the river dividing the two States, and the entire strip of sand lying partly in each State feeds gas into the pipe lines of the United Fuel Gas Company. It is impossible to determine whence any definite portion of the gas in the lines of the Company came; that is, whether from Kentucky or from West Virginia.

The Company has purchased gas in Kentucky to the amount of 615,000,000 cubic feet and in Ohio to the amount of over 14,000,000 cubic feet, which is com-

mingled with other gas in the lines of the Company produced or purchased in West Virginia and in Ohio. When gas is fed from any well into the lines of the Company, for instance line A, there is no way of knowing where that gas is going, whether to a consumer in West Virginia or to one in another State, nor is there any way of controlling it. The same holds good with reference to line E, another line of the company, although practically all the gas in that line goes out of the States. This much is possible of determination because there are very few West Virginia consumers on that line. The gas furnished to the United Fuel Company by the Hope Natural Gas Company and the Pittsburgh & West Virginia Gas Company is fed into the general pipe line system of the United Fuel Company and commingled with the common mass of gas purchased and produced by that Company.

Pennsylvania Exhibit No 22, offered at page 360, appearing at page 1566, replaced by Pennsylvania Exhibit No. 39-D, offered at page 876 (Wyer), appearing at page 1584.

This is a map showing the natural gas property of he United Fuel Gas Company in West Virginia Kentucky and Ohio This map shows the trunk lines of the United Fuel Gas Company and of the Columbia Gas & Electric Company, the compressor stations of the United Fuel Gas Company and the Columbia Gas & Electric Company, the drying plants of the companies and the distributing plant of the United Fuel Gas Company. The pipe lines appear on this map as crossing the boundaries of the respective States mentioned.

Pages 386-387:

The United Fuel Gas Company delivered to domestic consumers outside the State of West Virginia about a million and a half cubic feet of gas, and such gas was delivered in and transported to Ohio and Kentucky towns.

Some nine and a half million cubic feet of gas is delivered by the United Fuel Gas Company to the Ohio Fuel Supply Company after crossing the State Lines of West Virginia and Ohio.

Page 381 (Cross-examination):

"Q. Well, when you put the gas from any specific well into that line, and mingle it with the gas from other wells, you don't know where that gas is going, whether it is going to a consumer in West Virginia or a consumer out of West Virginia?

A. I do not, no sir.

Q. And you have no way to control it—You don't control it after it enters that line, whether it goes to a consumer in West Virginia or a consumer out of West Virginia, do you?

A. I couldn't keep track of that certain gas from a certain well, no, sir—not where it went."

JOHN B. TONKIN.

Page 439:

Gas produced by the Hope Natural Gas Company in West Virginia is transmitted to Pennsylvania through

lines crossing the state boundary to Pittsburgh, Altoona and Greensburg, Pennsylvania.

JAMES H. REED.

Pennsylvania Exhibit No. 23, offered at page 486, appearing at page 1566, replaced by Pennsylvania Exhibit No. 39-F, offered at page 876 (Wyer), appearing at page 1586.

This is a map showing the natural gas property of the Philadelphia Company in Pennsylvania and West Virginia as of January 1, 1920. The map shows the natural gas distributing plants, the compressing stations, the gas fields and direction of gas flow of the Philadelphia Company in the two States named. Two of the gas fields are shown as extending unbroken underneath the line dividing Pennsylvania and West Virginia.

Page 530:

As indicated on Pennsylvania Exhibit No. 23, there is a gathering line of the Philadelphia Company that extends from West Virginia Pennsylvania State Line. Lines operated by the Pittsburgh and West Virginia Gas Company, and by the Equitable Gas Company, connect somewhere near the State Line and form one continuous line of transportation.

Page 531:

Some gas is brought down from Pennsylvania to West Virginia and then back again into Pennsylvania.

J. E. ANGLE.

Page 554:

The lines of the Fayette County Gas Company extend in one continuous line from West Virginia into Pennsylvania.

MARTIN B. DALY.

Page 564:

Ohio Exhibit No. 1, offered at page 564, appearing at page 1695, replaced by Pennsylvania Exhibit No. 47 (Wyer) offered at page 973, appearing at page 1599. (Pennsylvania Exhibit No. 47 is a copy of Ohio Exhibit No. 1, being a map of the main lines of the East Ohio Gas Company differing from the original Exhibit 1 merely in scale).

Pages 564 to 570:

This exhibit shows that the lines of the East Ohio Gas Company extend through numerous counties in Ohio, and the testimony given by Mr. Daly in this connection sets out in detail the line, connections and routes taken by these pipe lines.

Page 565:

Lines of the East Ohio Gas Company connect at the Ohio River with pipe lines coming from West Virginia.

L. B. DENNING.

Ohio Exhibit No. 2, offered at page 651, appearing at page 1695, replaced by Pennsylvania Exhibit No. 49, offered at page 974 (Wyer), appearing at page 1601.

(This exhibit is an exact copy of Ohio Exhibit No. 2, differing from the original exhibit only in scale).

Pages 651 to 658:

This exhibit represents the main trunk lines and transmission lines of the Ohio Fuel Supply Company, together with the various communities to which it supplies gas. On this map are also indicated the lines of the Northwestern Ohio Natural Gas Company.

Page 653:

Gas Brought from West Virginia by the United Fuel Gas Company is taken on the Ohio side of the river and transported to Sugar Grove or Wheeler Station at Sugar Grove where this West Virginia gas is mingled with Ohio gas.

Pages 656 and 657:

"Q. Mr. Denning, I wish you would describe a little more in detail the route of the gas obtained from the United Fuel Gas Company, down at the river, as it goes to Cincinnati, giving its connection to the so-called Cincinnati line or division?

A. The system generally, Mr. Eagleson, is so arranged as to be interchangeable, or rather I should say, I fancy, inter-connecting. The point being to keep gas flowing to the distributing points as nearly uniform as can be done. Gas received from the United Fuel at its delivery point on this side of the river in Ohio, and coming from West Virginia, passes along through line E, the 18-inch line, until it reaches Wheeler Station at Sugar Grove. As I explained before, it is there mingled with the other gas which is brought up from Vinton and Jackson Counties and the other producing territory in

the Sugar Grove field. It then can be thrown in any one of several directions. It can be sent to Zanesville over this line and these intermediate points as shown on the map. It can and is sent to Columbus through the line indicated by red, or through the line indicated by blue. It can in emergency be sent up through the cross line, clear up to Treat Station, so that in the event of an emergency, assuming that Treat station should for some reason or other be put out of business, we might be able to render some service to this section of the country controlled by Treat station, from Wheeler station; or it can and most usually is taken through one or the other of these cross lines running westerly from Wheeler station, connecting with the Cincinnati 18-inch line, as an additional safeguard, for Xenia, Hamilton, London and Cincinnati, and the intermediate towns supplied."

Page 715:

The gas brought by the Ohio Fuel Supply Company through the line connected with that Company's line and running to Sugar Grove becomes commingled there with gas produced by that Company in the State of Ohio in the Jackson and Vinton district.

G. F. BATCELOR.

Pennsylvania Exhibit No. 25, offered at page 746, appearing at page 1566. This is an outline map of the main lines of the Natural Gas Company of West Virginia, both in the Northern and Southern divisions of the system.

Pennsylvania Exhibit No. 26, offered at page 746, appearing at page 1566. Map showing the natural gas property of the Natural Gas Company of West Virginia, Southern division.

EUGENE P. WHITCOMB.

Ohio Exhibit No. 10, offered at page 750, appearing at page 1709.

Pages 750 to 758 and 764 to 772:

A map of the main lines of the Logan Natural Gas & Fuel Company in Indiana and Ohio.

Page 781:

"Q. Is your system of transportation lines so connected or interrelated that in case of a shortage of gas from any field that you may have in one of the three divisions, can you transfer gas from another division to that one, to help out?

A. The transmission—or the main or larger transmission lines pass through all the fields. We can regulate the supply by cramping the gates against the towns nearest the compressing stations and carrying a larger pressure to the points farthest away. We have some lines through which the gas may be closed, and the gas driven in either direction, though the principal main trunk lines running north, the gas flows only in one direction.

Q. Then your pipe line systems in Ohio, as a whole, are one unit, are they?

A. Practically one unit; they are all connected.

Q. And the division of your system into the Northern, Central and Southern is for what primary purpose?

A. More for the Operating Department, as a matter of convenience in classifying data and operations pertaining to the lines, fields and wells."

S. S. WYER.

Pages 876-878:

Pennsylvania Exhibit No. 39-A, offered at page 876 (Wyer), (replacing Pennsylvania Exhibit No. 24), appearing at page 1581; being a map of the Fayette County Gas Company showing how the Fayette County Gas Company gets natural gas from West Virginia. This map shows the geographical location of the pipe lines of the Fayette County Gas Company both in West Virginia and in Pennsylvania, although at the present time the Fayette County Gas Company does not own any pipe line property in West Virginia and the lines shown in West Virginia are the pipe lines of the Hope Natural Gas Company that are used for service to the Fayette County Gas Company across the State line. The Hope Natural Gas Company produces the gas in West Virginia, transmits it to the Wade measuring station and there delivers it to the Fayette County Gas Company, which takes it then into Pennsylvania where it is delivered by said Company to consumers in Uniontown, Connellsville, Scottdale and other towns in Westmoreland and Fayette Counties.

Pages 888 and 889:

The lines of The Manufacturers Light & Heat Company form a continuous net work, crossing and recrossing from the State of West Virginia into the States of Ohio and Pennsylvania. From the manner in which the lines are constructed and operated, in order to determine

whether the gas produced by the Company and transmitted through its lines into any one of the three States comes from any particular one of the States, tests must be made, and in some parts of the system they would show that all of the gas was West Virginia gas. In other parts of the system they might show all the gas to be Pennsylvania gas, and in still other parts of the system the gas would be intermingled, being West Virginia, Pennsylvania and Ohio gas.

Pages 888-889:

Following the lines of said company from West Virginia into Pennsylvania, there is a line coming into Washington County, Pennsylvania, near the Majorsville Compressing Station. At Hundred on the West Virginia side there is a compressing station that drives the gas into West Virginia and the lower end of Greene County, Pennsylvania, and then back again into Marshall County, West Virginia. From Hickory, Pennsylvania there are lines which deliver gas into West Virginia and also into Steubenville, Ohio. On crossing the Western Pennsylvania boundary line the lines of this Company run from the north part of Hancock County and enter Ohio, also reaching Chester, West Virginia as well as East Liverpool and Wellsville, Ohio. From that point gas is taken generally into other counties of West Virginia and Ohio.

Page 891:

Pages 890 to 892:

A map of the main lines of the Carnegie Natural Gas Company in Pennsylvania and West Virginia.

Pennsylvania Exhibit No. 39-H, offered at page 876, appearing at page 1588.

Pages 892 and 893:

Map of the main natural gas lines of the Eastern Oil Company in West Virginia and Maryland.

Pages 932 and 934:

Gas feeding from a well into a line, which line in turn carries gas partly to points of consumption in West Virginia and partly to points of consumption in Pennsylvania and Ohio, has no label upon it and there is nothing upon it to distinguish ownership; it is all intermingled. It is generally very difficult, and in many cases impossible, to tell what points such gas will reach ultimately. There is no way of identifying the gas reaching any consumer as coming from any particular well or district. The only thing that can be known is that if gas is fed from a well into a general system, a certain percentage of such gas will ultimately reach consumers on that line, whether in the originating State or in other

States. The flow of gas on a given line can be controlled by controlling the pressure on the line by means of manipulating the gates or valves.

Page 935:

"• • • There are certain local conditions where wells are feeding into lines crossing the state boundary, and where the direction of flow under normal conditions must always be the same, where it would always be an absolute certainty that the gas from those wells would get into a certain line, crossing the state line at a certain definite boundary, and going to a certain definite group of towns; for the property as a whole, however, it would be impossible to tell ordinarily—and that is especially true with a large number of wells in the southern part of the field—whether the gas would go one way or another. It is, of course, relatively very easy to proportion the amount of gas going into Ohio, to the East Ohio Gas Company, or to the Peoples Gas Company, or to the Fayette County Gas Company, by mere change of position of gate valve, but that change in position of gate valve will determine the relative volume as a total that will pass, and will have no bearing and will give no information on identity from either individual wells or even local fields."

CHARLES E. KREBS—DEFENDANT'S WITNESS.

West Virginia Exhibit No. 30-A, offered at page 1115, appearing at Folio 448.

Pages 113 to 1117:

Map showing the location of gas pipe lines and compressor and measuring stations in West Virginia of the Carnegie Natural Gas Company, Eastern Oil Company, Fayette County Gas Company, Hope Natural Gas Company, The Manufacturers Light & Heat Company, Philadelphia Company, Reserve Company and United Fuel Gas Company. This is a composite map showing the same lines, stations, &c., as were shown on several maps introduced by the State of Pennsylvania through Mr. Wyer.

H. E. NEASE—DEFENDANT'S WITNESS.

Page 994:

According to the report submitted by the Hope Natural Gas Company to the Board of Public Works of West Virginia, the business of the Hope Company is confined to the State of West Virginia. This is also true with reference to the report of the Pittsburgh & West Virginia Gas Company and of the Reserve Gas Company.

Pages 1030 and 1031:

The Pittsburgh & West Virginia Gas Company markets a small part of its gas within the State of West Virginia; the greater part of the entire production, however, is marketed to the Equitable Gas Company at the West Virginia State line. The Equitable Gas Company is controlled by the same interests as the Pittsburgh & West Virginia Gas Company. It is customary for the producing company in West Virginia, as in the case of the Pittsburgh & West Virginia Gas Company, to sell its gas at the State line at the cost of production within West Virginia to the producing company.

Page 1061 (Cross-examination):

The Hope Company and the Reserve Company furnish a large amount of gas to other companies that transport that gas into Pennsylvania, Ohio and other States. Therefore, a large portion of the gas produced by the Hope Company is delivered to other companies to whom it sells, which companies transport this gas into Ohio, Pennsylvania and other States.

Note: These maps have not been reproduced here, but are referred to as the most convincing argument of the fact that the operating systems are one unit ignoring State lines.

VI.

THE OPERATION AND EFFECT OF THE WEST VIRGINIA STATUTE WILL BE TO APPROPRIATE TO THE USE OF WEST VIRGINIA CONSUMERS GAS ALREADY IN COURSE OF TRANSMISSION FROM WEST VIRGINIA TO OTHER STATES AND DESTROY THE MARKET FOR THE PRODUCT OF THE GAS COMPANIES, RENDER THEIR PLANTS VALUELESS AND PARALYZE THEIR BUSINESS.

Some of the evidence under this heading is necessarily repetition of evidence under previous and subsequent headings but this has been avoided as much as possible. This evidence under Point VI must be considered with evidence particularly under points VIII and IX as well as other points to obtain a fair comprehension of the above proposition.

HARRY A. QUAY.

(Pages 25 and 26; 26; 38 and 39; 48, and 129 and 130):

(Page 26):

"Q. And what would be the effect on the market value of the property of the investors?

A. I would say that the market value of the property, without gas to serve the patrons, would be very little."

(Page 48):

"* * * Again, if the service of a consumer is interrupted, no matter whether it is an industrial or a domestic consumer, he realizes that he can place no de-

pendence on the service; he was depending on it for heating, and he found he was not getting sufficient gas for that purpose, and was forced to put in a substitute fuel; if he could not secure gas for cooking purposes or lighting his home regularly, satisfactorily to him, he would be compelled to secure other fuel, substitute fuel."

(Pages 53; 99 and 100; 105 and 106, and 111):

If, under the operation of the statute, the companies producing gas in West Virginia were compelled to furnish gas through the West Virginia lines to West Virginia consumers in greater quantities than were furnished without the compulsion of the statute, then there would be a proportionate reduction of pressure along the entire system of lines; and aomng the points where pressure would be reduced, would be points through which gas flowed which had crossed from West Virginia to Pennsylvania and back again into West Virginia, with the result that the companies would be compelled under the statute to furnish to West Virginia consumers gas which had already been transmitted to Pennsylvania and had flowed back through the lines once more to West Virginia.

As a general proposition, it is the pressure in the lines which determine the direction of the flow of gas and not the gates which are placed at intervals along the lines and which to some extent may direct the flow of gas. For the most part these gates are not closed. There is, therefore, no way of determining in advance where gas, starting from any given point, would reach its final destination, or in what State. As an example, the case was cited of some gas which had been sent out from a West Virginia compressing station and which had been contaminated by sulphur, the odor of which

was plainly evident. Complaints were subsequently entered by consumers in widely divergent points in West Virginia and in other States, to-wit, Pennsylvania and Ohio, to the effect that the odor of sulphur had been noticed in the gas.

Although, as a general rule, it is impossible to know beforehand, or to direct, the flow of gas from West Virginia to Pennsylvania, it is known that the gas furnished to consumers upon the lines of the company at the furthest point North in Pennsylvania where the Manufacturers Company supplies gas to consumers, was produced in Pennsylvania.

T. O. SULLIVAN.

(Pages 212 and 213; 214; 215 and 216; 222; 326, and 330):

(Page 214):

"* * * It (curtailment of supply to consumers outside of the State of West Virginia) would also have the effect of making the service that we could render to those companies so unsatisfactory to their consumers that they would necessarily have to adopt some other means of providing heat in their homes. Natural gas service, in order to be at all satisfactory, has to be practically a continuous service. Unless it can be relied upon, the public generally would only use it for such purposes as could be dispensed with easily at any time."

(Page 215 and 216):

"Q. What would be the effect upon the operation of your lines of an order from the Public Service Commission of the State of West Virginia to make connec-

tions with and supply the deficit of other natural gas companies in the State of West Virginia, for which you had made no provision and which previously you were not supplying, during these cold periods I have already referred to? * * *

Q. The statute providing that the Public Service Commission should have the power and the right to compel any gas company in the state engaged in the transportation of gas to make connections with and supply the deficit to any other or all other gas companies in the state which had a deficit at the time?

A. In many instances it would be practically impossible for us to comply with an order of that kind, under the present construction of our pipe line systems. The lines are built with a view to delivering gas to certain communities. The compressing stations are installed for that purpose and with that end in view. A connection of that kind made on many of the suction lines in the field leading to these compressing stations would necessitate shutting down those stations, in order to permit the gas to accumulate in the suction lines and get a sufficient pressure from the natural rock that it would produce such a pressure as to force the gas to the points where it might be needed. It would have the effect of rendering a good portion of our equipment valueless for the purposes for which it was intended."

(Page 216):

"Q. And what effect of disorganization would it have upon your operations, where no provision had been made for this particular demand at those particular times?

A. It would have the effect of creating a very chaotic condition, and of generally demoralizing the business. It would be almost impossible to operate under those conditions. In order to take care of any business, it is necessary to make some provisions, and if those provisions are interfered with, it certainly creates a very chaotic condition; more especially if that interference comes at times when all of the available supply is being utilized. It then creates a condition—I am frank to say I wouldn't know how to cope with it. It would be so dangerous that I would be very much disinclined to comply with any order of that kind, if it came at a time when conditions were serious.

Q. As I understand your answer then, as a practical gas man, you don't know what you could do under those circumstances, to operate the lines?

A. Not if I complied with the order. I should feel very much inclined to disregard the order and take a chance on going to jail, possibly."

(Page 222):

If during cold weather, under compulsion of the statute, gas in the lines of the Hope Company were diverted to industries and other consumption in West Virginia, it would make the supply available for Pennsylvania and Ohio consumers so unsatisfactory that they would be compelled to discontinue its use entirely. Considering the shortages already existing in cold weather, any further curtailment of the supply for Pennsylvania and Ohio would have a very detrimental effect on the service in those States.

JOHN B. CORRIN.

(Pages 326; 328, and 330):

If the gas territory and wells of the Hope and Reserve Companies were exhausted so that the business of supplying natural gas to consumers would have to be given up by the companies, the value of the plants would be "junk value," or less than 25 per cent. of the present value.

If the Reserve Company were compelled from time to time, especially in cold weather, to make connections with and supply other public utilities in West Virginia then those with which it had contracts and for which it had made provisions, it would not be possible to operate the system further because of the uncertainty and undependability of the gas supply furnished to consumers in Pennsylvania and Ohio; they could not be retained as consumers, and under such conditions it would not be practicable to maintain a gas company.
(Page 330):

"A. I can't imagine how it would be possible for us to retain our consumers at all, if they were going to be subject to that interrupted service; but I don't think that people would be annoyed by the interrupted service. Another thing,—I think it would be extremely dangerous to have interrupted service. It might be that the gas would go off, practically entirely off, and come on again. It might blow up their houses. And the discomforts that people would undergo, I think they would not be annoyed by it and would put it out of their houses.

H. A. WALLACE.

(Pages 368 and 369, and 370 and 371):

If the United Fuel Gas Company were compelled to obey the provisions of the West Virginia statute and supply the demands of the West Virginia consumers during the winter, it would be absolutely impossible to operate the Company successfully as a gas company under those conditions, for no doubt the Company would lose all its profitable business outside the State of West Virginia for the reason that the consumers would not tolerate the uncertain and insufficient gas supply which would result from an enforced compliance with the statute.

(Pages 368 and 369):

"Q. If your company was compelled to supply, under the terms of the proposed legislation, which we are now resisting, an adequate supply to fill the requirements of the domestic, industrial and other consumers of the State of West Virginia, before taking any of the gas outside of the state, what, in your opinion, would be the effect of this upon your ability to transport any gas out of the state?

A. I feel that in a very short time, in cold weather especially, we would have no gas to transport out of the state, and for that reason I do not believe domestic consumers and other people would care to be conencted to our lines, if they could only receive a supply of gas during the summer season, and in the winter time, when they absolutely needed the gas for heating and lighting and comfort, to have the supply discontinued, they naturally would not care to use gas for fuel.* * *"

JOHN B. TONKIN.

Pages 427 and 428; 428 and 429, and 429:

The value of the Peoples Gas Company's plant in the event of a cessation of gas supply to the extent that the plant could no longer be maintained would depend partly upon whether it could be converted into an artificial gas plant. As to the field and main lines, perhaps 15 per cent. of the investment could be salvaged. Unless the city distributing plants could be sold for the purpose of manufacturing artificial gas, their junk value would not pay for taking them out.

Pages 428 and 429:

"Q. Now, then, what would be the effect upon the operation of your company, if, under the provisions of the Act of the Legislature in controversy here, the Hope Company should be compelled to make connections with other companies to supply their deficit, or should be compelled to supply the demands of the consumers in West Virginia with gas before making deliveries to you? What would be the effect?

A. Well, the result would probably be that on extremely cold days there would be very little, if any, gas come north through the lines connecting with the Hope Company. It would create a situation that would leave us practically without gas, and what little gas we would have left would be scattered around to so many places, and we would have to try to do so much with so litle gas, that we wouldn't have any service. It would also create a dangerous situation, where the gas would go out, no doubt, in a number of places. In fact, it would demoralize the operation of the company.

Q. Would that demoralization go to the extent of substantially shutting down your operations?

A. I think that after one winter of that, our customers would probably want to leave us; that they wouldn't put up with the inconveniences and the suffering that they would have to go through, under those conditions."

JAMES H. REED.

Pages 505 and 506:

In the event that the natural gas supply of the Philadelphia Company failed completely, the wreckage value of the Company's gas lines, plants, distributing system, &c., would be next to nothing. This is due partly to the fact that the expense involved in lifting and taking out pipe lines would be greater than the sum realized from their sale. Moreover, most of the streets under which pipe lines lie having been paved, there would be difficulty in salvaging the system, and, therefore, as to the gathering and transporting systems the whole investment of the Company would be wiped out. As to the distributing systems in the cities, it might be possible to use the systems for artificial gas.

J. E. ANGLE.

Page 555:

If, under the operation of the West Virginia statute, the Hope and Reserve Gas Companies would be compelled during cold days of the winter to make a connection between their lines and Morgantown or those at Fairmont for the purpose of supplying any

deficit in those towns during this period, this would, without doubt, put the Fayette County Gas Company out of business, the Fayette Company being entirely dependent upon the Hope Company for its supply of gas.

MARTIN B. DALY.

Pages 588; 589 and 606:

Page 588:

"Q. Under those circumstances then, if the authorities in West Virginia, pursuant to the Act in question here, were to divert to persons, firms or corporations in West Virginia for the service of the public, or any part of the public, for all purposes, in the State of West Virginia, a substantial amount of the gas that otherwise would come through the Hope Natural Gas Company's lines to your company, what effect, if any, would that have with reference to the disorganizing and breaking down or destroying the operation of your company?

A. The result of such an action, in so far as we are able to anticipate it, would be the wreckage— practical financial wreckage of the company. It would result in depriving many of the communities of gas service of any kind. It would leave our transportation system without any reason or any practical use to which it could be applied. That alone would involve a loss of approximately $20,000,000, less whatever salvage might be obtained from it."

Page 589:

"Q. Now, you spoke of the result of such an act on the part of the authorities of West Virginia upon your physical property values. You may state more in detail, if you desire, what that result would be.

A. Financially the company must use its investment in its transportation system, for the reason that those pipe lines are constructed for the purpose of carrying very large quantities of gas, and if that quantity is not available, the system becomes useless. The pipes are very large and are not in demand for any other purpose, nor can they be used for any other purpose. We have but one pipe line that might be taken up and realize any profit over the cost of taking it up.

Q. What line would that be?

A. That would be the No. 1 line, 10 and 12 inch pipe. The 18 and 20 inch pipe would not be marketable.

Q. That would mean that the main transportation lines of your company from the Ohio River, in Monro and Belmont Counties, northward to the lake, would be rendered to what extent useless?

A. I should say that entire system would be lost."

Page 606: (Cross Examination):

When the supply of gas furnished by the Hope Natural Gas Company to the East Ohio Gas Company is reduced by 25 per cent. the plant of said latter company will become junk, for such a supply will be so inadequate for the demands that the business of said East Ohio Gas Company will be practically at an end for anything except cook stoves or lighting, and the use will not tolerate such an inadequate service.

T. J. JONES.

Page 636:

The Dayton Gas Company depends entirely for its supply upon the Logan Natural Gas & Fuel Company, which Company secures its gas from West Virginia. If the supply of gas furnished the Dayton Gas Company were curtailed, the Company would have to receive a much larger price for its gas or it would go into the hands of a receiver. The earnings of the gas companies depend upon the volume of gas. If the volume is very materially reduced it necessitates either higher rates or means bankruptcy of the companies. If the gas were entirely cut off the companies would be put out of business, lose their investments, or would have to proceed to erect manufacturing plants and produce manufactured gas.

L. B. DENNING.

Pages 672 and 673; 674; 678; 679, and 702:

Pages 672 and 673:

"Q. Now, with reference to those one million people dependent upon your company for natural gas, as you stated, if the authorities in West Virginia, pursuant to the act in question here, were to divert to persons, firms or corporations in West Virginia, for the services of the public, or any part of the public, for all purposes in the State of West Virginia, a substantial amount of the gas that otherwise would come through the United Fuel Company lines to the lines of your company for distribution to those consumers, what effect would that have upon their gas supply in Ohio, and the operation of your company in their service?

A. I understand your question to be what effect the diversion of a substantial amount of the gas received from West Virginia would have upon the operations and property of The Ohio Fuel Supply Company and the people whom it serves. Is that a correct conclusion?

Q. That is correct.

A. A very disastrous and destructive effect upon both, of course more or less dependent upon the quantity of gas diverted. A substantial quantity diverted would have the immediate effect of disorganizing and disarranging the service to the consumers throughout the state, make necessary the entire elimination of service from a considerable number of consumers, a complete rearrangement of lines, compressing stations and operating conditions of the company and undoubtedly deprive a considerable portion of the people served by the company, of gas service, thereby destroying the investment which they have in appliances, and also result in a destruction of a considerable portion of the company's property, by reason of the fact that it would no longer be of any value or use in the company's operations, and would not have any value whatsoever, except what might be possibly obtained from a resale or junk or a salvage value. It would necessitate—I think I have already said—a complete elimination or discontinuance of service to a considerable number of consumers."

Page 674:

The value of natural gas service to the consumer depends upon the continuity of supply. Anything that interferes with that continuity of supply results in a disrupted and unsatisfactory service.

Pages 678 and 679:

"A. With very few exceptions they would be reduced simply to their junk or salvage value, for the reason that they were constructed primarily for the distribution of natural gas without regard, or without thought of ever utilizing them in manufactured gas distributions. You understand that the principles of construction as between a natural gas plant and a manufactured gas plant are entirely different and we would have very little left out of the distributing systems which we own ourselves other than junk or reclaimed value. I believe that some portions of the City of Toledo might be utilized in manufactured gas distribution, but even that is problematical."

Page 702:

When the diminishing supply of gas has failed or been used the gas companies will be put out of business and the consumer will have to turn to some other form of fuel.

J. W. McMAHON.

Pages 725 and 734 and 735:

The Northwestern Ohio Natural Gas Company will be financially ruined under the operation of the West Virginia statute, and its property would have only a junk value.

Pages 734 and 735: (Cross Examination):

If the supply of gas furnished the Northwestern Ohio Natural Gas Company by the Hope Natural Gas Company were diminished 2,000,000 feet a day, it would be dangerous for the company to attempt to operate.

EUGENE P. WHITCOMB.

Pages 782 and 783; 783; 783 and 784 and 787:

If for any reason West Virginia gas should be denied the companies of the Union Natural Gas Corporation, this would ruin and demoralize the service of the entire southern division of said corporation, with the exception of the two and a quarter million of gas available in local fields. There would be absolutely no gas whatsoever passing through the lines west of the Sugar Grove compressing station supplying the cities of Dayton, Muncie, Richmond, New Castle and other cities and towns in Ohio and Indiana. There would be no service whatever, or supply, to deliver to the City of Lancaster, in Fairfield County, Ohio; and the City of Newark, in Licking County, would be substantially out of gas.

Page 783:

"Q. What would be the effect upon your distribution system, and your supply to you company, if, for any reason the supply from West Virginia would become intermittent and irregular, sometimes—to illustrate—coming as it is now under your contract and then again being substantially denied to you?

A. It would probably result in the loss of all of the service under the contracts to which I have referred, by reason of being unable to give them a continuous supply. They would probably discontinue the use of natural gas altogether."

Pages 783 and 784:

Under the operation of the West Virginia statute the companies of the Union Natural Gas Corporation

will receive no gas at the Sugar Grove station. This would demoralize the entire service of the southern division and render the investment, lines, compressing stations and distributing plants of very little value.

Page 787:

"* * * Now, I want to ask you: If, for any reason, you were denied a supply of gas from West Virginia, what would be your financial loss because thereof?

A. It would be approximately the total value of the compressing plants, pipe lines and distributing systems, less whatever might be obtained in the way of junk value, or if sold as second-hand material, providing a purchaser could be obtained."

J. K. ANDERSON.

Pages 820; 830 and 831, and 853 and 854:

Under the operation of the West Virginia statute it would be possible for the interstate companies doing business in West Virginia, in supplying gas to consumers in the States of Ohio and Pennsylvania, to operate at times, but they would be seriously crippled in their operations. Their plants would be practically useless for a large part of the year and they would lose their market in those other States and thereby lose all or a large part of the plant used in serving consumers in the other States in transporting gas from West Virginia to those other States, both through large main lines and possibly some compressing stations.

Page 820:

If for any cause the supply of natural gas furnished to either domestic or industrial consumers becomes inter-

mittent and not continuous it would be impossible for the gas company to retain a market for its gas under such condition, for this would cause great dissatisfaction and result in the use of substitute fuel and destroy the market for gas.

Pages 853 and 854; Cross-examination:

The operation of the West Virginia statute would seriously diminish the supply of gas to consumers in Pennsylvania and Ohio.

NOTE—As bearing upon the demand for gas in West Virginia and some of those who would have to be supplied in accordance with the testimony of witnesses for the defendant upon that subject.

H. E. NEASE—DEFENDANT'S WITNESS.

CHARLES E. KREBS—DEFENDANT'S WITNESS.

Pages 1121 and 1122:

J. S. LAKIN—DEFENDANT'S WITNESS.

Pages 1140-1154; 1155; 1158:

B. F. ROBINSON—DEFENDANT'S WITNESS.

Page 1207.

R. T. CUNNINGHAM—DEFENDANT'S WITNESS.

Pages 1220 and 1221, and 1241:

The people living in the counties of Wetzel, Monongalia and certain other counties mentioned by Mr. Krebs have built their homes and equipped them for the use of natural gas therein as fuel and for illuminating purposes. A number of industries have been built and were so located for the reason that they could utilize natural gas for fuel. This is especially true in the counties of Marshall, Ohio, Wetzel, Marion, Monongalia, Harrison, Doddridge, Tyler, Pleasants etc., Wood. In Clarksburg and Fairmont all the dwelling houses were equipped for natural gas for heating. Some of the office buildings and places of business in Clarksburg were built without taking into consideration the possibility or the necessity of changing fuel at some future time. About 10 per cent. of the dwelling houses in Fairmont, however, were constructed with heating, hot water or steam heating furnaces. Factories and industrial plants in Fairmont were equipped for the use of gas.

The West Virginia University at Morgantown, the Preparatory Branch of the University of West Virginia at Keyser, the buildings at Marshall College in Huntington, the West Liberty Normal School in Ohio County, and various other colleges, schools and hospitals in Gilmer and Kanawha Counties, in the towns of Huntington, Fairmont, Moundsville, Terra Alta and Elkins, were built and equipped for the use of natural gas as a fuel.

The West Virginia University at Morgantown was compelled to change from the use of gas to the use of

coal as a method of heating upon the request on the part of the West Virginia Traction and Electric Company in order that said company might give better service to domestic consumers in Morgantown. The Preparatory Branch of the West Virginia University at Keyser, the West Virginia Trades School at Montgomery, the Glenville Normal School at Glenville and the West Virginia Collegiate Institute in Kanawha County have had an inadequate supply of gas for a period of years varying from one to three. During the cold weather it has been frequently necessary to dismiss school and there has frequently not been enough gas to prepare meals. Because of the inadequate supply of gas, the West Virginia School for Boys in Taylor County was compelled to change the heating plant from gas to coal. Because of an inadequate supply of gas at the West Virginia Industrial Home for Girls in Harrison County it was frequently necessary to put the girls to bed in order to keep them warm.

The Weston State Hospital and the Fairmont State Hospital have had during recent years an inadequate supply of gas. At times it has been necessary to shut down the laundry, to abandon electrical equipment and pumping equipment and to change, in the case of the Fairmont Hospital, from the use of gas as fuel to coal as fuel. During the extremely cold weather, at the Weston State Hospital it has been necessary to put patients to bed in order to keep them warm. The State Tuberculosis Sanitarium at Terra Alta has had a very poor supply of gas for about three years. In January of 1920 the gas supply was so inadequate that the patients would have frozen to death if the superintendent had not erected stoves and built fires, putting the pipes out through the windows as there were no

chimneys. The West Virginia Children's Home at Elkins has had such a poor supply of gas that it has been compelled to make a temporary change from gas to coal.

Wherever gas was supplied to the above mentioned institutions by one of the large interstate companies, the service was uniformly good. Where the service was defective it was from local companies.

B. F. ROBINSON—DEFENDANT'S WITNESS.

Pages 1205, 1206:

Since the time gas commenced to be used as a fuel in Clarksburg the city has grown from a population of about 6,000 in 1900 to about 28,000 at the recent census. Gas was first used in about 1892 or in 1893. The great increase in the population and growth of Clarksburg can be attributed to the use of natural gas. The abundance of natural gas in 1900 and the surplus in this vicinity led to the offering of very low rates of four cents. As there was no market for the gas at that time it was used as an inducement to bring factories and consumers to Clarksburg. Practically all the industries in the vicinity of Clarksburg came in from outside sources. These industries brought at least 10,000 skilled workmen and other people connected with same in Clarksburg where they have located permanently, purchased homes and settled.

R. T. CUNNINGHAM—DEFENDANT'S WITNESS.

Pages 1222, 1223:

The use of gas at Fairmont, West Virginia, has had an appreciable effect in the growth of that city. Because

of the availability of natural gas at low rates many industries requiring gas for fuel settled there, bringing with them skilled help and attracting other labor into the community. These workmen and people connected with the industries have located and built their homes in Fairmont and are dependent on these industries for their support. In general, throughout the Monongahela Valley of West Virginia, the same influence of natural gas in the matter of growth and development of the community may be traced. Some of the principal cities in this valley are Morgantown, Clarksburg, Mannington, Weston, Buckhannon and Grafton.

H. E. NEASE—DEFENDANT'S WITNESS.

Pages 1178, 1182, 1183, 1184, 1185, 1186, 1187, 1188:

The West Virginia University consumes gas furnished by the West Virginia and Maryland Gas Company, a subsidiary of the Eastern Oil Company group. The West Virginia Collegiate Institute in Kanawha County is supplied with gas by the Charleston-Dunbar Natural Gas Company, which has a connection with the United Fuel Gas Company. The Weston State Hospital is supplied with gas by the Keener's Oil, Natural Gas and Fuel Company, which, until May, 1919, received its gas from the Hope Company. The Spencer State Hospital in Roane County is served with gas by the United Fuel Gas Company. Marshall County, where the West Virginia Penitentiary is located, is served with gas by the Manufacturers Light and Heat Company, and to a small extent by the Pittsburgh and West Virginia Gas Company and the Hope Company. The West Virginia Industrial School for Boys in Taylor County is served by the Hope Company and the Pittsburgh and West Virginia Gas Company. Five of the large interstate com-

panies, to-wit: The Carnegie Natural Gas Company, the Reserve Gas Company, the Pittsburgh and West Virginia Gas Company, the Hope Natural Gas Company and the Manufacturers Light and Heat Company operate in Harrison County where the West Virginia Industrial Home for Girls is located. The State Tuberculosis Sanitarium at Terra Alta, Preston County, is served by the Northern Natural Gas Company, and the West Virginia Children's Home at Elkins in Randolph County is served by constituent companies of the Eastern Oil Company.

JOHN J. CORNWELL—DEFENDANT'S WITNESS.

Governor of West Virginia.

Pages 1193, 1197:

Prior to the enactment of the West Virginia statute in question the Governor of the State had received numerous complaints relative to the inadequacy of service furnished by the companies operating in West Virginia with a demand and a request for relief in respect thereto. These complaints and demands, beginning about 1917, came from manufacturers, gas consumers in Clarksburg, various Boards of Trade, Chambers of Commerce, Rotary Clubs, persons connected with hospitals, etc. Partly as a result of such complaints and requests the Governor laid the situation before the legislature during 1918 by a paragraph in his bi-annual message with a result that the statute in question was passed.

B. F. ROBINSON—DEFENDANT'S WITNESS.

Pages 1205, 1206, 1207, 1210:

Clarksburg, having a population of about 28,000

according to the last census, uses natural gas almost exclusively for domestic fuel and for fuel for industrial purposes. The Clarksburg Light and Heat Company has been compelled to buy gas from independent producers and from the Hope Company in order to supply its deficiency.

R. T. CUNNINGHAM—DEFENDANT'S WITNESS.

Pages 1218-25, 1228-29:

Natural gas has been in common use in Fairmont, West Virginia for domestic and industrial purposes since prior to 1894, but recently some of the larger industries have put producer plants in operation.

Because of the inadequacy of gas service a large number of consumers in Fairmont are considering changing to the use of coal. The first serious shortage of natural gas came there during the Winter of 1916-1917. During this period the industries had no fuel for practically sixty days, schools had to be closed down, churches could not be properly heated, and there was considerable suffering and inconvenience. Glass activities suspended work for a period of from four to eight days, naturally causing considerable unemployment. In the Monongahela Valley many consumers have taken up the use of producer gas or other forms of fuel instead of natural gas. This applies especially to glass industries having continuous, not seasonal operation.

CHARLES M. SNAITH—DEFENDANT'S WITNESS.

Pages 1281, 1282:

The local company supplying the town of Weston has not been able to meet the demands of the domestic consumers of natural gas for a period of two years.

CHARLES A. SHORT—DEFENDANT'S WITNESS.

Pages 1281 1282:

In Shinnston, domestic consumers have suffered from the shortage of natural gas and it has been necessary in the electric light plant there to use coal, and stores, public buildings and school houses have also been affected by the shortage. These conditions are general in Harrison County. Until two years ago natural gas was used in Shinnston for all heating and lighting purposes in some industries.

VANCE L. HORNER—DEFENDANT'S WITNESS.

Pages 1309, 1311 to 1312:

Until the past year Lumberport, W. Va., used natural gas for domestic and industrial purposes. For the last three or four years the Lumberport Gas Company has been unable to supply its consumers of natural gas in outlying districts such as Erie and Hepzibah. If all the companies operating in this vicinity took their gas at only a natural pressure the Lumberport Natural Gas Company and the Shinnston Gas Company would be able to keep on supplying their consumers for four or five years, but if the larger companies, by the use of pumping stations, make a general practice of taking their gas out on a vacuum the wells of these companies will be drained and they will be able to supply their consumers for only about a year longer.

PARKE BOWSER—DEFENDANT'S WITNESS.

Page 1331:

Some communities such as Glenville, which is far

from the source of supply, are using coal for fuel because they have not enough gas to supply them.

F. C. DEVERICKS—DEFENDANT'S WITNESS.

Pages 1343, 1344:

In section embraced by Doddridge, Harrison, Lewis, Wetzel and other counties in the north central part of West Virginia natural gas was generally used for heating, lighting and manufacturing purposes. Clarksburg has used gas for domestic purposes since 1893 or 1894, and this has been the exclusive fuel until the recent shortages in gas in 1915 and 1916.

During the winter of 1915-1916 there was a severe shortage of gas in and about Clarksburg. A great many industries were closed down, resulting in a loss of about one million dollars a week to the community. This was directly ascribable to the shortage of gas. The shortage was general throughout the State. Similar conditions with regard to industrial shut-down prevailed throughout the Monongahela Valley. This was the first severe shortage.

VII.

THE OPERATION AND EFFECT OF THE WEST VIRGINIA STATUTE WILL BE NOT ONLY TO IMPAIR BUT WILL DESTROY AT TIMES THE CONTRACTS BETWEEN THE GAS COMPANIES AND OTHER COMPANIES AND CONSUMERS, DOMESTIC AND INDUSTRIAL, AND THE STATES OF PENNSYLVANIA AND OHIO AND THE UNITED STATES GOVERNMENT, AND WILL AT ALL TIMES MAKE SAID CONTRACTS UNENFORCEABLE AND MAKE THE OTHER PARTIES THERETO CANCEL THE SAME.

HARRY A. QUAY.

Pages 7 and 8; 118; 119, and 120:

The Manufacturers Light & Heat Company has a contract with the State of Pennsylvania to supply gas to the Boys' Industrial Home, known as Morganza. Said Company has contracts with the United States Government to supply gas to government dams along the Ohio River, and, further, said Company has contracts with the United States Government to supply gas to various post offices in Ohio, Pennsylvania and West Virginia. In addition to these, The Manufacturers Light & Heat Company has contracts to supply gas to various counties, as for example, Allegheny County, Pennsylvania, which gas is used by the county and State for county institutions. The Manufacturers Light & Heat Company also furnishes gas to the Department of the Interior, Bureau of Mines of the United States. State institutions, various municipalities, and in some instances county institutions, in West Virginia and Pennsylvania, are supplied with gas by The Manufacturers Light & Heat Company under contracts.

West Virginia Exhibit No. 1, offered at page 138, appearing at page 1712.

Gas Purchase Agreement between the Hope Natural Gas Company and The Manufacturers Light & Heat Company.

T. O. SULLIVAN.

Page 211:

The Hope Natural Gas Company had a contract with the East Ohio Company, dated March 1, 1910; with the Peoples Natural Gas Company, dated May 1st, 1911; with the Fayette County Gas Company, dated May 1st, 1910; with the Mountain State Gas Company; and the River Gas Company, dated April 1, 1910, which was assumed by the Hope Company on April 1, 1910; the contract with the Northwestern Ohio Natural Gas Company, dated October 16, 1915; the contract with the Reserve Gas Company, dated April 11, 1913.

Page 223:

The Hope Natural Gas Company supplies various municipalities and governmental institutions, both State and Federal, with gas, such as post office buildings, government dams, court houses, hospitals, churches, public schools and institutions of that character by virtue of contracts.

A contract between the Hope Natural Gas Company and the Fayette County Gas Company, dated May 1st, 1910.

West Virginia Exhibit No 2, offered at page 284, appearing at page 1724.

Hope Natural Gas Company and The Light, Fuel & Power Company agreement.

Page 326:

"Q. From your knowledge of the demand for gas in the State of West Virginia at the present time by other public utilities, industrial consumers, domestic consumers, and others in the state of West Virginia, what do you say if their demands and requirements were first fully supplied, as to whether or not you could carry out your contracts and transport the gas produced by you out of the State of West Virginia?

A. We certainly could not live up to our contracts, and in addition, it would practically make a whole lot of our equipment and lines a lot of junk, without value."

H. A. WALLACE.

Page 373:

The United Fuel Gas Company supplies gas to natural gas companies that convey it to Louisville, Cincinnati and Pittsburgh, by virtue of contractual relations existing between said companies and the United Fuel Gas Company.

Pages 388 and 389:

The United Fuel Gas Company furnishes gas to the town of Nitro, West Virginia, a manufacturing town built by the United States Government during the war.

Page 402 (Cross-examination):

The United Fuel Gas Company has contracts with the Columbia Gas & Electric Company, the Ohio Fuel Supply Company, the Central Kentucky Natural Gas Company, the Louisville Gas & Electric Company, the Portsmouth Gas Company, the Hope Natural Gas Company and the Pittsburgh & West Virginia Gas Company.

Page 590:

The East Ohio Gas Company is under contractual relations with various municipalities in Ohio to supply consumers therein with natural gas for a period of years.

Page 594 (Cross-examination):

By an additional contract with the Hope Natural Gas Company, the East Ohio Gas Company contracted with the Hope Company for an additional supply of gas in order to take care of the increased demand of the East Ohio Gas Company.

Page 596:

Prior to 1910 the contracts between the East Ohio Gas Company and the Hope Natural Gas Company for the sale and delivery of gas at the Ohio River were not in writing, although there was an understanding relative to same. In regard to contracts with municipalities, the East Ohio Gas Company is obliged by ordinance to supply these municipalities with gas to the extent of the ability of the Company.

T. J. JONES.

Pages 632 and 633:

The Pure Oil Company supplies gas to Federal and State buildings, schools and hospitals in the Cities of Columbus, Dayton and Springfield some of which are the Hospital for Feeble Minded, the Hospital for Insane, School for the Blind, School for the Deaf and Dumb, the Ohio State University, and all State institutions in the City of Columbus.

Page 635:

The Dayton Gas Company purchases or secured its entire supply of gas from the Logan Natural Gas & Fuel Company by virtue of a contract between the two companies, and depends entirely for its supply of gas upon the amount of gas that the Logan Natural Gas & Fuel Company can secure from West Virginia.

Page 611 (Cross-examination):

The Pure Oil Company has contracts for gas with the Ohio Fuel Supply Company.

Page 616 (Redirect Examination):

This Company contracted with the Ohio Fuel Supply Company for gas to be furnished Columbus in April of 1914, for Springfield in November, 1914, and for Dayton contracted with the Logan Company for June of 1916.

Page 618 (Recross Examination):

"A. I would be unable to say, as I said, from personal experience, what quantity of gas comes from West Virginia that is distributed in the cities of Columbus and Springfield, also in the city of Dayton, other than our contract specifically states that the gas we receive at Dayton comes from West Virginia through contracts held by the Logan Natural Gas and Fuel Company."

L. B. DENNING.

Page 656:

The Ohio Fuel Supply Company acquires its West Virginia gas by reason of contractual relations with the United Fuel Gas Company.

Page 697 (Cross-examination):

The Ohio Fuel Supply Company is demanding that there shall be a sufficient supply of gas delivered to it from the State of West Virginia for consumers in the State of Ohio because it has contracts for such.

Page 708:

The Ohio Fuel Supply Company has entered into contracts with consumers directly supplied by it, and also into contracts with the communities of Columbus, Springfield and Hamilton. The latter contracts contain provisions to the effect that the consumers who were a party to the contracts first mentioned are to be supplied with gas by the Ohio Company before the communities, and that the latter are to be entitled to only as much gas as might be left in the event of shortage after supplying the others.

J. W. McMAHON.

Page 718:

The entire supply of gas of the Northwestern Ohio Gas Company comes from the Hope Natural Gas Company.

Page 719:

The Northwestern Ohio Gas Company has contracted with the Hope Company for West Virginia gas.

Page 727 (Cross-examination):

The Northwestern Ohio Gas Company began to take gas at the Sugar Grove Station from the Hope Natural Gas Company in 1903 or 1904 under a written

contract. Pennsylvania Exhibit No. 16,—offered at page 224 (Sullivan), appearing at page 1569, shows an agreement between the Hope Natural Gas Company and the Northwestern Ohio Gas Company as of October 16, 1915. This is the contract under which the Northwestern Company is at present securing its gas.

Page 728:

"My statement is that if, owing to the enactment of laws by the state of West Virginia, whereby The Hope Natural Gas Company cannot deliver us the amount of gas, or a lesser amount of gas than they are now delivering us, that it will be detrimental."

Page 730:

"Q. Aside from the existence or operation of this statute, have you had, or do you now have in mind, any idea that the increasing shortage in West Virginia will interfere in any respect with the ability of The Hope Company to deliver gas to The Northwestern Company.

A. Well, I understand that The Hope Company have sufficient territory to give us a fair supply of gas in accordance with their contract if the gas can be delivered in accordance with their contract, but if diverted by law or in any other way, that it would interfere with their ability to furnish us."

EUGENE P. WHITCOMB.

Pages 765 and 766:

The Union Natural Gas Corporation, through subsidiary companies, entered into contracts with the Cen-

tral Indiana Gas Company, Central Contract & Finance Company and the Jantha Light & Heat Company to supply gas to various towns in Indiana and Ohio.

> "All of the contracts to which I have referred and all of the towns supplied on these lines contemplated the use of nothing but West Virginia gas. There was no provision—in fact, the contract stated that they were not entitled to gas produced in the state of Ohio."

Page 768:

> "* * * all contracts on the line from Sugar Grove to Dayton and Indiana contemplate and provide for the delivery of West Virginia gas only, and specifically recite the fact that the Union Natural Gas Corporation has available a large quntity of gas in West Virginia, and that they are not entitled to Ohio gas.* * *"

Page 769:

> "* * * A new contract was made with the Dayton Gas Company (about 1915) which provided, as I stated, for the use of West Virginia gas only, and in 1913, in the early part of the year, contracts were made with the Central Indiana and other distributing companies within that state, which provided for West Virginia gas only; * * *"

Page 772:

The Union Natural Gas Corporation of Ohio has contracted with the Reserve Gas Company for gas. A new contract was entered into between said parties on April 11th, 1913, which is the contract under which these companies are operating at the present time. This

contract is referred to in Pennsylvania Exhibit No. 17,—offered at page 225 (Sullivan), appearing at page 1524. Under this contract the Union Natural Gas Corporation was to receive 12,000,000,000 cubic feet of gas per year. From 1904 to 1919, inclusive, under the contracts referred to, the Reserve Gas Company delivered to the Union Natural Gas Corporation 102,682,712,000 cubic feet of gas.

Pages 773 and 774:

During the years 1914 to 1918 the Union Natural Gas Corporation received from the Reserve Company the full amount of gas to which it was entitled, but it was obliged to take during the summer months an excess of gas. During the year 1919, however, the amount received by the Union Natural Gas Corporation was 2,400,000,000 cubic feet short of the amount to which it was entitled by virtue of the contract.

Page 783:

Any diversion of West Virginia gas from the Union Natural Gas Corporation would result in a shortage of gas to all the consumers supplied by the lines of said Company running west from Sugar Grove, the lines running north to Newark and Lancaster, and lines to Circleville, Chillicothe and Athens, Ohio. If the volume were to cease entirely, practically all of the service of said Company as outlined above would be put out of commission.

Page 784:

If under the operation of the West Virginia statute the Union Natural Gas Corporation were to receive no gas at Sugar Grove, the entire service of the Southern division of said Company would be demoralized.

Page 797 (Cross-examination):

There are a number of contracts made by the Logan Natural Gas & Fuel Company with different distributing companies, to-wit: Central Indiana Gas Company, located at Muncie, Indiana; Dayton Gas Company, at Dayton, Ohio; Richmond Light, Heat & Power Company, of Richmond, Indiana; Interstate Public Service Corporation, at New Castle, Indiana, and the Jantha Light, Heat & Fuel Company, in the Western part of Ohio. These contracts were all made during the year 1913 and provide, in express terms, that the gas delivered by the Logan Natural Gas & Fuel Company is to be West Virginia gas.

SAMUEL S. WYER.

Page 969:

> * * * where the gas, after severance is delivered to the lines in West Virginia where such lines deliver gas to lines in other states, the diversion of gas from those interstate lines in West Virginia would result in the inevitable voiding of contractual relationships and destroy many property rights, because of the inability of such West Virginia interstate lines, on account of such diversion, to meet their contractual obligations at the state lines, where the gas is delivered to lines in the other states. * * *

Note: In this connection the evidence under the VI heading preceding and the VIII following is not here repeated, this evidence showing that under the provisions of the statute of West Virginia these companies could not carry out the contracts referred to under the above heading.

VIII.

THE OPERATION AND EFFECT OF THE WEST VIRGINIA STATUTE WILL BE TO ABSOLUTELY PROHIBIT AT TIMES, DURING PERIODS OF COLD WEATHER, THE TRANSPORTATION OF GAS FROM WEST VIRGINIA INTO PENNSYLVANIA, OHIO OR OTHER STATES AND THUS DRIVE CONSUMERS OFF THE LINE ALTOGETHER AND FOR THE WHOLE YEAR.

SECTION 5.

HARRY A. QUAY.

Pages 43 to 47 and 1244:

If The Manufacturers Light & Heat Company were called upon to supply natural gas to meet the probable requirements of all industrial consumers of West Virginia, it would require between twenty-five and thirty-three million cubic feet per day. This estimate is based upon previous consumption of gas by various West Virginia industrial consumers, a partial list of which is given, and upon information as to what those industrials have informed the Manufacturers Company from time to time as to the amount of gas they would or might desire to use. At present these industrials are being supplied with about one million and a half feet as a minimum, and about 6,000,000 feet as a maximum, per day.

Most of the industrials, realizing the possibility of curtailment of their supply by the Manufacturers Company for the better service of domestic consumers, have

supplied themselves with fuel other than natural gas and installed apparatus for the production of producer gas, and some were using coal for fuel whenever possible.

Page 47:

"A. I would say that if my company was compelled to furnish gas in an amount equal to the possible requirements of all of our customers, connected to our lines in the State of West Virginia—and that would apply to all other companies in the State as well—that it would practically demoralize our business in the States of Pennsylvania and Ohio. It would make the physical operation of the property absolutely problematical; you wouldn't know what your requirements were going to be for a certainty in the State."

After referring to periods of the previous year when the Company was short of gas at various Pennsylvania and Ohio Cities the witness continued:

For that reason, I base my opinion, if we were called upon to supply ten, fifteen, twenty or twenty-five million feet a day in addition to the amounts that we were furnishing, or if that amount of gas was taken out of the distribution end of the States of Pennsylvania and Ohio and used in West Virginia prior to the time that it got into the lines in those two States, it would mean that there would be times there would be practically no gas in a great many lines of the company in the two States of Ohio and Pennsylvania."

Page 48:

"Again, if the service of a consumer is interrupted, no matter whether it is an industrial or a domestic consumer, he realizes that he can place no dependence on

the service; he was depending on it for heating, and he found he was not getting sufficient gas for that purpose, and was forced to put in a substitute fuel; if he could not secure gas for cooking purposes or lighting his home regularly, satisfactorily to him, he would be compelled to secure other fuel, substitute fuel."

Pages 50-51:

"Q. Under the present system of operation of your lines in West Virginia, state what the facts are as to the West Virginia consumers getting, during times of shortages at other points, their proportion of gas from the lines.

A. The domestic consumers in the State of West Virginia have not suffered any shortage.'

Q. You mean those on your lines?

A. On our lines. With the exception of the domestic consumers in the town of New Cumberland, Hancock County, West Virginia. The domestic consumers in Ohio have suffered shortages; the shortage the past winter in the city of Steubenville, for domestic consumers, at Martins Ferry, Bridgeport and Bellaire, Ohio, has been marked. The shortage for domestic consumers on the lines of our company in the city of New Castle has been very severe; there have been at least twenty-four different shortages in that city, some periods of time there being no gas whatsoever in the lines for their use. New Brighton, Beaver Falls, Rochester, various smaller communities in the Beaver Valley have experienced severe shortages. In the district, the domestic consumers in and surrounding Pittsburgh, Bellevue, Avalon, and in that territory have suffered three or

four severe shortages, in some cases there being no gas or not sufficient gas so that any would burn in their homes."

Page 131 (Cross-examination):

"If we were required to furnish amounts of gas which, for instance, our industrial consumers would like to have and would take, in West Virginia, the amount of gas which they would use and would take would be taken to the detriment of consumers further along in the states of Pennsylvania and Ohio and also West Virginia—that is, the domestic consumers. Take, in extreme cold weather, when the domestic consumer is using all the gas that he desires, if I were to permit the use of gas for industrial purposes, there would be a great shortage in the supply of gas to domestic consumers. It is by the discontinuing or curtailing of the amount of gas furnished industrial consumers that we can tide ourselves over during these cold periods, these peak load periods. In other words, we divert and give to the domestic consumer the gas that we have available, in preference to giving it to the industrial consumer. You can readily see, if I was called upon at times even for only a million feet of additional gas to factories, that would mean one million feet less for domestic consumers. There have been times that I have been short, that a million feet, if I had it available, would have prevented that particular shortage. Now, when that gets up to eight or ten million feet, and they take it out, and it is not permitted to be utilized for domestic use, the prospect of shortage becomes very much more acute.

Pages 133; 348 and 349; 586 and 587; 631 and 677:

Harry A. Quay, of the Manufacturers Company; John B. Corrin, of the Reserve, Hope, Connecting and other

companies; Martin B. Daly, of the East Ohio Gas Company; T. J. Jones, of the Natural Gas Properties of the Pure Oil Company; L. B. Denning, of the Ohio Fuel Supply Company; testimony summarized:

Natural gas constitutes the best fuel for domestic consumers in that it is especially adapted for lighting, heating and cooking purposes. It is much more economical than either electricity or coal and much cleaner than the latter. Its use results in a great saving of money and labor towards consumers.

HARRY A. QUAY.

Pages 41 to 43; 51; 52; 121 to 124; 147 to 150; 151 and 152, and 173 to 177:

This evidence may be summarized as follows:

In past years large quantities of gas had been furnished by The Manufacturers Light & Heat Company to various industrial plants in West Virginia, Pennsylvania and Ohio. Follansbee Brothers, for example, at Follansbee, West Virginia, required and obtained about 4,000,000 cubic feet per day at one time. At present, especially in winter, the supply of gas to industrial companies is very much restricted, and very little gas, at least when compared to the amount supplied to domestic consumers is being furnished to industrials. The gas companies have adopted the policy of curtailing in part, and sometimes almost altogether, the supply of gas furnished to industrial consumers. Industrial consumers in West Virginia have at times been furnished gas in preference to those in Pennsylvania and Ohio (p. 51). The gas companies in general operating in West Virginia, including The Manufacturers Light & Heat Company have entered upon a systematic campaign

of discouraging the industrials throughout the three States above mentioned from using natural gas, and every contract made by The Manufacturers Light & Heat Company with an industrial consumer contains a clause reserving the right to temporarily discontinue, in whole or in part, the supply of gas furnished such consumer in the event that the domestic consumers required all the gas which the company had available. In 1915 the Manufacturers Company had withdrawn their industrial schedules altogether. At various times the supply furnished industrial companies in Pennsylvania and Ohio had been entirely discontinued for periods of varying length. Pennsylvania Exhibits 2 to 8, inclusive, consist of letters which were sent out by The Manufacturers Light & Heat Company to industrial companies, advising them that the Company was not in position to furnish them with a full and adequate supply of gas.

But the industrial companies have not been entirely cut off from the natural gas supply by the gas companies, for the reason that at certain periods, as in summer, the companies have more gas than is required by the domestic consumers. Sales would be lessened if industrials were entirely cut off, and, as a consequence, the rate to domestic consumers would have to be raised in order that the Company might continue its operations under favorable financial conditions. For such reasons the companies find it impossible to discontinue entirely the sale of industrial gas.

T. O. SULLIVAN.

Page 217:

"Q. Now, from your recollection of the quantity of gas that was required by these industrial plants in

West Virginia, both from your prior and present experience, what do you say as to those industrial plants, if they could receive all of the gas they desired for all of their operations, having a demand sufficient practically to take most of the gas produced in the state?

A. In cold weather, when the demand of the domestic consumers would be large, if all the industries adopted the use of natural gas to meet all their requirements, then, in my judgment, there would be a demand to take practically all of the gas that the Hope Natural Gas Company produces. This might not apply to all portions of the State of West Virginia, but in the sections in which we are operating, there would be a demand for practically all of the gas that is being produced at those times."

Pages 226 and 227:

"Q. From your knowledge and experience in the natural gas business and the operation of natural gas companies, if those companies engaged in furnishing, or required by law to furnish, natural gas for public use, or for the use of the public, for domestic, industrial or other consumption, within the State of West Virginia, are compelled to furnish a supply of natural gas reasonably adequate for the purposes, whether domestic, industrial or otherwise, for which natural gas is consumed, or desired to be consumed, by the public, or any part of the public, within the State of West Virginia, within what length of time, in your opinion, would the demand for natural gas in the State of West Virginia, for domestic, industrial and other purposes, as defined by the Act now in controversy, take substantially all of the gas produced in the State of West Virginia?

A. If the different natural gas companies operating in the State of West Virginia were compelled to furnish all of the gas that might be required for use within the state, in my opinion it would be only a comparatively short time until there would be a sufficient demand to use all of the gas that is produced. I base this opinion upon the desires which have been expressed by different firms and persons using gas within the state, of what their requirements would be, if they could obtain all the gas they needed. I also understand that in certain industries natural gas is very much better adapted for certain purposes than any other fuel that can be secured. And in view of that, it would no doubt cause other manufacturers outside of the State of West Virginia, to locate in the state, on account of the advantages which they would obtain by the use of this fuel. Taking these matters into consideration, I feel satisfied that it would be only a comparatively short time, possibly a year, maybe two years, until there would be a demand developed within the state that would use all of the gas that might be produced."

Pages 222 and 223:

"Q. In the operation of a natural gas company, there is what is usually called, or frequently referred to, the peak load?

A. Yes, sir.

Q. Now, tell us what the peak load is, in your experience as a natural gas man?

A. The peak load is the demand created by the increased quantity of gas required by consumers on cold days and at certain hours of the day. In cold

weather, on an extremely cold day, the demand of the average domestic consumer will be from four to five times greater than it is on the normal day. Then there are certain hours in the day when the demand is very considerably increased above the normal demand; that is, from about 6:30 to 8:30 in the morning, during the time that breakfasts are being prepared. Then again, from about 11:30 to 1:30 in the afternoon, while the mid-day meal is being prepared. And again, from about five o'clock in the evening to seven o'clock, when supper is being prepared. This creates a very increased demand, which probably at times is as high as 15 to 20 times more than the regular average daily load. Of course, the demand in the winter season—the normal demand in the winter season, is considerably larger than the normal demand in the summer season, probably about four times.

Pages 214; 226 and 227, and 309 to 302, summarized:

Under the operation of the West Virginia statute the industrial consumers in West Virginia would demand and consume an amount of natural gas greatly in excess of the amount they at present are consuming or being furnished with by the gas companies. Natural gas is the fuel best adapted for the purpose of those industrial consumers and if under the operation of the statute such industrial consumers could obtain all the gas they desired, various other industrial plants would be tempted to locate in West Virginia, which would account for the consumption of a large additional amount of natural gas. The demand which would be worked up by the industrial consumers in West Virginia under the advantages of the statute would very shortly reach a point where there would be no gas left for exportation to other States. As to the industrial consu-

mers now supplied, or reasonably close to the lines of the Hope Natural Gas Company, it would take between sixty and seventy-five million feet of gas per day to fulfill their demands if the provisions of the statute were enforced.

Pages 214, 215, and 222:

It is estimated that under the operation of the West Virginia statute if the West Virginia consumers could get all the gas they wanted it would amount to from 60,000,000 to 75,000,000 cubic feet per day, and that this would result in making the service to all the other companies—that is, other companies buying, selling and producing gas and buying some of it from the Hope—to which the Hope Company was supplying gas, very unsatisfactory and inadequate for the requirements of the customers of such companies. On cold days, assuming the increase in demand under the operation of the statute, the Hope Company would be able to give practically no service to any of the companies purchasing gas from it outside of the State for the service would be so poor that it would be practically of no value to the consumers of those companies. Owing to the present shortages which exist in Pennsylvania and Ohio, any additional quantity taken out of the lines would have a very detrimental effect on the service in other States.

Pages 221; 288 and 288 to 290, summarized:

It is the general rule of all companies engaged in the natural gas business, as well as of the Hope Natural Gas Company, to give preference to domestic consumers over industrial consumers in the event of a shortage of gas on the line, when there is not sufficient to supply both

and this has been the general rule for many years, despite the fact that since the industrial demand is more uniform and regular over the entire year than the domestic gas companies would prefer to serve the former. But, for the reason that at certain periods during the year the companies have more than sufficient gas to supply the requirements of domestic consumers, it is still necessary to dispose of the surplus to industrial consumers since this obviates the necessity for higher rates to domestic consumers. That is, the companies are enabled to give a lower rate for domestic service by reason of the income and return received from the industrial service.

JOHN B. CORRIN.

Pages 326 and 327:

"Q. What would be the effect upon the practical operation of the lines of the Reserve Natural Gas Company, if it were compelled from time to time, especially on the coldest days or periods of winter, to make connections with and supply other public utilities in the State of West Virginia than those with which it had contracts, and for which it had made provisions?

A. First, it would be very dangerous. I do not see how it would be possible to operate any gas system of lines if you could not determine the amount of gas that was going to go through those lines and have some person or city, or otherwise, take gas off the line before it reached your consumers. In addition, you could not retain any of your consumers yourself, because the service that would be rendered would be uncertain and undependable; and in fact, I don't believe that it would be practicable to maintain a gas company if that condition existed.

Q. From your knowledge of the demand for gas in the State of West Virginia at the present time by other public utilities, industrial consumers, domestic consumers, and others in the State of West Virginia, what do you say if their demands and requirements were first fully supplied, as to whether or not you could carry out your contracts and transport the gas produced by you out of the State of West Virginia?

A. We certainly could not live up to our contracts, and in addition, it would practically make a whole lot of our equipment and lines a lot of junk, without value.

Q. Would the present requirements and demands of domestic, industrial and other consumers in the State of West Virginia, in the coldest periods of the year, be sufficient, practically to take all the gas produced and transported by your company and the other natural gas companies in the state?

A. I don't believe there would be very much left to go through our lines out of the state, if all the demands were met."

Page 327:

The variation between the normal demand and the peak load demand among domestic consumers was about 500 per cent.; that is, the peak load is about six times as great as the normal demand. In the industrial service, however, the variation is not very great.

Pages 328 and 329, summarized:

The Reserve Gas Company did not desire any more permanent industrial consumers than they already have,

and in line with the policy of the other companies, discouraged industrial consumption. However, in order that the business might yield profits, the Reserve Company found itself compelled to sell some gas to industrials in order to get rid of gas at the time when in spite of specific requirements of the domestic consumers there was still surplus gas.

Page 330:

"Q. The population in the States of Ohio and Pennsylvania that is supplied with natural gas and uses it for domestic purposes,—are you familiar with the conditions under which the gas is thus consumed?

A. I believe I am.

Q. And will you tell us now, just as graphically as you can, what the effect would be upon those consumers, if from time to time the operation of your lines was interfered with, as you have described by the supplying of gas to other utilities, or industrial consumers, on cold days, in West Virginia, under the provisions of this Act in controversy here?

A. I can't imagine how it would be possible for us to retain our consumers at all, if they were going to be subject to that interrupted service; but I don't think that people would be annoyed by the interrupted service. Another thing,—I think it would be extremely dangerous to have interrupted service. It might be that the gas would go off, practically entirely off, and come on again. It might blow up their houses. And the discomforts that people would undergo, I think they would not be annoyed by it and would put it out of their houses."

H. A. WALLACE.

Pages 368 and 369:

"Q. If your company was compelled to supply, under the terms of the proposed legislation, which we are now resisting, an adequate supply to fill the requirements of the domestic, industrial and other consumers of the State of West Virginia, before taking any of the gas outside of the state, what, in your opinion, would be the effect of this upon your ability to transport any gas out of the state?

A. I feel that in a very short time, in cold weather especially, we would have no gas to transport out of the state, and for that reason I do not believe domestic consumers and other people would care to be connected to our lines, if they could only receive a supply of gas during the summer season, and in the winter time, when they absolutely needed the gas for heating and lighting and comfort, to have the supply discontinued, they naturally would not care to use gas for fuel."

Pages 369; 370, and 371, summarized:

Under the operation of the West Virginia statute the demand for gas for industrial purposes in West Virginia would so increase that in the course of a year, or a year and a half, practically all the natural gas produced in West Virginia would be sold in that State for manufacturing purposes. This opinion is based upon the applications for gas which have been received by the United Fuel Gas Company from big industries. Filling the requirements of these applications would take between seventy-five and one hundred millian cubic feet of gas per day, and if these requirements were satisfied there

would be no gas exported from West Virginia for domestic purposes in winter time. The carbon black industries, which are especially wasteful in their use of natural gas, from the nature of the industry and the way in which natural gas is used therein, and which nevertheless can use natural gas profitably, would resume or recommence the use of gas from which they are at present cut off, with the natural effect of further reducing the amount available for exportation from West Virginia. Further, it would be impossible to construct lines, compressing stations and field equipment in such a way that the demands of other consumers than the industrials could be taken care of, assuming that the requirements of the latter must be met first.

JOHN B. TONKIN.

Page 423:

The Peoples Natural Gas Company also discourages the use of gas by industrial consumers. At one time the industrial supply was almost entirely cut off. Domestic consumers are always given the preference over industrials, who are shut off from the supply of gas at the approach of cold weather or when the pressure in the lines of the company begins to decline. The contract of the Peoples Company with industrials contains a clause much to the same effect as that of the Manufacturers Company, to-wit, that in case of shortage the domestic requirements will be met before the industrial.

The Peoples Company, however, still does supply some gas to industrials, for the same reason as given by Mr. Quay and Mr. Sullivan in regard to the policy of their respective companies; that is, that during the periods of warm weather, when the domestic demand

is very light, it is either necessary to dispose of surplus gas to the industries in order to preserve low rates to domestic consumers, or to shut in their wells altogether. Where fields are competitive, that is, where other gas companies operate in the same district, or where certain large industrial concerns obtain gas from their own territory for their operations, it is not feasible to shut in the wells, since the gas from these wells would no doubt be drained by the operations of the competing companies and by the above named industrial companies owning their own wells. Where, however, the fields are not competitive, the gas wells are actually shut in in preference to supplying industrial consumers.

On pages 437 and 438 it was said:

"Q. How does the industrial gas business keep down the price to the domestic consumers?

A. If we were to depend entirely upon the domestic consumer for our revenues, and he doesn't use hardly any in the summer time, we wouldn't have money enough for operating; it would be necessary to charge him several times the price that he is being charged now, the price for that service."

Pages 423 and 424:

The variation between normal demand and the peak load demand in serving domestic consumers is about 1,000 per cent. The greatest peak load occurs during the winter, and occurs every winter, and the peak load is higher during some hours in the day than during others, both summer and winter, when, for instance, all appliances are turned up to heat houses and cook breakfast.

Pages 428 and 429:

"Q. Now, then, what would be the effect upon the operation of your company, if, under the provisions of the Act of Legislature in controversy here, the Hope Company should be compelled to make connections with other companies to supply their deficit, or should be compelled to supply the demands of the consumers in West Virginia with gas before making deliveries to you? What would be the effect?

A. Well, the result would probably be that on extremely cold days there would be very little, if any, gas come north through the lines connecting with the Hope Company. It would create a situation that would leave us practically without gas, and what little gas we would have left would be scattered around to so many places, and we would have to try to do so much with so little gas, that we wouldn't have any service. It would also create a dangerous situation, where the gas would go out, no doubt, in a number of places. In fact, it would demoralize the operation of the company."

Page 429:

"Q. Would that demoralization go to the extent of substantially shutting down your operations?"

A. I think that after one winter of that, our consumers would probably want to leave us; that they wouldn't put up with the inconveniences and the suffering that they would have to go through, under those conditions."

Page 429:

"Q. From your practical knowledge and information as to the operation of natural gas lines, and your familiarity with the Hope Company, by reason of your official connection therewith, what do you say a o those demands, such as I have described, being such as to demoralize or interfere with the whole operation of the Hope Company's system?

A. Well, I know that during my connection with the Hope Natural Gas Company there were a great many requests of other gas companies and other consumers for a supply of gas, and it is my opinion that the demand on their lines would be so great from companies doing business in West Virginia and from industrial plants there, that there would be no gas left in cold weather to distribute to the Peoples Natural Gas Company."

JOHN B. TONKIN.

Pages 445 to 447:

JOHN B. CORRIN.

Pages 326 and 327:

JAMES H. REED.

Page 526:

Under the operation of the West Virginia statute, even eliminating from consideration the increased industrial consumption in West Virginia there would be enough gas taken out of the lines by increasing the do-

mestic consumption and by making other connections to very seriously cripple the service to Pennsylvania and Ohio consumers on cold days.

W. W. FREEMAN.

Pages 458; 475 and 476, and 477, summarized:

In cold weather the Union Gas & Electric Company cuts off industrial consumers, including those owning power plants, entirely. The curtailment of gas by the Union Company to industrial consumers had somewhat ameliorated the condition of existing shortages, although it had not altogether met it. However, it was not practicable to cut industrials from the lines of the company's consumers altogether because the income received from the sale of gas to industrials during the time of light demand by domestic consumers enabled the Company to give domestic consumers lower rates.

JAMES H. REED.

Pages 525 and 526, summarized:

Because the income received from the sale of natural gas to industrial consumers in warm weather, when there was more than enough gas to supply domestic consumers, enabled the Company to maintain lower rates to the domestic consumers, the Philadelphia Company, despite the limited and insufficient gas supply in general, still continued to serve industrial consumers to some extent.

Pages 561, 562, 578, 579, 603, 634, 680, 681, 722, 781 and 793; summarized:

J. E. Angle, of the Fayette County Gas Company; Martin B. Daly, of the East Ohio Gas Company; T. J. Jones, of the natural gas properties of the Pure Oil Company; L. B. Denning, of the Ohio Fuel Supply Company; J. W. McMahon, of the Northwestern Ohio Natural Gas Company, and Eugene P. Whitcomb, of the Union Natural Gas Corporation, all testified that it is the uniform policy of natural gas companies to prefer domestic consumers to industrial consumers and that industrial consumers are supplied with natural gas only during the summer months when there is a surplus available; and, further, they reserve the right in their contracts to and actually do discontinue to industrial users the supply of gas at any time without notice if, in their judgment, that is necessary. These witnesses further state that the Public Utilities Commission of Ohio in its administrative orders to the natural gas companies of Ohio, directs the gas companies in case of shortage, to cut off all classes of consumers other than domestic consumers, to the end that the domestic consumers may have the first and prior right to gas. Regardless, however, of any administrative orders on the part of the Public Utilities Commission of Ohio, the gas companies, as a matter of uniform practice, limit the service furnished the industrials and at all times give preference to the domestic consumer.

Ohio Exhibits Nos. 3 to 9, inclusive (offered page 681), consist of copies of administrative orders of the Public Utilities Commission of Ohio relative to discontinuing the furnishing of gas to industrial consumers in Ohio during the years 1916 to 1920, inclusive. The exhibits appear on pages 1695-1706 of the record.

MARTIN B. DALY.

Pages 587 and 588:

"Q. Mr. Daly, if, under the provisions of the statute in question in this proceeding, the Hope Natural Gas Company were compelled to divert to new or other persons, firms or corporations in West Virginia, than it now serves, a material amount of gas which it has been and is now furnishing to your company for distribution, what would be the effect thereof on the operation of your company, and especially in the cold day periods of the year?

A. Any act on the West Virginia authorities that would decrease our present supply would naturally affect the domestic user of gas, inasmuch as we are now facing a shortage of 75,000,000 feet per day, so that any additional amount that might be taken away from the Hope Natural Gas Company would affect our supply to that extent. It is our only source of supply, outside of a small production in Ohio, which we have been unable to increase, notwithstanding active operations and diligent work on the part of the company all the time, seeking an adequate supply there."

Pages 588 and 589:

"Under those circumstances then, if the authorities in West Virginia, pursuant to the Act in question here, were to divert to persons, firms or corporations in West Virginia for the service of the public, or any part of the public, for all purposes, in the State of West Virginia, a substantial amount of the gas that otherwise would come through the Hope Natural Company's lines to your company, what effect, if any, would that have with refer-

ence to the disorganizing and breaking down or destroying the operation of your Company?

Q. Confine yourself to the question for the moment, please with regard to the extent of the wreckage on your company's service, and the effect on your customers.

A. The effect on our gas consumers would be that they would be obliged to discontinue natural gas altogether. That must be the ultimate result."

Page 611:

The East Ohio Gas Company, supplying, *inter alia*, the City of Cleveland, suffered a shortage of about 60,000,000 feet during the preceding winter. During the winters of 1917 and 1918, 20,000 homes in Cleveland were cut off from any gas at all because of the Company's inability to furnish gas.

Page 606, (Cross-examination):

When the supply of gas furnished by the Hope Natural Gas Company under its contract with the East Ohio Gas Company is reduced by 25 per cent., the supply will be so inadequate for the demands of the business that it would practically be at an end for anything except cooking or lighting. The user will not tolerate a service so inadequate as the company would be able to give under those conditions.

T. J. JONES.

Page 635:

The only source of supply for the Dayton Gas Company is the gas received from the Logan Natural Gas

and Fuel Company, which Company secures the gas from West Virginia exclusively. The supply at Dayton has been inadequate in the winter time to the extent of 50 per cent. of the requirements, if not more.

Pages 635 and 636:

"Q. What would be the result if the supply of West Virginia was cut off further by reason of the enforcement of the Act in question?

A. The Dayton Gas Company, depending entirely upon its supply from The Logan Natural Gas and Fuel Company, which company secures the gas from West Virginia, and having no other source of supply, if the gas was cut off entirely, would immediately have to turn to other fuel. If the gas was only partially curtailed the consumers would have to be limited undoubtedly to cooking, heating water, some lighting and perhaps a little auxiliary heating.

Q. Well, what would be the effect upon your company in a business way, Mr. Jones?

A. The earnings of The Natural Gas Company depend upon the volume of gas which it can sell at the present prices. Either The Dayton Gas Company would have to receive a much larger price for its gas or they would go into the hands of a receiver."

L. B. DENNING.

Page 672-673:

"A. I understand your question to be what effect the diversion of a substantial amount of the gas received from West Virginia would have upon the opera-

tions and property of The Ohio Fuel Supply Company and the people whom it serves. Is that a correct conclusion?

Q. That is correct.

A. A very disastrous and destructive effect upon both, of course more or less dependent upon the quantity of gas diverted. A substantial quantity diverted would have the immediate effect of disorganizing and disarranging the service to the consumers throughout the state, make necessary the entire elimination of service from a considerable number of consumers, a complete rearrangement of lines, compressing stations and operating conditions of the company and undoubtedly deprive a considerable portion of the people served by the company, of gas service, thereby destroying the investment which they have in appliances, and also, result in a destruction of a considerable portion of the company's property, by reason of the fact that it would no longer be of any value or use in the company's operations, and would not have any value whatsoever, except what might be possibly obtained from a resale or junk or a salvage value. It would necessitate—I think I have already said—a complete elimination or discontinuance of service to a considerable number of consumers."

Page 673:

"A. Last winter during the cold period, the Ohio Fuel Supply Company did not have enough gas from all sources produced or purchased in Ohio, and including the gas delivered to us from West Virginia, to supply cold-weather-demands of its consumers. To divert or discontinue or take away the supply of gas from West Virginia would leave Columbus absolutely with-

out gas; that is, when I say 'absolutely,' I mean without any dependable gas service at all, and to all practical effects absolutely without gas."

Page 674:

"A. The Northwestern Natural Gas Company, as I have said before, is wholly dependent and has been for years, upon the supply of gas produced in West Virginia, and delivered to it by us. Were that flow to be interfered with or to be stopped it would mean total destruction of natural gas service in those communities which it serves."

Pages 674, 675, 677:

If the supply of gas of the Northwestern Natural Gas Company, which is wholly dependent upon gas produced in West Virginia, were to be interfered with or stopped it would mean a total destruction of natural gas service in the communities which this company serves.

It is absolutely essential to natural gas service that there be continuity in that service. The consumer must have the gas coming to him in an even flow at all times for his demands. Any interference with that continuity of service results in disruption and unsatisfactory service to the consumer for the value of gas service to the consumer lies in the continuity of it. The problem of a gas company has always been to supply that instantaneous demand and maintain the continuity of service. To have any considerable or substantial quantity of gas diverted or eliminated from the West Virginia supply means to so disarrange, disorganize and discontinue the service to the consumer as to render it practically worthless to the consumer.

J. W. McMAHON.

Page 721: Summarized:

In 1910 the amount of gas sold for domestic purposes by the Northwestern Ohio Natural Gas Company was just short of 3,000,000,000 cubic feet; for industrial purposes 103,786, 000 cubic feet; total 3,103,695,000 cubic feet. In 1919 the domestic consumption was 5,689,621,000 cubic feet; industrial, 313,948,000; total 6,003,569,000 cubic feet. Similar figures are given for all of the years between 1910 and 1919, showing a rather steady increase from the earlier date to the later.

Pages 724, 725:

If under the operation of the West Virginia statute, the amount of gas that the Hope Company might be able to furnish to subsidiary companies in Ohio were curtailed it would cause great hardship in those communities which these companies serve. If the curtailment in the supply furnished were very extensive it would cause during the winter months almost a total cessation of the supply of gas to consumers and would cause irreparable damage to the people and would be a detriment to their health and dangerous to their property. It is absolutely necessary in the service of gas, if that service is to be dependable and worth while to a consumer, that it flow from a source of supply which is uninterrupted and continuous.

L. B. DENNING.

Pages 711 and 712:

The term "peak load" means the greatest amount of gas which a domestic consumer requires to meet his

needs during extremely cold weather. During cold weather everyone turns on the gas and as a result the demand becomes a peak very much greater and the quantity of gas required is at once increased. This is a seasonable demand, a seasonable peak load which always comes during the winter. It may last for a day or two at a time, or it may last for two or three weeks, depending entirely on weather conditions, which cannot be forecast.

There is also a daily peak load due to the fact that the demand for gas during the day is greatest at the breakfast hour, at noon time and in the evening, when meals are prepared.

EUGENE P. WHITCOMB.

Pages 767 and 768:

"A. We have approximately two and a quarter million feet left in the old Sugar Grove field that would be available for distribution at Sugar Grove. If there was no West Virginia gas delivered at that point, however, there wouldn't be a cubic foot of gas going through this 18-inch line—

Q. Which 18-inch line?

A. The 18-inch line supplying Dayton, the Jantha Light & Heat, and all the service now being supplied in Indiana, also including the City of Lancaster, in Fairfield County, Ohio. Now, as I have stated, there is approximately two and a quarter million feet of gas from the old field, or local field, available to the Logan Natural Gas & Fuel Company, which they are using at the present time.

Q. Where?

A. Distributing to these other towns. I was just about to say that the Logan Company owns its own distributing plant in Chillicothe and at Sugar Grove; and the Circleville plant, owned by the Buckeye Gas Company, being another subsidiary of the Union Natural Gas, is dependent altogether on the Logan Company for its sole supply. In addition to being obliged to discontinue the service altogether from these places mentioned, from the Sugar Grove-Dayton-Indiana lines, the City of Athens, in Athens County, Ohio, is entirely dependent upon West Virginia for its supply; the line being connected to the two 16-inch lines of the Connecting Gas Company, running from the Ohio River to Sugar Grove station. The two and a quarter million cubic feet, to which I have referred as being available in the Sugar Grove field, would be inadequate to supply the service at Circleville, Chillicothe, Sugar Grove and a few other smaller towns in that locality; in fact, there wouldn't be one-fifth of the amount which they require. And in view of the fact that all contracts on the line from Sugar Grove to Dayton and Indiana contemplate and provide for the delivery of West Virginia gas only, and specifically recite the fact that the Union Natural Gas Corporation has available a large quantity of gas in West Virginia, and that they are not entitled to Ohio gas, consequently that two and a quarter million which we have in the local field would not be available for any of that service."

Page 783 (Cross-examination):

"Q. What would be the effect upon your distribution system, and your supply to your company, if, for any reason, the supply from West Virginia would be-

come intermittent and irregular, sometimes—to illustrate—coming as it is now under your contract and then again being substantially denied to you?

A. It would probably result in the loss of all of the service under the contracts to which I have referred, by reason of being unable to give them a continuous supply. They would probably discontinue the use of natural gas altogether."

J. K. ANDERSON.

Page 824:

Pennsylvania Exhibit No. 33—Anderson, offered page 824 of the record, appearing page 1573: "Estimate of Monthly and Yearly Sales of Natural Gas in West Virginia" to domestic and industrial consumers, respectfully.

"Q. Have you made any computation and estimates of the quantity of gas which the industrial plants in West Virginia would take per year, if they could get a full and continuous supply?

A. I have made two such estimates, based upon the reports of the maximum monthly sales in any one month to domestic and industrial consumers of the twelve largest gas utilities doing business in West Virginia, which reports were made to me in writing by letter. The first show the increased demand per annum in excess of the present sales which the industrial consumers would make upon the utilities by reason of the operation of the act in question, amounting to 98,628,380,000 cubic feet; second, showing the increased sales

per annum of gas which would be made to industrial consumers under the operation of said act, amounting to 55,017,359,000 cubic feet."

(Note: For the manner in which this estimate was reached, see above exhibit.)

Pages 825-826:

"Q. From the figures and estimate which you have made with reference to the increased consumption of industrial gas in the State of West Virginia, under the operation of the Act now in controversy, if it goes into effect, state whether or not, in your opinion, that increased consumption would consume substantially all of the gas produced in West Virginia?

A. It will, within a few years.

Q. Within what length of time would you say?

A. I would say within a year and a half from the date of the effectiveness of the act."

Pages 827 and 828:

"Q. What would be the effect upon the operation of the interstate gas companies, or those transporting gas from West Virginia into the other states, of the enforcement of the provisions of the Act now in controversy, with respect to the transportation of gas from West Virginia into other states?

A. The chief effect upon the large utilities would be to disorganize their operations because of changing the direction and amounts of gas from those for which their plants were designed to meet demands which were

unforeseen, and which, being caused by the deficiency in supply of gas produced by small local companies, would come at times of greatest demand upon their own consumers, this great deficiency in supply to the consumers in other states during extreme cold weather would cause great distress and suffering and be attended with danger of possible death from asphyxiation."

Page 839 (Cross-examination):

The peak load refers more especially to the load placed upon the utility by the demands of the consumers during extremely cold waves and wouldn't cover an entire month.

Pages 905 and 906:

"Q. What is the number of towns that would be affected outside of West Virginia by diminishing or inhibiting the transmission of gas from West Virginia to those respective towns.

A. About 650.

Q. And what number of consumers would be likewise affected?

A. Over a million.

Q. And what population?

A. Over five million."

Page 909:

"Q. What do you say as to the maintainance of gas pressures in the lines to suit the operating conditions of the lines from West Virginia to the various points of consumption outside of the State, even to the remotest point?

A. The pressures maintained in West Virginia must be such as will properly feed into the transmission scheme as a whole, and must be subordinated to the operating conditions necessary to deliver gas to the various communities en route along the various transmission lines going out of the state."

Pages 909 and 910:

"Q. What would be the effect of making physical connection in West Virginia between those interstate lines and local lines or communities, as is provided for in the statute now under discussion, as to the service on the lines of such interstate companies?

A. The immediate practical effect of making such connections would be to demoralize in all cases, and in many instances destroy entirely, the interstate service for natural gas transmission, in towns outside of West Virginia.

Q. Will you explain this a little more fully, and tell us why this result would follow?

A. For instance, in gas transmission, the gas is not only the commodity that is being transmitted through the line, but it is within itself endowed with an inherent energy for propelling itself along the line by

virtue of its own expansion. That is, the gas flow in these interstate main transmission lines is always by expansion. The gas is never pushed forward like a plug of incompressible fluid, like water or oil, and any disturbance or any removal of gas by diverting part of that gas out of the line, has the effect of not merely lessening the flow, but disturbing the transmission conditions all along the line. This, for instance, is in marked contrast to what can be done with other commodities. For instance, a train of coal cars starting in West Virginia for Toledo, Ohio, the train itself has no physical connection and no dependence on other trains ahead or behind it. Each train goes along as an independent unit, and each car on the train is an independent unit. The shunting off in West Virginia of one or more coal cars from such a train would not in any way affect the other cars en route or the other trains en route. However, the shunting off from an interstate transmission line of a certain amount of natural gas would not only bring about a shrinkage in volume by an amount equal to that so removed, but may so disturb the pressure conditions as to demoralize the transmission conditions all along the line.

Q. What would you say as to the interstate service, such as is now being supplied, being possible when and if such connections are made from time to time, for uncertain quantities at unexpected and unprovided for times, to meet the shortages that might occur in the State of West Virginia, and which these companies engaged in interstate transmission of gas would be called upon to supply under the terms of the Act in controversy?

A. If the diversion were done to any extent at all, it would result in demoralizing all such service and ultimately destroying it entirely."

Page 911:

"Q. Would it be possible as a practical operating operation to rearrange these transmission lines or reconstruct the same, so as to provide for the contingencies possible under the operation of the Act in controversy, say in West Virginia?

A. It would not, for the very simple reason that the enforcement of this Act would merely kill all interstate shipments of natural gas out of the State of West Virginia.

Q. If there should be supplied to all the industrial, domestic and other consumers in the State of West Virginia an adequate supply of natural gas before the same were transmitted outside of the State, what would be the effect as to the quantity of gas, if any, that would be left for transmission outside of the state?

A. There wouldn't be any left to transmit."

Page 914:

"Q. If you can't give us any figures, can you give us an estimate of what would be the effect upon the public, such as domestic consumers and their families, in the other states than West Virginia, of the enforcement of this statute, referring to those who are now using natural gas as fuel?

A. It would deprive all such consumers of natural gas service."

Pages 914 and 915:

"Q. if the companies engaged in the business of

supply gas from West Virginia to the communities in other states, as has been described, should not adopt the policy of cutting off all such service under the operation of this act, and of notifying the consumers to discontinue all such consumption, and continued their business as now, taking their chances under the operation of this Act, what would be the effect, in your opinion, as a natural gas expert and with your knowledge of the situation, upon the health and life and comfort of those domestic consumers who are using natural gas in other states, transported from West Virginia?

A. I do not believe that in the operation of the Act any one of those interstate lines would attempt to use natural gas, for the simple reason that there wouldn't be any, so the effect on health would be that they would have to get other fuel for heating and cooking, and something else for lighting. As far as convenience is concerned, there is nothing they could get that would be in the same class with the natural gas of which they had been deprived. That is, to state it this way, the operation of this law in West Virginia for most of these towns depending on these interstate lines, there would not be left any twilight zone for discussion. The gas would all stay in West Virginia."

Pages 969 and 970 (Cross-examination):

" * * In answering the questions on direct examination, in regard to the effect of the enforcement of the West Virginia Act, with which we are concerned in this case, did you have in mind that under the operation of that statute, every person in West Virginia who desired to consume natural gas for domestic or industrial purposes, would be entitled to, and would, in fact,

demand and consume all of the natural gas which he desired as long as there was any natural gas produced in the state?

A. The enforcement of the act in question would immediately bring about a condition where, in the immediate future, the demand solely within the State of West Virginia for natural gas would be greater than the available supply, and there would be no gas left for interstate transportation through the main lines now going out of the state."

Pages 970 and 971:

"Q. Have you figured or formed any estimate in figures of the amount of increased demand from the Hope Natural Gas Company under this statute for domestic uses or industrial uses and by reason of physical connection of local Gas Companies?

A. The increased demand for domestic gas in West Virginia would be negligible. Practically all of the gas would be used in industries; that is, the gas that now goes out of the state, if you were to hold that within the state, there would be very little difference in the amount of that that would go to the domestic consumer. You are now using very much above the average per domestic consumer and practically all the gas that now goes to export would be used by industries within the State."

H. E. NEASE—WITNESS FOR DEFENDANT.

Page 993:

There has been a considerable decrease in the amount of gas used in the manufacture of carbon black within the last two years.

CHARLES E. KREBS—WITNESS FOR DEFENDANT.

Pages 1099 to 1101; 1104 and 1105; 1113; 1130 and 1131 and 1137:

The gas used in making carbon black was generally located at some isolated field or place, that is, some distance away from a market where it could be consumed. The gas used is usually very light pressure gas, of much lower pressure than could be transported through pipes of its own accord. Most of the industries engaged in the manufacture of carbon black produce the gas for that purpose from their own wells. Carbon black is manufactured in West Virginia, Oklahoma, Louisiana and Pennsylvania. It is used for printers' ink, automobile tires, black and gray paints, ships, structural iron, carbon paper, typewriter ribbons, phonograph records, etc. There are from forty to forty-three million pounds of carbon black manufactured in the United States annually, about three-fourths of which quantity is manufactured in West Virginia for foreign consumption.

F. C. DEVERICKS—WITNESS FOR DEFENDANT.

Pages 1327 and 1328, and 1348 to 1350:

Most of the carbon black factories in West Virginia have been, or are being, dismantled. Gas producers have come to look upon the use of natural gas in the carbon black industry as wasteful, and consider the gas more valuable for use by domestic consumers and have ceased supplying carbon black industries.

R. T. CUNNINGHAM—WITNESS FOR DEFENDANT.

Pages 1226, and 1229 and 1230:

Owing to the success enjoyed by various gas companies in West Virginia in obtaining high rates, the West Virginia industrial consumers will be automatically prevented from going on a "gas spree" or "debauch," even under the operation of the West Virginia statute. The increase in rates already has had this effect in the reduction of the consumption by both domestic and industrial consumers in West Virginia, as have had the various shortages which have occurred,—because of which some industries have gone over to the use of other fuels. In the City of Fairmont and vicinity, it is estimated that the gas which will be used in that district in the future will not exceed the amount of gas used in the year 1916, assuming that the Owens Company would continue to use its producer throughout the year.

F. C. DEVERICKS—WITNESS FOR DEFENDANT.

Pages 1345 and 1346:

The price of industrial gas is 40 cents a thousand feet in Clarksburg at the present time, which is considered almost prohibitive for manufacturing purposes, and the high rate has considerably curtailed its use. In view of this fact and of the further fact that a number of industries have gone over to the use of other fuel, it is estimated that the future consumption of gas by industries in the Clarksburg district will be considerably less than it was in 1914 and 1915 (during and after which years the shortages in gas developed).

IX.

THE EFFECT OF THE OPERATION OF THE WEST VIRGINIA STATUTE WILL BE A DISCRIMINATION IN FAVOR OF THE CITIZENS OF WEST VIRGINIA AND AGAINST THE CITIZENS OF PENNSYLVANIA AND OHIO AND OTHER STATES WHO ARE DEPENDENT UPON THE GAS EXPORTED TO THEM FOR FUEL FOR HEAT AND LIGHT BY THE COMPANIES PRODUCING GAS IN WEST VIRGINIA, AND SUCH RESIDENTS OF PENNSYLVANIA AND OHIO AND OTHER STATES, BOTH DOMESTIC AND INDUSTRIAL CONSUMERS, WILL SUFFER PECUNIARY LOSS AND THE LIVES, HEALTH, SAFETY, COMFORT AND CONVENIENCE OF DOMESTIC CONSUMERS WILL BE AFFECTED.

JOHN B. TONKIN—Page 420:

W. W. FREEMAN—Pages 478 and 479:

JAMES H. REED—Pages 497 to 500:

The testimony of these witnesses may be summarized as follows:

Many communities in Pennsylvania, Ohio and other States are dependent on natural gas for fuel and light, although some are served with electricity. The Hope

and Reserve Companies supply large towns ranging in population from 10,000 up to 60,000, and even cities as large as Pittsburgh, with natural gas. There are a number of such towns and cities upon the lines of the above mentioned companies. In a number of the larger cities, however, such as Pittsburgh, Greensburg and Altoona, there are plenty of houses using electricity (pages 440 and 441). Cincinnati use natural gas for lighting purposes to a considerable extent.

SAMUEL S. WYER—Pages 907; 908; 951 and 952:

SUMMARY OF TESTIMONY OF ABOVE WITNESSES:

The Fayette County Gas Company supplies gas to various towns and cities in Westmoreland and Fay-

ette Counties, Pennsylvania, and the source of this gas at present is the Hope Company operating in West Virginia and the gas supplied by it to the Fayette Company is West Virginia gas.

In various cities of Ohio there are about 475,000 people dependent on the natural gas supplied them by the Pure Oil Company, which secures its supply of gas from West Virginia. This figure of 475,000 includes the entire population of the towns of Columbus, Springfield and the suburbs. The Dayton Gas Company purchases or secures its entire supply of gas from the Logan Natural Gas & Fuel Company, and as the Logan Company secures its gas from West Virginia the Dayton Company is entirely dependent for its supply of gas upon that which is secured from West Virginia. The City of Dayton, Ohio, is dependent for its entire supply of gas upon West Virginia.

The domestic consumers of the Ohio Fuel Supply Company are dependent upon natural gas for cooking, water heating and lighting. The two general sources of supply of gas for the Ohio Fuel Supply Company are Ohio and West Virginia. The Northwestern Natural Gas Company is wholly dependent, and has been for years, upon the supply of gas produced from West Virginia, and if that flow were interfered with or stopped the communities which this Company serves would have no natural gas service.

The Northwestern Ohio Natural Gas Company supplies about 250,000 people in various cities and towns with natural gas.

The Natural Gas Company of West Virginia serves 324 domestic consumers in Pennsylvania.

The Union Natural Gas Corporation and its subsidiary companies supply many consumers in Ohio with natural gas. The City of Lancaster, in Fairfield County, Ohio, is wholly dependent on West Virginia gas. The Union Natural Gas Corporation and its subsidiary companies have contracts with the Dayton Company and the Central Indiana Company providing for the delivery to these companies of West Virginia gas exclusively. The Logan Natural Gas & Fuel Company supplies, both directly and indirectly 364,949 consumers with West Virginia gas.

There are a great number of domestic and industrial consumers in both Pennsylvania and Ohio who are dependent upon West Virginia gas. About 40 per cent. of the total consumption of natural gas by domestic and industrial consumers in Pennsylvania is supplied by gas imported from the State of West Virginia.

There are 650 municipalities in Ohio, Pennsylvania, Kentucky, Indiana and Maryland that depend entirely on West Virginia for their supply of natural gas and have no other gas supply.

The above references to testimony may be summarized as follows:

All the companies above mentioned are experiencing the same difficulty in obtaining a sufficient gas supply. Moreover, the supply is constantly decreasing as the fields decline. The production of the Peoples Company fell off 15% in 1918-1919 despite the expenditure of over a million dollars in drilling additional wells and the company has been put to the use of compressing stations to get gas from the McKeesport field. A regular decline of 15% each year is looked for from now on. Shortages in winter have been severe. The discovery of new gas territory seems to be exceedingly im-

probable. One method used in the attempt by the companies to counteract the shortage of gas has been the preaching of economy to consumers. Whether the West Virginia statute be enforced or not, a condition of the most complete exhaustion of gas or at least the limitation of gas service to cooking stoves, hot water heating appliances and so on, is looked for. There is every prospect that the decline in gas supply will continue until the state of practically complete exhaustion is reached.

All the above refers to conditions in the three States of Ohio, Pennsylvania and West Virginia. The possible solution of the decline in natural gas lies in the restriction of natural gas to domestic consumers, the increase in price for gas supplied to domestic consumers, and contracted area service by natural gas companies.

The above references to testimony may be summarized as follows:

With the exception of the unlooked for discovery of the large McKeesport field in Pennsylvania there have been no notable discoveries of new gas territory in either Pennsylvania or Ohio for the last five years, nor is there any prospect that in the future new gas territory will be found in those two States. The companies make constant efforts to find new gas territory but meet with very little encouragement or success. Harrison and Gilmer Counties in West Virginia are practically completely drilled up. There is a possibility of finding additional gas territory in West Virginia but none in Indiana,

Pennsylvania or Ohio. The cities of Columbus and Lancaster, in Ohio, are wholly dependent on West Virginia gas.

Summing up the situation it seems that there are no known fields still unoperated in any section tributary to Pennsylvania and Ohio other than in West Virginia.

HARRY A. QUAY.

Page 29:

"Q. Are there any known gas fields outside of those now occupied and in use, within any reasonable distance from the territory supplied by your company and other companies in this district, that are available, from which to obtain a gas supply?

A. None that I know of.

Q. Are there any fields tributary to the cities and towns now being supplied by the companies which you have named, which are not now being developed and occupied by the various gas producing companies?

A. I know of no such fields. The territory adjacent to practically all of the large centers where natural gas is being supplied has been drilled and tested to a very considerable extent; so that it does not seem to us that any large fields are likely to be discovered in proximity to those centers of population."

JOHN B. CORRIN.

Pages 327 and 328:

"Q. Now, what are the facts as to the knowledge of new fields or not, new gas fields?—Whether or not there are any available for supplying the consumption of natural gas in the present territory supplied with natural gas?

A. Well, I know that not only our own companies, the companies with which I am identified, the Hope and the Reserve, but all other companies, are using extreme efforts to find new fields, and have been for the last five or ten years, especially the last five years—they have used every effort and I don't know of any new field in the last five years that has been discovered that amounts to anything, outside of this McKeesport field,—by any of the companies that amount to anything. • • • "

J. K. ANDERSON.

Page 821:

"Q. Now, do you know of any other fields than West Virginia fields of natural gas which are tributary to Pennsylvania, outside of what is produced in Pennsylvania itself, from which a supply of natural gas for consumers could be obtained?

A. I do not."

MR. CORRIN: pages 326, 330, 344:

MR. WALLACE; pages 368, 369, 370, 371:

MR. TONKIN; pages 429, 434 to 435, 440:

The testimony of the above witnesses may be summarized as follows:

Under the operation of the West Virginia statute, resulting as it would in cutting off the supply of gas on consumers in Pennsylvania and Ohio, the health and safety of those domestic consumers will be greatly affected. Such consumers would suffer seriously from the deprivation of the fuel which at present affords them heating, cooking and lighting facilities. Injury to their health would follow, especially in the winter months, because homes could not be properly heated to offset the effects of cold weather and because of the lack of facilities for cooking meals. Danger would ensue from the fact that an intermittent gas supply creates the possibility of explosions and fires in that, upon a decrease of gas pressure, fires and lights are extinguished but the valves are left open, and when the gas pressure is increased sufficiently to create a flow of gas to these homes the gas coming through the open valves in full force creates a possibility of asphyxiation or explosion in the houses.

HARRY A. QUAY.

Pages 47, 48:

"Q. If this Bill should go into effect and be enforced in the State of West Virginia, from your knowledge of the conditions in West Virginia, the operation of your lines, and the demands that would be made thereon from time to time by others in accordance with the

provisions of this Statute, what would be its effect, or the effect of such enforcement of the Act upon the operations of your company, with respect to transporting gas from West Virginia into other States?

"A. * * * It would create, from an operating standpoint, a very, very dangerous situation. I know of no condition in the industry which bothers, or is more dangerous to, life and property than a shortage existing in your system. Consumers, when a shortage occurs, naturally desiring to keep warm and to utilize the gas, open, for instance, their valves wide, in order to obtain as much gas as possible; and sometimes they leave the home and go to purchase something, or go to theatres, they leave the house for various reasons, leaving the gas regulated perhaps with the valves wide open; there is a lull or decrease in the demand placed upon the company, and your pressure begins to pick up, the flame in the stove becomes stronger, more full,—in many instances, when the pressure regains normal, the flame is coming out over the consumer's stove, creating a blaze which sets his home afire. At other times people might go to bed, permitting the heating stove to burn in their home; perhaps the pressure declines and the flame becomes extinguished; the pressure naturally increases at night after people have gone to bed, because a great many people have a habit of restricting the amount that is used from the midnight hours; the pressure accumulates, and the gas comes back into the consumer's home, into his room, and asphyxiates him. There is no situation so critical, I consider, as an insufficient supply of gas which is liable to go completely out and then come back on at unknown times."

Page 133:

Natural gas is peculiarly adapted for the purposes of cooking, lighting and hot water heating. Coal or electricity is not so convenient a fuel as a substitute for the reason that gas is cheaper and involves a great deal less labor. The same objections apply to gasoline and oil and to artificial gas. The use of natural gas for heating the homes is not so essential as the use of natural gas for the other purposes above mentioned, and due to the shortage in gas and the decline in the supply, the time may come when the amount of natural gas used for heating purposes will perhaps be restricted.

T. O. SULLIVAN.

Page 214:

"Natural gas service, in order to be at all satisfactory, has to be practically a continuous service. * * * * * if the service is intermittent and unreliable it creates a very dangerous condition. The fact that gas would have to be discontinued on short notice, and then might be turned back into the lines again on short notice, would create a very dangerous and unsatisfactory condition * * * *"

Pages 221, 222:

"Q. * * * I wish you would state a little more fully what you mean by dangers to life and health and so forth of the domestic consumers on your line who are dependent upon gas transported from your lines and delivered to these other companies for the supply of domestic consumers, in the event of your being compelled upon orders of the Public Service Commission or otherwise, to give preference to industrial consumers and others in the State of West virginia? * * *

"A. The danger is caused by the decline in the pressure, which will occur if any large quatities of gas were diverted from places where it was being used. It many times will occur that people are away from home, and they leave certain fires or lights burning in their homes. If the pressure drops to a pressure that some of those fires or lights became extinguished, and then came back on slightly again, there would be an escape of gas into the buildings, which would cause explosions, or might cause loss of life to people who were in the buildings. If this were to occur at night—people frequently retire leaving certain fires and lights burning—and if anything should occur during the night whereby those fires and lights were extinguished and the gas escaped into the rooms, it would be very dangerous and might ignite and cause explosions that would do almost unlimited damage. It would be impossible to estimate what a condition of that kind might bring about."

Page 295 (Cross-examination):

"Q. With reference to the fact of a shortage in the gas supply upon domestic consumers in the States of Pennsylvania and Ohio, have you any reason to think that the inconvenience and suffering occasioned to the consumers in those States would be any different from the inconvenience and suffering caused to consumers in West Virginia by a like shortage?

"A. I have not, if the same conditions existed in West Virginia."

JOHN B. CORRIN.

Page 326:

"Q. What would be the effect upon the practical operation of the lines of the Reserve Natural Gas Company, if it were compelled from time to time, especially on the coldest days or periods of winter, to make connections with and supply other public utilities in the State of West Virginia than those with which it had contracts, and for which it had made provisions?

"A. First, it would be very dangerous. I do not see how it would be possible to operate any gas system of lines if you could not determine the amount of gas that was going to go through those lines and have some person or city, or otherwise, take gas off of the line before it reached your consumers. * * *"

Page 330:

"* * * Another thing,—I think it would be extremely dangerous to have interrupted service. It might be that the gas would go off, practically entirely off, and come on again. It might blow up their houses. * * *"

Page 344 (Cross-examination):

"Q. In your testimony touching the danger to the consumers, where the gas supply is furnished irregularly and interruptedly, you do not mean to confine those dangers to the consumers in Ohio and Pennsylvania, do you?

"A. Oh, no, no.

"Q. There would be equally as much danger to any consumer in West Virginia, who received the same character of service?

"A. Depending on where they were located; but there is more danger in Ohio and Pennsylvania, because there are so many more consumers.

"Q. It is a matter then of percentage?

"A. And location."

H. A. WALLACE.

Pages 368, 369:

"Q. If your company was compelled to supply, under the terms of the proposed legislation, which we are now resisting, an adequate supply to fill the requirements of the domestic, industrial and other consumers of the State of West Virginia, before taking any of the gas outside of the state, what, in your opinion, would be the effect of this upon your ability to transport any gas out of the State?

"A. * * * It would be absolutely dangerous, as I understand the method supposed to take care of this measure; in as far as you would be called upon at most any hour for a large supply of gas, it would necessarily take the gas away from the lines leading into the other States; providing that happened at night or at times the people were away from home, the gas would go out, no doubt, in their homes, if these parties were shut off in the meantime; and before they returned or got up, the pressure would be increased in their lines, and the gas would flow through and come into their

houses, and it would not be lit, and there would be danger of asphyxiating the people, and also of blowing up their houses and killing any number of people. * * *"

Page 371:

"* * * and it would be very dangerous to endeavor to heat or cook with it, especially to heat with it, on account of the supply being possibly taken away from them during the night time when they were asleep, and coming on again and allowing the gas to flow into the residence when there would be no light to ignite it; and under those conditions, of course there is great danger of asphyxiating a large number of people, providing there was some little light in the house that had not gone completely out, the gas would ignite and explode and blow up the building. Or, providing somebody came into the house and lit a match, not being familiar with what might occur in the gas business the same thing would happen—blow up the building and possibly kill numerous people, and it would be a very dangerous and hazardous business."

JOHN B. TONKIN.

Page 429:

"Q. From your practical knowledge and information as to the operation of natural gas lines, and your familiarity with the Hope Company, by reason of your official connection therewith, what do you say as to those demands, such as I have described, being such as to demoralize or interfere with the whole operation of the Hope Company's system?

"A. Well, there is a very great danger when the gas goes out in a house, to the safety of the consumer and

the safety of his property; because if he is asleep or happens to be away, or something of that kind—particularly if there is one light that happened not to go out, the gas would come back on and fill the house with gas, and an explosion would be bound to occur. There is always that danger; that is one danger,—of the gas going out and then coming back on again before the valves are shut off.

"Q. Well, would the cessasion of the supply such as has been described, result in such an intermittent supply of gas as to produce those conditions?

"A. There is no doubt about it in my mind."

Page 435 (Cross-examination):

"The conditions are the same in one State as another, in case of a shortage." (In regard to effect on health and life of domestic consumers).

MR. QUAY; pages 21, 22, 56, 67, 68, 133:

MR. SULLIVAN; pages 205, 206, 220, 295, 296:

MR. DENNING; pages 677, 678:

MR. McMAHON; pages 723, 724:

MR. ANDERSON; pages 819, 820, 829, 855:

MR. WYER; pages 907, 913, 914, 915, 964:

The testimony of the witnesses above referred to may be summarized as follows:

Most of the homes in Pennsylvania and Ohio housing consumers at present using natural gas as a fuel for heat and light were constructed with a view thereto; that is, the heating, cooking, and sometimes lighting appliances are adapted for the use of natural gas and natural gas only as fuel. Other fuel cannot be used in those appliances and the homes do not contain arrangements for using any other fuel.

If, then, as a result of the operation of the statute, natural gas cannot be obtained by such consumers for use as a fuel for the above purposes, other fuels, which are more expensive to the consumer, will have to be used with the result that it will be necesary to install other appliances. This will further involve the reconstruction of those houses in the installation of cook stoves and heating furnaces and the enlargement of old flues and chimneys or installing new ones. The average cost of such reconstruction or installation to each domestic consumer in Pennsylvania and Ohio will be from $200 to $300, and the aggregate loss thereby occasioned may be determined by the simple process of multiplying such average cost by the number of consumers dependent on West Virginia gas whose houses were so constructed.

HARRY A. QUAY.

Pages 21 to 22:

"Q. Where dwelling houses have been constructed with the burning of natural gas as a fuel in view, and with natural gas appliances installed therein, what are the facts as to whether or not, to introduce other fuel, it is necessary to reconstruct such houses?

"A. I know of many that it would be necessary to reconstruct. I mean by that that some of the houses are built without flues or chimneys. To burn coal or wood it would be necessary that flues be constructed and certain changes made in the homes.

"Q. And in those houses which have been constructed with the intention of using natural gas as fuel, where there are flues and chimneys, what are the facts as to the sizes of those flues and chimneys for other fuel?

"A. I know of quite a few that the flue inside the chimney is restricted to such small size that coal cannot be burned successfully,—that is, the smoke comes out into the rooms. It would be necessary for them either to tear those down or reconstruct in some manner, and make a larger flue or drafts for the burning of coal or other fuel.

"Q. From your experence and knowledge of the business and observation in those towns or cities, in which natural gas was used as a fuel, and in which there have been large construction of houses during the last few years, especially five or ten years ago, were those houses built solely with reference to the burning of gas? Or were they planned and built with reference to the use of other fuel as well—What was the custom?

"A. A great many of them were built for the sole purpose of burning gas. Now, that situation perhaps has changed in the last two or three years. Previous to that time the supply of gas was very good, but for the last three or four years, our company, as well as other companies in this vicinity, has been unable at all times to supply the full requirements of their consumers, and shortages have occasionally occurred. This has brought attention to the fact that natural gas is not going to exist forever and that they might be called upon at some time to substitute other fuel in the immediate future.

"Q. And that is what has brought about then the change in the methods of construction to which you have referred?

"A. Yes, sir."

(Cross Examination).

In the event of gas shortage or deprivation of gas supply in West Virginia, there would be as much and similar necessity for reconstructing houses at present adapted to the use of natural gas as there would be under similar circumstances in Ohio and Pennsylvania.

JOHN B. CORRIN.

Page 330:

"And in addition, I do know there are thousands of houses in this vicinity and other vicinities, that would have to be, as far as the flues are concerned, reconstructed before they could put other fuel in."

H. A. WALLACE.

Page 372:

"Q. Take the consumers upon your lines in West Virginia and Ohio and Kentucky; what are the facts as to special appliances being necessary to be installed for the purpose of burning natural gas instead of other fuel?

"A. They have to have, all domestic consumers, special appliances for using natural gas."

Page 402: (Cross Examination):

The necessity for reconstruction of houses in West Virginia under conditions of gas shortage in that State would be similar to that in Pennsylvania and Ohio under the same conditions.

J. K. ANDERSON.

Pages 819, 820:

"Q. When natural gas is used as a fuel in dwelling houses, and also industrial plants, is it necessary to construct the houses and plants specially adapted to the use of gas as compared with other fuel?

"A. To burn gas economically, it is necessary to have your house equipped with proper service and house piping between the floors and walls of dwellings, and to use efficient appliances, also to construct suitable flues to carry off the products of combustion.

"The natural gas appliances cannot be used for burning any other fuel. Many houses are equipped with

flues which are sufficient to carry off the burned gases, but are insufficient to carry off the increased volume of smoke and burned gases from coal.

"It would be necessary to largely reconstruct a great number of those houses at heavy expense, to equip them to use other fuel. Often it would be necessary to increase the size of flues with which the house was originally equipped, and frequently to build a large flue of sufficient capacity to take care of the products of combustion from large coal-heating furnaces, which are extensively used in heating residences."

T. J. JONES.

Pages 644, 645: (Cross Examination):

Many of the houses which at the present time are equipped for the use of natural gas were built prior to the furnishing of natural gas as fuel and were built for the purpose of using coal, and many of the houses that have been since built have put in furnaces for the use of coal and some of which have been used or equipped for the purpose of using gas as a fuel by putting gas burners on them and many of them were using coal and have been using coal from the beginning.

L. B. DENNING.

Page 677 to 678:

" * * * The effect of that (to have any considerable quantity of West Virginia gas diverted) upon the consumer direct is that he must turn to some other form of fuel, either gaseous or solid, to supply that need. If he turns to a gaseous fuel the only remedy he has, and the only thing he can have is a manufactured gas.

He will not get the service from the manufactured gas that he gets from natural gas for the reason that the B. T. U. content of the artificial gas is rarely more than one-half of the B. T. U. content of natural gas. If he turns to solid fuel he then has the complete elimination of his present fixtures and appliances, the readjustment of household conditions, and with the further added inconvenience of the dirt and annoyance and the necessity of cleaning out ashes * * *.

If he turns to the manufactured gas he can, to a limited extent, use the fixtures and appliances for cooking that he has now with some modification and adjustment at some expense."

S. S. WYER.

Page 964: (Cross Examination):

As to the necessity for reconstruction or conversion of homes at present constructed for the use of natural gas as fuel, in the event that it becomes necessary to use other fuel the same conditions would obtain in West Virginia as in Ohio and Pennsylvania.

HARRY A. QUAY.

Page 56:

"I would say that I consider it would cost those consumers on an average of at least $200 per consumer, to substitute other fuel for the purpose of cooking, heating and lighting their homes. In making that estimate, I took into consideration the fact that last fall I put in substitute heating appliances, in my home, which cost me two hundred and approximately seventy-

five dollars for my heater and the accessories; wiring my home for electric lights, the total expense was approximately $250. I secured prices on coal cook stoves; one cannot purchase at these times a very elaborate cook stove—coal cook stove—short of $40 or $50. * * * Realizing that perhaps the expense incurred by me in our place was much higher than it would be in the average, I threw off a couple or three hundred dollars and figured that $200 would perhaps be much lower than it would cost the average customer."

T. O. SULLIVAN.

Page 222:

"Q. What would you say would be a fair estimate of the average cost to the present domestic consumers in the States of Pennsylvania and Ohio, now using natural gas, to change their appliances to other fuel, where those appliances could be changed without reconstruction of the houses? What would be a fair average, or have you made any figures upon that subject?

"A. I have atempted to make figures upon it, but it is rather a difficult thing to do, to arrive at an average, of course. It is a very easy matter to estimate what the cost would be of changing any particular house, * * * but as far as I have been able to figure it out, an average price would probably—would be between two and three hundred dollars per house. That might be more or might be a little less. I don't think it would be any less; my judgment would be that it would be more, if anything."

Pages 295, 296: (Cross Examination):

The cost of reconstruction of houses in West Virginia for the purpose of changing them so that fuel other than natural gas could be used would be about the same per house as the cost per house in Pennsylvania.

JOHN B. CORRIN.

Pages 330 to 331, 334:

The cost of reconstruction of houses in order to make possible the use of fuel other than natural gas where such houses were originally constructed with a view towards using natural gas would, basing the estimate upon the cost of reconstructing witness' own home of ten rooms, be from $400 to $500, and (p. 344. Cross Examination) the cost would be about the same for a West Virginia house.

L. B. DENNING.

Page 678:

" * * * He cannot, however, except in a very limited way, use the heating appliances that he has, so he must necessarily not only sustain what I may call a loss in the way of better conditions in the household but also a substantial financial loss in the way of being compelled to junk and abandon appliances and fixtures which are already in the house and already in use and which have been in use for a good many years. The actual money outlay or loss sustained by the individual consumer would be purely a matter of conjecture, depending upon the individual conditions. I would estimate, due to the change in fixtures, a loss of from $50 to $75 per consumer as a minimum; due to

the change in house conditions I fancy would be much more than that, although I am not prepared to give any figure as to that."

S. S. WYER.

Page 907:

"The enforcement of the Act in controversy would mean a loss of at least $100 on the average to each consumer affected, and this would mean an aggregate loss of at least $112,000,000."

Page 914:

"It would be a very great inconvenience. It would represent a very distinct financial loss. Of course, it would be very difficult to fix that by any definite arithmetical amount, because natural gas at any prices that it has been sold for in the past is cheaper by far than any other service or competing commodity that could be purchased for performing any similar function in the house. One dollar natural gas would be only 40 per cent. as expensive in actual cost to the consumer as manufactured gas at current prices, and for the larger communities it would be necessary to go to manufactured gas. For the smaller communities—and they of course are in the majority as far as numbers are concerned—it would not be feasible to operate artificial gas plants, and they would have to go without any gas service at all, and for any other commodity they could purchase at present market prices, the cost would be very much greater and would represent a distinct and great financial loss, in addition to the very important one of the great inconvenience of natural gas for domestic purposes."

MR. QUAY: pages 15, 21, 58, 59, 56:

Mr. DALY: page 586:

MR. DENNING: page 677:

MR. McMAHON: page 724:

MR. ANDERSON: pages 820, 830, 853:

MR. WYER: page 964:

Summary of above testimony:

Industrial plants in Pennsylvania and Ohio, as in the case of the homes of domestic consumers in those States, were constructed with a view toward fitting them to the use of natural gas as a fuel. These gas appliances are unfit for the use of other fuel, and in the event of the necessity of the use thereof, the appliances will have to be reconstructed. The industrial consumers in Pennsylvania and Ohio can use no other fuel so effectively as natural gas, and the deprivation of the supply of natural gas under the operation of the West Virginia statute will result in a serious financial loss to such customers.

HARRY A. QUAY.

Page 15:

" • • • It (natural gas) is used by industrial consumers for various uses,—we have steel plants, glass factories, potteries, machine shops, founderies—various industries who receive gas from our lines."

Page 21:

"A. When the price of natural gas was very cheap, it was used in a great many crude appliances, but as the price advanced, the industrial user has been forced to adopt appliances especially constructed for the use of natural gas, so that he might burn it economically."

(Cross Examination..:

Pages 58 to 59:

Natural gas is used in industrial plants in West Virginia in about the same way and for the same purposes as in Pennsylania.

Page 820:

"A. In case of industrial plants, where it is desired to change from natural gas to the use of coal, oil, or other substitute fuel, it is generally necessary to reconstruct some of the subjects, in order to make the change in fuel, or else to build and construct artificial gas plants with which to supply artificial gas in the same appliances and burners. This is perhaps a heavier expense than to make a change to some of the other classes of fuel."

Page 56:

A great many of the industrial consumers of the Manufacturers Light and Heat Company will have to reconstruct their plants in order to use fuel other than natural gas, their appliances at present having been constructed especially for the use of natural gas. For

use by industrial companies, this gas has many advantages over other commodities as a fuel as to its heating value and to the manner in which this heat can be applied and in which the gas can be used.

L. B. DENNING.

Page 677:

"A. Natural gas is the best and most economic and most convenient fuel for all general purposes that has ever been discovered. Its B. T. U. content of heat efficincy is generally from 100 to 150 per cent more than that of any manufactured gas or any solid fuel."

HARRY A. QUAY.

Pages 20 and 21, 28 and 29:

The gas companies producing gas in West Virginia supply large communities in Pennsylvania with gas. Since up to the last few years gas has been plentiful, every effort has been made to extend the business, the number of consumers and the amount of gas sold. Taking as a basis for computation the number of natural gas meters in use in Pennsylvania, it would appear that some 2,000,000 people in that State use gas for fuel and light. Although industrial consumers on the lines of the Manufacturers Company are no longer entirely dependent upon natural gas, for the reason that they have equipped themselves with substitute fuel, domestic consumers, to the extent of thousands, have no other way of heating their homes or cooking than by natural gas.

Among the number of entire communities supplied with natural gas there are various large communities. The East Ohio Gas Company, supplying gas in Ohio, the Peoples Natural Gas Company, of Pennsylvania, the Fayette Natural Gas Company and The Manufacturers Light & Heat Company, receive practically all their gas for domestic purposes from outside the State, substantially wholly from the State of West Virginia. The same is true of the Carnegie Natural Gas Company and the Philadelphia Company.

Page 28:

The East Ohio Gas Company, supplying gas in Ohio; the Peoples Natural Gas Company, the Fayette Natural Gas Company and The Manufacturers Light & Heat Company, supplying gas to domestic consumers in Pennsylvania, receive practically their entire supply of gas so furnished from West Virginia. The Carnegie Natural Gas Company and the Philadelphia Company, supplying gas to both Ohio and Pennsylvania, receive it from the same source.

Pages 8 and 9:

Gas supplied by The Manufacturers Light & Heat Company, 1919:

Number of Consumers:

In West Virginia	In Pennsylvania	In Ohio	Miscellaneous
11,000	75,000	26,000	4,500

Total, 116,500.

Gas sold in West Virginia in cubic feet, 5,400,000,000; Pennsylvania, 15,800,000,000; Ohio, 6,300,000,000.

(NOTE: Includes domestic, industrial and miscellaneous sales.)

Gas supplied to domestic consumers: West Virginia, 1,084,000,000 cubic feet; Pennsylvania, 7,966,000,000 cubic feet; Ohio 2,600,000,000 cubic feet.

Gas supplied by the Manufacturers Company for industrial purposes: West Virginia, 3,300,000,000 cubic feet; Pennsylvania, 5,700,000,000 cubic feet; Ohio, 3,700,000,000 cubic feet.

Miscellaneous: West Virginia, 1,000,000,000 cubic feet; Pennsylvania, 1,600,000,000 cubic feet; Ohio, 100,000,000 cubic feet.

Pages 141 to 143:

Figures showing the number of domestic consumers, the number of industrial consumers and the number of miscellaneous consumers supplied by The Manufacturers Light & Heat Company with natural gas for the years 1910 to 1919, inclusive, in the three States of Pennsylvania, Ohio and West Virginia.

Pages 29, 52 131, 133, 134, 149, 150, 151, 162, 167:

Not only are the present fields of gas inadequate to supply the large companies operating in West Virginia with gas sufficient to satisfy the requirements of all their consumers, but those gas fields are also on the decline; that is, the supply of gas obtainable from them is steadily decreasing. The Manufacturers Light and Heat Company has not sufficient gas to fill the demands of its customers. In cold weather when the industrial consumers are shut off there is still not sufficient gas

for the domestic consumers of the Manufacturers Company in the States of Pennsylvania and Ohio. Further, all the known gas fields tributary to the gas territory held under lease by the Manufacturers Company are occupied and in use—that is, fully drilled up and fully operated. Due to this condition the Manufacturers Company cancelled all contracts for the sale of industrial gas, with the exception of United States government contracts, as of March 5, 1920. One reason for the purchase of gas in such large quantities from the State of West Virginia by Pennsylvania and Ohio consumers is the decline in the Pennsylvania and Ohio gas fields. As a matter of fact the production of gas from the fields in all three states—Pennsylvania, Ohio and West Virginia—is fast declining, steady and constant demands being made upon the gas underneath the fields, the amount of which is definite and limited and not inexhaustible. The decline in the production of gas in West Virginia fields has been less than that in Pennsylvania and Ohio, but is perfectly discernible. The time is approaching when there will be insufficient gas to meet the requirements of even domestic consumers in the three States mentioned. Little or no new territory is available. The companies producing gas in West Virginia have in prospect the necessity of abandoning those plants when the supply of gas becomes altogether exhausted though it will be attempted to postpone that period by curtailing the consumption of gas and by the adoption by consumers of other fuel when the gas supply becomes so low as to be unsatisfactory. The alternative to discarding the large gas plants is the production of manufactured gas, which is merely a possibility.

T. O. SULLIVAN.

Pages 211, 279, 280, 283, 296, 297:

At the present time the companies have not sufficient natural gas or means of obtaining natural gas to satisfy the demands therefor made upon them by the consumers. The Winter months witness great shortages of natural gas invariably. The prospect is that these shortages will increase since, at least in the witness' knowledge, there is no way in which the gas companies can obtain sufficient gas to adequately supply consumers in Winter. Discovery of new gas territory is hardly to be hoped for, and further, the present gas fields are becoming depleted and are being steadily exhausted. The rate of decline depends upon two factors:

(a) the rate at which the gas is taken out, and

(b) the size of the hole from which the gas is extracted.

JOHN B. CORRIN.

Pages 329 and 344:

In the witness's estimate, ¾ of the gas used by domestic consumers in Pennsylvania and Ohio comes from West Virginia. The proportion of gas used in Pennsylvania and Ohio for industrial purposes which comes from West Virginia is somewhat less, however, than 75 per cent. These conditions have existed for about four years and exist at the present time; if anything the percentage of gas obtained by consumers in Ohio and Pennsylvania from West Virginia is increasing.

Pages 327, 328, 346, 348, 349:

Prior to the war the Reserve Gas Company and the Hope Natural Gas Company suffered no shortages, but since then the supply has been insufficient to meet the demand. All gas fields and all sands of all gas companies are declining, the present fields being capable of producing but an insufficient supply to satisfy the demands of consumers. In spite of the efforts of the companies to get more gas, not only on the surface but by deeper drilling, no success having been met, the probability for the coming year would be 30% increase in the shortages. Some companies are at present using suction on their wells to increase the production of gas and eventually all the other companies will have to adopt the same methods.

Page 349:

"* * * There is just a limited amount of gas left and we have to all realize that. We can use it up in two or three years, or we can extend it over a period of ten or fifteen years, and it is just up to the people what they are going to do with it."

H. A. WALLACE.

Page 400:

The Union Gas & Electric Company, of Cincinnati, supplying domestic consumers in Cincinnati with gas, receives its supply from the Columbia Gas & Electric Company, which, in turn, obtains its gas from West Virginia and Ohio.

JAMES H. REED.

Pages 497 to 500:

"Q. Have you the list of the cities and towns supplied by your company in the State of Pennsylvania, in Allegheny County, Armstrong County, Greene County, Washington County and Westmoreland County; also the cities and towns in the State of West Virginia, supplied; and also the gas supplied from trunk lines to customers whose post office addresses are given?

A. I have.

Q. Will you read that into the record, please?

Q. Those trunk line consumers, to whom you refer, are in West Virginia, are they not?

A. Yes, sir."

J. E. ANGLE.

Pages 538 and 539:

This is a table showing the number of domestic consumers and number of industrial consumers served in the towns of Uniontown, Scottdale, Connellsville and Mt. Pleasant, Pennsylvania, by the Fayette County Gas Company; the cubic feet of gas supplied to municipalities and public buildings by the Company, and the number of people in the above named towns dependent upon that gas, estimating 4½ persons per consumer, for the years 1910 to 1919, inclusive. The table shows the domestic consumers in the four towns named to average about 10,500 each year; other consumers, about 95; municipalities and public buildings, about 75,000, and the number of people dependent, 45,000 to 55,000.

MARTIN B. DALY.

Pages 572 and 573:

"Q. Can you give us a list of at least the principal municipalities and cities that you supply gas to?

"A. Yes, sir; I think I have that here:

Towns served as of December 31, 1919.	No. of consumers.
Clevland	208,294
Akron	32,655
Kenmore	1,866
Cuyahoga Falls	1,890
Canton	18,685
North Canton	370
Massillon	4,915

Dover	1,971
New Philadelphia	2,704
Uhrichsville and Dennison	2,861
Kent	1,623

Loudonville	3,643
Barberton	3,272
Wadsworth	1,101
Dovlestown	270
Millersburg	351
Danville	194
Buckeye City	116
Gann (Brinkhaven)	125

Q. Now those towns are scattered over your system from Southeastern Ohio in Monroe County to Cleveland on Lake Erie, and from Danville in Knox County to Millersville in Monroe County, are they, Mr. Daly?

A. Yes, and extend further down through the Southeastern corner of Monroe County to East Palestine

and North in Trumbull County to the City of Warren; East to the City of Urbana in Portage County also. The beginning, however, of the distribution does not take place until after the lines enter Tuscarora County, Uhrichsville and Dennison being the furthest South.

Q. In that list do you have the cities of Cleveland, Canton, Akron, indirectly Alliance, Youngstown and Warren?

A. Yes, all of those."

Page 588:

Because of the inability of the Hope Natural Gas Company to fulfill its contracts with the East Ohio Gas Company during the winter time there have been serious shortages of gas in the vicinity supplied by this company, so serious that for a number of days extending over a period of nearly three weeks there were many people who could not obtain sufficient gas to cook their meals.

Page 612:

"Q. When the supply of gas which the company may have for distribution gets below a certain point what is your opinion as to whether or not there is very great danger involved in its consumption?

A. There is no doubt but that the condition you describe would bring about a hazard in the use of gas which might result in loss of life and property by reason of explosions and asphyxiation. Fires could not be left burning over night with any degree of certainty or safety and it would render the service not only unsatisfactory but dangerous."

T. J. JONES.

Pages 631 and 632, summarized:

The witness is manager of the Natural Gas Properties of the Pure Oil Company, under which exist a number of subsidiary companies. The subsidiary companies are the Columbus Gas & Fuel Company, Federal Gas & Fuel Company, Springfield Gas Company and the Dayton Gas Company. From 1916 to 1920, inclusive, the Federal Gas & Fuel Company had from 13,000 to 16,000 consumers annually; the Dayton Gas Company from 28,000 to 36,000 consumers annually; the Springfield Gas Company from 11,000 to 14,000 consumers annually, and the Columbus Gas & Fuel Company from 44,000 to 46,000 consumers annually.

Page 740:

Figures furnished by T. J. Jones.

Consumption for the year ending March 31, 1920, of gas furnished by the Columbus Gas & Fuel Company, the Federal Gas & Fuel Company, the Dayton Gas Company and the Springfield Gas Company:

Domestic, 13,310,970,000 cubic feet; industrial, 1,790,396,009 cubic feet; total, 15,101,366,000 cubic feet.

The number of domestic consumers of the combined companies was 111,695; of industrials, 941; total, 112-633.

The proportion used by the industrial consumers was, therefore, 11.85 per cent.

Pages 636 and 637:

"Q. And if your supply of gas from West Virginia was curtailed by reason of the putting into force of the act in question here what would be the result of that on your company as a company and your consumers and those dependent upon your company?

A. The service as I have stated would be very unsatisfactory and very hazardous. The consumers would be limited to gas for cooking and lighting and heating hot water. It would be necessary for them to provide other means for taking care of their comforts in the way of heating. * * *"

L. B. DENNING.

Pages 667 and 668:

Page 661 to 664:

Tabulation of figures showing gas sales by the Ohio Fuel Supply Company for the years 1910 to 1920, inclusive, and showing the number of domestic consumers, the number of public buildings supplied and the amount supplied to each company every year; the amount of gas sold by the Northwestern Ohio Natural Gas Company to domestic consumers and the number of domestic consumers; the amount of gas sold by the Ohio Fuel Supply Company to industrial consumers and to other consumers and the number of such consumers, respectively. Likewise for the Northwestern Ohio Natural Gas Company. The amount of gas sold to all consumers and the number of such consumers by the Ohio Fuel Supply Company; also the amount of gas sold at wholesale to municipalities and utilities. The amount of gas sold to all consumers by the Northwestern Ohio Natural Gas Company, and the number of such consumers. All these figures are given for the respective years 1910 to 1920, inclusive.

The number of domestic consumers of the Ohio Fuel Supply Company increased from 53,908 in 1910 to 63,060 in 1920, and the amount of gas sold fluctuated from almost 6,000,000,000 cubic feet in 1910 to less than 4,000,000,000 cubic feet in 1920. In 1910 there were 259 public buildings which were on the lines of

the company's consumers; these increased to 415 in 1920, and the amount of gas furnished such consumers decreased from 582,165,000 cubic feet in 1910 to 180,356,000 cubic feet in 1920.

The Northwestern Ohio Natural Gas Company enjoyed an increase in the number of consumers from 34,579 in 1910 to 54,119 in 1920, and the gas sold increased from about 3,000,000,000 cubic feet in 1910 to 5,620,150,000 cubic feet in 1919. Similar fluctuations are shown in the other figures referred to. For actual figures see tables on pages referred to.

G. F. BATCHELOR.

Page 745:

This table shows sales of gas by the Natural Gas Company of West Virginia to domestic consumers in varying amounts close to the 2,000,000,000 cubic feet mark for the years 1910 to 1919, inclusive, and to industrial consumers in amounts increasing from 708,987,000 in 1910 to about 2,000,000,000 in 1919. Total of gas furnished domestic and industrial consumers for the same years increased from 2,700,000,000 in 1910 to over 3,000,000,000 in the years 1917 and 1918 and 2,923,345,000 in 1918.

EUGENE I. WHITCOMB.

Page 794:

Tabulation showing number of domestic consumers of the Logan Natural Gas & Fuel Company and the amount of gas furnished such consumers for the years 1910 to 1919, inclusive, and the ratio which the amount of gas thus furnished bears to the total amount of gas

sold by the Company. Similar figures are shown relative to the gas for other consumption, including commercial and industrial.

Pages 758 to 761:

The Logan Natural Gas & Fuel Company supplies domestic, industrial and other consumers in various towns in Indiana and Ohio with natural gas. The figures for the year ending December 31st, 1919, are as follows:

Population in towns served, 339,340; domestic consumers, 85,832; commercial, industrial and miscellaneous, 1,628; total consumers, 87,460.

Cities and towns served through other companies in Ohio:

Population, 246,817; total number consumers served, 52,020.

Cities and towns served through other companies in Indiana:

Population, 89,589; total number of consumers served 16,232.

Grand total population served by the Logan and other companies in Indiana and Ohio, 675,946; total consumers served, 155,712.

Only the totals of all figures have been given here.

The tables in the record show the population of, and domestic and industrial consumers served in, each town.

J. K. ANDERSON.

Page 821:

"About forty per cent. of the total consumption of natural gas by the domestic and industrial consumers in Pennsylvania is supplied by gas imported from the State of West Virginia, and therefore at least forty per cent. of such consumers are wholly or partly dependent upon West Virginia for their fuel supply."

Page 823:

"Q. Now give us the average annual consumption per domestic consumer for the year 1918, for the different states?

A. The average annual consumption per domestic consumer for the year 1918, for the different states, is as follows:

West Virginia	164.89	thousand	cubic	feet.
Pennsylvania	124.34	"	"	"
Ohio	110.65	"	"	"
Kentucky	87.21	"	"	"
Indiana	78.25	"	"	"
22 other states	91.80	"	"	"

Pennsylvania Exhibit No. 32, offered at page 823 of the record, appears on page 1569 of the record.

In addition this exhibit embraces a compilation taken from the reports to the Board of Public Works and to the Public Service Commission, of West Virginia, for the years 1909 to 1919, inclusive, showing the average yearly consumption per domestic consumer in West Virginia in thousand cubic feet, and also showing

the number of domestic consumers, the volume in M cubic feet and the average per domestic consumer of 13 companies and 54 other utilities doing business in West Virginia, and the average price per domestic M feet of gas for the year 1918 of said companies and utilities.

Page 819:

"Q. Mr. Anderson, give us the number of industrial and domestic consumers, and the amount of natural gas consumed by them, in the State of Pennsylvania, as shown by this exhibit, Pennsylvania Exhibit No. 30, which has been already introduced, for the year 1918.

A. The report of the United States Geological Survey for the year 1918 shows 481,275 consumers; or on a basis of five people to each consumer, 2,406,375 people using 59,839,731,000 cubic feet of gas. It shows 4,486 industrial consumers, using 117,300,074,000 cubic feet of gas. The total consumption in said State for both classes is given as 177,139,804,000 cubic feet.

Q. Now, have you the same information as to the number of domestic and industrial consumers and the amount of gas consumed by them, in the State of Ohio?

A. I have; it is shown on the reverse side of that sheet—on Pennsylvania Exhibit No. 30.

Q. Give it to us.

A. A report of the United States Geological Survery for the year 1918 shows 885,876 domestic consumers, or, on a basis of five people to each consumer, 4,429,380

people using 98,023,666,000 cubic feet of gas. It shows 4,010 industrial consumers, using 45,561,594,000 cubic feet of gas."

Page 827, 828:

The direct result of the enforcement of the West Virginia statute would be a deficiency in the supply of gas available for transportation to other States. This would come at the time of greatest demand and this deficiency in supply to consumers during the extremely cold weather would cause great distress and suffering and be attended with dangers of possible death from asphyxiation."

Page 829:

"Q. What effect would the enforcement of the provisions of the Act in controversy here have upon the consumers in Pennsylvania who obtain through their respective companies their supplies of natural gas from West Virginia?

A. It would certainly endanger the comfort for a considerable time during the Winter season of over two million people in the State of Pennsylvania by reason of shortages of gas which would take place. Their peak load coming at the same time as the peak load demand of domestic consumers of the various natural gas utilities in West Virginia making a natural shortage at the extremities of the distribution system much greater than it would be in the State of West Virginia itself. This might possibly endanger their lives by reason of the low pressure which would prevail in so many homes and attendant danger of possible fire and explosion."

Page 841: (Cross Examination):

The effect of a gas shortage on either domestic or industrial consumers in either Pennsylvania or Ohio would not be any different or greater than the shortage of domestic or industrial gas on consumers in West Virginia; that is, that West Virginia consumers, if they did not have enough gas in the winter time, would be subjected to the discomforts of coal and would be compelled to substitute other appliances or alterations in their dewelling houses or industrial plants in order to use other fuel, and their inconvenience and expenses would be the same as in Ohio and Pennsylvania.

SAMUEL S. WYER.

Pages 907 and 908:

"Q. Can you give us, from investigations which you have made, the percentage of all the gas used in Maryland, Pennsylvania, Ohio, Indiana and Kentucky, that is furnished from West Virginia, or supplied from West Virginia?

A. Maryland, 100 per cent; Pennsylvania, 35 per cent; Ohio, 50 per cent; Indiana, 80 per cent; Kentucky, 90 per cent.

Q. How many municipalities in Ohio, Pennsylvania, Kentucky, Indiana and Maryland, respectively, depend entirely on West Virginia for their natural gas service, having no other gas supply?

A. About 650 towns in the five states.

Q. How many in each?

A. Ohio, 300; Pennsylvania, 300; Kentucky, 25; Indiana, 15; Maryland, 14.

Page 908:

"Q. Will you give us now the number of domestic consumers, respectively, in Pennsylvania, Kentucky, Indiana, Maryland and Ohio, who are dependent entirely on West Virginia for their natural gas service, and the number of people?

A. Pennsylvania, 300,000 consumers, one and a half million population; Kentucky, 75,000 consumers, 375,000 population; Indiana, 15,000 consumers, 75,000 population; Maryland, 10,000 consumers, 50,000 population; Ohio 725,000 consumers, 3,625,000 population.

Q. How have you arrived at the population?

A. Estimated five people for each domestic consumer."

Pennsylvania Exhibit No. 46. Offered, page 904 by Mr. Wyer, appearing on page 1598. This exhibit consists of a map showing the principal towns outside of the State of West Virginia depending upon that State for their natural gas service.

Pages 914 to 915:

"Q. If the companies engaged in the business of supplying gas from West Virginia to the communities in

other States as has been described should not adopt the policy of cutting off all such service under the operation of this Act and by notifying the consumers to discontinue all such consumption and continue their business as now taking their chances under the operation of this Act, what would be the effect in your opinion as a natural gas expert and with your knowledge of the situation, upon the health and life and comfort of those domestic consumers who are using natural gas in other States transported from West Virginia?

A. I do not believe that in the operation of the Act any one of those Interstate lines would attempt to use natural gas for the simple reason that there would not be any so the effect on health would be that they would have to get other fuel for heating and cooking and something else for lighting. As far as convenience is concerned there is nothing that they could get that would be in the same class with the natural gas of which they had been deprived. * * *"

CHARLES E. KREBS—DEFENDANT'S WITNESS.

Pages 1102, 1103, 1105, 1106, 1107, 1109, 1010, 1011, 1021.

West Virginia Exhibit 22 to 29, inclusive, offered by defendant's witness Krebs at pages 1002, 1003, 1005, 1006, 1007, 1009, 1010, 1011, 1021, and shown in the record, folio pages 440 to 447, inclusive and 450, consist of charts and diagrams showing the consumption of natural gas for industrial purposes, for domestic purposes and for all purposes, respectively, in the States of Pennsylvania, Ohio, Indiana and Kentucky.

Exhibit No. 32 is a diagram of the production and consumption of natural gas of West Virginia.

All charts and diagrams are for the years 1914 to 1918, inclusive.

Pages 1102 and 1103:

West Virginia Exhibit No. 22, introduced, page 1102, appearing folio 440; title, "Production and Consumption of Natural Gas in the State of Pennsylvania during 1914, 1915, 1916, 1917 & 1918."

X.

THE STATES OF PENNSYLVANIA AND OHIO, IN THEIR SOVEREIGN CAPACITY, IN AND THROUGH THEIR HOSPITALS, INSANE ASYLUMS, PUBLIC SCHOOLS, PENAL INSTITUTIONS AND CHARITABLE INSTITUTIONS ARE CONSUMERS OF NATURAL GAS AND HAVE CONTRACTS FOR THE SUPPLY THEREOF AND ARE DEPENDENT UPON THE USE OF NATURAL GAS EXPORTED FROM WEST VIRGINIA FOR HEAT AND LIGHT AND WILL BE SERIOUSLY AFFECTED BY THE OPERATION OF THE WEST VIRGINIA STATUTE AS TO THE LIFE, HEALTH, SAFETY, COMFORT AND CONVENIENCE OF WARDS AND DEPENDENTS IN SUCH INSTITUTIONS AND WILL FURTHER BE SUBJECTED TO GREAT PECUNIARY LOSS.

HARRY A. QUAY.

Pages 7 and 8:

"A. We sell to practically every municipality in which we serve the public. We have contracts with the State of West Virginia. We also have a contract with the State of Pennsylvania for supplying gas to the Boys' Industrial Home, known as Morganza. The sales last year to them ran something close to 90,000,000 cubic feet. I recollect the highest amount we had, which I think was January, 1919, was something like 15,000,000 feet, or a little over 15,000,000 feet that month. We have in that list 17 contracts, I believe, with the United States Government for supplying gas to Government dams along the Ohio River. And we have a great many con-

tracts with the United States Government for supplying gas to various post-offices in the various towns that we serve in the three States. In addition to that, there are some eight or ten contracts covering gas sold to counties, for instance, like Allegheny County here—for their use.

Q. And what do they use it for, in a general way —the county?

A. Well, mostly in their institutions. They have some gas engines; for laundry purposes, cooking and lighting, and so forth, general purposes.

Q. In State institutions, or County institutions?

A. Yes, sir."

Page 120 (Cross-examination):

The Manufacturers Light & Heat Company supplies State, municipal and county institutions with gas in both West Virginia and Ohio, under contracts.

T. O. SULLIVAN.

Page 223:

The Hope Company supplies various municipalities and Governmental institutions, including water works, government dams, court houses, hospitals, churches and public schools, with gas.

JOHN B. CORRIN.

Page 349:

"You spoke of using gas for lighting purposes; is that done very largely in the better class houses?

A. Well, that depends on what you mean by the better class houses; but there is a lot of gas used for lighting purposes in a great many of these smaller towns, used for street lighting."

H. A. WALLACE.

Page 378:

United Fuel Gas Company statement of gas sold in West Virginia to churches, schools and public buildings for the years 1910 to 1919, inclusive:

	"Number churches, schools, public buildings.	Amount gas sold.
1910	169	267,375,000
1811	55	109,284,000
1912	33	55,373,000
1913	51	55,999,000
1914	69	150,173,000
1915	58	148,303,000
1916	52	231,134,000
1917	52	238,854,000
1918	52	238,710,000
1919	39	137,275,000"

JOHN B. TONKIN.

Pages 422 and 423:

"Q. Do you supply any municipal subdivisions, such as poor houses or poor farms or public buildings in any of these towns and cities, in which your company supplies gas?

A. We do. We supply the court houses and jails and city buildings, public schools, hospitals, hose houses.

Q. All the general public buildings then of the state and municipalities?

A. We do."

W. W. FREEMAN.

Page 458:

"Q. Did you supply any public institutions, such as court houses, poor houses and hospitals?

A. Yes, sir; we have quite a number of those institutions; in addition to which, when gas is available—which it is in all except the cold winter months— the city works in Cincinnati is operated on gas under their boilers, and the water works and municipal plant in Norwood. Also, the Cincinnati General Hospital, which is a very large public institution."

JAMES H. REED.

Number of Municipalities, Churches, Schools, State Institutions and Public Buildings Furnished Gas During the Year 1919 by The Ohio Fuel Supply Company.

Municipalities	135
Churches	130
Schools	57
State Institutions	43
Public Buildings	170"

J. W. McMAHON.

Page 723:

"Q. To what extent, Mr. McMahon,—give such detail as you may be able to give with reference to your furnishing gas to municipalities, for municipal purposes; public buildings, churches, school houses and so forth?

A. We furnish gas for cooking and hot water, and we did furnish gas for heating to the State Insane Asylum at Toledo until about six years ago when we were obliged to discontinue it. But we now furnish gas for hot water and cooking for the State Insane Asylum in Toledo which has a total of inmates and attendants of between 1,500 and 2,000 people. The Northwestern Company supplies gas to the post office in Bowling Green, to the sub-stations in Toledo, all of the hospitals, orphan asylums, houses for the aged and the charitable institutions of Toledo, and the small towns are supplied with natural gas by our company for cooking and hot water; nearly all the school houses in the municipalities and in the city of Toledo are supplied with gas for cooking, and some of the smaller ones for heating. All of the parochial residences, and that

applies to the churches where they have cooking utensils, with the exception of six or seven out-lying churches that are beyond our lines, are supplied with natural gas. The libraries, to a greater or less degree, are supplied with natural gas; the waterworks for operating their filtration plant in the City of Toledo, and their high pressure stations for fire protection are supplied with gas, and all but one or two of the fire department houses. The entire economic condition, so far as fuel,—cooking is concerned of the city of 243,000 population,—and that applies equally to Bowling Green, North Baltimore, Perrysburg and Maumee, depends upon our supplying natural gas to those consumers."

Page 736 (Cross-examination):

"Q. You had something to say about the supply of gas by your company to hospitals, schools, asylums and institutions of that kind; I assume that that gas is supplied under schedules filed with your Public Utilities Commission under similar circumstances to your supply of domestic gas?

A. Yes, sir.

Q. That is there is no more of a special contract with those institutions than there is with your domestic consumers?

A. With one exception.

Q. What is that?

A. The City of Toledo for their waterworks.

Q. How long has that contract been in existence?

A. About five or six years."

EUGENE P. WHITCOMB.

Page 806:

"Q. Your Company has been furnishing gas to both of those state institutions at Athens, namely, the Ohio University and the Hospital for Epileptics or insane or whatever it may be, has it not?

A. It has."

XI.

GAS COMPANIES IN WEST VIRGINIA ARE PUBLIC SERVICE CORPORATIONS OPERATING UNDER FRANCHISES AND EXERCISING THE RIGHT OF EMINENT DOMAIN.

HARRY A. QUAY.

Pages 70 and 71:

"Q. Then the fact remains that, while you are uncertain as to the places at which you have or have not municipal franchises in West Virginia, you are operating, and have been operating for a number of years in the past, under some sort of municipal—

A. Power.

Q. Permission or power or tolerance or acquiescence—is that correct?

A. That is correct."

T. O. SULLIVAN.

Pages 246 to 248:

The pipe lines of the Hope Company are laid over lands over which the Company has a right of way. The company does not own the fee of such lands. Such rights of way for the purpose of laying, maintaining and operating pipe lines, and, in some instances, telephone and telegraph lines, are usually secured from the owner of the property by agreement and for compensation. Sometimes condemnation proceedings are resorted to in case of inability to deal with the owners of the land. The

lines also cross public highways in West Virginia in a number of places and are sometimes laid along such highways. In such cases permits or franchises are secured from the proper officials; in incorporated towns from the town officials. As a specific example, the instance was cited of the City of Clarksburg, from which the Hope Natural Gas Company held a franchise for its pipe line for the purpose of distributing and supplying natural gas to consumers in that city.

H. A. WALLACE.

Pages 381 and 382 (Cross-examination):

The United Fuel Gas Company has acquired rights of way in West Virginia by both purchase and condemnation proceedings. It also possesses a franchise in the City of Huntington, under which it is permitted the use of certain streets and alleys to lay lines connected up with consumers to distribute gas. Similarly in the City of Charleston, West Virginia (p. 386).

JAMES H. REED.

Pages 519 and 520 (Cross-examination):

The principal transmission lines of the Philadelphia Company go across the public roads and in some instances along them in the State of West Virginia. So far as the witness knows the rights to lay and operate these lines are exercised under permission or authority granted by the property State and county authorities in West Virginia. Some of the rights of way were acquired by condemnation proceedings. The Company also holds franchises in the State.

H. E. NEASE—DEFENDANT'S WITNESS.

Pages 1016 and 1017:

The great interstate gas companies have rights of way for their pipe lines across and along the roads in West Virginia, which rights were granted by the County Courts, and similar franchises permitting them to erect telephone and telegraph lines of their own along the public roads; where the companies serve natural gas in various incorporated towns and villages in the State, they furnish the supply of this gas under franchises.

J. S. LAKIN—DEFENDANT'S WITNESS.

Pages 1174 and 1175:

The Hope Natural Gas Company holds eight franchises transferred to it by deeds by the Mountain State Gas Company to furnish gas, which have been granted by the municipalities of Parkersburg, St. Marys and Sistersville, of Wood and Pleasants Counties, West Virginia.

CHARLES A. SHORT—DEFENDANT'S WITNESS.

Page 1276:

The Pittsburgh and West Virginia Gas Company, supplying gas to Shinnston, West Virginia, holds a gas franchise, as does also the Home Petroleum Company, supplying gas to the same town.

F. C. DEVERICKS—DEFENDANTS' WITNESS.

Pages 1363 and 1364:

Offered in evidence:

Certified copies of franchises granted by the County Court of Harrison County for the use of the public roads of the county to the Reserve Gas Company. Hope Natural Gas Company and Hutton Gas Company, respectively, through the years 1905 to 1907.

W. C. ALLMAN—DEFENDANT'S WITNESS.

Page 1215:

During the period of six years immediately preceding January 1, 1921, while the witness was Clerk of the Circuit Court of Lewis County, West Virginia, there were a number of proceedings by way of condemnations for pipe lines brought principally by the West Virginia Central Gas Company, the Hope Gas Company, the Reserve Gas Company and the Pittsburgh and West Virginia Gas Company or Philadelphia Company of West Virginia.

Copies of the court records of proceedings for these condemnations were offered in evidence and marked West Virginia Exhibit No. 45.

I. WADE COFFMAN—DEFENDANT'S WITNESS.

Pages 1216 and 1217:

During the period of witness' service as Clerk of the Circuit Court of Harrison County, various condemna-

tion proceedings for pipe lines for the transportation of natural gas were brought by gas companies, including the Hope Natural Gas Company, the Carnegie Natural Gas Company, the Fairmont & Grafton Gas Company, the Philadelphia Company of West Virginia and the Pittsburgh & West Virginia Gas Company.

Certified copies of the court records relative to the above were offered in evidence and marked West Virginia Exhibit No. 50.

West Virginia Exhibits Nos. 46 to 49, inclusive, consist also of certified copies of court records showing condemnation proceedings by the various companies in West Virginia courts for rights of way.

F. C. DEVERICKS—DEFENDANT'S WITNESS.

Page 1363:

Offered in evidence:

Certified copy of the proceedings has in the condemnation proceedings of Wheeling Natural Gas Company against Enos D. Tennant and others, marked West Virginia Exhibit No. 51.

West Virginia Exhibit No. 52,— offered at page 1364, appearing at page 1917, showing grants of franchises by communities in West Virginia to gas companies operating in that State.

H. E. NEASE—DEFENDANT'S WITNESS.

Page 988:

West Virginia Exhibits Nos. 9 to 15, inclusive, offered at page 988, appearing at Folios 270 to 378, inclusive.

These exhibits consist of reports respectively made by the Hope Natural Gas Company, the Pittsburgh and West Virginia Gas Company, United Fuel Gas Company, Reserve Gas Company, Carnegie Natural Gas Company, Columbia Gas and Electric Company and The Manufacturers Light & Heat Company to the Board of Public Works of the State of West Virginia.

F. C. DEVERICKS—DEFENDANT'S WITNESS.

Pages 1364 and 1365:

West Virginia Exhibits Nos. 53 to 59, inclusive, offered at pages 1364 and 1365, appearing at pages 1922, 1929, 1934, 1938, 1940 and 1942, respectively.

These exhibits consist of copies of rate applications made by the Hope Natural Gas Company, United Fuel Gas Company, Pittsburgh and West Virginia Gas Company, Reserve Gas Company and The Manufacturers Light & Heat Company, respectively.

XII.

THE RELATION OF THE HOPE NATURAL GAS COMPANY, PITTSBURGH AND WEST VIRGINIA GAS COMPANY, UNITED FUEL GAS COMPANY, COLUMBIA GAS AND ELECTRIC COMPANY AND THE MANUFACTURERS LIGHT & HEAT COMPANY TO OTHER PRODUCERS OF GAS AND GAS COMPANIES OPERATING IN WEST VIRGINIA AND THE RESPECTIVE HOLDINGS OF WELLS, LEASES, PRODUCTION, THE AMOUNT OF GAS EXPORTED BY SAID COMPANIES, MILES OF PIPE LINES OWNED, &C.

H. E. NEASE—DEFENDANT'S WITNESS.

Pages 995 and 996:

"Q. Are you able to give us the figures as to what percentage of the total net supply for public service of West Virginia Gas is controlled by these seven companies?

A. I am.

Q. Are your figures in that regard based upon the information and knowledge you have testified about previously?

A. They are.

Q. Will you give us in the record the total net supply for public service of all gas produced in West Virginia and then the net supply for the seven companies; then the percentage of the total net supply which

is controlled by the seven companies for the years 1911 to 1919, inclusive?

Answer—

Statement Showing Total Net Supply for Public Service of Natural Gas Produced within West Virginia and the Total thereof of the Hope Natural Gas Company, Pittsburgh and West Virginia Gas Company, United Fuel Gas Company, Reserve Gas Company, Carnegie Natural Gas Company, Columbia Gas and Electric Company, and Manufacturers Light and Heat Company Combined for the Seven Companies.

1911-1919.

	Total net supply for public service.	Net supply of the seven companies.	Percentage of the net supply of the seven companies to the total net supply.
	M cu. ft.	*M cu. ft.*	
1919	183,687,047	164,426,341	89.5%
1918	227,649,823	201,685,702	88.6%
1917	245,620,686	223,517,777	91.0%
1916	259,414,200	200,892,583	85.1%
1915	207,777,882	179,694,495	82.1%
1914	200,762,645	166,625,730	83.0%
1913	209,131,295	167,897,746	80.3%
1912	203,112,738	172,050,962	84.7%
1911	173,132,353	147,431,246	85.1%

Pages 996 and 997:

"Q. Are you able to give us a statement which will show the amount of gas produced in West Virginia which is used by the West Virginia consumers, and the percentage thereof with reference to the total net supply of such gas?

A. I have such a statement.

Q. Please put it in the record.

Answer—

Statement Showing Total Net Supply for Public Service of Natural Gas Produced within West Virginia and Total thereof Furnished to West Virginia Consumers.

1911-1919.

	Total net supply for public service. *M cu. ft.*	Sales to West Va. consumers *M cu. ft.*	Percentage of the total net supply sold to West Va. consumers
1919	183,687,047	46,654,098	25.4%
1918	227,649,823	52,985,173	23.3%
1917	245,620,686	48,942,388	19.9%
1916	259,414,200	59,409,460	22.9%
1915	207,777,882	53,147,718	25.6%
1914	200,762,645	50,600,709	25.2%
1913	209,131,295	53,629,419	25.6%
1912	203,112,738	51,968,488	25.6%
1911	173,132,353	40,265,294	23.3%

Q. The column on that statement just given, and under the heading "Total net supply for public service" is the total net public supply for the state, is it not?

A. It is of all gas produced within the state.

Q. Now, under the next heading, "Sales to West Va. consumers," have you embraced all of the consumers in West Virginia?

A. That is consumption that was used in public service or delivered to the public.

Q. And the third heading is the percentage which the amount so used in West Virginia bears to the total public supply?

A. Yes."

Page 997.

"Statement Showing Total Net Supply for Public Service of Natural Gas Produced within West Virginia of the Hope Natural Gas Company, Pittsburgh and West Virginia Gas Company, United Fuel Gas Company, Reserve Gas Company, Carnegie Natural Gas Company, Columbia Gas and Electric Company, and Manuacturers Light and Heat Company and the Total Thereof Furnished by the said Seven Companies to West Virginia Consumers:

1911-1919.

	Total net supply of the seven companies.	Sales to West Virginia consumers.	Percentage of total supply of seven companies sold to West Virginia consumers.
	M cu. ft.	*M cu. ft.*	
1919	164,426,341	29,360,811	17.9%
1918	201,685,702	30,120,273	14.9%
1917	223,517,777	26,889,876	12.0%
1916	220,892,583	24,526,859	11.1%
1915	170,694,495	18,860,867	11.0%
1914	166,625,730	20,612,599	12.4%
1913	167,897,746	22,297,677	13.3%
1912	172,050,962	21,101,443	12.3%
1911	147,431,246	17,200,747	11.7%"

Page 1015:

West Virginia Exhibit No. 18, offered at page 1015 by witness Nease, appearing at Folios 402 to 412.

Statement showing number of consumers in West Virginia furnished natural gas by the Hope Natural Gas Company, Pittsburgh and West Virginia Gas Company, United Fuel Gas Company, Reserve Gas Company, Carnegie Natural Gas Company, Columbia Gas & Electric Company, and The Manufacturers Light & Heat Company, combined for the seven companies.

NOTE: This includes 18-A to 18-J, which give the consumers for each of said companies separately.

The Exhibit setting forth the figures for the combined companies shows that they furnished a total of 34,400 consumers in West Virginia in 1910, and that this number increased gradually to 58,841 in 1919. Domestic and industrial consumers and local utilities are included.

Page 1018:

West Virginia Exhibit No. 19, offered at page 1018, appearing at Folios 414 to 423.

Statement showing distribution of the net supply of West Virginia natural gas combined for the seven companies.

NOTE: This includes 19-A to 19-I, which show figures for each company separately.

The figures for 1911 and 1919 are as follows:

	Total furnished to West Virginia consumers	Transported, or sold for transportation to other states
1919	29,360,811,000 cu. ft.	135,065,530,000 cu. ft.
1911	17,200,747,000 cu. ft.	130,230,499,000 cu. ft.

Pages 1037 and 1038:

The Manufacturers Light & Heat Company produces gas, has pipe lines or serves consumers in the following West Virginia counties: Doddridge, Harrison, Marion, Monongalia. Tyler, Wetzel, Marshall, Ohio, Brooke and Hancock; the Reserve Gas Company in Harrison, Lewis, Ritchie, Wood, Pleasants and Doddridge.

The Pittsburgh and West Virginia Gas Company has such service in the counties of Braxton, Doddridge, Gilmer, Harrison, Lewis, Marion, Monongalia, Ritchie, Taylor, Tyler and Wetzel.

The Carnegie Natural Gas Company produces, has pipe lines or serves consumers in Braxton, Doddridge, Gilmer, Harrison, Lewis, Taylor, Tyler, Marion, Monongalia Ritchie and Wetzel.

The Hope Natural Gas Company in Barbour, Braxton, Calhoun, Doddridge, Gilmer, Harrison, Lewis, Marion, Marshall, Monongalia, Pleasants, Ritchie, Rome, Tyler, Upshur, Wetzel and Wirt; also Wood and Taylor.

The Columbia Gas and Electric Company covers the counties of Cabell, Lincoln, Putnam and Wayne.

The United Fuel Gas Company in Boone, Cabell, Calhoun, Clay, Gilmer, Jackson, Kanawha, Lincoln, Logan, Mingo, Putnam, Poane and Wayne.

Pages 1062 and 1063:

The large interstate gas companies supply much free gas to consumers in West Virginia, for obtaining rights of way, &c. This free gas is not included in West Virginia Exhibit No. 16.

CHARLES E. KREBS—DEFENDANT'S WITNESS.

Pages 1101 and 1102:

The amount of gas shipped out of the State of West Virginia for the years 1914 to 1918, inclusive: for the year 1914, 141,341,928 M. cubic feet were shipped out of West Virginia, that being 59.77 of the total production; for the year 1915 there were shipped out of West Virginia 149,027,454 M. cubic feet, or 61.08 per cent. of the total production; for the year 1916 there were shipped out of West Virginia 194,214,899 M. cubic feet of gas or 64.90 per cent. of the total production; for the year 1917 there were shipped out of West Virginia 193,128,909 M. cubic feet, or 62.58 per cent. of the total production, and for the year 1918 there were shipped out of West Virginia 157,487,473 M. cubic feet, or 59.12 per cent. of the total production of gas in the State.

J. K. ANDERSON.

Pages 815-817:

Pennsylvania Exhibit No. 28, offered at page 815, appearing at page 1566.

Showing natural gas production statistics for the year 1919 in West Virginia, being also a record of gas production and purchases. This table shows the gas produced by natural gas utilities and the gas purchased from other than utilities, together with the totals, first, in all States, and, secondly, in West Virginia.

Pennsylvania Exhibit No. 29, offered at page 817, appearing at page 1567.

This is a chart showing the production and consumption of natural gas in the State of West Virginia for the years 1904 to 1920. This chart shows that the production of natural gas rapidly increased from 1908 to 1917, since which time it has steadily declined, and that the consumption from 1908 to 1917 gradually increased, from which time it has slightly declined.

H. E. NEASE.

Pages 994 and 995:

West Virginia Exhibit No. 16, offered at page 995, appearing at Folios 379 to 388, showing the supply of natural gas produced and acquired within West Virginia by the great interstate gas companies.

Exhibit No. 16 is a combined report. Exhibits Nos. 16-A to 16-I, inclusive, are separate reports on the same subject for the years 1911 to 1918, inclusive.

CHARLES E. KREBS.

Pages 1092 and 1093:

The quantities of gas produced in the State of West Virginia for the years 1914 to 1918, inclusive, are as follows, according to the reports of the United States Geological Survey:

269

For the year 1914, 236,489,175 M cubic feet;
For the year 1915, 244,004,159 M " " ;
For the year 1916, 299,318,907 M " " ;
For the year 1917, 308,617,101 M " " ;
For the year 1918, 265,160,917 M " " ;

H. E. NEASE—DEFENDANT'S WITNESS.

Pages 1165 to 1168:

Monthly reports of gas production of the Hope Natural Gas Company for July, 1919, showing cities and towns served in West Virginia; active domestic and industrial consumers in those towns; total of meters in use, and volume in Cubic feet of gas sold. Showing gas sold to various utilities; showing industrial and domestic consumers served and the volume of cubic feet of gas furnished through the field and main lines of the Company. The total gas sales for the month amounted to 3,426,445,000 cubic feet to the consumers above named. The total gas purchased in and out of West Virginia for that period was 1,329,097,000 cubic feet.

EDWIN ROBINSON.

Page 1382:

"*Ebert's Statement on West Virginia Natural Gas Production, Importation, Sales, and Exportation for Year* 1920:

Pa. Exhibit No. 53. 3-21-1921. J.R.S.

Inspection Department, Gas Utilities.

Summary of the Natural Gas Production, Importation, Sales, and Exportation for the Fiscal Year Ending June 30, 1920.

I.	Sold in cities and towns in W. Va.	51,525,765 Mcf.		
J.	Sold in field and main lines in W. Va.	35,883,029 "		
K.	Total sales in W. Va.	87,408,794 "	87,408,794	Mcf.
L.	Sold to W. Va. utilities		48,806,800	"
M.	Exported from W. Va.		142,519,562	"
N.	Line loss, etc.		66,357	"
O.	Credit total		278,801,513	"
C.	Purchased from W. Va. producers	34,932,777 Mcf. from	1,074-2/12 wells*	
E.	Purchased from W. Va. utilities	49,012,245 "		
F.	Imported to W. Va.	5,435,663 "		
G.	Error in reporting	326 "		
	Total purchases and imports	89,381,011 "	89,381,011	Mcf.
B.	Produced by utilities from 7,709-5/12 wells*		189,420,502	"
H.	Debit total		278,801,513	"

In item F, 755,666,000 cubic feet of the 5,435,663,000 was 'forced importation' through a main trunk line, from the McKeesport, Pa., gas field, while the latter was in its prime. While the utility exports gas to Pennsylvania regularly and imports none from Pennsylvania, it was compelled to take the quantity named above during one month.

Charles B. Ebert,
Acting Chief Inspector.

*Monthly average of wells.

Page 1378:

Pennsylvania Exhibit No. 50, offered at page 1378, by witness Robinson, appearing pages 1603, 1604 and 1605:

Natural Gas Statistics—State of West Virginia.

The total production of natural gas within the State of West Virginia, for the year ended December 31, 1919, was approximately 220 billion cubic feet. Approximately 80 billion cubic feet of the State's production (or the equivalent thereof) and 4 billion cubic feet of imported gas was consumed within West Virginia and approximately 140 billion cubic feet piped to other States.

The production of natural gas within West Virginia for the years 1908 to 1919, both years inclusive, was as follows:

Year	Cubic Feet.
1908	112,181,278,000
1909	166,435,092,000
1910	190,705,869,000
1911	206,890,576,000
1912	239,006,682,000
1913	245,453,985,000
1914	236,489,175,000
1915	244,004,159,000
1916	299,318,907,000
1917	289,898,967,000
1918	280,289,044,000
1919	219,886,837,000

The statement following shows the quantity of natural gas exported from the State.

Year	Exported from State (cubic feet)	Percentage of State's total production
1908	61,644,618,000	55%
1909	96,074,387,000	58%
1910	120,508,811,000	63%
1911	132,867,059,000	64%
1912	151,144,250,000	63%
1913	155,501,876,000	63%
1914	150,161,936,000	63%
1915	154,630,164,000	63%
1916	200,004,740,000	67%
1917	196,679,263,000	68%
1918	174,664,650,000	62%
1919	139,939,062,000	64%

Industrial Consumers.

Year	Gas Consumed (cubic feet)	Percentage of State's total production
1909	60,453,682,000	36.4%
1910	59,023,550,000	31.1%
1911	62,711,802,000	30.5%
1912	74,574,273,000	31.4%
1913	76,990,310,000	31.7%
1914	72,062,030,000	31.0%
1915	74,153,788,000	30.7%
1916	83,767,519,000	27.9%
1917	76,816,465,000	26.5%
1918	86,005,521,000	31.1%
1919	65,015,951,000	27.5%

Large quantities of natural gas are used within the State in the manufacture of carbon black. The average yearly consumption for the last ten years for this purpose was approximately 23 billion cubic feet per year. During the year 1919, approximately 21 billion cubic feet was used for this purpose. The figures for "Industrial Consumption" include this gas.

Prepared by H. E. Nease, Statistician, Public Service Commission of West Virginia.

F. B. ROBINSON.

Pages 353-1205:

The Standard Oil Company of New Jersey owns about 51% of the stock of the Clarksburg Light and Heat Company.

JOHN B. CORRIN.

JOHN B. TONKIN.

Pages 321, 424:

The Standard Oil Company of New Jersey owns the stock of and controls the River Gas Company and the Peoples Natural Gas Company; the Hope Natural Gas Company and the Union Gas Corporation own all

the stock of the Reserve Natural Gas Co. and Connecting Gas Companies in the proportion of about 51% and 49% respectively.

HARRY A. QUAY.

Page 1508-Pa. Exhibit No. 14.

The number of Stockholders in the Manufacturers Light and Heat Company total 4,170.

H. E. NEASE.

Pages 998 and 999:

Some of the larger oil companies produce gas to a limited extent, and such companies as the South Penn Oil Company, which is closely allied with the Hope Natural Gas Company and the Reserve Gas Company, market their gas to the Hope Natural Gas Company and the United Fuel Company. The Ohio Fuel Oil Company is a large gas producing company and in its earlier years it was closely allied to the United Fuel Gas Company. The Carter Oil Company is allied to the Hope and Reserve Companies, these being Standard Oil Companies. These affiliated oil companies market their gas to the kindred gas companies. The Ohio Fuel Oil Company sells practically all the gas that it produces to the United Fuel Gas Company. The South Penn sells practically all of the gas that it produces (or did until recently) to the Fayette County Gas Company, which is closely allied with the Hope Company.

Page 1019:

The records of the Public Service Commission of the State of West Virginia show that 212 independent producers market their gas to the large interstate companies.

Page 1021:

Some of the large interstate gas companies exchange gas. For example, the Reserve Gas Company handled through its lines some gas for the Hope Gas Company and there is now an arrangement between the Pittsburgh and West Virginia Gas Company and the Eastern Oil Company group, by which the Pittsburgh and West Virginia exchanges some gas in the territory where the Eastern Oil Company group companies are operating for some isolated production that the Eastern Oil Company group has from one well in Gilmer County. They are now building a pipe line to that well of the Eastern Oil Company in Gilmer County.

Statement Showing Productive Gas Wells within West Virginia.

Page 1030:

The Pittsburgh and West Virginia Company has taken over the properties of the Fairmont Natural Gas Company and the properties of the Philadelphia Company of West Virginia. The Pittsburgh and West Virginia Company is the changed name of the old Fairmont and Grafton Gas Company, a local West Virginia corporation, the control of which passed into the hands of the Pittsburgh and West Virginia Company in 1913.

Page 1031:

The United Fuel Gas Company acquired the properties of the United States Natural Gas Company:

> "The United Fuel Gas Company has acquired no other—the property of no other natural gas utility companies. The United States Natural Gas Company, however, the company which it acquired, as I have stated, was made up of numerous smaller natural gas companies, including the Triple State Natural Gas Company, The Kanawha Natural Gas, Light & Fuel Company, The Charleston Natural Gas Company and some of the properties of the Kanawha Gas Company. The United Fuel Gas Company was reorganized along about the time it took over the properties of the United States Natural Gas Company and its stock very greatly increased. At this time it also took over from the Hope Natural Gas Company a great block of leases, south of the little Kanawha River.
>
> I think that about covers the development of the company."

Pages 1032 and 1033:

The Standard Oil Company of New Jersey was at one time interested in the United Fuel Gas Company, and the majority of the stock up until 1910 was held by the Standard Oil Company of New Jersey. The United Fuel Gas Company has transferred considerable gas territory to the Hope Company. There is an agreement between the United Fuel Gas Company and the Hope Natural Gas Company, or the interests controlling these two companies, with reference to the territory north of the Kanawha River and the territory south of the Kanawha River.

Pages 1081 and 1082:

The Standard Oil Company has been dissolved by a decision of the Supreme Court of the United States, and the stock of the South Penn Oil Company was distributed among the individual stockholders.

J. S. LAKIN—DEFENDANT'S WITNESS.

Pages 1169 to 1174:

By deed dated June 27th, 1911, the Wheeling Natural Gas Company, Tri-State Gas Company and The Manufacturers Light & Heat Company, West Virginia corporations, and The Manufacturers Light & Heat Company, a Pennsylvania corporation, granted and transferred to the Hope Natural Gas Company, a West Virginia corporation, 892 leases of gas land covering 65,205.15 acres located in Harrison, Lewis, Marion, Upshur, Braxton and Gilmer Counties; also 20 gas-purchase contracts covering gas produced from 9839.75 acres; also over 100 rights of way over various farms; also 177,867 feet of pipe lines.

By deed dated April 1, 1910, the Mountain State Gas Company, a West Virginia corporation, transferred certain property to the Hope Natural Gas Company, including 180 leases of gas territory covering 23,610 acres located in Ritchie, Gilmer, Pleasants, Wirt, Tyler, Wetzel and Calhoun Counties, W. Va.; also over a thousand rights of way over farms in the counties above named and also in Lewis, Harrison, Doddridge and Wood Counties, West Virginia. The same deed transferred 101 wells in Pleasants, Ritchie, Tyler, Wetzel, Calhoun, Gilmer and Wirt Counties, West Virginia. The deed further transferred to the Hope Company eight franchises given by the municipalities of Parkersburg, St. Marys and Sistersville.

B. F. ROBINSON—DEFENDANT'S WITNESS.

Pages 1204 and 1205:

There was a merger of the Clarksburg Light & Heat Company and the Mountain State Gas Company which included a transfer to the former of all the property of the latter, and, in addition the property and franchise of the West Fork Oil & Natural Gas Company, with the exception of some leases which had previously been sold. Of the stock in the new company formed by the merger, 51 per cent. was subscribed for by interests representing the Standard Oil Company of New Jersey. The latter are represented by four of the seven stockholders constituting the Board of Directors.

HARRY A. QUAY

Pages 12-13:

"In practically all gas fields there is more or less competition; and the belief is if you don't sell the gas,

your competitors draw on that territory and sell it, and that you had better sell your gas, what you can, before the other fellow sells it. Competition has been so keen that we have always attempted to sell practically all the gas drilled. Years ago, when there was not the demand for natural gas that there is today, there was a large surplus amount of gas, and we made great efforts to find markets for the gas and dispose of it. I don't wish to imply that those same conditions still apply to the present day."

Page 46:

"The competitive bidding for leases, I consider, is very much more extensive now than perhaps formerly. There is keen competition for leases.

T. O. SULLIVAN

Page 220:

"In my opinion, it (competition) is more pronounced than ever before."

JOHN B. CORRIN.

Page 357:

"There certainly has been strong competition, and we feel that competition is stronger today than it ever was. There is a greater demand for gas territory now than there ever has been, and a greater endeavor by these different gas companies to get it—even reasonably good territory."

H. A. WALLACE.

Page 371:

"There is a large amount of competition along the line of taking up leases, and it is steadily increasing. That is, competition is getting stronger."

J. K. ANDERSON.

Page 827:

"There is an active competition between large companies and smaller producers in endeavoring to lease new territory in new fields."

GEORGE W. WILSON—DEFENDANT'S WITNESS.

Pages 1302 and 1303 (Cross-examination):

There is pretty vigorous competition between the Hope Company and the Pittsburgh & West Virginia Company to obtain the gas production of the independent producers in the fields where those companies have pipe lines.

H. E. NEASE—DEFENDANT'S WITNESS.

Pages 1026, 1034, 1035, 1036:

Some of the larger cities in West Virginia, such as Morgantown, Fairmont, Clarksburg, Weston, Shinnston, Lumberport, Bridgeport, Salem, Pennsboro Harrisville and Cairo are served by local utilities. There are also a great many cities and towns served by local utilities in the southern section of the State. Some of the larger companies sell gas to local utilities which supply the local communities, for example: The Carnegie Natural

Gas Company sells gas to the West Virginia Traction and Electric Company which supplies Morgantown; the Pittsburgh and West Virginia Gas Company sells gas to utilities serving Fairmont, Marion County, and vicinity of Glenville; the Clarksburg Light and Heat Company serves Clarksburg and the vicinity; the Light, Fuel & Power Company serves Sutton, Braxton County, and, indirectly, Gassaway and various smaller towns in Braxton County; the Keener's Oil, Natural Gas and Fuel Company serves Weston, Lewis County; the Comet Oil and Gas Company serves Pruntytown and some smaller towns in Taylor County; the West Virginia Heat and Light Company serves the towns of Ellenboro, Pennsboro and Cairo in Ritchie County; the Clarksburg Light and Heat Company secures gas from the Hope Natural Gas Company; the United Fuel Company sells gas to Charleston-Dunbar Natural Gas Company which supplies a small portion of Charleston, the incorporated cities of Saint Albans and South Charleston, and the towns of Dunbar, Spring Hill and Institute in Kanawha County. The Columbia Gas and Electric Company and the Reserve Gas Company do not sell any gas to local utilities.

CHARLES A. SHORT—DEFENDANT'S WITNESS.

Pages 1295, 1296:

The smaller gas companies in West Virginia are unable to go out in the field, purchase gas and have it transported to their lines by the pipe line companies. The larger companies have never made a practice of exchanging gas with the small local companies. An attempt on the part of the Home Petroleum Natural Gas Company to purchase natural gas from the Hope people in Pittsburgh was unsuccessful.

Pages 1331 and 1332, and 1335 and 1336.

F. C. DEVERICKS.

All the above are Defendant's Witnesses.

Pages 1351 to 1354, 1353 and 1354, 1357 and 1358, and 1361 to 1363:

Prior to and coincident with the operation of the great interstate gas companies in the gas industry, independent producers and small local gas companies operated in West Virginia. As a general rule the independent producers did not proceed to develop discoveries of gas producing sands into a complete gas industry or business. They were usually content to find a market in some company already operating and furnishing gas to consumers in order that they, the independent producers, would not be compelled to undergo the expense laying pipe lines or of building pump or compressor stations. Sometimes their interests lay rather in the speculative field of the gas industry than in the developing and distributing lines. Most often their operations consisted in selling gas as quickly as possible to the larger companies.

F. C. DEVERICKS—DEFENDANT'S WITNESS.

Pages 1353 and 1354:

"A. The rule was this: That those who were financailly able to do it would rather have had the large acreage, but those who were simply promoters and cared but little whether it was a productive well or non-productive well, preferably non-productive, in some cases where they would be selling interests, and there would be more money in not having a well produce than there would be in having it produce.

Q. I wish you would give the formula for that. It is rather a new adventure in finance. Will you explain to us how it would be profitable for promoters, even in West Virginia, to take up a property and make more money out of it when it would not produce than when it did?

A. This is not for the record——

Q. Yes, this is for the record.

A. All right, then I will say this: There has been a great many men who came here following the oil business, who would promote a company, and not only here, but every other field throughout the United States, I think I am safe in making it the United States, who have gone into the territory and gathered up leases, or a lease, rather, a small acreage, and started out to sell a one-thirty-second or a sixteenth or a quarter or one-eighth or something like that, simply for the money that they would be able to obtain for those interests in excess of what it would cost to drill a well, and there has been men who lived on that; and we had a recent example of that in McKeesport, and I am surprised that counsel had never heard of McKeesport.

Q. Do you want that to go down to the court as your answer to my question?

A. I asked for permission not to put that in the record. Every word of which is true.

Q. Is that your answer to my question? And I ask the stenographer to repeat the question to the witness.

(The question read by the stenographer as follows):

"Q. I wish you would give the formula for that. It is rather a new adventure in finance. Will you explain to us how it would be possible for a promoter, even in West Virginia, to take up a property and make more money out of it when it would not produce than when it did?"

Q. Now, the question having been read, I repeat and ask you if you want the answer you just made to be your answer?

A. It is the formula you are asking for. That is the formula. The answer which I gave you is the formula."

So far as regards the local companies, their operations are almost invariably carried on in a small way, at least when compared to those of the larger interstate companies. A few specific examples may be cited: For instance, the Monongahela Valley Traction Company has approximately 18,000 acres of gas territory in the region of Fairmont, five or six thousand acres of which are developed. The Home Petroleum Gas Company owns some 250 acres in Harrison County, and about 80 acres in Marion County, upon which are six wells. The Company possesses no pumping station. The Lumberport Gas Company, serving Lumberport, Haywood, Erie, Hepzibah and a number of small towns surrounding, has territory consisting of some 37 drilled acres and five wells on separate tracts. The Horner Gas Company, from which the Lumberport Gas Company buys some gas, has about 80 acres of developed territory and five wells. The Eagle District Gas Company has about 160 acres. The Lumberport Company has no pump or booster station.

As a rule, the small companies in West Virginia, including those cited above, hold little or no reserve acreage. This is not due always, or even in a majority of cases, to the lack of gas territory. For instance, at the time the Keener Natural Gas, Oil & Fuel Company, supplying Weston, West Virginia, entered that town

some 25 years ago there was ample opportunity to take up additional acreage. Weston afforded the Company a market for its gas. (page 1267).

Financial conditions limited the operations of such companies to a very considerable degree. It is not only the cost of reserve acreage which prevents these companies from acquiring same but the necessity incidental thereto of laying pipe lines from their present holdings or transmission lines to such new territory, assuming that the latter would be productive of a gas supply. For the same reason these small companies are unable to build compressor stations which would have enabled them to obtain more gas from wells where the pressure had decreased to an extent where without a compressor station very little gas was to be had. For instance, the Home Petroleum Gas Company had an opportunity recently to obtain more gas by laying three or four miles of pipe line, but although it had considered the proposition, decided that the investment was not advisable.

(Page 1295.)

F. C. DEVERICKS—DEFENDANT'S WITNESS.

Pages 1357 and 1358:

It was generally assumed that the South Penn Oil Company, which had taken up a number of leases in West Virginia fields and districts, had suffered considerable financial loss through these operations. They had been, in a way, pioneers in the field, in that theirs was the first attempt to take up any considerable acreage or leases and do a large amount of drilling on the territory. The company was generally supposed to have lost millions of dollars in the adventure. As a

general rule the small independent operators, either individual or associate, did not feel warranted in marketing gas directly to the consumer. The reason is, that their holdings, generally being comparatively small, their production did not warrant the financial expenditure involved in building pipe lines to transport their gas, and, further, since their territory is somewhat limited they cannot feel assured of a number of consumers sufficient to use all the gas they can produce. The result is that the larger companies soon learn of the existence of gas in these territories and extend their pipe lines there and buy up the gas from these independent producers. It is therefore the larger companies who supply the consumers in the territory where gas is discovered, even though they do not themselves produce it in that territory. This, however, is only a general rule, for sometimes the independent producers themselves lay their own pipe lines and supply consumers direct. The consequence is that there are some gas distributing plants in most of the centers of population in West Virginia in and around Bradford and surrounding districts which were originally built by local capital, although some have been built by larger companies.

At least one of the smaller local companies, however, is doing some development. The Clarksburg Light & Heat Company recently acquired two or three thousand acres in Harrison County, which, however, had been previously operated. The Company has been drilling continuously on an average of from 15 to 20 new wells per year, the cost of which was from twelve to thirteen thousand dollars each (pages 1208 to 1212).

H. E. NEASE—DEFENDANT'S WITNESS.

Pages 1020-1021:

As a general rule the independent producers of gas do not have pipe lines for the transportation of their gas to market, nor do they have a market financed by local capital and by local enterprises. They have never had large capitalizations or large financial resources at their command and during the past fifteen years many of them have failed and gone out of business. They do not control a great deal of territory nor do they have any pipe lines or pumping stations. Their gas is distributed by natural rock pressure of the gas wells.

Pages 1028-1029, 1030, 1031:

The Manufacturers Light and Heat Company, the Pittsburgh and West Virginia Gas Company, and the United Fuel Company have absorbed and taken over many smaller companies originally operating in West Virginia.

GEORGE W. WILSON—DEFENDANT'S WITNESS.

Page 1300:

In Lewis and Braxton Counties the independent producers are fewer in number than they have been in recent years. At one time a considerable number operated, drilled wells, etc., but their leases have been sold to larger companies, which is practically the only market for the independents. The only method of transporting gas furnished the independent producer is the pipe lines of the larger companies. The extent of their holdings does not justify the small producers to go to the expense of laying pipe lines of their own.

VANCE L. HORNER—DEFENDANT'S WITNESS.

Pages 1309, 1310, 1311, 1312:

An attempt to exchange gas by the Lumberport Gas Company and the Shinnston Company with the Hope Company was without success. The Carnegie Company operating in the same vicinity as the Lumberport and Shinnston Gas Companies takes its gas at the present time through its pumping station from its well at less than atmospheric pressure which results in reducing the pressure on the adjoining wells operated by the witness' companies. If this were resorted to by all the companies, the Shinnston and Lumberport Gas Companies would be reduced to either establishing pumping stations or find it impossible to get gas from their wells. The financial situation of these companies would not justify the establishment of pumping stations.

PARKE BOWSER—DEFENDANT'S WITNESS.

Pages 1333 to 1335 (Cross-examination):

Operating about seventy oil and gas wells in Calhoun, Ritchie and Gilmer Counties in association with some other individuals, Mr. Bowser had shut in about 2,000,000 feet of gas because the market conditions offered by the Hope Natural Gas Company, to whom this gas could have been sold, practically amounted to a confiscation of property. The price offered was too low and the conditions in the contract were wholly derogatory to the producers. Under the contract offered him by the Hope Company it would have been necessary to lay about twelve miles of pipe line which would have involved an expenditure of from $12,000 to about $15,000, which the company considered an unjustifiably high amount.

J. K. ANDERSON.

Page 822:

Pennyslvania Exhibit No. 31, offered at page 822, appearing at page 1568.

Statement showing relation of operated and unoperated leaseholds of large interstate natural gas companies and small local intrastate natural gas companies doing business in the State of West Virgina. The statement shows the seven companies owning of 2,954,120 acres of gas territory in West Virginia, of which 26.57 per cent. are operated, and 20 small local intrastate natural gas companies owning a total of 27,619 acres in West Virginia, of which 62.65 per cent. are operated. The figures are as of August 19th, 1920, and based upon reports to the Board of Public Works of West Virginia.

Pages 1026 to 1027, 1028:

The Hope Natural Gas Company, the Reserve Gas Company, the Carnegie Natural Gas Company, the Pittsburgh and West Virginia Gas Company and the Manufacturers Light and Heat Company are engaged in and have production and pipe lines in Harrison County, but none of these companies serve the towns of Clarksburg, Shinnston, Lumberport, Bridgeport and Salem in said Harrison County. The total acreage of that County is 266,240 acres and the total acreage of gas territory held by the five companies is 171,996 acres. The total number of gas wells producing gas in that county and owned by these five companies is 1,674. There are 57 independent producers, owning 160 wells, who sell to these five companies. The extent of pipe line owned and operated by the five companies in this County is 1,157 miles, said pipe

line being two inches and larger. The total number of domestic consumers in Harrison County served by the five companies is between 800 and 900, and about 100,000 cubic feet of gas is furnished these consumers. No industries in Harrison County are supplied with natural gas by these companies. The Pittsburgh and West Virginia Gas Company supplies about 100 consumers in the town of Shinnston. Some of the companies furnish gas to local utilities that supply some of the above mentioned towns. The assessed value of the property of the five companies in Harrison County for the year 1920 is $13,915,199.

Pages 1027 to 1028:

The Hope Natural Gas Company, the Reserve Gas Company, the Carnegie Natural Gas Company and the Pittsburgh and West Virginia Gas Company are producing gas and have pipe lines in Lewis County, the acreage of said county being 251,520 acres and the population in 1920 being 20,455. The four gas companies control in that county 176,739 acres. The number of wells owned by the companies is 1,196 and they have purchased or are purchasing from 16 independent producers of gas owning 66 wells. The mileage of pipe line owned by said companies in Lewis County is 795 miles. The assessed value for their property for 1920 is $10,630,629. About 1200 domestic consumers are supplied with gas by these companies. These are chiefly rural consumers and rural communities, no incorporated cities or towns being supplied by any of the four companies. There is practically no service for industrial consumers in Lewis County.

J. S. LAKIN—DEFENDANT'S WITNESS.

Page 1188:

Q. It is at this point that I will ask you to make part of your examination the statement in respect to the Eastern Oil Company group of gas companies, heading that in proper form and letting it go into the record as part of your direct examination.

2589 *Statement Showing Leases, Wells, and Pipe Lines Within West Virginia of "Eastern Oil Company Group" of Natural Gas Companies.*

	Leases (acres).	Gas wells (No.).	Pipe line (miles).
West Virginia Central Gas Company	34,067	161	260
West Virginia and Maryland Gas Company	None	None	220
Northern Natural Gas Company	None	None	10
Totals	34,067	161	490

Leases are located within the counties of Lewis, Harrison, Upshur, Barbour and Gilmer.

Gas wells are within the counties of Lewis, Harrison and Braxton.

The Eastern Oil Company also owns the following local gas companies operating within West Virginia. These companies are not connected with the company's general system.

	Leases (acres).	Gas wells (No.).	Pipe line (miles).
Salem Natural Gas Company	386	6	57 miles, 1 to 8¼ "
West Union Gas Company	367	3	20 miles, 1 to 6¼ "
Glenville Natural Gas Company	200	1	17 miles, 1½ " to 5⅝ "

The Salem Natural Gas Company operates within the counties of Doddridge and Harrison; the West Union Gas Company within Doddridge County and the Glenville Natural Gas Company within Gilmer County.

EDWIN ROBINSON.

Pages 1389-1392:

Made an investigation and compilation of the acreage held by operators in West Virginia; separated the acreage held by operators in West Virginia other than the Hope Natural Gas Company, Pittsburgh & West Virginia Gas Company, United Fuel Gas Company, Reserve Gas Company, Carnegie Natural Gas Company, Columbia Gas & Electric Company, and The Manufacturers Light & Heat Company; gave the amount of developed acreage held by other operators in the State of West Virginia than those seven companies, and the amount of undeveloped acreage; made an estimate of the amount held by other operators not included in the list, which did not purport to include all, both of developed and undeveloped acreage; offered in evidence Pennsylvania Exhibit 54 at page 1608, Vo. II of Exhibits, statement showing approximate acreage held by certain companies and individuals in West Virginia, comprising ten pages; offered in evidence general summary of acreage held by operators in West Virginia as compared with testimony of Mr. Nease, page 1618 of Exhibits, Vol. I, as follows:

191 & 192 *General Summary of Acreage Held by Operators in West Virginia as Compared with Testimony of Mr. Nease.*

	Developed.	Undeveloped.	Total.
Testified by Nease as held by seven companies	689,305	1,866,720	2,556,025
Ascertained as held by other operators	524,007	1,416,659	1,940,666
Estimated held by operators not included in above	100,000	300,000	400,000
	1,313,312	3,583,379	4,896,691

Percentage Held by Operators Other Than the Seven Companies Without the Estimate of Those Unascertained.

Developed.	Undeveloped.	Total.
43.2	43.1	43.2

Percentage With the Estimate of Those Unascertained.

There has been no discrimination against consumers in West Virginia 77
Volume of gas exported from West Virginia..... 86
Improper use of gas in West Virginia..... 92
Extent of the property rights which would be effected by the enforcement of this statute..... 95
West Virginia would take substantially all the gas under the act in question..... 97
The testimony shews that the effect of the enforcement of the statute in question would be as alleged in the bill of complaint of the state of Ohio. 102
There has been no discrimination against consumers in West Virginia 205
Present status of the available gas supply—decline and shortage 208

Note: By inadvertence omission of text occurred at page 77 which is inserted at end of brief under heading **"There has been no discrimination against consumers in West Virginia"** as pages 205 et seq.

Conclusion 108
LEGAL ARGUMENT 110
I. This case is properly brought in the original jurisdiction of this court..... 110
II. Natural gas is privately owned and is not the property of the state, which the state may refuse to permit to be transported outside the state 112
III. Natural gas when reduced to possession is a commodity which belongs to the owner of the land, and may be the subject of both intrastate and interstate commerce 120

Index.

IV. The act in question constitutes a regulation of interstate commerce 126

a. Purposes of the commerce clause.....126

b. Early judicial decisions interpreting the commerce clause 130

c. Development of the rule of Cooley vs. Port Wardens. Cases in which the power of Congress is exclusive.....135

d. Application of the rule that as to those subjects "which are of such a nature as to demand that if regulated at all, their regulation should be by a single authority," the power of congress is exclusive to the act in question 143

V. Even a police regulation must be absolutely impartial and not discriminate as between interstate and intrastate transactions.....149

VI. The statute of West Virginia discriminated against interstate commerce in natural gas....155

VII. The states have no right to define the subjects of interstate commerce, but that definition must be made by the court in accord with the general understanding of the commercial world..167

VIII. There is no public service duty owed to the consumers inside the State of West Virginia which justifies this legislation preventing or restricting the interstate transportation of gas.170

Index.

IX. Eminent Domain. The fact that the companies which transport gas in interstate commerce have exercised the right of eminent domain within the State of West Virginia will have accepted franchises or other privileges to which only public service corporations are entitled, does not amount to a dedication of their entire supply of gas to the use of the public inside the State of West Virginia.....178

X. Natural gas is interstate commerce if it is in the course of transportation to another state, although it is mingled with gas which is not intended to be transported out of the state.....181

XI. The act in question is void because it impairs the obligation of the contract in violation of Section 10 of Article 1 of the constitution of the United States 189

XII. The act in question is in violation of the 14th Amendment of the constitution of the United States in that it deprives the State of Ohio and many of its citizens and residents of property without due process of law.....193

XIII. The validity of the act must be determined from its language and its necessary operation and effect 196

Supreme Court of the United States

OCTOBER TERM, 1921.

NUMBER 18, ORIGINAL.

THE STATE OF OHIO,

Complainant,

vs.

THE STATE OF WEST VIRGINIA,

Defendant.

STATEMENT OF THE CASE.

This is a suit in equity, in the original jurisdiction of this court, by the State of Ohio against the State of West Virginia. The complaint is directed, as appears from the bill, against the enforcement by the State of West Virginia, of an act passed by the legislature of that state on February 12, 1919, duly approved by the governor, to be effective May 10, 1919, a copy of which statute is attached to the bill, marked "Exhibit B."

TEXT AND ANALYSIS OF THE ACT.

"Section 1. That every person engaged in furnishing, or required by law (whether statutory or common law) to furnish natural gas for public use, or for use of the public, or any part of the public, whether for domestic, industrial or other consumption, within this state, shall to the extent of his supply of said gas produced in this state, (whether produced by such person or by any other person), furnish for public use within the territory of this state, and for the use of the public and every part of the public within the territory of this state, in or from which such gas is produced, or through which said gas is transported, or which is served by such person, a supply of natural gas reasonably adequate for the purposes, whether domestic, industrial or otherwise, for which natural gas is consumed or desired to be consumed by the public, or any part of the public, within said territory in this state, and for which said consumer or consumers therein shall apply and be ready and willing to make payment at lawful rates."

Section one of this act requires every person engaged in furnishing or required by law to furnish natural gas for the use of the public within the State of West Virginia, to furnish an adequate supply of gas for all purposes, whether domestic, industrial or otherwise, for which gas is consumed or desired to be consumed by the public or any part of the public, within the State of West Virginia, in the territory where the gas is produced or through which it is transported, or which is served by such person.

"Section 2. That in case any person engaged in furnishing, or required by law (whether statutory or common law) to furnish, natural gas for public use within this state, or for the use of the public or any part of the public within this state, shall have a production or supply of natural gas which is, or probably will be, insufficient to furnish for such use, (for the purposes, whether domestic, industrial or otherwise, for which natural gas is consumed by the public or any part of the public), within the territory in this state served by such person, then and in that event the public service commission shall have authority, and the same is hereby conferred on it, upon the application of any such person or any of his consumers within this state and after due hearing upon notice and proof to the satisfaction of the commission that public convenience and necessity so require, to order any other person engaged in furnishing, or required by law (whether statutory or common law) to furnish, natural gas for public use within this state, and producing or furnishing natural gas for public use in said territory or transporting the same through said territory, to furnish to such person having such insufficient production or supply, natural gas for the purpose of supplying such deficiency, at and during such times, upon and at such just and reasonable terms, conditions and rates, and in such amounts, as the commission shall prescribe. And whenever, after such hearing upon notice and proof, the commission shall determine that public convenience and necessity so require, the commission shall have authority to provide for and compel the establishment of a reasonable physical connection or connections between the lines, pipes or conduits of such persons having such excess supply of gas and the lines, pipes or conduits of the person having such deficiency of supply, and to require the laying and construction of such reasonable extensions of lines, pipes or conduits as may be necessary for the establishment of such physical connection or connections, and to ascertain, determine

and fix the just and reasonable terms and conditions of such connection or connections, including just and reasonable rules and regulations and provision for the payment of the costs and expense of making the same or for the apportionment of such cost and expense as may appear just and reasonable. **Provided, however,** that no person shall, by virtue of this section, be ordered to furnish natural gas to any other person so engaged in furnishing, or required by law to furnish, natural gas for public use, except to the extent that the person so ordered to furnish natural gas shall, at the time, have a production or supply of natural gas in excess of the quantity sufficient to furnish a reasonably adequate supply to his consumers within this state; nor shall any person, by virtue of this section, be ordered to furnish natural gas to any other person so engaged in furnishing or required by law to furnish, natural gas for public use in a territory within this state, if any when the said person having said excess shall, to the extent of such excess, be ready and willing to furnish, and within such time as the commission shall prescribe shall actually furnish, to the consumers within said territory a reasonably adequate supply of natural gas."

Section two of the act provides that any person who is engaged in furnishing gas for public use within the state of West Virginia, and whose supply of gas is insufficient to fully supply the wants of consumers, for all purposes, whether domestic, industrial or otherwise, within the territory in the State of West Virginia served by such person, may make application to the Public Service Commission of that state for an order to require any other person engaged in furnishing or required by law to furnish gas for public use within the state and producing or furnishing gas for public use in the territory or trans-

porting the same through the territory served by the person having an insufficient supply of gas, to supply the deficiency of the person having such insufficient supply. The commission is given the power to fix just and reasonable terms, conditions and rates upon which the gas shall be so furnished as well as the amount of gas to be furnished. The Commission may require the necessary physical connections to be made and make provision for the apportionment of the expense of such connections. Section two contains a proviso that no person should be required to furnish gas to another person furnishing gas to the public, unless the first person shall have a supply in excess of the quantity sufficient to adequately supply his consumers within the State of West Virginia. It provides further that if the person having such excess shall be willing to furnish an adequate supply of gas directly to the consumers of the person having such deficiency, then such person having such excess shall be permitted to supply such consumers directly instead of supplying the persons having such insufficient supply for his consumers.

"Section three. That in so far as the same shall not be in conflict with this act, all of the authority, powers, jurisdiction and duties conferred and imposed on the public service commission by the act, entitled, 'An act to create a public service commission and to prescribe its powers and duties, and to prescribe penalties for the violations of the provisions of this act,' passed February twenty-first, one thousand nine hundred and thirteen, as amended by the act entitled, 'An act to amend and re-enact sections one, two, three, four, five, nine, ten, fourteen, fifteen and twenty-two, of chapter nine of the

acts of one thousand nine hundred and thirteen, creating a public service commission, prescribing its powers and duties, and penalties for violation of the provisions of said chapter, and to add thereto six sections to be known as sections twenty-three, twenty-four, twenty-five, twenty-six, twenty-seven, twenty-eight, enlarging the powers and duties of said public service commission, prescribing additional penalties and giving to the commission power to punish for contempt,' passed February tenth, one thousand nine hundred and fifteen, are hereby conferred and imposed on the public service commission in respect to the subject matter of this act, or any part thereof."

Section three of the act gives the Public Service Commission of West Virginia all of the power and authority to enforce this act which it has under the general act creating it and prescribing its powers and duties, and the amendments thereto.

"Section four. That in case of violation of any provision of this act any person aggrieved or affected thereby may complain thereof to the public service commission in like manner, and thereupon such procedure shall be had, as is provided in respect to other complaints to or before said commission, and all such proceedings and remedies may be taken or had for the enforcement or review of the order or orders of said commission, and for the punishment of the violation of such order or orders, as are provided by law in respect to other orders of said commission. In case of the violation of any provision of this act, the public service commission, or any person aggrieved or affected by such violation, in his own name, may apply to any court of competent jurisdiction by a bill for injunction, petition or writ of mandamus or other appropriate action, suit or proceeding, to compel obedience to and compliance with

this act, or to prevent the violation of this act, or any provision thereof, pending the proceedings before said commission, and thereafter until final determination of any action, suit, or proceedings for the enforcement or review of the final order of said commission; and such court shall have jurisdiction to grant the appropriate order, judgment or decree in the premises."

Section four of the act gives to any person aggrieved by the violation of any provision of the act the right to complain to the Public Service Commission and to have such proceedings for enforcement of the order of the commission or review thereof as is provided by law with respect to other orders of said Commission. It further gives to the Public Service Commission or to any aggrieved person the right to apply to any court of competent jurisdiction for injunction, mandamus, or other appropriate remedy to compel compliance with the act, pending the proceedings before said Commission, and thereafter until final determination of any action, suit or proceeding for the enforcement or review of the final order of said Commission, and confers upon such court the jurisdiction to grant the appropriate judgment, order or decree in the premises.

"Section five. That if any person subject to the provisions of this act shall fail or refuse to comply with any requirement of the commission hereunder, such person shall be subject to a fine of not less than one hundred dollars nor more than five hundred dollars for each offense; and such person, or the officers of the corporation, where such person is a corporation, may be indicted for their failure to comply with any requirement of the commission under the provisions of this act, and upon conviction thereof, may

be fined not to exceed five hundred dollars, and in the discretion of the court, confined in jail not to exceed thirty days. Every day during which any person, or any officer, agent or employe of such person, shall fail to observe and comply with any order or direction of the commission, or to perform any duty enjoined by this act, shall constitute a separate and distinct violation of such order or direction of this act, as the case may be."

Section five imposes a fine of not less than $100 nor more than $500 for each failure or refusal to comply with any requirement of the Commission under the act and provides for the indictment of the person, or of the officers of the corporation, if such person be a corporation, for failure to comply, and provides a fine of $500 and a jail sentence, not to exceed thirty days, which may be imposed in the discretion of the court. It further provides that every day during which any person or its officers or agents shall fail to comply with the provisions of the act or any order of the Commission made under the act shall be deemed a separate and distinct violation of the act.

"Section six. That any person claiming to be damaged by any violation of this act may bring suit in his own behalf for the recovery of the damage from the person or persons so violating the same in any circuit court having jurisdiction. In any such action the court may compel the attendance of the person or persons against whom said action is brought, or any officer, director, agent or employe of such person or persons, as a witness, and also require the production of all books, papers and documents which may be useful as evidence, and in the trial thereof such witness may be compelled to testify, but any such witness shall not be prosecuted for

any offense concerning which he is compelled hereunder to testify."

Section six gives to any person aggrieved by violation of the act the right to bring suit for damages in his own name in any circuit court of the state having jurisdiction. It further provides for the compulsory attendance of witnesses and the production of books and papers which may be useful as evidence.

"**Section seven.** That the word 'person' within the meaning of this act shall be construed to mean and to include, persons, firms, and corporations."

"**Section eight.** That the sections, provisions and clauses of this act shall be deemed separable each from the other, and also in respect to the persons, firms, corporations and consumers mentioned therein or affected thereby, and if any separable part of this act be, or be held to be, unconstitutional or for any reason invalid, or unenforceable, the remaining parts thereof shall be and remain in full force and effect.

"**Section nine.** That all acts and parts of acts in conflict with this act are hereby repealed."

Sections seven, eight and **nine** of the act require no comment at this point.

THE LEGAL MEANING AND EFFECT OF THE LAW.

We believe that the legal meaning and effect of this act is as follows:

First: It imposes an absolute duty upon any person furnishing gas or required by any law of West Virginia, whether statutory or common law, to furnish gas for

public use to devote his entire supply of gas to the satisfaction of the wants and desires of all persons within the territory of the State of West Virginia in which the gas is produced or through which it is transported, or which is being served by the person in question, before he will be permitted to furnish any gas whatever to any person outside of the boundaries of the State of West Virginia. His duties within the state are not to be limited to the persons or communities which he has held himself out to serve or which he has in fact been serving in the past, but are made by this act to include also all persons in the territory where the gas is produced or through which it is transported, even though the owner of the gas may never have served or held himself out to serve either of these classes of persons.

Second: It requires any person producing or transporting or furnishing natural gas and having a supply in excess of the quantity necessary to supply his consumers **inside the State of West Virginia**, even though his supply is inadequate or not more than adequate, to supply all of his consumers both inside and outside of the State of West Virginia, to make or submit to physical connection with the pipe lines of any other person engaged in supplying gas, in the territory in which the first person shall be producing or furnishing or transporting natural gas, and to furnish to such other person all of the gas which he may have in excess of the requirements of his consumers **inside the State of West Virginia**, if such other person shall require all of such excess in order to adequately supply his consumers **inside the State of West Virginia.**

Third: The act requires that all consumers, inside the State of West Virginia, shall be given a reasonably adequate supply of natural gas, **whether** for **domestic,** industrial, or other purposes, before any gas whatever is transported outside the State of West Virginia. The act is mandatory upon the person furnishing gas, and gives no discretion either to him or to the Public Service Commission or to any other authority which could permit the person furnishing gas to supply domestic consumers outside of the state if industrial consumers inside the state were desiring gas for their use. Likewise the act places all consumers inside the state, and also all persons not on the lines of the person furnishing gas, but being located inside the state, in a position of preference over all persons outside the state, even though the persons outside the state are domestic consumers only, and have long since been such consumers, on the lines of the persons who are furnishing gas to them.

THE BILL OF COMPLAINT.

The bill of complaint recites the character of the two states, as being states of the United States of America, and that the bill was filed by the attorney general of the complainant state, pursuant to the authority of a joint resolution of the legislature of the State of Ohio, and the written direction of the governor of that state. The complainant states then, in the first division of its bill, alleges facts which are in substance as follows:

That natural gas has been for more than twenty years last past, known to exist in large quantities, of great

value, in the State of West Virginia; that many persons, including many citizens and residents of the State of Ohio, have invested capital in West Virginia in drilling wells and establishing facilities for producing, transporting and marketing gas, said gas being found in thirty-four named counties of the State of West Virginia; that much of the gas development in West Virginia has been and is being done by Ohio citizens and corporations.

The second division of the bill alleges that many cities and industrial plants in West Virginia are connected by pipe lines with the gas supply of the wells in West Virginia, or are located near to said pipe lines, and that if a reasonably adequate supply of natural gas should be furnished to all persons so located within the State of West Virginia, for all purposes, whether industrial, domestic or otherwise, then, in that event, substantially if not entirely, all of the gas produced in West Virginia would be required to meet said demands in West Virginia, the result of which would be to deny natural gas to even the preferred or domestic consumers in Ohio.

The bill of complaint further alleges that, in the early stages of gas development in West Virginia, all of the demands of all consumers in West Virginia for all purposes, were met, and there was a surplus for transportation to the State of Ohio, but that now the consumption of and demand for natural gas in West Virginia has greatly increased, and that if the statute of West Virginia, thereafter complained of, should be enforced, the transportation of gas to Ohio even for use by domestic consumers would be cut off, and such transportation would be entirely prohibited.

The third division of the bill alleges that, for more than twenty years last past, large quantities of natural gas have been transported from the State of West Virginia into the State of Ohio, for use and consumption within said state; that in the early stages of natural gas development in West Virginia, there was a small demand for the same in the State of West Virginia, and that the Ohio municipalities of Cleveland, Cincinnati, Columbus, Dayton, Akron, Canton, Hamilton, Springfield, Youngstown and many others, have either constructed plants for the distribution of natural gas, or permitted such plants to be erected by private capital, at great expense, and are dependent upon natural gas for light, heat and fuel, and for other purposes.

The fourth division of the bill of complaint alleges that many corporations and companies, of which five are named, have, at the expense of many millions of dollars, laid large trunk lines for the transportation of gas from the gas fields of West Virginia to the said cities in Ohio, and that such transportation to and the distribution, sale and use of natural **gas** in the said cities in Ohio have been conducted for many years last past, under contracts then and still existing between the said companies on the one hand, and the State of Ohio and its municipalities on the other; that the State of Ohio, and its inhabitants in said municipalities and elsewhere, now rely almost wholly upon the use of natural gas for light, heat and fuel, and for other purposes; that the demand for such gas is growing, and that there is now, from time to time, a shortage of gas in said state, even when the use of it is limited to

domestic purposes; that all contracts in Ohio with consumers of natural gas provide for preference to domestic consumers, and for cutting off all other classes of users in case of a shortage of supply.

The fifth division of the bill of complaint avers and enarges that for many years gas has been extensively transported in interstate commerce through pipe lines in, through and among the Dominion of Canada, the states of New York, Pennsylvania, West Virginia, Ohio, Kentucky, Indiana, Illinois, Missouri, Kansas, Oklahoma, Texas, Arkansas, Louisiana and other states in the United States; that there are more than five thousand miles of main trunk lines laid and operated in said states and Canada; that the transportation of West Virginia gas by pipe lines has become a great industry, with millions of dollars invested therein; that natural gas is a well established and extensively transported article of interstate commerce.

The sixth division of the bill of complaint alleges that there are now in operation in the State of Ohio, and from Ohio into West Virginia, more than one thousand miles of connecting natural gas main pipe lines; that the property value of said pipe lines is at least twenty-five million dollars, and that more than half of said pipe lines were laid for the exclusive purpose of, and are now engaged in transporting and handling natural gas produced in the State of West Virginia.

The complainant further alleges, in the seventh division of its bill of complaint that it is the owner and proprietor of seventeen state institutions established for

penal, eleemosynary, educational and governmental purposes, within the State of Ohio, which are named in the bill; that said natural gas so transported from West Virginia and used as aforesaid is also used in municipal buildings and for municipal and street lighting in the counties, townships and municipalities of the State of Ohio; that all of said gas so used in said institutions, municipalities and buildings is supplied and used under existing contracts between the State of Ohio and the political subdivisions thereof respectively, on the one hand, and the producers and distributors of natural gas who bring the same from the State of West Virginia, on the other hand; that the State of Ohio has, at great expense, provided equipment for the use of natural gas, which would have a mere salvage value if said state should be unable to continue to secure a supply of natural gas from the State of West Virginia; that the great convenience and economy of this fuel have saved the State of Ohio thousands of dollars annually; that the use of natural gas has enabled the state to better care for its abnormal persons in its institutions; that the said state used, in its said public institutions, during the year ending June 30th, 1918, a total amount of three hundred sixty-nine million, three hundred eighty-nine thousand (369,389,00) cubic feet of natural gas, of which a large proportion was obtained from the State of West Virginia; that if the said state should be deprived of its supply from the State of West Virginia, the volume and pressure of its gas supply would be insufficient for any practical use; that the citizens and residents of Ohio and other states have invested

in the natural gas business in the State of Ohio, approximately one hundred and fifty million dollars, from which investment the State of Ohio and its subdivisions receive in taxes annually large sums of money; that many citizens and residents of the State of Ohio have become bound by contracts to furnish natural gas, whose only source of natural gas supply for the fulfillment of which contracts, is from the State of West Virginia.

The eighth division of the bill of complaint alleges that the legislature of the State of West Virginia passed, on February 12th, 1919, an act, the title of which is quoted in the bill, and a copy of the full text of which act is attached to the bill, marked "Exhibit B," and made a part of the bill. The alleged substance of the act is set forth in the bill, as is also its alleged purposes, and it is alleged to be illegal and void because it offends against, and is in contravention of Clause 3 of Section 8 of Article 1 of the Constitution of the United States, and of the fourteenth amendment of the Constitution of the United States, and of Section 10 of Article 1 of the Constitution of the United States.

The ninth division of the bill avers that it is the effect and purpose of the statute complained of to require persons producing and transporting natural gas in West Virginia to devote their entire supply to the needs of consumers inside the said state, and to wholly prevent the exportation of natural gas from said state.

The tenth division of the bill alleges that the enforcement of the act would cause to the complainant state great and irreparable pecuniary loss and injury, and

would deprive more than four millions of people, being citizens and residents of the State of Ohio, of their natural gas supply, and would deprive the State of Ohio of its large income from the taxes upon gas property, and would destroy or impair the value of the property of many persons and corporations, residents of the State of Ohio, to the extent of many millions of dollars.

The bill of complaint then charges that the act of West Virginia complained of is void because it would prevent the transportation of gas in interstate commerce from West Virginia into Ohio, which the State of West Virginia is not legally empowered to do, such power being lodged in the government of the United States, and not elsewhere; and that the enforcement of the statute would cause great and irreparable injury to the rights and property of the complainant state and its citizens and residents, for which it or they would have no adequate remedy at law.

The bill of complaint then proceeds as follows:

> "In consideration whereof, and for as much as your orator and its citizens and residents, who except through representation by your orator, have no remedy and can only have adequate relief in this honorable court, your orator on its own behalf and also as the **parens patriae**, trustee, guardian and representative of that great proportion of its citizens, who are directly affected by the provisions of said law, as aforesaid, prays this honorable court to take cognizance of the several charges set forth in the premises."

The complainant then prays that the State of West Virginia be made defendant and may be compelled to

answer each and every allegation therein contained, but waiving the answer under oath; that it be adjudged and decreed that the said act or law of the State of West Virginia is illegal and void because it conflicts with and contravenes those provisions of the Constitution of the United States named in the eighth division of the bill; that it be adjudged and decreed that neither the complainant state nor its citizens and residents have an adequate remedy at law for the injury which would result from the enforcement of said act, and that such injury would be irreparable.

The complainant further prays that the defendant may be restrained by a writ of perpetual injunction, issuing out of and under the seal of this honorable court, from in any way interfering with the transportation of natural gas from and out of the State of West Virginia, for use in the State of Ohio by said state, or any of its citizens or residents, under the authority of the said act, or any act, law or statute of the State of West Virginia, or under any pretended common law right, rule of action or unwritten law of the State of West Virginia. The complainant then prays for a provisional or preliminary injunction, and formally concludes its bill.

THE ANSWER.

The State of West Virginia in its answer substantially admits all of the material allegations of the bill of complaint as to the external, physical facts. The denials contained in the answer go principally to conclusions or statements of law contained in the bill of complaint, to-

gether with the formal denial for lack of information, as to certain matters which pertain particularly to internal conditions within the State of Ohio. The answer purports to set forth some of the alleged evils sought to be remedied by the act in question which are in substance these: That West Virginia has a large production of natural gas; that a large proportion of its production is being transported out of the state, and that there is, in many communities inside the state, a shortage of gas supply, especially in winter weather. It further alleges that the gas fields and facilities in West Virginia have largely fallen into the hands of seven named corporations which have a virtual monopoly of the business of producing and transporting gas in West Virginia; that these corporations are public service companies, and have acted as such, except in so far as they have failed and refused to furnish to the public in West Virginia within the range of their pipe lines a reasonably adequate supply of gas.

The answer states that there was, at the time when the lines and facilities for the transportation of gas from West Virginia were established, a large surplus of gas beyond the demands of consumers in West Virginia, but that this condition is no longer true, and that at the present time the transportation of gas from the state makes inadequate the supply within the state.

The answer further alleges that the seven companies base their refusal to furnish additional gas within the state upon the fact that they have duties to consumers in other states, arising out of contracts or out of their duties as public utilities in such other states, while the State

of West Virginia claims that the seven companies owe a duty to furnish gas to all consumers, present and prospective, inside the state in priority to consumers of any class outside the state. This contention of the State of West Virginia appears in paragraph VI, page 30, of its answer, where this language is used:

> "On the one hand it was insisted by said state and its people that they were entitled to a reasonably adequate gas supply to the extent, for the purposes and by the means later specified in and by the statute complained of in said bill of complaint, and that the duty of furnishing such supply rested on said seven companies as well as the other public service gas companies of West Virginia."

It appears again in paragraph X, on page 36 of the defendant's answer, where this language is used:

> "While this defendant admits that gas is or may be an article of interstate commerce, yet this defendant denies that gas placed in mains or pipes by public service gas companies, is either in interstate commerce or a legitimate article of interstate commerce, unless and until it has reached the point where it is no longer subject to the public service in West Virginia, and the duties imposed by law upon public service gas companies have been observed and performed by them; and denies that the requirement of the performance or observance of the duties owed by such companies is an interference with interstate commerce or a burden thereon."

The [illegible]r then states that this issue between the said seven companies on the one hand and the State of West Virginia and its citizens on the other hand, gave rise to the legislation in question in this litigation. It admits that the consequences of the enforcement of the statute

in question will be as alleged in the bill of complaint, but denies that the consequences will be of such extent as alleged in the bill. It states that the State of Ohio may obviate to a certain extent the consequences of the legislation by

> "The contraction by internal regulation by the State of Ohio of the territorial scope of service or distribution and of the number of its consumers."

and says that such remedy must also ultimately be applied in West Virginia. It admits that the inconveniences, losses and other consequences would result to the State of Ohio as alleged in the bill, but alleges that similar consequences will result in West Virginia, unless the statute is upheld. The answer then alleges the constitutionality and legal validity of the statute and denies that it would, **except indirectly or incidentally,** prevent the transportation of gas in interstate commerce.

THE TAKING OF THE PROOFS.

This court, on April 20, 1920, made an order granting motions to consolidate cases numbers 23 and 24, original, October Term, 1919, being the cases of The Commonwealth of Pennsylvania, complainant, vs. The State of West Virginia, and The State of Ohio, complainant, vs. The State of West Virginia, "for the purpose of taking the proofs." The court further appointed Levi P. Cooke, Esq., of the District of Columbia, as a commissioner to take and return the testimony in these cases, with the powers of a Master in Chancery, as provided by the rules of this court, but the court ordered that said Commis-

sioner should not make any findings of fact or state any conclusions of law. The order of the court further fixed the time for the taking of the testimony.

The hearings commenced on May 11th, 1920, and continued from time to time until April 26th, 1921. Hearings were held in Pittsburgh, Pennsylvania; Columbus Ohio; Charleston, West Virginia, and Clarksburg, West Virginia. The testimony taken, and the exhibits offered comprise over 2,000 printed pages. **Notwithstanding this large amount of testimony, there is practically no conflict in the evidence upon any material point in the case, and hence a long and detailed discussion of the proof would be needlessly burdensome to the court.** We present therefore, as brief a statement as possible of the facts as shown by the proofs, or admitted by the pleadings, with citations to the pages of the record, for the purpose of verification.

GENERAL TESTIMONY RELATING TO GAS PRODUCTION.

Natural gas is not found in rooms or open cavities under the earth's surface, but in the minute spaces between the grains of sand which make up sand rock. This substance is called by the profession "gas sand," but is, in fact, sand rock. There is no regeneration of natural gas in the sands from which it has been removed. (Wyo 869,909).

There is no reliable method of determining the existence of natural gas under the earth's surface except by puncturing the earth down to the location of the gas sand

that is, by drilling a gas well. (Quay 10, Sullivan 196, Wyer 868). This fact makes the business of finding and producing natural gas an extremely hazardous venture. (Quary 10). Natural gas exists in the sands originally at a high pressure known as the rock pressure. This pressure varies for different wells and for different areas, and has no particular relation to the volume of gas that will flow from a well. (Wyer, page 869). This rock pressure, however, is the force by which gas is, in the first instance, severed from the soil. This process of severance is shown by Pennsylvania Exhibit 36, record, page 1578, copy of which we insert next following this page, and which exhibit is explained by the witness, Wyer, in his testimony (Record, pages 870, 871).

PENNSYLVANIA EXHIBIT 36.

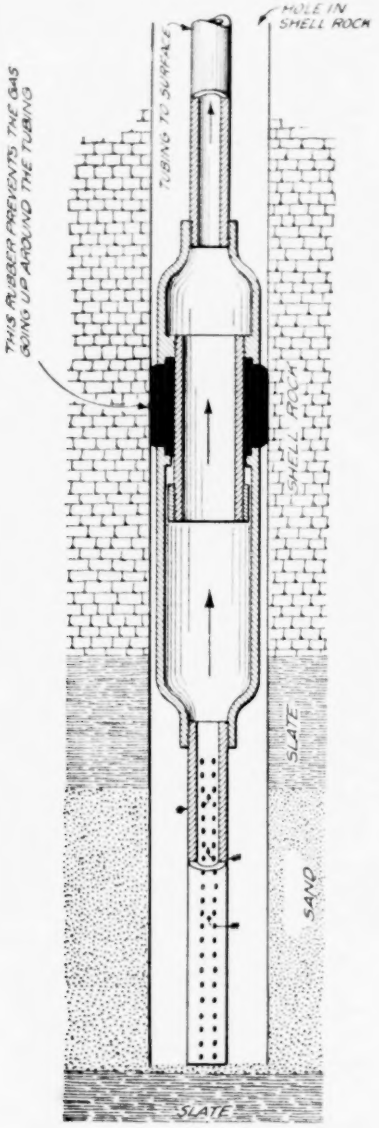
Offered at p. 870 of Printed Record by Witness Wyer.

How Natural Gas is Severed from the Soil, Brought under Control, and Delivered Into a Fixed Closed Container.

HOW NATURAL GAS IS SEVERED F
AND DELIVERED INTO

FIRST STEP

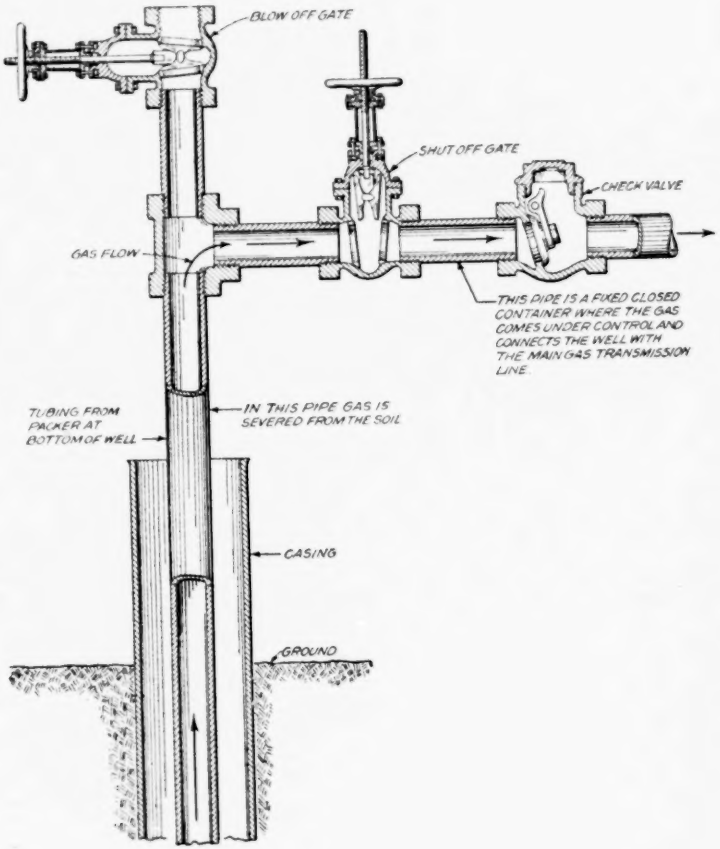
Well packer at bottom of well—usually about ½ mile below the earth's surface—where the gas is separated from the ground, is forced into the tubing, and then comes to the surface.



THE SOIL, BROUGHT UNDER CONTROL,
IXED CLOSED CONTAINER

FINAL STEP

Well fittings above ground where the gas from the packer below as it flows up through the tubing comes under control and is delivered into the well discharge line which is a fixed closed container.



This exhibit and its explanation show that the process of severing natural gas from the soil and of placing it in a closed container, requires only the provision of the necessary mechanical equipment for catching the gas as it is forced by the rock pressure out of the earth through the well or aperture, and the keeping of the pressure of the pipe or container into which it flows, lower than the rock pressure which is forcing the gas out of the well. This natural or rock pressure declines as the gas is removed from the natural reservoir. (Wyer, p. 873). It thus gradually becomes so low that it is insufficient to cause the gas to flow for any considerable distance in the direction of the place of its ultimate use. Sufficient pressure then must be restored to give the gas a tendency to flow, so that it will reach its destination. This pressure is artificially supplied by natural gas compressors, the function of which is to re-compress the gas and thus supplement the declining natural rock pressure. These compressors have been in use for more than thirty years. Pennsylvania Exhibit No. 38, record, p. 1580, which is inserted next following this page, is a diagram of a natural gas compressor, prepared by the witness, Wyer, and explained by the witness on page 874 of the record.

PENNSYLVANIA EXHIBIT 38.

Offered at p. 874 of Printed Record by Witness Wyer.

Diagram Showing Action of Natural Gas Compressors as Used For Compressing Gas Through the Transmission Lines.

The action of a gas compressor is illustrated in the diagram below, where A is a reciprocating piston working in cylinder B. C and D are inlet valves to the cylinder, and E and F are discharge valves to the cylinder, drawn to their seats by the springs K K. All the gas wells are connected to the intake side of a compressor so that the pressure from the wells drives the gas to the compressor. As the piston moves in the direction of the arrow the inlet valve C is opened by the higher pressure of the gas in the intake G, and the gas then rushes from G through C into the space H. As the piston moves toward the end of its stroke the gas in space I is forced out into the discharge line J through the discharge valve E. When the piston A reaches the end of its stroke the spring K closes the valve C and on its return stroke the piston A compresses the gas in H until the pressure is great enough to open the discharge valve F and thereby drive the gas out into the discharge line J.

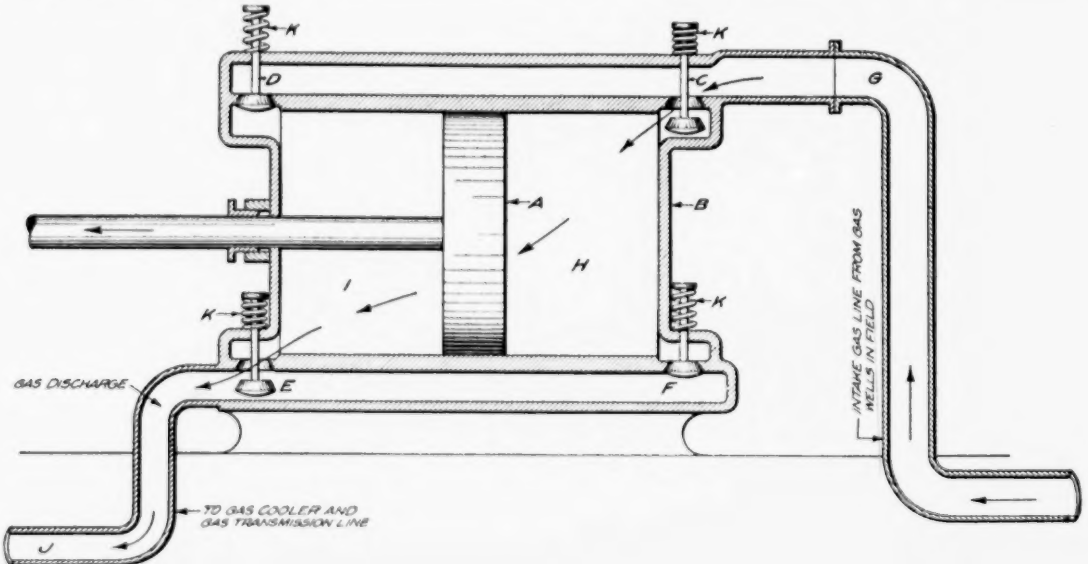


DIAGRAM SHOWING ACTION OF NATURAL GAS COMPRESSOR AS USED FOR COMPRESSING GAS FOR TRANSMISSION THROUGH LINES

This exhibit and explanation show simply a machine by which the gas is taken in through valves on the low pressure side of the machine, compressed by pistons and sent out at a higher pressure through a valve on the opposite side of the machine. It would be impracticable to market natural gas at any considerable distance from the point of its production without the use of a compressing device. (Record, p. 875.) Some of these compressor stations located in West Virginia have thousands of horsepower which impart the supplemental energy which transmits the gas through West Virginia and thence throughout all the journey to the house fixtures of consumers located in municipalities in Pennsylvania and Ohio. In some instances, for instance, where West Virginia gas is transmitted through West Virginia and Ohio to cities in Indiana, additional compressing stations are necessary to impart the required pressure for the ultimate delivery.

The gas producing territory involved in this action lies within the area known as the Appalachian field, which, in a general sense, includes Pennsylvania, Ohio, West Virginia, Kentucky and Indiana. (Record, page 60). It was first discovered in this field, not by persons searching for it, but by persons drilling for oil, who, upon puncturing the earth, found a deposit of gas instead of the oil for which they were drilling. It was considered a hindrance and annoyance, as well as a source of considerable danger to oil operators, when they found it. Their practice was to conduct it through pipes to a safe distance and there ignite it and permit it to burn in the open.

Later, it was used by persons near the wells, they burning it in ·le burners. The supply was thought to be inexhaustible and the gas was grossly wasted. However, it soon became apparent that the supply of gas was being depleted, and meters were installed, over the consumers' protest; also better types of burners were invented, which effected a saving of gas and increased its efficiency. (Quay, pages 18, 19.)

GAS DEVELOPMENT IN WEST VIRGINIA.

The production of gas in the State of West Virginia originated in substantially the same way; that is, as a by-product accidentally discovered in the search for oil. The South Penn Oil Company was the pioneer operator for oil in West Virginia. Many of the wells which it drilled produced gas instead of oil. It endeavored to find a market for this gas in West Virginia, and its owners formed a corporation, called The Flaggy Meadow Gas Company, to take this gas and supply it to the then small West Virginia towns. Later, the same owners, still having a large surplus of gas, formed another corporation, known as the Mountain State Gas Company, for the purpose of carrying the gas to the river towns, such as Sistersville and Parkersburg. The amount of gas produced by these companies was, however, so large and was accumulating so fast, that these outlets for it were entirely insufficient, and hence further provision had to be made for a more distant market. In the meantime, before these outside markets were established, billions of cubic feet of gas were blown into the air and wasted because there was no

market for the gas and no facilities for reaching a market. (Record, p. 331). The logical places for such market were the towns in the States of Ohio and Pennsylvania which were closest to this source of production. In 1898 The Hope Natural Gas Company, now one of the largest producers and transporters of natural gas, was formed for the purpose of taking over the gas wells and gas territory of the South Penn Oil Company and marketing that gas through a pipe line to be laid from West Virginia fields to cities in Ohio.

Later, The Reserve Gas Company was formed for the purpose of producing gas and transporting it to the Ohio river, from whence it would be taken through two lines to Sugar Grove, Ohio, from which place it could be distributed to its ultimate destination, in the State of Ohio. The Connecting Gas Company was formed by the same interests who formed the Reserve Gas Company, solely for the purpose of transporting this gas from the Ohio river to Sugar Grove, Fairfield County, Ohio. This entire plan was carried out and has been for years in operation.

The formation of these companies is described in the testimony of the witness, Corrin,, record, pages 322, 323, 324, 325. They were formed for the purpose of making it possible to save and utilize the natural gas which would otherwise have been wasted because there was no demand for it in the vicinity of its production.

> "Every town that they could get in West Virginia was being supplied. They were supplying all the industries that there were to be supplied, and these wells were being drilled continuously in a search

for oil and were either being shut in or being abandoned, and that was the only way they had to dispose of this gas—was to look for some market outside of the state, which they did." Corrin, page 331.

After these lines were established and the value of the gas for light, heat and fuel, as well as the opportunity to place it at the disposal of a consumer who desired it, was assured, wells were drilled for the sole purpose of discovering and producing gas, instead of, as originally, being drilled merely for the production of oil, and incidentally producing gas.

After referring to the pioneer operations in West Virginia by outside capital, above referred to, the witness, on page 333 of the record, states:

> "They certainly were the pioneers, there is no question about it; and if it hadn't been for these companies, or companies similar to them, with a good backing of capital, why, I don't think that West Virginia would have been advanced to where it is today. In fact, I think they are responsible for the advancement of West Virginia twenty-five years. As a sample of that, when I first started to work for the South Penn Oil Company, over 90 per cent. of the land, the titles to which were examined, had liens of some kind against it. Today there isn't 1 per cent. in the oil and gas counties."

Many other companies secured gas territory in West Virginia and constructed great pipe line systems to market gas in Ohio, as hereinafter described.

The supply of gas was adequate, both for consumption inside the State of West Virginia and for transportation to other states, until during the time of the world war in

1917 and 1918. (Record, pages 331 and 334). By reason of the vast demand for gas for industrial consumption, which occurred as a result of the war, and which drew upon the lines of the gas companies during the summer as heavily as, or more heavily than during the winter, the gas companies had no opportunity to rest their wells or to accumulate a surplus of gas, as they had been in the habit of doing, in accord with good practice, under normal conditions. The federal government, through the fuel administration, gave orders to the gas companies to supply essential industrial plants with all the gas possible. Wells were drilled and turned into lines which, under normal conditions, would have been held in reserve, to assure a future supply. (Record, pages 333, 334). The supply of gas has never been adequate for all purposes, during the periods of maximum demand, since that time.

The relation of the gas producing companies to the land from which the gas is produced, and the method of establishing that relation, is usually, substantially, as follows: The gas company determines that certain land is worthy of consideration as possible gas producing land. Men from the leasing department of the company are sent to the owners of the land to secure, if possible, leases upon these lands, granting to the gas company the right to enter upon the land and drill a well for oil or gas, and reduce the same to possession, if discovered. The consideration for this lease is usually the payment of a certain sum, ordinarily one dollar per acre per year from a date designated in the lease, until such time as a well is

completed upon the lands. If a well producing either oil or gas is found upon the lands, then the payment of said amount ceases, and the gas company pays a royalty upon the production from the premises instead. This royalty is generally one-eighth of the oil produced, or a given amount, usually two or three hundred dollars per year, for a producing gas well. It is sound business policy, of course, for a company which is about to hazard its money in the drilling of a well, to secure leases upon a considerable amount of contiguous territory, so that a well, if found, would be protected from drainage, by a competitor, through other lands not within the control of the company. (Record, p. 23, Quay.)

The amount of money spent by the producing gas companies annually, in payment of bonuses at the time when these leases are originally secured, and in payment of rentals during the time when the leases are held for the purpose of protecting wells and providing a sufficient reserve acreage for the future production of the company, and in payment of the expense of drilling wells to test this territory, is a vast amount for each of the larger companies, amounting to many millions of dollars. (Quay, 24,25). If gas is discovered upon leased lands, then it becomes necessary to secure rights of way across the lands intervening between the well and the point at which the gas will be consumed. This is ordinarily done by agreement with the owners of that land upon the payment of an agreed sum. (Quay, 24).

A diagram illustrating all of the typical processes of gas production, transportation, distribution and consumption was introduced in evidence by the witness Wyer, page 871 of the printed record as Pennsylvania Exhibit 37. (Record, p. 1579). We insert a copy of that exhibit herein, to avoid an extended discussion of this process.

PENNSYLVANIA EXHIBIT 37.

Offered at p. 871 of Printed Record by Witness Wyer.

How Natural Gas from West Virginia is Transmitted to the Consumer in Another State.

It is not feasible commercially to store natural gas in tanks or holders, but it must be transmitted to the points of consumption where the consumers use it and be held back in the wells during the warm weather when there is a less demand for it. (Sullivan, 202).

A NATURAL GAS PLANT IS DESIGNED AND BUILT FOR SPECIFIC PURPOSE.

Sullivan (The Hope Natural Gas Company), Record, pp. 204 and 214:

> "Every natural gas plant is designed and built for some specific purpose, with a view to taking gas from some certain field, transporting it and delivering it to some certain market; and the installation of the compressing stations, the size of the lines, the size of the compressing stations, their location—all of those things are carefully studied out and planned before the plant is built. The compressing stations are installed where it may be considered is the most favorable location to take the gas from certain territory—or from wells located in certain territory, and deliver it into the lines leading to the market. This is all definitely planned and fixed with most every gas company when the project of installing it is being considered and thought out. It is built for a certain specific purpose. Of course, later on, depending on conditions, additions and changes may be made from the original plan, but it is originally planned for a certain definite purpose."

CASE INVOLVES FOUR INTER-STATE OPERATING SYSTEMS.

The record discloses that there are four large and distinct gas producing, transporting and distributing systems in this case. The names of the principal separate companies composing each system are as follows:

1. The Manufacturers Light and Heat Company, located in the northern part of West Virginia, the southeastern part of Ohio and the southwestern part of Pennsylvania.

2. West of the first mentioned system is that composed of The Hope Natural Gas Company and The East Ohio Gas Company. The River Gas Company, an interstate company, is a part of this system.

3. West of the second mentioned system is that composed of The Reserve Gas Company, The Connecting Gas Company, The Union Natural Gas Corporation and The Northwestern Ohio Natural Gas Company.

4. West of the third mentioned system is that composed of The United Fuel Gas Company, operating in the middle and western part of West Virginia, eastern Kentucky and southern Ohio. The Ohio Fuel Supply Company, The Columbia Gas and Electric Company and The Union Gas and Electric Company. The Point Pleasant Gas Company, an interstate company, owned by The Ohio Fuel Supply Company, is also part of this system.

A brief description of the above mentioned companies, with copies of exhibit maps, showing their position and function in each of said four systems, is as follows:

THE MANUFACTURERS LIGHT & HEAT COMPANY

The Manufacturers Light & Heat Company has a system of gas pipe lines covering the western portion of the State of Pennsylvania and northern portion of the State of West Virginia, and a number of towns along the eastern boundary of the State of Ohio. A detailed statement of the affairs of this company is given in the testimony of Mr. Quay, the general manager of the company. His testimony appears in the record, beginning on page 4. This company has under lease in West Virginia approximately 170,000 acres, in Pennsylvania approximately 180,000 acres, and in Ohio approximately 15,000 acres. (Record, page 5). It has 457 gas wells in West Virginia, 700 in Pennsylvania and 10 in Ohio (Record, page 6). It produced in the State of West Virginia in the year 1919 approximately 5,700,000,000 cubic feet of gas, in Pennsylvania approximately 6,500,000,000 cubic feet, and in Ohio approximately 300,000,000 cubic feet. It purchased in the State of West Virginia, in the year 1919, approximately 13,500,000,000 cubic feet of gas, in Pennsylvania approximately 900,000,000 cubic feet, in Ohio approximately 100,000,000 cubic feet. The major portion of the gas purchased by this company was secured from The Hope Natural Gas Company, a large producer in the State of West Virginia, which company is hereinafter discussed in detail. (Record, p. 7).

This company has in West Virginia approximately 11,000 consumers, in Pennsylvania approximately 75,000 and in Ohio approximately 26,000. A map showing the lines of this company was introduced in evidence, at page 876 of the record, by the witness Wyer, being Pennsylvania Exhibit 39e, appearing in the record at page 1585, is here inserted.

MAP OF
MAIN LINES
OF
THE MANUFACTURERS
LIGHT AND HEAT CO.
IN
OHIO, PENNSYLVANIA
AND
WEST VIRGINIA
SCALE 5 MILES

This map shows very frequent crossings and re-crossings of the state lines between West Virginia and Pennsylvania, and West Virginia and Ohio. It shows that the lines were constructed in complete disregard of state lines, and solely with reference to the convenience of the company and of the communities which it had an opportunity to supply with gas.

The portion of the testimony of witness Quay upon this point is here inserted:

> "The gas passes from the State of West Virginia into the State of Pennsylvania, passes from the State of Pennsylvania back into West Virginia, passes from the State of West Virginia into Ohio, and passes from the State of Ohio back into West Virginia." (Record, page 18).
>
> "I believe that there are forty-three different points at which our lines cross from West Virginia into Ohio, from West Virginia into Pennsylvania, and vice versa." (Record, page 27).

The largest towns in the so-called Panhandle District of West Virginia, namely, Chester, New Cumberland, Weirton, Holliday's Cove, Follansbee and Wellsburg, are many times supplied entirely with gas coming from Pennsylvania or Ohio. (Rec., p. 53.)

The lines of this system constitute

> "one huge net work spreading over parts of three states—Ohio, Pennsylvania and West Virginia." (Record, Wyer, p. 887).

THE HOPE NATURAL GAS COMPANY.

The Hope Natural Gas Company was formed in 1898 to take over the gas wells and gas territory of the South Penn Oil Company. (Corrin, p. 332). It was the West Virginia end of a pipe line system all built at one time and for one purpose, the Ohio end being built by The East Ohio Gas Company to supply Canton, Massillon, Akron and other towns in Ohio. The lines of the Hope Company as they exist at the present time are shown by Pennsylvania Exhibit 39b, offered at page 876 of the printed record by witness Wyer, and appearing at page 1582 of the printed record, a copy of which exhibit we here insert.

PENNSYLVANIA EXHIBIT 39 B.

Offered at p. 876 of Printed Record by Witness Wyer.

West Virginia
State Line

This map shows pipe lines of various dimensions, from two inches in diameter to twenty inches in diameter, extending over numerous counties in West Virginia. It shows also numerous compressing stations in which the pressure necessary to cause the gas to flow in the desired direction is restored to the gas. This map shows along the northern and western boundaries of the State of West Virginia points at which the gas is delivered out of the lines of the Hope Company to consumers and other companies in Pennsylvania and Ohio. At Clarington, West Virginia, three lines of the Hope Company, being 20, 20 and 18 inches in diameter, respectively, are shown, which deliver gas from the Hastings compressor station to The East Ohio Gas Company lines, which transport the same into the State of Ohio. A similar situation is shown farther north and east along the river, where, at a point called Round Bottom, two other lines, 10 and 18 inches in diameter, respectively, deliver gas from the Hastings compressor station to The East Ohio Gas Company for transportation into Ohio. Along the southern boundary of Pennsylvania and the northern boundary of West Virginia, other points are shown at which the Hope Company delivers gas to other companies for consumption in the State of Pennsylvania.

The largest sales of gas made by the Hope Company for consumption in the State of Ohio are made to The East Ohio Gas Company. The contract under which these sales are made at present is Pennsylvania Exhibit No. 19, offered by witness Sullivan at page 225 of the

printed record, and reproduced in full at page 1544 of the printed record. It supersedes the oral contract made in the formation of both companies in 1898 and recites in substance that the Hope Company is the owner of gas wells, gas rights and leases for gas purposes in the State of West Virginia, and is the owner of pipe lines extending from its natural gas territory in the State of West Virginia to boundary of the State of Ohio on the Ohio river, and that The East Ohio Gas Company holds franchises and distributing systems for the distribution of natural gas in the city of Cleveland and other cities, villages and towns in the State of Ohio, and is the owner of three trunk lines extending from the boundary of the State of Ohio on the Ohio river through the State of Ohio to the city of Cleveland and connecting with distributing systems owned by the said Ohio company in the city of Cleveland and in various cities, villages and towns in the State of Ohio. It further shows the undertaking and agreement of the Hope Company to sell and deliver to The East Ohio Company and of the East Ohio Company to purchase and take from the Hope Company, all the natural gas requisite for the supply of the domestic consumers of The East Ohio Gas Company, and also certain amounts of gas to be supplied upon special terms and with the consent of the Hope Company for manufacturing purposes. The contract regulates the pressure at which the gas is to be delivered and recites in the seventh division thereof, at page 1546 of the record, that the contract shall continue unless previously terminated by mutual consent of the parties so long as the Hope Company produces gas in

marketable quantities in West Virginia. **The seventh division of the contract further provides for preferential service for the domestic consumers on the lines of the Hope Company in West Virginia, and for the pro rating of all of the rest of the supply of gas of the Hope Company between the domestic consumers of The East Ohio Company and those of the Peoples Natural Gas Company.** The contract contains many provisions covering the details of so large and important a transaction, but none of which, we believe, is material in this litigation.

THE RIVER GAS COMPANY.

The River Gas Company obtains its gas supply for distribution from West Virginia. It supplies towns in both Ohio and West Virginia, namely, Marietta, Matamoras, Newport, Belpre, Stockport, Chester Hill, Amesville, Painesville, Gravel Bank, Reno and Fly.

> "Part of the Hope's allotment of gas going through the lines of The Connecting Gas Company was taken by The Hope Natural Gas Company and sold to the River Company." (Record, page 321).

At times the gas from its lines in Ohio passes back into West Virginia through the lines of The Hope Natural Gas Company. The testimony of the witness Corrin upon this point appears at page 205 of the record:

> "It is true that gas at times goes from the lines of the River Gas Company back into the State of West Virginia through the lines of the Hope Company. I know this, because there is a meter on the lines and we pay the River Gas Company for the gas that goes through."

The map of the lines of the Hope Company, Pennsylvania Exhibit 39b, which we have hereinbefore inserted at page —— in this brief, shows also the lines of The River Gas Company.

THE EAST OHIO GAS COMPANY.

The East Ohio Gas Company, the company entitled to receive the gas from the Hope Company under the contract herein last discussed, has an extensive system of gas transmission and distribution lines in the State of Ohio, which supply gas to many cities, among them Youngstown, Alliance, Canton, Massillon, Akron and Cleveland. It owns and operates five large pipe lines, being 20, 18, 18, 10 and 18 inches in diameter, respectively, the longest of which is 134 miles in length, and the shortest of which is 100 miles in length, which transport gas, three from Clarington and two from Round Bottom on the Ohio river, at which points the gas is received from The Hope Company, to the cities hereinbefore named and numerous other municipalities in Ohio. (Record, 565, 567, 582; Pennsylvania Exhibit 47, record 1599). The first of these lines was laid from Round Bottom on the Ohio River to the city of Akron, Ohio, in the year 1898. (Record, 590). All of its main lines, their dimensions and directions and communities supplied by them are shown upon a map, which was offered in evidence at page 973 of the record, by the witness Wyer, as Pennsylvania Exhibit 47, and which appears at page 1599 of the record, a copy of which map we here insert.

TRUNK LINE VALVE STATIONS
GAS COMPRESSING STATIONS

The testimony of the witness Daly, at page 582 of the printed record, shows conclusively how The East Ohio Gas Company and The Hope Natural Gas Company are dependent upon each other for their supply of gas and market, respectively. We quote here a part of Mr. Daly's testimony:

> "Q. You may state whether or not it is a fact that when The East Ohio Gas Company would construct its lines 1, 2, 3, 4 and 5 from the river northwardly, as you have described, The Hope Natural Gas Company, on the West Virginia side of the river, would construct a line or lines from its system, perhaps Hastings Station, northwardly to the river, and connect with your lines, having with your company a unity of purpose of transporting West Virginia gas into Ohio for distribution to your consumers."

p. 538:

> "A. The investment in each instance was made after the East Ohio Company had received the assurance of The Hope Natural Gas Company that it had an adequate supply of gas and would lay additional transportation lines of sufficient size to transport the quantity of gas desired, up to the full capacity of the pipe lines that the East Ohio Company constructed."

The testimony of Mr. Daly at page 570, with reference to the source of supply of the gas distributed by The East Ohio Gas Company here follows:

> "A. No, it had no territory in the State of Ohio. The East Ohio Gas Company had no territory in the State of Ohio until after 1903.
>
> "Q. Prior to 1903, where did it procure its gas?
>
> "A. Purchased it under contract from The Hope Natural Gas Company. That contract was entered into prior to the construction of the No. 1 ten-inch line running from Pipe Creek to Akron.

"Q. Then since the inception of The East Ohio Gas Company in 1898, it has been procuring gas delivered to it from West Virginia by The Hope Natural Gas Company?

"A. Yes, sir; it didn't start any development for itself until 1906 or 1907."

Page 569:

"Q. What are the sources of your gas supply?

"A. We purchase nearly all of our gas— approximately 80 per cent. of it—from The Hope Natural Gas Company."

"The Hope Natural Gas Company was organized for the purpose of supplying The East Ohio Gas Company with gas."—Tonkin, p. 425.

The amounts of gas produced in West Virginia and purchased by The East Ohio Gas Company for the purpose of supplying Ohio communities, and the extent to which those Ohio communities are dependent upon the West Virginia gas for their supply, are shown by the testimony of Martin B. Daly, beginning record, page 563, and the figures especially appear at pages 569 and 570. They show that in 1918 the East Ohio Company purchased from the Hope Company 36,069,354,000 feet; produced in Ohio 8,317,075,000 feet; purchased in Ohio 4,290,920,000 feet of gas. The testimony of the same witness at page 573 shows the towns served by this company as of December 31st, 1919, and the number of consumers in each town. Thirty-four principal towns are shown to be served, the largest being Cleveland, having 208,294 consumers, and the smallest New Middletown, with 65 consumers. On pages 575 and 576 appears a

table prepared by the same witness showing the meter connections for the United States government, the state, subdivisions of the state, such as municipalities, counties and school boards, and churches, parsonages, and charitable institutions. The tables appearing at page 580 of the record, prepared by the witness Daly, show that substantially all of the gas distributed by The East Ohio Gas Company is distributed to domestic consumers. This company is active in its efforts to procure additional gas territory and to increase the production from territory already acquired. (Record, page 585).

THE RESERVE GAS COMPANY.

A map of the main lines of The Reserve Gas Company in West Virginia, offered at page 877 of the printed record by witness Wyer as Penn. Exhibit 39c, and appearing in the record at page 1583, is here inserted.

PENNSYLVANIA EXHIBIT 39 C.

OF
RESERVE GAS COMPANY
IN
WEST VIRGINIA
SCALE OF MILES

This map shows that practically all of the production of this company is in the counties of Harrison and Lewis in West Virginia, and that the gas is there compressed and sent through three large lines, being 12, 12 and 16 inches in diameter, which are, before reaching the river, reduced to two 16-inch lines, to a point on the Ohio river where the gas is delivered to The Connecting Gas Company. Detailed information with reference to the operations of The Reserve Gas Company is given by the witness Corrin, the manager of the company, at page 317ff of the record. This company had, in January, 1920, approximately 750 wells and approximately 56,000 acres of territory, and approximately 525 miles of pipe line. (Record, 317). The lines of the company extend to the state line between the states of West Virginia and Ohio at Boaz, south of Marietta, Ohio. The Reserve Company, during the year 1919, produced 20,911,000,000 feet of gas and purchased during the same period 1,267,000,000. (Record, pp. 319, 320).

The gas which it delivers at Boaz, Ohio, is there received by The Connecting Gas Company, which is merely a transporting company, transporting gas produced by The Reserve Gas Company from the state line between Ohio and West Virginia to a point in Ohio called Sugar Grove, through two 16-inch pipe lines, approximately 60 miles long. This gas, transported to Sugar Grove, Ohio, is there apportioned between two companies, one being The Union Natural Gas Corporation, which through its subsidiary companies supplies many municipalities in the central and northern part of Ohio with gas. (Record, p. 321).

The other line of the Connecting Company carries gas from the West Virginia line to Wheeler Station at Sugar Grove, Ohio, where it is delivered to The Northwestern Ohio Natural Gas Company for transportation to Toledo and other cities in northwestern Ohio. (Rec., 323).

The contract between The Reserve Natural Gas Company, The Union Natural Gas Company, The Hope Natural Gas Company, The Connecting Gas Company and T. N. Barnsdall, dated April 11th, 1913, offered in the printed record at page 225 by the witness Sullivan and appearing in the printed record at page 1535 as Pennsylvania Exhibit No. 18, supercedes prior contracts made at the time of the building of the plants in 1902. This contract on its face shows that it was made for the purpose of purchasing gas from the Reserve Company and having it transported to various points in Ohio for the purpose of supplying gas to The Union Natural Gas Corporation for the communities in Ohio which it serves and of supplying gas to The Northwestern Ohio Natural Gas Company with gas for Toledo and other Ohio communities. **As in all other contracts made and in evidence in this case pursuant to which gas is produced in West Virginia and transported to consumers in Ohio communities, provision is made for preferential service for the domestic consumers of the respective producing companies in West Virginia.** The contract is long and detailed, but we believe that the statements here made concerning it show all of it that is material to this litigation.

THE UNION NATURAL GAS CORPORATION.

The Union Natural Gas Corporation was organized under the laws of the State of Delaware in 1902, and proceeded forthwith in the same year to acquire 50 per cent., less one share, of the capital stock of The Reserve Gas Company, a West Virginia corporation, and of The Connecting Gas Company, an Ohio corporation, together with T. N. Barnsdall's interests and right to a certain contract executed in 1902 between himself, The Hope Natural Gas Company and The Reserve Natural Gas Company. (Record, p. 748). The Union Natural Gas Corporation, which receives gas from The Reserve Gas Company through the lines of The Connecting Gas Company at Sugar Grove, Fairfield county, Ohio, owns and holds the stock of thirteen distributing companies in the State of Ohio. (Record, pages 748-749.) The largest of these is The Logan Natural Gas and Fuel Company, acquired in 1902, which owns all leases, gas wells, does all the developing and owns all the pipe lines or transmission lines, with two unimportant exceptions, that are identified with and used in connection with the supplying of gas to said distributing companies. (Record, pages 749 and 771). A map designated by the witness Whitcomb as a "Field and Main Line Map" of the subsidiary companies of The Union Natural Gas Corporation in Ohio and Indiana was offered at page 750 of the printed record by the witness, as Ohio Exhibit No. 10, and appears at page 1708 of the printed record. The map is here next inserted.

e lines of The Connecting Company also are shown
is map by the two broken parallel lines lying close
her and extending from the Ohio River northwest
gar Grove in Fairfield county, Ohio.

is map shows that service is rendered by these
rous Ohio companies in many counties and munici-
ies in the northern and western parts of the State of

e natural gas transported through The Logan Nat-
Gas and Fuel Company's 18-inch line westward from
r Grove to The Jantha Light and Heat Company in
, to all Indiana consumers, and to Dayton, Ohio,
s "all from West Virginia." (Record, page 753).
ontracts on the line from Sugar Grove to Dayton
Indiana contemplate and provide for the delivery of
Virginia gas only. The Sugar Grove compressing
n was installed for the distribution or the compres-
of gas produced both in Ohio and in West Virginia;
e time of the laying of the 18-inch Sugar Grove-
on line, in 1913, the station was very materially in-
ed as to capacity in order to take care of the in-
ed volume of gas from West Virginia, to drive it on
ayton and to points in Indiana. There is no other
ressing station on that line, a distance of approxi-
ly 182 miles. (Whitcomb, p. 782).

ese affiliated companies not only buy large quanti-
f gas from The Reserve Company, at Sugar Grove,
but also produce a considerable quantity of gas
n the State of Ohio, or purchase such gas from pro-
's. A tabulation of the cities and towns in Ohio and

Indiana served by these affiliated companies, appears on pages 758, 760 and 761 of the printed record. They show a total of more than 130,000 consumers, representing a population of more than 500,000 people. Tables on pages 761, 762 and 763 show that these companies furnish a large amount of gas to public institutions operated by the State or its subdivisions.

The testimony of the witness Whitcomb at page 773 of the record shows a delivery of more than 9,000,000,000 cubic feet of gas by the Reserve Company to the Logan Company in the year 1919, under the provisions of the contract between the Reserve Company and the Union Company and others hereinbefore discussed, being Pennsylvania Exhibit No. 18. The testimony of the witness Whitcomb at page 768 shows that all of the communities lying upon the line which appears upon the map as running from Sugar Grove, Ohio, west to Elwood, Indiana, are supplied and have a right to be supplied only with West Virginia gas, purchased from the Reserve Company through the lines of the Connecting Company at Sugar Grove, Ohio.

A summary of the investment for delivery of gas from West Virginia to Ohio and Indiana consumers shows a total of $6,521,254.08. (Record, page 786). The total number of consumers supplied with West Virginia gas by The Logan Natural Gas and Fuel Company, directly and indirectly, represents a population of 364,949, and 78,994 consumers. (Record, p. 787).

THE NORTHWESTERN OHIO NATURAL GAS COMPANY.

The Northwestern Ohio Natural Gas Company has already been discussed in connection with the discussion of The Hope Natural Gas Company and will hereinafter be referred to in connection with The Ohio Fuel Supply Company. The main or transmission lines of this company appear on the map of The Ohio Fuel Supply Company's lines. Pennsylvania Exhibit 49, record, p. 1601, which exhibit is to be evidence of that fact the same as if separately offered. (Record, p. 717). Its gas supply comes from The Hope Natural Gas Company in West Virginia, through the lines of The Connecting Gas Company, by virtue of an arrangement before mentioned with The Reserve Gas Company. (Record, p. 1509, 1535). As shown on said map, the gas is transported through two 10-inch lines from Horn's Mills, Fairfield county, Ohio, to the cities of North Baltimore, Bowling Green, Perrysburg, Maumee and Toledo, a total distance of about 160 miles. The gas distributed by this company comes exclusively from West Virginia, except for some small amounts of gas which this company procures from The Ohio Fuel Supply Company in emergency cases, where the Hope Company does not furnish a sufficient amount. (Record, pp. 718-19). This company has a production of its own from only six or seven wells.

Its consumers are all situated in the northwestern part of Ohio and are as follows:

City of Toledo	52,132
Maumee	489
North Baltimore	663
Perrysburg	595
Bowling Green	1,639

The population dependent upon this company for natural gas service is more than 250,000. (Record, p. 721). Its supply has been furnished almost exclusively for domestic use, less than 10 per cent. being furnished for industrial use. (Record, 722).

THE UNITED FUEL GAS COMPANY.

The United Fuel Gas Company, a large producer and transporter of gas in West Virginia, is shown by a map which was offered at page 876 of the printed record by the witness Wyer as Pennsylvania Exhibit 39d, which map appears at page 1584 of the printed record. A copy of said map is here inserted.

OF
THE UNITED FUEL GAS CO.
IN
WEST VIRGINIA, KENTUCKY AND OHIO
As of JAN. 1, 1919
SCALE - MILES

It shows that this company transports gas from its northern field in West Virginia to Ravenswood on the Ohio River, and there delivers it to The Ohio Fuel Supply Company, by which company it is transported farther into Ohio. It shows further that gas is transported from the Clendenin field to various points upon the Ohio River, crossing the river at several places, one of which is in the vicinity of Portsmouth, Ohio. It further shows that gas is transported from the Kermit field, which lies partly in West Virginia and partly in Kentucky through a line which crosses the state line between West Virginia and Kentucky at several places, and discharges into the lines already described which carry the gas into the State of Ohio near Portsmouth, Ohio. This same map shows lines of The Columbia Gas and Electric Company, the company which supplies the City of Cincinnati, Ohio, extending through the States of Kentucky and West Virginia to Ball's Gap, West Virginia, where gas is purchased from The United Fuel Gas Company. A full description of this system appears in the testimony of the witness Wallace, the general manager of the United Fuel Gas Company. At page 361 of the printed record the testimony of Mr. Wallace shows that this company has 626 wells in West Virginia and 47 wells in Kentucky. The utter disregard of state lines, with which this company's lines were established, crossing and re-crossing the state lines between Ohio, West Virginia, and Kentucky, to supply communities lying in any of these states which could be conveniently supplied by this company, is so significant of the confidence which the business inter-

ests of the country have reposed in the frequent statemens of this court that, with respect to commercial intercourse, state lines are non-existent, that we quote verbatim the testimony of this witness, as it appears on pages 361, 362, 363, 364 and 365 of the printed record:

"A. Our main transmission line, leading from the Roane county field, beginning at Roxalana, in Roane county, West Virginia, extending to Portsmouth, Ohio, consisting of 10-inch, 14-inch and 16-inch pipe, approximately 125 miles in length. This line is known as our line "A." We also have—

Q. Just a moment, before you get to another line. That line crosses the Big Sandy river, does it not, at Kenova?

A. It does.

Q. And runs through Kentucky, up to a point above Ashland, where it divides and crosses the river into Ohio, at some place above Chinnville, and continues on to Portsmouth, on the other side of—the other branch continues on to Portsmouth, on the other side, on the Kentucky side of the Ohio river; while the branch continues up to Wheelersburg, Sciotoville, New Boston, to Portsmouth on the opposite side, the Ohio side of the Ohio river? Is that the fact?

A. It is.

Q. And this is shown here on the map?

A. It is.

Q. Now, then, to what points is this line particularly designed to transport gas, up to what points? Or, transportation to what points is this line used for?

A. Coal Grove, Ohio, Ironton, Ohio, Wheelersburg, Ohio, Sciotoville, New Boston and Portsmouth, all in the State of Ohio.

Q. Now, what about those towns in Kentucky—that is, Catlettsburg and Ashland, and so on?

A. We have the main line on the opposite side of the river in Kentucky supplying Catlettsburg and

Ashland, Russell, Chinnville, in Greenup county, and Boyd county, Kentucky.

Q. What towns in West Virginia does this line supply?

A. Kenova, Ceredo, Huntington, Barboursville, Ona, Culloden, Hurricane, Nitro, Poca, Sissonville, Clendenin, and other smaller places.

Q. The United Fuel Gas Company produces its gas then in the Roane county filed from its own gas territory, and through its own gas well, and transports this gas through this line supplying these various cities and towns in West Virginia, Ohio and Kentucky, as you have described. Now state whether it does that in its own name directly, as a producing, operating, transporting and supplying company?

A. It does supply all these various places in its own name and with its own gas, transported through these lines. Also, in addition to the river crossing previously spoken of, there is another one at Huntington, supplying Corryville, Bradrick, Proctorville and Chesapeake, in Lawrence county, Ohio.

Q. That crosses the Ohio river there at Huntington?

A. It does.

Q. And is there another crossing, or two crossings, near Kenova?

A. There are two crossings. One of them has been previously referred to, and there is another additional crossing at Chinnville, from Greenup county, Kentucky, into Lawrence county, Ohio.

Q. In addition to that Chinnville crossing, there are two lines that cross the Big Sandy at Kenova, and above, are there not?

A. Yes, sir, one line crossing near Huntington, that has been previously referred to—

Q. No, I mean right there, just above Kenova.

A. There is a line leading across the point at Coal Grove from Boyd county, Kentucky, into Lawrence county, Ohio; a line crossing near Chinnville from Greenup county, Kentucky, into Lawrence county,

Ohio; the line crossing again from Greenup county into Ohio near New Boston, Ohio.

Q. Now, at Portsmouth, Ohio, do you supply the town of Portsmouth direct, in the name of the United Fuel Gas Company, or do you supply some local company there that has the distributing system?

A. We supply the local company at Portsmouth, at the city limits, with gas.

Q. What is the name of that company, do you remember?

A. The Portsmouth Gas Company.

Q. And at all the other towns that you have described, the United Fuel Gas Company maintains the distributing systems itself?

A. It does.

Q. Now, take up the next important transmission line of the company?

A. We have an additional line practically paralelling line "A," previously spoken of, known as our line "S," leading from the Roane county field to Ball's Gap measuring station. This line is approximately 49 miles in length, consisting of 10-inch, 12-inch and 20-inch pipe; by far the larger proportion of it being 20-inch O. D. pipe.

Q. Now, this line supplies, as shown by your map, a number of towns in West Virginia?

A. It does.

Q. And at Ball's Gap, with what line does it connect there?

A. With the 18-inch line belonging to the Columbia Gas and Electric Company, of Cincinnati.

Q. And where did that carry the gas?

A. The 18-inch gas line carries the gas from our measuring station at Ball's Gap, at which point the gas is measured to the Columbia Gas and Electric Company, to their Kenova compressor station; from which point it is compressed and delivered to a 20-inch line to the City of Cincinnati.

Q. How many miles distant?

A. 123 miles from Kenova compressor station to

Cincinnati, and 29 miles from our measuring station to Kenova.

Q. You refer to the only Cincinnati—that is, in Ohio?

A. Cincinnati, Ohio.

Q. Now, what is your next important transmission line?

A. Our next line of importance is an 18-inch line leading from what is known as our Spencer gas field, located in Roane and Jackson counties, West Virginia, to and across the Ohio river, near Ravenswood, West Virginia, at which point we measure the gas before crossing the Ohio river, to the Ohio Fuel Supply Company, of Ohio.

Q. What is the size of that line?

A. The line is 18 inches, outside diameter.

Q. And you supply, do you, a number of towns in West Virginia, before you reach the river?

A. We do.

Q. And the Ohio Fuel Supply Company takes this gas, as I understand, at the low water mark on the Ohio side?

A. It does.

Q. And transports it where?

A. To various cities throughout Ohio.

Q. I beg your pardon.

A. To various cities and towns throughout the State of Ohio.

Q. What are the larger cities or towns? Just name one or two of them, as to get the general direction of it.

A. I am not very familiar with the towns.

Q. Well, if you don't know, it is all right. Now, give us your next line. What is this called on your system—one was "A" and the other was "S," and what is this called?

A. That is called line "E."

Q. Now, then, take your next line.

A. We have another line connecting with our line 'A,' near Kenova, West Virginia, running south to Inez, Kentucky, and ending at Kermit, West Vir-

ginia. This is a 10-inch line, and crosses the state line, or river, near Leach, Kentucky, and Kenova, West Virginia, leading from West Virginia into Boyd county, Kentucky; again crossing the line, the river, between Buchanan and Louisa, Kentucky, crossing the river from Lawrence county, Kentucky, into Wayne county, West Virginia; again crossing the line from Wayne county, West Virginia, near Ft. Gay; leading again into Lawrence county, Kentucky, from Wayne county, West Virginia. This line connects with an 8-inch line and a 6-inch line near Inez, Kentucky, and extends across the river, or state line, into Kermit, Mingo county, West Virginia; then entering our compressor station at Kermit, West Virginia, the gas is compressed and delivered back into our line, our 16-inch C. D. line, known as 'B. M. 22.'

Q. Extending from where?

A. From Kermit, West Virginia, this line B. M. 22 leads to Inez, Kentucky, from the compressor station in Kermit, West Virginia.

Q. Now, the gas that is obtained in this line, as you have described, comes, in part from the Roane county filed, from the Wayne county field, and the Kermit field, in West Virginia?

A. Also from the Kanawha field in Clay county.

Q. And the Clay county field and the Chapmanville field or district in West Virginia, and from the Kermit field in Martin county, Kentucky, does it not?

A. It does.

Q. And that gas is all mixed and compressed at your Kermit station in West Virginia.

A. It is.

Q. And sent up as far as Inez, across the river to Inez, in Kentucky?

A. It is.

Q. And there delivered to whom?

A. To the Central Kentucky Natural Gas Company, supplying towns and cities in Central Ken-

tucky and the Louisville Gas and Electric Company, of Louisville, Kentucky.

Q. The Louisville Company supplies gas to Louisville, Kentucky, does it, as well as to stations en route?

A. Its gas is practically all supplied to domestic consumers in the city of Louisville, Kentucky.

Q. How far is the gas transported by the Central Kentucky Company, the longest distance, from Inez?

A. The distance from Inez, Kentucky, to Frankford, Kentucky, is 142 miles.

Q. And how far is it from Inez to Louisville?

A. The distance from Inez, Kentucky, to Louisville, Kentucky—the length of this line is 180 miles.

Q. Now you supply from this same line, do you not, beginning at Kenova, towns on both sides of the river in West Virginia and Kentucky, at different points along the line?

A. We do.

Q. Then you have quite a number of such towns, as shown on the map here?

A. We have.

Q. Now give us your next large transmission line?

A. Our next large transportation line is known as line 'T,' 20 inch O. D. pipe; which line connects with, or has an extension known as our line 'M,' 16-inch O. D. pipe. These two lines were practically built to supply the Hope Natural Gas Company and the Pittsburgh and West Virginia Natural Gas Company, transporting the gas from the Kanawha county gas fields at Buff Lick, and also the gas from Rome and Kanawha counties, near Clendenin.

Q. Now, how long is that line?

A. The line 'M,' consisting of 10, 12 and 16-inch pipe—the larger proportion of it being 16-inch, is 19.2 miles in length.

Q. Now line 'T'?

A. Line 'T,' to which line 'M' connects, is 39.29 miles in length.

Q. About 60 miles then altogether.

A. Yes, sir.

Q. Now you say it sells gas there—it delivers gas to the Hope Natural Gas Company and the Pittsburgh & West Virginia Gas Company. At what points does it make that delivery?

A. At Cedarville Measuring Station, in Gilmer county, West Virginia.

Q. And where does the Hope Natural Gas Company take it?

A. At that point, Cedarville, West Virginia.

Q. And where does it take it?

A. I couldn't tell you just what points it travels. I believe it eventually leads to Hastings Station in Wetzel county.

Q. Do you know where the Pittsburgh & West Virginia Gas Company takes it?

A. The gas is measured to them at the same point in Gilmer county.

Q. To what point do they take it?

A. That gas is eventually delivered to Pittsburgh, Pennsylvania."

The testimony of the witness Wallace on page 367 shows that this company had, in the year 1919, 24,559 domestic consumers in the State of West Virginia, and 11,777 consumers in other states. It also had industrial consumers, both inside and outside the state.

THE OHIO FUEL SUPPLY COMPANY.

The Ohio Fuel Supply Company, a gas company operating entirely inside the State of Ohio, purchases West Virginia gas from The United Fuel Gas Company at Ravenswood, which appears upon the map of The United Fuel Gas Company hereinbefore discussed and inserted. The Ohio Fuel Supply Company has a net work of pipe

lines extending over the entire central portion of the State of Ohio, with some branches running farther in all directions. A map of the system of this company was offered at page 974 of the printed record by the witness Wyer as Pennsylvania Exhibit 49 and appears in the printed record at page 1601. A copy of this map is here inserted.

The Ohio Fuel Supply Company buys West Virginia gas from United Fuel Gas Company
The Ohio Fuel Supply Company furnishes only a part of total gas used in Cincinnati
Ohio

(The main line of The Northwestern Ohio Natural Gas Company, hereinbefore referred to, are also shown on this map, there being two lines extending from a point marked Hern's Mill, in a northwesterly direction to a point in Hancock county, a distance of 121 miles, and thence on to Toledo, a distance of 38 miles. Record, pages 717 and 718.)

The detailed testimony with reference to the system of The Ohio Fuel Supply Company was given by the witness Denning, the vice-president of The Ohio Fuel Supply Company, beginning at page 650 of the printed record.

The two general sources of gas supply of The Ohio Fuel Supply Company are gas produced in Ohio and that produced in West Virginia, the latter by reason of contract relations with The United Fuel Gas Company. (Record, page 656.) That part of its system which carries gas to Cincinnati is the 18-inch line beginning at Homer Station and extending in a southwesterly direction to Cincinnati, approximately 170 miles, built in 1905, and through which flows gas produced in Ohio and that produced in West Virginia. (Denning, 655, 656.) The 8-inch line of The Ohio Fuel Supply Company extending from Wheeler Station southeasterly to the Ohio river and connecting with the 18-inch line of The United Fuel Gas Company was for the express and only purpose of procuring and transporting gas from West Virginia. (Denning, page 665.) The lines of The Northwestern Ohio Natural Gas Company—its transmission system—were built and laid exclusively for the sole and only pur-

pose of obtaining West Virginia gas. (Denning, page 666.)

The witness Denning testified that this company, and all companies, within the knowledge of the witness, are constantly exercising efforts to discover not only new sources of supply, but additional gas within known fields. (Denning, pages 670, 671, 713.)

The gas supplied by The United Fuel Gas Company to The Ohio Fuel Supply Company on the Ohio side of the river is transported to the Wheeler station at Sugar Grove, Ohio, and is there mingled with gas produced in Ohio, and is all supplied to communities in Ohio except a portion which is transported back into West Virginia to supply the municipality of Point Pleasant, where the distributing company, The Point Pleasant Natural Gas Company, is owned by The Ohio Fuel Supply Company. The Ohio Fuel Supply Company supplies directly the 137 cities listed on pages 667, 668 of the record, and also wholesales gas and supplies indirectly, through its subsidiary companies, The Northwestern Ohio Natural Gas Company, and The Point Pleasant Natural Gas Company, the cities of Toledo, Bowling Green, North Baltimore, Maumee and Perrysburg, Ohio, and Point Pleasant, West Virginia. In addition, The Ohio Fuel Supply Company wholesales gas to utilities and municipalities for the purpose of supplying the same to Ohio consumers, as shown by the list on page 669 of the printed record. Altogether it is responsible for the natural gas supply of approximately one million people in Ohio. (Denning, 672.) The number of municipalities, churches, schools, state in-

stitutions and public buildings furnished gas during the year 1919 by this company were:

Municipalities	135
Churches	130
Schools	57
State Institutions	43
Public Buildings	170

The Ohio Fuel Supply Company has not taken on new towns in Ohio for several years past. [Denning, 691.] It requires all of the gas which it has been able to get from West Virginia, and more, to meet its present obligations. (Denning, 696.)

The United Fuel Gas Company has not been able, during cold weather, to furnish to The Ohio Fuel Supply Company the amount of gas which it has contracted to furnish to that company. (Denning, 696.)

THE UNION GAS AND ELECTRIC COMPANY.

The Union Gas and Electric Company of Cincinnati is the distributing company that supplies the city of Cincinnati with natural gas. It purchases this gas from The Columbia Gas and Electric Company and The Ohio Fuel Supply Company. (Record, page 454.)

The Columbia Gas and Electric Company owns 253 gas wells, 122 miles of field lines and a considerable acreage, operated and unoperated, in the State of West Virginia. In addition, it has a twenty mile pipe line connecting with the United Fuel Company's lines at Ball's Gap, West Virginia, through which it secures a further supply. All of the natural gas used in the city

of Cincinnati is West Virginia gas, except such portion of the gas furnished by The Ohio Fuel Supply Company as is produced in the State of Ohio, which is a very small proportion of the total gas supply of the city of Cincinnati, and even now in cold weather amounts to almost nothing. (Record, page 459.)

THE NATURAL GAS COMPANY OF WEST VIRGINIA.

The Natural Gas Company of West Virginia has gas wells, lines and territory in the States of Ohio, West Virginia and Pennsylvania. The detailed explanation of the affairs of this company appear in the testimony of the witness, Batchelor, at pages 741-747 of the record. A map showing the lines and wells of the southern division of this company was introduced in evidence at page 746 of the printed record by the witness Batchelor, and appears in the record at page 1566, being Pennsylvania Exhibit No. 26, which map is here inserted.

Producing Gas Wells
Distributing Plant

The gas production of this company is all in the States f Pennsylvania and Ohio. It has not and never has had ny gas production in West Virginia. (Batchelor, 743.) 'et for the most part, it markets its gas in the State of Vest Virginia to 14,137 consumers, including Wheeling nd Benwood, West Virginia. Of the gas supplied in Vest Virginia, 37 per cent. is consumed by industrial oncerns.

THERE IS NO MONOPOLY OF THE GAS SUPPLY AND INDUSTRY IN WEST VIRGINIA.

An examination of the evidence with reference to the ownership of the principal gas companies operating in the State of West Virginia, exporting gas from West Virginia shows that ownership to be as follows:

The Hope Natural Gas Company is owned and The Reserve Natural Gas Company is controlled by The Standard Oil Company of New Jersey. (Record, p. 188.) This company also owns The East Ohio Gas Company, operating in Ohio, and The Peoples Natural Gas Company in Pennsylvania. (Record, pp. 325, 424.)

The Pittsburgh and West Virginia Company, The Carnegie Natural Gas Company, The United Fuel Gas Company, The Manufacturers Light and Heat Company and The Fayette County Gas Company are in no way affiliated with the Standard Oil interests. (Record, p. 356.) The stock of The United Fuel Gas Company is owned by The Columbia Gas and Electric Company and The Ohio Fuel Supply Company. (Record, pp. 378-379.) The Carnegie Natural Gas Company is a subsidiary of The

United States Steel Corporation. (Record, p. 172.) The evidence shows that these gas companies have in fact engaged in and do engage in the keenest competition, formerly in finding markets for the gas when there was a surplus, and at the present time in securing gas to supply the already established markets. (Record, pp. 12-13.) Competitive bidding for leases is keen at the present time, even more keen than formerly. (Record, pp. 45, 46, 220, 371, 827.) There is a greater demand for even reasonably good territory now than there ever was before, and there is stronger competition to secure that territory than ever before. (Record, pp. 357, 371.)

There certainly has been strong competition, and we feel that competition is stronger today than it ever was. There is a greater demand for gas territory now than there ever has been, and a greater endeavor by these different gas companies to get it—even reasonably good territory. (Corrin, 357.)

The undisputed testimony, then, and the facts relative to the ownership of the principal gas companies operating in West Virginia, show that the claim of an unlawful combination between these companies is entirely without foundation. Several of the companies are large, and do have large affiliated companies in the other states, to which companies they supply this gas. However, a large combination of capital is required to lay gas lines for hundreds of miles and install the necessary equipment for causing the gas to flow through those lines, in addition to the capital required to hold a sufficient reserve acreage to protect these investments. The size of the

company which undertakes to carry on such an enterprise is hardly a fault, but rather a necessity.

It is not apparent how the rights of the plaintiff state and its citizens with respect to a continuation of the gas supply secured to them by interstate pipe lines and contracts, can be abridged, even if the charge that the gas territory of West Virginia is controlled by seven big companies were true. Even should the seven companies be combined into one, and the one be a sole and complete monopoly, the remedy to prevent an alleged hardship upon West Virginia consumers would not be by an act which expressly discriminates against the consumers residing out of West Virginia and against the plaintiff states as consumers of gas.

The defendant has not even correctly selected the seven large operating gas companies in West Virginia in that it has omitted to name the West Virginia Central Gas Company, one of the group of companies known as the Eastern Oil Company group supplying West Virginia gas to Cumberland and other Maryland cities. The seven companies which defendant has named do not have control of West Virginia gas resources nor are they combined in interest as defendant seeks to imply by grouping them together. There are between 40 and 50 gas utilities supplying West Virginia cities. (Stipulation, pp. 1365-1366.)

Many of the local utilities have a great spread of pipe lines, large areas of undrilled and undeveloped territory, and suitable compressing stations. (Robinson, 1374-1378.)

Operators other than the seven companies hold 43.2% of the developed acreage and 43.1% of the undeveloped acreage and in arriving at these percentages there are many operators whose holdings could not be ascertained. (Robinson, 1390-1391, Pennsylvania Exhibit 54.)

There are no contracts between the seven companies or any of them restricting development, territory, or production, or dividing territory. Such contracts as exist between some of the companies are for the purpose of buying and selling severed gas already produced, made at a time when one company had a surplus production and the other had requirements for the market beyond its then existing production. These contracts are in evidence. Many of them provide for deliveries of gas within West Virginia from which delivery points many West Virginia cities are served as well as cities outside of the state. For example, the contract for sale of gas by The Hope Natural Gas Company to the Manufacturers Light and Heat Company, (Record, p. 1712), provides for delivery at three points within the State of West Virginia from which delivery points the Manufactures Light and Heat Company takes its purchases of gas and transmits the gas to Wheeling, Moundsville, and many West Virginia cities and also its markets in Pennsylvania and Ohio.

There are no contracts whereby the Carnegie Natural Gas Company sells to or buys from any of the other seven companies, but it does sell gas to both the local company serving Morgantown and the local company serving Fairmont, West Virginia. (Record, p. .....)

There are no contracts whereby the Philadelphia Company group sells to or buys from the Standard Oil Company group or sells to or buys from the Manufacturers Light and Heat Company.

The Reserve Gas Company has no contracts with any of the other six, excepting the Hope Natural Gas Company.

Omission:--See Pages 205 et seq.

NATURAL GAS SERVICE IS IMPRACTICABLE UNLESS THE PEAK LOAD OF THE DOMESTIC DEMAND CAN BE MET.

All the evidence in the case is to the effect that the purpose with which the great systems of production, transportation and distribution of natural gas were established was the furnishing of gas to domestic consumers. The contracts in evidence provide for the furnishing of natural gas by the companies producing it in West Virginia to the companies distributing it in the plaintiff states, for the purposes of domestic consumption. The physicial situation and the practical operation of the plants proves this, the lines being laid to centers of population, and the gas being distributed to thousands of domestic consumers instead of to a few large industrial plants. The demand for gas for domestic consumption, that is, for cooking, lighting, heating, and hot-water heating, exists throughout the year, but fluctuates greatly in amount during the different seasons. There is during the summer months a demand, though comparatively small, for gas for cooking, lighting and hot-water heating. During the colder weather,

when the heating demand is added, a peak load condition is created. We quote the description of peak load conditions as described by two witnesses, (1) Sullivan—page 222:

"A. The peak load is the demand created by the increased quantity of gas required by consumers on cold days and at certain hours of the day. In cold weather, on an extremely cold day, the demand of the average domestic consumer will be from four to five times greater than it is on the normal days. Then there are certain hours in the day when the demand is very considerably increased above the normal demand. This creates a very increased demand, which probably at times is as high as 15 to 20 times more than the regular average daily load."

And (2) Denning—page 711:

"Using the term 'peak load' in this sense, meaning the greatest amount of gas which the domestic consumer requires or thinks he requires to meet his needs at the time, during very extremely cold weather; in other words, the greatest amount of gas that will be required of you at any particular given time. Now the seasonal peak load will always reach us during the cold weather periods. * * * There will come a sudden drop in temperature and the mercury will go down below zero. At once everyone begins to turn on his gas, getting cold, and the demand becomes a peak very much greater and the quantity of gas required is at once increased; that is a seasonal demand, a seasonal peak load which always reaches us during the winter; it may last only a day or two at a time; it may last for two or three weeks, depending entirely on weather conditions, which we cannot forecast. There is a daily peak load, even in the summer time, running usually during the breakfast hour in the morning, as a rule, but at noon there comes another, due to the preparation of the noon meal, not being so great. The evening meal is what is called the supper peak." * * etc.

A very excellent description of peak load requirements and conditions and the operating conditions that must exist in order to meet peak load requirements, is given by witness Quay at Record, pages 56-57.

If the transportation and distribution systems are to continue to be of value, it is necessary that the gas company be able to serve all the consumers upon whose patronage they are primarily dependent, namely, the hundreds of thousands of domestic consumers, throughout the whole year. If the service is intermittent, it is worthless, and will, necessarily, be discontinued. The testimony of the witness Denning at page 677 of the record, is as follows:

> "One of the great values of natural gas service, and its prime requisite, is its continuity of service; the ability of the consumer to step into his house any hour of the day for the 365 days of the year and, by simply turning a little stop-cock and lighting the gas, have an instantaneous service at his command. A problem of the gas company has always been to supply that instantaneous demand and maintain that continuity of service. We have reached a point where, as I said yesterday, during extreme cold weather we are unable to meet the entire demand of the consumer. To have any considerable or substantial quantity of gas diverted or eliminated from our West Virginia supply means to so disarrange and disorganize, and I may say discontinue the service to the consumer, as to practically render it useless to the domestic consumer."

The producing, transporting and distributing gas companies, as well as the governmental authorities, have recognized the fact that domestic consumers must have

service at all seasons, and have made every effort to insure an ability to render continuous service to the patrons upon whom they are primarily dependent, even during the periods of maximum demand. This has been accomplished by the original contracts between the companies, by administrative orders of the Public Utilities Commission of Ohio, and by reasonable rules and practices adopted and enforced by the gas companies themselves. We here make specific reference to the provisions of the contracts between the gas producing companies and the distributing companies, which contracts provide for the preference to the domestic consumers.

The contract between The Hope Natural Gas Company and The East Ohio Gas Company, Pennsylvania Exhibit 19, appearing at page 1544 of the Record, provides for the furnishing by The Hope Company to The East Ohio Company of all the gas requisite for the supply of the domestic consumers of The East Ohio Gas Company and provides that any contracts made by The East Ohio Company for the supply of gas for manufacturing purposes must be made with the consent and approval of the Hope Company. (Record, p. 1545.) This contract further specifically provides for a full supply of gas to the domestic consumers of the Hope Company in West Virginia, before any gas is deliverable under the contract even for domestic consumption outside the State of West Virginia. (Record, pp. 1546, 1547.)

The contract between The Hope Natural Gas Company and The Peoples Natural Gas Company, Pennsylvania Exhibit 17, Record, p. 1524, contains similar provisions. (Record, pp. 1525, 1533, 1534.)

The contract between The Hope Natural Gas Company and The Northwestern Ohio Natural Gas Company, Pennsylvania Exhibit 16, Record, p. 1509, at 1510, provides that the gas supply furnished under this contract is to be used for domestic consumers.

The contract between The Mountain State Gas Company and The River Gas Company, Pennsylvania Exhibit 20, Record, page 1554, provides for the sale of all the natural gas required by The River Gas Company for the supply of all the consumers of that company paying domestic rates, and for such further amounts as may be required by The River Gas Company to fulfill contracts for the supply of gas for manufacturing purposes, such contracts to be made with the consent of The Mountain State Gas Company. **The latter company expressly reserves the right to prefer its domestic consumers in West Virginia.** (Record, p. 1556.)

The contract between The Hope Natural Gas Company and The Fayette County Gas Company, Pennsylvania Exhibit 21, Record, p. 1560, provides for the supply of gas for consumers paying domestic rates. It further provides for a preference to the domestic consumers connected with its own system in West Virginia and those connected with systems in West Virginia, which it is supplying with gas. (Record, p. 1565.)

The contract between The United Fuel Gas Company and The Ohio Fuel Supply Company, West Virginia Exhibit 38, (Record, p. 1761) measures the amount which The Ohio Fuel Supply Company is entitled to receive by the demands of its domestic consumers. (Record, p.

1761.) It reserves to The United Fuel Gas Company "the right to supply all of its domestic consumers in West Virginia and the domestic consumers in West Virginia of all companies whose capital stock or a majority thereof is owned by The United States Fuel Gas Company. (Record, p. 1764.)

The Public Utilities Commission of Ohio issues from year to year what it terms its administrative orders to the natural gas companies of Ohio, classifying the consumers, and ordering that in case of any shortage that would render the companies unable to meet the needs of all classes of consumers, the gas is to be shut off from all classes other than domestic, to the end that domestic consumers may have the first and prior right to the gas. (Rec., p. 578.) The Commission issues from time to time during periods of cold weather its so-called emergency orders, pursuant to Section 614-32, General Code of Ohio, (Rec., p. 681) limiting, where necessary, domestic consumers to a maximum number of cubic feet of gas per day. (Rec., pages 578, 681.) Sufficient of these orders to show their nature and extent were offered by the witness, Mr. Denning, at page 681 of the printed record, and are shown in the record at pages 1695, 1706, being Ohio Exhibits Nos. 3-9, inclusive. The text of the general administrative order No. 34, issued May, 1918, which is reissued annually by the Commission, being Ohio Exhibit 17 (at page 1703 of the Record) is as follows:

> "Administrative Order No. 34.
>
> The Public Utilities Commission, having under consideration the probable inability of natural gas companies to furnish an adequate supply to all their

consumers during the coming winter, and the necessity of formulating more definite rules for the guidance of such public utility companies in disconnecting industrial and other consumers from the service, when necessary, during an emergency, to conserve the supply for domestic consumers, and the order in which disconnection should be made, as well as the order in which the service should be restored when the emergency is passed, hereby adopts the following rules and regulations, to wit:

1. That for the purpose of disconnecting or curtailing service to consumers during an emergency, all consumers of natural gas are divided into two general classes, namely: Domestic Consumers and Industrial Consumers.

2. That domestic consumers, for such purposes, include the users of natural gas for heating, lighting and cooking in private homes, boarding houses and apartment houses; and users of natural gas for lighting and cooking only, in hotels, restaurants, bakeries, eating places, club houses, hospitals and other charitable institutions.

3. That all other consumers shall be designated as "Industrial Consumers;" but for the purpose of disconnecting or curtailment during an emergency, the following subdivisions of industrial consumers may be made, in cases where there is more than a sufficient supply of gas for domestic consumers as herein specified, but not a sufficient supply for all industrial consumers:

A. Users who are not included in the domestic consumer's class, as herein specified, but who are engaged in preparing or preserving foodstuffs, or food producing plants, for such purposes only.

B. Industries directly engaged in manufacturing or producing war materials, for such purposes only; and users of gas in gas engines.

C. All other industrial consumers.

When there is not sufficient gas for all industrial consumers, as herein defined, the surplus shall be furnished to industrials in the order above named.

4. This classification is subject to the following exceptions: Where natural gas is being used in limited qualities for scientific, experimental or mechanical purposes, and where other means of producing light and heat for such purposes cannot be reasonably substituted, an amount essential to such use, but not to exceed five thousand (5000) cubic feet per month to each consumer so engaged may be used for such purposes only, and as if they were included in the class of domestic consumers herein specified.

5. If, after disconnecting all industrial consumers, there is not a sufficient supply of gas for the domestic consumers, then all boilers and furnaces not provided with gas fixtures and appliances primarily designed for burning natural gas as a fuel shall be disconnected; and if it becomes necessary to further restrict the use of gas to meet the emergency, domestic consumers may be limited to the use of thirty-five thousand (35,000) cubic feet per month, in one building, or for one family.

6. A copy of these regulations shall be furnished by each natural gas company to its consumers not later than June 15, 1918.

7. Consumers who do not promptly disconnect or curtail, in accordance with these rules and regulations, when notified by the utility that it is necessary so to do, shall, upon discovery, be wholly disconnected from the service until the emergency is passed."

What is accomplished by virtue of these various orders of the Public Utilities Commission was, prior thereto, voluntarily practiced by the gas companies. (Rec., p. 680.) That these orders are carried out is shown by the record: The East Ohio Gas Company,

which supplies Cleveland, Akron, Canton, Youngstown and numerous other municipalities in Ohio, confines its gas service strictly to domestic consumption during the cold weather, or winter period. (Rec., p. 578.) The Ohio Fuel Company limits its supply of gas to domestic consumers at all times when the supplying of gas to other consumers would impair its supply to domestic consumers. (Rec., p. 680.) The Logan Natural Gas & Fuel Company, and all of the other subsidiaries of the Union Natural Gas Corporation, supplying more than fifty municipalities in Ohio, furnish no industrial gas during the six months winter period. (Rec., pages 781, 793.) The North Western Ohio Natural Gas Company furnishes gas for industrial purposes during the summer months only. During the year 1919, less than 6% of the gas distributed by this company was to consumers other than domestic. (Rec., pages 721, 722.) The companies held by The Pure Oil Company which supply Columbus, Springfield and Dayton, Ohio, cut off their industrial consumers in the winter season. (Rec., p. 634.) The Union Gas & Electric Company, distributing gas in Cincinnati and suburbs, cuts off all industrial consumers during the cold weather, its own power plant being first. (Rec., page 458.)

The record discloses sufficient facts to warrant the statement that, in the very near future, Ohio will be on a strictly domestic basis of gas consumption, thus conserving this exceptional fuel for the use that will render the greatest service to the public. Even now, companies supplying gas in Ohio and Pennsylvania for industrial purposes, do so only under contracts which give the com-

pany the right to shut off this supply immediately when it becomes necessary to do so in order to take care of the domestic consumers. (Rec., pages 436, 328, 458, 603, 939.)

The provision of the statute which would require an adequate supply to consumers within the State of West Virginia **for all purposes**, whether domestic, industrial, or otherwise, would immediately destroy what has been accomplished by the contracts, the administrative orders and the reasonable rules and practices of the gas companies hereinbefore set forth, and would render it impossible for the gas distributing companies to meet their peak-load demands and render continuous service to domestic consumers. The evidence shows that intermittent service is neither practicable nor possible, and that the utility value of these systems would be destroyed if they were reduced to that condition. (Rec., pages 214, 326, 368, 428, 677, 725.)

VOLUME OF GAS EXPORTED FROM WEST VIRGINIA.

The maps showing the lines of the principal gas companies receiving gas exported from the State of West Virginia, which maps have been inserted heretofore in this statement of facts, show the vast amount of that exportation. A single map was prepared by the witness Wyer and offered at page 914 of the record as Pennsylvania Exhibit 46, which appears at page 1598 of the record, showing the principal towns outside of West Virginia depending upon West Virginia for natural gas

service. We insert here a copy of this map for the purpose of showing graphically the large extent to which communities in Ohio and Pennsylvania, as well as in the other states of Maryland, Indiana and Kentucky, are dependent for their gas supply upon the continued right to receive gas exported in interstate commerce from the State of West Virginia.

PENNSYLVANIA EXHIBIT 46.

Offered at p. 904 of Printed Record by Witness Wyer.

The testimony of the witness Wyer (at page 895) shows in figures the amount of this exportation. The production of natural gas in West Virginia was at its greatest in 1916. During that year approximately 193 billion cubic feet of gas or sixty-four per cent. of the total production, was exported from the state. In the year 1919 approximately 138 billion cubic feet of gas was exported from the state. (Record, pages 895, 896.) Pennsylvania Exhibit 41, offered at page 895 of the record by the witness Wyer, shows the volume of gas exported from West Virginia in billion cubic feet, and the percentage of the state's total production exported for the years from 1906-1919, inclusive. We insert here a copy of this exhibit.

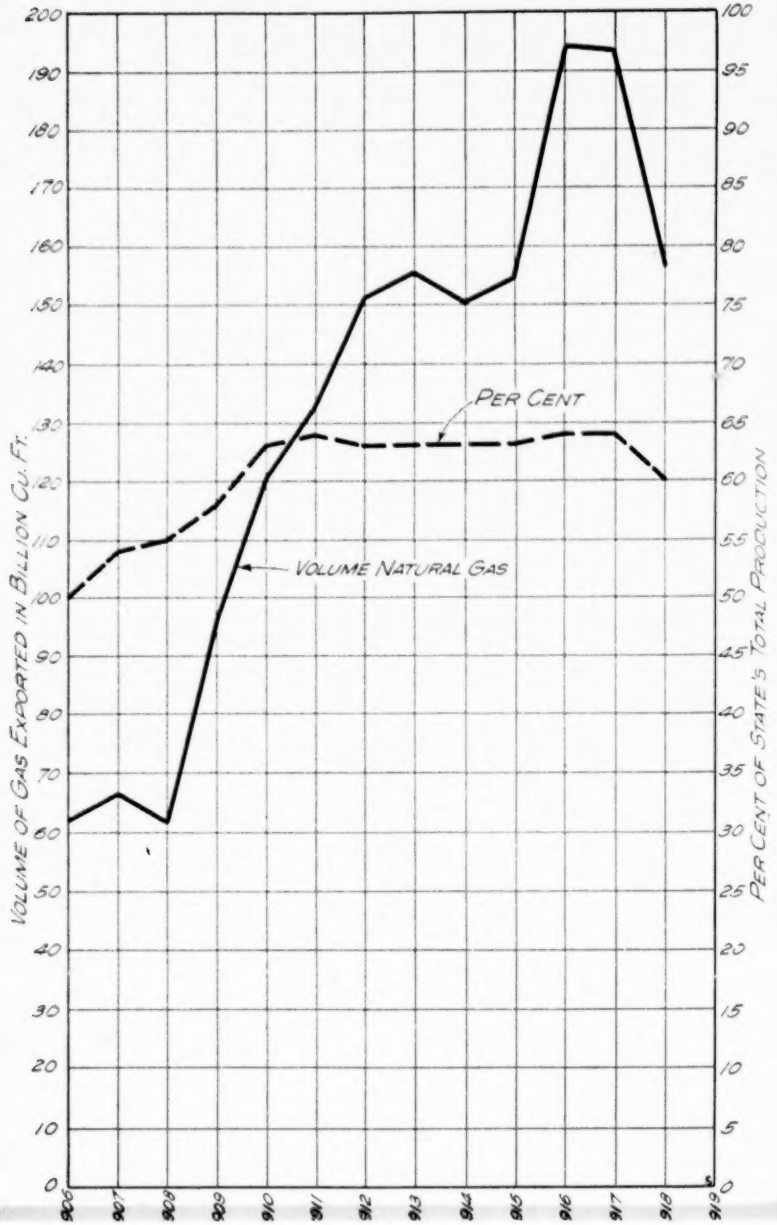
PENNSYLVANIA EXHIBIT 41.

Offered at p. 895 of Printed Record by Witness Wyer.

Volume of Natural Gas and Per cent of State's Total Production Exported from West Virginia.

VOLUME NATURAL GAS
AND
PER CENT OF STATE'S TOTAL PRODUCTION
EXPORTED FROM WEST VIRGINIA

Based on data compiled by the United States Geological Survey.



The exhibit shows that both the volume of gas exported and the per cent. of the state's total production exported increased from the year 1906 to the year 1911, from which time until the year 1916 the volume of gas exported increased, although the per cent. of the state's total production remained practically static; that since the year 1916 both the volume of gas exported and the per cent. of the state's total production exported have gradually decreased.

The testimony of the witness Robinson, and the table prepared by him, being Pennsylvania Exhibit No. 50, offered at page 1378 and appearing on pages 1603, 1604 and 1605 of the printed record, are to the same effect. They show that the percentage of the total production of gas in West Virginia which is exported from the state, was, for the year 1919, 64 per cent.

The percentage of the gas consumed in other states, which is imported into those states from West Virginia is shown by the testimony of the witness Wyer at pages 907, 908 of the Record. It is as follows:

Maryland	100 per cent.
Pennsylvania	35 per cent.
Ohio	50 per cent.
Indiana	80 per cent.
Kentucky	90 per cent.

About 650 towns in these five states depend entirely upon West Virginia gas. (Record, page 907.) Three hundred of these municipalities are in Ohio, three hundred in Pennsylvania, twenty-five in Kentucky, fifteen in Indiana and fourteen in Maryland. (Record, page 908.) The number of domestic consumers dependent

entirely upon West Virginia gas for their natural gas service, and the number of people so dependent, is as follows:

Ohio	725,000	consumers	3,625,000 people
Pennsylvania	300,000	"	1,500,000 "
Kentucky	75,000	"	375,000 "
Indiana	15,000	"	75,000 "
Maryland	10,000	"	50,000 "

IMPROPER USE OF GAS IN WEST VIRGINIA.

The policy of the State of Ohio and of the gas companies distributing gas in that state, of giving the preference at all times to domestic consumers, has been shown. There is much evidence to the effect that gas is being wastefully used in West Virginia, and that it is being extensively and grossly used in industries, although the use therein necessarily accentuates the shortage of gas for the domestic consumers in West Virginia and other states. The testimony of the witness Wyer at page 101 shows that a large saving of gas could be effected by the correction of improper burning equipment, both in industries and by the domestic consumers. (Record, pages 901, 902.) The practice of domestic consumers of neglecting to turn off the gas in mild weather and thereby grossly wasting it, is shown by the testimony of the witness Wyer. (Record, page 901.)

These observations are fully borne out by the statistics in the testimony of the witness Wallace (page 368), showing that the average domestic consumer in Charleston, West Virginia, in the year 1919, used more than

twice as much as the average domestic consumer in the city of Cincinnati, Ohio. The charts prepared by the witness Wyer, Pennsylvania Exhibits 42, 43, 44 and 45, appearing at pages 1594-1597 of the printed record, hereinbefore inserted, show also that the average consumption is much greater in West Virginia than in Ohio or Pennsylvania.

One of the grossest misuses of natural gas is in the carbon black industry. A considerable proportion of the gas produced in West Virginia is used in that state in the manufacture of carbon black. We insert here the testimony of two witnesses with reference to that condition.

The witness Wallace (Record, page 369), says that the carbon black industry is,

> "An industry in which we all know all the heat units and valuable substance in the gas is absolutely wasted."
>
> "Q. Do you know whether or not there are any number of such carbon black plants in the State of West Virginia and if you do, tell us how many?
>
> A. I can't give you the exact number from memory. I can furnish that for the record, if you want it. About 9 or 10 per cent. of the state's production is misused in carbon black manufacture." (Wyer, p. 903).

The soundness of the Ohio policy rsetricting the use of natural gas to domestic consumers, when the supply is inadequate, and the unsoundness of the policy of permitting this valuable fuel to be used in such wasteful processes as in the manufacture of carbon black, is well

shown by the testimony of the witness, Daly, at page 586 of the record. We here quote his language:

"Q. I wish you would state briefly the advantages, if any, of natural gas for domestic or other purposes, as compared with coal or other fuels?

A. The principal advantage, of course, is in its low cost, as compared with other gaseous fuel, its convenience, its cleanliness, and its advantage, when an adequate supply can be given, to the health of the community, by the ability to keep an even temperature at all times. It is a commodity that might be described as a luxury within the reach of the poor as well as the rich, and has probably contributed more to the comfort of the laboring classes and peo- contributed to the comfort of the people. It has also saved a great deal of drudgery in that way, and has contributeed to the comfort of the people. It has also been a great contributory in the way of taxation to the communities. Not only in that way has it saved the community, but in the saving to cities of a large amount of money in the gathering and disposing of ash content. In the city of Cleveland alone, in the year 1917, the East Ohio Gas Company displaced approximately thirteen hundred thousand tons of coal. * * * Then we have charitable institutions and hospitals, where it is almost a necessity. They find it very difficult to get along without some fuel of that kind, and in the smaller communities, the cutting off of natural gas would mean that they would be deprived of all gaseous fuel, for the reason that they are not large enough to maintain an artificial gas plant. Even though the company could furnish gas, the cost would be very excessive in comparison with natural gas, and it would be unthinkable to tax the people to the extent necessary to use artificial gas for heating purposes, although they might afford the luxury of it for cooking and water heating."

On this subject the witness, Denning, (at page 677 of the record), testified as follows:

> "Natural gas is the best and most economic and most convenient fuel for all general purposes that has ever been discovered. Its B. T. U. content of heat efficiency is generally from 100 to 150 per cent. more than that of any manufactured gas or any solid fuel. For those reasons and due to the practically unlimited supply in the past, the domestic consumer throughout Ohio, to the number of somewhere between four millions and five millions, have grown to practically depend upon the use of natural gas for all purposes of a general household nature, cooking, in a large measure for lighting, and in a very large measure for heating, particularly for dwellings."

EXTENT OF PROPERTY RIGHTS WHICH WOULD BE AFFECTED BY THE ENFORCEMENT OF THIS STATUTE.

The maps hereinbefore inserted showing the pipe line systems of the various natural gas companies engaged in transporting gas from West Virginia to other states and in transporting gas in and through those other states to the ultimate consumer, show graphically that the property the value of which would be destroyed by the shutting off of the gas now carried by these lines, would be enormous. The equipment of consumers upon all of the lines shown by these maps, would be rendered largely useless, and this would add another large sum to the total of destroyed property values. The testimony of the witness, Wyer, (pages 905 and 906), is to the effect that the property value of gas companies that would be affected by the enforcement of the law in question would

be at least two hundred million dollars. The same witness testified that the readjustment of the appliances and houses of consumers for the use of other fuel would be a loss of at least one hundred dollars on the average for each consumer affected, and this would make an aggregate loss of at least one hundred and twelve million dollars. The testimony of the witness, Daly, (page 588), is that the result of the enforcement of this act would be the practical financial wreckage of The East Ohio Gas Company. It would render the transportation system useless and destroy its value, except its salvage value. The loss would be approximately twenty million dollars.

The testimony of the witness, Denning, (record, page 673), is to the effect that much of the property of The Ohio Fuel Supply Company would be rendered useless by the operation of this act.

The testimony of the witness, Quay, (record, page 47), Corrin (record, page 326), Wallace (record, page 368), Tonkin, (record, page 428), Angle, (record, page 555), McMahon, (record, page 725), Whitcomb, (record, pages 782-783), Anderson, (record, page 828), Wyer, (record, page 909), is to the effect that the service of these gas companies to their consumers would be demoralized by the operation of the act. The deteroriation and loss in value of property which would necessarily follow such a demoralization of service is plain.

WEST VIRGINIA WOULD TAKE SUBSTANTIALLY ALL THE GAS UNDER THE ACT IN QUESTION.

The testimony shows that under the operation of the act, practically the entire supply of gas produced in the State of West Virginia would be, if not immediately, then at a very early date, required for consumers inside the State of West Virginia. We here insert verbatim extracts of the testimony of the complainant's witnesses upon this point:

Quay (The Manufacturers Light & Heat Company, record, page 44):

> "A. If we were called upon to supply natural gas to meet all the requirements of the gas which they may desire to use, in all of the industrial plants, manufacturing companies, in West Virginia, it would require between 25 and 33,000,000 cubic feet per day.
>
> Q. As I understand your answer, that applies only to those industrial plants that are connected with your own lines?
>
> A. Yes."

Wallace, (The United Fuel Gas Company, record, page 369):

> "I feel that in the course of a year or year and a half, the gas would be practically all sold in the State of West Virginia for manufacturing purposes." * * *

Sullivan, (The Hope Natural Gas Co., record, page 214):

> "We have attempted to make an estimate of the increased amount which consumers connected to

our lines and closely tributory thereto, would require to take care of their business, if they were using natural gas for all purposes. And we estimate that that would be in the neighborhood of from sixty to seventy-five million cubic feet per day." * * *

Anderson, (record, pages 824, 825):

"Q. Have you made any computation and estimates of the quantity of gas which the industrial plants in West Virginia would take per year, if they could get a full and continuous supply?

A. I have made two such estimates, based upon the reports of the maximum monthly sales in any one month to domestic and industrial consumers of the twelve largest gas utilities doing business in West Virginia, which reports were made to me in writing by letter. The first show the increased demand per annum in excess of the present sales which the industrial consumers would make upon the utilities by reason of the operation of the act in question amounting to 98,628,380,000 cubic feet; second, showing the increased sales per annum of gas which would be made to industrial consumers under the operation of said act, amounting to 55,017,359,000 cubic feet.

Q. Have you any other estimates of the increased industrial use of gas per annum within the State of West Virginia, by reason of the operation of the act now in controversy?

A. I have made an estimate of such increased use of gas in West Virginia, based upon the curtailment of the supply of gas to industrial consumers, by reason of the increased domestic consumers' demand during the winter months, based upon the actual monthly industrial sales of the nine largest gas utilities operating in the State of West Virginia, Pennsylvania, Ohio and Kentucky.

Q. What amount of increased use of gas per annum does this computation show?

A. It shows 32,959,471,000 cubic feet.

Q. Does this purport to show the entire increase in the industrial demand, which will occur under the operation of the act?

A. It does not; on the contrary, it is believed to be much less than the actual demand would prove to be."

There are many natural gas utilities in West Virginia, (stipulation, pp. 1365-1366; Robinson, 1374-5-6-7-8), supplying the towns and cities of that state, and it is chiefly from industrial concerns in a few of these that the loudest complaints about shortage occur. The glass companies of Morgantown, Fairmont and Clarksburg were largely responsible for the passage of the act, in a self-centered demand that insists on gas for their glass pots throughout the winter, though the supply for their use shall be taken from the homes of Pennsylvania and Ohio families.

The local companies supplying Morgantown, Fairmont and Clarksburg had an inadequate supply from their local wells, though both companies have large areas of undrilled leaseholds, extensive pipe line systems and compressing stations. (Robinson, 1375; Cunningham, 1219). The unique scheme, therefore, was evolved and embodied in the act, **something entirely new in utility regulation** or policy, whereby the local companies should have the right to demand that the interstate companies shall not only take care of their own West Virginia patrons, but shall make good the deficiency upon the lines of any other gas utility before gas may go out of the state. (Cunningham, 1230).

Fairmont and Morgantown also made application to the Public Service Commission of West Virginia to com-

pel the interstate companies to sell to the local companies. (Robinson, 1399).

That the statute in question here had its inception in 1917 in the demand for gas from the industries of West Virginia also appears from the testimony of Governor Cornwell, who testifies, (record, page 1194), that "the matter was first brought to my attention by Mr. Steptoe, who represented manufacturers and other gas consumers at Clarksburg in the northern part of the state." The governor refused, he testifies, (record, page 1195), "to put a provision in the call for the special session in 1917 to deal with this question, for several reasons, but I did lay the matter before the legislature, or called it to the attention of the legislature at the regular biennial session in 1919."

From the paragraph, relating to this subject, in the governor's message to the 1919 session of the West Virginia legislature, we quote, in part, as follows:

> "With the approach of the last winter and the early cold weather there was an acute gas shortage in the central and northern section of the state, **especially for manufacturing purposes**, which led to a demand of me by gas consumers for a special session of the legislature to enact a measure under which the gas companies could be compelled to furnish an adequate supply of gas to West Virginia consumers.
>
> * * * * * * * * *
>
> I acceded to that request, not only because of the importance of the particular questions therein involved, but because I felt that the graver and more far-reaching question of the powers of the legislature itself, as well as the general regulatory powers of the Public Service Commission were likewise in-

volved, and that they should be settled by the Commission, and if need be by the courts of the land, in order that we might know, once and for all, how far the legislature has gone or how far it can properly go in regulating public service corporations through the Public Service Commission." (Record, page 1196).

In addition to these industries which are using gas from the lines of local utilities but want an additional supply during the peak load time, as well as at all other times, there are many other industries which are not dependent altogether on gas, but are using coal and coke; these constitute an enormous threat against the gas supply in their locality should this act be upheld. For instance, the Weirton Steel Company, Weirton, West Virginia; Wheeling Steel and Iron Company, Wheeling, West Virginia; LaBella Iron Works, Wheeling; Whittaker Glass Company, Wheeling; Follansbee Bros., Wellsburg, West Virginia; Fostoria Glass Company, Moundsville, West Virginia; United States Stamping Company, Moundsville, West Virginia; Homer Laughlin China Company at Newell, West Virginia; Smith and Taylor Company, Chester, West Virginia, are some of these plants which would avail themselves of the benefit of the act and would demand from 25 million to 33 million cubic feet per day. (Quay, 44.) And a large number of other similar plants near the lines of other interstate companies in West Virginia. (Quay, 45.)

Even though, under the act in question, a substantial amount of gas would remain for exportation to other states during the season of minimum demand, yet the

evidence is plain that, during the winter period, the amount would be so small as to render the service insufficient, dangerous and intolerable, and the value of the service and of the property devoted to it would be destroyed as completely as if no gas at all were available for exportation. (Record, pp. 214, 326, 368, 428, 677, 725).

THE TESTIMONY SHOWS THAT THE EFFECT OF THE ENFORCEMENT OF THE STATUTE IN QUESTION WOULD BE AS ALLEGED IN THE BILL OF COMPLAINT OF THE STATE OF OHIO

The undisputed testimony of the witnesses upon the question of the effect of the act of West Virginia completely supports the allegations made in the bill of complaint of the State of Ohio with reference to that fact. We insert herein the verbatim testimony of the managers of the various companies transporting gas from West Virginia, and distributing such gas in other states:

Quay, (The Manufacturers Light and Heat Company, record, page 47:

> "If my company was compelled to furnish gas in an amount equal to the possible requirements of all of our customers, connected to our lines in the State of West Virginia—and that would apply to all other companies in the state as well—that it would practically demoralize our business in the States of Pennsylvania and Ohio."

Sullivan, (The Hope Natural Gas Company), record, page 214:

> "If the provisions of this statute were put into effect it would result in such a demoralization of the business as to make it impossible for us to fulfill our obligations under the contracts which we have made with other companies for a supply of gas outside of the State of West Virginia. It would also have the effect of making the service that we could render to those companies so unsatisfactory to their consumers that they would necessarily have to adopt some other means of providing heat in their homes. * * *"

Corrin, (The Hope Natural Gas Company The Reserve Gas Company, The Connecting Gas Company, The River Gas Company), record, page 326:

> "First, it would be very dangerous. I do not see how it would be possible to operate any gas system of lines if you could not determine the amount of gas that was going to go through those lines and have some person or city, or otherwise, take gas off of the line before it reached your consumers. In addition, you could not retain any of your consumers yourself, because the service that would be rendered would be uncertain and undependable; and, in fact, I don't believe that it would be practicable to maintain a gas company if that condition existed."

Wallace, (The United Fuel Gas Company), record, p. 368:

> "I feel that in a very short time, in cold weather especially, we would have no gas to transport out of the state, and for that reason I do not believe domestic consumers and other people would care to be connected to our lines, if they could only receive a supply of gas during the summer season, and in the winter time, when they absolutely needed the gas

for heating and lighting and comfort, to have the supply discontinued. * * *"

Tonkin, (Peoples Natural Gas Company), record, page 428:

"Well, the result would probably be that on extremely cold days there would be very little, if any, gas come north through the lines connecting with the Hope Company. It would create a situation that would leave us practically without gas, and what little gas we would have left would be scattered around to so many places, and we would have to try to do so much with so little gas, that we wouldn't have any service. It would also create a dangerous situation, where the gas would go out, no doubt, in a number of places. In fact, it would demoralize the operation of the company."

Angle, (Fayette County Gas Company), record, page 555:

"It would, without any question of doubt, put The Fayette County Gas Company out of business."

Daly, (The East Ohio Gas Company), record, page 588:

"The result of such an action, in so far as we are able to anticipate it, would be the wreckage—practical financial wreckage of the company. It would result in depriving many of the communities of gas service of any kind. It would leave our transportation system without any reason or any practical use to which it could be applied. That alone would involve a loss of approximately $20,000,000, less whatever salvage might be obtained from it."

Jones, (The Pure Oil Company), record, page 636:

"The Dayton Gas Company, depending entirely upon its supply from The Logan Natural Gas & Fuel

Company, which company secures the gas from West Virginia, and having no other source of supply, if the gas was cut off entirely, would immediately have to turn to other fuel. If the gas was only partially curtailed the consumers would have to be limited undoubtedly to cooking, heating water, some lighting and perhaps a little auxiliary heating."

Denning, (The Ohio Fuel Supply Company, (record, page 673:

"A very disastrous and destructive effect upon both, of course more or less dependent upon the quantity of gas diverted. A substantial quantity diverted would have the immediate effect of disorganizing and disarranging the service to the consumers throughout the state, make necessary the entire elimination of service from a considerable number of consumers, a complete rearrangement of lines, compressing stations and operating conditions of the company and undoubtedly deprive a considerable portion of the people served by the company, of gas service, thereby destroying the investment which they have in appliances, and also result in a destruction of a considerable portion of the company's property, by reason of the fact that it would no longer be of any value or use in the company's operations, and would not have any value whatsoever, except what might be possibly obtained from a resale or junk or a salvage value. It would necessitate—I think I have already said—a complete elimination or discontinuance of service to a considerable number of consumers."

"Q. Do you mean by that a considerable number of municipalities?

A. Yes; for instance, for illustration, take the city of Columbus—

Q. That is the capital of the state?

A. The capital of the state, yes; we rely almost entirely upon the volume of gas produced in West Virginia and transported through the West Virginia

105

18-inch line, to supply Columbus. If that were diverted or were to cease, Columbus would be, I may say, almost without gas service entirely."

McMahon, (The Northwestern Ohio Natural Gas Company), record, page 725:

"If the Northwestern was to be deprived, through the legislative acts of another state, or if the Hope Company were only able to deliver us a smaller quantity or a less quantity of gas than they are at present delivering us, it would cause us great hardship in the communities we serve. If that was very extensive it would cause, during the winter months, almost a total cessation of the supply of gas to our consumers, and would cause irreparable damage to the people that we serve, and would be detrimental to their health and dangerous to their property. * * * The company would be financially ruined."

Whitcomb, (The Union Natural Gas Corporation, The Logan Natural Gas and Fuel Company, and other subsidiary companies, (record, pages 782-783):

"It would ruin and demoralize the service in our entire southern division, with the exception of the two and a quarter million feet of gas available in local fields. There would be absolutely no gas whatever passing through the line west of Sugar Grove compressing station supplying the city of Dayton the city of Muncie, Richmond, New Castle and other cities and towns in Ohio and Indiana. We would have no service whatever, or no supply to deliver to the city of Lancaster, in Fairfield county. * * * "

James H. Reed, former president of the Philadelphia Company, says, (page 526):

"Under the operation of the West Virginia statute, even eliminating from consideration the in-

creased industrial consumption in West Virginia, there would be enough gas taken out of the lines by increasing the domestic consumption and by making other connections to very seriously cripple the service to Pennsylvania and Ohio consumers on cold days."

Anderson, (expert witness), record, page 828:

"The chief effect upon the large utilities would be to disorganize their operations because of changing the direction and amounts of gas from those for which their plants were designed to meet demands which were unforseen and which, being caused by the deficiency in supply of gas produced by small local companies, would come at times of greatest demand upon their own consumers, this great deficiency in supply to the consumers in other states during extreme cold weather would cause great distress and suffering and be attended with danger of possible death from asphyxiation."

Wyer, (expert witness), record, page 909:

"Q. What would be the effect of making physical connection in West Virginia between those interstate lines and local lines or communities, as is provided for in the statute now under discussion, as to the service on the lines of such interstate companies?

A. The immediate practical effect of making such connections would be to demoralize in all cases, and in many instances destroy entirely, the interstate service for natural gas transmission, in towns outside of West Virginia."

CONCLUSION OF STATEMENT OF THE CASE.

The proofs taken, and hereinbefore reviewed, show that the effect of the enforcement of the act in question herein would be to compel the gas companies engaged in transporting gas from West Virginia in interstate commerce to divert immediately a considerable proportion of the gas now being transported in interstate commerce and furnish it to applicants inside the state; that within a comparatively short period the increased demand for gas for industrial consumption inside the State of West Virginia, which increase would be the natural consequence of the preference created by the act in question, would require all of the gas produced in West Virginia, leaving none for exportation interstate; that the diversion to intrastate uses of any considerable proportion of the amount of gas now being transported interstate, would, during the cold weather months, demoralize the gas service in the plaintiff state and other states and render it dangerous and intolerable; the consequence of this would be that provision for other fuel would have to be made, and the consumers would lose their gas supply and the value of their appliances adapted to natural gas; the companies and municipalities transporting and distributing the gas would lose the larger portion of the value of their investments; that natural gas is the ideal fuel for domestic purposes, and that this fact has been recognized by the gas companies and governmental authorities of the State of Ohio by giv-

ing the preference in all cases to domestic consumers; that the contract and property rights of these domestic consumers, as well as those of the plaintiff state and of its subdivisions, would be impaired and destroyed by the operation of the act in question.

We proceed now to the discussion of whether or not the State of West Virginia has the power, under our constitutional limitations, to impose these consequences upon the plaintiff state and her citizens and residents.

LEGAL ARGUMENT.

I.

THIS CASE IS PROPERLY BROUGHT IN THE ORIGINAL JURISDICTION OF THIS COURT.

The allegations made by the pleadings and the facts as shown by the proofs in this case clearly bring it within the original jurisdiction of this court, as that jurisdiction has been defined in the cases.

In the case of Kansas v. Colorado, 185 U. S., 125, this question was fully discussed by Mr. Chief Justice Fuller in an able opinion in which he held that, undoubtedly, the constitution made some things justiciable which were not known as such at the common law and that, as the remedies ordinarily resorted to by independent states for the determination of controversies raised by collision between them were withdrawn from the states by the constitution, a wide range of matters susceptible of adjustment, and not purely political in their nature, were made justiciable by that instrument. He referred to the case of Missouri v. Illinois, 180 U. S., 208, in which it was held that the State of Missouri had a right to sue in this court to protect the health and comfort of her citizens which were threatened by the act of the state of Illinois in introducing large quantities of sewage into the waters of a river upon which the state of Missouri depended for her water supply. He held that the mere fact that a state

had no pecuniary interest in the controversy would not defeat the original jurisdiction of this court which might be invoked by the state as **parens patriae**, trustee, guardian or representative of all, or a considerable portion, of its citizens. The learned justice stated that, when one of our states complains of the infliction of a wrong by another state this court has the constitutional jurisdiction to ascertain the existence of the cause of complaint and to adjust the matter, if the complaint be well founded, since the states of the Union cannot make war upon each other nor make reprisal upon each other by embargo nor enter upon diplomatic relations and make treaties. He asserted the power of the court to sit, upon occasion, as an international tribunal and to apply international law if the exigencies of the particular case should so demand.

Again, in the case of Georgia vs. Tennessee Copper Company, 206 U. S., 230, Mr. Justice Holmes, delivering the opinion, used the following language:

> "The case has been argued largely as if it were one between two private parties; but it is not. The very elements that would be relied upon in a suit between fellow citizens as a ground for equitable relief are wanting here. The state owns very little of the territory alleged to be affected, and the damage to it capable of estimate in money, possibly, at least, is small. This is a suit by a state for an injury to it in its capacity of quasi-sovereign. In that capacity the state has an interest independent of and behind the titles of its citizens, in all the earth and air within its domain. It has the last word as to whether its mountains shall be stripped of their forests, and its inhabitants shall breathe pure air. It might have to pay individuals before it could utter that word, but with it remains the final power. The alleged

> damage to the state as a private owner is merely a makeweight, and we may lay on one side the dispute as to whether the destruction of forests has led to the gullying of its roads."

The rule of these cases is readily applicable to the facts of the instant case. The court took this view in passing upon the application for leave to file, and, since the proofs taken clearly support all the material allegations in the bill of complaint, the action of the court in thus taking jurisdiction of the case was clearly right.

II.

NATURAL GAS IS PRIVATELY OWNED, AND IS NOT THE PROPERTY OF THE STATE, WHICH THE STATE MAY REFUSE TO PERMIT TO BE TRANSPORTED OUTSIDE THE STATE.

The claim may be made that natural gas is comparable with wild game and naturally flowing water, which have been held to be the property of no one until reduced to possession, and as to which, therefore, the state may impose terms upon the privilege of reducing them to possession. See Geer vs. Connecticut, 161 U. S., 519; Hudson City Water Co. vs. McCarter, 209 U. S., 349.

This claim, if made, is completely answered by the statement that such is not the law of West Virginia, as is shown by repeated decisions of their Supreme Court of Appeals, to which we now refer.

In the case of Williamson vs. Jones, 39 W. Va., 231,

Holt, J., speaking for the Supreme Court of Appeals of that state, said:

> "We are met at the threshold by the contention on the part of defendant Jones that, no matter who may be the rightful owner of the land, petroleum—mineral oil—so far from being a part of the inheritance, something of which waste can be committed, is only capable of the qualified ownership of belonging to him who first appropriates it, no matter where it may be situated. Whatever the earlier decisions in other states may have been, it has never been so held in this state; and the authorities now very generally—universally, so far as I have examined them—hold petroleum to be a mineral, and as much a part of the realty as timber, coal, or iron ore, except that in proper cases its mobility as a subterranean liquid must be taken into consideration as in the case of salt water, etc. * * * Oil is a mineral and, being a mineral, is part of the realty. Funk vs. Haldeman, 53 Pa. St., 229. In this it is like coal or any other natural product which in **situ** forms part of the land."

This case came again before the Supreme Court of Appeals of West Virginia, (43 W. Va., 562), where, Brannon, J., speaking for the court, said:

> "Petroleum oil in its place in the land is a part of the land itself, just as are ore, coal, timber and iron."

This question again came before the Supreme Court of Appeals of West Virginia in Wilson vs. Youst, 43 W. Va., 826, and the court in an opinion in which it examined the authorities at considerable length, held to its former opinion.

Later, in the case of South Penn Oil Company vs. Mc-

Intire, 44 W. Va., 296, the court reaffirmed the doctrine laid down in Wilson vs. Youst, supra, and cited again the language given from Stoughton's Appeal, 88 Pa. St., 198. Still later, in the case of Carter vs. Tyler County Court, 45 W. Va., 806, a case arising over the right to tax oil and gas leases, the Supreme Court of West Virginia said:

> "While the oil remains in the cavities of the rocks **in situ**, this court has held in Wilson vs. Youst, (43 W. Va., 826), and Williamson vs. Jones, (39 W. Va., 231), that it is part of the realty. The lessee may drill the well to the sand or rock in which the oil is contained, but the oil does not change its character from realty to personalty, or any portion of its ownership until it is brought to the surface, and then seven-eighths of it becomes the property of the lessee."

Still later, in the case of Preston vs. White, 57 W. Va., 278, the same court, through Brannon, P. J., held to the same effect.

These West Virginia decisions, which stand unreversed, absolutely conclude argument as to the nature of the ownership of natural gas in that state. The West Virginia view is in full accord with the decisions of this court.

In Brown vs. Spillman, 155 U. S., 665, 669, Mr. Justice Shires said:

> "Petroleum gas and oil are substances of a peculiar character, and decisions in ordinary cases of mining, for coal and other minerals which have a fixed **situs**, can not be applied to contracts concerning them without some qualifications. **They belong to the owner of the land, and are a part of it**, so long as they are on it or in it, or subject to his control,

but when they escape and go into other land, or come under another's control, the title of the former owner is gone. If an adjoining owner drills his own land and taps a deposit of oil or gas, extending under his neighbor's field, so that it comes into his well, it becomes his property. Brown vs. Vandergrift, 80 Penn. St., 142, 147; Westmoreland Nat. Gas Co.'s Appeal, 25 Weekly Notes of Cases, (Penn.), 103."

The nature of the land owner's property in natural gas, and the distinction between the cases involving on the one hand things which are owned by no one, such as wild animals and flowing water, and, on the other hand, things which are the subjects of private ownership, has not anywhere been better stated than by the late Chief Justice White in the case of Ohio Oil Company vs. Indiana, 177 U. S., 190, 208, 210.

This court upheld the constitutionality of the statute of the State of Indiana prohibiting the owner of any natural gas or oil well to permit the gas or oil to escape and waste for a longer period than two days after gas or oil had been struck in the well. In the opinion Mr. Justice White said:

"If the analogy between animals **ferae naturae** and mineral deposits of oil and gas, stated by the Pennsylvania court and adopted by the Indiana court, instead of simply establishing a similarity of relation, proved the identity of the two things, there would be an end of the case. This follows because things which are **ferae naturae** belong to the 'negative community.' In other words, are public things subject to the absolute control of the state, which, although it allows them to be reduced to possession, may at its will not only regulate but wholly forbid their future taking. Geer vs. Connecticut, 161 U. S.,

519, 525. But whilst there is an analogy between animals **ferae naturae** and the moving deposits of oil and natural gas, there is not identity between them. Thus, the owner of land has the exclusive right on his property to reduce the game there found to possession, just as the owner of the soil has the exclusive right to reduce to possession the deposits of natural gas and oil found beneath the surface of his land. The owner of the soil can not follow game when it passes from his property; so, also, the owner may not follow the natural gas when it shifts from beneath his own to the property of some one else within the gas field. It being true as to both animals **ferae naturae** and gas and oil, therefore, that whilst the right to appropriate and become the owner exists, proprietorship does not take being until the particular subjects of the right become property by being reduced to actual possession. The identity, however, is for many reasons wanting. In things **ferae naturae** all are endowed with the power of seeking to reduce a portion of the public property to the domain of private ownership by reducing them to possession. **In the case of natural gas and oil no such right exists in the public. It is vested only in the owners in fee of the surface of the earth** within the area of the gas field. This difference points at once to the distinction between the power which the lawmaker may exercise as to the two. In the one, as the public are the owners, every one may be absolutely prevented from seeking to reduce to possession. No divesting of private property, under such a condition, can be conceived because the public are the owners, but the enacting by the state of a law as to the public ownership is but the discharge of the governmental trust resting in the state as to property of that character. Geer vs. Connecticut, supra. On the other hand, as to gas and oil, the **surface proprietors** within the gas field all have the right to reduce to possession the gas and oil beneath. They **could not be absolutely deprived of this right which belongs to them without a taking of private**

property. * * * Viewed, then, as a statute to protect or to prevent the waste of the common property of the surface owners, the law of the State of Indiana which is here attacked because it is asserted that it devested private property without due compensation, in substance, is a statute protecting private property and preventing it from being taken by one of the common owners without regard to the enjoyment of the others."

The above was approved, and much of the language of Mr. Justice White was quoted in the opinion of this court in the case of West vs. Kansas Natural Gas Co., 221 U. S., 229. Every court in which the question has arisen has taken a similar view. The following text writers confirm our statements. Thornton on Oil and Gas, Sections 18, 19, 20; White on Mines and Mining Remedies, Section 62, p. 223; Snyder on Mines, Section 1170, p. 954.

Since the question has been directly determined by the Supreme Court of Appeals of West Virginia, and by this court, we shall not trouble the court with the further authorities, which are numerous and uniform.

The distinction between the case at bar and the case of Hudson Water Company v. McCarter, 209 U. S., 349, in which this court held that the State of New Jersey might, by valid enactment, forbid the transportation of the water of a river flowing within the State of New Jersey, for consumption in a city in another state, is as obvious as the distinction made by Mr. Justice White in the case of Ohio Oil Company vs. Indiana, supra, between the rights of the state in wild game and natural gas. The language of the court in the Hudson water case itself

distinguishes this case from that. Mr. Justice Holmes said at page 356 of that case:

> "It is fundamental, and we are of opinion that the private property of riparian proprietors can not be supposed to have deeper roots."

But the private property in natural gas has been held by all courts to be as deeply rooted as that in any other property. The statute in question here does not seek to limit the right of owners to take gas from the earth. It fully permits the complete reduction of the gas to private ownership and possession, but it only seeks to limit the right of the private owner and possessor to transport the gas in interstate commerce. Certainly natural gas, lawfully taken from the earth and placed in containers, and for decades recognized as a proper subject of interstate transportation, and always held to be, even when in place in the earth, the subject of private ownership and possession, can be no more properly brought within the rule of the Hudson Water Company case than can oil or coal or iron or copper or any other natural resource. It will hardly be contended that the right of the owner of coal or iron or oil to raise and deal with this property can be qualified by the state by limiting that right to the use of it inside the state. The difference between these cases and those of wild animals and flowing water is that the state is the owner, if it chooses to be so, of the wild animals and flowing water, since they have no private owner, and hence may transfer that ownership upon terms fixed by itself. The state is nowhere, certainly not in West Virginia, thought to be the owner of coal, or oil or gas in

place, hence there is no opportunity to attach conditions upon the acquisition of title. The state can control the use, within the limits of its police power, but it can not, by the exercise of this power, prevent interstate commerce. The language of Mr. Justice Holmes at page 357 of the opinion in Hudson Water Co. vs. McCarter, 209 U. S., 349:

> "It finds itself in possession of a great public good. What it has it may keep, and give no one a reason for its will,"

can not be made applicable, since the state has it not, unless we are prepared to say that the state has all things which are within its borders and may prevent their exportation,

> "And give no one a reason for its will."

No one would claim this to be the law.

In the case of West vs. The Kansas Natural Gas Company, 221 U. S., 229, Mr. Justice McKenna, delivering the opinion of the court, said, at page 259, in distinguishing the case of Hudson Water Co. vs. McCarter, supra:

> "That principle was that the 'interest of the public of a state to maintain the rivers that are wholly within it substantially undiminished, except by such drafts upon them as the guardian of the public welfare may permit for the purpose of turning them to a more perfect use.' And this principle was emphasized as the one determining the case, and the opinion expressed that it was 'quite beyond any rational view of riparian rights that an agreement of no matter what private owners could sanction the diversion of an important stream outside the boundaries of the state in which it flows. The private right to appropriate is subject not only to the rights of land owners, but to the initial limitation that it

may not substantially diminish one of the great foundations of public welfare and health.'

It is hardly necessary to say that there was no purpose in the case to take from property its uses and commercial rights, or to assimilate a flowing river and the welfare which was interested in its preservation to the regulation of gas wells, or to take from the gas when reduced to possession the attributes of property decided to belong to it in Ohio Oil Co. v. Indiana, and recognized in Lindsley v. Natural Carbonic Gas Co. Indeed, pains were taken to put out of consideration a material measure of the benefits of a great river to a state. And surely we need not pause to point out the difference between such a river, flowing upon the surface of the earth, and such a substance as gas, seeping invisible through sands beneath the surface."

There is nothing, then, in the character of natural gas, which permits it to be considered as a thing apart, and to be placed, together with its owners and those who desire to consume it, outside the protection of the commerce clause of the constitution.

III.

NATURAL GAS WHEN REDUCED TO POSSESSION IS A COMMODITY WHICH BELONGS TO THE OWNER OF THE LAND, AND MAY BE THE SUBJECT OF BOTH INTRASTATE AND INTERSTATE COMMERCE.

Extended argument upon this point is rendered unnecessary by the statement made in division X. on page 36 of the answer of the defendant, which we here quote:

"While this defendant admits that gas is or may be an article of interstate commerce, yet this defend-

ant denies that gas placed in mains or pipes by public service gas companies, is either in interstate commerce or a legitimate article of interstate commerce, unless and until it has reached the point where it is no longer subject to the public service in West Virginia, and the duties imposed by law upon public service gas companies have been observed and performed by them; and denies that the requirement of the performance or observance of the duties owed by such companies is an interference with interstate commerce or a burden thereon."

In the case of West v. Kansas Natural Gas Co., 221 U. S., 229, supra, the first paragraph of the syllabus is as follows:

"Natural gas when reduced to possession is a commodity which belongs to the owner of the land and may be the subject of both intrastate and interstate commerce."

The opinion of the court in that case reviews the authorities upon this question, calling attention especially to the Indiana cases of State ex rel. Corwin v. Indiana & Ohio Oil, Gas & Min. Co., 120 Ind., 575, 6 L. R. A., 579, 2 Inters. Com. Reps., 758, 22 N. E., 776; Manufacturers Gas and Oil Co. v. Indiana Natural Gas & Oil Co., 155 Ind., 545, 53 L. R. A., 134, 58 N. E., 706, 21 Mor. Min. Rep., 102, and Jamieson v. Indiana Natural Gas & Oil Co., 128 Ind., 555, 12 L. R. A., 652, 3 Inters. Com. Rep., 613, 28 N. E., 76, which the court in the West case discusses at pages 256-258 of 221 U. S. Reports. The view of the first Indiana case, State v. Indiana, etc., Co., 120 Ind., 575, **supra,** had been earlier approved by this court in the case of Ohio Oil Co. v. Indiana, 177 U. S., 190,

where this court in an opinion by Mr. Justice White approved the same, saying:

> "In State v. Indiana, Etc., Co., 128 Ind., 575, a law of the State of Indiana which made it unlawful for any person to conduct natural gas beyond the state, and imposing penalties for so doing, was assailed as unconstitutional because repugnant to the commerce clause of the Constitution of the United States. The court held the statute to be void for the asserted clause. The property in natural gas when reduced to actual possession was decided to be like any other property, and therefore the subject of commerce, and within the protection of the Constitution of the United States."

In Haskell v. Kansas Natural Gas Co., 224 U. S., 217, (1912), this court, in refusing to modify the decree in the case of West v. Kansas Natural Gas Co., **supra,** said:

> "The original proceeding was brought to enjoin the officers of the State of Oklahoma from preventing the carriage in interstate commerce beyond the lines of the state of natural gas which had been severed from the earth by the owners of such gas, and particularly to enjoin enforcement of a certain statute of the state passed in 1907 * * * This court held that natural gas after severance is a commodity which might be dealt in like other products of the earth, as coal and other minerals, and is a legitimate subject of interstate commerce; and that no state by such laws as were involved in the case can prohibit its transportation in interstate commerce beyond the lines of that state * * *. (Page 228.)
>
> "As we have said, this court in its decision affirmed the right of the complainants in the conduct of interstate commerce, to take natural gas out of the state and declared that a state could not prohibit the transportation of such product beyond its bor-

ders and that the legislative act in question was an act the main purpose and effect of which were to prohibit the exercise of lawful rights secured by the federal constitution."

In Pennsylvania Gas Company v. Public Service Commission of New York, 252 U. S., 23, (1920), this court, affirming the decision of the New York Court of Appeals, 225 N. Y., 397, said:

> "We think that the transmission and sale of natural gas produced in one state, transported by means of pipe lines and directly furnished to consumers in another state is interstate commerce within the principles of the cases already determined by this court. West v. Kansas Natural Gas Co., 221 U. S., 229; Haskell v. Kansas Natural Gas Co., 224 U. S., 217; Western Union Telegraph Co. vs. Foster, 247 U. S., 105. * * *
>
> "In the instant case the gas is transmitted directly from the source of supply in Pennsylvania to the consumers in the cities and towns of New York and Pennsylvania, above mentioned. Its transmission is direct, and without intervention of any sort between the seller and the buyer. The transmission is continuous and single, and is, in our opinion, a transmission in interstate commerce, and therefore subject to applicable constitutional limitations which govern the states in dealing with matters of the character of the one now before us."

In the case of Landon, Receiver, v. Public Utilities Commission of Kansas, 242 Fed., 658, the court said:

> "Reverting to the character of the business transacted by the receiver, it is to be noted, (a) that the shipment is started on its journey from one state to another; (b) with the purpose it shall be delivered to a consumer; (c) that it moves continuously from

a point of shipment in one state to the consumer in another state; (d) that it is moved part of the way in the pipe lines of the distributing company, whether as agent of the receiver or as connecting carrier is immaterial; (e) the destination of the shipment is intended at the time of the shipment to be beyond the state, although the name of the particular consumer for any specific portion of the gas shipped is not known; (f) there is no stoppage in transportation; (g) the title to the gas remains in the receiver until delivery to the ultimate consumer.

"In substance and effect there are continuing orders by the consumers to the receiver through the distributing company to supply them with gas from the Oklahoma fields. Such transactions have the character of interstate commerce at their inception and this character continues until final delivery. Crenshaw v. Arkansas, 227 U. S., 389, * * * and cases cited. Even though the shipment is started before a definite order for a specific amount is given, still the continuous and usual course of business determines the character of the shipment. Swift & Co. v. United States, 196 U. S., 375. * * *; Grand Union Tea Co. v. Evans, (D. C.), 216 Fed., 79."

This court, in Public Utilities Commission vs. Landon, 249 U. S., 236, reversed the decision of the Circuit Court of Appeals last cited upon the ground that the interstate character of the transportation ceased upon the sale and delivery of the natural gas to the local distributing companies in the city and state where the gas was to be consumed. This court, in that case, said, however:

"That the transportation of gas through pipe lines from one state to another is interstate commerce may not be doubted. Also, it is clear that as part of such commerce the receivers might sell and deliver gas so transported to local distributing companies free from unreasonable interference by the state. Ameri-

can Express Co. v. Iowa, 196 U. S., 133, 143; Oklahoma v. Kansas Natural Gas Co., 221 U. S., 229; Haskell v. Kansas Natural Gas Co., 224 U. S., 217, * * *. See also Haskell vs. Cowham, 187 Fed., 403."

The same question came before the Court of Chancery of New Jersey in the case of Benedict v. Columbus Construction Company, 49 N. J. Eq., 23, and was similarly decided. See to the same effect Cooley on Constitutional Limitations, 7 ed., 858; Prentice & Egan, on the Commerce Clause of the Federal Constitution, 195.

Every court, then, which has passed upon this matter has determined that natural gas is a commercial commodity and that its transportation in pipe lines, which is the only practicable method of transporting it, is, if those lines cross state boundaries, interstate commerce. The statement of the defendant state, then, on page 36 of its answer, as follows:

> "Yet this defendant denies that gas placed in mains or pipes by public service gas companies is either in interstate commerce or a legitimate article of interstate commerce, unless and until it has reached the point where it is no longer subject to the public service in West Virginia, and the duties imposed by law upon public service gas companies have been observed and performed by them,"

is so completely contrary to the established law upon the subject that one would desire to wait until counsel for the defendant had suggested some legal reason for this striking proposition before making an argument upon the subject. At this point, however, the statement seems to be simply wrong. If gas is a commodity and as such is a proper subject of interstate commerce, then it must

follow that the law of West Virginia, made either by statute or judicial decision, and whether it purports to be an exercise of police power or not, can not convert a physical commodity, which has always been held to be a subject of interstate commerce, and which is still moving, or which persons still desire to move, across state lines, into a thing which is not a legitimate article of interstate commerce. Western Union Telegraph Co. vs. Foster, 247 U. S., 105; Western Union Telegraph Co. vs. Pendleton, 122 U. S., 347, 359; Leisy vs. Hardin, 135 U. S., 100; Savage vs. Jones, 225 U. S., 501; Western Union Telegraph Co. vs. Brown, 234 U. S., 542, 547; Vandalia Coal Co. vs. Commission, 268 Fed., 572.

IV.

THE ACT IN QUESTION CONSTITUTES A REGULATION OF INTERSTATE COMMERCE.

(a) Purpose of the Commerce Clause.

One of the principal contentions of the complainant in this case is that the act of the State of West Virginia, in question here, is unconstitutional because it is in violation of Clause 3 of Section 8 of Article I of the Constitution of the United States, the so-called "commerce clause." It becomes pertinent, therefore, to refer briefly to the historical background of the commerce clause, and the history of its adoption and interpretation.

The causes leading to the adoption of the Commerce Clause were well stated by Mr. Justice Johnson of this

court in his concurring opinion in the case of Gibbons v. Ogden, 9 Wheaton, 1, in which opinion he stated that, upon the return of peace following the War of the Revolution, the sympathies which had bound the states together during the period of the war dissolved and the states, finding themselves in full control over their own commerce, enacted iniquitous laws and impolitic measures from which grew up a conflict of commercial relations destructive of the domestic harmony of the states and fatal to their commercial interests abroad. He stated that this commercial anarchy was the immediate cause that lead to the Constitutional Convention and that the adoption of the Commerce Clause was recognized at the time as removing from the states the power to enforce these conflicting commercial regulations, as proved by the fact that such regulations, which existed by statute in every state, were permitted to drop lifeless without even the formality of a repeal.

Chief Justice Marshall, in the case of Brown vs. Maryland, 12 Wheaton, 419, said:

> "The oppressed and degraded state of commerce previous to the adoption of the constitution can scarcely be forgotten. It was regulated by foreign nations with a single view to their own interests; and our disunited efforts to counteract their restrictions were rendered impotent by want of combinations. Congress, indeed, possessed the power of making treaties; but the inability of the federal government to enforce them had become so apparent as to render that power in a great degree useless. Those who felt the injury arising from this state of things, and those who were capable of estimating the influence of commerce on the prosperity of nations,

perceived the necessity of giving the control over this important subject to a single government. It may be doubted whether any of the evils proceeding from the feebleness of the federal government contributed more to that great revolution which introduced the present system than the deep and general conviction that commerce ought to be regulated by congress. It is not, therefore, matter of surprise that the grant should be as extensive as the mischief, and should comprehend all foreign commerce and all commerce among the states. To construe the power so as to impair its efficacy would tend to defeat an object, in the attainment of which the American public took, and justly took, that strong interest which arose from a full conviction of its necessity. What then is the just extent of a power to regulate commerce with foreign nations, and among the several states? This question was considered in the case of Gibbons v. Ogden, (9 Wheat. Rep., 1), in which it was declared to be complete in itself, and to acknowledge no limitations other than are prescribed by the constitution. The power is co-extensive with the subject on which it acts, and can not be stopped at the external boundary of a state, but must enter its interior."

In the case of Cook v. Pennsylvania, 97 U. S., 574, this court reviewed the history of the constitutional convention with particular reference to the interstate commerce clause, and stated in its opinion that:

"A careful reader of the history of the times which immediately preceded the assembling of the convention which framed the American constitution can not fail to discover that the need of some equitable and just regulation of commerce was among the most influential causes which led to its meeting."

And still later in Lehigh Valley Co. v. Pennsylvania, 145 U. S., 192, Mr. Chief Justice Fuller said:

> "The conflict between the commercial regulations of the several states was destructive to their harmony and fatal to their commercial interest abroad, and this was the mischief intended to be obviated by the grant to the congress of the power to regulate commerce with foreign nations and among the states."

And in Cook vs. Marshall County, 196 U. S., 261, Mr. Justice Brown said:

> "The power of congress to regulate commerce among the states is perhaps the most benign gift of the constitution. Indeed, it may be said that without it the constitution would not have been adopted. One of the chief evils of the confederation was the power exercised by the commercial states of exacting duties upon the importion of goods destined for the interior of the country or for other states. The vast territory to the west of the Alleghanies had not yet been developed or subdivided into states, but the evil had already become so flagrant that it threatened an utter dissolution of the confederacy. The article was adopted that all of the states of the Union might have the benefit of the duties collected at the maritime ports, and to relieve them from the embarrassing restrictions imposed upon the internal commerce of the country."

In his dissenting opinion in the case of Austin vs. Tennessee, 179 U. S., 343, Mr. Justice Brewer said:

> "Second only to the power 'to collect taxes' and 'to borrow money' is the power given to congress by Section 8, Article 1 of the constitution 'to regulate commerce with foreign nations, and among the several states, and with the Indian tribes.' Thus next in order, as though next in importance to the

power of maintaining itself by taxation and borrowing money, is the power to regulate commerce between the states, as well as between the United States and foreign nations."

(b) The Early Judicial Decisions Interpreting the Commerce Clause.

Not until 1824 was there any important judicial determination bearing upon the commerce clause of the constitution. In that year the well known case of Gibbons vs. Ogden, 9 Wheaton, 1, 6 L. Ed., 23, involving the question of the right of the New York legislature to grant an exclusive right of navigation of the waters within the jurisdiction of the State of New York with boats propelled by fire or steam, was decided. In that case this court unanimously reversed the New York court and held the act of the legislature of New York to be void because in conflict with the federal constitution. The principles there laid down by Chief Justice Marshall, speaking for the court, formed the foundation upon which the whole structure of judicial determination with reference to the commerce clause has been built. In that case commerce was defined as being a more general term than traffic, and as including intercourse between nations and states, and comprising every form of commercial relation between the various states.

> "It (commerce) described the commercial intercourse between nations and parts of nations in all its branches and is regulated by prescribing rules for carrying on that intercourse."

This decision frankly recognized that the power does not extend to commerce conducted **entirely within the states**, but asserted that the protection of the commerce clause does not halt at state lines, when applied to foreign and interstate intercourse; that the control of Congress over interstate commerce is absolute and knows no limitation. It was, on the other hand, recognized that such legislation as quarantine laws, health laws and inspection laws, being in the general description of police powers, still belong to the states, even though they might indirectly affect interstate commerce. The question of whether the jurisdiction of the Congress over interstate commerce was so complete that, even in the absence of action by congress, the states could not in any way regulate it, was not decided, although the point was strenuously argued by distinguished counsel. Chief Justice Marshall said, however:

> "It has been contended by the counsel for the appellant, that as the word to 'regulate' implies in its nature full power over the thing to be regulated, it excludes, necessarily, the action of all others that would perform the same operation on the same thing. That regulation is designed for the entire result, applying to those parts which remain as they were as well as to those which are altered. **It produces a uniform whole, which is as much disturbed and deranged by changing what the regulating power designs to leave untouched as that on which it has operated.** There is great force in this argument, and the court is not satisfied that it has been refuted." (Bold type ours.)

Mr. Justice Johnson, in his concurring opinion in that case, said that the power to regulate foreign commerce

is necessarily exclusive in the federal government since the states are entirely unknown to foreign nations and that, since the language which grants the power over interstate commerce is the same as that which grants the power as to foreign commerce, the power over interstate commerce is also necessarily exclusive.

This point, left undecided in Gibbons vs. Ogden, has been the basis of much of the later litigation involving the commerce clause.

In the case of Brown vs. Maryland, 12 Wheaton, 419, (1827), this court said, although the statement was not required for the decision:

> "The power claimed by the state (the power to impose a license tax upon importers for the privilege of selling goods), is in its nature in conflict with that given to congress."

The case was, however, put expressly upon the ground that congress had expressly authorized importation by imposing a duty upon the article in question, and that hence the statute of Maryland was in conflict with the act of congress and not merely with the general power of congress given it by the commerce clause.

In the case of New York vs. Miln, 11 Peters, 102, the court refused to pass upon the question of whether the mere constitutional grant of the power to congress was, in the absence of action by Congress, exclusive of state action, although the subject was fully argued. The court was said to have been hopelessly divided upon this question. See the statement of Mr. Justice Wayne, 7 Howard, at 423 (the passenger cases).

In Pierce vs. New Hampshire, 5 Howard, 504, (one of the license cases, 1846), this question, which had been reserved in the preceding cases, came squarely before the court for decision. Here again the court was divided, but Mr. Justice Woodbury, for the first time, enunciated the rule which has since become well established. He said, substantially, that, with regard to a regulation which reaches all of the states, the power over commerce, "must, of course, be exclusive," but that there are many local matters concerning which the concurrent and auxiliary actions of the states is permissible. At page 624 of 5 Howard, he said:

> "There is much in connection with foreign commerce which is local within each state, convenient for its regulation and useful to the public, to be acted on by each till the power is abused or some course is taken by congress conflicting with it. Such are the deposit of ballast in harbors, the extension of wharves into tide water, the supervision of the anchorage of ships, the removal of obstructions, the allowance of bridges with suitable draws, and various other matters that need not be enumerated, beside the exercise of numerous police and health powers, which are also by many claimed upon different grounds."

The question was next raised in the Passenger Cases, 7 How., 282, and again Mr. Justice Woodbury, in his dissenting opinion, adhere to the views stated by him in the License Cases and said that, as to "matters of exterior, general and uniform cognizance" the power of congress may be exclusive, and as to such matters the silence of congress is to be respected and obeyed as much as its

action, that in other cases, such as affected any mere local or subordinate matter within the limits of a state, the silence of Congress is rather an invitation for the states to legislate upon it.

In the well known case of Cooley vs. Port Wardens, 12 Howard, 310, the view stated by Mr. Justice Woodbury in the license and passenger cases, was at last made the ground of the decision. Mr. Justice Curtis, in delivering the opinion of the court, said:

> "The diversities of opinion, therefore, which have existed on this subject have arisen from the different views taken of the nature of this power. But when the nature of a power like this is spoken of, when it is said that the nature of the power requires that it should be exercised exclusively by congress, it must be intended to refer to the subjects of that power, and to say they are of such a nature as to require exclusive legislation by congress. Now, the power to regulate commerce, embraces a vast field, containing not only many, but exceedingly various subjects, quite unlike in their nature; some imperatively demanding a single uniform rule, operating equally on the commerce of the United States in every port; and some, like the subject now in question, as imperatively demanding that diversity, which alone can meet the local necessities of navigation. Either absolutely to affirm, or deny that the nature of this power requires exclusive legislation by congress, is to lose sight of the nature of the subjects of this power, and to assert concerning all of them what is really applicable but to a part."

This decision is now the established rule. It is, in substance, that the states may exercise powers as to merely local matters, which exercise may have full operation until it is circumscribed by congressional action. In such

cases the inaction of Congress is to be taken as an indication that, until congressional action, the states may freely deal with such local matters. However, in matters admitting or requiring uniform regulation throughout the country or affecting states other than the one which is assuming to legislate, the inaction of congress is to be taken as a declaration of its will that commerce shall be "free and unrestricted."

(c) Development of the Rule of Cooley vs. Port Wardens. Cases in Which the Power of Congress is Exclusive.

The authoritative statement of the rule in the case of Cooley vs. Port Wardens, supra, still left much opportunity for dispute as to the "nature of the subjects of this power," and the litigation since that time has largely centered upon the proper classification of the power sought to be exercised, and the determination whether it was one which required uniformity of rule, or one which admitted diversity of rule. A helpful statement of the rule was made by Mr. Justice Brown in the case of Covington, etc., Bridge Co. vs. Kentucky, 154 U. S., 204, where he said:

> "The adjudication of this court with respect to the power of the states over the general subject of commerce are divisible into three classes: First, those in which the power of the state is exclusive; second, those in which the states may act in the absence of legislation by congress; third, those in which the action of congress is exclusive and the states cannot interfere at all."

The third class of cases, under the rule of Covington Bridge Company vs. Kentucky, supra, embraces "those in which the action of Congress is exclusive and the states cannot interfere at all." It is fairly obvious that the word "action" as used in the quoted clause, means "power," for the **inaction** of Congress, within this class of cases has always been held to be just as effective as its action.

There are many adjudication of this court which place certain cases definitely inside this third class, where "the states cannot interfere."

In the case of Welton vs. State of Missouri, 91 U. S., 275, 279, the constitutionality of a statute of Missouri, which imposed a license tax upon persons who sold goods which were the "growth," "product" or "manufacture" of another state was attacked. No license was required for selling similar goods which were produced within the state. The Supreme Court held that this statute was in conflict with the power of Congress to regulate interstate commerce. In the opinion Mr. Justice Field said:

> "It will not be denied that that portion of commerce with foreign countries and between the states **which consists in the transportation and exchange of commodities is of national importance, and admits and requires uniformity of regulation.** The very object of investing this power in the general government was to insure this uniformity against discriminating state legislation. * * *
>
> The power which insures uniformity of commercial regulation must cover the property which is transported as an article of commerce from hostile or interfering legislation, **until it has mingled with and**

become a part of the general property of the country, and subjected like it to similar protection, and to no greater burdens. If, at any time before it has thus become incorporated into the mass of property of the state or nation, it can be subjected to any restrictions by state legislation, the object of investing the control in the congress may be entirely defeated. * * *

The fact that Congress has not seen fit to prescribe any specific rules to govern interstate commerce does not affect the question. Its inaction on this subject, when considered with reference to its legislation with respect to foreign commerce, is equivalent to a declaration that interstate commerce shall be free and untrammelled. As the main object of that commerce is the sale and exchange of commodities, the policy thus established would be defeated by discriminating legislation like that of Missouri."

In the case of Railroad Company v. Husen, 95 U. S., 465, 469-470, this court had under consideration a statute of the State of Missouri which prohibited importation of certain kinds of cattle into the State of Missouri during a certain period of the year. The court held the act was an attempted regulation of interstate commerce and was void, saying that the transportation of property from one state to another is undeniably interstate commerce, and that any interference with that transportation is necessarily beyond the power of the states. The court further said:

"The Missouri statute is a plain interference with such transportation, an attempted exercise over it of the highest possible power, that of destruction. * * The object and effect of the statute are, therefore, to obstruct interstate commerce, and to discriminate between the property or citizens of one state and

> that of citizens of other states. * * * **Transportation is essential to commerce, or rather it is commerce itself, and every obstacle to it, or burden laid upon it by legislative authority, is regulation.**"

In the case of Hall vs. De Cuir, 95 U. S., 485, 488, this court held a statute providing that carriers of passengers should give all persons equal privileges without discrimination on account of race or color, unconstitutional as applied to a steamboat carrying passengers in and out of a state. It was there said:

> "But we think it may safely be said that state legislation, which seeks to **impose a direct burden** upon interstate commerce, **or to interfere directly with its freedom,** does encroach upon the **exclusive power** of Congress. The statute now under consideration, in our opinion, occupies that position. It does not act upon the business through the local instrument to be employed after coming within the state, but directly upon the business as it comes into the state from without **or goes out from within.**"

In County of Mobile v. Kimball, 102 U. S., 691, 697, Mr. Justice Bradley, delivering the opinion of the court said that, among the subjects which are national in their character and "admit and require uniformity of regulation affecting alike all the states," is "all that portion of commerce with foreign countries or between the states which exists in the transportation, purchase, sale and exchange of commodities." The learned justice further said, speaking of this subject:

> "Here there can of necessity be only one system or plan of regulation, and that congress alone can prescribe. **Its non-action in such cases with respect to**

any particular commodity or mode of transportation is a declaration of its purpose that the commerce in that commodity, or by that means of transportation, shall be free. There would, otherwise, be no security against conflicting regulations of different states, each discriminating in favor of its own products and citizens and against the products and citizens of other states. And it is a matter of public history that the object of vesting in congress the power to regulate commerce with foreign nations and among the states was to insure uniformity of regulation against conflicting and discriminating state legislation."

In Brown vs. Houston, 114 U. S., 622, Mr. ustice Bradley said, upon this point:

"The power to regulate commerce among the several states was granted to congress in terms as absolute as is the power to regulate commerce with foreign nations. If not in all respects an exclusive power, if in the absence of congressional action the states may continue to regulate matters of local interest only incidentally affecting foreign and interstate commerce, such as pilots, wharves, harbors, bridges, tolls, freights, etc., still, according to the rule laid down in Cooley vs. Philadelphia Wardens, 53 U. S., 12, How. 299, 319 (13:996, 1004), the power of congress is exclusive whenever the matter is national in its character or admits of one uniform system or plan of regulation, and is certainly so far exclusive that no state has power to make any law or regulation which will affect the free and unrestrained intercourse and trade between the states, as congress has left it, or which will impose any discriminating burden or tax upon the citizens or products of other states coming or brought within its jurisdiction."

In Leisy vs. Hardin, 135 U. S., 100, 108, this court declared unconstitutional a statute of the state of Iowa prohibiting the importation of intoxicating liquors within its territory.

In the opinion, Chief Justice Fuller said:

> "Hence, inasmuch as **interstate commerce, consisting in the transportation, purchase, sale and exchange of commodities, is national in its character, and must be governed by a uniform system, so long as Congress does not pass any law to regulate it, or allowing the states so to do, it thereby indicates its will that such commerce shall be free and untrammelled.** * * *."

The learned justice further said that a state has no power to define the articles of interstate commerce; that if such power existed it might be selfishly used by a state for the promotion and benefit of its own interests, and that the commercial anarchy and confusion which were sought to be avoided by the adoption of the Commerce Clause of the constitution would soon result from the "diverse exertions of power by the several states of the Union."

In Western Union vs. James, 162 U. S., 650, Mr. Justice Peckham said:

> "In regard to these matters relating to commerce which are **not of a nature to be affected by locality**, but which necessarily ought to be the same over the whole country, it has been frequently held that the silence of Congress upon such a subject, over which it has unquestioned jurisdiction, was equivalent to a declaration that in some respects commerce should be free and unregulated by any statutory enactment."

In the Minnesota Rate Cases, 230 U. S., 352, 57 L. Ed., 1511, 33 Sup. Ct., 729, the court has recently restated the rules which were developed through the cases from which we have quoted, and others. This court there said, speaking through Mr. Justice Hughes:

> "If a state enactment **imposes a direct burden upon interstate commerce**, it must fail regardless of Federal legislation. The point of such an objection is not that Congress has acted, but that the state has directly restrained that which in the absence of federal regulations should be free. If the acts of Minnesota constitute **a direct burden** upon interstate commerce, they would be invalid without regard to the exercise of federal authority touching the interstate rates said to be affected. On the other hand, if the state, in the absence of federal legislation, would have had the power to prescribe the rates here assailed, the question remains whether its action is void as being repugnant to the statute which Congress has enacted.
>
> * * * * * * * * * *
>
> The general principles governing the exercise of state authority when interstate commerce is affected are well established. The power of Congress to regulate commerce among the several states is supreme and plenary. It is 'complete in itself, may be exercised to its utmost extent, and acknowledges no limitations, other than are prescribed in the Constitution.' (Gibbons vs. Ogden, 9 Wheat., 1, 19 L. Ed., 23.) The conviction of its necessity sprang from the disastrous experiences under the Confederation when the states vied in discriminatory measures against each other. In order to end these evils, the grant in the constitution conferred upon Congress an authority at all times adequate to secure the freedom of interstate commercial intercourse from state control and to provide effective regulation of that intercourse as the national interest may demand. * *
>
> The grant in the Constitution of its own force, that

is, without action by Congress, established the essential immunity of interstate commercial intercourse from the direct control of the states with respect to those subjects embraced within the grant **which are of such a nature as to demand that if regulated at all their regulation should be prescribed by a single authority.** It has repeatedly been declared by this court that **as to those subjects which require a general system of uniformity of regulation the power of Congress is exclusive.** In other matters, admitting of diversity of treatment according to the special requirements of local conditions, the states may act within their respective jurisdictions until Congress sees fit to act, and when Congress does act the exercise of its authority over-rides all conflicting state legislation."

(Bold type ours in the above quotations.)

Thus the rules have been worked out in the decisions. The interdiction of the commerce clause is against state legislation which lays a direct burden upon interstate commerce, "or imposes restrictions, either by way of taxation, discrimination, or regulation, upon commerce between the states." Covington, etc., Bridge Co. vs. Kentucky, supra.

(d) The Application of the Rule That as to Those Subjects "Which are of Such a Nature as to Demand that if Regulated at all, Their Regulation Should be by a Single Authority" the Power of Congress is Exclusive, to the Act in Question.

The application of this rule to the legislation here drawn in question is, in our judgment, plain. The language of Mr. Justice Woodbury in the Passenger Cases, 7 Howard, 282, seems to us to fit the instant case with remarkable exactness. We quote again that language:

> "So far as reasons exist to make the exercise of the constitutional power exclusive, as on matters of **exterior, general and uniform cognizance,** the construction may be proper to render it exclusive."

It is difficult to see how any regulation, the effect of which is to determine the proportionate shares and rights of consumers of natural gas in five states, including the plaintiff state, can be anything except a "matter of exterior, general and uniform cognizance." Neither the legislature nor the courts of West Virginia have the power to determine the rights of the citizens of Cleveland, Columbus, Cincinnati, and the other approximately three hundred cities and towns in the plaintiff state, if the statement made in Cohen vs. Virginia, 6 Wheaton, 264, that

> "in all commercial regulations we are one and the same people"

is still the law of the land.

Again, the language of the court in the case of **Cooley** vs. Port Wardens, 12 Howard, 310, as follows:

> "But when the nature of a power like this is spoken of, when it is said that the nature of the power requires that it should be enforced exclusively by congress, it must be intended to refer to the subjects of that power, and to say that they are of such a nature as to require exclusive legislation by congress. * * * Some imperatively demanding a single uniform rule, operating equally on the commerce of the United States in every port; * * *."

This language again covers the situation presented by the instant case, the transportation interstate of a product which is the subject of public utility service, and in which over three and one-half millions of people in the plaintiff state according to well recognized rights of public utility consumers, have a right and an interest. This is not a matter which can be said to permit diversity of rule in the different states, through which the lines carrying this public utility product happen to pass.

It is obvious that if each of such states has the power to make its own rules, no matter what may be their effect upon the interstate transportation of gas, or upon the rights and property of consumers of gas located beyond their jurisdiction, the matter will at once take this shape; that the state in which the gas is produced will take all that it "desires" for all purposes; that the state through which the transporting lines next pass will take all that it "desires" for all purposes; that the states lying beyond will take what is left, if any, in the order of their location. The evidence in the case at bar shows conclusively that, within a short period from the time that an act

such as the act in question should become effective and be enforced, if such an act is ever permitted to be enforced, all of the gas will be taken by the first state, namely the state in which the gas is produced. Thus, we would be reduced again to the condition which existed before the constitution, when the only governing principle would be that of state selfishness, which would soon be adopted by every state with reference to its most valuable products as a justifiable retaliatory policy.

> "And yet we have said 'in matters of foreign and interstate commerce there are no state lines.'"
>
> West vs. Kansas Natural Gas Company, supra.

The statute in question herein not only regulates but lays a direct prohibition and restriction upon the interstate transportation of natural gas. It imposes upon the owners of this commodity, obligations with reference to the disposition of it, the natural and necessary effect of which would be to prevent its transportation from the State of West Virginia. The owners of natural gas are ordered, by the provisions of the statute, to sell their commodity inside the state, which is a method, not very indirect, of telling them that they must not transport it outside the state.

This is the most primitive and most obvious form of violation of the commerce clause. The cases hereinbefore quoted from show that this court has always held that, "state legislation which seeks to impose a direct burden upon interstate commerce or to interfere directly with its freedom, does encroach upon the exclusive power of

Congress;" Hall vs. DeCuir, 95 U. S., 485, 488; and that "all that portion of commerce with foreign countries or between states which consists in the transportation, purchase, sale and exchange of commodities" admits and requires uniformity of regulation. The prohibition of commerce attempted by this act is so gross that it almost baffles argument. The act does not merely **regulate** commerce according to the ordinary meaning of the word regulate. It **prohibits** commerce, and the only material question of fact is, "How much of this commodity will, under the act, be prohibited from moving in interstate commerce, and how much, if any, will be permitted to move." We believe that this is a true statement of the problem presented by this statute, and that this court has never been confronted with a state law which, when stripped of its verbiage, attempted a more direct violation of the commerce clause of the constitution.

As to the question of how much gas would be prevented from moving in interstate commerce by this act, the evidence in the case clearly shows that the immediate effect of the enforcement of the act would be to prevent a considerable proportion of the amount of gas now moving in interstate commerce from continuing so to move, since it is proved that all of the gas companies which now transport gas in interstate commerce are obliged to apportion their inadequate supply between their intra-state and interstate consumers and hence could not furnish "a supply of gas reasonably adequate for the purposes of" consumers inside the State of West Virginia without, to a corresponding extent, subtracting from the sup-

ply which is now moving in interstate channels. The statute, in its second section, would further reduce the amount moving in interstate commerce by requiring such owners to furnish gas to other persons not now being furnished, but who may desire to connect with the lines of the owners, and secure a supply, even though the owners of the gas have never held themselves out as being willing, and are not in fact able, to serve them, and this gas would also have to be subtracted from the part now moving interstate.

The evidence shows (Record, p. 216) that the gas appropriated by the statute from these interstate companies must come from either of two places on the pipe line system: (a) by a connection to an intake line between the compressing stations and the wells, in which case it will cause a shutting down of the station in order to permit gas to accumulate in the intake line sufficient pressure to give the desired service, and thus wholly interrupt and prohibit the export of gas from that station; or (b) by a connection to the line discharging from the compressing station towards the state of export, in which case it will divert and diminish the supply so moving interstate.

The evidence further shows, that the ability to secure a supply of this valuable fuel would immediately produce a vastly increased demand inside the State of West Virginia, which would have to be met by further subtractions from the gas now moving interstate, and that these demands would in a short time, consume all of the supply of gas, and leave practically none at all to move across the state lines. The effect upon interstate

commerce then of these regulations and restrictions would be direct, and clearly within the rule of the cases cited. It would create the commercial anarchy and confusion so happily discarded by the commerce clause of the constitution. The answer admits (pages 30 and 31) and the evidence shows that the owners of this gas have been fulfilling their duty as public servants, to the best of their ability, by apportioning their supply among their consumers, without reference to state lines. Consumers in all the states have shared in the advantages, and in the hardships incident to inadequate supply, without discrimination, according to recognized rules of public utility duties. This, of itself, is a fair explanation of the **inaction of Congress** upon this matter, and it is doubtful whether congressional action could better the situation, but the fact remains that the power which could control this interstate movement of natural gas has seen fit to remain inactive, and therefore its movement must be "free and untrammeled." If the owners of this gas should, of their own volition, seek to discriminate against any of the states here interested, it may be assumed that relief from the Congress would not be sought in vain, nor long delayed.

We conclude, then, upon this point, **that the subject in question is one of general cognizance, requiring uniform regulation, if any, and hence the attempted prohibition and regulation by the State of West Virginia must fail.**

V.

EVEN A POLICE REGULATION MUST BE ABSOLUTELY IMPARTIAL AND NON-DISCRIMINATORY AS BETWEEN INTERSTATE AND INTRASTATE TRANSACTIONS.

Even though the field sought to be covered by state legislation is within the second class, as defined by this court in the case of Covington Bridge Company vs. Kentucky, 154 U. S., 204, supra, viz., those cases in which the states may, in the absence of legislation by Congress, act, nevertheless it may also lie within the scope of an important corollary to that rule, and the legislation may yet be void. The corollary is that any state regulation though prima facie local in its nature, must not be so drawn or applied as to operate as a discrimination against interstate commerce. Numerous cases have applied this rule, or recognized its existence.

In Ward v. Maryland, 12 Wallace, 418, the Maryland statute required all traders to apply for a license and pay a fee which in the case of a resident was graduated from twelve dollars to one hundred and fifty dollars, according to the value of the stock, but in the case of a non-resident selling imported goods, the fee was fixed at three hundred dollars. The statute was held void, the majority of the court basing their decision on the equal privileges and immunities clause while the minority concurred upon the additional ground of the commerce

clause. In the course of the majority opinion it was said that the statute

> "either works a complete prohibition of all commerce from the other states in goods to be sold by sample within the limits of the described district, or at least creates an unjust and onerous discrimination in favor of the citizens of the state enacting the statute."

In Woodruf v. Parham, 75 U. S., 123, the court expressly upheld a tax of the city of Mobile, but only because it was uniform and imposed alike upon all property within the city. The court expressly said, however:

> "There is **no attempt to discriminate injuriously against the products of other states, or the rights of their citizens**, and the case is not, therefore, an attempt to fetter commerce among the states, or to deprive the citizens of other states of any privilege or immunity possessed by citizens of Alabama. **But a law having such operation would**, in our opinion, be an infringement of the provisions of the constitution which relate to those subjects, and therefore, void."

The case of Weldon v. Missouri, 91 U. S., 275, is in point. There the court reviewed a statute of Missouri imposing a peddler's license tax upon persons going from place to place to sell wares not the product or manufacture of the state and not imposing a like tax upon the sale of similar articles, the growth, product, or manufacture of Missouri. This was a discrimination and the act imposing the tax was held bad, Mr. Justice Field saying:

> "Imposts operating as an absolute exclusion of the goods would be possible, and all the **evils of discriminating state legislation, favorable to the interests of**

one state and injurious to the interests of other states and countries, which existed previous to the adoption of the constitution might follow, and the experience of the last fifteen years shows would follow from the action of some of the states."

In Guy v. Baltimore, 100 U. S., 434, an ordinance of the ity of Baltimore imposing wharfage dues upon vessels rriving from other states and not upon those from other arts of the state, was before the court for review. The ourt held the ordinance unconstitutional. Mr. Justice larlan, in delivering the opinion, said:

"It must be regarded as settled that no state can, consistently with the federal constitution, impose upon the products of other states brought therein for sale or use, or upon citizens because engaged in the sale therein, or the transportation thereto, of the products of other states, more onerous public burdens or taxes than it imposes upon the like products of its own territory. * * * Under the authority of the state, it may also exact wharfage fees, equally, from all who use its improved wharves, provided such charges do not exceed what is fair remuneration for the use of its property. But it cannot employ the property it thus holds for public use so as to hinder, obstruct or burden interstate commerce in the interest of commerce wholly internal to that state."

Another case is that of Walling v. Michigan, 116 U. S., 46. There the state had passed a law imposing a specific ax on persons engaged in the sale of liquors to be shipped nto the state without imposing a like tax on persons sell- ng liquors manufactured in the state. The court held

this a clear discrimination. In the course of the opinion Mr. Justice Bradley said:

> "A discriminating tax imposed by a state, **operating to the disadvantage of the products of other states** when introduced into the first mentioned state, is, in effect, a regulation in restraint of commerce among the states, and as such is a usurpation of the power conferred by the constitution upon the congress of the United States."

In the case of Minnesota v. Barber, 136 U. S., 313, the state of Minnesota passed a law, the title of which declared it to be passed for the protection of the public health, and hence a police measure. It required the inspection of all cattle, sheep and swine slaughtered for human food. This inspection was to be made four hours before the slaughter of the animal. Any person selling the meat of animals not so inspected was punished. The law on its face applied to every one without regard to his selling meats from animals raised in the state or animals brought in. The court declared it to be one thing to exclude from its limits cattle, sheep or swine actually diseased or meats by their condition unfit for use, but an entirely different thing to interdict the sale of meat from animals not slaughtered in the state. The act was held unconstitutional.

As another instance of the non-discriminatory treatment which the Supreme Court exacts of a state when it attempts to deal even with matters embraced in the second class, we refer to the case of Brimmer v. Redman, 138 U. S., 78. The court had before it an act of Virginia passed undoubtedly under its police power, for its pre-

amble recited the fact that unwholesome meats were being sold in Virginia and then declared it unlawful to sell in the state any fresh meats which had been slaughtered one hundred miles or over from the place at which it was offered for sale, except and until it had been inspected and approved by inspectors provided for by the act. The act also imposed the duty upon all persons before offering for sale any meats so slaughtered to apply to the inspectors to have the same approved. The court declared the act a **discrimination against meats from other states** and unconstitutional. Mr. Justice Harlan said:

> "Undoubtedly, a state may establish regulations for the protection of its people against the sale of unwholesome meats, provided such regulations do not conflict with the power enforced by the constitution upon congress, or infringe rights granted or secured by that instrument. But it may not, under the guise of exerting its police power, or of enacting inspection laws, **make discriminations against the products and industries of some of the states in favor of the products and industries of its own or of other states.** The owner of the meats here in question, although they were from animals slaughtered in Illinois, had the right under the constitution, to compete in the markets of Virginia, upon terms of equality, with the owners of like meats, from animals slaughtered in Virginia or elsewhere within one hundred miles from the place of sale. Any local regulations which, in terms or by its necessary operation, denies this equality in the markets of a state, is, when applied to the people and products or industries of other states, a direct burden upon commerce among the states, and therefore void. * * * Nor can this statute be brought into harmony with the constitution by the circumstances that it purports to apply alike to the citizens of all the states, including Virginia; for a burden imposed by a state upon inter-

> state commerce is not to be sustained simply because the statute imposing it applies alike to the people of the state enacting such a statute."

In Darnell & Son v. Memphis, 208 U. S., 113, the state statute was held void which imposed a tax on persons not residing within the state who engaged in selling imported liquor while no tax was imposed on those selling domestic liquors. The court said that while the state had taxed articles imported from another state after the same had become massed with the general property within the state this rule had—

> "always expressly excluded the conception that a state could, without directly burdening interstate commerce, discriminate against such property by imposing upon it a burden of taxation greater than that levied upon domestic property of a like nature."

In Voight vs. Wright, 141 U. S., 62, the State of Virginia had passed a law requiring an inspection of all flour brought into the state and imposing a fee therefor, and providing for **no inspection of home flour**, was declared to be a discrimination against the products and industries of other states in favor of its own, and so unconstitutional and void.

No argument is needed to show that the rules governing interstate commerce apply as well to that entering as that leaving the territory of a state. Upon this a well-known writer (Cook on the Commerce Clause, Section 61), expresses himself as follows:

> "Although the question of the validity of restrictions imposed under authority of a state more fre-

quently arises with reference to transportation out of the state, it seems clear enough that, so far as concerns such question, there is no substantial distinction between transportation into and transportation out of the state, whether of property or of persons."

This court has, in a recent case, confirmed the statement of this author. In the case of West vs. Kansas Natural Gas Co., 221 U. S., 229, supra, Mr. Justice McKenna, in delivering the opinion of the court declaring invalid a statute of Oklahoma which restricted the **exportation** of natural gas, said, 221 U. S., at 262:

> "This discrimination is beyond the power of the state to make. As said by the Court of Appeals in the eighth circuit, no state can, by action or inaction, prevent, unreasonably burden, **discriminate against**, or directly regulate, interstate commerce, or the right to carry it on."

See also Coe vs. Errel, 116 U. S., 517.

VI.

THE STATUTE OF WEST VIRGINIA DISCRIMINATES AGAINST INTERSTATE COMMERCE IN NATURAL GAS.

The manifest intent of the statute is that the wants of consumers in West Virginia shall be fully satisfied out of the supply of gas available, in preference to the consumers in other states. Its necessary effect is that the consumers in other states can obtain only what is left after the wants of West Virginia consumers are fully met. The consequence of the enforcement of the statute will be

not merely a reduction of the total amount of gas available for consumers outside of the state by the amount diverted to consumers within the state but such irregularity and uncertainty in the supply available for outside consumers as will in large measure forthwith and eventually altogether make it impracticable for them to continue the use of natural gas.

The intent of the statute appears (1) from a consideration of the nature and conditions of the business to which it applies, (2) from the history of the events attending the enactment of the statute and (3) from the averments of the answer interposed by the State of West Virginia.

(1) The system of pipe lines is a natural development. Companies organized for the distribution of natural gas in centers of population have sought their supply further and further afield as the local supply has become exhausted or, by reason of increased demand, has become inadequate. The owners of gas producing territory have sought more remote markets for the gas which they have produced in excess of the requirements of the markets nearer at hand. The growth of the system has been substantially independent of state lines, the most available fields or most favorable markets being sought without reference to their location upon either one or the other side of a state line. In some cases the same company distributes gas in two or more states. In other cases the companies in one state turn over gas for distribution in other states. There are a multitude of contracts and relations between the companies, which have grown up in the ordinary course of business development and which have been hereinbefore referred to.

In the course of events West Virginia has become a great source of supply for the other states. There has been no discrimination against her in those cases where gas has been taken out of the state by public service corporations operating both within and without the state; the customers within and without the state have been treated alike. In nearly all of the contracts under which West Virginia gas has been sold by West Virginia companies to other companies for distribution, the contracts of sale have reserved a preference for the domestic consumers of the selling companies. The business is regulated by principles that are the outgrowth of the peculiarities of the business. Inasmuch as the demand for domestic consumption, that is to say, for heating houses and other domestic uses, varies enormously from one season of the year to another and even from day to day and the demand for domestic purposes must always be met if the business is to continue, a preference is always given to domestic consumption over industrial consumption. If the weather is very cold or there is any other cause of shortage, the industrial consumption is cut down or cut off in order that the domestic consumption may be maintained. This principle has prevailed throughout West Virginia, Pennsylvania and Ohio.

The production of natural gas and the capacity of the transportation systems are not more than sufficient generally to meet the domestic demand in periods of cold weather. As an economic proposition, it would be impossible to make them so. The consequence is that everywhere in periods of very cold weather, all available gas

is necessary to supply the domestic consumption. When the West Virginia statutes declares that the wants of West Virginia consumers, industrial and miscellaneous as well as domestic, shall be fully supplied at all times, the necessary meaning is that in periods of cold weather the wants of West Virginia consumers must be supplied at the expense of consumers in other states because, (a) there is no source from which the gas can be obtained except by a curtailment of the amount going into other states and (b) because if the first section of the statute does not mean this it adds nothing to the existing public service law. See the West Virginia Public Service Act, Sections 4, 5, 7 and 23, found on pages 55, 56, 57 and 67, respectively, of the defendant's answer. See also Carnegie Natural Gas Co. vs. Swiger, 72 W. Va., 557, 46 L. R. A., N. S., 1073.

(2) The circumstances preceding and attending the enactment of the statute may properly be referred to to show its intent. The testimony of Governor Cornwell of West Virginia (Record, pp. 1195, 1196), hereinbefore referred to, shows that the agitation for this statute began with the manufacturers and other consumers around Clarksburg, West Virginia, and that with the approach of cold weather, the season during which the gas companies have great difficulty in furnishing an adequate supply of gas even for domestic consumers, these manufacturers sought to have relief from the shortage of the gas supply for manufacturing purposes, by the enactment of this statute. It is apparent, then, that those who sought the enactment of the law, and the legisla-

ture which enacted the law, must have intended that the manufacturing interests of West Virginia should be furnished an adequate supply of natural gas at the expense even of domestic consumers in other states. The discrimination, then, which is apparent in the language of the statute, is equally apparent in its history and the circumstances surrounding its enactment.

(3) The answer declares that the purpose of the statute is to provide for the requirements of the inhabitants of West Virginia. It declares whatever effect the enforcement of the statute has on the inhabitants of other states is direct and incidental. The answer also, however, declares that there is a shortage of natural gas in periods of cold weather; that the situation has to be met by a curtailment either of the use to which gas is put or of the area over which it is distributed; that the inhabitants of West Virginia have a prior claim upon gas originating in West Virginia and, in effect, that the statute is enacted to enforce this prior claim.

The consequence of the enforcement of the statute will, of course, be that on cold days when the West Virginia domestic consumption will rise to its peak the industrial consumption in West Virginia will not be cut down or cut off but will continue at the expense of the domestic consumption in other states. But the effect of this will not be limited to depriving Pennsylvania and Ohio of the amount of additional gas consumed in West Virginia. If the effect were only to retain for use within the state ten per cent. of the gas now going out of the state, this would probably be enough to completely ruin the busi-

ness of distributing gas for domestic purposes outside of the state. The reason is that this ten per cent. would all be retained during a few days of great severity and the domestic service which would be liable to fail in severe weather would therefore be useless in all weathers.

That the fulfilment of the requirements laid down in the statute in question would be at the expense of the gas consumers in other states now dependent upon West Virginia gas for their supply, is shown conclusively by the determination of the Public Service Commission of West Virginia in its decision of the case of Kelly Axe Mfg. Co. vs. United Fuel Gas Company, P. U. R. A. 289. At page 294 of this report the Commission said of the defendant, The United Fuel Gas Company, which is, as appears from the record in this case, one of the largest producers and transporters of natural gas in West Virginia:

> "The defendant delivers its gas to its consumers in West Virginia and to the distributing companies in Ohio through one system of pipe lines and from the same gas fields in West Virginia. It appears from the record that the defendant has a sufficient production or supply of natural gas in the State of West Virginia to furnish a reasonably adequate supply of gas to all of its consumers in the State of West Virginia. It does not affirmatively appear from the record that the defendant has a sufficient supply or production of gas in the State of West Virginia to furnish a reasonably adequate supply of gas to all of its consumers in West Virginia without interfering with the supply of gas demanded of the defendant for the consumption of the distributing companies in the State of Ohio."

The purpose of the statute, as disclosed on its face and by the averments of the answer, is to regulate interstate commerce in natural gas to the advantage of West Virginia and at the expense of the other states. It gives to all industrial consumers in West Virginia and also to local public service companies which have not maintained their sources of supply an option to be exercised at any time upon the gas otherwise available for distribution in other states.

The principle of the entire statute is the full supply of the wants of the residents of West Virginia at the expense of the residents of other states. The statute deals with an industry in which the available supply of gas is distributed by the different agencies concerned among their customers, without regard to state lines and according to equitable principles that have become generally established. It seeks to establish in place of this method of distribution a scheme by which the residents of West Virginia will in every respect have a preferential right in West Virginia gas.

There is no doubt that the West Virginia statute is intended to work a discrimination in favor of the inhabitants of West Virginia and there is no doubt that its practical effect would be to place the inhabitants of other states at a very great disadvantage in comparison with West Virginia residents. Instead of a system under which consumers of natural gas everywhere bear their share of any shortage, according to equitable principles, the statute would establish a system by which the entire hardship due to a shortage must be borne by the inhab-

itants of other states to the exoneration of the inhabitants of West Virginia. Because the statute intends and in its practical operation would bring about a discrimination against interstate commerce, it is void as a direct burden upon such commerce. It is not necessary to the position of the complainants to maintain that the statute in its practical operation would entirely prohibit the exportation of gas from West Virginia, as was the case with the statute under consideration in West v. Kansas Natural Gas Co., 221 U. S., 229, nor is it necessary for the plaintiffs to maintain that the regulation of interstate commerce in natural gas is so exclusively within the domain of congress as to render void every state action in any way affecting such commerce. The fact that the statute works an intentional and substantial discrimination condemns it equally whether or not the discrimination is in degree equivalent to prohibition. The same element of intentional and substantial discrimination makes it unnecessary to consider just where the line is to be drawn between what a state may and may not validly do in the way of regulations incidentally affecting interstate commerce in natural gas.

In Pennsylvania Gas Co. v. Public Service Commission, 252 U. S., 23, it was held that the Public Service Commission of New York, in the absence of legislation by congress, had jurisdiction over the rates charged to local consumers by a public service company bringing in its gas from another state. But there is no question that the action of the Public Service Commission would have been void had it sought to compel the company to pre-

fer its New York consumers over its consumers in other states.

On page 33 of the answer the defendant admits that the enforcement of the statute will "indirectly and incidentally diminish" the supply of gas transported to Ohio, unless the production of gas be increased, which the pleadings admit and the evidence shows to be impracticable. The naive suggestion is made at this point in the answer that the answer to the question, "Whether or not the quantity thereof transported to, or for use in Ohio or any other state will be appreciably decreased will depend in a large degree upon the apportionment of the gas transported from West Virginia by said seven companies among the several states, **other than West Virginia**, desiring to consume the same." This is another way of saying that, after West Virginia has secured her needs and "desires" she is quite willing that the state which has the next chance at the supply may adopt similar measures to secure her wants.

> "And yet we have said that 'in matters of foreign and interstate commerce there are no state lines.'"
>
> West vs. Kansas Natural Gas Co., supra.

The defendant's answer again admits the discriminatory character of the legislation, on page 37 of the answer. In the face of the language of the act in question, which, in Section 1, requires an adequate supply,

> "whether for domestic, industrial, or other consumption, **within this state,**"

and in Section 2 requires gas companies to extend their

territory by making connections with other companies which they have never served nor held themselves out to serve, the answer suggests to the State of Ohio that with reference to the inadequacy of supply which exists and will be suggested by the discrimination in favor of west Virginia,

> "The remedy therefore must be the contraction by internal regulation of the State of Ohio, of the territorial scope of service of distribution and of the number of its consumers."

Defendant's answer, page 37. The discrimination is deliberate, intentional, but accompanied with humanitarian suggestions as to how to avoid its inevitable consequences.

The statute does not lay down any general rule of public service duty. It requires that owners and transporters of gas disregard all known rules of public service duty. Its discriminatory purpose and effect are obvious in the following provisions:

1. It does not make nearness to the source of production the test as to whether a consumer or community shall have a preferred right to a gas supply. It makes state lines the controlling thing. All persons and communities **inside the state** shall be fully supplied before any gas is transported outside the state. Distance is immaterial, and the state line is made the point of division between those whose rights are preferred and those whose rights are disregarded. It will be noted that, so far as persons and communities inside the state are concerned, the test of the right to service is, by the second

section of the statute, made to depend upon the ability of the gas company to adequately supply its present consumers and communities inside the state, and no new consumers need be connected unless there is a surplus.

2. Priority of time of connection with the lines of the gas company gives no right whatever to companies or consumers or communities located **outside the State of West Virginia. Inside the state**, as we have just pointed out, priority of connection with the lines gives an absolute priority of right to service and no new communities or consumers need be connected unless there is a surplus beyond an adequate supply for present consumers.

3. All consumers "**within this state**" are entitled to have their wants and "**desires**" fully supplied for every purpose "whether for domestic, industrial or other consumption," before even the most preferred class of consumers, namely, the domestic consumers, outside the state are entitled to a single foot of gas. It will be observed here that this discrimination is in complete violation of what West Virginia herself recognizes as public utility duty. From the testimony of Mr. Lewis, a member of the Public Service Commission of West Virginia (record, page 1298), it is shown that by the rule of the Public Service Commission of West Virginia, in case of a shortage, domestic consumers are preferred and industrial consumers are shut off. That is the rule, then, "**within the state.**"

These discriminations show clearly that it was not the purpose, and will not be the effect, of the statute in question to lay down any rule of public service duty generally

applicable "with eyes blinded to state lines." In every application of the statute, the duty laid down ends at the state lines, and, by consequence, requires the contrary treatment by these companies of their consumers beyond the state lines.

We conclude, then, upon this point, that, even though the statute in question should be deemed to be of such a nature that it would fall within the general scope of class 2, according to the classification made by this court in the case of Covington Bridge Co. vs. Kentucky, 154 U. S., 204, nevertheless, it is clearly unconstitutional because its whole purpose and effect is to discriminate against the movement of natural gas in interstate commerce and the rights and privileges of consumers of natural gas, located outside the boundaries of West Virginia, the discrimination being made to depend solely upon the location outside the state.

No gas company could comply with this statute, without locating at the point where its lines cross the state lines, a means for the physical stoppage of the flow of natural gas. Its duties with reference to two consumers, neighbors, would be entirely different, if those neighbors were on opposite sides of the state line, and the only method by which the gas company could observe the provisions of the statute would be by installing a gate or valve in its lines between these two consumers so that it could supply the intrastate consumer adequately for all purposes "whether for domestic, industrial or other consumption," before his neighbor across the state line would be entitled to a foot of gas. It should be noted that

o claim is made that this statute is a conservation meas-
ıre. It is not, of course, since its enforcement would re-
ıuire that the producing gas companies, in order to com-
ly with its provisions, and at the same time attempt to
ıeet their legal obligations and public service duties to
heir millions of consumers in states other than West
irginia, and to protect investments worth hundreds of
illions of dollars in those states from practically im-
ıediate destruction, should produce gas from all of their
serve territory as rapidly as possible. The consequence
ould be, of course, a wasteful orgy of gas consumption
hich would in a very short time completely consume
ıe available supply, and the sooner destroy millions of
ollars in value of property both inside and outside the
tate of West Virginia.

VII.

HE STATES HAVE NO RIGHT TO DEFINE THE SUBJECTS OF INTERSTATE COMMERCE, BUT THAT DEFINITION MUST BE MADE BY THE COURT, IN ACCORD WITH THE GENERAL UNDERSTANDING OF THE COMMERCIAL WORLD.

In the first paragraph of Section X. of the answer of
e State of West Virginia appears the following lan-
ıage:

> "While this defendant admits that gas is or may be an article of interstate commerce, yet this defendant denies that gas placed in mains or pipes by public service gas companies, is either in interstate commerce or a legitimate article of interstate commerce,

> unless and until it has reached the point where it is no longer subject to the public service in West Virginia, and the duties imposed by law upon public service gas companies have been observed and performed by them; and denies that the requirement of the performance or observance of the duties owed by such companies is an interference with interstate commerce or a burden thereon."

This statement of the answer shows that the legislation in question is an attempt on the part of West Virginia to define, in accordance with its own peculiar views, the proper articles of interstate transportation. This is an expedient which has been often tried, in order to evade the commerce clause of the constitution, but it has always failed, as this must fail, since it would amount to a nullification of this clause.

In the case of Bowman vs. R. Co., 125 U. S., 465, this court held that the question whether an article is or is not subject of commerce is to be determined by the usages of the commercial world, and does not depend upon the declaration of any state. In that case it was held that the State of Iowa could not forbid the transportation of liquor into its territory notwithstanding the prohibition laws of that state. Mr. Justice Matthews, in the opinion in that case, said:

> "Can it be supposed that, by omitting any express declarations on the subject, congress has intended to submit to the several states the decision of the question in each locality of what shall and what shall not be articles of traffic in the interstate commerce of the country? If so, it has left to each state, according to its own caprice and arbitrary will, to discriminate for or against every article grown, pro-

duced, manufactured, or sold in any state, and sought to be introduced as an article of commerce into any other. If the State of Iowa may prohibit the importation of intoxicating liquors from all other states, it may also include tobacco, or any other article, the use or abuse of which it may deem deleterious. It may not choose, even, to be governed by considerations growing out of the health, comfort, or peace of the community. Its policy may be directed to other ends. It may choose to establish a system directed to the promotion and benefit of its own agriculture, manufactures, or arts of any description, and prevent the introduction and sale within its limits of any or all articles that it may select as coming into competition with those which it seeks to protect. The police power of the state would extend to such cases, as well as to those in which it was sought to legislate in behalf of the health, peace and morals of the people. In view of the commercial anarchy and confusion that would result from the diverse exertions of power by the several states of the Union, it cannot be supposed that the constitution or congress has intended to limit the freedom of commercial intercourse among the people of the several states."

* * *

The doctrine of the Bowman case has been approved in Leisy v. Hardin, 135 U. S., 100, and Long vs. Michigan, 135 U. S., 161. See also Adams vs. Kentucky, 214 U. S., 218. The fact that this and other courts have repeatedly held natural gas to be a legitimate object of commerce and that it is regarded as a desirable commodity by all persons who can get it, and that all of the litigation upon the matter in the various courts has been caused by a desire to keep this valuable commodity, and to restrict the exportation of it, while in no case has there been any

effort to prevent the importation of it, clearly stamp natural gas as a legitimate commercial commodity. It can not be classed with diseased animals and meats, contraband of commerce, while states are striving for the right to share in it.

VIII.

THERE IS NO PUBLIC SERVICE DUTY OWED TO THE CONSUMERS INSIDE THE STATE OF WEST VIRGINIA WHICH JUSTIFIES THIS LEGISLATION PREVENTING OR RESTRICTING THE INTERSTATE TRANSPORTATION OF GAS.

It is claimed, on page 36 of the defendant's answer, the language of which has been hereinbefore quoted, that the fact that the possessors of gas, inside the state will be, under the act in question, burdened with a statutory duty to give a preference to consumers "within the state," and that therefore only such amount of gas as may remain after that duty is fulfilled is the legitimate subject of interstate commerce. This claim assumes the constitutionality of the legislation, and seeks to justify the restriction upon interstate commerce by pointing to the statute, when the validity of the statute is the whole question in this litigation.

It cannot be seriously claimed, even if there would be any advantage in so claiming, that the statute in question is merely declaratory of the common law relating to public service duty. One of the chief objects of the common law of public service was the prevention of dis-

crimination by a public service company. The act in question **requires discrimination** against the consumers outside the state, and seriously punishes a refusal to discriminate against them. The discriminatory nature of the statute has been discussed by us more fully in Division VIII. of this brief, **supra.**

The case of Vandalia Coal Co. et al. vs. Special Coal and Food Commission of Indiana et al., 268 Fed., 572, decided on Nov. 27, 1920, by the District Court for the District of Indiana, consisting of Baker and Page, circuit judges, and Anderson, district judge, bears strongly upon this question. The first two paragraphs of the syllabus of that case are as follows:

> "The Indiana Coal and Food Commission law and orders issued thereunder, requiring coal mines which had contracted to deliver their coal outside the state to sell the same to concerns within the state, is an interference with interstate commerce, and an interlocutory injunction will issue against its enforcement.
>
> Orders of the Indiana Special Coal and Food Commission requiring coal mines to deliver coal to specified concerns within the state, which impair contract obligations of coal mines which had otherwise contracted for their output, are unconstitutional, and will be temporarily enjoined."

The opinion of the court in that case shows that the court assumed, for the purposes of the decision, that the distribution of coal could be regulated by the state substantially as a public utility, yet the court holds that such regulation can not be permitted to interfere with

the right of the owners of coal to transport it beyond the state if they so desired. The court said, in its opinion:

> "First. That the operation of the statute, as indicated by the orders of the commission, is a direct interference with interstate commerce. When the coal is severed from the ground it becomes an article of commerce, and the owner of that commodity, under the commerce clause of the federal constitution (Article 1, Section 8), which recognizes no state lines, has the right, so far as the state is concerned, to sell and to contract to sell his entire output to citizens of other states. The orders are also an interference with interstate commerce by reason of the showing in the bill that the output of three of the five mines contracted to the Pennsylvania Company, an interstate carrier, under a contract meeting the approval of the Interstate Commerce Commission, which approval carries an implied finding of fact that the coal, so used, is directly consumed in, or in aid of, intertsate commerce."

The preliminary assumption made by the court puts the case on all fours with the case at bar. It was a case of an attempt by the state, in the exercise of its powers of regulation over a public utility enterprise to require that enterprise to fully supply all the demands of consumers inside the state, for its product, thus preventing the transportation out of the state of so much of its product as should be demanded inside the state. Thus it appears that state line barriers can not be erected under the guise of requiring adequate service from a public service corporation. The supposed self-interest which would demand that residents of Indiana be given a favored position with reference to the coal produced in that state, and the residents of West Virginia be given a favored posi-

tion with reference to the natural gas produced in that state, is an aggravated form of the same supposed self-interest which has prompted the enactment of every piece of legislation held invalid by this court as in conflict with the commerce clause of the constitution.

The Vandalia Coal Co. case, supra, involving the statute of Indiana, is significant in another respect. This court, in the case of West vs. Kansas Natural Gas Co., supra, decided in 1911, said:

> "The statute of Oklahoma recognizes it to be a subject of intrastate commerce, but seems to prohibit it from being the subject of interstate commerce, and this is the purpose of its conservation. In other words, the purpose of its conservation is, in a sense, commercial, the business welfare of the state, as coal might be, or timber. Both of those products may be limited in amount, and the same consideration of the public welfare which would confine gas to the use of the inhabitants of a state would confine them to the inhabitants of a state. If the states have such a power, a singular situation might result. Pennsylvania might keep its coal, the northwest its timber, the mining states their minerals. And why may not the products of the field be brought within the principle? Thus enlarged, or without that enlargement, its influence on interstate commerce need not be pointed out. To what consequence does such power tend? If one state had it, all states have it; embargo may be retaliated by embargo, and commerce will be halted at state lines. And yet we have said that 'in matters of foreign and interstate commerce, there are no state lines.'"

The language quoted was prophetic. It scotched the tendency to build commercial barriers out of the doctrine of conservation, but now the same tendency arises, to

build a commercial barrier out of a supposed duty of a public utility enterprise to serve adequately all of its consumers who happen to live on one side of a state boundary line, disregarding all others. The consequences of this doctrine, should it prevail, would be fully as bad as the ones pointed out in the West case, **supra**. When it is remembered that more and more enterprises which have been in the past free from public regulation, are now made by legislation the subject of such regulation, which practically puts them within the field of so-called public service companies, it is apparent that the statute involved in this case is as perilous to the doctrine that we are one country, commercially, as were the statutes interdicted by this court in any of the epoch-making cases involving the commerce clause. Shall the latest weapon created to serve state self-interest, "the adequate performance of a public service duty," be permitted to prevail against the principles which have withstood the most ingenious attacks since the constitution was adopted?

The possibility that many enterprises now not regulated may be lawfully brought within the field of public service enterprises is well shown by the language of this court in the case of German Alliance Insurance Company vs. Lewis, 233 U. S., 389, where this court reviewed the cases from Munn vs. Illinois, 94 U. S., 113, and commented upon all of them as follows:

> "The cases need no explanatory or fortifying comment. They demonstrate that a business, by circumstances and its nature, may rise from private to be of public concern, and be subject, in consequence, to governmental regulation. The underlying

> principle is that business of certain kinds hold such a peculiar relation to the public interest that there is superinduced upon it the right of public regulation."

The field has been farther extended since that time and will no doubt be still farther extended as the public interest demands. But it is obvious that if the statute in question here shall prevail, a dire consequence may follow from each such extension, which involves the subject matter or the facilities for interstate commercial intercourse.

The numerous cases in this court involving the question of the right of a state to compel the stopping of interstate trains are in accord with this view. A number of such statutes have been upheld upon the specific ground that they required no more than adequate local service, to which the communities inside the state are, of course, as much entitled as communities outside the state, since the railroad has held itself out to serve all communities where stations are established. L. S. & M. S. Ry. vs. Ohio, 175 U. S., 285; Mo. Pac. Ry. vs. Kas., 216 U. S., 262. It will be observed, however, that the rendering of adequate local service by such a utility as a railroad, as to which there are no physical limitations which prevent the expansion of its facilities as the demands upon it increase, need not at all interfere with its adequate rendering of interstate service. The railroad can handle the local service by local trains, if there is a reasonable demand for such service, and this court has held in numerous cases that if a sufficient local and connecting service is supplied by local trains, then interstate trains may not

be compelled to make stops which would unduly interfere with interstate transportation. Ill. C. Ry. v. Illinois, 163 U. S., 142; Cleveland, etc., Ry. v. Illinois, 177 U. S., 514; Miss. R. Com. v. I. C. Ry., 203 U. S., 335; Atlantic C. Line v. Wharton, 207 U. S., 328; Herndon v. Chicago, etc., Ry., 218 U. S., 135. In these cases the adequate rendering of local service is an aid to interstate commerce rather than an interference with it. However, in the case of a product limited in quantity, such as natural gas, and as to which, unlike a railroad, additional intrastate service cannot be furnished except directly at the expense of interstate service, then certainly there will be no preferential right given to a consumer simply because he happens to be located inside, rather than outside, the boundary line of a particular state. The same rule would doubtless be applied to the railroad cases, if a case should arise in which the rendition of full intrastate service would prevent the rendition of equivalent interstate service. In the case of Miss. R. R. Com. vs. Ill. Cent. R. R., 203 U. S., 335, Mr. Justice Peckham, delivering the opinion of the court, said, with reference to the two conflicting claims:

> "Both claims are to be considered, and after the wants of the residents within a state or locality through which the road passes have been adequately supplied, **regard being had to all the facts bearing upon the subject,** they ought not to be permitted to demand more, at the cost of the ability to successfully compete with its rivals in the transportation of interstate passengers and freight."

Among the "facts bearing upon the subject" in the case now before the court, as shown by the record, are

these: that there is an insufficient amount of natural gas to supply the "desires" of all persons "within the state" and out, who are drawing upon the lines of these companies and have legal rights to do so; that restrictions must be made; that communities not now on the lines can not, in justice to the consumers already being served, be connected; that in the cold weather the available supply should be given to the domestic consumers, and, even they should, if necessary, be required not to use it for their main heating plants. The legislature of West Virginia "had no regard" for these pertinent facts, but by this act seeks to coerce the gas companies to furnish to **the extent of the supplies of gas produced in West Virginia,**" a supply of natural gas reasonably adequate for the purposes, whether domestic, industrial, or otherwise, for which gas is consumed or desired to be consumed, * * * in this state.

The most casual reading of these railroad cases shows that the "desires" of the patrons of the railroads having intrastate facilities have no bearing upon the case. Their **reasonable needs** are, however, to be supplied, if in so doing the railroad is not disabled from similarly serving its patrons beyond the state.

IX.

EMINENT DOMAIN—THE FACT THAT THE COMPANIES WHICH TRANSPORT GAS IN INTERSTATE COMMERCE HAVE EXERCISED THE RIGHT OF EMINENT DOMAIN WITHIN THE STATE OF WEST VIRGINIA, OR HAVE ACCEPTED FRANCHISES OR OTHER PRIVILEGES TO WHICH ONLY PUBLIC SERVICE CORPORATIONS ARE ENTITLED, DOES NOT AMOUNT TO A DEDICATION OF THEIR ENTIRE SUPPLY OF GAS TO THE USE OF THE PUBLIC INSIDE THE STATE OF WEST VIRGINIA.

It is claimed, in the fifth division of the defendant's answer, that since the gas companies which transport natural gas which now moves in interstate commerce have claimed and exercised the right of eminent domain in the State of West Virginia and other franchises and special rights which were and are granted only to public service companies, by and under the laws of West Virginia, gives to the public within the State of West Virginia a preferential right in the gas produced and transported by these companies. This can not be the law. The practice of these companies was exactly the same at the time they were granted these rights, privileges and franchises, as is their practice now. The law of West Virginia, then, as does the law of all other jurisdictions, grants these rights to public service companies, as such

at least if they are furnishing a part of their product or service to consumers inside the jurisdiction which grants these rights. It is not necessary, as is conclusively shown by the fact that these companies have been granted these rights by the State of West Virginia, that both termini of their lines or all lines connected with them and served by them, lie inside the state. The Supreme Court of Appeals of the State of West Virginia adjudicated this matter in the recent case of Carnegie Natural Gas Co. vs. Swiger, 72 W. Va., 557, at 572, 46 L. R. A., ns., 1073. Miller, J., delivering the opinion of the court, said:

> "But it is argued that but few persons are or will be served in West Virginia by the proposed pipe line; that most of the gas is and will be transported into Pennsylvania; that the petitioner is a corporation under the laws of Pennsylvania, and that its principal business is to produce gas and transmit it into that state, and that the sovereign right of eminent domain is properly limited to the service of the people of the state where the power is invoked. While the petitioner is a foreign corporation, it avers and proves its authority to do business in this state. Having obtained authority to do business here, Sec. 30, Chap. 54, Code 1906, confers upon it the same rights, powers and privileges, and imposes upon it the same duties and liabilities, and subjects it to the same rules and regulations, as domestic corporations. Floyd v. National Loan and Invest. Co., 49 W. Va., 327, 54 L. R. A., 536, 87 Am. St. Rep., 805, 38 S. E., 653. Section 24, Chapter 52, of the code provides that 'such company shall, for the purpose of transporting natural gas, oils and water, be considered and held to be a common carrier, and subject to all the duties and liabilities of such carriers under the laws of this state.' The petition avers, and the evidence shows, that petitioner is serving many persons in this state with gas. True, but few at present are

being served by the particular line in question, but it avers and proves its willingness to serve all persons applying, subject to its proper rules and regulations. It avers and proves that it has fixed reasonable prices and rates for such service. If the petitioner is serving the people of West Virginia with gas, and all who apply, as it avers and proves, it can not be denied the right of eminent domain because it serves the people in another state into which its pipe lines go. There is not a particle of evidence in the case showing or tending to show, that petitioner has ever neglected its duty toward the people of this state. That but few are shown to be taking gas from the particular line sought to be extended through defendant's land is of little consequence. The petitioner is seeking business. Practically the same objections were interposed to the rights of the petitioner in Pittsburgh Hydro-Electric Co. v. Liston, and were met in the same way that we have met them here."

The duty of these gas companies, then, under the law of West Virginia, is the ordinary public service duty to serve adequately all consumers which it has held itself out to serve, either by its practice or by lawful contracts made in that behalf, to the extent of its available supply of the produce furnished. This duty does not begin nor end at state boundary lines. The right of a consumer beyond the boundaries of the State of West Virginia, but on the lines of the company, is just as much entitled to be protected under the public service law as is the right of a consumer inside the State of West Virginia.

X.

NATURAL GAS IS IN INTERSTATE COMMERCE IF IT IS IN THE COURSE OF TRANSPORTATION TO ANOTHER STATE, ALTHOUGH IT IS MINGLED WITH GAS WHICH IS NOT INTENDED TO BE TRANSPORTED OUT OF THE STATE.

It may be contended that, since most of the gas companies in West Virginia which own and transport the gas which is furnished to consumers in Ohio and other states, also supply gas direct to consumers, or in some instances to distributing companies, inside the State of West Virginia, none of the gas which is transported by these companies is in the course of transportation in interstate commerce. We believe that such a contention, if made, would be so obviously unsound as to hardly require an answer, but, out of an abundance of caution, we discuss the matter at this point.

In the case of Swift & Co. vs. United States, 196 U. S., 375, Mr. Justice Holmes made this statement of fundamental principles:

> "Commerce among the states is not a technical legal conception, but a practical one, drawn from the course of business. When cattle are sent for sale from a place in one state, with the expectation that they will end their transit, after purchase, in another, and when in effect they do so, with only the interruption necessary to find a purchaser at the stockyards, and when this is a typical, constantly recurring course, the current thus existing is a current

> of commerce among the states, and the purchase of the cattle is a part and incident of such commerce. What we say is true at least of such a purchase by residents in another state from that of the seller and of the cattle."

In the case of Ohio R. R. Commission vs. Worthington, 225 U. S., 101, 106, 108, (1912), the facts were that coal was being transported by the defendant in error from a coal field in Ohio to the ports of Huron and Cleveland on Lake Erie, from which points the bulk of the coal was to be carried by lake vessels to ports in other states or in Canada. The Ohio Railroad Commission claimed that transportation, as far as the lake ports, was intrastate, and hence fixed the freight rates for this transportation. The court held that the act of the Ohio commission was void, as an attempted regulation of interstate commerce, and Mr. Justice Day, at page 108 of the report, said:

> "It is true, as argued by the learned counsel for the commission, that this coal may be accumulated in large quantities at Huron, and only taken out of the accumulated lots from time to time, when it is to be put upon vessels and shipped out of the state; but it must always be remembered that this 70 cent rate applies solely to such coal as is in fact placed upon vessels for carriage to beyond the state points, and as the Circuit Court said, **the substance of things is not changed by the fact that a small part may be unloaded at one of the Ohio islands in Lake Erie.** The situation then comes to this, that the rate put in force is applicable only to coal which is to be carried from the mine in Ohio to the lake, there placed upon vessels and thence carried to upper lake ports beyond the state. By every fair test the transportation of this coal from the mine to the upper lake ports is an interstate carriage, intended by the parties to be

such, and the rate fixed by the commission, which is in controversy here, is applicable alone to coal which is thus, from the beginning to the end of its transportation, in interstate carriage, and such rate is intended to and does cover an integral part of that carriage, the transportation from the mine to the Lake Erie port, the placing upon the vessel and the trimming or distributing in the hold, if required, so that the vessel may complete such interstate carriage."

On page 106 of the same case, Mr. Justice Day said:

"It appears that all the coal shipped at the lake cargo rate remains on the cars of the complainant until unloaded into a vessel, unless it should be diverted en route and devoted to some other purpose, but in that case the lake cargo rate does not apply. For instance, if it should be diverted to commercial use at Huron, the rate on commercial coal, which is $1 a ton, would govern.

There is testimony to the effect that when the coal leaves the mines it is not known in what vessel it will be loaded, nor to what particular ultimate destination it will go, and that sometimes such coal is sold and vessels arranged for after the coal is at Huron, but it is subject to demurrage charge if it remains on the cars beyond a specified time."

The Worthington case goes much farther than is required by the facts of the instant case. In the Worthington case the normal course of transportation was for the bulk of the coal to be transported interstate, but there were no contracts or other obligations which in fact fixed its destination beyond the boundaries of the State of Ohio. The owners of the coal had the full right, as far as appears, to divert the coal to local uses, and in practice, some of it was so diverted. Nevertheless, the nor-

mal course of transportation was interstate, and the commerce was held to have that status.

This court has held in the cases of Texas and N. O. R. R. vs. Sabine Tram Co., 227 U. S., 111, (1913), and R. R. Commission of La. vs. Texas and Pacific Ry. Co., 229 U. S., 336, (1913), that, when shipments are made to a port, of goods which are in fact, and in the regular course reshipped to a foreign destination, the goods are in interstate commerce, although the bills of lading are local and the goods will have to be reshipped to their foreign destination.

In the case of Texas and N. O. R. R. Co. vs. Sabine Tram Co., supra, Mr. Justice McKenna said, at page 130 of the opinion:

> "The lumber was ordered, manufactured and shipped for export * * * and the shipment was not an isolated one, but typical of many others which constituted a commerce amounting in the year 1905 to 14,667,670 feet of lumber and in the year 1906, 39,554,000 feet. Nor was there a break in the sense of the interstate commerce law and the cited cases, in the continuity of the transportation of the lumber to foreign countries by the delay and its trans-shipment at Sabine."

The applicability of this language to the instant case is striking. Here the gas is produced, compressed and shipped for export. The exportation is a constantly recurring process, amounting to billions of cubic feet of gas per year. By every practical conception of the term "interstate commerce" the transportation of this gas is interstate.

And the interstate character of the gas so moved is not

changed though it is, in the state of its production, mingled with gas which is not intended to be transported out of the state or when in the state of its destination it is intermingled with gas of local production.

In the case of People ex rel. Pennsylvania Gas Co. v. Saxe, 229 N. Y., 446, the Court of Appeals held that a franchise tax measured by gross earnings, from all sources within the state, could not be imposed upon the business of a Pennsylvania gas company in transporting gas from Pennsylvania into New York and mingled with gas of local production before delivery. The court held the business corresponding to the amount of the foreign gas to be interstate commerce, upon authority of Pennsylvania Gas Co. v. Public Service Comm., 225 N. Y., 397; 252 U. S., 23; Ratterman vs. W. U. Tel. Co., 127 U. S., 411.

Again, in the case of R. R. Commission of Louisiana vs. Texas and Pacific Ry. Co., 229 U. S., 336, **supra**, Mr. Justice McKenna said, after citing the cases bearing upon this question:

> "The principle enunciated in the cases was that it is the essential character of commerce, not the accident of local or through bills of lading, which determines federal or state control over it. And it takes character as interstate or foreign commerce when it is actually started in the course of transportation to another state or to a foreign country."

In the case of Public Utilities Commission vs. Landon, 249 U. S., 236, at 245, Mr. Justice McReynolds, in the course of the opinion, said:

> "Interstate commerce is a practical conception and what falls with it must be determined upon consider-

ation of established facts and known commercial methods."

In Western Union Telegraph Company vs. Foster, 247 U. S., 105, (1918), where the point involved was whether stock quotations from the New York Stock Exchange delivered in Boston were in interstate commerce until their receipt at the broker's office in the latter city, Mr. Justice Holmes says, at page 113:

> "If the normal, contemplated and followed course is a transmission as continuous and rapid as science can make it from exchange to broker's office, it does not matter what are the stages or how little they are secured by covenant on bond. * * *
>
> Practice, intent and the typical course, not title, or niceties of form, were recognized as determining the character * * *.
>
> It is admitted that the transmission from New York to Massachusetts by the telegraph company was interstate commerce. If so, it continued such until it reached 'the point where the parties originally intended that the movement should finally end.' Illinois Central R. R. Co. v. Louisiana R. R. Commission, 236 U. S., 157, 163."

In the case of Rearick vs. Pennsylvania, 203 U. S., 507, Mr. Justice Holmes, delivering the opinion of the court, said:

> "'Commerce among the several states' is a practical conception not drawn from the 'witty diversities' (Yelv. 33) of the law of sales. Swift & Co. v. United States, 196 U. S., 375, 398, 399. The brooms were specifically appropriated to specific contracts, in a practical, if not a technical sense. Under such circumstances, it is plain that, wherever might have been the title, the transport of the brooms for the

purpose of fulfilling the contracts was protected commerce."

The fact that in some cases the title to the gas changes in the course of the transportation from West Virginia into Ohio, does not prevent the transportation from being considered as interstate commerce. This principle was set forth by this court in Swift & Co. vs. United States, 196 U. S., 375, hereinbefore quoted from, in which case Mr. Justice Holmes, delivering the opinion of the court, said, at pages 398, 399:

> "Taking up the latter objection first, commerce among the states is not a technical legal conception, but a practical one, drawn from the course of business. When cattle are sent for sale from a place in one state, with the expectation that they will end their transit, after purchase, in another, and when in effect they do so, with only the interruption necessary to find a purchaser at the stockyards, and when this is a typical, constantly recurring course, the current thus existing is a current of commerce among the states and the purchase of the cattle is a part and incident of such commerce. What we say is true at least of such a purchase by residents in another state from that of the seller and of the cattle. And we need not trouble ourselves at this time as to whether the statute could be escaped by any arrangement as to the place where the sale in point of law is consummated. See Norfolk & Western Ry. v. Sims, 191 U. S., 441."

See also Gulf, Colorado and Sante Fe Ry. Co. vs. Texas, 204 U. S., 403, (1907).

The evidence in this case shows that more than 80 per cent. of the natural gas which enters the lines of the companies which transport gas interstate, is in fact and in

practice taken across the state lines, the remainder, of course, being distributed inside the state. (Record, p. 997). Those percentages are practically fixed by the contracts of these companies with consumers and other companies inside and outside the State of West Virginia, and by their public service obligations inside and outside the state.

The conception that, of a given mass of gas, 80 per cent. of the mass is in interstate commerce, and the other 20 per cent. is in intrastate commerce, is in no sense more difficult to grasp than the conception that of a given tank of oil, or mass of gas, or tract of land, or block of securities, 80 per cent. of the same is owned by A and the other 20 per cent. is owned by B; yet this conception of undivided ownership has been familiar to our law from its beginning.

If interstate commerce is, as this court has frequently said, a "practical conception," no tribunal can say of a mass of gas, of which in fact 80 per cent. is en route interstate, that none of the mass is in interstate commerce. Such a determination would be at best a "witty diversity" which should not be allowed to control important commercial relations.

XI.

THE ACT IN QUESTION IS VOID BECAUSE IT IMPAIRS THE OBLIGATIONS OF CONTRACTS IN VIOLATION OF SECTION 10 OF ARTICLE 1 OF THE CONSTITUTION OF THE UNITED STATES.

The proof in this case establishes that there are a large number of valid and existing contracts between the State of Ohio and corporations and natural persons who are citizens and residents of that state, which entitle them to a supply of natural gas, either for their own use or for further distribution to the public inside the State of Ohio, and of which contracts the public within said state are the beneficiaries. It also appears from the record that practically all of the municipalities within the State of Ohio are served with natural gas pursuant to contracts made between the municipalities and gas companies under the provisions of Sections 3982 and 3983 of the General Code of Ohio. (Record, p. 590.)

All of these contracts would be immediately impaired, and many of them rendered impossible of performance to any practicable extent, by the enforcement of the act in question. These contracts were all valid and lawful when made, many of them, as we have noted, being made by political subdivisions of the state, pursuant to express statutory authority of the complainant state. The contracts under which gas is furnished by the large inter-

state companies of West Virginia to other companies for distribution in this state uniformly recognize the established rules of public utility duty, by providing for a preferred service to domestic consumers, both in West Virginia and in Ohio in case of a shortage of supply adequate for all classes of consumers, and by providing for a fair apportionment of the available supply among the several communities to which the gas is to be transported. We are aware of the doctrine of this court enunciated in the case of Hudson Water Co. vs. McCarter, 209 U. S., 349, at 357, that

> "One whose rights, such as they are, are subject to state restriction, cannot remove them from the power of the state by making a contract about them. The contract will carry with it the infirmity of the subject matter. Knoxville Water Co. vs. Knox, 189 U. S., 434, 438; Manigault vs. Springs, 199 U. S., 473, 480. But the contract, the execution of which is sought to be prevented here, was illegal when it was made."

The contracts shown by the evidence in this case, however, had no infirmity when made. They were contracts looking to a provision of a supply of gas to maintain a valuable public service. They make no discrimination, they amount simply to agreements to produce and supply an amount of gas, so long as it can be produced and supplied, which will justify the other contracting party in making expenditures which will provide facilities for the service of natural gas to communities. They offend against no public utility duty which either party to them owes. They offend only in that they agree to give

natural gas to companies for use outside the State of West Virginia. Upon no theory, except one which assumes the legality of legislation which discriminates against interstate commerce, can they be said to have any infirmity which permits of their being destroyed.

Even assuming the right of a state, as an original proposition, to restrain the exportation of commodities in interstate commerce, nevertheless it could not under our constitutional limitations permit such exportation while expensive channels and facilities for such exportation are being established and contracts are made and property is acquired which depends for its whole value solely upon such continued exportation, and then, suddenly, and without any provision for compensation of losses caused thereby, change its policy and forbid such exportation. Rebbins vs. Los Angeles, 195 U. S., 223. Such legislation does not strike at a practice deemed harmful by the legislature, but seeks, for the supposed good of the state, to take the contracts and property of others for the benefit of its own residents. This it cannot do, under our constitutional limitations, without making compensation. The statute in question makes no provision whatever for compensation, nor could it validly do so, as to contracts and property outside the state. Pine vs. Mayor of City of New York, 103 Fed., 337; Holyoke Water Power Co. v. Connecticut River Co., 52 Conn, 570; Farnum v. Canal Corp., 1 Summ., 46, Fed. Cas. 4, 675; U. S. vs. Ames, 1 Woodb. & M. 76, Fed. Cas. 14, 441; Rutz v. City of St. Louis (CC), 7 Fed., 438.

In spite of the facts, alleged in the defendant's an-

swer, at pages 9 and 10 thereof, that charters or certificates of admission granted by the State of West Virginia to corporations are subject to the express statutory right of the legislature of said state to alter any charter and to alter or repeal any law applicable to the said corporations, nevertheless the contracts and property rights of these artificial persons are not entirely without constitutional protection. Miller vs. State, 15 Wall., 478, at 498; Adirondack Ry. vs. New York State, 176 U. S., 335. This court has recently held in R. R. Co. vs. Commission of Wisconsin, 237 U. S., 220:

> "We would be very averse to deciding that without explicit declaration, every general law of the state applicable to corporations is enacted as an amendment to their charters. * * * It is one thing to decide that corporations are subject to the police power of the state, and quite another to hold that every general law is an amendment to their charters."

This is shown conclusively by the fact that the legislation is equally applicable to "persons" and "firms" as to "corporations." See Section VII of the act.

XII.

THE ACT IN QUESTION IS IN VIOLATION OF THE FOURTEENTH AMENDMENT OF THE CONSTITUTION OF THE UNITED STATES IN THAT IT DEPRIVES THE STATE OF OHIO, AND MANY OF ITS CITIZENS AND RESIDENTS, OF PROPERTY WITHOUT DUE PROCESS OF LAW.

The enforcement of the statute in question here, would, as is shown by the evidence hereinbefore discussed, destroy property of the plaintiff state and her citizens to the value of millions of dollars, by rendering that property worthless by cutting off the supply of gas. This amounts to a violation of the rights of the plaintiff and her citizens under the Fourteenth Amendment:

> "Nor shall any state deprive any person of life, liberty or property, without due process of law, nor deny to any person within its jurisdiction the equal protection of the law."

There is neither reason nor authority for holding that the clause relating to life, liberty or property, is limited to the protection of persons within the jurisdiction of the state. It was obviously intended to protect them everywhere from the effects of acts done under state authority. For example, lower riparian owners upon a stream which passes across a state line are not at the mercy of the upper state. The upper state could not validly authorize the impairment of their rights, hence

anyone, even an officer of the upper state, who undertook to impair their rights would be restrained or held liable. In the case of Pine vs. Mayor, etc., of City of New York, 103 Fed., 337, it was so held, and the court, Shipman, circuit judge, in his opinion said:

> "The statutes of the state of New York do not undertake to give power to condemn land for public purposes which is situate in another state, and if they undertook to confer such power they would be ineffective. Holyoke Water Power Co. v. Connecticut River Co., 52 Conn., 570; Farnum v. Canal Corp., 1 Summ. 46, Fed. Cas. No. 4, 675; U. S. v. Ames, 1 Woodb. & N. 76, Fed. Cas. No. 14441; Rutz v. City of St. Louis (C. C.), 7 Fed., 438. Neither is there a Connecticut statute which authorizes the City of New York to exercise any rights of eminent domain over land in Connecticut."

The decree of the Circuit Court was affirmed by the Circuit Court of Appeals, 112 Fed., 98. That decree was reversed in this court, New York City vs. Pine, 185 U. S., 93, 22 Supt. Ct., 592, 46 L. Ed., 820, but only upon the ground that the plaintiff was guilty of laches in not earlier pressing his claim for injunction instead of compensation.

See the discussion in 8 Harvard Law Review, 136, by G. B. French and J. Smith, of the question of "Power to divert an interstate river."

The authorities just cited show further that a state cannot exercise the power of eminent domain to take or damage property which is outside the jurisdiction of the state, but that question is of no importance here since the statute in question makes no provision for compensation

for the destruction which it would, if enforced, inevitably cause. We are faced, then, by the bald situation of a state, by direct legislative action, seeking to do that which, by its natural and inevitable consequences would destroy or damage property of large value, without the slightest provision for compensation. It is a plain case of a violation of the fourteenth amendment. It could hardly be contended that the state could, validly, within its own jurisdiction provide that the supply of gas which is now, and for many years past has been, conveyed and served to one of its communities, should be cut off from that community and served to another exclusively, the first community being allowed to receive only the surplus which was not desired by the second community. The plain violation of all rules of public service, and the destruction of property which such a law would cause, would clearly make it invalid. It would, we believe, not be valid even though it carried a provision for compensating the persons whose property was damaged, since one public service can not be destroyed by eminent domain simply to set up another of the same kind. And yet the State of West Virginia is seeking, by the act in question, to destroy property and public service in vast amount, because they lie outside the State of West Virginia, in order to improve the condition of consumers inside the state. The destruction of property which would admittedly result from the enforcement of this statute renders this legislation offensive to the fourteenth amendment.

The statement made in Division VII, on page 32, of

the defendant's answer, that the losses and inconveniences, if any, which may result from the enforcement of this act, are and will be **damnum asque injuria** is but an argument in a vicious circle. Such argument would justify any destructive legislation. Of the numerous cases holding that legislation which results in the destruction of innocuous property is invalid under the fourteenth amendment, we cite the following: Eubank vs. Richmond, 226 U. S., 137; Dobbins vs. Los Angeles, 195 U. S., 223.

XIII.

THE VALIDITY OF THE ACT MUST BE DETERMINED FROM ITS LANGUAGE AND ITS NECESSARY OPERATION AND EFFECT.

The proofs taken in this case show conclusively that the necessary operation and effect of the statute, if enforced, will be to divert to intrastate uses, large quantities of gas which is now being transported from the State of West Virginia into the State of Ohio and other states. The fact that the enforcement of the statute would be harsh and inequitable, and would cause great suffering, inconvenience, and financial loss to the gas consumers outside the State of West Virginia, for the sake of rendering an adequate supply of natural gas to be grossly used in manufacturing industries in West Virginia, and misused in carbon black plants there, might lend some countenance to the contention that the statute would not be enforced to bring about such consequences. The answer

of the defendant on page 40, however, admits that it is its intention to enforce the statute and to impose the penalties therein provided, in case of its violation. However, even though the State of West Virginia should deny its intention to enforce the statute, nevertheless the established rules of construction require that a statute be construed according to its reasonable interpretation, with no regard to any disclaimer on the part of the state enacting it, of its intention to enforce it.

Mr. Justice Harlan, in Western Union Telegraph Company vs. Kansas, 216 U. S., 1, in delivering the opinion of the court which declared unconstitutional an act of the State of Kansas, said:

> "But it is said that none of the authorities cited are pertinent to the present case, because the state expressly disclaims any purpose by the statute in question to obstruct or embarrass interstate commerce, but seeks only to prevent the telegraph company from entering the field of domestic business in Kansas without its consent, and without conforming to the requirements of its statute. But the disavowal by the state of any purpose to burden interstate commerce can not conclude the question as to the fact of such a burden being imposed, or as to the unconstitutionality of the statute as shown by its necessary operation upon interstate commerce. If the statute, reasonably interpreted, either directly or by its necessary operation, burdens interstate commerce, it must be adjudged to be invalid, whatever may have been the purpose for which it was enacted, and although the company may do both interstate and local business. This court has repeatedly adjudged that in all such matters the judiciary will not regard mere forms, but will look through forms to the substance of things. Such is an established rule

of constitutional construction, as the cases abundantly show."

Mr. Chief Justice Marshall, in Brown vs. Maryland, 12 Wheaton, 419, said, concerning such a contention:

> "We are told that such wild and irrational abuse of power is not to be apprehended, and is not to be taken into view, when discussing its existence. All power may be abused; and if the fear of its abuse is to constitute an argument against its existence, it might be urged against the existence of that which is universally acknowledged, and which is indispensable to the general safety. The states will never be so mad as to destroy their own commerce, or even to lessen it.
>
> We do not dissent from these general propositions. We do not suppose any state would act so unwisely. But we do not place the question on that ground."

See also Bethlehem Motors Corporation v. Flynt, Advance Opinions 1921, page 687, Supreme Court Reporter, July 1, 1921, page 571, in which case it was practically admitted that the statute in question, even if it attempted a discrimination, would in practice be "futile." On this point Mr. Justice McKenna said, concerning this argument of the attorney general of the state:

> "May we accept his view of it, that is, regard the condition as a mere brutum fulmen, imposing no condition or burden, against the decision of the Supreme Court of the state? The court has assumed its efficacy and regarded it as a legal condition. * * * We are unable to concur in this conclusion. It is a perilous power to concede to the state, and it is immediately manifest that it can be exerted to prevent all commerce of those corporations (or other corporations) with the state except as the commerce

> might be through direct personal purchases and importations. In other words, the power can be exerted to exclude the products of those corporations, and every other corporation, if they have, or it has, agents in the state."

The answer of the State of West Virginia does deny that the statute was passed for the purpose of preventing the transportation of gas beyond the borders of West Virginia. (Answer, pages 38, 39). The operation and effect of the statute, however, and not the intention with which it was enacted, have always been held to be the controlling factors.

In the case of Kansas City Railway Co. vs. Kansas, 240 U. S., 227, at page 231, Mr. Justice Hughes, in delivering the opinion of the court, said:

> "And, further, in determining whether a tax has such a direct relation to interstate commerce as to be an exercise of power prohibited by the commerce clause, our decision must regard the substance of the exaction—its operation and effect as enforced—and can not depend upon the manner in which the taxing scheme has been characterized."

See also to the same effect: Looney vs. Crane, 245 U. S., 178, at 187; St. Louis Street Ry. Co. vs. Arkansas, 235 U. S., 350, 362.

In Galveston, etc., Ry. Co. vs. Texas, 210 U. S., 217, at page 227, Mr. Justice Holmes said:

> "Neither the state courts nor the legislatures, by giving the tax a particular name or by the use of some form of words, can take away our duty to consider its nature and effect. If it bears upon commerce among the states so directly as to amount to a regu-

> lation in a relatively immediate way, it will not be saved by name or form. Stockard v. Morgan, 185 U. S., 27, 37; Asbell v. Kansas, 209 U. S., 251, 254, 256."

In the case of Western Union Telegraph Company vs. Foster, 247 U. S., 105, **supra**, Mr. Justice Holmes, in delivering the opinion of the court, holding unconstitutional and void an order of the Public Service Commission of Massachusetts, said:

> "Acts generally lawful would become unlawful when done to accomplish an unlawful end. United States v. Reading Co., 226 U. S., 324, 357, and a constitutional power can not be used by way of condition to attain an unconstitutional result. Western Union Telegraph Co. v. Kansas, 216 U. S., 56; Sioux Remedy Co. v. Cope, 235 U. S., 197, 203. The regulation in question is quite as great an interference as a tax of the kind that repeated decisions have held void. It can not be justified 'under that somewhat ambiguous term of police powers.' Western Union Telegraph Co. v. Pendleton, 122 U. S., 347, 359; Leisy v. Hardin, 135 U. S., 100; Savage v. Jones, 225 U. S., 501, 520; Western Union Telegraph Co. v. Brown, 234 U. S., 542, 547."

The language used here and the cases supporting it are applicable to the instant case. The consequences of the act in question, as shown by the evidence, would be the prohibition or restriction of interstate commerce, the destruction of property, and the impairment of contracts. These unlawful consequences must, under the rule of the above decisions, ivalidate the statute, regardless of the avowals in the defendant's answer that its only purpose is to require adequate service by public service companies.

CONCLUSION.

By direction and authority of the legislature and the governor of the State of Ohio, this action is brought, seeking to repeal what it regards as an illegal attack upon its rights. While this statute is drawn with great ingenuity, its purpose and effect are obvious. The useful and unoffending property of the state, and the property of those whom the state is bound to protect, worth many millions of dollars, is threatened with destruction. The state's right, and the rights of her citizens and residents to continue to receive natural gas—the cheapest, cleanest and most convenient fuel known for domestic purposes, and upon which fuel they have become accustomed to rely—are threatened with abrupt extinguishment. Contracts, lawful and commended by all when made, for they represented a development highly valuable to the State of West Virginia, and now free from complaint except that their performance still requires the transportation of natural gas out of the State of West Virginia, are threatened with impairment and nullification. These, in the main, will be the consequences of the statute complained of, if it is held to be valid.

The fact that the State of West Virginia is willing to bring down all of these consequences upon a sister state, in fact all states that adjoin her, solely for the commercial advantage of having an adequate supply of gas for gross and wasteful use in industrial plants and for misuse

201

in carbon black plants, to the deprivation of natural gas for even domestic purposes beyond her state lines, might so justifiably awaken sentiments of resentment in the state so treated, that attempts at retaliation would be expected to follow. This natural consequence of such a law as the one here drawn in question is so obvious that no state, except one highly favored with natural resources, as is the State of West Virginia, would hazard its enactment. However, spurred by her declared self-interest, the State of West Virginia has enacted this remarkable law and is here defending its constitutionality upon the ground that it may require at all times an adequate service by public utilities to all consumers within the territory of West Virginia, regardless of consequences of those across her state lines. This court is asked to discover some magic force and authority in the words "adequate service" which the court has never been able to discover in the words "police power," "state rights," "conservation" or words of similar import, and which shall be made to over-ride the provisions of the constitution of the United States.

The fact that the defendant state may regard itself as so favorably situated that it can "live unto itself alone," granting no favors and asking none, fortunately, does not determine the rights of the State of Ohio. The framers of the constitution were well aware, from their observation of "state" nature, that the states could not and would not give up their powers of making war, of embargo, entering into treaties and diplomatic negotiations with one another, unless they were given in return posi-

tive legal guaranties which would remove the ordinary causes of friction and strife among the several states. These guaranties, so required, were provided by the constitution. That document as interpreted by this court, positively secures to the State of Ohio its rights herein asserted. These rights are deliberately violated by the statute in question. This violation clearly entitles this complainant to the relief prayed for in its bill of complaint.

The State of Ohio further believes that a decision upholding the statute in question would not only cause great inconvenience and suffering, destroy property, contracts and other rights which it is her duty to protect, but would, when pursued to its natural conclusion, seriously endanger the Union itself, by creating a condition of commercial anarchy. The situation is no less critical than that which confronted this court in the earlier cases, now regarded as epoch making, and in which cases, it is now agreed, erroneous decision would have brought disaster. The wisdom and soundness of those decisions have been proven by long experience under them. We believe that a decision upholding this statute would be a departure from and repudiation of the basic principle of those cases and be an abrupt turning backward.

Confident that this, the Supreme Court of the states united under and subject to the constitution, will decree continued maintenance of those basic principles, by holding void this statute, that we may go on, as in the

past, in matters of commerce one and the same people and without reference to state lines.

Respectfully submitted,

JOHN G. PRICE,
Attorney General of Ohio.

E. E. CORN,
Special Counsel.

FREEMAN T. EAGLESON,
R. G. ALTIZER,
Of Counsel.

THERE HAS BEEN NO DISCRIMINATION AGAINST CONSUMERS IN WEST VIRGINIA.

The testimony taken bearing upon the question of whether the gas companies operating in West Virginia have discriminated against their West Virginia consumers shows that such discrimination has not taken place. The average domestic consumer in Charleston, West Virginia, in the year 1919, used 175,000 cubic feet of gas for the year. The average domestic consumer in the city of Cincinnati, Ohio, for the same year, used 84,000 cubic feet of gas; the average domestic consumer in the city of Portsmouth, Ohio, during the same year used 137,000 cubic feet of gas. (Record, page 368).

The testimony of the witness, Anderson, at page 823 of the record, is as follows:

> "A. The average annual consumption per domestic consumer for the year 1918, for the different states, is as follows:
>
> West Virginia ..... 164.89 thousand cubic feet
> Pennsylvania ..... 124.34 thousand cubic feet
> Ohio ..... 110.65 thousand cubic feet
> Kentucky ..... 87.21 thousand cubic feet
> Indiana ..... 78.25 thousand cubic feet
> 22 other states..... 91.80 thousand cubic feet"

The true situation is shown graphically by Pennsylvania Exhibits 42, 43, 44 and 45, prepared by the witness, Wyer, and appearing at pages 1594 to 1597 of the record herein. Copies of these exhibits are inserted herein and show conclusively that the average consumption in West Virginia is and has been much greater than in Ohio.

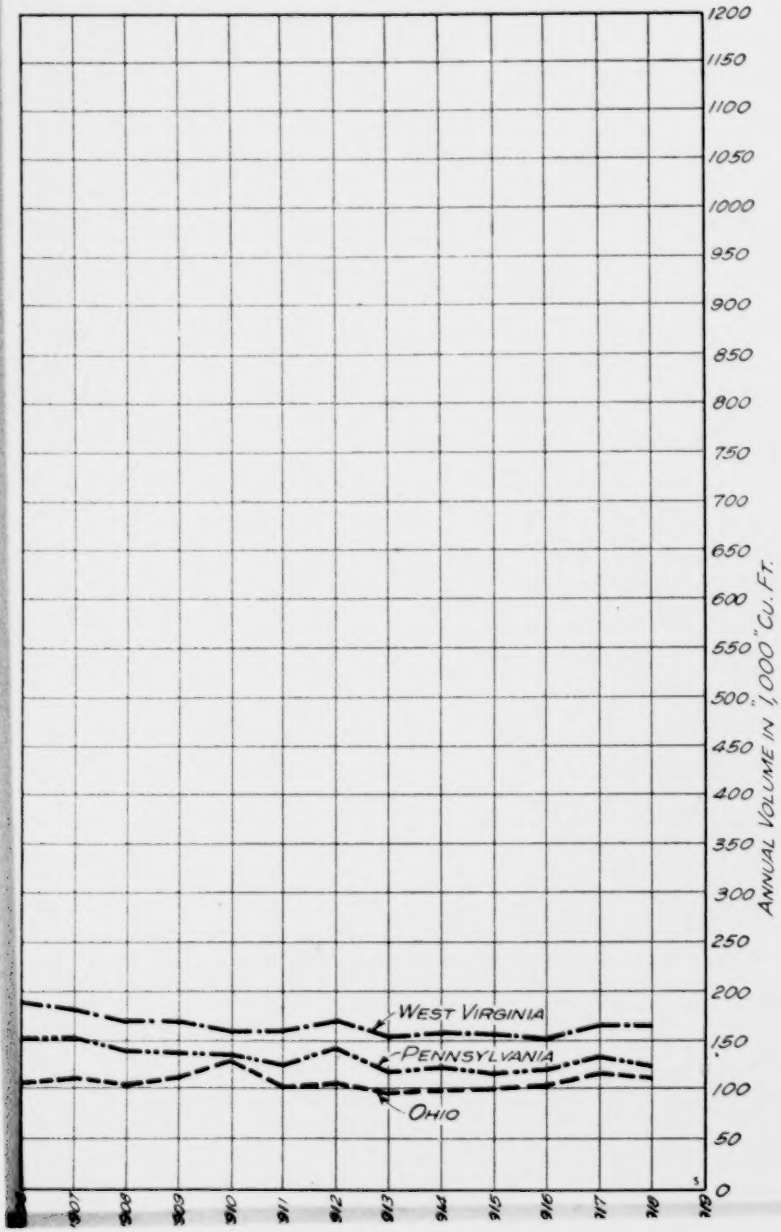
Domestic Gas Consumed Annually per Domestic Consumer in West Virginia, Ohio, and Pennsylvania.

DOMESTIC NATURAL GAS
CONSUMED ANNUALLY PER DOMESTIC CONSUMER
IN
WEST VIRGINIA, OHIO AND PENNSYLVANIA

Based on data compiled by the United States Geological Survey.



There is no support whatever in the testimony for the proposition that gas consumers in West Virginia on the lines of these interstate gas companies have not received at least their full proportionate share of the total supply of gas. In fact, the contract between The Hope Natural Gas Company and The East Ohio Gas Company, being Pennsylvania Exhibit 19, and appearing at page 1544 of the record herein, provides, in its seventh paragraph, that the domestic consumers of the Hope Company in West Virginia shall be at all times supplied in full by the Hope Company in preference to consumers of the companies outside the state to which the Hope Company sells gas.

The contracts between The Hope Natural Gas Company and The Peoples Natural Gas Company, Pennsylvania Exhibit 17, (record, p. 1524); the contract between The Hope Natural Gas Company and The Northwestern Ohio Natural Gas Company, Pennsylvania Exhibit 16, (record, p. 1509); the contract between The Mountain State Gas Company and The River Gas Company, Pennsylvania Exhibit 20, (record, p. 1554); the contract between The Hope Natural Gas Company and The Fayette County Gas Company, Pennsylvania Exhibit 21, (record, p. 1560); the contract between The United Fuel Gas Company and The Ohio Fuel Supply Company, West Virginia Exhibit 38, (record, p. 1761), all provide specifically for a preference for the domestic consumers in West Virginia upon the lines of the supplying company or upon the lines of other companies in West Virginia furnished gas by the supplying company. These companies, then, are now giving a preference to West Virginia domestic consumers.

PRESENT STATUS OF THE AVAILABLE GAS SUPPLY—DECLINE AND SHORTAGE.

There is no dispute as to the present lack of an adequate supply of natural gas and that this inadequacy extends to all the communities throughout the plaintiff states.

It is due to a decline in the old fields, not now supplemented by new discoveries; the gas operators do not know where to turn for new fields. It is also due to the increasing demand through the natural growth of prosperous communities served in all the states involved, and to the enormous demand during war years when the supply was drained by a continuous delivery night and day to industrial plants, pursuant to orders of the United States government. (Record, pp. 333, 334).

Natural gas is not used only for cooking and hot water heating as is manufactured gas, but is used generally for house heating in grates, stoves and furnaces which in communities using manufactured gas are heated with coal. This fact contributes much to the very great peak load demand which falls upon the natural gas company when cold weather begins. On cold days when the consumer lights his grate, stove and furnace, the demand is from fifteen to eighteen times the demand on warm days. The necessity of conserving gas with which to meet the peak demands, at morning, noon and evening for cooking purposes, is imperative. It is on these cold days that a withdrawal or diminution of the gas supply would cause

extreme suffering, for many communities and thousands of consumers have no substitute heating appliances or substitute fuel. (Quay, 29; Sullivan, 211; Tonkin, 423-421; Angle, 553-562; Reed, 524).

Much of defendant's testimony is made up of statistics to show what proportion of West Virginia gas produced is exported as compared with volumes consumed in the State. As corrected by figures given by witness, Robinson, page 1380, it appears that in 1919, 36 per cent. of the West Virginia production was used in the State and 64 per cent. exported to five other states.

These figures show annual volumes; to get a daily demand it does not follow that the annual volume can be divided by 365 days; on the contrary, the whole issue of this case is focused not upon an average daily or yearly volume, but upon the **cold day** demand. The proof is conclusive that were West Virginia by this statute to obtain a reasonably adequate supply for all its inhabitants and industries, either the entire supply will be taken and the consumer in Pennsylvania and Ohio will get no gas; or such part of the supply will be taken that the service for Pennsylvania and Ohio, for any class of consumers, is completely broken down, and in either case the citizens of those states are the victims of discrimination.

Supreme Court of the United States

OCTOBER TERM, 1921.

Number 17—Original

COMMONWEALTH OF PENNSYLVANIA, Complainant

vs.

STATE OF WEST VIRGINIA, Defendant.

Brief on Behalf of Complainant.

Questions Involved.

The State of West Virginia in its Answer calls the statute in controversy the "Adequate Gas Supply Act."

Its avowed purpose is to compel all companies, including those engaged in interstate transportation and sale of natural gas, to deliver to West Virginia consumers "domestic, industrial and otherwise" an adequate supply, before they are allowed to transport and deliver any gas to any consumer, either domestic, industrial or others, in any other State.

Does such a statute discriminate against citizens of other States, interfere with and burden interstate commerce, impair the obligation of contracts, deprive citizens of Pennsylvania, Ohio and other States, of their property without due process of law, and deny to the citizens of other States than West Virginia the equal protection of its laws?

The Statute in Controversy.

The statute is entitled:

"House bill No. 59. A bill in relation to persons, firms and corporations engaged in the furnishing or required by law to furnish natural gas for public use within this State, to provide remedies for the enforcement of this Act and penalties and punishment for violation thereof, and to extend the jurisdiction of the Public Service Commission and of the courts of this State with respect thereto."

The provisions of the statute particularly involved in this controversy are as follows (the underscore is ours):

"SECTION 1. That every person engaged in furnishing, or required by law (whether statutory or common law) to furnish, natural gas for public use, or for the use of the public, or any part of the public, whether for domestic, industrial or other consumption, within this state, shall to the extent of his supply of said gas produced in this state, (whether produced by such person or by any other person), furnish for public use within the territory of this state, and for the use of the public and every part of the public within the territory of this state, in or from which such gas is produced, or through which said gas is transported, or which is served by such person, a supply of natural gas reasonably adequate for the purposes, whether domestic, industrial or otherwise, for which natural gas is consumed or desired to be consumed by the public, or any part of the public, within said territory in this state, and

for which said consumer or consumers therein shall apply and be ready and willing to make payment at lawful rates."

"SECTION 2. That in case any person engaged in furnishing, or required by law * * * to furnish natural gas for public use within this state, * * * shall have a production or supply of natural gas which is, or probably will be, insufficient to furnish for such use (for the purposes, whether domestic, industrial or otherwise, for which natural gas is consumed by the public or any part of the public), within the terirtory in this state served by such person, then and in that event the public service commission shall have authority * * * to order any other person engaged in furnishing, or required by law (whether statutory or common law) to furnish, natural gas for public use within this state, and producing or furnishing natural gas for public use in said territory or transporting the same through said territory, to furnish to such person having such insufficient production or supply, natural gas for the purpose of supplying such deficiency. * * * And whenever * * * the commission shall determine that public convenience and necessity so require, the commission shall have authority to provide for and compel the establishment of a reasonable physical connection or connections between the lines, pipes or conduits of such person having such excess supply of gas and the lines, pipes or conduits of the person having such deficiency of supply, and to require the laying and construction of such reasonable extensions of lines, pipes or conduits as may be necessary for the establishment of such physical connection or connections * * * Provided, however, that no person shall * * * be ordered to furnish natural gas to any other per-

son so engaged in furnishing, or required by law to furnish, natural gas for public use, except to the extent that the person so ordered to furnish natural gas shall, at the time have a production or supply of natural gas in excess of the quantity sufficient to furnish a reasonably adequate supply to his consumers within this state; nor shall any person, by virtue of this section, be ordered to furnish natural gas to any other person * * * if and when the said person having said excess shall, to the extent of such excess, be ready and willing to furnish, and within such time as the commission shall prescribe shall actually furnish, to the consumers within said territory a reasonably adequate supply of natural gas."

SECTION 3. Confers jurisdiction on the public service commission of the state.

SECTION 4. Provides for complaints by persons aggrieved to the public service commission.

SECTION 5. Provides for penalties for violation of Act.

SECTION 6. Provides for recovery of damages for violations of Act.

SECTION 7. Defines persons.

SECTION 8. Provides that sections are separable.

SECTION 9. Repeal of conflicting laws.

The statute in full is printed as Exhibit "A" in the Appendix to this brief on page 149.

The Issues Tendered by the Pleadings and the Contentions of the Respective Parties.

The avowed purpose of the State of West Virginia, by the statute in controversy, and the legal machinery by which it proposes to compel those companies engaged in the interstate transportation of natural gas, to discriminate in favor of West Virginia consumers, and to prohibit such companies from transporting gas out of the State, until after an adequate supply has been delivered to all classes of consumers, domestic, industrial and others, in the State of West Virginia, is set forth with brutal frankness in the Answer filed in this case by the State of West Virginia.

On page three of the Answer, in Paragraph III, it is stated:

> "This defendant says that the facts, circumstances and conditions existing before, at the time of and since the passage of said statute and the evils sought to be remedied thereby were and are among others as in this Answer hereafter alleged, and the intention and purpose of the legislature of West Virginia in the passage of said statute were and are as in this Answer hereafter alleged."

The Answer in said Paragraph, and those following, proceeds to give the history of the development of the natural gas industry in the State of West Virginia. It traces the development of the transportation and sale of gas to other States. It shows how the gas was first disposed of to local communities, and as the quantities found increased, markets in other states were

sought and pipe lines built and the gas was transported and sold in such other States, and that this has continued for many years and admits that "in addition to their business of supplying gas to the public of West Virginia," the large companies "after the construction of their respective pipe line systems aforesaid also engaged and are still engaged in the business of transporting gas to or for consumption in other States."

The Answer then sets forth that while in the inception of the interstate business the production of gas in West Virginia was increasing and there was a large surplus for export and this continued for many years, that this production gradually declined and consumers in West Virginia did not obtain "a reasonably adequate supply of gas." The Answer claims that the shortage of gas supplied to the people of West Virginia "was and is caused by the transportation to or for consumption in other States," and the companies failed to supply a "reasonably adequate service to the public of West Virginia," or "to the local gas companies engaged in the service of said public, under the pretext that they were and are prevented from so doing by the necessities of the gas-consuming populations of said other States."

In Paragraph VI, page 30, the Answer continues:

> "Under these circumstances an issue arose between the State of West Virginia and the people thereof on the one side, and said seven companies on the other. On the one hand it was insisted by said State and its people that they were entitled to a reasonably adequate gas supply * * * . On the other hand it was insisted by said seven companies, as they still do insist, that they were and are unable to render additional service or furnish additional gas in West Virginia, either directly to

the public or to the local gas companies therein, because of the alleged necessities of the people of said other States and the contracts aforesaid. And said seven companies further contended as they still do contend, that their gas is private property, which they were and are entitled to dispose of when, where and as they choose, and that they owed no higher duty to the State of West Virginia or the people thereof than to the other States and their gas consuming population.

Confronted with the foregoing, among other, facts, circumstances and conditions, and in the light thereof, the Legislature of West Virginia, at its session of 1919, in the exercise of its police and other powers, enacted the statute complained of in the bill of complaint."

And again in Paragraph IX, page 33, of said answer, the State of West Virginia says:

"While this defendant admits that gas is or may be an article of interstate commerce, yet this defendant denies that gas placed in mains or pipes by public service gas companies, is either in interstate commerce or a legitimate article of interstate commerce, unless and until it has reached the point where it is no longer subject to the public service in West Virginia, and the duties imposed by law upon public service gas companies have been observed and performed by them; and denies that the requirement of the performance or observance of the duties owed by such companies is an interference with interstate commerce or a burden thereon."

And again in Paragraph XV, page 37, of said answer, the State of West Virginia says:

"This defendant admits that among the persons, firms and corporations to which said statute is applicable, and to whom it was designed to apply, are all those who, being engaged in the supply of gas to the public of West Virginia, are also engaged in the transportation of gas into Pennsylvania and other States * * *"

The paragraph continues:

"And this defendant says that the West Virginia gas of the persons, firms and corporations in said statute mentioned, required for the reasonably adequate supply of the public in West Virginia, is affected with the use or interest of said public, which is superior and prior to any introduction thereof into interstate commerce, and that this public use or interest cannot be destroyed or limited by the attempt or desire of said persons, firms or corporations to engage in interstate commerce. * * * This defendant * * * admits that the effect of said statute will be to give to all of the consumers in West Virginia, in said statute mentioned, to the extent of the gas therein mentioned, a reasonably adequate supply of gas, and says that said gas is affected with the use or interest of said public of West Virginia as in this answer before alleged."

The answer says in the same paragraph at page 40:

"This defendant admits that many of the gas companies have withdrawn, or attempted to withdraw, altogether their industrial classification, and do not hold themselves out as willing to supply industrial consumers. But this defendant denies that the gas companies supplying gas to the public in West Virginia did or do have the right to

withdraw their industrial classification or service, except to the extent necessary to furnish a reasonably adequate supply of gas to the domestic consumers of West Virginia * * *"

Complainant contends that said statute in terms or by necessary operation:

(a) prohibits the transportation of natural gas from West Virginia into Pennsylvania, Ohio and other States, until all of the consumers in West Virginia, "domestic, industrial or otherwise," shall have obtained an adequate supply;

(b) authorizes and empowers the appropriation, for the use of West Virginia consumers, of natural gas which is already in transit in interstate commerce, to consumers in Pennsylvania, Ohio and other States, while in course of transportation through pipe lines passing through portions of West Virginia into Pennsylvania, Ohio, and other States;

(c) authorizes this appropriation in transit without the consent of the owner or transporter, or any contract therefor, and without any agreement as to the amount thereof that will be taken, the terms and conditions under which the same will be taken, or the rates that will be paid therefor;

(d) prevents contracts being made for a supply of gas to be transported from West Virginia into Pennsylvania, Ohio and other States, because the companies will not know nor be able to estimate, from time to time, what if any gas they will be permitted by said State of West Virginia so to transport and to sell, nor the periods during which they will be permitted to transmit and sell;

(e) discriminates against consumers in Pennsylvania, Ohio and other states by giving to all consumers

in the State of West Virginia, domestic, industrial, or other, a preferential or prior right over consumers in other States, without regard to or consideration for the life, health, convenience, comfort, financial losses and property rights of consumers in such other States, or their contracts of purchase of said gas or the rights, duties and obligations of the transporter under contracts made for the sale and delivery thereof;

(f) will increase the demand for gas by consumers in West Virginia so as to appropriate all the gas produced in West Virginia, or at least deplete the supply for such interstate delivery to such an extent that but a small proportion of the gas now being transported from West Virginia into Pennsylvania, Ohio and other States, will be available for such transportation, not enough to justify the continuance of the industry;

(g) requires a reasonably adequate supply to all consumers in West Virginia, industrial and others as well as domestic, and if such gas is needed to make up the deficit of any company supplying gas to consumers of any kind in West Virginia, compels companies to make up such deficit with the gas in transit to consumers in other States by taking the same out of the pipe lines conducting said gas into such other States;

(h) provides that all industrial consumers and others, as well as domestic consumers, in West Virginia, shall be adequately supplied before even domestic consumers in Pennsylvania, Ohio and other States, can get any gas from West Virginia;

(i) will compel every natural gas company in West Virginia to extend its lines and deliveries coincident with the boundaries of the State, and spread its business blanket-like over the whole State even though

by carefully prepared charter limitations and by the previous course of dealing the particular gas company had expressly limited the locality it purposed to supply;

(j) would appropriate so large a proportion of the natural gas now obtained or that could be obtained from West Virginia as to make it impractical, if not impossible, to transport any gas whatever out of said State, and would destroy interstate transportation of gas.

The Bill of Complaint and the Answer define the paramount issues between the parties to this suit substantially as follows:

Complainant contends that the transmission of natural gas from the producing wells of West Virginia to consumers in Pennsylvania, Ohio, and other States, through pipe lines crossing and recrossing State lines, is interstate commerce, and the effect of the so-called "Adequate Gas Supply Act" of West Virginia is to burden and interfere with and practically prohibit and prevent such transmission of natural gas from West Virginia to such other States, and to discriminate in favor of West Virginia consumers and against consumers in other States.

West Virginia contends: that because this natural gas is produced in West Virginia; because public service corporations of West Virginia are transporting the same; because of the obligations of these public service companies to the public of West Virginia; and because this gas is affected with the use or interest of such public which is superior and prior to any introduction of said gas into interstate commerce, therefore if the citizens of West Virginia want this gas, the State of West Virginia has the right to force such companies to deliver an adequate

supply thereof to consumers in West Virginia, before any of such gas can be taken out of the State, by the private owners thereof, for delivery to consumers in other States.

This naive contention of West Virginia is founded upon the assumption that natural gas produced in West Virginia, though it has been reduced to possession by the owner, though it has become an article of commerce, though it has been committed to interstate commerce, nevertheless, that gas is affected with the use or interest of the public of West Virginia which is superior and prior to the right of the owner to market his gas in interstate commerce.

The State of West Virginia vouchsafes no explanation of the "divinity" that doth "hedge" this gas, nor yet what power dread hath drawn "the awful circle" thereabout, so that if this nation "set but a foot within that holy ground" the penalty of paralysis of power is imposed.

Another direct issue between Complainant and Defendant is upon the claim of the State of West Virginia that so unlimited is the power of the State over its public service companies engaged in the transmission, sale and delivery of natural gas that notwithstanding limitations in charters and the long continued and approved course of dealing thereunder whereby companies had limited the territory it purposed to supply, nevertheless the State could compel such companies to cover the whole State and all the inhabitants thereof, natural and artificial, and give to all such inhabitants, natural and artificial, including competitive gas companies, an adequate supply of gas, before taking any of said gas out of the State.

An analysis of the statute will further demonstrate the correctness of the foregoing dissection of the claims of the State of West Virginia, as well as other fatal defects in said statute. Such analysis will be found at page 155 appendix hereto.

Counsel respectfully invite the attention of this Court to a digest of the evidence, printed in a separate volume and herewith submitted, comprising 298 pages.

This digest includes not only the evidence taken on direct examination by the complainant, but the cross-examination of complainant's witnesses, and the evidence taken by the defendant . References are given to the pages of the record.

The testimony has been collated and digested under the following headings:

1. Description of Witnesses as Experts, their experience, their opportunities for obtaining information, and the contrast in these respects of the witnesses for complainant and the witnesses for defendant.

2. Historical and Descriptive outline of development of and operating methods employed in the Natural Gas Industry of West Virginia. The discovery of Natural Gas and development of Natural Gas Fields was incident to oil development, and at first gas was of no value, there being no market for same.

3. The Later Development of the Natural Gas Fields of West Virginia was made by the great Interstate Transporting Companies for the purpose of obtaining gas to be transmitted to market in other States, which markets had been sought so as to give value to the natural gas produced in West Virginia.

4. The Amount of the Investment of the companies producing gas in West Virginia and transporting it to other States, in obtaining and carrying leases, drilling wells and laying pipe lines, &c.

5. The Exportation of Natural Gas from West Virginia to other States as carried on by the Gas Companies operating in that State, showing the lines of transmission, the movement of gas through the lines, and the operation Interstate and as one system or unit.

6. The Operation and Effect of the West Virginia statute will be to appropriate to the use of West Virginia Consumers Gas already in course of transmission from West Virginia to other States, and destroy the market for the product of the Gas Companies, render their plants valueless, and paralyze their business.

7. The Operation and Effect of the West Virginia statute will be not only to impair, but will destroy at times, the contracts between the Gas Companies and other companies and consumers, domestic and industrial, and the States of Pennsylvania and Ohio, and the United States Government, and will at all times make said contracts unenforceable, and make the other parties thereto cancel the same.

8. The Operation and Effect of the West Virginia statute will be to absolutely prohibit at times, during periods of cold weather, the transmission of Gas from West Virginia into Pennsylvania, Ohio or other States, and thus drive consumers off the line altogether and for the whole year.

9. The Effect of the Operation of the West Virginia statute will be a discrimination in favor of the citizens

of West Virginia and against the citizens of Pennsylvania and Ohio and other States, who are dependent upon the gas exported to them for fuel for heat and light by the Companies producing gas in West Virginia, and such residents of Pennsylvania, Ohio and other States, both domestic and industrial consumers, will suffer pecuniary loss, and the lives, health, safety, comfort and convenience of domestic consumers will be affected.

10. The States of Pennsylvania and Ohio, in their sovereign capacity, in and through their hospitals, insane asylums, public schools, penal institutions, and charitable institutions, and through the various political subdivisions of said States, such as cities, boroughs, &c., are consumers of Natural Gas, and have contracts for the supply thereof, and are dependent upon the use of Natural Gas exported from West Virginia for heat and light, and will be seriously affected by the operation of the West Virginia statute as to the lives, health, safety, comfort and convenience of wards and dependents in such institutions, and in such cities, boroughs, &c., and will further be subjected to great pecuniary loss.

11. Gas Companies in West Virginia are public service corporations, operating under franchises and exercising the right of eminent domain.

12. The Relation of the Hope Natural Gas Company, Pittsburgh & West Virginia Gas Company, United Fuel Gas Company, Reserve Gas Company, Carnegie Natural Gas Company, Columbia Gas and Electric Company, and The Manufacturers Light & Heat Company, to other producers of Gas and Gas Companies operating in West Virginia, and the respective holdings of wells, leases, production, the amount of gas exported by said companies, miles of pipe lines owned, &c.

Introductory Statement.

Before argument and citation of authorities upon the legal propositions, it will serve a useful purpose to take a general view of the development of the natural gas industry in West Virginia, and the effect of the enforcement of the statute in controversy upon the gas companies and upon consumers in other states. All of this is more fully and graphically shown by the evidence.

Details of fact, quotations from and reference to the evidence, will be found in the "Digest." There is little or no conflict between the evidence of the complainant and the defendant. On all the important questions there is no conflict at all. In fact the Answer of the defendant admits substantially all that is necessary to make complainant's case.

The South Penn Oil Company, in the latter half of the last century, had taken up large blocks of leases in the State of West Virginia, and had drilled the same for the development of the oil deposits. In its early operations it drilled many dry holes and a number of gas wells. Other operators did the same, but abandoned the wells when they obtained gas. The South Penn Oil Company, however, tubed and cased their gas wells and shut them in. They were confronted with the problem—what to do with the gas from these wells. The South Penn Oil Company, after a number of gas wells had been drilled by this corporation, acquired the Flaggy Meadow Gas Company, to take over these gas wells and supply several small West Virginia towns and also supply fuel for the drilling and pumping of wells of the South Penn Oil Company. (Digest p. 21; Record p. 18; Digest p. 34; Record pp. 322-4; Digest p. 42; Record pp. 340-1).

About 1894, the South Penn Oil Company, having obtained further gas wells in other sections of the State, the same stockholders organized the Mountain State Gas Company. The Mountain State Gas Company took over some of these gas wells and undertook to supply some of the river towns in West Virginia, such as Sistersville and Parkersburg. It was found, however, that the number of gas wells obtained by these three companies, the South Penn Oil Company, the Flaggy Meadow Gas Company, and the Mountain State Gas Company, was increasing to such an extent that the companies were obliged to seek some other market to take the gas thus produced, as there was not sufficient demand in West Virginia, and accordingly the Hope Natural Gas Company and the East Ohio Natural Gas Company were formed, by the same interests, to take over these properties and obtain an outlet for this gas, there being no market for the same in West Virginia. The markets first sought were certain cities in Ohio, then later cities in Pennsylvania and other States. (Digest p. 34; Record pp. 322-4; Digest p. 41; Record pp. 325, 331-2; Digest p. 42; Record pp. 341-2).

Lines were laid from Massillon, Canton, Akron and other Ohio cities to the Ohio River, where they connected with the lines of the Hope Company, and gas was transmitted to the Ohio towns and sold there, no measurements being made along the lines and not until the gas reached the ultimate consumer. Later the lines of the East Ohio Company were extended to Cleveland, and other and larger lines were laid from Cleveland to the Ohio River, where they connected with other and larger lines which had been laid by the Hope Company, and gas was transmitted and sold in Cleveland, without any measurements at intermediate points and not until the gas reached the ultimate consumer. Later extensions

of lines or other lines were laid to other Ohio cities such as Columbus, Cincinnati, etc. by these or other companies. The Peoples Natural Gas Company in Pennsylvania was also purchased by the same interests and lines were laid by this company to the West Virginia state line to connect with the Hope Company lines there, and also to Brave Station in Pennsylvania to connect with the Hope Company lines at that point, and gas was delivered both at the state line and in Pennsylvania by the Hope Company to the Peoples Natural Gas Company. The Peoples Company supplied a number of Pennsylvania cities and towns. (Digest pp. 42-3; Record pp. 424-7).

During this same period T. N. Barnsdall was another heavy operator in West Virginia. He was drilling for oil, and in many instances found gas. Some of this territory of Barnsdall's interlocked with the territory of the South Penn Oil Company. When in 1898 the Hope Natural Gas Company was formed, or shortly thereafter, these gas interests of Barnsdall were transferred to this company. Prior to that time Barnsdall was supplying gas to quite a number of towns in Ohio, and after the consolidation of his interests as above stated with the Hope Company, the Reserve Gas Company was then formed by the same interests to take over many of the holdings of the Hope and Barnsdall companies. The Barnsdall interests were subsequently transferred to the Union Natural Gas Corporation. At practically the same time the Connecting Gas Company was formed by the same interests that formed the Reserve Company, to transport the gas from the Ohio River where it was taken by the Reserve Company's lines to two points,—Sugar Grove, in Ohio, where the Union Natural Gas Corporation received it for transmission and delivery,—and the other at Wheeler, in Ohio, where the Northwestern

Ohio Natural Gas Company received the gas belonging to the Hope Company, and transmitted and delivered the same through its own system in Ohio to various cities, including the city of Toledo. This plan of operation has been followed by the respective organizations from that date to the present time. (Digest p. 35; Record pp. 322-4).

Substantially all of these companies, however, after their organization, became active in securing additional gas territory and additional gas wells, both by drilling and purchasing, and, when the demand for gas increased, began the purchase of gas from other operators. (Digest pp. 44-6, 49, 53, 54; Record pp. 186-8, 521-4, 683-5, 719).

These companies, as well as others that were formed by other parties, from time to time, such as the Pittsburgh & West Virginia Gas Company, the United Fuel Gas Company, the Columbia Gas & Electric Company, the Carnegie Natural Gas Company, The Manufacturers Light & Heat Company, the Eastern Oil Company, The Logan Natural Gas Company, The Fayette Gas Company, Ohio Fuel Company, Northwestern Ohio Natural Gas Company, and many others, produced gas in West Virginia, or purchased it from other companies engaged in its production in West Virginia, and for years have been supplying West Virginia gas not only to the centers of population in West Virginia, but to large cities such as Pittsburgh, Johnstown, Altoona, McKeesport, and New Castle, in Pennsylvania, Cleveland, Cincinnati, Columbus and Toledo, in Ohio, Louisville, Ky., and Indianapolis, Ind., and the large number of towns and cities in Pennsylvania named on pages 6 to 9, of the Bill of Complaint of the Commonwealth of Pennsylvania, and to a large number of cities and towns in Ohio and other States. (Digest

pp. 212-233 and see references to Record there cited, which are so numerous that inserting them here would interrupt the continuity of the reading).

The number of cities and towns in States adjacent or contiguous to West Virginia dependent almost entirely upon West Virginia for their natural gas supply is substantially as follows:

In Pennsylvania	about	300
Ohio,	"	300
Kentucky,	"	25
Indiana,	"	15
Maryland,	"	14

Among these are some of the largest cities in these states. (Digest, pp. 234-5; Record, pp. 907-8; Digest, p. 236; Record, p. 904).

The number of domestic consumers in Pennsylvania is substantially 400,000, or counting five to a family, approximately a population of 2,000,000; in Ohio about 725,000, or a population of 3,625,000; in Kentucky about 75,000, or a population of 375,000; in Indiana about 15,000, or a population of 75,000; and in Maryland about 10,000, or a population of 50,000. (Digest, p. 235; Record, p. 908).

The States in which the activities of the larger natural gas companies taking gas from West Virginia and other States are conducted, are as follows:

Hope Natural Gas Company. Pennsylvania, Ohio and West Virginia. (Digest, pp. 79, 80; Record, pp. 204, 205, 297, 298).

Reserve Gas Company. Pennsylvania, Ohio and West Virginia. (Digest, pp. 79, 80; Record, pp. 186, 189, 974).

Connecting Natural Gas Company. Pennsylvania, Ohio, Kentucky and West Virginia. (Digest, pp. 83, 84; Record, pp. 318, 364).

East Ohio Gas Company. Ohio. (Digest, p. 88; Record, pp. 564, 570, 975, 1599).

Columbia Gas & Electric Company. West Virginia, Kentucky and Ohio. (Digest, pp. 84, 85; Record, pp. 374-6, 392, 876, 1584).

Logan Natural Gas Company. Indiana, Ohio and West Virginia. (Digest, p. 91; Record, pp. 750-8, 764-72, 1709).

Fayette Natural Gas Company. Pennsylvania and West Virginia. (Digest, p. 80; Record, pp. 534, 554).

Pittsburgh & West Virginia Natural Gas Company. Pennsylvania and West Virginia. (Record, pp. 514, 515).

The Manufacturers Light & Heat Company. Pennsylvania, Ohio and West Virginia. Digest, p. 74; Record, pp. 615, 616).

Carnegie Natural Gas Company. Pennsylvania and West Virginia. (Digest, p. 95; Record, pp. 876, 890-2, 1587).

Eastern Oil Company group of companies. Maryland and West Virginia. (Digest, pp. 93, 94; Record, pp. 892, 893).

Natural Gas Company of West Virginia. West Virginia, Pennsylvania and Ohio. (Digest, p. 90; Record, pp. 741-2, 746, 1566).

United Fuel Gas Company. West Virginia, Kentucky and Ohio. (Digest, pp. 84-5; Record, pp. 374-6, 392, 876, 1584).

The Philadelphia Company. Pennsylvania and West Virginia. (Digest, p. 87; Record, p. 876, 1586):

Ohio Fuel Supply Company. Ohio and West Virginia. (Digest, pp. 88, 89; Record, pp. 651-8, 874, 1601).

Peoples Natural Gas Company. Pennsylvania. (Digest, pp. 79, 80; Record, pp. 186-90, 1509).

Northwestern Ohio Natural Gas Company. West Virginia and Ohio. (Digest, p. 89; Record, p. 651).

The Hope, Reserve, Connecting, Peoples and East Ohio, are the only companies that are in any manner affiliated or have any connection with the so-called Standard Oil interests. The other twelve companies in the foregoing list and many others have no such connections. All of these companies are in competition with one another (if located and operating in the same territory) in leasing, drilling, &c. (Digest, pp. 282-4; Record, pp. 1302-3, 12, 13, 46, 220, 357, 371, 827). The evidence conclusively establishes the fact that there is no monopoly, except in so far, as always results, that operations requiring enormous capital can only be carried on by a comparatively few. In this case these few are in no way associated. (Digest, pp. 275-82; Record, pp. 160, 321, 353, 356, 378-9, 424, 469, 508, 553-4, 638, 658, 682, 998-9, 1021, 1030-33, 1169, 1174, 1205, 1508).

The investment of the natural gas companies engaged in operating for and transmitting and supplying natural gas in and from West Virginia, at the present time, is several hundred millions of dollars, and the investment of the domestic consumers in the respective

States in their appliances for burning natural gas, estimated at $200 to the consumer, would be in excess of $245,000,000. This takes no account of the money invested and lost, nor of the appliances used in industrial plants. (Digest, pp. 60-71, and references there cited. Digest, p. 201 and references to Record there cited for average cost to consumer. Record, p. 908 for evidence as to number of consumers).

The total production of natural gas in the State of West Virginia in 1908 was approximately 112,000,000,000 cubic feet. This production gradually increased for five years until 1913, when it was approximately 245,500,000,000 cubic feet. It declined in 1914 and 1915, but in 1916 it was approximately 299,000,000,000 cubic feet. This increased in 1917 and declined in 1918, and in 1919 it was approximately 220,000,000,000 cubic feet. (Digest, p. 273; Record p. 278).

There was transported out of the State of West Virginia for the use of the respective consuming communities in Pennsylvania, Ohio, Indiana, Kentucky and Maryland, in the year 1919, approximately 140,000,000,000 cubic feet, or about 64% of the State's total production. The State of West Virginia during the same year consumed approximately 80,000,000,000 cubic feet of its own production and about 4,000,000,000 cubic feet which was imported into West Virginia from other states. (Digest, pp. 273-4; Record, p. 1378).

Natural gas cannot be stored after the gas-bearing sand has been punctured by the drill, and must be transmitted to the points of consumption by pipe lines. (Digest, pp. 23, 33; Record, pp. 13, 1421). The transmission for long distances through these pipe lines, after gas is forced into the line by its natural or rock

pressure, is made possible by the construction of compressors, which release the gas after compression into the transmission lines, and the gas flows through the same by its expansion. These compressor stations are located at intervals upon all of the transmission lines. (Digest, pp. 24-26; Record, pp. 127, 153-5). Some of these compressor stations have many thousand horse power. (Digest p. 61; Record pp. 258-9). The flow of gas in any direction is always towards the point of lowest pressure, and, therefore towards the point of largest consumption at the instant. Its direction of flow may vary from minute to minute, hour to hour and day to day. (Digest, pp. 29, 32; Record, pp. 865-76, 1419-20). The gas in the lines is never at rest. It is always in motion in one direction or another. (Digest, p. 31; Record, p. 908).

The development and growth of the presently existing vast system of natural gas production, transportation &c, is the result of experience extending over more than a quarter of a century. At first the supply of gas was confined to limited areas, within the radii of transmission by means of natural rock pressure of the gas in the ground. Science has extended these radii, almost indefinitely, by supplementing this natural pressure by compressor stations of thousands of horse power erected at intervals along the transmission lines.

These transmission lines in West Virginia, Pennsylvania and Ohio, cross and recross the State lines at many points. (Digest, p. 73; Record, p. 30). The lines of some of these companies are shown upon maps in Volume I of Exhibits, Volume III of the record, at the following pages:

And the joint map of the Hope, Reserve and Peoples Companies 1600

The map at page 1694, of the above Volume, based on data compiled by the United States Geological Survey, shows the natural-gas-using towns, and main transmission lines, in West Virginia, Pennsylvania, Ohio, Indiana, Kentucky and Maryland. They form a network of interstate transportation or transmission, forming a system of interstate connections and interstate crossings to which railroad lines are no comparison. These maps visualize the fact that in the production, sale and transportation of natural gas, state lines were obliterated by all of these gas companies, just as they were by the commerce clause of the Constitution of the United States. To now turn bac the hands on the dial of time, law, usage and custom (by which usage and custom the state of West Virginia has heretofore enormously profited) as this statute now proposes, would involve losses to gas companies and to consumers of nearly a billion dollars, subject millions of men,

women and children, in other states than West Virginia to indescribable hardships, to dangers to life and health, to discomfort and inconvenience, the while consumers in West Virginia were protected from all those losses and evils by the selfish discrimination of the laws of their State, in their favor, instead of the State adopting a forward-looking policy applicable to consumers in all States alike, providing for a gradual readjustment to meet the diminishing gas supply.

The lines of some of these companies cross and recross the State lines at a large number of places. The lines of The Manufacturers Light & Heat Company, for example, cross and recross the State lines between West Virginia and Pennsylvania and Ohio, over forty times. Through these lines the transmission of gas is carried from the producing centers of West Virginia to the consuming centers of Pennsylvania, Ohio, Kentucky, Indiana and Maryland. (Digest, pp. 73-5; Record, pp. 30, 114, 146-7). At these consuming centers in the villages, boroughs, towns and cities, there are distributing systems of pipe lines with house connections of the same general character as those used for manufactured gas. (Digest, p. 25; Record, p. 18).

All of the gas companies supplying the centers of population in all of the States have long since adopted the rule of giving to the domestic consumer preference over the industrial consumer; that is, in the event that there is not sufficient gas to supply both industrial and domestic consumers, the supply to the industrial consumer is cut off as far as possible.

In some of the States, as in Ohio, the Public Service Commission of the State has made rules and regulations giving to the domestic consumer the preference. The

natural gas companies, by reason of the present and prospective shortage of natural gas supply, have adopted the general policy of discouraging as far as possible the use of natural gas for industries, so as to conserve the supply for the domestic consumers. This policy was adopted because industries could more readily arrange for other fuel, and because industrial plants, as a rule, used such enormous quantities of gas that the supply was not enough for both domestic and industrial consumption. (Digest, pp. 147-8 and references to record there cited; Digest, pp. 157-8; Record, p. 423; Digest, p. 162; Record, pp. 561, 562, 578-9, 603, 634, 680, 681, 722, 781, 793).

Even when the supply of natural gas was much greater than it is at present,—in fact, at all times,—during "peak load" periods, that is, during extreme cold weather, both because of the peak load demands and because of the slowing down of transmission during such weather, there has been a shortage of supply, and even domestic consumers have not been furnished with an adequate supply. (Digest, pp. 144-6, 152, 161, 164, 166; Record, pp. 47, 50, 51, 215, 222, 458, 475-7, 611, 673). This condition has been accentuated during the last few years by a gradual diminution that has taken place in the supply of gas. (Digest, p. 214; Record, p. 47-8; Digest, pp. 216, 217, 224; Record, pp. 211, 327-8, 348, 588).

In addition to private citizens, the States of Pennsylvania and Ohio have contracts for the supply of gas to their public insitutions in the localities supplied by these natural gas companies, such as hospitals, poorhouses, houses of detention, etc., and the various municipalities in said States use the gas under contract for their public buildings, sometimes for street lighting and for the lighting of their grounds and the like. (Digest,

pp. 126, 127, 129, 132, 134-6, 238-52; Record, pp. 7-8, 118-20, 223, 388-9, 458, 500, 501, 574-7, 590, 632-3 and references to Record cited in Digest, pp. 238-52).

In many sections of Pennsylvania and Ohio, and in some of the other States, dwelling houses have been constructed with appliances adapted solely for the use of natural gas, and these appliances cannot be used for other fuel. So, too, some of the industrial plants have been so constructed, and must be reconstructed in order to use other fuel. The time required for such reconstruction and change of appliances would be very considerable,—many months,—and the cost thereof would be great. (Digest, pp. 200-12, and references to Record there cited).

If West Virginia gas were cut off from these consumers until the new appliances were installed and adapted to other fuel, and such fuel procured, such consumers would be not only subjected to an enormous cost and expense, but also would be affected in their comfort and convenience as well as in their health, if indeed their lives would not be in many cases jeopardized. (Digest, pp. 192-200 and references to Record there cited).

The gas companies transmitting gas from West Virginia into Pennsylvania, Ohio, and other States, are not only under contract to supply West Virginia gas to domestic and industrial consumers, but also to the States themselves and the municipal subdivisions of said States, and other gas companies operating therein. (Digest, pp. 127-141, 238-52, and references to Exhibits in Record there cited).

A large proportion of the natural gas now being used in Pennsylvania, Ohio, and these other States, is

obtained in and transported from West Virginia into these other States, and naturally and inevitably anything that reduces the amount of gas thus to be transported into these other States will diminish the quantity of gas thus to be delivered from West Virginia to these other States. (Digest, p. 142; Record, p. 969; Digest, pp. 273-4; Record, p. 1378; Digest, pp. 235-6; Record, pp. 904-8; Digest, pp. 184-7, and references to Record there cited.) The effect of such diminution is not measured in proportion to the amount of gas taken out for consumption in West Virginia under the provisions of said statute. There must always be enough gas in any pipe line system to fill the lines in order to maintain any pressure sufficient to afford any practical service to consumers on that line. While therefore only 25% to 50% of the amount of gas in transit to other States may be temporarily seized under the provisions of said statute for use in West Virginia, this may, and in all probability would, so disorganize the pressures on the transmission system as to prevent any service at all to consumers on said lines in other States, especially those at distant points. (Digest, pp. 30-31; Record, p. 876; Digest, pp. 77-8, Record, pp. 49-50; Digest, p. 141; Record, p. 783; Digest, p. 164, Record, p. 606; Digest, pp. 177-8; Record, pp. 909-10).

The operation of the West Virginia statute in controversy, not only undertakes to regulate and control the transportation lines, that is, the machinery of transportation, but proposes to take out of the lines, while the same is in transit to other States, the very article of commerce,—the natural gas,—so under transportation, and, without the consent of the gas company thus transmitting the same from West Virginia to such other States, proposes to appropriate and apply the gas thus taken to the use of and for the benefit of not only the

domestic consumers in West Virgnia, but also all other consumers, the industrial consumers and others, throughout the domain of the State of West Virginia.

The effect of the operation of said statute and the carrying out of its mandates will be:

(a) The appropriation by West Virginia consumers of gas already committed to interstate commerce.

(b) The practical prohibition altogether of the transportation of gas from West Virginia into other States.

(c) To discriminate in favor of and give to consumers in West Virginia preferences and opportunities over consumers in other States.

(d) To cause enormous pecuniary losses to the natural gas companies and to consumers in these other States.

(e) To affect and jeopardize the comfort, convenience, health, and possibly the lives, of consumers in such other States.

(f) To strike down the contracts of the transporting companies with States, municipalities, other gas companies, and with consumers in such other States.

(g) To take the property of the transporting gas companies forcibly and without their consent.

(h) To destroy the value of the investments of the transporting natural gas companies, by destroying their market for gas, greatly reducing

the value of their plants, and in many instances rendering such plants, especially their distributing systems, utterly valueless.

The foregoing effect of the operation of the statute and the carrying out of its provisions, is evident from the following considerations:

The statute requires of each company in the state, however limited by charter or course of business may have been its locality of supply, an adequate supply of natural gas to be furnished, in the first instance, to all the residents of West Virginia, domestic, industrial and others, whether such residents are now being supplied by said transporting companies or not, and whether they have any connections upon their lines or not, and whether they are located in the territory which the company agreed to supply or not. By express terms the statute covers the whole territory of West Virginia, and the territory through which any of the lines of transportation pass. (As a matter of fact there are only two or three counties in the State through which lines do not pass.)

The statute also requires such adequate supply not only to domestic consumers, but to industries and to other consumers. If the industries now in the State, and particularly those additional industries which would be there attracted by such an enactment, as well as all the domestic consumers in the State, would use natural gas for fuel, as they undoubtedly would, they would consume substantially every foot of gas produced in the State,—even that produced at the present time, not to speak of the lesser quantity that will later be available on account of the rapid decline in production in West Virginia that is now going on. (Digest, pp. 114-81, passim and references to Record there cited).

Moreover, as previously stated, at no time during the past, when the supply of natural gas was much greater than today, during the "peak load" periods, even after industrial consumers were cut off the lines, could the gas companies furnish an adequate supply. (Digest, pp. 214, 216, 217, 224, 144-6, 152, 161, 164, 166; Record, pp. 47-8, 50, 51, 211, 215, 222, 327, 328, 348, 458, 475-7, 588). The peak load varies over normal from ten to twenty times. (Digest, pp. 150-1; Record, pp. 55-7, 222-3, 327, 423-4, 909). No gas company as an economic proposition, could afford to lay lines of dimensions sufficient for this extraordinary demand which continues for short periods only and during extreme cold weather. (Digest, p. 32; Record, p. 520). Besides this, temperature affects the flow of gas from the well and through the lines, cold retarding the flow, and the colder the weather the more the flow is retarded, just at the time when the demand is the greatest and the necessity for its use the most imperative. During these periods, therefore, if the demand for domestic consumption in West Virginia must be adequately supplied, even if the industrial demand in West Virginia, like elsewhere, was cut off, which the statute forbids, still consumers in other States would suffer indescribable hardships by this preemption of substantially all the gas by West Virginia consumers. As already explained, the transmission of gas by pipe lines, unlike the transportation of other commodities, may be substantially stopped by taking out of the line a comparatively small per cent. of their capacity, because the pressures must be maintained or no gas can be transmitted.

In addition to this, should any other natural gas company in the State, by reason of improvidence or carelessness or negligence or want of foresight and of capital, or other reason, be unable to supply the consumers

upon its lines, even though when such lines were laid it was evident the company laying the same could not supply such consumers, and that such consumers would require billions of feet of gas over and above the amount said company was prepared to supply, nevertheless, other companies engaged in interstate transportation of natural gas would be compelled to make a connection with such line and make up the deficit, whenever such deficit existed, whether such deficit was permanent or temporary only, during "peak load" periods. A local company with one small gas well could buy the distributing system of the largest city in West Virginia, and then, as above stated, compel the great interstate transportation companies to make up its deficit of gas.

Leaving out consideration of the wasteful use of gas by industries and in carbon-black manufacture now going on in West Virginia, (which waste would be enormously increased under the statute), the domestic consumers in West Virginia are comparatively just as wasteful. (Record, p. 901).

The diagram on page 1595 (Volume III of Record, Volume I of Exhibits) shows that domestic consumers in West Virginia used per consumer in 1906, 1,100,000 cubic feet of gas, and this fluctuated down to the end of 1918 to 850,000 feet per consumer; while during the same period the domestic consumers in Pennsylvania and Ohio respectively used in 1906, 600,000 and 250,000 feet per consumer, and in 1918, 375,000 and 160,000 feet per consumer; or West Virginia consumers in 1906 used nearly twice as much as Pennsylvania consumers and over four times as much as Ohio consumers, and in 1918, when the necessity for conservation became apparent, West Virginia consumers on the average consumed during that year over twice as much as Pennsylvania and over five times as much as Ohio consumers.

There is no claim, either by the Answer or by the evidence that there has been any discrimination by any of these interstate gas companies against consumers in West Virginia as compared with consumers in other States. West Virginia consumers have not only been fairly and liberally supplied, but lavishly, in comparison with consumers in other States. The statute, as the Answer shows and the evidence confirms, is not designed to protect consumers in West Virginia against discrimination, but to compel discrimination in their favor and against consumers in other States. The sole purpose of the statute in other words is to enforce discrimination in favor of West Virginians and against consumers in all other States.

This shortage of gas in cold weather to the consumers in other States would destroy altogether the demand for gas by such consumers. If consumers of gas in other States during the cold weather, when they needed above all other times this fuel to light and heat their houses and cook their meals, were deprived of this fuel, it follows inevitably that they would make other arrangements for fuel. They could not afford to rely upon the uncertainties and precariousness and intermittent character of their fuel supply of natural gas from these companies transporting the same from West Virginia into these other States, which would be subject to the operation of this West Virginia statute.

The experienced operators and experts of all the large natural gas companies testified unqualifiedly that the effect of the operation of the statute would be not only to tremendously diminish the supply of gas while in transit from the State of West Virginia into these other States, but it would so demoralize the operation of their lines as to utterly and completely prohibit and

prevent such companies from transmitting any gas into these other States during periods of cold weather and would destroy all demand for gas by consumers in these other States. These consumers in other States, such as Pennsylvania and Ohio, who are now dependent upon the gas at present being produced and transported from the State of West Virginia, would be so discriminated against by this statute that they would have to use other fuel, change their appliances, in some instances reconstruct their houses, and altogether abandon the use of natural gas; while the consumers in West Virginia could revel in the luxury of natural gas, and, if they continued their present profligacy, in an abandonment of waste of this most munificent gift of Nature to man.

Argument.

The following legal propositions Complainant contends are applicable to this case. The same, together with the authorities in support thereof, will be separately argued.

1. Natural Gas when reduced to possession by the owner of the surface, his grantees, lessees, or assigns, is an Article of Commerce, and Congress has expressly so recognized it and provided for its transmission or transportation in pipe lines.

2. Natural Gas is not the property of the State, although owing to its power of self-transmission it has been fancifully called a "Mineral Ferae Naturae" by analogy to Animals Ferae Naturae, and the State has no more dominion over it than over other privately owned real or personal property.

3. The transmission of natural gas through pipe lines from points within one State, into or through other States, when the pipe lines and the gas transmitted therein cross and recross the State line, constitutes Interstate Commerce.

4. The transmission of natural gas by pipe lines, from the producing centers of West Virginia to the consuming centers of Pennsylvania, Ohio, and other States, constitutes an act of commerce among the several States, of such a nature as to be national in character, and to admit of and require a uniform system or plan of regulation.

5. The obvious purpose and effect of the West Virginia statute is not only to burden, interfere with and regulate Interstate Commerce, but to absolutely prohibit and prevent the same by prohibiting and preventing the transmission of natural gas out of said State.

6. The obvious and declared purpose and the effect of said West Virginia statute is to discriminate against consumers in other States in favor of and to and for the commercial, economic and other benefit and advantage of consumers in West Virginia.

7. Over eighty per cent. of the natural gas entering the pipe lines of the Interstate Natural Gas Companies in West Virginia is started with the definite intention that it shall be transmitted in Interstate Commerce, and as a fact it is so transmitted to Pennsylvania, Ohio, and other States, wherefore:

(a) The statute cannot be sustained because it purports to enforce duties imposed by Law upon Public Service Gas Companies in West Virginia, or any common-law duty of public utilities.

(b) The statute cannot be sustained because the specific quantity, or the exact destination, or the particular consignee, are unknown at the inception of said transportation; or because in some instances the gas is transported by the producer or owner for his own use or for distribution or for sale to local consumers or distributing companies; or because there is a transfer of title thereto in transit; or because of any local necessity, public sentiment or expediency, to retain said gas for use by the citizens of West Virginia.

(c) The statute cannot be sustained because of any alleged police power.

(d) The statute cannot be sustained because of any alleged corporate franchise regulation by the State of West Virginia, either as to domestic or foreign corporations engaged in Interstate Commerce.

(e) The statute cannot be sustained because said statute applies equally to both domestic and non-resident persons and to Intrastate as well as Interstate Commerce, and the Interblending of Intrastate and Interstate Commerce.

(f) The statute cannot be sustained because several of these Companies also do some local business, by distributing Natural Gas at certain points from their pipe line systems to local communities.

(g) The statute cannot be sustained because those Interstate Gas Companies, if there are any, which are not Public Service Companies under the Laws of West Virginia would not be affected.

8. The possibility that the State of West Virginia may exercise some forbearance, and that the State Public Service Commission may exercise a liberal discretion in the enforcement of said statute, in no sense mitigates the repugnancy of said statute to the Commerce Clause of the United States Constitution.

9. The West Virginia statute so involves the regulation of both Intrastate and Interstate transmission of Natural Gas, that by no possible construction could it be upheld without being so remodeled that it would be a mere speculation whether the legislature would have

passed it in its new form, and this Court cannot reshape said statute simply because it embraces elements that it might have reached if it had been drawn with a different measure and intent.

10. The natural and necessary operation and effect of said statute will be to impair the obligation of contracts.

11. The natural and necessary effect of said statute is to deny to Citizens of Pennsylvania, Ohio, and other States, the privileges and immunities granted by said statute to citizens of West Virginia.

12. The natural and necessary effect of said statute is to deprive the Interstate Natural Gas Companies operating in West Virginia of their property without due process of law.

I.

NATURAL GAS WHEN REDUCED TO POSSESSION BY THE OWNER OF THE SURFACE, HIS GRANTEES, LESSEES, OR ASSIGNS, IS AN ARTICLE OF COMMERCE, AND CONGRESS HAS EXPRESSLY SO RECOGNIZED IT AND PROVIDED FOR ITS TRANSMISSION OR TRANSPORTATION IN PIPE LINES.

The legal status of natural gas and its character as a legitimate subject of interstate commerce was declared and settled by this Court in the leading case of *Oklahoma vs. Kansas Natural Gas Co.*, 221 U. S. 229, (1911). It was explicitly decided in that case, (p. 255):

> "Gas, when reduced to possession, is a commodity; it belongs to the owner of the land, and, when reduced to possession, is his individual property, subject to sale by him, and may be a subject of intrastate commerce and interstate commerce."

And in *Haskell vs. Kansas Natural Gas Co.*, 224 U. S. 217 (1912), on the question of modification of the decree in *Oklahoma v. Kansas Natural Gas Co., supra,* the court said, (p. 220):

> "This court held that natural gas after severance is a commodity which might be dealt in like other products of the earth, as coal and other minerals, and is a legitimate subject of interstate commerce."

See also:

State ex rel. Corwin v. Indiana & Ohio Oil, Gas & Mining Co., 120 Ind. 575 (1889).

Ohio Oil Co. v. Indiana 177 U. S. 190.

Congress has expressly recognized natural gas to be a lawful subject of commerce and has made provision authorizing its transmission or transportation in pipe lines.

Act of March 11, 1904, c. 505 Sec. 1, 33 Stat. at L. 65, amended March 2, 1917, c. 146, Sec. 1, 39 Stat. **983.**

Act of June 29, 1906 (34 Stat. at L. 584, c. 359, Sec. 1), commonly known as the Hepburn Amendment to the Interstate Commerce Act.

II.

NATURAL GAS IS NOT THE PROPERTY OF THE STATE, ALTHOUGH OWING TO ITS POWER OF SELF-TRANSMISSION IT HAS BEEN FANCIFULLY CALLED A "MINERAL FERAE NATURAE" BY ANALOGY TO ANIMALS FERAE NATURAE, AND THE STATE HAS NO MORE DOMINION OVER IT THAN OVER OTHER PRIVATELY OWNED REAL OR PERSONAL PROPERTY.

This was expressly decided by this Court in *Ohio Oil Co. v. Indiana*, 177 U. S. 190 (1900).

Also *Oklahoma v. Kansas Natural Gas Co.*, 221 U. S. 229 (1911), *supra*.

Kansas Natural Gas Co. v. Haskell, 172 Fed., 545 (1909), affirmed by this Court in *Oklahoma v. Kansas Natural Gas Co., supra*.

Manufacturers Gas & Oil Co. v. Indiana Natural Gas & Oil Co., 155 Ind., 545 (1900).

III.

THE TRANSMISSION OF NATURAL GAS THROUGH PIPE LINES FROM POINTS WITHIN ONE STATE, INTO OR THROUGH OTHER STATES, WHEN THE PIPE LINES AND THE GAS TRANSMITTED THEREIN CROSS AND RECROSS THE STATE LINE, CONSTITUTES INTERSTATE COMMERCE.

In the recent case of *Pennsylvania Gas Co. v. Public Service Commission of New York*, 252 U. S. 23, (1920), the court by Mr. Justice Day said, (p. 28):

> "We think that the transmission and sale of natural gas produced in one State, transported by means of pipe lines and directly furnished to consumers in another State, is interstate commerce within the principles of the cases already determined by this court. *West v. Kansas Natural Gas Co.*, 221 U. S. 229; *Haskell v. Kansas Natural Gas Co.*, 224 U. S. 217; *Western Union Telegraph Co. v. Foster*, 247 U. S., 105. * * *"

This case affirmed the decision of the New York Court of Appeals, *Pennsylvania Gas Co. v. Public Service Commission*, 225 N. Y. 397 (1919), in the course of which Cardozo, J., said, (p. 402):

> "We think the petitioner's business is interstate commerce. There is no doubt that the transportation of oil or gas from state to state through the medium of pipe lines is commerce between the states. *West. v. Kansas Natural Gas Co.*, 221 U. S. 229; *Haskell v. Kansas Natural Gas Co.*, 224 U. S. 217; *Haskell v. Cowham*, 187 Fed. Rep. 403."

In *Public Utilities Comm. of Kansas v. Landon,* 249 U. S. 236 (1919), the same proposition was established.

Mr. Justice McReynolds, said, (p. 245):

> "That the transportation of gas through pipe lines from one State to another is interstate commerce may not be doubted. Also, it is clear that as part of such commerce the receivers might sell and deliver gas so transported to local distributing companies free from unreasonable interference by the State. *American Express Co. v. Iowa,* 196 U. S. 133, 143; *Oklahoma v. Kansas Natural Gas Co.,* 221 U. S. 229; *Haskell v. Kansas Natural Gas Co.,* 224 U. S., 217."

The same conclusion had been reached nearly a quarter of a century earlier, in *State ex rel. Corwin v. The Indiana & Ohio Oil, Gas & Mining Co.,* 120 Ind. 576 (1889), reviewed and explicitly reaffirmed in *Manufacturers Gas & Oil Co. v. Indiana Natural Gas Co.,* 155 Ind. 545 (1900).

It is well established by decisions of this Court that even where the transmission or transportation of legitimate articles of commerce is from and to points in the same State, where the transportation lines cross and recross the State line, it is interstate commerce within the constitutional protection.

See *Hanley v. Kansas City Southern R. Co.,* 187 U. S. 617 (1902).

Western Union Telegraph Co. v. Speight, 254 U. S. 17 (1920).

The means of conveyance, the distances of the transportation in the respective States, the number of crossings, the character or manner of the passage back and forth or the frequency thereof, in no way change the interstate character of the commerce, or the Federal control of the same.

Gloucester Ferry Co. v. Pennsylvania, 114 U. S. 196 (1885).

Covington etc. Bridge Co. v. Kentucky 154 U. S. 204. (1893).

IV.

THE TRANSMISSION OF NATURAL GAS BY PIPE LINES, FROM THE PRODUCING CENTERS OF WEST VIRGINIA TO THE CONSUMING CENTERS OF PENNSYLVANIA, OHIO AND OTHER STATES, CONSTITUTES AN ACT OF COMMERCE, AMONG THE SEVERAL STATES, OF SUCH A NATURE AS TO BE NATIONAL IN CHARACTER, AND TO ADMIT OF AND REQUIRE A UNIFORM SYSTEM OR PLAN OF REGULATION.

Natural gas in commercial quantities cannot be stored; it must be transmitted by pipe lines from the mouth of the well to the ultimate consumer. Pipe lines are the universally recognized method for such transmission. The normal, universally followed, and most scientific method of marketing natural gas is to turn it from the well immediately into the pipe line, through which it is transmitted on the first part of its journey by its power of expansion, having been held in compression by nature while in the sand-rock. This compression is commonly called the rock pressure. This rock pressure forces the gas from the bottom of the well to the mouth and thence into the pipe lines. On these pipe lines at intervals are established compressor stations, some of which are of many thousand horse-power. These place the gas under compression while in the lines, and by expansion the gas continues on its journey, passing en route perhaps through several compressor stations.

From the instant it enters the pipe lines the gas is never at rest, but is always in motion, sometimes in one

direction and sometimes in another; its course being towards the point of lowest pressure on the lines at the instant, so the movement may be in opposite directions from hour to hour. It is always, as stated, instinct with life, superinduced in the first instance by its expansion from its compression under the natural rock-pressure, and later by its expansion from compression by the various compressor stations located along the lines and perhaps in several States.

The term "pumping station," as used on oil and water lines, is sometimes applied to natural gas lines, but this is a misnomer; the gas is not forced or driven, but travels by its power and propensity of expansion, after being compressed.

None of this gas is ear-marked. No particular thousand feet is destined for any particular point on the lines. All the gas that enters the pipe-line system, perhaps from fields in two or three States, or several fields in the same State, becomes commingled and is not-separable, and moves now here and now there, according to the current, as above explained, until it reaches the local distributing mains and ultimate consumer. The title to the gas is in the pipe-line company. The natural gas companies are not engaged in transporting gas for others, but in transmitting their own gas, which they sell at so much per thousand feet delivered. All of the large interstate companies start the gas on its journey from one State to another to be delivered to the consumer in such other State. The destination is foreordained; that is, delivery to purchasers in such other States.

The continuous and usual course of business, and the commitment of the gas company to supply the con-

sumers' requirements from hour to hour and day to day, determine the character of the shipment and the point and place of delivery.

The gas thus entering the lines in West Virginia is destined for and moves in the normal, contemplated and followed course, as continuous and rapid as science can make it, to the consumers in Pennsylvania, Ohio, Indiana, Kentucky, Maryland, and other States. Some gas from all these other States may enter the lines and become commingled with the gas from West Virginia, while en route from West Virginia to consumers in these other States; or some of this gas from other States, when the movement of the current in the lines is towards West Virginia, may be supplied to consumers in West Virginia.

The gas in the pipe-line system of any company crossing the State lines, is so transmitted from State to State under contracts for the sale and delivery thereof to consumers in such other States.

The interstate gas companies having pipe lines extending from West Virginia into Pennsylvania, Ohio, and other States, made contracts to supply gas to consumers in those States. These interstate companies produce or purchase gas in West Virginia, and after it enters their pipe lines they transmit or transport it from West Virginia to consumers in other States for delivery under their said contracts. Their pipe lines through which this transmission or transportaton is being conducted, are only the vehicle by which the gas—the article sold—is conveyed from West Virginia and delivered to said purchasers. There is no separate charge for transportation or transmission. The gas is sold delivered at

the point of consumption, and while the pipe lines are a transportation or transmission system—unlike railroads, telegraph lines and the like, they are not engaged in the separate business of transportation. The transaction, therefore, is primarily a contract of sale of a specific article delivered at the point of consumption or transmission as distinguished from the contract of transportation or transmission.

However, it is interstate commerce, considered both as a purchase and sale, and also as transportation.

Such purchase and sale of gas and transmission thereof through pipe lines from State to State is that kind or character of interstate commerce which has been declared again and again by this Court to be national in character, to be governed by a uniform system or plan of regulation. Such uniformity and plan Congress alone can supply, exclusive of regulation or attempt at control by the respective States in which the purchase and sale takes place, or through which the transmission or transportation is made.

Inextricable confusion, delay and uncertainty would result, if each State through which the pipe lines passed would undertake to make separate and distinct regulations.

Public Utilities Commission v. Landon, 249 U. S., 236 (1919), *supra.*

Landon, Receiver v. Public Utilities Commission of Kansas, 242 Fed., 658; C. C. A., (1917).

Pennsylvania Gas Co. v. Public Service Commission of New York, 225 N. Y., 397 (1919).

State ex rel. Corwin v. Indiana & Ohio Oil, Gas & Mining Co., 120 Ind. 576 (1889).

Judge Sanborn, in *Haskell v. Cowham,* 187 Fed., 403 (1911), said (p. 408):

> "Interstate commerce in natural gas, including therein its transportation among the States by pipe lines, is a subject national in its character and susceptible of regulation by uniform rules. The silence or inaction of Congress relative to such a subject is a conclusive indication that it intends that interstate commerce therein shall be free, and any law or act of a state or of its officers which prohibits it or substantially restrains its freedom is violative of the Constitution and void." (Citing authorities).

These natural gas cases present a modern application of this Court's well-settled and long-established interpretation of the Commerce Clause of the Federal Constitution to the effect that the sale or exchange and transportation of commodities between the States is of national importance and admits of and requires uniformity of regulation and therefore no State has power to interfere with, regulate or burden, much less prohibit, such sale and transportation. A brief reference to a few of these cases is accordingly here made. The sale of gas and its transportation or transmission from State to State comes within the established rule.

The question of what constituted such national character of the subject matter of interstate commerce

as to bring it within the exclusive Federal commerce power, was before the court in *Reading Railroad Co. vs. Pennsylvania* (The State Freight Tax Case), 15 Wall. (82 U. S.) 232 (1872).

Mr. Justice Strong said, (p. 279):

> " * * * the rule has been asserted with great clearness, that whenever the subjects over which a power to regulate commerce is asserted are in their nature national, or admit of one uniform system or plan of regulation, they may justly be said to be of such a nature as to require exclusive legislation by Congress. *Surely transportation of passengers or merchandise through a State, or from one State to another, is of this nature.*"

(The italics are ours).

In *Welton v. State of Missouri*, 91 U. S. 275 (1875), the opinion, written by Mr. Justice Field, has been widely quoted in this and other courts. Speaking of the fundamental constitutional principles involved, he observed, (p. 279):

> "Commerce is a term of the largest import. It comprehends intercourse for the purpose of trade in any and all of its forms, including the transportation, purchase, sale and exchange of commodities between the citizens of our country and the citizens or subjects of different states. The power to regulate it embraces all the instruments by which such commerce may be conducted. So far as some of these instruments are concerned and some subjects which are local in their operation, it has been held that the states may provide regulations until Congress acts with reference to them; but where the subject to which the power applies is national in

its character, or of such a nature as to admit of uniformity of regulation, the power is exclusive of all state authority.

It will not be denied that that portion of commerce with foreign countries and between the states, which consists in the transportation and exchange of commodities, is of national importance, and admits and requires uniformity of regulation. The very object of investing this power in the General Government was to insure this uniformity against discriminating State legislation."

(The underscore is ours).

In *Gloucester Ferry Co. v. Pennsylvania*, 114 U. S. 196, (1885), the Court, said, (p. 203):

"And it needs no argument to show that the commerce with foreign nations and between the states which consists in the transportation of persons and property between them, is a subject of national character and requires uniformity of regulation. Congress alone, therefore, can deal with such transportation, its non-action is a declaration that it shall remain free from burdens imposed by state legislation. Otherwise there would be no protection against conflicting regulations of different states, each legislating in favor of its own citizens and products, and against those of other states. It was from apprehension of such conflicting and discriminating state legislation, and to secure uniformity of regulation, that the power to regulate commerce with foreign nations and among the states was vested in Congress."

(Underscore ours.)

The law is well summarized in the opinion of this Court, in *County of Mobile v. Kimball,* 102 U. S. 691, 697, (1880), where it is said:

> "The subjects indeed upon which Congress can act under this power are of infinite variety, requiring for their successful management different plans or modes of treatment. Some of them are national in character, and admit and require uniformity of regulation, affecting alike all the states; others are local, or are mere aids to commerce, and can only be properly regulated by provisions adapted to their special circumstances and localities. *Of* the former class may be mentioned all that portion of commerce with foreign countries or between the states which consists in the transportation, purchase, sale and exchange of commodities. Here there can of necessity be only one system or plan of regulation, and that Congress alone can supply; its non-action in such cases with respect to any particular commodity or mode of transportation is a declaration of its purpose that the commerce in that commodity, or by that means of transportation, shall be free. There would otherwise be no security against conflicting regulations of different states."

(The underscore is ours).

In *Leisy v. Hardin,* 135 U. S., 100 (1890), it was said:

> "Whenever, however, a particular power of the general government is one which must necessarily be exercised by it, and Congress remains silent, this

is not only not a concession that the power reserved by the states may be exerted as if the specific power had not been elsewhere reposed, but on the contrary the only legitimate conclusion is, that the general government intended that power should not be affirmatively exercised, and the action of the states cannot be permitted to effect that which would be incompatible with such intention. Hence, inasmuch as interstate commerce, consisting in the transportation, purchase, sale and exchange of commodities, is national in its character and must be governed by a uniform system, so long as Congress does not pass any law to regulate it, or allowing the states so to do, it thereby indicates its will that such commerce shall be free and untrammelled."

(The underscore is ours).

Authorities could be greatly multiplied if necessary.

Gas is sold by the owner in West Virginia to purchasers in Pennsylvania and Ohio, and other States. This was a transaction of interstate commerce of purchase and sale. The delivery by the vendor through his pipe line from West Virginia to these other states was a transaction in interstate commerce in transportation. It was of such a character, both as a purchase and sale and as transportation, as gave to the Federal Government sole control.

These interstate gas companies are public service corporations in all the States through which their lines pass. In all of these States, except Maryland, gas is produced or purchased by them and introduced into their lines. In several instances the lines of the same company pass out of and back into West Virginia at several points, supplying consumers both while out of and

within West Virginia. Unlike railroad transportation, in natural gas transmission the motive power is not exerted immediately at the point of transportation, in the carriage of the load. The compressor station influencing the delivery at a certain point may be in another State from the point of delivery, or several compressor stations in several states at the same instant may influence this delivery. Again in transportation by rail, a part of the load may be taken off at one point or another, without affecting the carriage of the remainder. In transmission of natural gas the taking out of the lines of a comparatively small percentage of the gas in transit may so reduce the pressures as to prevent transmission of any of the remainder. So, too, transportation by rail is a separate and distinct transaction from the purchase and sale of the commodity carried. Not so with natural gas, the transmission being only an incident of the sale and delivery. Therefore if different States through which the lines pass can enact different rules and regulations for the sale, transmission and delivery of this gas, confusion worse confounded will inevitably result. If West Virginia can pass such a law as the statute in controversy, so could each of the other States, and all of them could provide different kinds of rules and regulations for the operation of the pipe lines and the sale and delivery of gas. Imagine the confusion, the paralysis, of interstate commerce that would ensue. No better illustration can be conceived than these interstate natural gas companies, for the application of the rule above referred to, adopted by this Court, namely: That where the commerce between the States consists of the transportation, purchase, sale and exchange of commodities, there can of necessity be only one system or plan of regulation, which Congress alone can supply.

V.

THE OBVIOUS PURPOSE AND EFFECT **OF THE WEST VIRGINIA STATUTE IS NOT ONLY TO BURDEN, INTERFERE WITH AND** REGULATE INTERSTATE COMMERCE, BUT **TO ABSOLUTELY PROHIBIT AND PREVENT** THE SAME BY PROHIBITING AND PREVENTING **THE TRANSMISSION OF NATURAL GAS OUT OF SAID STATE.**

If this statute can be enforced, in accordance with its purpose, as demanded by the State of West Virginia, and its purpose can be interpreted, as set forth in the Answer of said State, all of the natural gas produced in West Virginia would be conserved for the use of the consumers in West Virginia, and consumers in other States would be cut off from and deprived of any natural gas supply from the State of West Virginia.

The statute in express terms provides that all classes of consumers in West Virginia, domestic, industrial and others, shall each and all be furnished with a reasonably adequate gas supply. This reverses the present policy of all natural gas companies to prefer domestic consumers and to conserve the supplies of natural gas as far as practicable for the use of domestic consumers.

Under the statute, the consumers of the whole State,—domestic, industrial and others,—are treated as a unit, and each and every natural gas company in the State is obligated by the statute to supply these consumers wherever situate in that State. However limited or circumscribed may have been the appropriation by the gas company of its property, gas production, or pipe

lines, in their devotion to the public use, whether limitations of the use by certain classes of consumers, or limitations of territory of such use, the statute makes each and every gas company in the State devote all of its production and all of its pipe lines to every class of consumers and to every part of the State, however remote from the territory in which such gas company had proposed to do business.

The State of West Virginia in its Answer seeks to justify the imposition of these arbitrary and extraordinary powers of operation and control of the pipe line systems of these natural gas companies, and the right to commandeer their gas, upon the grounds, first, that "the 'West Virginia gas of the persons, firms and corporations in said statute mentioned required for the reasonably adequate supply of the public in West Virginia is affected with the use or interest of said public which is superior and prior to any introduction theerof into intertsate commerce," and so long as this natural gas is being transported through the mains or pipes of public service gas companies in that State and while the gas is in such mains and pipe lines it is subject to the public service of West Virginia, and accordingly such public service companies subject to such service must observe and perform the duties imposed by law upon public service gas companies. The duty to be imposed by this law, under this statute, is to deliver to every consumer in West Virginia, of every class, wherever situated, an adequate gas supply.

The evidence in the case (see the digest thereof in the separate volume pp. 99, 143), practically uncontradicted, but in any event overwhelming, establishes that the necessary effect and inevitable consequence of carrying out the provisions of said statute will be:

FIRST. To appropriate to consumers in West Virginia all the natural gas produced in West Virginia, because the industrial and other consumers in West Virginia, if adequately supplied, together with the domestic consumers, will demand and consume all the natural gas now produced in that State, without considering the rapid diminution of the supply now going on.

SECOND. To so demoralize the transportation systems of the interstate natural gas companies engaged in transporting natural gas to consumers in other States, as to wholly prohibit and prevent, during certain periods, the transportation of any gas out of the State of West Virginia to consumers in other States.

The purpose and intent of the statute in controversy is palpably an effort on the part of the State of West Virginia to keep its natural gas supply for the exclusive use and benefit of the people of the State of West Virginia, and the Answer not only admits this but asserts the legal right of the State so to do.

Can a State by indirection, by circumflexion, where the purpose is manifest and the Answer of the State so admits, and the result inevitable, accomplish this purpose, under the guise of regulating its own public service corporations, when those corporations are engaged in interstate commerce?

While so engaged in interstate commerce these companies are the public service corporations of the nation as well as the state, and their duties and obligations, as such, are paramount to any obligation to the State.

This principle is the very pith and kernel of the decision of this Court in *Oklahoma v. Kansas Natural*

Gas Co., 221 U. S. 229 (1911), *supra*. In that case the Attorney General of the State declared that the question before the Court was the right of the State of Oklahoma to conserve its gas supply for its own use.

Mr. Justice McKenna, delivering the opinion of the Court, said, (p. 254):

> "In other words, the purpose of its conservation is in a sense commercial, the business welfare of the state, as coal might be, or timber. Both of those products may be limited in amount, and the same considerations of the public welfare which would confine gas to the use of the inhabitants of a state would confine them to the inhabitants of the state. If the states have such a power a singular situation might result. Pennsylvania might keep its coal, the Northwest its timber, the mining states their minerals. And why may not the products of the field be brought within the principle? Thus enlarged, or without that enlargement, its influence on interstate commerce need not be pointed out. To what consequence does such power tend? If one state has it, all states have it; embargo may be retaliated by embargo, and commerce will be halted at state lines. And yet we have said that in matters of foreign and interstate commerce there are no state lines. In such commerce, instead of states, a new power appears and a new welfare, a welfare which transcends that of any state. But rather let us say it is constituted of the welfare of all of the states, and that of each state is made the greater by a division of its resources, natural and created, with every other state and those of every other state with it."

Haskell v. Kansas Natural Gas Co., 224 U. S., 217 (1912), *supra.*

State ex rel. Corwin v. Indiana & Ohio Oil, Gas and Mining Co., 120 Ind. 575 (1889), *supra.*

Manufacturers Gas & Oil Co. vs. Indiana Natural Gas & Oil Co., 155 Ind. 545, (1900) *supra.*

The State of West Virginia, in enacting the statute in controversy, is not the first to attempt by indirection, by various pretexts and subterfuges, that which it could not do directly. This has been shown in some of the cases hereinbefore cited in which the analysis by this and other courts of statutes of other States, showed that they had been passed for the purpose of prohibiting the export of gas from one State to another, which purpose was not directly expressed, the real purpose being concealed. Though more or less concealed by divers and sundry provisions of the respective statutes, if the intent thereof to prevent the transportation of gas from out the State to other States was finally disclosed, the statute has invariably been denounced by the courts as unconstitutional.

One of the most adroit and ingenious attempts thus to conceal the true purpose of such statutes was that made by the draftsman of the Indiana statute of March 4, 1891. This statute prohibited the transmission of natural gas through pipe lines at a greater pressure than 300 pounds to the square inch. It forbade the use of artificial acceleration of the natural flow of the gas. This would prevent the use of compressor stations, which are necessary if the gas is to be transmitted any considerable distance. All of these regulations on their face looked like police regulations within the power of

the individual States. But the statute was declared by the New Jersey Court to be in effect an attempt to prevent the transportation of natural gas without the territorial limits of Indiana, and it was accordingly declared unconstitutional.

This decision by the New Jersey court was cited with approval by this Court in the leading case in this Court, already referred to, of *Oklahoma v. Kansas Natural Gas Co.*, 221 U. S., 229.

The New Jersey case above referred to is *Benedict v. Columbus Construction Co.*, 49 N. J. Eq., 23, 23 Atl., 485. The New Jersey court, in a stockholders' suit, construing the Indiana Act, declared, in the words of Chancellor McGill, (p. 37):

> "The Supreme Court of Indiana, by its decision in the Jamieson case, has merely said that the pressure prescribed by the act of March 4, 1891, is presumptively reasonable as a police regulation. Reverting to the act of 1891, it is perceived that its title contemplates not only the 'regulation' of transportation of gas, but also the 'procuring and using' it. It forbids the owner of a gas well to take gas therefrom by artificial means. He must allow the gas to flow to him. Then, he must restrict the flow, if it should enter his pipes at a pressure in excess of 300 pounds to the square inch, to that pressure, and then although his pipes may be of equal strength along their entire line, and although friction lessens the pressure at the rate of from five to eight pounds per mile, he must do nothing to counteract the effect of the friction to maintain the pressure which the legislature admits is safe and reasonable. It requires but a simple mathematical calculation to ascertain that the effect of this law is to limit the

transportation of gas to a radius of about 60 miles from the gas wells, and to restrict it within the territorial limits of the state of Indiana. * * * I cannot escape the conviction that the purpose of the provision considered was to prevent the transportation of gas without the terriorial limits of Indiana.

Such a purpose is unlawful, in that it seeks to impose a burden upon interstate commerce, which directly and substantially interferes with its freedom * * *"

Burdens, regulations, restraints and interdictions, in no proportion as direct and effective upon interstate commerce as this West Virginia statute, have been denounced again and again by this Court as unconstitutional.

Should this Court desire to further pursue this inquiry an examination of the following cases will demonstrate the accuracy of the foregoing statement:

Brown v. Maryland, 12 Wheat, 419;
The Passenger Cases, 7 Howard, 286.
Henderson v. Mayor, 92 U. S. 259.
Chy Lung v. Freeman, 92 U. S. 295.
Almy v. California, 65 U. S. (24 How.) 169.
Crandall v. Nevada, 73 U. S. 35.
Woodruff v. Parham, 75 U. S. 123.
State Freight Tax Case, 82 U. S. 232.
Hall v. DeCuir, 95 U. S. 485.
Railroad Co. v. Husen, 95 U. S. 465.
Ferry Co. v. Pennsylvania, 114 U. S. 196.
Wabash v. Illinois, 118 U. S. 557.
Robbins v. Shelby Dist., 120 U. S. 489.

Bowman v. R. R. Co., 125 U. S. 465.
Leisy v. Hardin, 135 U. S. 100.
Lyng v. Michigan, 135 U. S. 161.
McCall v. California, 136 U. S. 104.
Minnesota v. Barber, 136 U. S. 313.
Crutcher v. Kentucky, 141 U. S. 47.
Covington Bridge Co. v. Kentucky, 154 U. S. 204.
Railroad Co. v. Eubank, 184 U. S. 27.
American Express Co. v. Iowa, 196 U. S. 133.
Rearick v. Pennsylvania, 203 U. S. 507.
West. Un. Tel. Co. v. Kansas, 216 U. S. 1.
Int. Text Book Co. v. Pigg, 217 U. S. 91.
Buck Stove Co. v. Vickers, 226 U. S. 205.
Railway Co. v. Covington, 235 U. S. 537.
West. Un. Tel. Co. v. Foster, 247 U. S. 105.

The evidence in this case establishes that the West Virginia statute will, if enforced, directly and immediately interfere with, burden and prohibit not only the transmission of natural gas from State to State, but that also the management and operation of gas companies in these other States, which rely upon West Virginia gas, will likewise be affected and they will be prevented from performing the public service and other obligations they have lawfully and in good faith assumed in such other States.

It is significant that this Court has been quick to point out and condemn this extra-territorial effect of State statutes, and to emphasize its repugnancy to the Commerce Clause of the Federal Constitution.

This Court dwelt upon this feature as the one chiefly objectionable in the State Acts before the Court and one of the reasons why such Acts should be declared

unconstitutional, in the following cases, which were cited, together with others, in the cases immediately preceding:

Case of State Freight Tax, 15 Wall. (82 U. S. 232).
Hall v. De Cuir, 95 U. S. 485, 488.
Wabash etc. Ry. Co. v. Illinois, 118 U. S. 557, 572, 575.
Bowman v. Chicago etc. Ry. Co., 125 U. S. 465, 498.
Minnesota v. Barber, 136 U. S. 313, 322.
L. & N. R. Co. v. Eubank, 184 U. S. 27, 34 *et seq.*
American Express Co. v. Iowa, 196 U. S. 133, 143.
West. Un. Tel. Co. v. Kansas, 216 U. S. 1, 30.
So. Covington & Cinc. St. Ry. Co. v. Covington, 235 U. S. 537.

As previously stated, there is practically no conflict of testimony to the effect that the enforcement of this West Virginia Act will necessarily and inevitably result in absolutely prohibiting and preventing the transmission or transportation of natural gas from West Virginia to other States.

S. S. Wyer, the great natural gas expert, employed by the United States Government, testified, at pages 969, 970, of the Record:

> "The enforcement of the Act in question would immediately bring about a condition where in the immediate future the demand solely within the State of West Virginia for natural gas would be greater than the available supply and there would be no gas left for interstate transportation through the main lines now going out of the State."

T. O. Sullivan, of the Hope Natural Gas Company, said, pages 226 and 227:

> "If the natural gas companies operating in the State of West Virginia were compelled to furnish all of the gas that might be required for use within the State, in my opinion it would be only a comparatively short time until there would be a sufficient demand to use all of the gas that is produced."

The witness further described the time as "possibly a year, maybe two years."

John B. Corrin, of the Connecting and Reserve Companies, said, pages 326 *et seq.*:

> "I do not see how it would be possible to operate any gas system of lines if you could not determine the amount of gas that was going to go through those lines and if some person or city or otherwise took gas off the lines before it reached your consumers. In addition, you could not retain any of your consumers yourself because the service that would be rendered would be uncertain and undependable, and in fact I don't believe that it would be practicable to maintain a gas company if that condition existed."

H. A. Wallace, of the United Fuel Gas Company and Cabin Creek Gas Company, said, pages 368 *et seq.*:

> "I feel that in a very short time, in cold weather especially, we would have no gas to transport out of the State, and for that reason I do not believe domestic consumers and other people would care to be connected to our lines if they could only receive a supply of gas during the summer season and in

the winter time when they absolutely needed the gas for heating and lighting and comfort, to have the supply discontinued, they naturally would not care to use gas for fuel."

John B. Tonkin, of the Peoples Natural Gas Company, said, page 429:

"I think that after one winter of that, our consumers would probably want to leave us; that they wouldn't put up with the inconveniences and the suffering that they would have to go through under those conditions."

And again:

"It is my opinion that the demand on their line (Hope Company's) would be so great from companies doing business in West Virginia and from industrial plants there that there would be no gas left in cold weather to distribute to the Peoples Natural Gas Company."

Martin B. Daly, of the East Ohio Gas Company, said, pages 558 *et seq.*:

"The effect on our gas companies would be that they would be obliged to discontinue natural gas altogether. That must be the ultimate result."

J. K. Anderson, natural gas engineer, said, pages 825 *et seq.*:

"Q. From the figures and estimate which you have made with reference to the increased consumption of industrial gas in the State of West Virginia, under the operation of the act now in controversy, if it goes into effect, state whether or not, in your opinion, that increased consumption would consume substantially all of the gas produced in West Virginia?

A. It will, within a few years.

Q. Within what length of time would you say?

A. I would say within a year and a half from the date of the effectiveness of the act."

The evidence on this subject has been collated in the digest of evidence made by complainants, particularly under Section 8, page 143, but also under Section 6, page 99, and Section 7, page 126.

All of the operating heads of the great interstate natural gas companies, operating in West Virginia, testified to the same effect. They were: Mr. Quay, of The Manufacturers Light & Heat Company; Mr. Sullivan, of the Hope Natural Gas Company; Mr. Corrin, of the Reserve Gas Company; Mr. Tonkin, of the Peoples Natural Gas Company; Mr. Daly, of the East Ohio Gas Company; Mr. Jones, of the Columbus Gas & Fuel Company, etc.; Mr. Denning, of the Ohio Fuel Supply Company; Mr. Whitcomb, of the Union Natural Gas Corporation; Mr. Wallace, of the United Fuel Gas Company; Mr. Reed, of the Philadelphia Company, and the Pittsburgh & West Virginia Gas Company; Mr. McMahon of the Northwestern Ohio Natural Gas Company; Mr. Angle, of the Fayette County Gas Company; and the two natural gas engineers and experts, Mr. Wyer and Mr. Anderson.

The testimony of these witnesses is not contradicted by any of the evidence introduced in this case.

VI.

THE OBVIOUS AND DECLARED PURPOSE AND THE EFFECT OF SAID WEST VIRGINIA STATUTE IS TO DISCRIMINATE AGAINST CONSUMERS IN OTHER STATES IN FAVOR OF AND TO AND FOR THE COMMERCIAL, ECONOMIC AND OTHER ADVANTAGE OF CONSUMERS IN WEST VIRGINIA.

The argument on the Fourth Proposition hereinbefore was based on the contention that the sale and transportation of gas from state to state was interstate commerce of such a nature as to be national in character and to admit of and require a uniform system or plan of regulation.

The argument under the Fifth Proposition preceding was primarily upon the contention of complainant that the statute in controversy by its necessary operation would entirely prohibit and prevent interstate commerce in natural gas by confining its consumption to the State of West Virginia. The argument upon the Sixth Proposition above stated is founded upon the contention that even if the interstate commerce sought to be regulated by said statute was not of that national character and to admit of and require a uniform system or plan of regulation, and even if the statute did not wholly prohibit and prevent the exportation of gas from the State, nevertheless it is a discrimination unmistakably and unavoidably in favor of consumers in West Virginia and against consumers in other States, and therefore is such a burden upon, interference with, and regulation of interstate commerce, as has always been denounced by this Court.

96

As has already been argued, from the text of the statute, the admissions in the Answer and the proofs in the case, the purpose of the statute in controversy was to keep for the use of consumers in West Virginia, until they were adequately supplied, the natural gas produced in that State. Consumers in West Virginia, regardless of consumers in other states, and at any cost to said consumers in other states, were to have an adequate gas supply. All consumers in West Virginia, domestic, industrial and others, and throughout the entire territory of the State, were to have such adequate gas supply, even if by providing such adequate supply the consumers in other States were given an inadequate supply, an intermittent supply, or no supply at all.

The evidence shows that there are millions of people in Pennsylvania, and even a larger number in Ohio, and large numbers in other States, who are dependent for their gas supply upon the gas produced in and exported from West Virginia.

The evidence further shows that under the operation of the statute in controversy, while consumers in West Virginia might engage in a natural gas "spree" or "debauch," at the same time consumers in other States would be starved for light or heat and would suffer accordingly in health, comfort, convenience, and to the extent perhaps of jeopardizing life.

The evidence further shows that under the operation of the statute in controversy while consumers in West Virginia would be obtaining an adequate supply, consumers in other States would not know from day to day or hour to hour upon what if any supply of natural gas they could depend. They would be in the position

of the man dying of thirst holding his parched lips to the closed spigot of a tank from which the contents were being drawn through the suction pipe of a pump in West Virginia. When the spigot was opened, whether or not his thirst would be satiated would depend on the length and the strength of the suction.

The hazardous, dangerous, intolerable and unbearable conditions under which consumers in other States under this statute would have to use gas supplied by the interstate gas companies, exporting gas from West Virginia, if they could use it at all, have been fully described. The West Virginia consumer could view the plight of these consumers in other states with complacency and assurance because protected by this statute, even though there be commingled with this self-satisfaction some pity that these unfortunates do not live in West Virginia to reap the benefit of this discriminatory statute.

It is hardly conceivable, under the averments of its Answer, that the State of West Virginia would attempt in this Court to deny that the purpose and intent of the statute in controversy was to discriminate in favor of West Virginia consumers against consumers in other States. In an exuberance of caution, however, and at the risk of wearying this court this question will now be fully considered.

This purpose and intent are demonstrated as follows:

FIRST: By the text of the statute itself, considered in connection with the nature and conditions of the natural gas industry in West Virginia and other States.

SECOND: From the history of events which led up to the enactment of said statute, as shown by the

evidence, as set forth by the State of West Virginia in its Answer, and as testified to by the Governor of West Virginia.

THIRD: From the legal positions taken in the Answer made in this case by the State of West Virginia.

FIRST: The express terms of the statute, and the nature and character of the natural gas business, demonstrate that the intent and purpose of the statute in controversy were to discriminate in favor of West Virginia consumers and against consumers in other States. The statute requires every gas company in the State to furnish gas for domestic, industrial or other purposes, to the public of the whole State of West Virginia.

The statute further provides that in case any gas company supplying any part of the public in West Virginia has a deficit, every other gas company can be compelled to make connections with such company, and, during the time of said deficit, make up the same.

Certain regulations and principles have grown up with and been developed by the experience of the natural gas business,—among others, the necessity of preferring domestic consumers to industrial consumers, and, for this purpose, at times of cutting off the industrial consumers. All of the contracts offered in evidence in this case made by the respective gas companies provide for this in express terms, as by reference thereto will more fully appear, and are made subject to the right of the company agreeing to supply gas to other gas companies to first supply its domestic consumers.

The Answer of the State of West Virginia admits that many of the gas companies have withdrawn or attempted to withdraw altogether their industrial classifications, and do not hold themselves out as willing to supply industrial consumers; but denies that the gas companies supplying gas in West Virginia have the right to withdraw their service to industrial consumers except to the extent necessary to furnish an adequate supply to the domestic consumers in West Virginia.

Without, therefore, invoking for the purpose of the argument on this particular question, the evidence already referred to and discussed,—that under the statute West Virginia consumers would preempt all of the gas that could be produced in West Virginia, and that the operation of the interstate lines would be wholly disorganized, so that no gas could be transmitted through such lines into other States,—it necessarily follows from the requirements of the statute itself and the nature and history of the business that the consumers in West Virginia during cold weather would take all of the gas produced in West Virginia, and that during such periods the transportation of any gas from West Virginia to other States would be prevented. It cannot be doubted that, if the terms of the statute are enforced, at least in cold weather, during the "peak load" periods, the demands of West Virginia consumers must be supplied at the expense and to the disadvantage of, and in discrimination against, consumers in all other States. There is no other source from which this adequate gas supply can be given to West Virginia consumers during such periods, except from the quantity intended for and being transmitted to other States. It is a simple mathematical proposition. If during "peak load" periods there is not enough gas to go around, that is, to supply con-

sumers in West Virginia and other States, for example, a billion feet, and consumers (domestic, industrial and others) in West Virginia must be first furnished with an adequate supply, taking the whole billion feet, before the balance, if any left, can be transported to such other States, then the amount necessary to supply West Virginia consumers must be taken away from consumers in such other States.

SECOND: The history of the events leading up to the enactment of the statute is not left in doubt. Complainant's witnesses gave such history. The State of West Virginia in its Answer details the event on account of which it states specifically the statute was enacted.

In its Answer the State of West Virginia gives the history of the development of the natural gas industry in that State, shows how the gas produced was at first disposed of to local communities in that State, and that as the quantities of gas produced increased, and no market therefor could be found in West Virginia, markets in other States were sought; that the great interstate pipe lines were accordingly laid, and the gas was then delivered and sold in such other States; that this course of dealing has continued for over a quarter of a century; that these interstate gas companies accordingly, which were engaged in the business of supplying gas to the public in West Virginia, afterwards also engaged in the business of transporting for sale and selling gas for consumption in the markets of these other States.

The Answer sets forth the fact that while at the inception of the interstate business the production of gas in West Virginia was increasing and there was ac-

cordingly a large surplus for export from West Virginia, and while this continued for many years, the production finally declined and is still declining, so that consumers in West Virginia experience a shortage in their supply of gas like consumers in other States.

The Answer alleges that the shortage of gas supplied to people of West Virginia "was and is caused by the transportation to or for consumption in other States," and that the interstate gas companies failed to supply a reasonably adequate service to the public of West Virginia or "to the local gas companies engaged in the service of said public, under the pretext that they were and are prevented from so doing by the necessities of the gas-consuming populations of said other States."

The Answer unequivocally asserts that it was on account of this situation that the statute in controversy was enacted.

It is manifest, therefore—in fact, beyond the range of possible controversy—that this statute was enacted for the express purpose of obtaining an adequate supply of gas for all consumers in West Virginia, domestic industrial and others, at the cost and expense and to the disadvantage of consumers in other States; or, to state the proposition in another form, it was a statute passed to discriminate against consumers in all other States in favor of consumers in West Virginia.

John J. Cornwell, who was Governor of the State of West Virginia at the time this statute was enacted, testified, (pages 1193 to 1197, Transcript of Record), as to the events which led up to the enactment of this statute. He called attention to the complaints that were made to him relative to the inadequacy of service by the gas companies operating in West Virginia, and the demands for relief. He tells about representatives

of manufacturers and other consumers calling upon him, of conferences he had with the gas companies, and then states that he laid the matter before the legislature, or called it to the attention of the legislature, at the regular biennial session of 1919, which enacted this statute and read into the record a part of his message upon this subject, a portion whereof is as follows:

> "With the approach of last winter and the early cold weather there was an acute gas shortage in the central and northern sections of the State, especially for manufacturing purposes, which led to a demand of me by gas consumers for a special session of the legislature to enact a measure under which the gas companies would be compelled to furnish an adequate supply of gas to West Virginia consumers."

He then states that the statute in controversy was passed at that session of the legislature.

The attention of the Court is directed particularly to the statement in this message, that there was a shortage of gas in certain sections "especially for manufacturing purposes."

We have already referred to the general policy of all of these gas companies to prefer domestic consumers, and that it is a universal rule among such companies to reserve the right to cut off or reduce industrial consumers when necessary to supply the domestic consumption, and that this custom and policy and practice were admitted in the Answer of the State of West Virginia. Nevertheless, by the express terms of this statute, the industrial consumers and others in West Virginia (whatever "others" may mean; evidently the draughtsman of the Act was unwilling to allow a single foot of gas if it could be prevented to escape from the grasp of

West Virginians) as well as the domestic consumers, must be furnished an adequate supply of gas, before even the domestic consumers in other States were to be allowed any gas at all. Surely, argument is unnecessary to show this to be the most flagrant discrimination, to the advantage of West Virginia consumers of all classes, against any class of consumers in other States.

THIRD: The Answer of the State of West Virginia leaves no doubt of the purpose and intent of this statute being to discriminate in favor of West Virginia consumers to the disadvantage and against the interest of consumers in all other States. While here and there in this Answer will be found denials in general terms that the purpose and the intent of this statute were to discriminate, &c., such general denials, as also many of the admissions, are qualified by the phrase substantially to the effect, "except as in this Answer otherwise alleged." For example, in Paragraph XV at page 39 of the Answer:

> "This defendant denies that the effect in general of said statute is to give to all consumers in West Virginia a preferential or prior right over consumers in Pennsylvania, but admits that the effect of such statute will be to give to all of the consumers in West Virginia in said statute mentioned to the extent of the gas therein mentioned a reasonably adequate supply of gas, and says that said gas is affected with the use or interest of said public of West Virginia as in this Answer before alleged."

And again, on the same page and in the same paragraph, referring to an averment of the bill of complaint as follows:

"If as expressly provided by said statute a reasonably adequate supply of gas must be given not only to domestic consumers but also to industrial consumers and for other consumption in the State of West Virginia by those engaged not only in intrastate but also those engaged in interstate transportation, and also in furnishing gas for use in West Virginia, then the demand for gas by consumers in West Virginia would so increase as to absorb practically all the gas produced in West Virginia, and prohibit the transportation thereof into Pennsylvania, or at least deplete the supply to such an extent that but a small proportion of the gas now being transported from West Virginia into Pennsylvania will be available for such transportation."

The Answer says:

"This defendant denies the allegation of subparagraph (f) of Paragraph Eleven of said bill, except as in this Answer otherwise alleged."

It is nowhere otherwise alleged.

These general denials so qualified cannot be invoked against the positive and affirmative claims and averments of the Answer. The theory of the State of West Virginia of its right to discriminate follows logically from the categorical statement of the law, as interpreted by it, upon which the State of West Virginia plants itself in its Answer. Defendant says in Paragraph XV of the Answer that it admits that the statute was designed to apply to all who were engaged in the supply of gas to the public of West Virginia, though they were also engaged in the transportation of gas into Pennsylvania and other States.

The Answer admits in Paragraph IX that while gas is or may be an article of interstate commerce, yet such gas in the pipes of public service companies in West Virginia cannot be considered in interstate commerce "unless and until it has reached the point where it is no longer subject to the public service of West Virginia and the duties imposed by law upon public service gas companies have been observed and performed by them."

This is fully explained by Paragraph XV of the Answer where it is claimed that the West Virginia gas required for the reasonably adequate supply of the public in West Virginia is affected with the use or interest of said public which is superior and prior to any introduction thereof into interstate commerce.

The Answer "admits that the effect of said statute will be to give to all of the consumers in West Virginia in said statute mentioned to the extent of the gas therein mentioned a reasonably adequate supply of gas, and says that said gas is affected with the use or interest of said public of West Virginia as in this Answer before alleged."

It clearly appears, therefore, (a) that this statute was passed to obtain for all of the consumers in West Virginia, domestic, industrial and others, an adequate gas supply; (b) that West Virginia claimed that all of said consumers in West Virginia were entitled to this adequate supply before any part of said gas could be taken out of the State in interstate commerce; (c) that West Virginia claimed that the foregoing discrimination in favor of West Virginia consumers was justified because the gas produced in West Vrginia was affected

with the use or interest of the public of West Virginia, which is superior and prior to any introduction thereof into interstate commerce.

Not only is the intent and purpose to discriminate plainly avowed, but the justification therefor under its construction of the law is proclaimed by the State of West Virginia.

If this principle of law contended for by the State of West Virginia is introduced into the body of our Federal laws, a startlingly new principle of far-reaching consequence will result.

As said in the Oklahoma case, of a different attempt there to prevent interstate commerce in natural gas, if this could be done "Pennsylvania might keep its coal, the Northwest its timber, the mining States their minerals. And why may not the products of the field be brought within the principle."

The foregoing deals with the purpose and intent of the statute and the grounds upon which the State of West Virginia claims the right to enact and enforce the same.

Let us now consider what would be the consequence of the enforcement of the statute as discriminating in favor of West Virginia consumers to the disadvantage of the consumers in other States. On cold days, when the domestic consumption in West Virginia is at its peak, and the industrial and other consumption in West Virginia takes out its demands, this must be at the cost and expense of the consumption in other States even of the domestic consumer. The additional amount necessary to furnish an adequate supply to the consumers in West Virginia cannot be calculated

upon a percentage basis, as for example, ten or twenty per cent. for the whole year. The amount taken out will be during those peak-load periods when there is a shortage of supply anyway, perhaps during comparatively short periods, and in consequence will leave nothing for transportation to other States.

The statute gives an option to all consumers in West Virginia, including those improvident local companies, upon the gas supplies of all of the companies, in preference to consumers in other States.

As heretofore stated, the natural gas industry grew up as an interstate business, wholly disregarding State lines, and the natural gas companies, in case of a shortage of gas, as far as possible distributed the gas among all domestic consumers in all the States upon equitable principles.

In place of this, however, the statute seeks to introduce discrimination in favor of the West Virginia consumers of all classes, to the disadvantage of all others.

Let it be emphasized that there is no contention in this case that the West Virginia domestic or industrial consumers have been in any way discriminated against by these interstate companies, or that at all times such West Virginia consumers have not obtained their full proportion of the available supply. In fact, the evidence shows, that the West Virginia consumers have been lavishly supplied as compared with all others, consuming twice as much as those in Pennsylvania and five times as much as those in Ohio.

The question is not, therefore, one of preventing discrimination against West Virginia consumers, for no such thing is even claimed. The statute proposes, not

to prevent discrimination against, but to compel discrimination in favor of, the West Virginia consumers.

Whether or not said statute of West Virginia, by intention and purpose, was to discriminate against interstate commerce, if in its practical operation it discriminates against interstate commerce, it is void as a direct burden upon such commerce in conflict with the Commerce Clause of the Federal Constitution.

In order to hold this statute unconstitutional it is not necessary, as stated in the proposition under which this argument is made, that the statute in its practical operation would wholly prohibit the exportation of gas from West Virginia, like the statute in the Oklahoma case, in 221 U. S. 229; nor is it necessary that the sale and transportation of gas from State to State should be held to be interstate commerce of such nature as to be national in character and to require a uniform system or plan of regulation, although complainant contends for both of those propositions. If the fact is that this West Virginia statute works a substantial discrimination in favor of West Virginia consumers and against consumers in other States, the statute must fall, because it places a burden upon, interferes with and undertakes to regulate, interstate commerce.

There are corollary propositions which may project themselves upon the judicial mind in considering complainant's argument upon this statute, as, for example, whether or not a statute would be sustainable requiring a public service corporation of West Virginia to furnish to its consumers within the State equally as good service as that furnished to consumers in other States, or whether or not the State of West Virginia could require of its public service corporations that they provide an adequate supply to their domestic con-

sumers before transmitting gas outside of the State for purposes other than domestic consumption; but these questions, while interesting to the legal mind, are not in any manner involved in this controversy, and the discussion thereof here would be wholly out of place.

In this case there is no doubt whatever that the gas that is taken out of West Virginia into other States is used in such other States for exactly the same purposes for which that gas is used in West Virginia. It is also undisputed that the consumers in other States enjoy no more consideration than consumers in West Virginia; in fact, that they enjoy much less. It is also clear, as already stated, that the West Virginia statute was not passed to prevent—what did not exist—discrimination against West Virginia consumers.

In practically every case where State laws have been held unconstitutional because they placed burdens upon interstate commerce by discriminating in favor of the State's own citizens against those of other States, they were cases where the State sought to protect the commerce of its own citizens by imposing burdens upon the citizens of other States coming into said State, or property brought into said State, or business transacted in said State. The majority of cases were those requiring payments for licenses by non-residents greater than those paid by residents, or imposing taxes upon goods brought into the State from other States or countries, to be sold in competition with the products of that State, or some regulation affecting the right of non-residents to do business in the State; and wherever any of these attempts have been made, and under whatever guise, this Court has declared the Act unconsti-

tutional because all such Acts discriminated in favor of the State's own citizens against the citizens of other States.

Many cases could be cited of this general character in each of which the principle stated is the same.

The direct question which we have here, of a State undertaking to hold within the State its coal, timber, minerals, products of the field, gas, or other property, for the benefit of its own citizens, has never been raised heretofore, except in the natural gas cases. This Court said in the case of *Oklahoma vs. Kansas Natural Gas Company*, 221 U. S. 229:

> "The State, as we have seen, grants the use of the highways to domestic corporations engaged in intrastate transportation of natural gas, giving such corporations even the right to the longitudinal use of the highways. It denies to appellees the lesser right to pass under them or over them, notwithstanding it is conceded in the pleadings that the greater use given to domestic corporations is no obstruction to them. This discrimination is beyond the power of the State to make. As said by the Circuit Court of Appeals in the Eighth Circuit, no State can by action or inaction prevent, unreasonably burden, discriminate against or directly regulate interstate commerce or the right to carry it on. And in all of these inhibited particulars the statute of Oklahoma offends."

The principle, however, is the same. Whether for the benefit and advantage of its own citizens, the discrimination be an attempt to hold property within the State, or to keep property without the State, it is the unlawful discrimination that constitutes the interference with interstate commerce.

The general principle is stated in the case of *Welton v. Missouri*, 91 U. S. 275, as follows:

> "The license tax exacted by the State of Missouri from dealers in goods which are not the product or the manufacture of the State, before they can be sold from place to place within the State, must be regarded as a tax upon such goods themselves, and the question presented is whether legislation thus discriminating against the products of other States in the conditions of their sale by a certain class of dealers is valid under the Constitution of the United States. * * * The power of the State to exact a license tax of any amount being admitted, no authority would remain in the United States or in this court to control its action, however unreasonable or oppressive. Imposts operating as an absolute exclusion of the goods would be possible, and all the evils of discriminating State legislation, favorable to the interests of one State and injurious to the interests of other States and countries, which existed previous to the adoption of the Constitution, might follow, and the experience of the last fifteen years shows would follow, from the action of some of the States."

The principle is thus stated by Mr. Justice Harlan, in *Guy v. Baltimore*, 100 U. S. 434:

> "It must be regarded as settled that no State can consistently with the Federal Constitution impose upon the products of other States brought therein for sale or use, or upon citizens because engaged in the sale therein or the transportation thereto of the products of other States, more onerous public burdens or taxes than it imposes upon the like products of its own territory. * * * The

concession of such a power to the States would render wholly nugatory the national control of commerce among the States and place the trade and business of the country at the mercy of local regulations having for their object to secure exclusive benefits to the citizens and products of particular States."

In *Walling v. Michigan*, 116 U. S., 446, it was said:

"A discriminating tax imposed by a State operating to the disadvantage to the products of other States when introduced into the first mentioned State is in effect a regulation in restraint of commerce among the States and as such is a usurpation of the power conferred by the Constitution upon the Congress of the United States."

In *Bowman v. Chicago & N. W. R. R. Co.*, 125 U. S., 465, it was said:

"Can it be supposed that by omitting any express declaration on the subject Congress has intended to submit to the several States the decision of the question in each locality of what shall and what shall not be articles of traffic in the interstate commerce of the country? If so, it has left to each State, according to its own caprice and arbitrary will, to discriminate for or against every article grown, produced, manufactured, or sold in any State and sought to be introduced as an article of commerce into any other. * * * It may choose to establish a system directed to the promotion and benefit of its own agriculture, manufactures or arts of any description, and prevent the introduction and sale within its limits of any

or of all articles that it may select as coming into competition with those which it seeks to protect."

In *Scott v. Donald*, 165 U. S. 58, this Court said:

"It is sufficient for the present case to hold, as we do, that when a State recognizes the manufacture, sale and use of intoxicating liquors as lawful, it cannot discriminate against the bringing of such articles in, and importing them from other States; that such legislation is void as a hindrance to interstate commerce and an unjust preference of the products of the enacting State as against similar products of other States."

In the recent cases decided by this Court of *Sioux Remedy Company v. Cope*, 235 U. S. 197, and *Bethlehem Motors Corporation vs. Flynt*, (16 U. S. Advance Reps., 1920-21, p. 687), the foregoing and many other cases are cited with approval and followed, and it is held that such statutes imposing discrimination by a State in favor of its own citizens are void as in conflict with the Commerce Clause of the Federal Constitution.

The general principle of these authorities to be enforced is the same; certainly as strong, if not stronger, when the burdens and regulations imposed upon interstate commerce are applied to property and business going out of the State instead of to property and business coming into the State. So long as these impositions are burdens upon, regulations of, or interference with, interstate commerce, operating as discrimination in favor of its own citizens and against the citizens of other States, they offend against the Commerce Clause of the Federal Constitution, and it is immaterial whether the discrimination sought is accomplished by keeping the property or business inside the State, or preventing it from entering the State.

What the State cannot do, the gas company may not do, even as one of its obligations as a public service company.

Neither the State nor the gas company can so discriminate.

The converse of this proposition, that is, the right of a natural gas company to discriminate against consumers in another State, which it was serving in favor of the consumers in the state in which the gas was being produced, upon plea of primary charter obligation, was denied in *City of Jamestown v. Pennsylvania Gas Co.*, (U. S. Dist. Ct. W. D. N. Y.), 264 Fed., 1009 (1920). An injunction was granted restraining the defendant interstate gas company from withdrawing its service to the complainant city and its inhabitants in the State of New York, notwithstanding the contention that said gas company, a Pennsylvania corporation, owed a primary duty under its charter to render a reasonably adequate service to the cities of Erie, Corry and Warren, in the State of Pennsylvania, in which State the company obtained its natural gas supply.

Attempts have been made by several States, under various pretexts and by various subterfuges, as appears from the cases already cited, to accomplish the same purpose sought by the statute in controversy here, namely, to conserve the use of natural gas produced in a State for the exclusive use of consumers in said State; but without exception this Court and other courts, State and Federal, have held said statutes to be in conflict with the provisions of the Federal Constitution relating to interstate commerce. The draftsmen of the Commerce Clause of the United States Constitution foresaw the very dangers presented by this West Virginia statute.

Alexander Hamilton, in the seventh number of The Federalist, said:

> "The competition of commerce would be another fruitful source of contention. The States less favorably circumstanced, would be desirous of escaping from the disadvantage of local situation, and of sharing in the advantage of their more fortunate neighbors. Each State, or separate confederacy, would pursue a system of commercial polity peculiar to itself. This would occasion distinctions, preferences and exclusion which would beget discontent. * * * The spirit of enterprise, which characterizes the commercial part of America, has left no occasion for displaying itself unimproved. It is not at all probable that this unbridled spirit would pay much respect to those regulations of trade, by which particular States might endeavor to secure exclusive benefits to their own citizens. The infractions of these regulations on one side, the efforts to prevent and repel them on the other, would naturally lead to outrages and these to reprisals and wars."

In the twenty-second paper Alexander Hamilton said:

> "The interfering and unneighborly regulations of some States, contrary to the true spirit of the Union, have, in different instances, given just cause of umbrage and complaint to others, and it is to be feared that examples of this nature if not restrained by a national control, would be multiplied and extended till they become not less serious sources of animosity and discord, than injurious impediments to the intercourse between the different parts of the confederacy."

The ameliorating remedy of the commerce clause of the proposed Constitution is dwelt upon by Madison in the forty-second paper:

> "But the mild voice of reason, pleading the cause of an enlarged and permanent interest, is but too often drowned before public bodies as well as individuals by the clamors of an impatient avidity for immediate and immoderate gain.
>
> The necessity of a superintending authority over the reciprocal trade of confederated states has been illustrated by other examples as well as our own."

It is manifest that as a rule, it is to the interest of the State to encourage its export trade. The peculiar character of the natural gas industry, the fact that its supply is limited, that if its use could be confined to consumers in the State, where it was being produced, it would largely contribute to the wealth, prosperity and industry of that State, has made natural gas the exception, so that burdens and restraints upon its export have been attempted. It is therefore comprehensible that a State pursuing its own selfish interest, its vision "cribbed, cabined and confined" by the horizon of its State lines, should fail to see to what misfortunes such action would ultimately tend. To such selfish short-sighted States may be recommended the words of Mr. Justice McKenna, in the Oklahoma case, where he said:

> "And yet we have said that 'in matters of foreign and interstate commerce there are no State lines.' In such commerce, instead of the States, a new power appears and a new welfare, a welfare which transcends that of any State. But rather let

> us say it is constituted of the welfare of all the States and that of each State is made the greater by a division of its resources, natural and created, with every other State, and those of every other State with it."

The evidence showing how the operation of the statute in controversy will discriminate in favor of the citizens of West Virginia is collated under the Ninth Heading, pages 184 to 237 of the digest of evidence herewith filed by complainant.

The witnesses have graphically detailed the danger to life, the suffering, the inconvenience and the discomfort that would be occasioned by the operation of this statute, to millions of people in the States of Pennsylvania and Ohio and hundreds of thousands in other States.

This testimony also shows the enormous financial losses that would be suffered by the removal of natural-gas-burning appliances, the installation of appliances for burning other fuel, and, in some localities, the reconstruction of houses which were adapted solely to the use of natural gas.

This evidence shows in detail that while these conditions would obtain in these other States under the operation of the statute, and pursuant to its purpose, during this same period consumers in West Virginia would be subjected to none of these dangers, sufferings, inconveniences, discomforts, and financial losses.

It is hardly conceivable that there could be a better illustration than this case of the effect of State selfishness, the evils sought to be remedied and the good to be accomplished by the Commerce Clause of the United States Constitution, in prohibiting the passage of discriminatory statutes.

VII.

OVER EIGHTY PER CENT. OF THE NATURAL GAS ENTERING THE PIPE LINES OF THE INTERSTATE NATURAL GAS COMPANIES IN WEST VIRGINIA IS STARTED WITH THE DEFINITE INTENTION THAT IT SHALL BE TRANSMITTED IN INTERSTATE COMMERCE, AND AS A FACT IT IS SO TRANSMITTED TO PENNSYLVANIA, OHIO, AND OTHER STATES, WHEREFORE:

(a) THE STATUTE CANNOT BE SUSTAINED BECAUSE IT PURPORTS TO ENFORCE DUTIES IMPOSED BY LAW UPON PUBLIC SERVICE GAS COMPANIES IN WEST VIRGINIA, OR ANY COMMON-LAW DUTY OF PUBLIC UTILITIES.

(b) THE STATUTE CANNOT BE SUSTAINED BECAUSE THE SPECIFIC QUANTITY, OR THE EXACT DESTINATION, OR THE PARTICULAR CONSIGNEE, ARE UNKNOWN AT THE INCEPTION OF SAID TRANSPORTATION, OR BECAUSE IN SOME INSTANCES THE GAS IS TRANSPORTED BY THE PRODUCER OR OWNER FOR HIS OWN USE, OR FOR DISTRIBUTION, OR SALE, TO LOCAL CONSUMERS OR DISTRIBUTING COMPANIES, OR BECAUSE THERE IS A TRANSFER OF TITLE THERETO IN TRANSIT, OR BECAUSE OF ANY LOCAL NECESSITY, PUBLIC SENTIMENT OR EXPEDIENCY, TO RETAIN SAID GAS FOR USE BY THE CITIZENS OF WEST VIRGINIA.

(c) THE STATUTE CANNOT BE SUSTAINED BECAUSE OF ANY ALLEGED POLICE POWER.

(d) THE STATUTE CANNOT BE SUSTAINED BECAUSE OF ANY ALLEGED CORPORATE FRANCHISE REGULATION BY THE STATE OF WEST VIRGINIA, EITHER AS TO DOMESTIC OR FOREIGN CORPORATIONS ENGAGED IN INTERSTATE COMMERCE.

(e) THE STATUTE CANNOT BE SUSTAINED BECAUSE SAID STATUTE APPLIES EQUALLY TO DOMESTIC AND NON-RESIDENT PERSONS AND TO INTRASTATE AND INTERSTATE COMMERCE, OR THE INTERBLENDING OF INTRASTATE AND INTERSTATE COMMERCE.

(f) THE STATUTE CANNOT BE SUSTAINED BECAUSE SEVERAL OF THESE COMPANIES ALSO DO SOME LOCAL BUSINESS, BY DISTRIBUTING NATURAL GAS AT CERTAIN POINTS FROM THEIR PIPE LINE SYSTEMS TO LOCAL COMMUNITIES.

(g) THE STATUTE CANNOT BE SUSTAINED BECAUSE THOSE INTERSTATE GAS COMPANIES, IF THERE ARE ANY, WHICH ARE NOT PUBLIC SERVICE COMPANIES UNDER THE LAWS OF WEST VIRGINIA WOULD NOT BE AFFECTED.

These respective positions of the State of West Virginia, because they are either directly raised by its Answer, or indirectly by its evidence, will be taken up separately. In an exuberance of caution every possible contention has been anticipated, although it may come to pass that only a portion of these contentions will be argued by West Virginia.

VII. (a) THE STATUTE CANNOT BE SUSTAINED BECAUSE IT PURPORTS TO ENFORCE DUTIES IMPOSED BY LAW UPON PUBLIC SERVICE GAS COMPANIES IN WEST VIRGINIA, OR ANY COMMON-LAW DUTY OF PUBLIC UTILITIES.

The West Virginia statute, while purporting to enforce a common-law duty of the public utility, in reality adds new and unusual burdens unknown to the common law.

It should be noted that the public utility which has professed and undertaken to serve a certain, definite community with natural gas, is by this Act compelled to serve an indefinite number of communities, anywhere "within the territory of this State," temporarily, at least, and perhaps permanently. In other words, this new and unusual obligation is not limited to communities contiguous to the territory which the public utility proprietor has assumed to supply, but to the extent that his volume of gas is derived from State sources he must furnish it "for public use within the territory of this State, and for the use of the public and every part of the public within the territory of

this State, in or from which such gas is produced, or through which said gas is transported, or which is served by such person."

It is difficult to understand why the draughtsman of the Act having first covered "for public use within the territory of this State," should have added the less comprehensive phrase "for the use of the public and every part of the public within the territory of this State in or from which such gas is produced or through which said gas is transported or which is served by such person." Even if the first phrase is limited by the second, the same argument applies.

The extension of the obligations of public service companies attempted by the statute may be explained by the contention on which the State in its Answer squarely plants itself, namely, that the gas produced in West Virginia is so affected with the use and interest of the public, that until that public has received an adequate supply the gas reduced to possession and introduced into their pipe lines by the gas companies cannot become the subject of interstate commerce because that use or interest is superior and prior to the right of introduction of such gas into interstate commerce. (See Answer Paragraph XV, p. 38). But as we have seen, this Court, in the cases already referred to, has decided that there is no such right of conservation in the State, but that natural gas is the subject of interstate commerce like any other commodity.

The common law does not require the public service proprietor to serve the public everywhere, but only that public, or part of the public, which reasonably comes within the scope of the service which he has professed or undertaken to render.

Wyman Public Service Corporations, Section 344.

"One who undertakes public employment has, in effect, thereby exposed and vested an interest of himself in all the King's subjects that will employ him in the way of his trade. But the duty thus defined is not to all men but to a certain public limited in various ways according to the usual profession (or nature of the undertaking). Thus a gas company owes its duty only to those who occupy premises within the territory covered by the service. And an innkeeper does not owe his duty to all who apply to him, but only to travelers. These two examples show that the duty itself has its limitations."

The innkeeper case referred to by the learned author is *Cayle's Case*, 8 Coke 32 (1584) in which that great common law jurist distinguished between the members of the public to which the service was owed, holds that it was to travelers and wayfarers, not to neighbors.

Public Service Corporation v. American Lighting Co., 67 N. J. Eq. 122, 57 Atl. 482 (1904), is the gas case mentioned in the text quoted.

There a company that controlled a new and improved type of gas-burner demanded from the local gas company a supply of gas at the top of every lamp-post in the city so that it might fulfill its contract to supply the city with light. In denying its right to demand said service, or the duty of the local company to furnish it, Mr. Vice Chancellor Pitney, said, (p. 127, 128):

> "I am entirely of the opinion that the defendant the lighting company has no standing whatever, in its own right, to demand from the complainants a supply of gas. For the simple reason,

above stated, that it is neither a householder nor a resident of Jersey City, and the obligation which is imposed upon complainants, by reason of their enjoyment of a public franchise of laying mains in the streets, to furnish gas, extends only to residential citizens of the city and to the municipality. It is quite absurd to say that any person who might happen to be walking along the street, and yet be destitute of any local habitation within the corporate limits of Jersey City, has the least right to demand a supply of gas from the complainants."

In *People ex rel. Pennsylvania Gas Co. v. Public Service Commission,* 196 N. Y. App. Div. 514; 189 N. Y. S. 478 (1921), it was held that the Commission could not compel the relator, a foreign interstate natural gas corporation, to make connections and extend its service to new consumers in a city which the company was serving under a franchise, irrespective of the fact that said new applicants lived on streets through which the mains were laid, where it was proven that the supply of gas was inadequate to serve existing consumers, and was constantly diminishing, and the taking on of additional consumers would destroy the service it was then trying to maintain, and subject its consumers to great hazard of destruction of life and property.

Wyman, Public Service Corporations, Section 273.

"Thus, a gas company may not be called upon to serve beyond the municipality for which it has been chartered."

See also Section 274 Territorial limits fixed by franchise.

The law of "Reasonably Adequate Supply" as applied to public service companies, and as applied to a natural gas company, would only justify the courts to enforce the common-law obligation of furnishing "a reasonably adequate supply" of gas to the specific community or communities which the public service company has professed or undertaken to serve, under the terms of its charter or of its local franchise, or within the reasonable ambit of its actual service, and not more.

Mr. Justice Hughes summed up the common law situation in *Northern Pacific Ry. Co. v. North Dakota*, 236 U. S. 585 (1915), when he said: (p. 595).

> "But, broad as is the power of regulation, the State does not enjoy the freedom of an owner. The fact that property is devoted to a public use on certain terms does not justify the requirement that it shall be devoted to other public purposes, or to the same use on other terms, or the imposition of restrictions that are not reasonably concerned with the proper conduct of the business according to the undertaking which the carrier has expressly or impliedly assumed.
>
> If it has held itself out as a carrier of passengers only, it cannot be compelled to carry freight. As a carrier for hire it cannot be required to carry persons or goods gratuitously."

This Court had long before recognized the common-law principle to be that a common-carrier by railroad could not be compelled to serve beyond his line, that is beyond the service which he had professed or undertaken to furnish to the public, in *Atchison, T. & S. R. Co. v. Denver & New Orleans R. Co.*, 110 U. S. 677 (1884). In the course of the opinion, Chief Justice Waite declared (p. 680):

"At common law, a carrier is not bound to carry except on his own line, and we think it quite clear that if he contracts to go beyond he may, in the absence of statutory regulations to the contrary, determine for himself what agencies he will employ."

Nor can a railroad company be required to deliver cars at the terminus of another railroad to which they are consigned at destination, even though there is a physical connection between the terminal of the two roads. *Central Stock Yards Co. v. Louisville & N. R. Co.*, 192 U. S. 568 (1904).

Similar decisions have been reached by the State courts. For instance, *Hoyt v. Chicago, B. & Q. R. Co.*, 93 Ill. 601 (1879) holding that a railroad company could not be compelled to deliver grain to a warehouse off its line; *The Pittsburgh, Cinn. & St. Louis Ry. Co. v. Morton*, 61 Ind. 539 (1878), that a railroad company owed no duty as to reasonable facilities beyond its own route; and *Pittsburgh, etc., Ry. Co. v. Viers*, 115 Ky., 526 (1902), to the effect that a railroad company's common law liability extended only to the end of its own line.

The common-law principles laid down by Mr. Justice Hughes in *Northern Pacific Ry Co. v. North Dakota*, 236 U. S. 585 (1915) *supra*, were applied to a water-supply service by the Supreme Court of Idaho in *Murray v. Public Utilities Commission*, 27 Ida. 603; 150 Pac. 47 (1915).

The Court said (p. 623):

"In order to justify the Commission in ordering enlargements, the Commission should be satisfied from the evidence: First, that the existing

plant is not reasonably sufficient to render adequate service (*Washington ex rel O. R. & N. Co. v. Fairchild*, 224 U. S. 510; Second, that the extension or enlargement is within the scope of the original professed undertaking of the proprietor of the utility (*N. P. R. Co. v. N. Dak.*, 236 U. S. 585)."

A strong case in point is *Fidelity Title & Trust Co. v Kansas Natural Gas Co.*, 219 Fed. 614 (1913), in which it was held that the order of the Public Utilities Commission of Kansas requiring the receiver of the defendant gas company to go into Oklahoma and extend its pipe line system in that State to new and distant fields, was unconstitutional.

Mr. Justice Holmes, delivering the opinion in *Interstate Commerce Commission v. Delaware L. & W. R. Co.*, 216 U. S. 531 (1910), thus referred to the provision of Section 1 of the Interstate Commerce Act, as amended in 1906, requiring main line railroads to provide on application connections with branch lines, (p. 537):

"The statute creates a new right not existing outside of it. *Wisconsin, Minnesota & Pacific R. Co. v. Jacobson*, 179 U. S. 287, 296."

R. R. Co. vs. Jacobson, above cited, involved the validity of a State statute requiring intersecting railroads to provide physical connections and interchange of traffic.

Mr. Justice Peckham said, (p. 296):

"At common law the courts would be without power to make such an order as was made in this case by the State court. Legislative authority would be necessary in order to give power to the courts to render a judgment of this kind."

Here the State of West Virginia has attempted to impose a new duty, unknown at common law, and in actual operation a regulation of the public service obligation owed equally to Pennsylvania, Ohio and other States as well as to West Virginia.

It falls within the words employed by Mr. Justice Holmes in *Western Union Telegraph Co. v. Foster*, 247 U. S. 105 (1917):

> "If the transmission of the quotations is interstate commerce the order in question cannot be sustained. It is not like the requirement of some incidental convenience that can be afforded without seriously impeding the interstate work. It is an attempt to affect in its very vitals the character of a business generically withdrawn from State control—to change the criteria by which customers are to be determined and so to change the business. It is suggested that the State gets the power from its power over streets which it is necessary for the telegraph to cross. But if we assume that the plaintiffs in error under their present charters could be excluded from the streets, the consequence would not follow. Acts generally lawful would become unlawful when done to accomplish an unlawful end. *United States v. Reading Co.*, 226 U. S. 324, 357, and a constitutional power cannot be used by way of condition to attain an unconstitutional result. *Western Union Telegraph Co. v. Kansas*, 216 U. S. 56; *Sioux Remedy Co. v. Cope*, 235 U. S. 197, 203. The regulation in question is quite as great an interference as a tax of the kind that repeated decisions have held void. It cannot be justified 'under that somewhat ambiguous term of police powers.' *Western Union Telegraph Co. v.*

Pendleton, 122 U. S. 347, 359; *Leisy v. Hardin*, 135 U. S. 100; *Savage v. Jones*, 225 U. S. 501, 520; *Western Union Telegraph Co. v. Brown*, 234 U. S. 542, 547."

It should be further noted that by furnishing natural gas to landowners or others along the route of their pipe-lines in accordance with the provisions of gas-well leases, gas acreage leases, and the like, these public utility proprietors have not professed, or undertaken, to serve the general public occupying the territory in which their supply of gas is produced or through which their pipe-line systems pass, nor by the law of West Virginia is such service held to be a public service. *Pittsburgh & W. Va. Gas Co. v. Nicholson*, 105 S. E. 784 (1921), not yet reported in the West Virginia Supreme Court Reports.

The foregoing argument is intended to show:

(a) That there are no duties imposed by law on public service gas companies, prior to the passage of this Act, which would authorize the State in demanding that these public service companies supply gas to citizens of all classes throughout the State, and

(b) that to the common-law duty of public utilities the statute in controversy adds new and unusual burdens, unknown to the common-law.

In the Ninth Paragraph of its Answer in this case, it is contended by the State of West Virginia that while this gas is or may be an article of interstate commerce, and admittedly when so, not subject to State control, nevertheless, the State, while this gas is in the pipe lines in West Virginia, may subject such gas to the

public service in West Virginia without thereby interfering with interstate commerce or placing a burden thereon, because as stated in the Fifteenth Paragraph of the Answer, the use and interest of the public of West Virginia in said gas is superior and prior to any introduction thereof into interstate commerce.

Under the Commerce Clause of the Federal Constitution the proposition should be stated exactly the converse to that claimed by the State of West Virginia. It should be stated: While goods are in transit in interstate commerce they connot be subject to the public service in West Virginia, nor to the duties imposed by law upon public service companies, if those duties or obligations in any manner interfere with the transmission of such articles in interstate commerce.

The contention of the State of West Virginia disregards certain well-settled principles of law as follows:

FIRST: Gas placed in mains or pipes by public service gas companies, while in course of transmission from points in West Virginia to points in other States, is in interstate commerce, and the companies so transmitting this gas were not obligated to observe and perform any duties imposed by law in West Virginia upon public service companies, when and if such duties, so imposed, directly burden, interfere with or prohibit such transportation in interstate commerce.

SECOND: Commodities in transit in interstate commerce by public service transportation companies are subject to the paramount public service of the nation, provided for by the Constitution of the United States, and whenever such rights, duties and obligations of and to the nation under the commerce clause

of its constitution conflict with the rights, duties or obligations which the State seeks to impose, then the latter are without force and effect, but utterly void.

VII. (b) THE STATUTE CANNOT BE SUSTAINED BECAUSE THE SPECIFIC QUANTITY, OR THE EXACT DESTINATION, OR THE PARTICULAR CONSIGNEE, ARE UNKNOWN AT THE INCEPTION OF SAID TRANSPORTATION, OR BECAUSE IN SOME INSTANCES THE GAS IS TRANSPORTED BY THE PRODUCER OR OWNER FOR HIS OWN USE OR FOR DISTRIBUTION OR SALE TO LOCAL CONSUMERS OR DISTRIBUTING COMPANIES, OR BECAUSE THERE IS A TRANSFER OF TITLE THERETO IN TRANSIT, OR BECAUSE OF ANY LOCAL NECESSITY, PUBLIC SENTIMENT OR EXPEDIENCY TO RETAIN SAID GAS FOR USE BY THE CITIZENS OF WEST VIRGINIA.

Where, as the evidence in this case establishes, upwards of eighty per cent. of the natural gas entering the pipe lines of the great interstate natural gas companies in the producing areas of West Virginia, is started from the originating points with the definite intention that it shall be directly and continuously transmitted or transported in interstate commerce, and as a business fact it is so transmitted or transported to the consuming markets of Pennsylvania, Ohio and other States, in a normal, established and recurring course of commerce and in fulfillment of contracts previously entered into therefor, and this has been the fact and the course of bus-

iness many years, the interstate character of such transmission or transportation is not affected by the fact that the specific quantity, or the exact destination, or the particular consignee, beyond the limits of the originating State, are unknown at the inception of said transmission or transportation.

The natural gas cases exemplify this fundamental principle, that it is the real and essential nature of the transmission or transportation and not the accidents of a definite consignee or destination in another State, or the designation of any specific portion of the commodity, or the quantity thereof to be delivered to a particular person or place outside the State, that gives interstate or foreign character to such commerce. See *Oklahoma v. Kansas Natural Gas Co., supra; Kansas Natural Gas Co. v. Haskell, supra; Haskell v. Cowham, supra; and Haskell v. Kansas Natural Gas Co., supra.*

In *Landon v. Public Utilities Commission of Kansas*, 242 Fed. 658 (1917), the Court, Booth, D. J., decided these questions on the authority of this Court:

> "Absence of a specific consignee at the time of shipment does not alter the character of the shipment. *Swift & Co. v. U. S.*, 196 U. S. 375, 25 Sup.Ct. 276, 49 L. Ed. 518; *T. & New Orleans R. Co. v. Sabine Co.*, 227 U. S. 111, 33 Sup. Ct. 229, 57 L. Ed. 442; *Grand Union Tea Co. v. Evans (D. C.)* 216 Fed. 791.
>
> The exact destination need not be fixed at the time of the shipment, provided the intent and purpose is to continue the journey beyond the limits of the State in which the journey begins. *Ohio R.*

R. Co. v. Worthington, 225 U. S. 101, 32 Sup. Ct. 653, 56 L. Ed. 1004; *T. & N. O. Co. v. Sabine Co.*, 227 U. S. 111, 33 Sup. Ct. 229, 57 L. Ed. 442.

Reverting to the character of the business transacted by the receiver, it is to be noted: (a) That the shipment is started on its journey from one state to another, (b) with the purpose that it shall be delivered to a consumer. (c) That it moves continuously from a point of shipment in one state to the consumer in another state. (d) That it is moved part of the way in the pipe lines of the receiver, and part of the way in the pipe lines of the distributing company, whether as agent of the receiver or connecting carrier is immaterial. (e) The destination of the shipment is intended at the time of the shipment to be beyond the state, although the name of the particular consumer for any specific portion of the gas shipped is not known. (f) There is no stoppage in transportation. (g) The title to the gas remains in the receiver until delivery to the ultimate consumer."

The above quoted case, when it came before this Court in *Public Utilities Commission v. Landon*, 249 U. S. 236 (1919), *supra*, was reversed on the sole ground that the court below held that the natural gas transmitted from Oklahoma to Kansas continued to be in interstate commerce *after delivery to the local distributing companies*, and that its interstate character ceased when it passed into the local mains of the local distributing companies.

See also:

Terminal Co. v. Interstate Commerce Com., 219 U. S. 498.

***Railroad Commission of Louisiana v. Texas & Pacific Ry. Co.*, 229 U. S. 336 (1913).**

R. R. Comm. vs Texas, & Pac. Ry. Co. 229 U. S. 336, furnishes authority establishing that the natural gas started on its way from the producing fields of West Virginia even in those cases when intended for delivery in West Virginia to other persons or companies, with the purpose and intention that it is to be exported by them, in conformance with the long-existing, normal and constantly recurring course of commerce in that commodity to the consuming centers of Pennsylvania, Ohio and other States, constitutes interstate commerce within the protection of the Federal Constitution, although during the transit to the point of delivery the exact consignee and destination beyond the State, or the quantity to go to any particular person or place, are indefinite and unknown.

As pointed out by Mr. Justice McReynolds in *Illinois Central Railroad Co. v. Louisiana Railroad Commission*, 236 U. S. 157, 163, (1915):

> "When freight actually starts in the course of transportation from one State to another it becomes a part of interstate commerce. The essential nature of the movement and not the form of the bill of lading determines the character of the commerce involved. And generally when this interstate character has been acquired it continues at least until the load reaches the point where the parties originally intended that the movement should finally end." (Citing cases.)

See also:

Penna. R. R. v. Clark Coal Co., 238 U. S., 456.

The fact that the gas is transported by the producer or owner to other States for his own use or to be there distributed to local consumers or sold to local distributing companies does not change the interstate character of the transaction.

In *Pennsylvania Gas Co. v. Public Service Commission of New York*, 252 U. S. 23 (1920), this Court said, By Mr. Justice Day (p. 28):

> "In the instant case the gas is transmitted directly from the source of supply in Pennsylvania to the consumers in the cities and towns of New York and Pennsylvania, above mentioned. Its transmission is direct and without intervention of any sort between the seller and the buyer. The transmission is continuous and single and is, in our opinion, a transmission in interstate commerce and therefore subject to applicable constitutional limitations which govern the States in dealing with matter of the character of the one now before us."

In another recent case *Public Utilities Commission of Kansas v. Landon, Receiver, etc.*, 249 U. S. 236 (1919), this court expressly recognized that the transmission or transportation of natural gas up to the mains of the local companies was interstate commerce in these words, McReynolds, J., (p. 245):

> "That the transportation of gas through pipe lines from one state to another is interstate commerce may not be doubted. Also, it is clear that as part of such commerce the receivers might sell and deliver gas so transported to local distributing companies free from unreasonable interference by the State."

In fact in every natural gas case that has come before this Court the gas was owned by the natural gas company that also did the transportation; the transportation was only an incident in the sale of the gas by the company to the consumer or to local distributing companies in other States.

The fact that there is in some instances a transfer of title in transit does not affect the interstate character of the transaction.

Swift & Co. v. United States, 196 U. S. 375 (1905).

The point was directly before the Court in *Gulf, Colorado & Sante Fe Ry. Co .v. Texas*, 204 U. S. 403 (1907).

Mr. Justice Brewer said, (p. 412):

"It is undoubtedly true that the character of a shipment, whether local or interstate, is not changed by a transfer of title during the transportation.

* * * * * * *

The control over goods in process of transportation, which may be repeatedly changed by sales, is one thing; the transportation is another thing, and follows the contract of shipment, until that is changed by the agreement of owner and carrier."

If considerations of local necessity, public sentiment or expediency, were allowed to control, and the States by their legislatures to interpret this local necessity, public sentiment, or expediency, the Commerce Clause of the Constitution of the United States might as well have been traced in sand.

As has already been shown by citations from the Federalist, the draftsmen of the Constitution sought to guard the interest of the nation as a whole against the States' conception of their own necessities and expediency.

In the leading case of *Oklahoma v. Kansas Natural Gas Co., supra*, Mr. Justice McKenna considered at length and expressly denied the supremacy of this alleged paramount right of the State of self-help, on account of local necessity or expediency, although in that case, as stated in the opinion of this Court, the State of Oklahoma drew a graphic picture of natural gas as a local necessity, and concluded this picture with the words:

> " * * * and that, substantially, the only natural, practical, usable fuel, both for domestic and industrial use, is natural gas."

An unusually stroong situation of State necessity was presented in *Kansas City Southern Ry. Co. v. Kaw Valley Drainage District*, 233 U. S. 75 (1914). There the Supreme Court of Kansas having ordered the defendant railroad to remove certain railroad bridges, which formed "a necessary part of lines of commerce by rail among the States," on the ground that said bridges were obstructing the flow of the rivers spanned by them and causing destructive floods, this Court reversed said decree as a direct interference with the freedom of interstate commerce and in violation of the exclusive control thereover conferred upon Congress by the Federal Constitution, the destructive floods to the contrary notwithstanding.

In the case of *United Fuel Gas Company vs. Walter S. Hallinan, State Tax Commissioner*, No. 835 Oc-

tober Term, 1920, (writ of error and petition for writ of certiorari to the Supreme Court of West Virginia), argued before this Court last month and not yet decided, the questions submitted directly related to some of the foregoing propositions. In that case this Court was asked to review a decision of the Supreme Court of Appeals of West Virginia construing the West Virginia Privilege Tax Act, and to decide how far if at all the interstate character of the transportation of natural gas would be affected by the fact that the transmission is accomplished by delivery in West Virginia to connecting lines, and that a small portion of the gas so delivered is resold in West Virginia to consumers along such connecting lines; the West Virginia Court having held that such gas was not in interstate commerce, but that where gas was delivered to connecting companies which sold no part thereof to consumers in West Virginia, that gas was in interstate commerce.

Accordingly the Supreme Court of Appeals of West Virginia as will be observed, in its opinion and decision held that a part of the gas so in transit was in intrastate and another part in interstate commerce.

The statute in controversy here in this case now before this Court ignores the fact that any portion of this gas may be in interstate commerce. The statute compels every gas company in the State to deliver all of the gas in its lines when necessary to supply West Virginia consumers, without regard to whether or not any portion of said gas is in transit in interstate commerce. This statute authorizes the taking of even that

portion of the gas which the Supreme Court of Appeals of West Virginia has held was gas in transit in interstate commerce.

VII. (c) THE STATUTE CANNOT BE SUSTAINED BECAUSE OF ANY ALLEGED POLICE POWER.

This so-called "Adequate Gas Supply" statute of West Virginia cannot be supported as a legitimate and authorized exercise of the State's police power, either for the protection of the interests of its citizens, or for the conservation of a natural resource.

> "No urgency for its use [police power], can authorize a State to exercise it in regard to a subject-matter which has been confided exclusively to the discretion of Congress by the United States Constitution."
>
> *Henderson v. Mayor of New York*, 92 U. S. 259.

> "The decisions also show that a State cannot avoid the operation of this rule by simply invoking the convenient apologetics of the police power. It repeatedly has been said or implied that a direct interference with commerce among the States could not be justified in this way."
>
> *Kansas City Southern Ry. Co. v. Kaw Valley Drainage District*, 233 U. S. 75.

The long established principle that the exercise by a State of its reserved police and other powers must not conflict with the exclusive power over interstate commerce conferred upon Congress by the United States

Constitution, has been recognized and applied by this Court to attempted regulation by States of the transmission or transportation of natural gas into other States.

Oklahoma v. Kansas Natural Gas Co., supra, turned on this very point.

There the state statute was stoutly defended as an enactment for the conservation of that natural resource, and as a *bona fide,* legitimate and constitutional exercise of the State's reserved police power, affecting interstate commerce but indirectly and incidentally.

Mr. Justice McKenna, delivering the opinion of the Court, painstakingly examined these claims.

Page 249:

"The provisions of the act, it is further insisted, are but an exercise of the police power to conserve the natural resources of the state. * * * And such exercise of power, it is contended, does not regulate interstate commerce, but only affects it indirectly."

Page 250:

"The appellant makes a broader contention. The right to conserve, or rather the right to reserve, the resources of the state for the use of the inhabitants of the state, present and future, is broadly asserted. 'The ruling principle of the law,' counsel say, 'is conservation, not commerce.' * * * We are, therefore, admonished at the very start in the discussion of the importance of the questions presented and the power which the states may exert against one another."

These claims were disallowed.

In refusing to modify the decree in the above case, this Court, in *Haskell v. Kansas Natural Gas Co., supra*, carefully reviewed and reaffirmed that decision.

Other gas cases in point are the following:

Haskell v. Cowham, 187 Fed., 403 (1911).

State ex rel. Corwin v. The Indiana & Ohio Oil, Gas & Mining Co., 120 Ind., 576 (1889) *supra*.

In the latter case the Court said:

> "But it is evident that that act under examination cannot under the rule laid down by the court of last resort (U. S. Supreme Court) be deemed a legitimate exercise of the police power. * * * The act cannot be taken out of the operation of the federal decisions upon the theory that it is a valid exercise of the police power resident in every sovereign state, for the theory is without foundation."

Over a decade later, in *Manufacturers Gas etc. Co. v. Indiana Natural Gas Co.*, 155 Ind., 545 (1920), the same court, in reviewing and reaffirming its decision, pointed out, Dowling, C. J. (page 546):

> "Nothing done by the appellee is complained of, excepting only that it removes natural gas out of the State of Indiana. No ground for the exercise of the police power of the state to prevent such removal is shown."

The New Jersey Court of Chancery in *Benedict et al v. Columbus Construction Co.*, 49 N. J. Eq. 23; 23 Atl., 485 (1892), when called upon in a stockholders' suit to determine the constitutionality of the Indiana Act of

March 4, 1891, prohibiting the use of any artificial means of accelerating the natural flow of the gas, by Chancellor McGill said, (page 37):

> "It requires but a simple mathematical calculation to ascertain that the effect of this law is to limit the transportation of gas to a radius of about 60 miles from the gas wells, and to restrict it within the territorial limits of the State of Indiana. * * As a police regulation, this provision of the law, upon its face, appears to be an absurdity. * * *"

Whenever a State seeks some pretext for interfering with, burdening, regulating or prohibiting interstate commerce, it almost invariably invokes "the convenient apologetics of the police power."

This Court has accordingly been required again and again to pass upon the question of how far the reserved police powers of the respective States authorize legislation by the States affecting interstate commerce. In all those cases, this Court, without attempting to fix the exact limits or the precise definition of the words "police power," has declared that "whatever may be the nature and extent of that power where not otherwise restricted, no definition of it and no urgency of its use can authorize a State to exercise it in regard to subject matter which has been confided exclusively to the discretion of Congress by the Constitution."

Henderson vs. Mayor of New York, 92 U. S. 259.

In case after case, where State after State has sought to sustain statutes affecting interstate commerce, upon the alleged reservation of its police powers, when it was made to appear that in fact the legislation of

the State directly sought to burden, interfere with, regulated, and especially if it prohibited or prevented, commerce between the States or with foreign countries, such legislation has been declared unconstitutional.

In *Railroad Co. vs. Husen*, 95 U. S. 465, this court said (page 470):

> "We admit that the deposit in Congress of the power to regulate foreign commerce and commerce among the States was not a surrender of that which may properly be denominated police power. What that power is it is difficult to define with sharp precision. It is generally said to extend to making regulations promotive of domestic order, morals, health, and safety. • • • But whatever may be the nature and reach of the police power of the State, it cannot be exercised over a subject confided exclusively to Congress by the Federal constitution. It cannot invade the domain of the national government. It was said in *Henderson et al. v. Mayor of City of New York, et al.* (*supra*), to be clear, 'from the nature of our complex form of government, that whenever the statute of a state invades the domain of legislation which belongs exclusively to the Congress of the United States, it is void, no matter under what class of powers it may fall, or how closely allied it may be to powers conceded to belong to the states.' Substantially the same thing was said by Chief Justice Marshall in *Gibbons v. Ogden*, 9 Wheat, 1."

To the same effect among other cases in this Court are the following:

New Orleans Gas Co. v. Louisiana Light Co., 115 U. S., 650. (1885).

Walling vs. Michigan, 116 U. S., 446.
W. U. Telegraph Co. vs. Pendleton, 122 U. S. 347.
Bowman vs. Ry. Co., 125 U. S. 465.
Leisy vs. Hardin, 135 U. S. 100.
Minnesota vs. Barber, 136 U. S. 313.
Crutcher vs. Kentucky, 141 U. S. 47.
Brennan vs. Titusville, 153 U. S. 289.
W. U. Tel. Co. vs. Kansas, 216 U. S. 1.
R. R. Co. vs. Brewing Co., 223 U. S. 70.
Savage vs. Jones, 225 U. S. 501.
Crenshaw vs. Arkansas, 227 U. S. 389.

This statute, however, was not passed by the State of West Virginia under any alleged reserved police power. The State may ultimately invoke the "convenient apologetics" of this power, but its Answer sets forth that the powers sought by said statute are enforceable because of some peculiar right of use and interest of the public of West Virginia in the gas produced in that State which is superior and prior to any right to introduce the same in interstate commerce.

VII. (d) THE STATUTE CANNOT BE SUSTAINED BECAUSE OF ANY ALLEGED CORPORATE FRANCHISE REGULATION BY THE STATE OF WEST VIRGINIA, EITHER AS TO DOMESTIC, OR FOREIGN CORPORATIONS, ENGAGED IN INTERSTATE COMMERCE.

This West Virginia statute, regulating the transmission and supply of natural gas, cannot be supported as a corporate franchise regulation, either as to domestic corporations engaged in interstate commerce therein, nor as to foreign corporations there engaged in inter-

state business. The power of the State over said corporations, by the Commerce Clause of the Federal Constitution, is atrophied. It cannot be exercised so as to burden, interfere with, regulate, prevent or prohibit the interstate business of said corporations. A constitutional power over intrastate corporations may not be exercised to obtain an unconstitutional result, the control of interstate business.

The power of a State, under any alleged corporate franchise regulation, to regulate the doing of local business is not unrestricted or absolute. This power must be exercised subject to the limitations of the United States Constitution. The exertion of that power over either a domestic or a foreign corporation, engaged within the State in both local and interstate business, in such a way as to directly or by its necessary operation burden the interstate commerce of said corporation, is unconstitutional.

The franchise or other powers of a State over its domestic corporations may not be so exerted as to prohibit those corporations from exercising their right under the Federal Constitution to lawfully engage in interstate commerce, or to directly hinder, burden or interfere with their exercise of that right, or to discriminate against those domestic corporations engaged within the State in such commerce.

Oklahoma v. Kansas Natural Gas Co., supra.
Haskell v. Kansas Natural Gas Co., supra.
Haskell v. Cowham, supra.

Illuminating cases recently decided by this court, where States have sought to control or regulate interstate commerce by statutes specifying the terms or conditions upon which corporations could transact busi-

ness within such States, providing corporate franchise regulations and the like, are the following:

Western Union v. Kansas, 216 U. S. 1.
The Minnesota Rate Cases, 230 U. S. 352.
Sioux Remedy Co. v. Cope, 235 U. S. 197.
International Paper Co. v. Massachusetts, 246 U. S. 135.

Because the corporations producing gas in West Virginia and transmitting the same through pipe lines are public service corporations, the State of West Virginia in its Answer claims the right, as a corporate franchise regulation, to compel these companies to first furnish an adequate supply of gas to consumers in West Virginia, and to make up the deficit of any other public service gas company in West Virginia that has a deficit in supplying its consumers.

Whatever may be the powers of the State of West Virginia over the corporations doing an exclusively intrastate business, the power of the State over corporations engaged in interstate business is limited by the Commerce Clause of the Federal Constitution, and any power which the State of West Virginia might otherwise possess and have the right to exercise, cannot be exerted upon this interstate commerce if it will have the effect of burdening, interfering with or regulating such interstate commerce.

It has already been argued, and the evidence demonstrates, that the effect of the operation of the statute will be not only to burden, interfere with, and regulate, but to absolutely prohibit and prevent, the export of gas from the State of West Virginia.

VII. (e) THE STATUTE CANNOT BE SUSTAINED BECAUSE IT APPLIES EQUALLY TO BOTH DOMESTIC AND NON-RESIDENT PERSONS AND TO INTRASTATE AS WELL AS INTERSTATE COMMERCE, AND THE INTERBLENDING OF INTRASTATE AND INTERSTATE COMMERCE.

The West Virginia statute in controversy can derive no constitutional justification on the ground that it applies equally to domestic and non-resident persons engaged in furnishing gas to or for use of the public in West Virginia, nor as subjecting intrastate and interstate commerce within the limits of the State to the same regulations.

The Oklahoma statute in *Oklahoma v. Kansas Natural Gas Co., supra*, expressly forbade domestic corporations from transmitting or transporting natural gas out of the State, or disposing of said gas for such exportation, and also prohibited and prevented the transmission or transportation of natural gas from the State by foreign corporations.

In *Haskell v. Cowham, supra,* the statute of Oklahoma of 1907 was held unconstitutional, as it only permitted pipe lines to be laid on or across State highways by domestic corporations which were forbidden to transmit natural gas from the State, or to sell it for transmission, on pain of forfeiture of their charters.

The statute prohibiting the transportation of natural gas from the State, condemned in *State ex rel. Corwin v. Indiana & Ohio Oil, Gas & Mining Co., supra,* applied to domestic as well as foreign persons transmitting or transporting natural gas out of the State.

In the *State Freight Tax Case,* 15 Wall. (82 U. S.), 232 (1872), *supra,* Mr. Justice Strong thus answered the contention that a State might constitutionally subject interstate commerce to the same regulation as imposed on domestic commerce in the absence of action by Congress (page 276):

> "Nor is it at all material that the tax is levied upon all freight as well that which is wholly internal as that embarked in interstate trade. * * * The state may tax its internal commerce, but if an act to tax interstate commerce is unconstitutional, it is not cured by including within its provisions subjects within the domain of the state. Nor is a rule prescribed for carriage of goods through, out of or into a state any the less regulation of transportation because the same rule may be applied to carriage which is wholly internal."

This passage is quoted and applied by Mr. Justice Bradley, in *Philadelphia Steamship Co. v. Pennsylvania,* 122 U. S. 326 (1887), *supra.*

In a previous case in the same year, *Robbins v. Shelby Taxing District,* 120 U. S. 489, (1887), the same principle was stated.

See also *Wabash, etc. Ry. Co. v. Illinois,* 118 U. S. 557 (1886), *supra.*

Minnesota v. Barber, 136 U. S. 313 (1890), *supra.*

Galveston, Harrisburg, etc. Ry. Co. v. Texas, 210 U. S. 217.

Ohio Railroad Commission v. Worthington, 225 U. S. 101 (1912).

Texas & N. O. R. R. Co. v. Sabine Tram Co., 227 U. S. 111 (1913).

Railroad Commission of Louisiana v. Texas & Pacific Ry. Co., 229 U. S. 336 (1913); all *supra*.

The interblending of intrastate and interstate commerce cannot operate to deprive Congress of the exclusive jurisdiction conferred upon it by the Commerce Clause of the United States Constitution.

The general principle is stated and many of the leading authorities cited by Mr. Justice Hughes in the *Minnesota Rate Cases*, 230 U. S. 352 (1913).

> "There is no room in our scheme of government for the assertion of State power in hostility to the authorized exercise of Federal power. The authority of Congress extends to every part of interstate commerce, and to every instrumentality or agency by which it is carried on; and the full control by Congress of the subjects committed to its regulation is not to be denied or thwarted by the commingling of interstate and intrastate operations. This is not to say that the nation may deal, with the internal concerns of the State, as such, but that the execution by Congress of its constitutional power to regulate interstate commerce is not limited by the fact that intrastate transactions may have become so interwoven therewith that the effective government of the former incidentally controls the latter. This conclusion necessarily results from the supremacy of the national power within its appointed sphere. *McCulloch v. Maryland*, 4 Wheat. 316, 405, 426; *The Daniel Ball*, 10 Wall. 557, 565; *Smith v. Alabama*, 124 U. S. 465, 473; *Baltimore & Ohio R. R. Co. v. Interstate Commerce Commission*, 221 U. S. 612, 618, 619 [Hours of employment case];

VII. (f) THE STATUTE CANNOT BE SUSTAINED BECAUSE SOME OF THESE COMPANIES ALSO DO SOME LOCAL BUSINESS, BY DISTRIBUTING NATURAL GAS AT CERTAIN POINTS FROM THEIR PIPE LINE SYSTEMS TO LOCAL COMMUNITIES.

The fact that these interstate gas companies, whether domestic corporations or not, are also engaged in rendering a local public utility service to certain definite communities, does not increase the authority of the State of West Virginia to exercise its regulatory power in such manner, as to directly interfere with and substantially destroy the constitutional freedom of such gas companies to carry on such interstate business independent of State molestation and restriction.

Allen v. Pullman Co., 191 U. S. 171 (1903).

In *Western Union Telegraph Co. v. Kansas*, 216 U. S. 1 (1910), this Court said:

> "We cannot fail to recognize the intimate connection which, at this day, exists between the interstate business done by interstate companies and the local business which, for the convenience of the people, must be done or can generally be better and more economically done by such interstate companies rather than by domestic companies organized to conduct only local business. It is of the last importance that the freedom of interstate commerce shall not be trammeled or burdened by local regulations which under the guise of regulating local affairs really burden rights secured by the Constitution and laws of the United States. While the general right of the States to regulate their strictly domestic affairs is fundamental in our constitutional system and vital to the integrity and permanence of that system, that right must always be exerted in subordination to the granted or enumerated powers of the general government, and not in hostility to rights secured by the supreme law of the land. * * * ." (Underscore ours.)

See also *Ohio Railroad Commission v. Worthington*, 225 U. S. 101 (1912), *supra*.

South Covington & Cinc. Street Ry. Co. v. City of Covington, 235 U. S. 537 (1915), *supra*.

The State of West Virginia seeks to take advantage of the fact that these great interstate gas com-

panies do a small local business by supplying a comparatively small quantity of gas, from their gas in transit through their interstate transportation systems, to communities or industries along their interstate lines in West Virginia.

Seizing upon this situation, the State by this statute seeks to regulate, burden, interfere with, in fact prevent and prohibit, all interstate business of these gas companies, by extending the severely localized business of each of said gas companies, without their consent, over the whole State, and to the entire population of the State, domestic, industrial and other, thus seizing all of their business.

By pretending to regulate and control this small per cent. of local business, the statute by its operation would turn from its flow into Pennsylvania, Ohio and other States, all the gas produced by these companies in West Virginia, and force it into lines for delivery within the State of West Virginia. It not only burdens and regulates the interstate transportation system, but seizes the very article while en route in interstate commerce, and compels its diversion from delivery in other States to delivery throughout the State of West Virginia.

VII. (g) THE STATUTE CANNOT BE SUSTAINED BECAUSE THOSE INTERSTATE GAS COMPANIES, IF THERE ARE ANY, WHICH ARE NOT PUBLIC SERVICE COMPANIES UNDER THE LAW OF WEST VIRGINIA WOULD NOT BE AFFECTED.

The answer to any such contention, if made, is found in the words of the Court in *Louisville & Nashville R. Co. v. Eubank*, 184 U. S. 27 (1902). Referring to the point before us, Mr. Justice Peckham, speaking for the Court, declared (pages 41, 42):

> "It seems also to be thought that there is no regulation of commerce, provided it is not interfered with or regulated in all ways by which transportation of commodities between interstate localities may be accomplished; that if the commodity (tobacco in this case) can be transported by any other means or route, or by any other individual or corporation than the one affected by the regulation, commerce is not regulated within the constitutional meaning. On the contrary, it seems quite clear that any law which in its direct result regulates the interstate transportation of a single individual carrier, or company of carriers, violates the provision in question; that it is no answer that the commodity can still be transported by another carrier or by water instead of rail, so long as the direct effect of the State legislation is to regulate the transportation of the commodity by a particular means, by rail instead of by water, or by a particular individual or company."

It will no doubt transpire that some of the foregoing reasons will not be urged by the State of West Virginia as bases for sustaining the constitutionality of the statute in controversy.

As this brief of argument had to be prepared (this being a case of original jurisdiction) before the contentions of the defendant could be fully ascertained,

it was deemed advisable to anticipate, as far as possible, every imaginable reason for sustaining said statute that could be assigned by the defendant.

It is hoped that by pursuing this course this Court will not have been subjected to an unreasonable and unnecessary burden.

VIII.

THE POSSIBILITY THAT THE STATE OF WEST VIRGINIA MAY EXERCISE SOME FORBEARANCE AND THAT THE STATE PUBLIC SERVICE COMMISSION MAY EXERCISE A LIBERAL DISCRETION IN THE ENFORCEMENT OF SAID STATUTE, IN NO SENSE MITIGATES THE REPUGNANCY OF SAID STATUTE TO THE COMMERCE CLAUSE OF THE UNITED STATES CONSTITUTION.

Chief Justice Marshall in *Brown v. Maryland*, 12 Wheaton, 419 (1827) said:

> "Questions of power do not depend on the degree to which it may be exercised. If it may be exercised at all, it must be exercised at the will of those in whose hands it is placed."

In *Western Union Telegraph Co. v. Kansas*, 216 U. S. 1 (1910), *supra*, this Court said:

> "But it is said that none of the authorities cited are pertinent to the present case, because the state expressly disclaims any purpose by the statute in question to obstruct or embarrass interstate commerce. * * * But the disavowal by the state of any purpose to burden interstate commerce cannot conclude the question as to the fact of such a burden being imposed, or as to the unconstitutionality of the statute as shown by its necessary operation upon interstate commerce."

The answer of the State of West Virginia, filed in this case, makes discussion of this point purely theoretical. It has asserted its right, under the statute, to compel the delivery to its consumers of an adequate supply of gas, although such gas was at the time in transit to consumers in other states, through interstate transmission lines.

IX.

THE WEST VIRGINIA STATUTE SO INVOLVES THE REGULATION OF BOTH INTRASTATE AND INTERSTATE TRANSMISSION OF NATURAL GAS, THAT BY NO POSSIBLE CONSTRUCTION COULD IT BE UPHELD WITHOUT BEING SO REMODELED THAT IT WOULD BE A MERE SPECULATION WHETHER THE LEGISLATURE WOULD HAVE PASSED IT IN ITS NEW FORM, AND THIS COURT CANNOT RESHAPE SAID STATUTE SIMPLY BECAUSE IT EMBRACES ELEMENTS THAT IT MIGHT HAVE REACHED IF IT HAD BEEN DRAWN WITH A DIFFERENT MEASURE AND INTENT.

In *Oklahoma v. Wells Fargo & Co.*, 223 U. S. 298 (1912), the Oklahoma tax of 1910 on the gross revenues of corporations was under consideration by this Court, and whether certain parts could be sustained without the others was argued. Mr. Justice McKenna said (p. 302):

> "Whether the statute could be construed as separable of course would be ultimately for the State court in any event. *Telegraph Co. v. Texas*, 105 U. S. 460. But we see no possible construction upon which it could be upheld without being so remodeled that it would be a mere speculation whether the legislature would have passed it in the new form. Neither the court below nor this court can reshape the statute simply because it embraces elements that it might have reached if it had been drawn with a different measure and intent."

Chief Justice Elliott, in *State ex rel, Corwin v. The Indiana & Ohio Oil, Gas & Mining Co.*, 120 Ind.

576 (1889), *supra*, in condemning an Indiana statute which prohibited the transportation of natural gas from the State as repugnant to the commerce clause, declared (p. 578):

> "The provisions of the statute are so interlocked that separation is impossible. Where the provisions of a statute are so closely blended that a separation cannot be effected without substituting another law for that intended to be enacted, none can be made by the courts. *Griffin v. State ex rel.*, 119 Ind. 520."

X.

THE NATURAL AND NECESSARY OPERATION AND EFFECT OF SAID STATUTE WILL BE TO IMPAIR THE OBLIGATION OF CONTRACTS.

This question may be considered:

First. With reference to the contracts made between the State of West Virginia and the interstate natural gas companies;

Second. With reference to the contracts made by these interstate natural gas companies with consumers in other States and with other natural gas companies in West Virginia and other States, and with the States of Pennsylvania, Ohio, &c.

A statement of the fact situation is the best argument that could be made under the above contentions.

The State of West Virginia, by charter to those gas companies organized under the laws of West Virginia, and by permits or certificates to the companies organized under the laws of other States and doing business in West Virginia, has entered into a contract with said corporations substantially to this effect: Those natural gas companies organized under the laws of West Virginia, and foreign gas companies admitted into said State, have the right to engage in a certain business within the State of West Virginia. The character of that business is set forth specifically, including the location of the principal place of business and its chief works; and the object and purpose for which the corporation was formed, and the kind and character of business in which it was to engage.

Gas companies incorporated under the laws of other States, and authorized to do business in West Virginia, were granted the same rights, powers and privileges, and were subject to the same regulations, restrictions and liabilities, as were conferred and imposed upon corporations chartered under the laws of West Virginia.

The State reserved the right, by Act of its legislature of 1867, to alter any charter or certificate of incorporation thereafter granted, and to alter or repeal any law applicable to such companies. Prior to that time there was no such right in the legislature.

Every application for charter, (Section 2899, c. 54, Code of West Virginia), had to set forth:

> "The object and purposes for which this corporation is formed are as follows: (Here insert fully the objects and purposes for which the corporation is formed, the kind or character of business in which it is to engage * * *)."

These gas companies accordingly took up leases, drilled wells, developed their gas fields, purchased gas from other producers, constructed their pipe lines, compressing stations, and the like, built their distributing systems in the cities, towns and villages they had agreed to supply, and continued their transportation systems through West Virginia across the State lines into Pennsylvania, Ohio and other States. In these other States they made contracts for the delivery of gas to consumers and to other gas-distributing companies and to the States themselves. Contracts were also made for the delivery of gas to other gas-transmission companies in West Virginia for transmission through their own system of pipe lines into other States.

There thus grew up and was developed this vast interstate transportation and transmission system and

interstate commerce in natural gas that have already been fully described in this brief of argument. The investment therein of these great interstate companies aggregates several hundred million dollars.

Now, after all these years, after these contracts by charter, and this course of dealing by and between the State of West Virginia and the natnatural gas companies, and by and between the natural gas companies and their consumers in West Virginia and in other States, for over a quarter of a century, the State of West Virginia, by the statute in controversy, undertakes to compel the natural gas companies operating in the State to increase their territory in West Virginia to be supplied, from perhaps one small community to communities and centers of population throughout the whole State, and to all residents of the State who may desire to consume the gas, and further undertakes to compel every gas company operating in the State to supply every other gas company operating in the State with enough gas to make up the deficit of such other company, if it has a deficit, in supplying consumers in West Virginia, and it further undertakes to compel every gas company in West Virginia, before it can transmit or transport any gas out of the State, to adequately supply not only its own consumers but every other consumer in the State, if so ordered by the authorities of the State. And all this without regard, first, to the contract between the State and these gas companies; secondly, without regard to the contract obligations which these companies may have entered into under the former regime before the passage of this Act; thirdly, without regard to the wishes, the capital, or the property of these gas companies or the effect of such changes upon the respective gas companies; and, fourthly, without regard to the investment of hundreds of millions

of dollars by these gas companies, in leases, wells, pipe lines, and compressor stations, and in the vast system of obtaining, producing, transmitting and selling natural gas in interstate commerce.

FIRST. The statute in controversy impairs the obligations of the contract made by the State of West Virginia with the natural gas companies operating in that State.

New, unusual and extraordinary burdens are placed upon these gas companies by the provisions of the statute in controversy, such as:

being compelled to enlarge their territory of supply throughout the State;

being compelled to supply all consumers, industrial and others as well as domestic;

being compelled to make connections with other gas companies and supply them with enough gas to make up the deficit of such other companies, if so ordered by the State authorities;

being compelled to give an adequate gas supply to all consumers alike in West Virginia before supplying any gas to any consumers outside of the State;

being compelled to abandon their interstate transmission and sale of gas, incurring thereby losses of hundreds of millions of dollars in plant and equipment.

None of these obligations was contemplated by their charters or previously enjoined by the laws of West Virginia.

All of these obligations are not only in conflict with the contract as made by the State of West Virginia with these gas companies, by the granting of charters to them, but are also in conflict with and directly opposed to the course of dealing between the State and these companies under said contracts, which has prevailed and been observed, recognized and permitted for over a quarter of a century, during which time, on the strength of this interpretation of the contract, these gas companies have made investments of hundreds of millions of dollars.

If it be argued that these changes are authorized by the reservation of the right to alter and amend charters under the provisions of the Corporation Laws of West Virginia of 1867, above referred to, then the answer is that this Court in *Railroad Company v. Commission of Wisconsin*, 237 U. S. 220, 234, said:

> "We would be very averse to deciding that, without explicit declaration, every general law of the State applicable to corporations is enacted as an amendment to their charters. * * * It is one thing to decide that corporations are subject to the police power of the State, and quite another to hold that every general law is an amendment to their charters."

Unless the statute in controversy can be defended under this provision of the West Virginia law as an amendment to the charters of these corporations, and it cannot be, then the statute in controversy directly affects, burdens, imposes new duties upon, entirely changes, and therefore impairs the obligations of the contract theretofore made by the State of West Virginia with these respective gas companies.

Miller v. The State, 15 Wall. 478.

Adirondack Railway v. New York State, 176 U. S. 335, 344.

Berea College v. Commonwealth of Kentucky, 211 U. S. 45.

Carondelet Canal Co. v. Louisiana, 233 U .S. 362, 377.

SECOND. The statute in controversy impairs the obligation of contracts made by these interstate natural gas companies with consumers and with other natural gas companies in other States, and with natural gas companies in the State of West Virginia which have purchased gas for transmission and transportation out of West Virginia into other States.

Under the course of dealing sanctioned and approved by the State of West Virginia for over a quarter of a century, these great interstate natural gas companies built their systems of pipe lines from West Virginia into these other States for the purpose of transmitting gas into such other States, and made contracts for the sale of such gas to consumers in these other States and to the States themselves. They also made contracts with other gas companies in such other States for the delivery of gas for transmission and distribution by such other companies in such other States. They also made contracts with gas companies in West Virginia engaged in interstate transmission for the sale of gas to be transported and transmitted into these other States.

All of these contracts are with one fell swoop utterly destroyed by the statute in controversy, because by the enforcement of the provisions of said statute the gas companies in West Virginia are forced and compelled to ignore such contracts, disregard the same, and supply

gas intended and consigned for delivery under said contracts, to other parties and other consumers in the State of West Virginia. No contract is excepted. Gas that has reached the border line of the State in transmission under these contracts to parties outside of the State, under the provisions of the statute in controversy, is there embargoed and its return to be supplied to consumers in West Virginia is compelled under heavy fines and penalties.

A more direct impairment of the obligation of a contract would not have resulted if this statute had in express terms provided that "notwithstanding your contracts with Ohio, Pennsylvania, Indiana, Maryland, Kentucky, and the United States Government, and notwithstanding the obligation thereof, and notwithstanding the fact that you are in the midst of the performance of these contracts in accordance with their terms, they shall not be regarded, they shall have no effect, they shall not avail, but you must supply all of this gas to consumers in the State of West Virginia."

XI.

THE NATURAL AND NECESSARY EFFECT OF SAID STATUTE IS TO DENY TO CITIZENS OF PENNSYLVANIA, OHIO AND OTHER STATES, THE PRIVILEGES AND IMMUNITIES GRANTED BY SAID STATUTE TO CITIZENS OF WEST VIRGINIA.

The language of the Constitutional provision, Article XIV, invoked by the above point, is as follows:

> "* * * No state shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any state deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws."

While this Article of the Federal Constitution does not necessarily relate to the prohibition against State interference with interstate commerce, nevertheless the vast majority of the cases in which this Court has been called upon to pass upon Article XIV, were cases likewise involving the question of interstate commerce.

This emphasizes the thought that whenever the discrimination or the deprivation prohibited by Article XIV has been attempted by any State, it has been directed more particularly against non-residents.

We are not left to conjecture as to the purpose of the statute of West Virginia. In the Answer filed by the State of West Virginia, the State baldly and boldly asserts the West Virginia has the right to require that West Virginia gas shall be supplied to West Virginia consumers until they shall have obtained an adequate

supply, and that this right of West Virginia consumers is superior and prior to any right or authority in the owner to introduce this gas into interstate commerce, &c.

It is manifest from an examination of the statute itself, and it is expressly stated in the Answer of the State of West Virginia in this case, that the very purpose of this Act is to discriminate in favor of consumers in West Virginia against consumers in other States. Every provision of the statute is drawn with this design and purpose in view.

The evidence in the case shows the effect of the operation of the statute will be, briefly stated, as follows:

First. It will give to all classes of consumers in West Virginia, domestic, industrial and others, an adequate supply of natural gas, (the best fuel known to man for comfort, convenience and economy), in preference to consumers of any kind in other states.

Second. It will give to industries in the State of West Virginia advantages in competition with industries engaged in like lines of business, located outside of West Virginia.

Third. It will encourage and induce industries now located in other States to transfer their plants to West Virginia, so as to obtain the advantage of the use of natural gas.

Fourth. It will practically deprive consumers of natural gas in Pennsylvania, Ohio, and other States, of the use of natural gas for fuel, and thus place them at a disadvantage as compared with consumers in West Virginia, in comfort, convenience, economy and business.

FIFTH. As between citizens of West Virginia it will enable those gas companies and individuals who are shipping gas out of the State in interstate commerce, but who are not engaged in furnishing gas within the State, to continue their business while all others are prohibited.

This Court said in *Connolly v. Sewer Pipe Co.*, 184 U. S. 540, 558:

> "What may be regarded as a denial of the equal protection of the laws is a question not always easily determined, as the decisions of this court and of the highest courts of the States will show. It is sometimes difficult to show that a State enactment, having its source in a power not controverted, infringes rights protected by the National Constitution. No rule can be formulated that will cover every case. * * * . In *Hayes v. Missouri*, 120 U. S. 68, 71, we said that the Fourteenth Amendment required that all persons subject to legislation limited as to the objects to which it is directed, or by the territory within which it is to operate, 'shall be treated alike, under like circumstances and considerations, both in the privileges conferred, and in the limitations imposed.' 'Due process of law and the equal protection of the laws,' this court has said, 'are secured, if the laws operate on all alike, and do not subject the individual to an arbitrary exercise of the powers of government.' *Duncan v. Missouri*, 152 U. S. 377, 382. Many other cases in this court are to the like effect. * * * For this court has held that classification 'must always rest upon some difference which bears a reasonable and just relation to the act in respect to which the classification is proposed, and can never be made arbitrarily and without any such basis.

> * * * But arbitrary selection can never be justified by calling it a classification. The equal protection demanded by the Fourteenth Amendment forbids this. * * * No duty rests more imperatively upon the courts than the enforcement of those constitutional provisions intended to secure that equality of rights which is the foundation of free government.' "

This Court said, in *Cotting v. Stock Yards Co.*, 183 U. S. 79, 87, quoting from *Reagan v. Farmers Loan & Trust Co.*, 154 U. S. 362:

> "The equal protection of the laws which, by the Fourteenth Amendment, no State can deny to the individual, forbids legislation, in whatever form it may be enacted, by which the property of one individual is, without compensation, wrested from him for the benefit of another, or of the public. This, as has been often observed, is a government of law, and not a government of men, and it must never be forgotten that under such government, with its constitutional limitations and guarantees, the forms of law and the machinery of government, with all their reach and power, must in their actual workings stop on the hither side of the unnecessary and uncompensated taking or destruction of any private property, legally acquired and legally held."

As stated, the statute and the Answer of the State of West Virginia show that discrimination, is what was sought; the statute abridges the privileges and immunities of citizens of other States, and also discriminates between those in the same State, but justifies all this in the manner hereinbefore stated. The answer to that alleged justification has already been made.

If for the moment, for the purpose of this argument, the violation of the Commerce Clause of the Constitution be forgotten, and the fact stated by this Court, that in matters of interstate commerce there are no State lines, be remembered, then clearly the very purpose and intent of this statute, as declared therein and asserted by the State in its Answer, is to give to citizens of West Virginia an adequate supply, and to non-residents no gas, if that is necessary to first supply the demands of the citizens of West Virginia. The whole question at issue in this suit is whether or not the State has the legal right to thus discriminate against and to abridge the privileges and immunities of non-residents of West Virginia.

XII.

THE NATURAL AND NECESSARY EFFECT OF SAID STATUTE IS TO DEPRIVE THE INTERSTATE NATURAL GAS COMPANIES OPERATING IN WEST VIRGINIA OF THEIR PROPERTY WITHOUT DUE PROCESS OF LAW.

It was held in the leading case of *Oklahoma v. Kansas Natural Gas Co., supra*, after citing and quoting from decisions of this and other Courts to the effect that the surface owners, under whose lands natural gas existed, could not be deprived of the right to reduce it to possession, without the taking of private property, without due process of law; the Court continuing:

> "It surely cannot need argument to show that if they could not be deprived of the right to reduce the gas to possession they could not be deprived of any right which attached to it when in possession."

It follows that any law which takes away from the owner of gas, after it has been reduced to possession, the right to dispose of it, is the taking of property without due process of law. Especially is this true in the instant case, where by this statute the State undertakes to select the market for this gas, to reserve it for future purchasers and use within the State of West Virginia, and to compel delivery to consumers or to other gas companies exclusively in said State of West Virginia,—parties to whom the owner of said gas is under no contract relation or obligation whatever.

Sanborn, C. J., in the case of *Haskell v. Cowham, supra* said:

"But an owner who by virtue of his ownership of land or of mining leases thereof has the vested right to draw by means of wells or pumps natural gas from beneath the surface is the owner of valuable property which the State cannot take from him without just compensation and State laws and acts of the officers of a State which prevent him from taking it from the land and selling it and conveying it out of the State in interstate commerce, while they permit the withdrawal and sale of such gas in interstate commerce, necessarily violate the national Constitution, (1) because they take his property without just compensation, (*Ohio Oil Co. v. Indiana*, 177 U. S. 190, 209, 210, 20 Sup. Ct. 576, 44 L. Ed. 279; *People v. New York Carbonic Acid Gas Co.*, 196 N. Y., 421, 441, 90 N. E. 441; *Manufacturers Gas & Oil Co. v. Indiana Natural Gas & Oil Co.*, 156 Ind. 679, 59 N. E. 169, 60 N. E. 1080)."

The case of *Kansas Natural Gas Co. v. Haskell*, decided by Pollock and Campbell, District Judges, 172 Fed. 545, contains a full discussion of this question and a review of the cases in this and lower courts, and reaches the same conclusion,—that any restrictions which would prevent the owner of gas, after it has been reduced to possession, from disposing of the same in the markets of his own selection, is the taking of property without due process of law.

This same proposition may be stated in still another form:

The statute in controversy, depriving the owner of property, which is subject to sale by him, of the right to contract for such sale to any party outside of West Virginia, thereby takes from him the Constitutional liberty to make contracts.

In *Allgeyer v. Louisiana,* 165 U. S. 578, this Court had under consideration a statute of Louisiana forbidding any person in the State "to effect, for himself or another insurance on property, then in this State, in any marine insurance company, which has not complied in all respects with the laws of this State." Allgeyer mailed a letter from New Orleans to New York to an insurance company there to insure certain shipments from New Orleans to foreign ports.

Mr. Justice Peckham, in delivering the opinion of this Court, holding the statute unconstitutional, said, (page 589):

> "* * * we think the statute is a violation of the Fourteenth Amendment of the Federal Constitution, in that it deprives the defendants of their liberty without due process of law. * * * The liberty mentioned in that Amendment means not only the right of the citizen to be free from the mere physical restraint of his person as by incarceration, but the term is deemed to embrace the right of the citizen to be free in the enjoyment of all his faculties; to be free to use them in all lawful ways; to live and work where he will; to earn his livelihood or avocation, and for that purpose to enter into all contracts which may be proper, necessary and essential to his carrying out to a successful conclusion the purposes above mentioned."

The effect of the statute in controversy is to prevent the making of any contract for the sale of gas by the owner thereof to any party outside the State of West Virginia. The statute attaches such conditions to such a contract of sale, so many impediments to its fulfillment, and so many contingencies,—some of which are sure, temporarily at least, to prohibit its perform-

ance—that no man would make the purchase under such a contract, subject to such conditions, impediments and contingencies.

As has been shown by the evidence of all the experts in the gas industry who have testified in this case—experts representing all the large interstate gas companies doing business in West Virginia—the statute in controversy would prohibit the making of contracts for sale of gas outside of West Virginia.

If this is its effect, then the statute deprives the owners of natural gas in the State of West Virginia—the natural gas companies—of their liberty; the liberty to contract for the sale of their property; without due process of law.

Again, the statute in controversy would place the expensive interstate pipe line systems and facilities of these interstate natural gas companies at the service of indefinite communities and of other public service gas companies engaged in furnishing a purely intrastate service (whose supply of gas happened to be inadequate). The statute would authorize these communities and these other gas companies to avail themselves of the use of said equipment and facilities which these interstate proprietors had provided not only for the specific communities that they had professed or undertaken to serve in West Virginia, but also in Pennsylvania, Ohio and other States, and aggregating an investment of hundreds of millions of dollars.

Mr. Justice Holmes said, in *Louisville & Nashville R. Co. v. Central Stock Yards Company*, 212 U. S. 132 (1909), in declaring unconstitutional the requirements of the Constitution and statute of Kentucky, as construed by the Supreme Court of that State, requiring

that intersecting railroads deliver to each other their own cars when loaded with goods consigned to points on the connecting line, in order to facilitate through traffic (page 143):

> "There remains for consideration only the third division of the judgment, which requires the plaintiff in error to receive at the connecting point, and to switch, transport and deliver all live stock consigned from the Central Stock Yards to any one at the Bourbon Stock Yards. This also is based upon the sections of the constitution that have been quoted. If the principle is sound, every road into Louisville, by making a physical connection with the Louisville & Nashville, can get the use of its costly terminals and make it do the switching necessary to that end, upon simply paying for the service of carriage. The duty of a carrier to accept goods tendered at its station does not extend to the acceptance of cars offered to it at an arbitrary point near its terminus by a competing road, for the purpose of reaching and using its terminal station. To require such an acceptance from a railroad is to take its property in a very effective sense, and cannot be justified, unless the railroad holds that property subject to greater liabilities than those incident to its calling alone."

Let it be noted that in the above and like cases of connecting railroads, &c., the question affects the transportation alone. In the case of natural gas companies and compulsory connections of their transmission systems of pipe lines we have the added feature and most important consideration of the compulsory delivery by this connection of the gas belonging to the

interstate gas company to the company having a deficit. The statute not only gives to the company having a deficit the use of the transmission system, but also the title to and beneficial use of the property being transported through such system.

Respectfully submitted,

GEORGE E. ALTER,
Attorney General.

A. LEO WEIL,
Attorneys for Complainant.

APPENDIX

EXHIBIT "A."

HOUSE BILL NO. 59.

A BILL in relation to persons, firms and corporations engaged in furnishing or required by law to furnish, natural gas for public use within this state, to provide remedies for the enforcement of this act, and penalties and punishment for violations thereof, and to extend the jurisdiction of the public service commission and of the courts of this state with respect thereto.

Be it enacted by the Legislature of West Virginia:

SECTION 1. That every person engaged in furnishing, or required by law, (whether statutory or common law) to furnish, natural gas for public use, or for the use of the public, or any part of the public, whether for domestic, industrial or other consumption, within this state, shall to the extent of his supply of said gas produced in this state (whether produced by such person or by any other person), furnish for public use within the territory of this state, and for the use of the public and every part of the public within the territory of this state in or from which such gas is produced, or through which said gas is transported, or which is served by such person, a supply of natural gas reasonably adequate for the purposes, whether domestic, industrial or otherwise, for which natural gas is consumed or desired to be consumed by the public, or any part of the public, within said territory in this state, and for which said consumer or consumers therein shall apply and be ready and willing to make payment at lawful rates.

SECTION 2. That in case any person engaged in furnishing, or required by law (whether statutory or common law) to furnish, natural gas for public use within this state, or for the use of the public or any part of the public within this state, shall have a production or supply of natural gas which is, or probably will be, insufficient to furnish for such use, (for the purposes, whether domestic, industrial or otherwise, for which natural gas is consumed by the public or any part of the public), within the territory in this state served by such persons, then and in that event the public service commission shall have authority, and the same is hereby conferred upon it, upon the application of any such person or any of his consumers within this state, and after due hearing upon notice and proof to the satisfaction of the commission that public convenience and necessity so require, to order any other person engaged in furnishing or required by law (whether statutory or common law) to furnish, natural gas for public use within this state, and producing or furnishing natural gas for public use in said territory or transporting the same through said territory, to furnish to such person having such insufficient production or supply, natural gas for the purpose of supplying such deficiency, at and during such times, upon and at such just and reasonable terms, conditions and rates, and in such amounts, as the commission shall prescribe. And whenever, after such hearing upon notice and proof, the commission shall determine that public convenience and necessity so require, the commission shall have authority to provide for and compel the establishment of a reasonable physical connection or connections between the lines, pipes or conduits of such persons having such excess supply of gas and the lines, pipes or conduits of the person having such deficiency of supply, and to require the laying and construc-

tion of such reasonable extensions of lines, pipes or conduits as may be necessary for the establishment of such physical connection or connections, and to ascertain, determine and fix the just and reasonable terms and conditions of such connection or connections, including just and reasonable rules and regulations and provisions for the payment of the costs and expense of making the same or for the apportionment of such cost and expense as may appear just and reasonable. *Provided, however,* that no person shall, by virtue of this section, be ordered to furnish natural gas to any other person so engaged in furnishing, or required by law to furnish, natural gas for public use, except to the extent that the person so ordered to furnish natural gas shall, at the time, have a production or supply of natural gas in excess of the quantity sufficient to furnish a reasonably adequate supply to his consumers within this state; nor shall any person, by virtue of this section, be ordered to furnish natural gas to any other person so engaged in furnishing or required by law to furnish, natural gas for public use in a territory within this state, if and when the said person having said excess, shall, to the extent of such excess, be ready and willing to furnish, and within such time as the commission shall prescribe actually furnish, to the consumers within said territory a reasonable adequate supply of natural gas.

SECTION 3. That in so far as the same shall not be in conflict with this act, all of the authority, powers jurisdiction and duties conferred and imposed on the public service commission by the act entitled, "An act to create a public service commission and to prescribe its powers and duties, and to prescribe penalties for the violations of the provisions of this act," passed February twenty-first, one thousand nine hundred and thir-

teen, as amended by the act entitled "An act to amend and re-enact sections one, two three, four, five, nine, ten, fourteen, fifteen and twenty-two, of chapter nine of the acts of one thousand nine hundred and thirteen, creating a public service commission, prescribing its powers and duties, and penalties for violation of the provisions of said chapter, and to add thereto six sections to be known as sections twenty-three, twenty-four, twenty-five, twenty-six, twenty-seven, twenty-eight, enlarging the powers and duties of said public service commission, prescribing additional penalties and giving to the commission power to punish for contempt," passed February tenth, one thousand nine hundred and fifteen, are hereby conferred and imposed on the public service commission in respect to the subject-matter of this act, or any part thereof.

SECTION 4. That in case of violation of any provision of this act any person aggrieved or affected thereby may complain thereof to the public service commission in like manner, and thereupon such procedure shall be had, as is provided in respect to other complaints to or before said commission, and all such proceedings and remedies may be taken or had for the enforcement or review of the order or orders of said commission, and for the punishment of the violation of such order or orders, as are provided by law in respect to other orders of said commission. In case of the violation of any provision of this act, the public service commission, or any person aggrieved or affected by such violation, in his own name, may apply to any court of competent jurisdiction by a bill for injunction, petition for writ of mandamus or other appropriate action, suit or proceeding, to compel obedience to and compliance with this act, or to prevent the violation of this act, or

any provision thereof, pending the proceedings before said commission, and thereafter until final determination of any action, suit or proceeding for the enforcement or review of the final order of said commission; and such court shall have jurisdiction to grant the appropriate order, judgment or decree in the premises.

SECTION 5. That if any person, subject to the provisions of this act shall fail or refuse to comply with any requirement of the commission hereunder, such person shall be subject to a fine of not less than one hundred dollars nor more than five hundred dollars for each offense; and such person, or the officers of the corporation, where such person is a corporation, may be indicted for their failure to comply with any requirement of the commission under the provisions of this act, and upon conviction thereof, may be fined not to exceed five hundred dollars, and in the discretion of the court, confined in jail not to exceed thirty days. Every day during which any person, or any officer, agent or employe of such person shall fail to observe and comply with any order or direction of the commission, or to perform any duty enjoined by this act, shall constitute a separate and distinct violation of such order or direction of this act, as the case may be.

SECTION 6. That any person claiming to be damaged by any violation of this act may bring suit in his own behalf for the recovery of the damage from the person or persons so violating the same in any circuit court having jurisdiction. In any such action the court may compel the attendance of the person or persons against whom said action is brought, or any officer, director, agent or employe of such person or persons, as a witness, and also require the production of all books, papers and

documents which may be useful as evidence, and in the trial thereof such witness may be compelled to testify, but any such witness shall not be prosecuted for any offense concerning which he is compelled hereunder to testify.

SECTION 7. That the word "person" within the meaning of this act shall be construed to mean, and to include, persons, firms or corporations.

SECTION 8. That the sections, provisions and clauses of this act shall be deemed separable each from the other, and also in respect to the persons, firms, corporations and consumers mentioned therein or affected thereby, and if any separable part of this act be, or be held to be unconstitutional or for any reason invalid or unenforceable, the remaining parts thereof shall be and remain in full force and effect.

SECTION 9. That all acts and parts of acts in conflict with this act are hereby repealed.

Digest of Statute.

SECTION I.

Every public service natural gas company

though its business be limited in territory

or

(a) limited to domestic consumers in West Virginia and other States,

or

(b) limited to industrial consumers in West Virginia and other States,

or

(c) limited to other consumers in West Virginia and other States,

nevertheless, without regard to its charter limitations: limitations of territory, or limitations of business, to the extent of its supply produced in West Virginia,

shall furnish a supply reasonably adequate to all three classes of consumers, domestic, industrial or otherwise:

(a) throughout the whole territory of the State of West Virginia,

or

(b) within the territory of the State of West Virginia in or from which such gas is produced,

or

(c) within the territory of West Virginia through which said gas is transported,

or

(d) within the territory of West Virginia which is served by such company;

and these classes of consumers throughout the State of West Virginia shall be furnished with a reasonably adequate supply for all purposes for which gas is consumed,

or

for which gas is desired for consumption, and for which said purposes said consumers shall apply and be ready to pay lawful rates;

And this in utter disregard:

(A) that any or all of this gas may have been sold to consumers in other States;

(B) that this gas is in transit to such consumers across State lines;

(C) that the gas company is under contract to deliver and transmit such gas across the State line;

(D) that this demand will destroy the business in other States;

(E) that the plant and investment of the gas company to a large extent will be destroyed;

(F) that enormous financial losses will be suffered by consumers in other states and their lives will be endangered and they will suffer in health, comfort and convenience;

(G) that the business of every gas company in the State will be spread out over the whole State;

(H) that preference to domestic consumers against industrial and other consumers will be prevented;

(I) that new, unusual and wasteful uses of gas will be encouraged;

(J) That no gas company will know from day to day and week to week and month to month what will be the demands upon its lines, what territory it will be called upon to supply, or to what uses such gas will be applied.

SECTION II.

Whenever any public service natural gas company

has an insufficient supply for all purposes, domestic, industrial or otherwise, for its consumers within the territory served by it,

Then and in that event the Public Service Commission of West Virginia, on proof that public convenience and necessity so require,—

May order

any other public service natural gas company producing or furnishing gas in said territory,

or

transporting the same through said territory,

even though it is not engaged in supplying gas to that territory, to make up such deficiency

to

the other gas company so deficient,

during such times and on such just and reasonable terms, conditions and rates and in such amounts as the Commission may prescribe,

and

When the Commission decides that public convenience and necessity require,

it may compel connection between the pipe lines and conduits of the two companies,

and may compel laying and construction of lines for such connections,

on the terms, conditions, rules and regulations, and provisions for payment of costs and expenses, as the Commission determines.

PROVIDED:

No such order shall be made

except to the extent

The helping company

has an excess over amount required to supply its consumers in West Virginia, whether it has enough to supply its consumers in other States or not,

or

is ready and willing to furnish that same territory and give consumers therein a reasonably adequate supply;

And this in utter disregard,—

(A) of the charter rights and obligations of the company so held up; and that it may have carefully refrained from undertaking to supply some populous city it knew it could not for various reasons supply.

(B) that any or all of this gas has been sold to consumers in other States;

(C) that it is in transit to such consumers across State lines;

(D) that the gas company is under contract to deliver and transmit such gas across the State line;

(E) that this intermittent demand will destroy the business in other States;

(F) that the plant and investment of the gas company to a large extent will be destroyed;

(G) that enormous financial losses will be suffered by consumers in other States and their lives will be endangered and they will suffer in health, comfort and convenience;

(H) that no gas company will know from day to day and week to week and month to month what will be the demands upon its lines, what territory it will be called upon to supply, or to what uses such gas will be applied.

SECTION IV.

In case of violation party aggrieved
may apply for injunction or mandamus or other action to enforce orders
pending proceedings original or on review.

SECTION V.

For failure or refusal to comply with any requirement of Commission, even pending review—

party offending subject to
fine $100 to $500 each offence;

may also be indicted and on conviction fined not to exceed $500,
imprisoned not beyond 30 days;

every day separate offence;

Thus during time in which appeal may be pending or other proceedings for review,—

For thirty days
can be fined $15,000
jailed 900 days, nearly three years.

SECTION VI.

Damaged party may sue and recover damages.

IN THE

Supreme Court of the United States

Number 20—Original

COMMONWEALTH OF PENNSYLVANIA, Complainant

vs.

STATE OF WEST VIRGINIA, Defendant.

Supplemental Brief for Complainant.

This Court ordered that this case be restored to the docket for reargument, with special reference to the questions:

> "1. Whether the suit was not prematurely brought as no action has been taken either by the State or by the State Commission under the statute."
>
> "2. Whether the bill presents a cause justiciable between the two States parties to the action."

Complying with said order, answers to these questions, and, in addition, suggestions upon other questions raised during the previous oral argument, are respectfully submitted on behalf of complainant. As far as possible, repetition of the argument contained in the original briefs will be avoided.

I.

"WHETHER THE SUIT WAS NOT PREMATURELY BROUGHT AS NO ACTION HAS BEEN TAKEN EITHER BY THE STATE OR BY THE STATE COMMISSION UNDER THE STATUTE."

This is a suit under the original jurisdiction of this Court. Evidence was offered by complainant in support of the averments of the Bill, and by defendant in support of the averments of the Answer.

This Court, like any other court at *nisi prius*, is bound by the proofs. It must decide the questions of fact under the evidence. This question of "whether the suit was not prematurely brought as no action has been taken either by the State or by the State Commission under the statute," involves both questions of fact and of law.

The question of fact involved is: Would the effects, causing loss of life, health and property, proved by the uncontradicted evidence as sure to follow the enforcement of the statute, wait for the length of time necessary to obtain action by this Court, if complainant had deferred proceedings until after the State or its Commission had acted in accordance with the purpose and intent of the statute, and the powers sought to be given by the statute had been first exercised?

The question of law is: Is any action by the State or by its Commission necessary, before the statute, by its own terms, would produce these very effects which the uncontradicted evidence shows are sure to follow from the provisions of said statute?

This question of fact,—in reality this very suggestion of whether or not the suit was prematurely brought,—involves an intimate knowledge and consideration of the peculiarities and idiosyncrasies of the natural gas industry. It is significant that the defendant and its counsel, familiar with that industry, did not suggest this objection to the filing of this complaint, or the decision of this suit, at this time.

That the State and its Commission had not yet taken action towards the enforcement of this statute, is explained by the preliminary injunction issued by this Court, restraining such action.

Moreover, as said by this Court in *Ludwig, Secy. of State vs. Western Union Tel. Co.*, 216 U. S. 146, page 162:

> "According to well settled rules of statutory construction the validity of a statute, whatever its language, must be determined by its effect or operation as manifested by the natural and reasonable meaning of the words employed. *Henderson v. Mayor*, 92 U. S., 259, 268. If a statute by its necessary operation really and substantially burdens the interstate business of a foreign corporation seeking to do business in the State * * * then it is unconstitutional and void, although said legislature may not have intended to enact an invalid statute."

In *Minnesota v. Barber*, 136 U. S. 313, after citing and discussing authorities, it was said, by this Court at page 320:

> "Upon the authority of this case and others that could be cited it is our duty to inquire in respect to the statute before us not only whether

there is a real or substantial relation between its avowed objects and the means devised for obtaining those objects, but whether by its necessary or natural operation it impairs or destroys rights secured by the Constitution of the United States."

The statute under discussion in that case was one passed by the State of Minnesota providing for inspection in Minnesota, within 24 hours before being slaughtered, of beef offered for sale in Minnesota. The beef had been killed in Illinois and shipped to Minnesota. This Court said of this statute, at page 321:

> "The enactment of a similar statute by each one of the States composing the Union would result in the destruction of commerce among the several States so far as such commerce is involved in the transportation from one part of the country to another of animal meats designed for human food, and entirely free from disease. A careful examination of the Minnesota act will place this construction of it beyond question."

And again at page 323:

> "Our duty to maintain the Constitution will not permit us to shut our eyes to these obvious and necessary results of the Minnesota statute."

It was said by this Court in *Henderson v. Mayor of New York*, 92 U. S. 259, at page 268:

> "In whatever language the statute may be framed its purpose must be determined by its natural and reasonable effect."

The power of a court of equity to prevent by injunction contemplated or threatened injuries before they are actually inflicted, has been applied by this Court in

cases in which the injury was threatened by the enforcement of a State statute in conflict with the Commerce Clause of the Federal Constitution.

In *Savage v. Jones*, 225 U. S. 501, a manufacturer of cattle food filed his bill in equity to prevent the State officials from taking proceedings to enforce an Act of the State requiring the formula to appear on the wrapper on all such goods sold. In that case this Court said:

> "If the statute of Indiana, as applied to sales by importing purchasers in the original packages, constitutes an unwarrantable interference with interstate commerce in the complainant's product, he had standing to complain and was entitled to relief against enforcement by the defendant of the illegal demands."

Citing authorities.

The case of *Ludwig, Secy. of State v. Western Union Telegraph Co.*, 216 U. S. 416, involved a statute of Arkansas imposing on interstate companies a license tax for the privilege of filing its articles of incorporation as a condition to doing intrastate business, the license tax or fee being based on the whole capital stock of the company, whether employed within the State or elsewhere. This Court held that a suit to enjoin the enforcement of the statute was properly and timely brought, since to wait until an attempt was made to actually enforce the statute would work irreparable injury on complainant company. This Court said, at page 164:

> "In order to prevent the contemplated or threatened injury to the company the court below

properly made a decree perpetually enjoining the appellant as Secretary of State, his agents and attorneys, from making proclamation that the telegraph company has no authority to continue doing business in Arkansas."

The real inquiry is one of fact. Does the statute in controversy, as claimed by the complainant, "by its effect or operation, as manifested by the natural and reasonable meaning of the words employed," burden, interfere with, and in fact prevent and prohibit, interstate commerce in natural gas, and if it does is the Commonwealth of Pennsylvania justified in praying for this injunction now, before the injury contemplated or threatened, affecting not only property, but life and health, is actually suffered?

To put the question conversely: If by delaying proceedings the citizens of the Commonwealth of Pennsylvania would actually suffer the contemplated and threatened injuries, and action thereafter would be of no avail except to some extent to prevent the continuance of further like injuries, is not said Commonwealth, in the performance of its sovereign obligations to its people, in good faith, bound to proceed at once, without delay?

The whole purpose and intent of the statute, as shown by its terms, by the Answer of the State of West Virginia, and by the argument of its counsel, are hereafter to appropriate to the use of all classes of consumers within the State, domestic, industrial, and others, an adequate supply of gas before permitting any gas produced in the State of West Virginia to be transported across the state line to other States, as has been

the established course of business of these interstate gas companies, encouraged and sanctioned by the State of West Virginia for over a generation.

The uncontradicted evidence of the officials of every interstate natural gas company doing business in West Virginia, and of natural gas experts, shows that the carrying out of this purpose and intent will not only burden and interfere with, but will actually prevent and prohibit, the transportation of all natural gas from the State of West Virginia into other States. It would divert the natural gas, while in transit from West Virginia to other States, to the use of consumers in West Virginia. It would in effect be a seizure by the State of West Virginia, for the use of its own consumers, of natural gas committed to and in transportation in interstate commerce.

To delay action until after this purpose and intent had been carried out and effect accomplished, for whatever length of time, for even a comparatively few days, before this Court could act, would render such action of no practical value to prevent the doing of the wrong and the suffering of the injuries. In this connection this Court's attention is respectfully directed to the following considerations, namely:

1st. All of the dangers to life, health, comfort and convenience, will have been suffered by those deprived of fuel in their homes for cooking, heating, lighting, etc., though it should be for a few days only. Food in the home can be dispensed with, with less danger to life and health, and for a longer period, than can fuel in extreme cold weather.

2nd. As soon as the fuel supply is cut off, other fuel must be immediately substituted. The delay necessary to obtain an injunction, even if the parties and court acted with the utmost expedition, could not be endured, even for a few days, even for a few hours, without loss of life and health to those wholly dependent upon gas for their fuel supply.

3rd. The necessary delay, however short, incident to the change in the appliances necessary to burn other fuel in place of gas, and the obtaining of such other fuel, would occasion all of the loss of life, health, comfort, convenience and property shown by the uncontradicted evidence in the case to be inevitable from the enforcement of the statute, especially when there is taken into consideration the extraordinary demands for such appliances and fuel that would be created by millions of gas consumers clamoring at the same time for plumbers' services and fittings and fuel supplies.

4th. If consumers in Pennsylvania at any time even for a few hours or a few days are compelled to make these changes in appliances requisite for the burning of other fuel than gas (even where the construction of the houses permits such changes) after they have endured the hardships and risks to life and health, and have gone to the expense of making such changes, even though subsequently the court should declare the action of the State unwarranted, all the damage would have been done. The expense to the millions of consumers in Pennsylvania of making these changes would aggregate several hundred millions of dollars.

5th. If consumers and their families in Pennsylvania, aggregating many millions in number, as shown by the testimony, and whom the State of Pennsylvania

as *parens patriae*, represents in this litigation, are entitled, now or at any time hereafter, to the relief sought by the bill of complaint filed and now under consideration, they are entitled to the same without being first subjected to all the horrors and property losses pictured by the uncontradicted proofs in this case as sure to follow from the operation of this statute of West Virginia.

6th. This suit stands on a different footing from the ordinary proceeding by an individual to protect his private rights. It is brought by a sovereign State, pursuant to a resolution adopted by the Senate and House of Representatives and approved by its Governor. This resolution (page 21, Complaint of Pennsylvania; for the convenience of the Court reprinted as Exhibit "A" in the appendix to this brief) recites the facts (now proven by the evidence) as to the dangers to life, health, convenience and comfort, and the property losses to be apprehended from the enforcement of this statute, and directed the appeal to this Court to protect the millions of its citizens from these horrors and losses, because without action by the State these citizens were remediless. Could this State, without being recreant to its sovereign obligation, before putting into motion the machinery of the law for the protection of its citizens, have waited until much, if not all, of the evils to be apprehended had been suffered by its citizens? If by prompt action this State could save the life of a single citizen, or the health of a single family, (however poor —and the poor would suffer the most), was not its action *now* justified?

Where the complainants are States the same rule does not obtain as in litigation between private parties. When the lives and health of its people are involved the

State should act at once. No nice balancing of probabilities ought to be tolerated.

As was said by this Court in *Georgia v. Tennessee Copper Company*, 206 U. S. 230, at page 237, Mr. Justice Holmes delivering the opinion:

> "Some peculiarities necessarily mark a suit of this kind. If the State has a case at all, it is somewhat more certainly entitled to specific relief than a private party might be. It is not lightly to be required to give up quasi-sovereign rights for pay; and, apart from the difficulty of valuing such rights in money, if that be its choice it may insist that an infraction of them shall be stopped. The States by entering the Union did not sink to the position of private owners subject to one system of private law. This court has not quite the same freedom to balance the harm that will be done by an injunction against that of which the plaintiff complains, that it would have in deciding between two subjects of a single political power. Without excluding the considerations that equity always takes into account, we cannot give the weight that was given them in argument to a comparison between the damage threatened to the plaintiff and the calamity of a possible stop to the defendant's business, the question of health, the character of the forests as a first or second growth, the commercial possibility or impossibility of reducing the fumes to sulphuric acid, the special adaptation of the business to the place.
>
> It is a fair and reasonable demand on the part of a sovereign that the air over its territory should not be polluted on a great scale by sulphurous acid gas, that the forests on its mountains, be they

better or worse, and whatever domestic destruction they have suffered, should not be further destroyed or threatened by the act of persons beyond its control, that the crops and orchards on its hills should not be endangered from the same source. If any such demand is to be enforced this must be, notwithstanding the hesitation that we might feel if the suit were between private parties, and the doubt whether for the injuries which they might be suffering to their property they should not be left to an action at law."

7th. If it can be presumed (which complainant avers it cannot), considering the terms of the statute, and the avowed purpose and intent as to the enforcement and the interpretation thereof by the State of West Virginia, as declared in its Answer, that said statute will not be so enforced as to prohibit, prevent, interfere with or burden interstate commerce in natural gas by its transportation out of the State of West Virginia, any decision of this Court as prayed by the complainant that said statute is unconstitutional to this extent, could not prejudice the rights of said State or deprive it of any prerogatives it might legally possess.

All of the foregoing reasons apply equally to the State of Pennsylvania, as a consumer of gas in its public institutions, such as homes, hospitals, houses of correction, etc., and to the municipal subdivisions of said State.

The only reason why this suffering by millions of consumers in Pennsylvania, and this property loss, aggregating hundreds of millions of dollars, have not already been imposed upon them by the operation of this statute, is because the operation thereof was en-

joined by this Court, pending the final determination of the questions now under consideration. If, after the vital organs of a patient have been removed by a surgical operation, the doctors in consultation agree that the operation should not have been made, such decision would afford the patient no relief, nor would it restore his organs!

Let it be noted that no action of the State itself, nor any of its officers, is required for the enforcement of the statute. Section One, without any further action by the State officials, courts or commission, absolutely compels every gas company to furnish an adequate supply to the public of West Virginia for all purposes for which natural gas may be desired by said public.

In the Answer filed by the State of West Virginia the State admits that it proposes to enforce this statute, even to the extent of enforcing the fines, penalties and imprisonment in the statute prescribed. (Answer, p. 44). It further admits that whether or to what extent under the changed conditions brought about by the enforcement of said statute the demands of the consumers in West Virginia would deplete or diminish the supply of gas available for transportation into Pennsylvania, will be dependent upon circumstances and contingencies referred to in the Answer.

The State of West Virginia further claims in its Answer that the effect of said statute will be to give to all of the consumers in West Virginia in the statute mentioned, to the extent of the gas mentioned, a reasonably adequate supply of gas, and says that the gas is affected with the use or interest of the said public of West Virginia, and claims that this use or interest of

said public is superior and prior to any rights flowing from the introduction of said gas into interstate commerce.

It follows, therefore, from the terms of the Act itself that no further action of the State of West Virginia is necessary, and from the averments of the Answer the State unequivocally asserts its intention to enforce the Act, even by fines, penalties and imprisonment.

Under the Second Section of the Act, which provides for a supply of gas to other public service companies by gas companies having a surplus *over and above what is required to supply their consumers in West Virginia*, the Public Service Commission is given authority to order said delivery and compulsory connection of lines for that purpose. The only discretion of the Commission is as to the convenience and necessity of the *West Virginia public*. The Section expressly authorizes such order by the Commission if the company has a supply in excess of the quantity sufficient *for all consumers in West Virginia who may desire to use gas.*

The fines and penalties provided by this Act are so great, each day being made a separate offence, that no company would dare to disobey the orders of the Commission, even long enough to raise the question of constitutionality of the Act by proper proceedings in the courts. Litigation for any length of time if unsuccessful would almost bankrupt any company. The imprisonment that would follow from even a short delay might mean incarceration during the lifetime of any officer of the gas company contesting the constitutionality of the statute.

As was said by Mr. Justice Brandeis, in *Oklahoma Operating Company v. Love*, 252 U. S. 331, page 336, of the statute then under consideration, the penalties whereof were nothing like as severe as those provided for in the statute in controversy:

> "But the penalties which may possibly be imposed if it pursues this course without success are such as well might deter even the boldest and most confident."

While the provision imposing the fines and imprisonment provided by the statute in controversy might be declared unconstitutional, if that question were raised by some bold and confident officer of one of the interstate companies, nevertheless, with such deterrents, in all reasonable probability any one of the interstate companies would find it less dangerous to comply with the statute than to raise the question of its constitutionality.

If, therefore, in cold weather, these compulsory connections are made and the interstate gas companies are compelled to make up the deficit of all local companies before the State of Pennsylvania could take any action whatever, it is manifest its people consuming natural gas would be subjected to the hazards to life, health, convenience and comfort, as well as property losses, described in the Bill of Complaint and proven by the evidence to follow from the enforcement of this provision of the statute.

The Answer of the State of West Virginia sets forth in explicit terms the contention of said State, that all gas produced in the State of West Virginia must be first applied to furnishing an adequate supply to all consumers in West Virginia who may desire to use the

same, before any of said gas can be introduced into interstate commerce or transported out of the State. This may include such use as for carbon black manufacture, generally condemned as being most wasteful. Can it be open to question, from the terms of the statute, the averments of the Answer, and the argument of counsel for the State of West Virginia, that its purpose and intention are to compel the application of all the gas produced or transported in the State to the supply of domestic, industrial and other consumers in that State who may desire the same for any purpose whatever before any thereof can be taken out of the State?

Nothing remains, therefore, to be done by the State or by its Public Service Commission, except, of course, the carrying out of this purpose and intention by the actual seizure of the gas for use within the State. To delay action, therefore, until after this actual seizure is made, *which seizure the State of West Virginia avows its purpose and intention to make*, would render valueless for the protection of citizens of Pennsylvania, any judgment or decree of this Court afterwards delivered or made.

The foregoing argument has been made principally upon the theory of a controversy between private individuals. Under the sixth reason above given why this suit was not prematurely brought, it was shown by citations from this Court that in suits where the complainant is a State, "if it has a case at all it is somewhat more certainly entitled to specific relief than a private party might be," and that other "peculiarities necessarily mark a suit of this kind."

In the case in controversy the legislature by formal action by both Houses, approved by the Governor, authorized and directed the Attorney General to institute

such legal proceedings and to do all other acts necessary to protect the rights and interests of the Commonwealth of Pennsylvania and of its citizens, etc.

The resolution recited the dangers to health, comfort, convenience and welfare of the people of the State from the enforcement of the statute in controversy, as well as the enormous property losses to which they would thereby be subjected.

There was no alternative left to the Attorney General by this action of the constituted authorities. There was no discretion left to the Attorney General. The dangers to health, comfort, convenience and welfare of the people and their threatened property losses are formally recited by the resolution.

What State official thereafter had the right to say "Such results may not follow. Had we better not wait and see?" Wait for what? See what? Whether or not the gas supply to consumers in Pennsylvania under the operation of the statute in controversy will be so diminished as to really affect the health and welfare of such consumers? What family or families are to be selected on which to try the experiment? How far must the experiment go? How many are to die, or get pneumonia or tuberculosis, before action should be taken?

Can a State thus deal with life and death, health and sickness, and not bring down upon itself the execration of all right-minded men?

If this statute in controversy at any time, now or hereafter, threatens to produce the dangers and damages alleged and proved, the State has the right, and it is its bounden duty to its people, before it is too late, by the loss of a single life or the health of a single family, to protect its people.

II.

"WHETHER THE BILL PRESENTS A CAUSE JUSTICIABLE BETWEEN THE TWO STATES PARTIES TO THE ACTION."

The temptation is with difficulty resisted to trace the historical development of this jurisdiction of this Court, when all the nations of the world at this time are considering the establishment of some great International Court to settle disputes between nations. Compacts and treaties have been made with this purpose. Societies have been organized of great publicists to make propaganda for the establishment of such a court,—a court having the same jurisdiction between nations as is possessed by this Court between the States of this Union.

As was said by Chief Justice Fuller in *Kansas v. Colorado*, 185 U. S. 125, at page 146, of this jurisdiction of controversies between States:

> "Sitting, as it were, as an international as well as domestic tribunal, we apply Federal law, state law, and international law, as the exigencies of the particular case may demand. * * *."

It was said of this jurisdiction of this Court in controversies between States, by William Wirt, in his argument in the case of *Cherokee Nation v. Georgia*:

> "The erection of such a tribunal was a sublime conception and worthy of the minds which planned our Constitution."

Beginning with the quarrels between the Colonies, before the Revolution, such as those between the Penns

and Lord Baltimore, continuing after the adoption of the Articles of Confederation, when a method was provided for arbitration between the States, and which furnished the suggestion of the system of original jurisdiction which was contained in the Constitution, it was manifest to the lawyers of pre-Revolutionary times that such original jurisdiction to determine disputes between the States must be conferred on some tribunal. The power conferred was general. There were no limitations in the constitutional provision conferring such power. As was pointed out by this Court in *Kansas v. Colorado*, 206 U. S. 46, in the opinion by Mr. Justice Brewer, at pages 81, 82 *et seq.*, that while as to its legislative powers this Government is acknowledged by all to be one of enumerated powers and that it can exercise only the powers granted to it:

> "On the other hand, in Article III, which treats of the judicial department—and this is important for our present consideration—we find that section 1 reads that 'the judicial power of the United States, shall be vested in one Supreme Court, and in such inferior courts as the Congress may from time to time ordain and establish.' By this is granted the entire judicial power of the nation. Section 2, which provides that 'the judicial power shall extend to all cases, in law and equity, arising under this Constitution, the laws of the United States,' etc. is not a limitation nor an enumeration. It is a definite declaration, a provision that the judicial power shall extend to—that is, shall include—the several matters particularly mentioned, leaving unrestricted the general grant of the entire judicial

power. There may be, of course, limitations on that grant of power, but if there are any they must be expressed, for otherwise the general grant would vest in the courts all the judicial power which the new Nation was capable of exercising."

It was under this general grant of power that this Court, in *Chisholm v. Georgia,* 2 Dall. 419, held that this Court had jurisdiction in a suit brought by a citizen against a State. That decision led to the adoption of the Eleventh Amendment to the Constitution, which prohibited such actions in the future.

This Court, under this general grant of power, in 1794, in the case of *Georgia v. Brailsford,* 3 Dall. 1, tried a case before a jury, and after the jury had been charged by Chief Justice Jay, the verdict found for the defendant was duly entered.

Under this general power, as relating to controversies between the States, this Court has developed a jurisprudence founded on principles of universal application to the Federal law, to State law, and to international law, and founded upon an association of sovereign States, independent yet united, united by an agreement —the Constitution—the enforceability whereof is vested in the Supreme Court.

As was natural, in the eighty odd cases of controversies between the States that have come before this Court, objections have been made to this jurisdiction from time to time upon diametrically opposite grounds. For example, in the case of *Rhode Island v. Massachusetts,* 12 Pet. 657, Daniel Webster argued that the jurisdiction of suits between States extended only to matters ordinarily judicially cognizable, and not to suits of a political character, such as boundaries; while in later

cases exactly the opposite was contended, to wit, that the jurisdiction related solely to political questions, such as boundaries, etc.

These eighty odd cases have been controversies over a wide range of subjects,—over boundaries, riparian and fishery rights, public health, interstate commerce, obligations of the States, political and territorial questions arising out of the Civil War, etc., etc.

In the case of *Missouri v. Illinois*, 180 U. S. 208, Mr. Justice Shiras, in delivering the opinion of the Court (p. 218) reviewed the history of the grant to the Supreme Court of power over controversies between the States. He reviewed many cases in this Court, *New York v. Connecticut*, 4 Dall.; *New Jersey v. New York*, 5 Pet.; *Florida v. Georgia*, 11 How.; *Pennsylvania v. Bridge Co.*, 9 How, 11 How., 13 How., and 18 How.; *South Carolina v. Georgia*, 93 U. S.; *Wisconsin v. Duluth*, 96 U. S.; *New York v. Louisiana*, 108 U. S.; *Wisconsin v. Insurance Co.*, 127 U. S.; *Hans v. Louisiana*, 134 U. S.; and *Louisiana v. Texas*, 176 U. S.; and after this review propounded this question:

> "From the language of the Constitution and from the cases in which that language has been considered, what principles may be derived as to the nature and extent of the original jurisdiction of this Court in controversies between two or more States?"

He then states that from the language alone considered it might be concluded that, wherever a State made complaint against another State, jurisdiction attached, regardless of the nature of the complaint. He added, however:

> "But it must be conceded that upon further consideration in cases arising under different states

of facts, the general language used in *Cohens v. Virginia* has been to some extent modified."

He then cites the different classes of cases and discusses them, and calls attention to the fact that while the jurisdiction in those cases involved boundaries and jurisdiction over lands and their inhabitants, and in some instances directly affected the property rights and interests of a State, he concludes this review:

"But such cases manifestly do not cover the entire field in which such controversies may arise, and for which the Constitution has provided a remedy; and it would be objectionable and, indeed, impossible, for the court to anticipate by definition what controversies can and what cannot be brought within the original jurisdiction of this court.

An inspection of the bill discloses that the nature of the injury complained of is such that an adequate remedy can only be found in this court at the suit of the State of Missouri. It is true that no question of boundary is involved, nor of direct property rights belonging to the complainant State. But it must surely be conceded that, *if the health and comfort of the inhabitants of a State are threatened,* the State is the proper party to represent and defend them. If Missouri were an independent and Sovereign State all must admit that she could seek a remedy by negotiation, and, that failing, by force. Diplomatic powers and the right to make war having been surrendered to the general government, it was to be expected that upon the latter would be devolved the duty of providing a remedy and that remedy, we think, is found in the constitutional provisions we are now considering.

> The allegations of the bill plainly present such a case. The health and comfort of the large communities inhabiting those parts of the State situated on the Mississippi River are not alone concerned, but contagious and typhoidal diseases introduced in the river communities may spread themselves throughout the territory of the State. Moreover substantial impairment of the health and prosperity of the towns and cities of the State situated on the Mississippi River, including its commercial metropolis, would injuriously affect the entire State.
>
> That suits brought by individuals, each for personal injuries, threatened or received, would be wholly inadequate and disproportionate remedies, requires no argument."

The foregoing opinion was delivered upon a demurrer to the bill of complaint. Upon the overruling of the demurrer the case went to trial, and when it came before this Court for final determination upon the evidence, (*Missouri v. Illinois*, 200 U. S. 406), this Court, by Mr. Justice Holmes, said, of the former decision in the case, (p. 518):

> "* * * The only question presented was whether as between the States of the Union this court was competent to deal with a situation which, if it arose between independent sovereignties, might lead to war. Whatever differences of opinion there might be upon matters of detail, the jurisdiction and authority of this court to deal with such a case as that is not open to doubt."

The case of *Kansas v. Colorado*, 185 U. S., 125, followed the decision of this Court on the demurrer in *Missouri v. Illinois*. In that case the opinion was delivered

by Chief Justice Fuller, (page 139 *et seq.*) in which he said, (p. 141):

> "* * * And as the remedies resorted to by independent States for the determination of controversies raised by collision between them were withdrawn from the States by the Constitution, a wide range of matters, susceptible of adjustment, and not purely political in their nature, was made justiciable by that instrument."

He then cited with approval the opinion in *Missouri v. Illinois, and continued,* (p. 142):

> "As will be perceived, the court there ruled that the mere fact that a State has no pecuniary interest in the controversy, would not defeat the original jurisdiction of this court, which might be invoked by the State as *parens patriae,* trustee, guardian or representative of all or a considerable portion of its citizens; and that the threatened pollution of the waters of a river flowing between States, under the authority of one of them, thereby putting the health and comfort of the citizens of the other in jeopardy, presented a cause of action justiciable under the Constitution."

The State of Colorado asserted its selfish interests just as the State of West Virginia asserts hers in this case. As stated by Chief Justice Fuller, (page 143), the State of Colorado insisted that she, as a sovereign and independent State, if her material welfare demanded it, had the right to consume for beneficial purposes all the waters within her boundaries. (Substitute "gas" for "water," and West Virginia makes the same contention here).

Colorado further insisted that by the law of nations the primary and absolute right of a State is self-preservation; that the improvement of her revenues, arts, agriculture and commerce, are rights of sovereignty; that she has dominion over all things within her territory; that the moral obligations of a State to observe the demands of comity cannot be made the subject of controversy between States; and that the only controversies that are justiciable in the Supreme Court are those which prior to the adoption of the Constitution would have been just cause for reprisal, etc.

Speaking of these contentions, this Court, by Chief Justice Fuller, said, (p. 143):

> "But when one of our States complains of the infliction of such wrong or the deprivation of such rights by another State, how shall the existence of cause of complaint be ascertained, and be accommodated if well-founded? The States of this Union cannot make war upon each other. They cannot 'grant letters of marque and reprisal.' They cannot make reprisal on each other by embargo. They cannot enter upon diplomatic relations and make treaties.
>
> As Mr. Justice Baldwin remarked in *Rhode Island v. Massachusetts*: 'Bound hand and foot by the prohibitions of the Constitution, a complaining State can neither treat, agree, nor fight with its adversary, without the consent of Congress; a resort to the judicial power is the only means left for legally adjusting, or persuading a State. * * .'"

This case came before this Court on final hearing after the evidence had been taken in *Kansas v. Colorado*, 206 U. S. 46. The opinion was delivered by Mr. Justice Brewer, beginning at page 80. Said the Court:

"While we said in overruling the demurrer that 'this court, speaking broadly, has jurisdiction,' we contemplated further consideration of both the fact and the extent of our jurisdiction, to be fully determined after the facts were presented. We therefore commence with this inquiry. And first of our jurisdiction of the controversy between Kansas and Colorado.

This suit involves no question of boundary or of the limits of territorial jurisdiction. Other and incorporeal rights are claimed by the respective litigants. Controversies between the States are becoming frequent, and in the rapidly changing conditions of life and business are likely to become still more so. Involving as they do the rights of political communities, which in many respects are sovereign and independent, they present not infrequently questions of far-reaching import and of exceeding difficulty."

The Court then proceeds to consider the foundations of its jurisdiction over controversies between States, and concludes, (page 83):

"Speaking generally, it may be observed that the judicial power of a nation extends to all controversies justiciable in their nature, the parties to which or the property involved in which may be reached by judicial process, and when the judicial power of the United States was vested in the Supreme and other courts all the judicial power which the Nation was capable of exercising was vested in those tribunals, and unless there be some limitations expressed in the Constitution it must be held to embrace all controversies of a justiciable nature arising within the territorial limits of the Nation, no matter who may be the parties thereto."

In the above case the principles laid down in *Missouri v. Illinois* were then adopted and applied and the jurisdiction of the Court upheld.

In *Georgia v. Tennessee Copper Co.*, 206 U. S. 230, this Court held that a suit by a State for an injury to it in its capacity of quasi-sovereignty, even without any direct financial interest, could be maintained, and said, (page 237):

> "The caution with which demands of this sort, on the part of a State, for relief from injuries analogous to torts, must be examined, is dwelt upon in *Missouri v. Illinois*, 200 U. S. 496, 520, 521. But it is plain that some such demands must be recognized, if the grounds alleged are proved. When the States by their union made the forcible abatement of outside nuisances impossible to each, they did not thereby agree to submit to whatever might be done. They did not renounce the possibility of making reasonable demands on the ground of their still remaining quasi-sovereign interests; and the alternative to force is a suit in this court. *Missouri v. Illinois*, 180 U. S. 208, 241."

In the latest utterance of this court on this subject, in the case of *New York v. New Jersey*, decided in May, 1921, and reported in the United States Supreme Court Advance Opinions, at page 544, it was said, by Mr. Justice Clarke, (p. 547):

> "* * * the right of the State to maintain such a suit as is stated in the bill is very clear. The health, comfort and prosperity of the people of the State and the value of their property being gravely menaced, as it is averred that they are by the proposed action of the defendants, the state is

the proper party to represent and defend such rights by resort to the remedy of an original suit in this court, under the provisions of the Constitution of the United States. *Missouri v. Illinois*, 180 U. S. 208, 241, 243 * *; *Georgia v. Tenn. Copper Co.*, 206 U. S. 230. * * * ."

It will be observed that in the cases of *Kansas v. Colorado*, *Georgia v. Tennessee Copper Co.*, and *New York v. New Jersey*, the complainant States had no pecuniary interest, but appeared as *parens patriae* or trustee for their people, for the protection of their lives, health, comfort and convenience. In none of these cases, except that of *Georgia v. Tennessee Copper Co.*, could the individual citizens of the complainant States have maintained a suit, and in each of these cases only a portion of the citizens of the State were affected by the proposed action of the defending State. All of these conditions obtain in the case at bar.

It would seem that this Court, in *Missouri v. Illinois*, 180 U. S.; *Kansas v. Colorado*, 185 U. S.; *Missouri v. Illinois*, 200 U. S.; *Kansas v. Colorado*, 206 U. S.; *Georgia v. Tenn. Copper Co.*, 206 U. S.; and *New York v. New Jersey*, Advance Opinions, not yet reported; *supra.*; has unwaveringly and unflinchingly adopted the rule laid down by Mr. Justice Shiras in *Missouri v. Illinois*, 108 U. S., to the effect that "if the health and comfort of the inhabitants of a State are threatened, the State is the proper party to represent and defend them," in its capacity of *parens patriae* or trustee for its people, and that this court has original jurisdiction in such actions.

Under the averments of the bill of complaint and the proofs in the case, the complainant State has appeared to protect the lives, health, comfort, convenience and the rights of its citizens.

There is nothing in the case of *Louisiana v. Texas*, 176 U. S. 1, so much relied upon by the defendant, the State of West Virginia, in its argument against jurisdiction by this Court, that militates against the foregoing contention. In that case the action was brought by the State of Louisiana against the State of Texas on account of the latter's quarantine laws, or rather the manner of the enforcement thereof, claiming that it prevented citizens of Louisiana, and especially of New Orleans, from engaging in interstate commerce with people in the State of Texas; and it was to enforce this right of such citizens of Louisiana so to engage in interstate commerce, that the suit was brought by the State as *parens patriae*, etc. of such citizens.

Moreover, in the case of *Louisiana v. Texas* it was not contended by the State of Louisiana that the Texas quarantine law was void, but the sole contention was that the health officer of Texas, by rules and regulations which were approved by the Governor, produced the infraction of the Constitutional provision protecting interstate commerce. The State of Louisiana was attempting to enforce the rights of certain of its citizens to engage in commerce with citizens in Texas.

This distinguishing feature of the case from the principle laid down in *Missouri v. Illinois,* is referred to by this Court in its opinion in the latter case, (180 U. S. 208, 237), referring to its former opinion in the case of *Louisiana v. Texas*, in these words:

> "After quoting the provisions of the statute of the State of Texas, regulating the subject of quarantine, the Chief Justice proceeded to say:
>
> 'It is not charged that this statute is invalid, nor could it be if tested by its terms. While it is true that the power vested in Congress to regulate

commerce among the States is a power complete in itself, acknowledging no limitations other than those prescribed in the Constitution, and that where the action of the States in the exercise of their reserved powers comes into collision with it, the latter must give way, yet it is also true that quarantine laws belong to that class of state legislation which is valid until displaced by Congress, and that such legislation has been expressly recognized by the laws of the United States almost from the beginning of the government. * * * The complaint here, however, is not that the laws of Texas in respect of quarantine are invalid, but that the health officer, by rules and regulations framed and put in force by him thereunder, places an embargo in fact on all interstate commerce between the State of Louisiana and the State of Texas, and that the Governor permits these rules and regulations to stand and be enforced, although he has the power to modify or change them. The bill is not rested merely on the ground of the imposition of an embargo without regard to motive, but charges that the rules and regulations are more stringent than called for by the particular exigency, and are purposely framed with the view to benefit the State of Texas, and the city of Galveston in particular, at the expense of the State of Louisiana, and especially of the city of New Orleans.

'But in order that a controversy between States, justiciable in this court, can be held to exist, something more must be put forward than that the citizens of one State are injured by the maladministration of the laws of another. The States cannot make war, or enter into treaties, though they may, with the consent of Congress, make compacts and agreements. Where there is no agreement, where

breach might create it, a controversy between States does not arise unless the action complained of is state action, and acts of state officers in abuse or excess of their powers cannot be laid hold of as in themselves committing one State to a distinct collision with a sister State.

'In our judgment, this bill does not set up facts which show that the State of Texas has so authorized or confirmed the alleged action of her health officer as to make it her own, or from which it necessarily follows that the two States are in controversy within the meaning of the Constitution.'"

It was admitted in the case of *Louisiana vs. Texas* "that quarantine laws belong to that class of state legislation which is valid until displaced by Congress, and that such legislation has been expressly recognized by the laws of the United States almost from the beginning of the government," and it was the improper enforcement of such a quarantine law of which the State of Louisiana complained, because it alleged that thereby some of its citizens were prevented from engaging in interstate commerce with citizens of Texas.

If, therefore, the statement of this Court that:

"* * * Inasmuch as the vindication of the freedom of interstate commerce is not committed to the State of Louisiana, and that State is not engaged in such commerce, the cause of action must be regarded not as involving any infringement of the powers of the State of Louisiana, or any special injury to her property, but as asserting that the State is entitled to seek relief in this way because the matters complained of affect her citizens at large."

be considered with reference to the facts of the case

and the situation there described, it will be manifest that the same cannot affect the question of jurisdiction in this case, where the complaint is that the State of West Virginia has passed a law that is unconstitutional, and which law affects the lives, health, comfort and convenience of millions of the citizens of the State of Pennsylvania.

There is no question here of the complainant State undertaking to vindicate the right of its citizens to engage in interstate commerce. The case in controversy comes squarely within the principle laid down by this Court in the authorities above referred to.

The only other question, therefore, that would seem to be open is: Is the question at issue in this controversy justiciable? In other words, applying the rule laid down by Mr. Justice Brewer in *Kansas v. Colorado,* the jurisdiction "must be held to embrace all controversies of a justiciable nature arising within the territorial limits of the nation no matter who may be the parties thereto."

That action by a State prohibiting, interfering with or imposing a burden upon interstate commerce, or impairing the obligations of contracts, or taking property without due process of law, or denying to citizens of other States the privileges and immunities granted to its own citizens, presents questions justiciable under the Constitution and laws of the United States has been decided by this Court again and again. There are hundreds of such cases in the reports of the decisions of this Court. The questions presented by the complaint, and the questions raised by the answer, in the case in controversy, are therefore justiciable questions. That

the State of Pennsylvania acting under authority of and by virtue of directions contained in the resolutions adopted by the legislature of that State, approved by the Governor, to take such action as *parens patriae* and trustee of its people as the officials of that State deemed proper, has the right to maintain such action, has been adjudicated by this Court in the foregoing authorities. If such State has no such right to proceed, then are millions of its citizens affected in their lives, health, comfort, convenience and property wholly without remedy. None of them under the Eleventh Amendment could institute a proceeding against the State of West Virginia to have this law declared unconstitutional. Before the Eleventh Amendment was adopted such a suit could have been maintained by individual citizens, and this Court would have had jurisdiction because a justiciable question was presented. Why then may not the State, as the representative of the welfare of its citizens, whose lives and health are threatened, maintain such a suit, and is the question thus presented any the less justiciable? It is just such a situation as is presented in this controversy which, before the adoption of the Constitution, would have led to embargoes and reprisals, **perhaps war.**

As graphically stated by Mr. Justice McKenna, in *Oklahoma v. Kansas Natural Gas Co.*, 221 U. S. 229, of a statute which attempted by indirection to prohibit interstate commerce in natural gas:

> "If the States have such power a singular situation might result. Pennsylvania may keep its coal, the Northwest its timber, the mining States their minerals, and why may not the products of the field be brought within the principle? Thus enlarged, or without that enlargement, its influence on interstate commerce need not be pointed out.

> To what consequence does such power tend? If one State has it all states have it; embargo may be retaliated by embargo and commerce will be halted at state lines."

The foregoing argument has taken no account of what ought to be a complete answer to this question of jurisdiction. The State of Pennsylvania, as shown by the bill of complaint and by the proofs, as the owner of a large number of State institutions, using natural gas, as well as through its municipal subdivisions using natural gas—all under contract—are directly and in its own interest pecuniarily and otherwise interested in this controversy. On that account alone it has the right to maintain this suit for the protection of those rights, whether or not any of its citizens or people were likewise so interested. It will not do for the State of West Virginia to attempt to brush aside this interest with the statement (page 75, defendant's brief of argument):

> "The substantial ground upon which the plaintiffs sue is the individual grievances of their citizens sought to be redressed by the plaintiffs in their character of *parens patriae*. Subsidiary and trifling in comparison are their complaints of shortage of gas in municipalities and public institutions."

True it is that comparing the property rights of the State involved in this controversy with those rights of its citizens, the losses by the State of Pennsylvania would be out of proportion (but not even then "subsidiary and trifling"), aggregating perhaps only a few millions of dollars, as compared with hundreds of millions, and that in comparison with the lives, health, comfort and convenience of the millions of its citizens, the lives, health, comfort and convenience of only some

thousands of the wards of the State would appear disproportionate. Nevertheless the State has the right, and it is its duty, to protect the lives, health, comfort and convenience of these its own particular wards, though they aggregate but a few thousand. In fact, it owes to them a peculiar duty of protection, because they were so unfortunate as to have become State wards. So, too, the State has the right to protect its own property interests.

The argument (Defendant's brief, p. 75), "that while sovereign States have sued, these cases are controversies between West Virginia and certain gas companies," is wholly gratuitous. There is not a scintilla of evidence to justify this statement. It impugns the honesty and integrity not only of the Governor, the Attorney General, and other State officials, but of the members of the legislature of Pennsylvania which by unanimous action passed resolutions directing the State officials to institute this action.

In the bill of complaint Pennsylvania specifically sets forth that as party complainant it brought its suit for the protection of its own rights and interests, and in its own behalf, as well as in its representative capacity. Considered solely with reference to the protection of the rights and interests of the State as a State, complainant would have the same standing in this suit as a private party to demand the protection of those rights. That the value of the property, directly owned by the State, and the number of its own peculiar wards, the lives and health of whom the State is taking this action to protect, are so much less in comparison with the property rights of its people and their numbers, the lives and health of whom the State is taking this action to protect, naturally casts into shadow the direct inter-

tests of the State. Considered alone, however, those direct interests would be great and important enough to engage the attention of this Court or any other judicial tribunal in the world.

Treating the cases as brought by complainant in its representative capacity, it is respectfully submitted that this Court has jurisdiction of this controversy, whether the question of jurisdiction be tested by the principles laid down by this Court, by the principles upon which our government was established, or by the universal rule of construction of considering the mischief and the remedy. Thus, as has been shown, this Court laid down the general principle *"if the health and comfort of the inhabitants of a State are threatened the State is the proper party to represent and defend them," "as parens patriae, trustee, guardian or representative of all or a considerable portion of its citizens."*

There was a still broader principle enunciated by this Court, applicable to the present controversy, when this Court said the jurisdiction *"must be held to embrace all controversies of a justiciable nature arising within the territorial limits of the nation, no matter who may be the parties thereto."*

There is still another foundation of jurisdiction, comprehensive and far-reaching, referred to by this Court in *Kansas v. Colorado, supra.* That ground involves the fundamental considerations upon which this nation was formed. It was said by this Court, through Mr. Justice Brewer, in the above stated case, (page 80):

> "It is well, therefore, to consider the foundations of our jurisdiction over controversies between States. It is no longer open to question that by

the constitution a nation was brought into being and that that instrument was not merely operative to establish a closer union or league of States."

After referring to the enumerated legislative powers, as contrasted with the entire judicial power, granted to the nation, this Court laid down the principle that the judicial power of the nation extended to all controversies justiciable in their nature, the parties to which, or the property involved in which, may be reached by judicial processes, etc.

That the question involved here, if this suit had been brought by a private party, is justiciable, to wit, an inquiry as to whether a statute is in violation of the Constitution,—is shown by the hundreds of cases in this Court in which those questions have been considered and decided. That they should be justiciable as between States, the same as between private parties, would seem to follow. Why may not one of the States of the Union complain in this Court of another State of the Union enacting a statute in violation of the very agreement which created this Union, bound the States together, and gave jurisdiction to this Court to enforce that agreement. If the jurisdiction of this Court is tested by the general rule of construction to consider the mischief, and then the remedy by which the same is to be removed, again every reason appeals for the retention of jurisdiction. The power to negotiate and contract, make reprisals, establish embargoes, and resort to force, was taken away from the States by the Constitution. In place thereof, jurisdiction in this Court was substituted. The usual procedure if the States had remained sovereign, and West Virginia had passed the statute in controversy,—a statute claimed by Pennsylvania to grievously affect its inhabitants,—would

have been, first, protestations and then negotiations; this failing, reprisals by one embargo and then another. Perhaps total exclusion of all intercourse would have followed, or a wall of customs duties established. West Virginia would no doubt have retaliated; result, ultimately war. But Pennsylvania can neither negotiate, contract, establish embargoes, institute reprisals, or resort to force. Its only remedy, provided by the Constitution, is suit in this Court.

If this Court under the facts of this case, has no jurisdiction, then, notwithstanding surrender by the States to the Nation of the power to protect their people, the people of the State are at the mercy of any State which influenced by selfish or mistaken policy enacts a law, frankly in conflict with the Constitution of the United States. If under such circumstances a State cannot sue a State in this court, the people cannot sue a State anywhere under the Eleventh Amendment, and therefore a law frankly in conflict with the Constitution can be enforced by the enacting State, though it inflicts the loss of life, health and property upon the citizens of sister States.

III.

IS THE ALLEGED OBLIGATION OF THE PUBLIC SERVICE GAS COMPANIES IN WEST VIRGINIA (AUTHORIZED BY CHARTER TO SUPPLY GAS IN WEST VIRGINIA AND ELSEWHERE) TO FURNISH WEST VIRGINIA CONSUMERS WITH A REASONABLY ADEQUATE SUPPLY OF GAS, SO MANDATORY AND PREFERENTIAL THAT THEY ARE COMPELLED TO OBSERVE THIS OBLIGATION AS SUPERIOR AND PRIOR TO THEIR OBLIGATIONS AS TRANSPORTERS OF SAID GAS IN INTERSTATE COMMERCE, AND CAN THE STATE OF WEST VIRGINIA, CONSEQUENTLY, EVEN WHEN THE GAS IS IN TRANSIT IN INTERSTATE COMMERCE, COMPEL THESE INTERSTATE TRANSPORTATION COMPANIES TO DIVERT THIS GAS FROM SAID INTERSTATE TRANSPORTATION IN ORDER TO FURNISH THIS ADEQUATE SUPPLY TO CONSUMERS IN WEST VIRGINIA?

This question involves the consideration of:

1st. What is the obligation of public service natural gas companies to the State of West Virginia?

2nd. When does this natural gas, after being reduced to possession, enter into the stream of interstate commerce?

3rd. If in conflict, which is paramount,—obligations under the constitution and laws of West Virginia, or obligations under the constitution and laws of the United States?

Apply this contention of the State of West Virginia to a public service company engaged in the business of transporting coal, such as a railroad company. The railroad company is a public service corporation in the State of West Virginia, the same as a natural gas company. It owes to the State the obligation adequately to serve the public of West Virginia. It has the right of eminent domain and the right of condemnation of rights of way, the same as a natural gas company. It must be assumed that those rights are granted on condition (as argued in the brief of defendant with reference to natural gas companies) that the corporation furnishes this adequate service to the public of West Virginia. Could the State of West Virginia demand, and by statute compel, the railroad company to adequately supply cars to all of the public of West Virginia along its lines, even if thereby the railroad company was prevented from carrying freight in transit to points outside the State?

Again, apply the contention to an oil pipe line company transporting oil from West Virginia into other States. The pipe line company has the right of eminent domain, condemnation, etc., and owes as a public service corporation the same obligations to the State as does a natural gas company. Could the state by statute compel delivery to the refineries in West Virginia along the line of this pipe line company of the oil in the pipe lines which was in transit to points beyond the State until such refineries had obtained an adequate supply, if the effect thereof would be to prevent the delivery to refineries outside the State of the oil in transit to them under contract for delivery?

To maintain the position of West Virginia there must be some State Divinity, heretofore unknown to the law, which doth hedge this natural gas about, and which is applicable to no other product of the State.

1st. WHAT IS THE OBLIGATION OF PUBLIC SERVICE NATURAL GAS COMPANIES TO THE STATE OF WEST VIRGINIA?

It is not proposed to repeat here the argument under VII (a), pages 94 to 101 of the brief of the State of Pennsylvania, heretofore filed. Brief reference will be made to additional authorities, and some of the authorities cited by defendant will be analyzed so as to show their inapplicability.

Act of 1891, Chap. 113; West Virginia Code, Chap. 52, Sec 24, provides:

> "that a company organized for the purpose of transporting natural gas, petrolem or water * * may enter upon any land for the purpose of examining and surveying a line for its tubing and pipes, and may appropriate so much thereof as may be deemed necessary * * such appropriations shall be made and conduced in accordance with the law providing for compensation to the owners of private property taken for public use * * *. Such company shall, for the purpose of transporting natural gas, oils and water, be considered and held to be a common carrier, and subject to all the duties and liabilities of such carriers under the laws of this State."

Code of West Virginia, Ch. 42, Sec. 20, provides that where a public utility desires to condemn a right

of way and objection is made to the valuation placed upon the land by the Commissioners, such public utility shall have the right to enter upon the premises and commence its work upon paying into court the sum ascertained by the report of the Commissioners. However, as to "a pipe line company organized for the purpose of transporting carbon oil or natural gas, or both, by means of pipes or otherwise", such companies, instead of paying into court the sum ascertained by the report of the Commissioners, may elect to give bond for such sum, and thereupon may enter upon the premises and proceed with the laying of their line.

The business of these companies was twofold:

1st. Transporting and supplying gas in the State of West Virginia, constituting but a small percentage of their business, as admitted by the defendant.

2nd. Transporting gas through the State of West Virginia to markets in other States, which was and is their principal business, as contended by the defendant. (It assigning from 74% to 80% to export; Defendant's brief, page 19).

In the brief of the State of West Virginia attention is called to certain petitions filed by certain natural gas companies in condemnation proceedings in West Virginia, to show that these companies intended to use such lines to supply gas to the public in West Virginia. An examination of such petitions, however, shows that the petitioning company named those cities, towns or localities to which it was supplying gas, which it had of its own accord undertaken to supply, or that the petition was for the purpose of building a transportation line, in accord with the powers granted to such companies in their charters and in Chapter 52, Sec. 24, quoted above.

On page 89 of its brief the State of West Virginia states:

> "That these companies would have received the above special rights and privileges except upon the terms of affording adequate service to the public of West Virginia, or in contemplation of the subordination of that service to that of the people of other States, is unthinkable."

This statement ignores the chronology of events. The statute granting these powers was passed in 1891, over 30 years ago. The charters to these gas companies gave them the right to produce, transport and supply gas not only in West Virginia, but "*elsewhere.*" Two of the largest of these companies, The Manufacturers Light & Heat Company and the Carnegie Natural Gas Company, were chartered by other States and were engaged in the natural gas industry in other States, and came into West Virginia to get a supply of gas for those other States as well as for such consumers as they might thereafter obtain in West Virginia.

As stated in the brief for the State of West Virginia, speaking of the inception and growth of this transportation of gas for consumption in other States, (page 16):

> "No program of conservation was adopted or attempted, nor were efforts made to restrict the enormous and continually increasing volume of gas which, in later years, certain of its public service corporations transported, or sold for transportation, to consumers in other States. The right of these public service corporations so to dispose of their surplus in other States was not only recognized, but substantially sanctioned by permitting

them to exercise the power of eminent domain for the construction of pipe lines transporting chiefly for foreign consumption."

While this statement in the brief has the qualification that it was,

"subject only to the duty of first serving West Virginia consumers in the territory through which such lines extended."

this qualification begs the whole question at issue. The quotation is given for the facts admitted. The qualification is an argument only.

The evidence shows that at this time the enormous production of gas in West Virginia was far in excess of any demand in West Virginia, and this encouragement to the natural gas companies engaged in transportation to other States was an inducement to invest millions upon millions of dollars to develop the resources of the State. This, as has already been shown, resulted in great benefit to the State.

Oil companies were given the same powers and privileges for the same reasons, which resulted, in like manner, in the development of the oil territory of the State, to its great advantage.

It will be noted that the statute refers to companies engaged in the business of *transporting*. In no single sentence is the word "supplying" or "furnishing" even mentioned.

These companies were made common carriers under the statute. The statement of West Virginia, on page 90 of its brief, that "these companies * * * refuse to transport for other producers gas which might serve the

public in West Virginia," is wholly gratuitous, because not supported by a scintilla of evidence. It may be that the use of such companies as common carriers of gas may not be usual, but that may be explained by the peculiarities of the transportation of natural gas. Unlike coal or other commodities, gas cannot be taken out of the pipe line at a certain destination and put into cars, tanks, barrels, or on a platform. The consignee at destination must have a pipe line system, compressors, etc., and a market for its distribution.

The proposition that these natural gas companies, because public utilities, owe to the State of West Virginia the obligation of furnishing a reasonably adequate supply "for public use within the territory of this State," or if these words of the statute be disregarded or restricted and this obligation be construed "for the use of the public and every part of the public within the territory of this State in or from which such gas is produced or through which said gas is transported or which is served by such person," must be supported in one of three ways:

(a) By the common law.

(b) By statutory obligation.

(c) By the charter of the company.

(a) *No Such Obligation as that Claimed Exists at Common Law; the Statute Enlarges the Territory to be Supplied.*

That this obligation, thus enlarged, is not a common-law obligation has been shown by the authority of this and other courts in the brief of the Commonwealth of Pennsylvania, pages 94 to 103, and will not be here

repeated. The authorities cited to the contrary in the brief of the State of West Virginia do not sustain its contention, with the exception of the forced construction put upon the case of *Gas Company v. Swiger*. That decision is not binding upon this Court for two reasons:

(a) The particular statement in the opinion quoted in defendant's brief was mere dicta not directly involved in the issues before the Court.

(b) The courts of the United States are not bound by the decision of a State court as to what is or is not the common law of that State, but will decide that question according to their own judgment, as was said by this Court in *Smith v. Alabama*, 124 U. S. 465:

> "A determination in a given case of what that law (the common law) is may be different in a court of the United States from that which prevails in the judicial tribunals of a particular State. This arises from the circumstance that the courts of the United States in cases within their jurisdiction where they are called upon to administer the law of the State in which they sit or by which the transaction is governed, exercise an independent though concurrent jurisdiction and are required to ascertain and declare the law according to their own judgment. This is illustrated by the case of Railroad Company *v. Lockwood*, 17 Wall. 357. The common law prevailing in the State of New York with reference to the liabilitiy of common carriers for negligence received a different interpretation from that placed upon it by the judicial tribunals of the State."

In *Gas Co. v. Swiger*, 72 W. Va. 557, relied upon by the State of West Virginia, it was said by Judge Miller, delivering the opinion of the court (as quoted with the asterisks from the brief of the State of West Virginia, p. 91):

> "We observe that the Legislature, by general law, has conferred upon pipe-line companies, organized for transporting oil and natural gas, the right of eminent domain, and has thereby necessarily imposed upon them, as public service corporations, the right and duty of performing a public service. That right and duty is fixed as firmly as if written into the statute. * * * Pipe-line companies organized for transporting gas must serve the public with gas, under reasonable and proper regulations, along the entire line traversed, and for reasonable rates fixed by themselves or by statute, or by contracts or ordinances of municipalities. * * The rights of the people are thus protected in nearly every case where the public is served by public service corporations, furnishing water, gas, electricity, or transportation."

(Citing *Charleston Gas Co. v. Lowe*, 52 W. Va. 662; *Hydro-Electric Co. v. Liston*, 70 W. Va. 83; *Calor Oil & Gas Co. v. Franzell* (Ky.) 109 S. W. 328; *Olmstead v. Morris Aqueduct*, 47 N. J. L. 311; *Gibbs v. Consolidated Gas Co.*, 130 U. S. 396; *Munn v. Illinois*, 94 U. S. 133).

Taking those words of Judge Miller with their context and inserting the omitted words shown by the asterisks, it will appear that what Judge Miller was referring to was that the public use must be fixed and definite and on terms and charges fixed by law. The whole paragraph (72 W. Va. 571) is as follows:

"On the first proposition, that the public use must be fixed and definite, and on terms and charges fixed by law, we observe first, that the legislature by general law has conferred upon pipe line companies, organized for transporting oil and natural gas, the right of eminent domain, and has thereby necessarily imposed upon them, as public service corporations the right and duty of performing a public service. That right and duty is fixed as firmly as if written into the statute. Pipe lines for transporting oil must carry oil, as railroads must carry passengers and freight, at reasonable rates, if such rates are not fixed by statute. Pipe line companies organized for transporting gas must serve the people with gas, under reasonable and proper regulations, along the entire line traversed, and for reasonable rates fixed by themselves, or by statute, or by contracts or ordinances of municipalities. Are not the rights of the public so fixed sufficiently definite to answer the requirements of the law? We think so. The rights of the people are thus protected in nearly every case where the public is served by public service corporations, furnishing water, gas, electricity, or transportation. *Charleston Gas Co. v. Lowe, supra*, and *Pittsburgh Hydro-Electric Co. v. Liston*, 70 W. Va. 83, recent decisions of this court support these conclusions. *Calor Oil & Gas Co. v. Franzell* (Ky.) 109 S. W. 328, as well as *Olmsted v. Proprietors of the Morris Aqueduct*, 47 N. J. L. 311, are likewise in point. So also are the cases of *Gibbs v. Balt. Gas Co.*, 130 U. S. 396; *Munn v. Illinois*, 94 U. S. 133."

In other words, as gas transportation companies are made common carriers by the statute, they must

serve the public with gas along the entire line by receiving same for transportation and transporting and delivering the same for reasonable rates, like railroads and oil pipe line companies.

However, all of this is mere dicta. The issues involved in that case were the condemnation of a right of way under the statute, the construction of the provisions of the statute as to giving bond, and whether or not the pipe line company was a public service corporation. The extent of its powers and obligations as a public service cororation were in no sense, directly or indirectly, involved.

The cases cited by Judge Miller to support his proposition are not in point, if the excerpt be interpreted as claimed by defendant, and some of them are to the contrary.

The first is *Charleston Gas Co. v. Lowe*, 52 W. Va. 622. The court there held that it was the duty to furnish gas to the people within the city who applied therefor, because the municipality had granted the franchise to the gas company for the purpose of supplying the people of that city, and the gas company had accepted the same.

The next case is *Hydro-Electric Co. v. Liston*, 70 W. Va. 83. This case was decided under the express provisions of a statute which provided that electric companies occupying highways under the Act should furnish electric service to all persons upon its lines desiring same. Here was an express statutory requirement for the supply of service along the lines.

The next case is *Calor Oil & Gas Co. v. Franzell* (Ky.), 109 S. W. 328. That case arose under condemnation proceedings, and contains nothing whatever supporting the proposition of Judge Miller.

The next case is *Olmsted v. Morris Aqueduct*, 47 N. J. L. 311. This was also a condemnation proceeding under a statute which gave the water company the right to extend its mains outside and beyond the corporate limits of the city or town which it was supplying. It contains nothing whatever to justify the statement of Judge Miller.

The next case is *Gibbs v. Consolidated Gas Co.*, 130 U. S. 395. That case involved the question of a contract to prevent competition and create a monopoly in the supply of gas to the city of Baltimore, and neither directly nor indirectly sustains the statement of Judge Miller.

Munn v. Illinois, 92 U. S. 133, the last case cited by Judge Miller, need not be analyzed to this Court to show that it is no authority for the statement of Judge Miller.

The misapplication of the authorities quoted or referred to in the brief of the State of West Virginia is well illustrated by a citation, (Defendant's brief, page 94), from Mr. Justice Clarke, in *New York v. McCall*, 245 U. S. 345. The language quoted is as follows:

> "Corporations which devote their property to a public use may not pick and choose, serving only the portions of the territory covered by their franchises which it is presently profitable for them to serve, and restricting the development of the remaining portions by leaving their inhabitants in discomfort without the service which they alone can render."

In the above case the company had a franchise to supply the inhabitants of the Third Ward of the Borough of Queens, New York. What this Court decided was that having accepted the franchise for that district it had undertaken the duty to supply the inhabitants of that district, and was therefore obligated to render adequate service to such inhabitants and extend its lines accordingly, and is not an authority for the purpose cited by the defendant.

This Court's attention is particularly directed to the fact that the statute in controversy expressly enlarges the territory to be served by the gas company over that which "is served by such" company. The statute reads:

> "furnish for public use within the territory of this state and for the use of the public and every part of the public within the territory of this State in or from which such gas is produced, or through which said gas is tranported or *which is served by such person.*"

In other words, the statute provides that the company must, in addition to the territory "which is served by such person," also serve all the other territory described, whether the gas company has devoted its property to this service or not.

That a state has no such power was held in *Atch., T. & S. F. R. R. Co. v. Railroad Commission of Cal.*, 173 Cal. 577; 2 A. L. R. 975, at page 980; *et seq*:

"Again, in *Del Mar Water, Light & P. Co. v. Eshleman*, 167 Cal. 666, 680, 140 Pac. 597, Mr. Justice Shaw, said: 'But even a constitutional declaration cannot transform a private enterprise, or a part thereof, into a public utility, and thus take property for public use without condemnation and payment. The provisions of this Act could not authorize the Commission to compel such corporation to dedicate additional property to public use without additional compensation. When a corporation voluntarily devotes a part of its property to public use, it is to be presumed that it makes the dedication because it is satisfied with the return which it expects to receive and in that way it is deemed to have been compensated for such dedication. But when it is forced to devote to public use additional property which it has not dedicated to public use, or is compelled to extend its service to supply uses or territory not embraced in the original dedication, it must under our constitutional provisions, as a condition precedent, be compensated for the value of the new property taken or new use exacted. This may be done under the power of eminent domain.' * * * * .

A public utility, undertaking to supply a given public need, submits itself to the regulation and control of public authority with respect to the service which it has thus undertaken. * * * * *. But to require a public utility to devote its property to a service which it has never professed to render is to take that property, *pro tanto*, and such taking cannot be justified except under the power of eminent domain—i. e. upon just compensation."

The *Del Mar v. Eshelman* case, in 167 Cal., cited and relied upon in the above citation from the Supreme Court of California, is cited with approval and followed in *Van Dyke v. Geary*, 244 U. S. 39, by this Court in an opinion by Mr. Justice Brandeis.

(b) *The Statute Law of West Virginia, Before the Passage of this Statute in Controversy, Imposed no Obligation Upon These Natural Gas Companies of Furnishing a Reasonably Adequate Supply "For Public Use Within the Territory of this State," or, if These Express Words of the Statute be Disregarded, "For the Use of the Public and Every Part of the Public Within the Territory of This State in and From Which Such Gas is Produced or Through Which Said Gas is Transported, or Which is Served by Such Person."*

There was no statute in the State of West Virginia which purported to impose in any manner such a requirement until the statute in controversy was passed. There was such a statute relating to telegraph, telephone and electric light and power companies. (Ch. 13, Act 1907, reenacting Section 2, Ch. 4, Code of W. Va. 1899). This however was subsequently repealed.

As has already been argued, when the statutes relating to oil and gas transportation companies were passed, the State of West Virginia was anxious to encourage the development of the oil and gas industry in said State, by the transportation of oil and gas out of the State, and, accordingly, the rights and privileges to natural gas and oil transportation companies were granted without any restrictions whatever.

Under the authority cited in the original brief of the State of Pennsylvania (pages 94 to 103), and hereinabove, it has been shown that there was no such obligation under the common law, and there is no statute which so provided. This obligation, therefore, if any such exists, must be sought in the charters of these gas companies.

(c) *The Charters of The Gas Companies do Not Provide or Imply That These Natural Gas Companies as Public Utilities Owe to The State of West Virginia the Obligation of Furnishing a Reasonably Adequate Supply "For Public Use Within the Territory of this State," or if These Words of the Statute be Disregarded "For the Use of the Public and Every Part of the Public Within the Territory of this State in and from Which Such Gas is Produced or Through Which Such Gas is Transported or Which is Served by Such Person."* .....

It is significant that the State of West Virginia did not put in evidence the charters of these respective companies, to maintain its contention that these companies, or any of them, under their charters were so obligated. The State of West Virginia did put in evidence certain petitions in condemnation proceedings by some of these companies, which recited certain provisions of the charters and showed that the company was chartered to produce, transport and supply gas in West Virginia and "*elsewhere.*" In almost all cases in these petitions the towns, cities or municipalities in West Virginia that were being supplied by said companies were named and specifically set forth. Two of the companies, in fact among the largest, were Pennsylvania corporations—the Carnegie Natural Gas Company and The Manufacturers Light & Heat Company—and when they entered West Virginia they then had plants and property and

supplied consumers in other States. No inference as to charter limitation can be drawn by the State of West Virginia against those companies whose charter rights have not been specifically set forth in evidence by the State of West Virginia. Some of them have already been before this Court, as the United Fuel Gas Company—containing the same provision in its charter as to supplying gas in West Virginia "*and elsewhere.*"

Whatever may have been the charter powers or privileges, however, something more is required than the right or privilege or permission *in the charter* to supply certain or general territory. It must be shown either (a) that such provisions in the charter are mandatory, not merely permissive, or (b) that the company has actually engaged in the service, before such companies can be compelled to supply even the territory named in the charter.

In the case of *Northern Pacific R. R. v. Dustin*, 142 U. S. 492, this Court, by Mr. Justice Gray, said (p. 498):

> "If, as in *Union Pacific R. R. v. Hall*, 91 U. S. 343, the charter of a railroad corporation expressly requires it to maintain its railroad as a continuous line, it may be compelled to do so by mandamus. So if the charter requires the corporation to construct its road and to run its cars to a certain point on tide-water (as was held to be the case in *State v. Hartford & New Haven Railroad*, 29 Conn. 538) and it has so constructed its road, and used it for years, it may be compelled to continue to do so. And mandamus will lie to compel a corporation to build a bridge in accordance with an express requirement of a statute. *New Orleans etc. Ry. v. Mississippi*, 112 U. S. 12; *People v. Boston & Albany Railroad* 70 N. Y. 569.

But if the charter of a railroad corporation simply authorizes the corporation, without requiring it, to construct and maintain a railroad to a certain point, it has been held that it cannot be compelled by mandamus to complete or to maintain its road to that point, when it would not be remunerative. *York & North Midland Railway v. The Queen*, 1 El. & Bl. 858; *Great Western Railway v. The Queen*, 1 El. & Bl. 874; *Commonwealth v. Fitchburg Railroad*, 12 Gray 180; *State v. So. Minnesota Railroad*, 18 Minn. 40."

Where a charter is permissive and not mandatory, and there is no obligation either by contract or by profession or offer of service to enter upon those permissive services there is no unrestricted or uncontrolled power or authority at law to require such corporation to perform such public services.

See *Towers v. United R. & Elec. Co.*, 126 Md. 478.

Public Service Comm. v. Phila., B. & R. Co., 122 Md. 438.

Scranton v. Scranton R. Co., P. U. R. 1915 C 890.

This principle of law was applied to a natural gas company, and shown to be peculiarly applicable, in *Fidelity Title & Trust Co. v. Kansas Natural Gas Co.*, 219 Fed. 614 (1913). In that case, Marshall, D. J., at page 616, said:

"But what are the limits of the duty to the state or public? There was no specific contract or charter provision, no exclusive right granted so as to imply a contract to supply the full needs of those dependent on the monopoly and for whose

interest the grant was made. The action of the state was only permissive. The company was not obligated to build any pipe line or to furnish any gas. So far as it availed itself of this permission, its property used for the quasi-public service was affected by the public interest, and its use of the property in this business was subject to valid state regulation, but it did not become a mere agency of the state, and was under no obligation, contractual or other, to increase its investment or build new lines. It did not manufacture gas. It purchased wells and transported gas by pipe line. These wells were gradually exhausted. The lines were exteneded and more distant wells obtained until the system extended into several states. The security of the bondholders is constantly dissipated by the consumption of the property, and this method has led to the insolvency of the corporation. If by its entry into Kansas the company entered into an obligation to constantly buy new wells and extend its lines to new gas fields so as to constantly furnish to the cities of Kansas an adequate supply of gas, the security of the bondholders was, indeed, illusory. The undertaking was one necessarily ending in bankruptcy.

It is well settled that a railroad company chartered to build a particular line under a permissive charter is not liable to the state for a failure to build it, and that only so far as it does build is its property affected by the public interest. *York etc. Ry. v. Regina*, 1 El. & Bl. 858, 864; *Edinburgh, etc. Ry. Co. v. Philip*, 2 Macqu. App. Cas. 526; *State v. So. Minn. R. R. Co.*, 18 Minn. 40 (Gil. 21); *Weymouth v. Penobscot Log Driving Co.*, 71 Me. 29. And *a fortiori*, that such a company cannot be required to construct a new or branch line. I know of no reason why this well-settled principle is not applicable in this case."

The absurdity of any contrary principle cannot be better illustrated than by the case under consideration. The charters in evidence provide for the supply of certain territory in West Virginia "and elsewhere." Could any community in the States of Pennsylvania, Ohio, New York, or adjoining States to West Virginia, or elsewhere, because these companies had charters to supply gas "elsewhere", compel them to extend their lines throughout Pennsylvania, Ohio, New York, Kentucky, Indiana, or even from Maine to California?

In the decision of the court in *Del Mar Water etc. Co. v. Eshleman*, 167 Cal. 666 (1914), (which is cited with approval by this Court in *Van Dyke v. Geary*, 244 U. S. 39), a thorough discussion of this question is given. It is too long to quote at length.

> "The fact that the articles of incorporation empower the company to engage in public service does not, of itself, constitute proof that it is engaged in such public service, or that it has dedicated such property as it may own to such public service. * * * The only effect of the adoption of such articles by a corporation is to give it the capacity to engage in such public service if it so desires. After having become incorporated in this manner, it has the power to engage in such service in the same sense that an individual has power to engage in such service. It may or may not do so, and until it does, it cannot be said to be subject to the jurisdiction of the railroad commission."

2nd. When Does Natural Gas, After Being Reduced to Possession, Enter into the Stream of Interstate Commerce?

Among the priceless gifts of nature to man, natural gas has been one of the most valuable. But the rights of property therein are peculiar. As said by this Court in *Oil Co. v. Indiana*, 177 U. S. 190:

> "The owners of the surface of the land within the gas field, whilst they had the exclusive right on their own land to sink wells for the purpose of extracting the oil and gas, had no right of property therein until by the actual drawing of the oil and gas to the surface of the earth they reduced these substances to physical possession."

Wandering hither and thither, disregarding proptery and State lines, they have been likened to animals *ferae naturae*, but in the case above quoted the want of identity of the rules of law applicable to oil and gas and to animals *ferae naturae* was clearly distinguished. The right of the public to reduce to possesion natural gas, like animals *ferae naturae*, was denied. When natural gas is once reduced to possession, as has already been shown by the authority of this and other courts (Brief filed by State of Pennsylvania) it becomes a commodity of commerce, intrastate or interstate as the case may be. After being reduced to possesion gas is always in motion on its way to market. When the shell which in all cases overlies the strata in which Nature has deposited this gas, and through which it flows, is pierced with the point of the drill of the person who has the legal right to reduce this gas to possession, the gas rushes by its power of expansion up through the tubing and casing of the well and into the line

of the natural gas company on its journey to market. As was said in the natural gas primer issued by the Smithsonian Institution, approved by George H. Ashley, State Geologist of Pennsylvania, at page 7:

> "The gas is never at rest, but is a constantly seething, moving mass, traveling in the mains at enormous velocities—at a speed many times exceeding that of the fastest trains—and requires constant attention at the well and until it is burned at the consumer's fixtures."

If it flows into the lines of one of these companies engaged in the business of supplying consumers in other States, (the large bulk of the gas in the lines being so destined for export,) then, even though such company also supplies from its lines a comparatively small percentage of this gas to consumers in the State of West Virginia, nevertheless this gas so entering the lines is in interstate commerce. Moreover, as has been shown, there being no absolute property in this gas until it is actually reduced to possession, and when it is actually reduced to possession it having been committed to interstate commerce, there is no period or time when the State of West Virginia could lay its hands upon it so as to burden, interfere with or prevent its transmission in such interstate commerce.

The decision of this Court on December 12, 1921, (not yet reported) Mr. Justice Holmes delivering the opinion, *United Fuel Gas Co. v. Walter J. Hollanan et al.*, thus refers to this interstate transportation:

> "In short the great body of the gas starts for points outside the State and goes to them. That the necessities of the business requires a much smaller amount destined to points within the State

to be carried undistinguished in the same pipes does not affect the character of the major transportation. Neither is the case as to the gas sold to the three companies changed by the fact that the plaintiff, as owner of the gas, and the purchasers after they receive it might change their minds before the gas leaves the State and that the precise proportions between local and outside deliveries may not have been fixed, although they seem to have been. The typical and actual course of events marks the carriage of the greater part as commerce among the States and theoretical possibilities may be left out of account. There is no break, no period of deliberation, but a steady flow ending as contemplated from the beginning beyond the State line. *Ohio R. R. Commission v. Worthington*, 225 U. S. 101, 108; *United States v. Reading Co.*, 226 U. S. 324, 367; *Western Union Telegraph Co. v. Foster*, 247 U. S. 105, 113."

This United Fuel Gas Company, which was a party to that case, is one of the seven companies referred to in the answer and brief of the State of West Virginia in the case at bar. All of the evidence in that case, as to the matters referred to by this Court, and more, is in the record in this case. In fact, under the evidence in the record before this Court in this case some of the great interstate companies occupy even a stronger position than the United Fuel Gas Company as to their interstate business.

It is not claiming too much to contend that the very instant this gas is reduced to possession by the strata being tapped by the drill, it is destined for and committed to interstate commerce. The facts have a language of their own. They speak in terms admitting

of no contradiction. If, as is conceded by the State of West Virginia, the seven great interstate companies referred to on page 21 of the brief of the State of West Virginia, sold from 1911 to 1919 inclusive, to consumers in West Virginia, only from 11% to 17% of their net supply, and the balance was transported by these companies for consumption in other States, then it follows inevitably that from 83% to 89% of this gas was at some time while in the State of West Virginia in course of transportation or transmission from the State of West Virginia to other States, and then and there committed to interstate commerce. In other words, as shown by the uncontradicted evidence, the vast bulk of the gas in the lines of these companies is in interstate commerce; or as stated by Mr. Justice Holmes, "The great body of the gas starts for points outside the State and goes to them," under contracts for the delivery thereof previously made, or to which these companies have been committed by their engagements to supply certain other companies and certain municipalities in other States. And yet the State of West Virginia proposes by the statute in controversy to compel the diversion of this very gas, this great body of the gas which has stared for points outside the State, while in transit to these points outside the State, to the supply of consumers in West Virginia, and to divert and hold it until such consumers in West Virginia shall have obtained an adequate supply, consumers in territory the gas company may never have undertaken to supply, even if thereby, as the uncontradicted evidence shows, all the gas produced in the State of West Virginia will be appropriated under the statute to supply these consumers in West Virginia, thereby preventing and prohibiting the export of any of said gas.

In fact, the State of West Virginia in its Answer claims the right, and sets forth the alleged legal grounds upon which it claims that right, to monopolize this gas. Complainants in their original brief and in this supplemental brief have already argued the unsoundness of this contention.

The *argumentum ad hominem* has been ably, ingeniously and adroitly made on behalf of the State of West Virginia that these seven great interstate companies have acquired so large a proportion of the developed and undeveloped gas territory in the State of West Virginia, that if they continue their present interstate business, consumers in West Virginia, although the gas is produced in the State of West Virginia, will be deprived substantially of all gas for consumption in said State.

As to the utter lack of foundation of allegations of monopoly or combination of the seven companies, sufficient has been said in contradiction and denial, in the original brief on behalf of the State of Pennsylvania.

The enforcement of the principle of non-interference by a State with interstate commerce, provided by the Constitution of the United States, will not lead to the result apprehended, namely, to deprive consumers in West Virginia of the use of natural gas.

It may serve a useful purpose to show from the evidence that this apprehension is a mere figment of the imagination. It may be wise to make this showing for the reasons given by Mr. Justice Holmes in his opinion in the *Northern Securities Case, viz*:

> "Great cases like hard cases make bad law. For great cases are called great not by reason of

their real importance in shaping the law of the future but because of some accident of immediate overwhelming interest which appeals to the feelings and distorts the judgment. These immediate interests exercise a kind of hydraulic pressure which makes what previously was clear seem doubtful and before which even well-settled principles of law will bend."

Mr. Lakin, a witness for the State of West Virginia (page 1138 *et seq.*, vol. 2, Transcript of Record, who stated his official position to be a member of the State Board of Control of West Virginia, which Board has charge of all the State educational, penal, charitable and correctional institutions) gave a list, on page 1139, of such State institutions and of the companies supplying gas to these institutions. Of these 17 institutions only 5 were supplied by any one of these seven companies, the others being supplied by local companies. This is shown at page 1155 *et seq.*, Transcript of Record. The witness testified that, while the gas service by the local companies was bad, that the service by the interstate companies was good, and that each one of the institutions that was supplied by any one of these seven interstate companies obtained good service. For example, the service of the West Liberty Normal School, supplied by The Manufacturers Light & Heat Company, the witness stated was very good. At the Spencer State Hospital at Spencer, W. Va., supplied by the United Fuel Gas Company, he stated the service was excellent. The service at the Huntington State Hospital, supplied by the United Fuel Gas Company, he stated was excellent. At the West Virginia penitentiary at Moundsville, supplied by The Manufacturers Light & Heat Company, he stated the service was very good. The service at the

West Virginia Industrial Home for Girls, of Industrial, W. Va., supplied by the Pittsburgh & West Virginia Gas Company, he stated has been very good.

Witnesses for the State of West Virginia also admitted (Vol. 2, pp. 1245 to 1250, Transcript of Record) that some of these local companies had a large acreage, one of them about 12,000 acres, of developed territory which it did not drill, and that private individuals had obtained large acreages which they had drilled and were drilling to obtain gas for use in their own plants.

At pages 1347 *et seq.*, witnesses for the State of West Virginia testified that Clarksburg and vicinity were supplied by local companies only, some of which were not public service companies. This is significant because of the testimony of Governor Cornwell that he was influenced to ask the legislature to pass the statute in controversy because of representations of shortage of gas at Clarksburg made to him by manufacturers and consumers of Clarksburg.

At pages 1001, 1002 and 1003, vol. 2, Transcript of Record, a witness for the State of West Virginia gave a table showing the acreage held in West Virginia *by natural gas utilities* on December 31, 1919, there being 48 in addition to the seven companies. This table showed that such local companies held a certain percentage of undeveloped and developed territory, as compared with the seven companies, of about 7% to 93%. Some of these local companies, however, hold large acreages both of undeveloped and developed territory.

Let it be noted, however, that this list and these figures wholly ignore the large amount of gas territory held and developed by individuals, by manufacturing corporations in the State for their own use, and by the

large number of oil companies and oil operators. Such territory so held by others than the natural gas utilities listed by the witness will approximately equal in acreage the amount held by all the gas utilities in the State, certainly the seven companies. (See Vol. 1 Exhibits, pp. 1608 to 1618.)

As was shown by the testimony, gas was being developed and produced from time to time by oil operators and wildcatters (those adventurers who take up a block of leases and drill one or more wells in the hope of finding oil or gas). The gas thus developed or produced is generally sold to the nearest gas line.

Moreover, these seven interstate companies deliver to consumers in West Virginia (see admission in brief of West Virginia, page 21) from about 11% to 18% of their whole production. Figured therefore solely with reference to the West Virginia gas utilities and consumption and deducting from the acreage holdings of the seven companies the percentage devoted to West Virginia, West Virginia would be incomparably better off than any other State. As shown by the evidence, these interstate gas companies furnish satisfactory service, so that the consumers supplied by the seven companies have no cause whatever for complaint. In other words, the shortage of gas complained of, and shown by the evidence of the State of West Virginia, to consumers in West Virginia, was occasioned by the local companies not engaged in interstate commerce, which failed to perform their function as public service companies and not by the seven interstate companies. These local companies had the same or better opportunities for securing leases, drilling wells and purchasing gas from others as had the seven companies. If they failed to embrace their opportunities for want of foresight, business judgment or capital they cannot on this account de-

mand sympathy and the ignoring of the Constitution. Had any of these seven interstate gas companies failed in their function as public service companies to supply communities served by them in the State of West Virginia, they could have been, and no doubt would have been, brought before the Public Service Commission of West Virginia, upon complaint of such communities, or some of their consumers, and orders accordingly demanded. So far as the record shows, and as the fact is, no complaint has ever been made against any of these interstate gas companies on account of any failure to fully and completely perform their public service duties to the consumers in West Virginia, nor is there any evidence that they did not fully and completely perform such duties and obligations. As was shown by the evidence the West Virginia domestic consumers have not only obtained their full proportion of the available supply, but they have been lavishly supplied as compared with all others, consuming twice as much as the consumers in Pennsylvania and five times as much as those in Ohio.

From the foregoing facts it is manifest that the apprehension that all of the gas produced in West Virginia might be taken out of the State to other States and no gas, though produced in the State, supplied to consumers in West Virginia, has nothing to justify it. When the supply of gas shall have become greatly diminished the management of the great interstate companies it must be assumed will be affected by the ordinary rules and usages of trade. Such companies in the natural course of business will find it unprofitable to transport comparatively small quantities of gas long distances, and will seek their markets nearer their sources of supply, namely, consumers in the State of West Virginia.

As stated, this argument is submitted not because complainant believes it affects the determination of the principles of law involved, or that this Court could be swerved from the straight line of judicial application of settled principles of law; yet, as stated by Mr. Justice Holmes, "great cases like hard cases make bad law," and it cannot be harmful to demonstrate that there are no hardships to consumers in West Virginia to be reasonably apprehended from an inflexible enforcement of the constitutional inhibition against State interference with interstate commerce in natural gas.

3rd. If in Conflict, which are Paramount,—Obligations Under the Constitution and Laws of West Virginia, or Obligations under the Consitution and Laws of the United States?

It is unthinkable that an irresistible force can meet an immovable body. Either the power of the State of West Virginia to compel public service natural gas corporations doing business in that State to furnish to consumers in West Virginia a reasonably adequate supply of gas,—whether or not, by so compelling, interstate commerce in natural gas is interfered with, burdened, prevented or prohibited,—is the supreme law of the land; or the power of the United States to enjoin any State, including West Virginia, from interfering with, burdening, preventing or prohibiting, interstate commerce in natural gas, is the supreme law of the land.

Stripped of its dress of rhetorical plausibility, the contention of the State of West Virginia in its nakedness is this: That to enforce the duty of a public service corporation to the State of West Virginia the State

may not only burden and interfere with, but if necessary absolutely prevent and prohibit, the export of natural gas from West Virginia into other States.

It is not always easy to unflinchingly apply even thoroughly established principles of law to a fact situation where such application has a tendency to inflict on one of the parties an apparent hardship. Every case that comes before a court involves a fact situation. Thus, at this instant there is not produced in West Virginia enough natural gas to furnish a reasonably adequate supply to all of the consumers in West Virginia, domestic, industrial and others, who may now and hereafter desire the same, however wasteful may be the uses for which said gas is desired, and at the same time continue the interstate transportation of natural gas to consumers in other States, as has been the course of conduct of the business for over a generation.

Let this condition that now confronts the state be first considered with reference to the admitted fact situation which obtained when this interstate business was undertaken, instead of solely with reference to the situation in West Virginia as it exists today.

Those natural gas corporations that were incorporated in the State of West Virginia were given the right to do an interstate business. Those that were engaged in interstate business when they came into West Virginia were given the right also to do business in West Virginia. The production of gas and its consumption were of great value to the State of West Virginia. There was not enough demand in the State in the earlier stages of the natural gas development to consume but a small portion of the gas there produced. The State of West Virginia encouraged the transportation of this gas into other States, where a market there-

for could be found. It profited greatly thereby. It encouraged, permitted, acquiesced in, and authorized, the expenditure of hundreds of millions of dollars by the interstate gas companies in the development of the gas fields, the laying of pipe lines, and the building up of this interstate business. What the State of West Virginia might have done in the beginning it is not now worth while to consider. Having no title to the natural gas in the ground, and the gas not becoming an article of commerce until reduced to possession by the party having the right so to do, we are not now concerned with what if any power the State had over this gas before it was so reduced to possession.

So, too, whether or not the gas company must satisfy its consumers as they come along, those nearest getting the first service and those furthest away what is left, is not involved in this controversy, because that is what is now being done and the statute in controversy does not seek that end.

The evidence shows that interstate natural gas companies are giving their West Virginia consumers at the present time a reasonably adequate supply.

What the statute in controversy seeks to compel these interstate natural gas companies now to do is to take on in West Virginia other consumers, in territory and districts that they have never heretofore undertaken to supply, to supply to other public service corporations in West Virginia any deficit which exists upon the lines of such other public service corporations, and to discriminate against their consumers in other States in favor of every one in West Virginia who may desire to use gas for any purpose.

The statute does not undertake to equitably and ratably distribute this gas among all the consumers on the lines,—consumers in West Virginia and in other States who came on, if not by the invitation, at least by the sanction and with the approval, of West Virginia, but this statute in the boldest and baldest manner, wholly ignores the rights and claims of consumers in other States, and undertakes to discriminate in the most ruthless and cruel manner against such consumers in other states and to appropriate to the use of all persons in West Virginia who may desire to use the same all the gas produced and transported in West Virginia. In so attempting, not only is there no equity to justify this attempted wrong, but there is law to prevent its successful consummation.

It clarifies the mind, stimulates the reason, and leads to directness of application, to review even thoroughly established and elementary legal principles.

Article VI of the Constitution provides:

> "This Constitution and the laws of the United States which shall be made in pursuance thereof * * * shall be the supreme law of the land * * * anything in the constitution or the laws of any State to the contrary notwithstanding."

It was said by Mr. Justice Harlan, delivering the opinion of this Court in *Northern Securities Co. v. United States*, 193 U. S., at page 335:

> "By the express words of the Constitution, Congress has the power to 'regulate commerce with foreign nations and among the several States, and with the Indian tribes.' In view of the numerous decisions of this court there ought not, at this day, to be any doubt as to the general scope of such power."

He quotes with approval the words of Chief Justice Marshall, in *Gibbons v. Ogden*, 9 Wheat. 1, 196, 197:

> " * * that such power 'is complete in itself, may be exercised to its utmost extent, and acknowledges no limitations other than are prescribed in the Constitution.' "

And again, (p. 345):

> "* * No State can, by merely creating a corporation, or in any other mode, project its authority into other States, and across the continent, so as to prevent Congress from exerting the power it possesses under the Constitution over interstate and international commerce, or so as to exempt its corporation engaged in interstate commerce from obedience to any rule lawfully established by Congress for such commerce. It cannot be said that any State may give a corporation, created under its laws, authority to restrain interstate or international commerce against the will of the nation as lawfully expressed by Congress. Every corporation created by a State is necessarily subject to the supreme law of the land."

And again (p. 347), referring to the power of the United States over interstate commerce, he continues:

> "* * The court has steadily held to the doctrine, vital to the United States as well as to the States, that a state enactment, even if passed in the exercise of its acknowledged powers, must yield, in case of conflict, to the supremacy of the Constitution of the United States and the acts of Congress enacted in pursuance of its provisions."

While there were dissents of some of the Justices of this Court in the Northern Securities case, none of the dissenting Justices questioned these propositions, but based their dissent upon other grounds.

If, therefore, as the uncontradicted evidence in this case shows, the enforcement of this statute will inevitably result in burdening, interfering with, and in fact preventing and prohibiting, interstate commerce in natural gas by those corporations now engaged in transporting it from West Virginia to other States, then surely it must follow that whatever duty or obligation as a public service corporation any of these corporations owed to West Virginia, which duty or obligation if observed by said corporation, would bring about and cause this burden, interference, prevention and prohibition, such duty or obligation could not be enforced by the State of West Virginia.

Suppose the State of West Virginia had passed a statute which had frankly enacted:

> "All public service corporations, now engaged in West Virginia in the business of producing and transporting gas for export to other States, before exporting the same to such other States, in accordance with the custom and usage authorized and sanctioned by this State for over a quarter of a century, shall deliver to all manner of persons throughout the State of West Virginia who may desire the same, an adequate supply of gas, even though the effect thereof will be to consume all of the gas in West Virginia, and prevent the carriage of any thereof outside of the State."

Would such a law be constitutional? Under the express terms of the statute in controversy and the evidence in this case, wholly uncontradicted, that is substantially what the enforcement of the statute in controversy would effect. That effect is what the State of West Virginia avows in its Answer it seeks by the statute in controversy to accomplish, and declares in its Answer it has the right so to do.

The charm "the obligations to the public of the State of the public service corporations of the State," is the abracadabra by whose magic the State would ward off the power of the Nation and would overthrow the mandate of the Constitution of the United States with a statute of the State of West Virginia. It is submitted that the magic of the charm has been overestimated; it is not so prodigiously potent.

Respectfully submitted,

GEORGE E. ALTER,
Attorney General.
A. LEO. WEIL,
Attorneys for Complainant.

APPENDIX.

Exhibit "A."

A JOINT RESOLUTION

Authorizing action by the authorities of this Commonwealth to prevent discrimination against the citizens of this Commonwealth in the use of natural gas which would result from the law recently enacted by the State of West Virginia.

Whereas There are millions of domestic and hundreds of industrial consumers of natural gas citizens of this Commonwealth who have expended enormous sums of money to equip their houses and plants respectively with appliances adapted for burning this fuel and to restrict and diminish the supply to any considerable extent would affect the domestic consumers in their health, their comfort their convenience and their welfare would subject them to enormous property losses in rendering useless their present appliances and necessitating the substitution of others in many cases requiring the reconstruction of dwellings while the industrial consumers if thus restricted and the supply of gas greatly diminished would not only suffer great loss but be placed at a disadvantage in competition with manufacturers in other States where by law an adequate supply was provided.

And Whereas Citizens of this Commonwealth have invested hundreds of millions of dollars in the exploration for and the development of natural gas wells and fields in the State of West Virginia and in the installation of transportation systems for the transmission of the gas thus found from West Virginia into Pennsylavania in order to obtain a supply for its citizens and to this end have made contracts and entered into obligations with cities and boroughs as well as with industrial plants and others and

Whereas The citizens of said cities and boroughs and the owners of said industrial plants and others are to a large extent dependent upon and have relied for their supply upon the gas transported from the State of West Virginia into the State of Pennsylvania the natural gas available from other sections being wholly inadequate a large proportion of said gas now consumed in Pennsylvania coming from West Virginia and

Whereas In order to restrain and restrict the transmission of this gas from West Virginia into Pennsylvania and to discriminate against the citizens of Pennsylvania and in favor of the citizens of West Virginia the State of West Virginia on the seventeenth day of February one thousand nine hundred and nineteen did enact a law the effect whereof is that the gas produced in said State should be first applied to the full satisfaction of all the domestic, industrial and other demands of the citizens of that State before any thereof could be transmitted into Pennsylvania thus disregarding the rights of citizens of Pennsylvania and the obligations of their contracts and

Whereas By cumulative fines and penalties civil and criminal said law of West Virginia is designed to deter

parties engaged in the production and transmission of natural gas in West Virginia into Pennsylvania from instituting legal proceedings to have tested and adjudicated the right of said State so to restrict and prevent the transmission of gas from West Virginia until after all of the demands of its citizens have been first adequately supplied and

Whereas The citizens of this State who will suffer in their health, comfort, convenience, welfare and property by the enforcement of this law are without remedy or redress except through action by this Comonwealth and

Whereas The enforcement of said law of West Virginia would be in conflict with the Constitution of the United States which inhibits the placing of burdens and restraints upon interstate commerce and prevents laws impairing the obligation of contracts and

Whereas The framers of the Constitution of the United States by the provisions of said Constitution sought to prevent any State from husbanding and applying its natural resources solely for the benefit of its own citizens to the detriment and loss of the citizens of other States well knowing if this policy were pursued it would result in reprisals and all of the evils attendant thereon and vested in the Federal courts the power to prevent any State from entering upon any such course of conduct now therefore

Be it Resolved By the Senate of the Commonwealth of Pennsylvania with the concurrence of the House of Representatives that the Attorney General be and he is hereby authorized and directed to institute such legal proceedings and to do all other acts necessary to protect the rights and interests of the Commonwealth of

Pennsylvania and of its citizens from any and all violation or infringement by the State of West Virginia or by any of its constituted authorities under or in pursuance of said law of West Virginia affecting or intended to affect consumers of natural gas in Pennsylvania.

E. E. BEIDLEMAN,
President of the Senate.

ROBERT S. SPANGLER,
Speaker of the House of Representatives.

Approved—The 18th day of April, A. D. 1919.

IN THE

Supreme Court of the United States

OCTOBER TERM, 1922.

NOS. 15-16, ORIGINAL.

THE COMMONWEALTH OF PENNSYLVANIA,
Complainant,

vs.

THE STATE OF WEST VIRGINIA, Defendant.

THE STATE OF OHIO, Complainant,

vs.

THE STATE OF WEST VIRGINIA, Defendant.

Consolidated Brief for Defendant, the State of West Virginia.

Statement of the Cases.

On February 10, 1919, the Legislature of West Virginia enacted the following statute (*W. Va. Acts of 1919*, Ch. 71):

"An Act in relation to persons, firms and corporations engaged in furnishing, or required by

law to furnish, natural gas for public use within this State, to provide remedies for the enforcement of this act and penalties and punishment for violations thereof, and to extend the jurisdiction of the public service commission and of the courts of this State with respect thereto.

Be it enacted by the Legislature of West Virginia:

SECTION 1. That every person engaged in furnishing, or required by law (whether statutory or common law) to furnish, natural gas for the public use, or for the use of the public, or any part of the public, whether for domestic, industrial or other consumption, within this State, shall to the extent of his supply of said gas produced in this State, (whether produced by such person or by any other person), furnish for public use within the territory of this State, and for the use of the public and every part of the public within the territory of this State, in or from which such gas is produced, or through which said gas is transported or which is served by such person, a supply of natural gas reasonably adequate for the purposes whether domestic, industrial or otherwise, for which natural gas is consumed or desired to be consumed by the public, or any part of the public, within said territory in this State, and for which said consumer or consumers therein shall apply and be ready and willing to make payment at lawful rates.

SECTION 2. That in case any person engaged in furnishing or required by law (whether statutory

or common law) to furnish, natural gas for public use within this State, or for the use of the public or any part of the public within this State, shall have a production or supply of natural gas which is, or probably will be, insufficient to furnish for such use, (for the purposes, whether domestic, industrial or otherwise, for which natural gas is consumed by the public or any part of the public), within the territory in this State served by such person, then and in that event the public service commission shall have authority, and the same is hereby conferred on it, upon the application of any such person or any of his consumers within this State and after due hearing upon notice and proof to the satisfaction of the commission that public convenience and necessity so require, to order any other person engaged in furnishing, or required by law (whether statutory or common law), to furnish natural gas for public use within this State, and producing or furnishing natural gas for public use in said territory, or transporting the same through said territory, to furnish to such person having such insufficient production or supply, natural gas for the purpose of supplying such deficiency, at and during such times, upon and at such just and reasonable terms, conditions and rates, and in such amounts, as the commission shall prescribe. And whenever, after such hearing upon notice and proof, the commission shall determine that public convenience and necessity so require, the commission shall have authority to provide for and compel the establishment of a reasonable physical connection or connections

between the lines, pipes or conduits of such person having such excess supply of gas and the lines, pipes or conduits of the person having such deficiency of supply, and to require the laying and construction of such reasonable extensions of lines, pipes or conduits as may be necessary for the establishment of such physical connection or connections, and to ascertain, determine and fix the just and reasonable terms and conditions of such connection or connections, including just and reasonable rules and regulations and provision for the payment of the costs and expense of making the same or for the appointment of such cost and expense as may appear just and reasonable. *Provided, however,* that no person shall, by virtue of this section, be ordered to furnish natural gas to any other person so engaged in furnishing, or required by law to furnish, natural gas for public use, except to the extent that the person so ordered to furnish natural gas shall, at the time, have a production or supply of natural gas in excess of the quantity sufficient to furnish a reasonably adequate supply to his consumers within this State; nor shall any person, by virtue of this section, be ordered to furnish natural gas to any other person so engaged in furnishing or required by law to furnish, natural gas for public use in a territory within this State, if and when the said person having said excess shall, to the extent of such excess, be ready and willing to furnish, and within such time as the commission shall prescribe, shall actually furnish, to the consumers within said territory a reasonably adequate supply of natural gas.

SECTION 3. That insofar as the same shall not be in conflict with this act, all of the authority, powers, jurisdiction and duties conferred and imposed on the public service commission by the act entitled, "An act to create a public service commission and to prescribe its powers and duties, and to prescribe penalties for the violations of the provisions of this act," passed February twenty-first, one thousand nine hundred and thirteen, as amended by the act entitled "An act to amend and re-enact sections one, two, three, four, five, nine, ten, fourteen, fifteen and twenty-two, of chapter nine of the acts of one thousand nine hundred and thirteen, creating a public service commission, prescribing its powers and duties, and penalties for violation of the provisions of said chapter, and to add thereto six sections to be known as sections twenty-three, twenty-four, twenty-five, twenty-six, twenty-seven, twenty-eight, enlarging the powers and duties of said public service commission, prescribing additional penalties and giving to the commission power to punish for contempt," passed February tenth, one thousand nine hundred and fifteen, are hereby conferred and imposed on the public service commission in respect to the subject matter of this act, or any part thereof.

SECTION 4. That in case of violation of any provision of this act any person aggrieved or affected thereby may complain thereof to the public service commission in like manner, and thereupon such procedure shall be had, as is provided in respect to other complaints to or before said com-

mission, and all such proceedings and remedies may be taken or had for the enforcement or review of the order or orders of said commission, and for the punishment of the violation of such order or orders, as are provided by law in respect to other orders of said commission. In case of the violation of any provision of this act, the public service commission, or any person aggrieved or affected by such violation, in his own name, may apply to any court of competent jurisdiction by a bill for injunction, petition for writ of mandamus or other appropriate action, suit or proceeding, to compel obedience to and compliance with this act, or to prevent the violation of this act, or any provision thereof, pending the proceedings before said commission, and thereafter until final determination of any action, suit or proceeding for the enforcement or review of the final order of said commission; and such court shall have jurisdiction to grant the appropriate order, judgment or decree in the premises.

SECTION 5. That if any person subject to the provisions of this act shall fail or refuse to comply with any requirement of the commission hereunder, such person shall be subject to a fine of not less than one hundred dollars nor more than five hundred dollars for each offense; and such person, or the officers of the corporation, where such person is a corporation, may be indicted for their failure to comply with any requirement of the commission under the provisions of this act, and upon conviction thereof, may be fined not to exceed five hundred dollars, and in the discretion of the court,

confined in jail not to exceed thirty days. Every day during which any person, or any officer, agent or employee of such person, shall fail to observe and comply with any order or direction of the commission, or to perform any duty enjoined by this act, shall constitute a separate and distinct violation of such order or direction of this act, as the case may be.

SECTION 6. That any person claiming to be damaged by any violation of this act may bring suit in his own behalf for the recovery of the damage from the person or persons so violating the same in any circuit court having jurisdiction. In any such action the court may compel the attendance of the person or persons against whom said action is brought, or any officer, director, agent or employee of such person or persons, as a witness, and also require the production of all books, papers and documents which may be useful as evidence, and in the trial thereof such witness may be compelled to testify, but any such witness shall not be prosecuted for any offense concerning which he is compelled hereunder to testify.

SECTION 7. That the word "person" within the meaning of this act shall be construed to mean, and to include, persons, firms, and corporations.

SECTION 8. That the sections, provisions, and clauses of this act shall be deemed separable each from the other, and also in respect to the persons, firms, corporations, and consumers mentioned therein or affected thereby, and if any separable part of this act be, or be held to be unconstitutional or for any reason invalid or unforceable,

the remaining parts thereof shall be and remain in full force and effect.

SECTION 9. That all acts and parts of acts in conflict with this act are hereby repealed."

This statute was preceded by the Public Service Commission Act, set forth as Exhibit "B," with the answers of West Virginia, which Act was designed to require reasonableness of rates, service and practices, and to prevent unjust preferences and discrimination, by public service corporations, including natural-gas companies, and to that end provided an administrative commission, to whose jurisdiction the due administration of the Act of 1919, here involved, was confided. (*Acts of 1913*, Ch. 9; *Acts of 1915*, Ch. 8.)

The States of Ohio and Pennsylvania, by their respective bills of complaint, complain that the enforcement of the Act of 1919 will necessarily prevent the transportation of West Virginia gas into Ohio and Pennsylvania, thereby destroying the investment of many of their citizens in natural-gas properties in West Virginia and also affecting the health and comfort, and endangering the lives, of numerous inhabitants of the plaintiff States who are presently consuming West Virginia gas; and thereupon the statute is attacked as unconstitutional and violative of those provisions of the Federal Constitution relating to interstate commerce, impairment of contract obligations, due process of law, equal protection of the laws, and abridgement of the privileges and immunities of citizens of the plaintiff States and of the United States.

Preliminary injunctions, awarded June 3, 1919, prior to answer by West Virginia, and in advance of any test of the statute's actual operation, have prevented its enforcement.

By its motion to dismiss and answer filed in each case, the State of West Virginia first challenges the right of the plaintiff States to maintain these suits, and then answers upon the merits, giving the history of the statute, the local causes and conditions leading to its enactment, and denies that the statute in anywise contravenes the Federal Constitution.

The questions before the Court are:

(1) Whether the bills present causes justiciable between the two States parties to the respective suits.

(2) Whether the suits were not prematurely brought, as no action has been taken by West Virginia or its Public Service Commission under the statute.

(3) Whether the statute, by its true construction, is violative of the Federal Constitution.

(a) As an interference with interstate commerce;

(b) As an impairment of contract obligations;

(c) As depriving the plaintiffs, or their citizens, of property without due process of the law;

(d) As denying to the plaintiff States, or their citizens, the equal protection of the laws;

(e) As abridging the privileges and immunities of citizens of the plaintiff States and of the United States.

EXHAUSTIBLE CHARACTER OF GAS.

In a record of the present bulk, even condensed narrative wears the color of prolixity. And where contemporary causes and conditions combine to produce an ultimate consequence, strict observance of chronological sequence and the avoidance of repetition in the separate chapters concurring to produce the whole are hardly practicable. With these qualifications we proceed to state, as shortly as the record and the importance of the cases seem to admit, the facts and circumstances in the legislative view, and the causes and conditions which created the necessity for, and justify the reasonableness of, the statute and brought about its passage.

Natural gas is produced by drilling wells into gas-containing strata or sands in the earth. The known fields in and from which gas is derived are, as a rule, comparatively few and restricted in area, the outstanding exception being those of West Virginia, which are in size and number so great as to constitute a more or less connected field extending across the State from north to south. As the number of gas wells in any field or other given area increases and the time during which the extraction of gas therefrom lengthens, the volume of the gas and the natural or rock pressure, upon which the output depends, gradually diminish, not only in the individual wells, but also in the entire field. The constant tendency, therefore, is in the direction of depletion of the field and exhaustion of the gas supply therefrom. And while for a considerable period the aggregate quantity of gas produced from a specific field may be increased or maintained at substantial uniform-

ity, this can only be accomplished by the drilling of new wells, the added extraction of gas from which still further accelerates the depletion of the field. For this reason it becomes necessary to sustain the output by exploration for new gas territory, and the development thereof when discovered. But even this extension of territory cannot be continued indefinitely, and the later discovered territories themselves are subjected to the same process of depletion and to the exhaustion of their gas. And so it occurs ultimately that the supply of gas, once adequate to the needs of the population dependent thereon, becomes insufficient for the service of all, and the uses of the gas, or the extent of its distribution and consumption, must be correspondingly curtailed. (Rec. 19-23, 60-63, 131-135, 201, 211, 282, 283, 296, 372, 431, 438, 521-525, 558, 689, 690, 697-700, 702, 719, 726-728, 801-804, 965.)

The foregoing was the experience in Indiana (Rec. 60, 61, 26, 728, 803), Ohio (Rec. 19-23, 61, 62, 685-687, 719, 727, 749, 801, 803, 804) and Pennsylvania (Rec. 19-23, 61, 62, 430, 431, 438, 486, 521-525, 558), where the extensive development and utilization of their own gas and its manifest tendency to depletion, preceded the transportation of West Virginia gas to the other states.

In Pennsylvania the depletion and shortage of gas was observed in certain fields as early as 1888, 1889 and 1890, and again in 1894 or 1895 (Rec. 19, 61, 62, 523, 524, 555, 558). In northern and northwesterly Ohio there were extensive shortages in 1900, 1902 and 1903 (Rec. 62, 719, 762-728, 748, 749, 764). The exhaustion of Indiana gas was manifest shortly after 1891 or

1892, and was extensive in 1900 (Rec. 60, 61, 726, 728, 803). This experience, and the inevitability of its duplication in West Virginia, were well known by the gas companies when they embarked in the business of West Virginia gas transportation to, or distribution in, the other states; and in the very nature of the case must have been known by the gas consumers of those states (Rec. 728).*

The Manufacturers Light & Heat Company entered West Virginia in 1902 or 1903 by the acquisition of local companies, whose business began in 1888 or 1889 (Rec. 63, 64, 94, 96, 97, 1039). The Philadelphia Company of Pennsylvania, through a subsidiary, went into West Virginia in 1897, after experiencing a shortage of Pennsylvania gas; and acquired in 1905 or 1906 the Fairmont & Grafton Gas Company, whose name was changed to the Pittsburg & West Virginia Gas Company, which delivers the bulk of its gas to the Equitable Gas Company and other Pennsylvania distributing subsidiaries of the Philadelphia Company (Rec. 523, 524, 484, 487, 511, 512, 516, 517, 1030, 1031). The Hope Natural Gas Company was organized in 1898 and took over the gas properties and franchises of certain companies (Rec. 322, 340-342 *et seq.*, 1173, 1329); and the Reserve Gas Company in 1902 (Rec. 322, 323, 748). The United Fuel Gas Company was organized in 1903 and expanded in 1909 by the absorption of the United States Natural Gas Company, which previously acquired the properties of local West Vir-

*The gas sales contracts of the exporting companies, hereinafter mentioned, by their provisions for priority service, indicate, as well as the physical facts, that the decline of West Virginia gas was anticipated.

ginia Gas companies (Rec. 359, 386, 1031, 1032). The Columbia Gas & Electric Company was organized and acquired its West Virginia properties in 1906 (Rec. 455, 456).

Of the companies buying gas from the Hope Natural Gas Company, a Standard Oil Company subsidiary, the Peoples Natural Gas Company, also a Standard subsidiary, supplying gas in Pittsburgh territory, experienced a shortage in or before 1903, when its purchases from the Hope commenced (Rec. 424); and the East Ohio Gas Company, also a Standard subsidiary, distributing gas at Cleveland, Akron, Canton and other Ohio points, was organized in 1898 (Rec, 323, 569, 578, 598, 1033), and commenced its Cleveland business in 1903, after the exhaustion of the north and northwest Ohio fields had begun (Rec. 593, 719, 726-728). The Fayette County Gas Company, operating at Uniontown and other Pennsylvania towns, was organized in 1900 and commenced its purchases in 1910 (Rec. 534, 555, 557, 558).

The Ohio Fuel Supply Company, which with the Columbia Gas & Electric Company owns the United Fuel Gas Company, and supplies gas to Cincinnati, Columbus, Springfield, Zanesville and other places in Ohio, was incorporated in 1902, and received no West Virginia gas until 1909, when its purchases from the United Fuel commenced (Rec. 650, 683-686). The Northwestern Ohio Natural Gas Company, supplying Toledo and other Ohio municipalities, organized in 1887, and a subsidiary of the Ohio Fuel Supply Company, began to buy from the Hope Natural Gas Company in 1903 or 1904, after the exhaustion of its north-

western Ohio field had become manifest, and after the Indiana gas had been exhausted (Rec. 658, 671, 718, 719, 726, 727). The Union Natural Gas Corporation, which with the Standard Oil Company owns the Reserve Gas Company, also owns the Logan Natural Gas & Fuel Company and other companies, supplying Dayton, Muncie and other Ohio and Indiana cities. Before the time of its organization, and when the Logan Company was acquired, there had been a sharp decline of their Ohio gas fields; and since about 1904 the Logan Company has received West Virginia gas from the Reserve Gas Company under the latter's contract with the Union Natural Gas Corporation (Rec. 747-755, 758-764, 773).

West Virginia Gas Development and Utilization.

West Virginia is, and for more than twenty years last has been one of the principal gas-producing States. The volume of its production is, and for twelve years last past has been, the largest in the United States (Rec. 1120). At present gas is produced in large quantities in and from the counties of Boone, Braxton, Brooke, Cabell, Calhoun, Clay, Doddridge, Gilmer, Hancock, Harrison, Kanawha, Lewis, Lincoln, Logan, Marion, Marshall, Mingo, Monongalia, Nicholas, Ohio, Pocohontas, Pleasants, Putnam, Ritchie, Roane, Taylor, Tyler, Upshur, Wayne, Wetzel, Wirt and Wood, being thirty-two of the fifty-five counties; while gas has been found in paying quantities, and large areas are leased and held as prospective gas territory, in six other counties (Rec., 980). The earliest West Virginia development was in the northern section. Originally

considered a nuisance in the oil operations, with which it was first produced, the gas was blown into the air and wasted; but later its value for domestic heating and lighting , as well as for factory fuel and general industrial use, was recognized. Wells were then drilled for gas. The enormous production and very great rock pressure (sometimes called natural pressure) in the early wells enabled the gas to be transported through pipe lines for considerable distances without the assistance of compressors; and aside from the cost of leases and drilling, the mere laying of a pipe line to the point of distribution was practically all of the investment required for local use.

In many instances small companies or individual operators obtained franchises and furnished gas to a municipality or community near at hand. Other and larger concerns connected their gas wells and lines into systems serving under franchises a number of separate municipalities and localities. Beginning in the period between 1889 and 1894, the most important cities and towns in the northern and north-central sections of West Virginia were thus served with gas by local companies, viz., Wheeling, Moundsville, Morgantown, Fairmont, Clarksburg, Grafton, Weston, West Union, Parkersburg, Sistersville, St. Marys, and many other municipalities in the Panhandle section and throughout the counties of Marshall, Wetzel, Monongalia, Marion, Harrison, Lewis, Doddridge, Ritchie, Tyler, Pleasants and Wood (Rec., 1117 *et seq.* 1173, 1174, 1205, 1206, 1218, 1219, 1267, 1343).

Its abundance, cleanliness, convenience and economy over other forms of fuel were so great that the use

of gas spread rapidly, and it soon became the universal and exclusive fuel in the northern and north-central sections of West Virginia for dwelling houses, business buildings, churches, schools, colleges, hospitals, asylums, court-houses, electric light and power plants, water works, municipal street lighting and many other purposes. In the then existing dwellings and buildings, the means and appliances for consumption of other fuel were generally discarded. New houses and buildings were in general constructed and equipped with a view to the exclusive use of gas for heating, and, in many instances, for illumination (Rec. 1119-1122, 1220-1223, 1343). The existing industries adopted gas for fuel, and a great number of new factories and other industries to which cheap fuel was important were established. The local gas companies in many instances, in order to upbuild the municipalities served by them, and thereby to stimulate the consumption of their gas, pursued for many years the policy of encouraging the establishment of new industries by the offer of gas at low prices during long periods of time. The industries thus established were located and constructed for, and their processes and products especially adapted to, the use of gas as fuel. They employed many workmen and laborers, both skilled and unskilled, who were dependent for employment and the livelihood of themselves and their families on the existence and continued operation of the gas-using industries. The population and wealth of the cities, towns and communities so supplied with gas, and of the State as a whole, thus increased; and the added population at once profited the gas companies by adding to the

consumption of their gas, and promoted the general prosperity.

This history was duplicated in the south-central and southern sections as the discovery and development of gas extended southward. In Charleston, Huntington, Spencer, Glenville, Point Pleasant, St. Albans, Kenova, and many other places in the gas-producing counties gas likewise became the universal and exclusive fuel, and the use thereof brought to pass the like development and growth of population, wealth and general prosperity (Rec., 1117 *et seq.*).

From this it followed that the domestic life and the business of a majority of the people of West Virginia were and are modified and their adjustments made with reference to the continued use of gas as fuel; and gas in reasonably adequate quantities for domestic and industrial use became, was and is a necessity throughout the greater part of the State.

According to the United States Geological Survey statistics for 1918 (Rec., 1566, insert p. 145, Pa. Exhibit No. 45), the West Virginia gas consumers in that year were divided into 127,168 domestic and 1,873 industrial users. The domestic users in 1919 were 130,780 (Rec., 849). Estimating, as is usually done, an average of four and one-half or five persons in the family of each domestic consumer (Rec., 908), would show from 585,000 to 650,000 West Virginians dependent on domestic service alone.

Gas Shortage in West Virginia.

Until the winter of 1916-1917, all consumers in the State were adequately served. The extent of the West Virginia fields and the quantity of production until that time were greater than ever before known in the gas industry. The supply in the hands of the public utilities, produced within the State, was at all times from four to five times greater than the total amount used by the domestic and industrial consumers of the State (Rec., 996). Under these circumstances West Virginia and its gas consumers rested in security.

In the winter of 1916-1917, however, the people of West Virginia were rudely disillusioned. Early in that winter began an inadequate service of gas, which, by midwinter, developed into an extensive shortage (Gov. Cornwell, Rec. 1194, 1196; 1139-1154, 1223-4, 1282, 1343-1345. And this recurred in the following winters, (Rec. 840-846). In an effort to meet the situation, and under a rule of the West Virginia Public Service Commission, all industrial gas was shut off; but yet the suppy was inadequate to warm the homes of domestic consumers. For a long period of extremely cold weather the shortage deprived dwelling-houses, hotels, stores, and public and private buildings of sufficient heat, and in some instances, of any heat. In the homes and hotels, cooking was prevented, and in many cases illness was caused or accentuated by the cold. Public schools were closed and churches compelled to forego their customary exercises. Factories were shut down with great loss to their owners, and their workmen thrown out of employment. An extreme example was the State Tuberculosis Sanitarium, at Terra Alta, where the supply failed utterly, and in order to keep the patients from

freezing, the officials were compelled in zero weather to build fires and erect stoves with funnels or stove-pipe projecting from the windows (Rec., 1153). The State Penitentiary at Moundsville in Marshall county, the West Virginia University at Morgantown in Monongalia County, the State Hospitals for Insane at Weston in Lewis County and at Spencer in Roane County, the Industrial School for Girls at Salem in Harrison County, the Industrial School for Boys at Pruntytown in Taylor county, the Fairmont Hospital and the Fairmont Normal School at Fairmont in Marion County, the Glenville Normal School at Glenville in Gilmer County, all State institutions, situate within developed gas territory, were likewise affected and driven to the use of other fuel. Distress or inconvenience to domestic consumers, and the shutting down of industries, occurred practically in all sections of the State where gas was used, from the northern Panhandle southward to Charleston (Rec., 1195). The severity was as great in the sections lying in the most prolific fields as elsewhere and many of the places affected were in proximity to the territory and gas lines of the companies most extensively engaged in the transportation of gas to or for consumption in other States (Rec. 1177 *et seq.*; 842-845; and see maps).

Cause of Shortage.

The cause of this gas shortage is not far to seek. The various statements in the record, too numerous and intricate to set out in detail, and not capable of precise reconciliation in some instances, concur in showing that the shortage in West Virginia, was and is due to the enormous volumes of West Virginia gas

exported by certain public service corporations of West Virginia, to or for consumption in the other States, and the consequent drainage of the West Virginia gas fields, without regard to present or future needs of West Virginia, or the duties of the exporters to the latter State.

The earliest figures available are for the year 1908. The following, (Rec., 1603, 1378, 992), shows the total amounts exported from West Virginia to and including the year 1919 as compared with the total production of the State:*

Year	Total Production	Exports	Per Cent.
	M. Cu. Ft.		
1908	112,181,278	61,644,618	55
1909	166,435,092	96,074,387	58
1910	190,705,869	120,508,811	63
1911	206,890,576	132,867,059	64
1912	239,006,682	151,144,250	63
1913	245,453,985	155,501,876	63
1914	236,489,175	150,161,936	63
1915	244,004,159	154,630,164	63
1916	299,318,907	200,004,740	67
1917	289,898,967	196,679,263	68
1918	280,289,044	174,664,650	62
1919	219,886,837	139,939,062	64

But the foregoing statistics of total production and export, and the calculation of consumption in West Virginia by subtraction of the total export from the total production, while pointed to by the plaintiffs,

*The total production above, except for 1918 and 1919, is as stated by the United States Geological Survey Reports. For 1918 and 1919, the production is computed by the Statistician of the West Virginia Public Service Commission from reports to the Board of Public Works and the Public Service Commission (Rec. 990-992).

are irrelevant. As explained in the margin,* a large proportion of the gas included in the total West Virginia consumption consists of free gas to lessors and gas used by the gas companies in field operations, which are properly operating expenses, and gas produced and consumed by persons and corporations, whose property has not been devoted to public use or affected with a public interest, and which therefore is neither available to the public in fact nor by statutory compulsion.

**Statistics on Production and Consumption.*—In the subsequent statistics, West Virginia has used as a basis the net supply available for service to the public. Before gas is available for public use, the producer must deliver to the landowner the free gas uniformly reserved in gas leases as part of the rental, the ordinary individual consumption whereof has largely exceeded that of the average domestic consumer, and the aggregate amount of which has been very considerable (Rec. 241, 414, 415, 848, 1062).

Large quantities of gas are consumed for field purposes, namely, for fuel used in drilling and cleaning out wells, the operation of compressor or pump stations to transport the gas, and the various other purposes necessary to the production and transportation of gas to market. The quantities so used amount to approximately 7 per cent of the annual production (Rec., 949, 989, 990, 992). Calculation based on the total sales and field gas consumption of the Hope Natural Gas Company in 1919, Rec., 267, gives a similar result.

Again, in West Virginia, as in other States, certain producers (consisting for the most part in West Virginia of carbon-black manufacturers, but also including a few other industries) hold and produce gas from their own territory and for their own consumption and are not public-service corporations (Rec., 989, 990, 992.

None of the free gas delivered in payment for leases, nor that used for field purposes or consumed by such private enterprises, reaches the public. To include the free or field gas as a part of the West Virginia consumption would at once charge West Virginia consumers with what they do not in fact receive, and at the same time free consumers in other States from the proportion chargeable to the production and transportation of the much greater quantities of exported gas. The total of these three items in the past ten years has averaged approximately 15 per cent. of the annual production. (See statistics, Rec., 992.) This gas should be eliminated from the public service gas supply, thus confining the statistics and discussion to the remaining 85 per cent. as the net supply of the public-service corporations available for service (*Pittsburgh & W. Va. Gas Co. vs. Nicholson*, 87 W. Va., 540, 544-546). Statisticians for the plaintiffs, however, include these three items in the supply of West Virginia consumers, and thereby have produced percentages to show that they use more gas *per capita* than the consumers in other States (Rec., 899-901; 948-950).

The distinction between the total production and the net supply available for public service is important in comparison of the amount and proportion used by West Virginia consumers with the exported gas. For example, in 1916 the total production of the State by all operators and for all purposes was 299,318,907 M cubic feet, and there was in the hands of the public-service corporations of the State a net supply of 259,414,200 M cubic feet available for service to the public and disposed of by said corporations (Rec., 992), yet of this latter volume the total served to all West Virginia consumers was only 59,409,460 M cubic feet, or 22.9 per cent. The figures for nine years show that the maximum used by West Virginia consumers never exceeded 25.6 per cent of the net supply, so available for public service (Rec., 996):

Year	Net Supply for Public Service	Sales to W. Va. Consumers	Per Cent. to W. Va. Consumers	Per Cent Exported
	M. Cu. Ft.			
1911	173,132,353	40,265,294	23.3	76.7
1912	203,112,738	51,968,488	25.6	74.4
1913	209,131,295	53,629,419	25.6	74.4
1914	200,762,645	50,600,709	25.2	74.8
1915	207,777,882	53,147,718	25.6	74.4
1916	259,414,200	59,409,460	22.9	77.1
1917	245,620,686	48,942,388	19.9	80.1
1918	227,649,823	52,985,173	23.3	76.7
1919	183,687,047	46,654,098	25.4	74.6

Of the gas available for public service, a proportion ranging from 80.3 per cent. to 91 per cent., has, by

the means hereafter explained, been controlled by seven companies, the Hope Natural Gas Company, Reserve Gas Company, Pittsburgh & West Virginia Gas Company, Carnegie Natural Gas Company, Manufacturers Light & Heat Company, United Fuel Supply Company and Columbia Gas & Electric Company, the companies chiefly engaged in the transportation of West Virginia gas to or for consumption in other States. The quantities and percentages controlled by these seven companies are illustrated by the following tabulation (Rec. 996, 1736, insert p. 414):

Year	Net Supply for Public Service	Net Supply of Seven Companies	Per Cent.
	M. Cu. Ft.		
1911	173,132,353	147,431,246	85.1
1912	203,112,738	172,050,962	84.7
1913	209,131,295	167,897,746	80.3
1914	200,762,645	166,625,730	83.0
1915	207,777,882	170,694,495	82.1
1916	259,414,200	220,892,583*	85.1
1917	245,620,686	223,517,777	91.0
1918	227,649,823	201,685,702	88.6
1919	183,687,047	164,426,341	89.5

And out of the abundance of the supply of the seven companies, the proportion granted to West Virginia consumers extended from 11 per cent to 17.9 per cent, as shown by the following (Rec., 997):

*The figure on Record, page 996, is a typographical error. See Rec., 1736, insert p. 383.

Year	Net Supply of Seven Companies	Sales to West Virginia Consumers	Per Cent.
	M. Cu. Ft.		
1911	147,431,246	17,200,747	11.7
1912	172,050,962	21,101,443	12.3
1913	167,897,746	22,297,677	13.3
1914	166,625,730	20,612,599	12.4
1915	170,694,495	18,860,867	11.0
1916	220,892,583	24,526,859	11.1
1917	223,517,777	26,889,876	12.0
1918	201,685,702	30,120,273	14.9
1919	164,426,341	29,360,811	17.9

The entire balance of their net supply for these years was marketed by the seven companies for consumption in other States. The following statement (deduced from the tabulation at Rec., 997) shows that of the West Virginia gas of the seven companies from 82.1 per cent. to 89 per cent. went to other States in the nine years from 1911 to 1919:

Year	Net Supply of Seven Companies	Amount Exported	Per Cent.
	M. Cu. Ft.		
1911	147,431,246	130,230,499	88.3
1912	172,050,962	150,949,519	87.7
1913	167,897,746	145,600,069	86.7
1914	166,625,730	146,013,131	87.6
1915	170,694,495	151,833,628	89.0
1916	220,892,583	196,365,724	88.9
1917	223,517,777	196,627,901	88.0

1918	201,685,702	171,565,429	85.1
1919	164,426,341	134,065,530	82.1

WEST VIRGINIA PUBLIC SERVICE GAS COMPANIES.

As of December 31, 1919, there were in West Virginia about sixty-seven natural gas public service corporations (Rec. 982, 1365),* all of which, by its language, fall within the purview of the statute in contest. By public service corporations we mean those concerns, whether corporate or individual, commonly denominated as public utilities. (Cf. *Van Dyke vs. Geary*, 244 U. S., 39, 43-45, per Mr. Justice Brandeis; *Southern Iowa El. Co. vs. Charlton*, 255 U. S., 539, 542, 543; *Winchester vs. Winchester Water Works Co.*, 251 U. S., 192, 197, per Mr. Justice Day.) They fall within the category of "corporations which devote their property to a public use" (*New York vs. McCall*, 245 U. S., 345, 351), or whose business is "affected by a public use." (*Stafford vs. Wallace*, U. S. Adv. Ops., 1921-2, p. 469; *Clarksburg L. & H. Co. vs. Public Service Com.*, 84 W. Va., 638, 644-646, 100 S. E., 551; *Mill Creek Coal & C. Co. vs. Public Service Co.*, 84 W. Va., 662, 668, 669, 100 S. E., 557; *German Alliance Ins. Co. vs. Lewis*, 232 U. S., 389.)

*The lists in the Record, pp. 982 and 1365, were compiled from the records of the Board of Public Works and the Public Service Commission. The sixty-seven companies, while reporting to those authorities, include a number only incidentally serving gas, such as oil companies and certain carbon-making and manufacturing plants, which utilize their production in their own private enterprises and whose consumers are limited to their employees or to lessors entitled to free gas. Of this character are the South Penn Oil Company (Rec., 1447), Ohio Fuel Oil Company (Rec., 1004), Columbian Carbon Company, Imperial Oil & Gas Products Company, and Owens Bottle Machine Company, none of which in fact supplies gas to the public, nor do they profess or hold themselves out to be public-service corporations (Rec., 998, 1004, *et seq.*).

Embraced within the sixty-seven companies are not only the Hope Natural Gas Company, the Reserve Gas Company, the Pittsburgh & West Virginia Gas Company, Carnegie Natural Gas Company, Manufacturers Light & Heat Company, United Fuel Gas Company and Columbia Gas & Electric Company, but also the numerous smaller corporations engaged in the public supply of gas (Rec. 1034-1042). Examples are, the Clarksburg Light & Heat Company at Clarksburg (Rec. 842, 1035, 1203); the Charleston-Dunbar Natural Gas Company at Charleston, St. Albans and South Charleston (Rec. 1036); the Huntington Gas & Development Company at Huntington and the vicinity thereof (Rec. 1180); the West Virginia Traction & Electric Company and the Randall Gas Company at Morgantown (Rec. 1034), 1041, 1142); The Monongahela Valley Traction Company at Fairmont (Rec. 1034, 1035, 1220); the Glenville Natural Gas Company at Glenville (Rec. 1034); the Keener's Oil, Natural Gas & Fuel Company at Weston (Rec. 1035, 1147, 1256); the West Virginia Heat & Light Company in Ritchie County towns (Rec. 1035); the Buckhannon Fuel Supply Company at Buckhannon (Rec. 1039); the Comet Oil & Gas in Taylor County, (Rec. 1035), and the Montgomery Gas Company in Kanawha and Fayette Counties, (Rec. 1041).*

*It may be noted in passing that in some instances smaller companies engaged in the public service sell part of their gas to some of the seven companies principally carrying on the export business. Examples are afforded by sales of the Comet Oil & Gas Company to the Hope Natural Gas Company, (Rec., 1736, insert p. 282); Clarksburg Light & Heat Company to the Pittsburgh & West Virginia Gas Company, (Rec., 1036, 1736, insert p. 299); the Charleston-Dunbar Natural Gas Company to the United Fuel Gas Company, (Rec., 1036, 1736, insert p. 316).

To these companies, engaged in the public service of gas, the State extended broad charter powers, but subject to the reserved legislative right to alter any charter and to alter or repeal any law applicable to a company *Code of W. Va.*, Ch. 53, sec. 8: *Acts of 1867*, Ch. 5, sec. 6; *Acts of 1882*, Ch. 96, sec. 8; *Manufacturers Light & H. Co. vs. Ott*, 215 Fed., 940; *St. Mary's &c. Petroleum Co. vs. West Virginia*, 203 U. S. 183). It gave the power of eminent domain, without which the construction of the great pipe-line systems hereinafter mentioned would not have been possible. This power was often exercised, and where not exercised was obviously potential in negotiations for the purchase of rights of way for pipe lines and other facilities (Rec. 1215, 1216, 1802-1917, 246, 382, 520; *Carnegie Nat. Gas Co. vs. Swiger*, 72 W. Va., 557, 79 S. E., 3; *Charleston Nat. Gas Co. vs. Lowe*, 52 W. Va., 662, 44 S. E., 410) County courts granted to them franchises for the free use of the public highways, upon and along which they constructed and maintain pipe lines, boxes, connections, and telegraph and telephone lines (Rec. 74, 246, 247, 519, 1016, 1017, 1917; *Hardman vs. Cabot*, 60 W. Va., 664, 55 S. E., 756). Under like franchises from cities and towns they were given and enjoy the use of streets and alleys (Rec. 70, 247, 248, 382, 386, 519, 1174). The various pipe lines for gathering, transmission and service of gas spread in a network over the gas fields and gas producing counties.

While its liberal policy toward those engaged in the public service of gas was primarily dictated by the motive to provide for its own people, West Virginia was not illiberal toward consumers in other States.

No program of conservation was adopted or attempted, nor were efforts made to restrict the enormous and continually increasing volume of gas which, in later years, certain of its public service corporations transported, or sold for transportation, to consumers in other States. The right of these public service corporations so to dispose of their surplus in other States was recognized by permitting them to exercise the power of eminent domain for the construction of pipe lines transporting chiefly for foreign consumption, subject only to the duty of first serving West Virginia consumers in the territory through which such lines extended. (See *Carnegie Nat. Gas Co. vs. Sweiger,* 72 W. Va., 557, 572, 573, 79 S. E., 3).

The Seven Companies.

We emphasize that the statute in question applies equally to all public-service gas companies. But it is nevertheless true that the marvelous disparity of the gas supply to West Virginia and the manifest discrimination against it in the distribution of its own product, were brought about by the seven public-service gas corporations (in practical interest and effect, five only), whose rights are so strongly sought to be vindicated by the plaintiffs. This was effected by the domination by the seven companies of the major part of the gas territory and gas supply of the State, vesting in them a virtual monopoly, and by the enormous sales of West Virginia gas for consumption in other States, already evidenced by the statistics above presented. While, therefore, the seven companies have not been singled out for hostile legislation, their relation to the present lit-

igation and to the West Virginia gas shortage requires special mention of their circumstances.

The seven companies, either in their original form or in the aspect later assumed, were and are, the Hope Natural Gas Company, Reserve Gas Company, Pittsburg & West Virginia Gas Company, Carnegie Natural Gas Company, Manufacturers Light & Heat Company, United Fuel Gas Company, and Columbia Gas & Electric Company. While seven in number and referred to throughout these causes as "the seven companies," they are, in effect, only five in interest and operation, because of the identity of control of the Hope Natural Gas Company and the Reserve Gas Company and of the United Fuel Gas Company and the Columbia Gas & Electric Company.

The Hope Natural Gas Company is owned, and the Reserve Gas Company is controlled, by Standard Oil Company of New Jersey (Rec., 322); the minority stockholding of the Reserve is presently owned by Union Natural Gas Corporation, a holding corporation controlling a number of companies engaged in producing and marketing natural gas to various cities in Ohio (Rec., 323); Carnegie Natural Gas Company is a subsidiary of the United States Steel Corporation (Rec., 925, 926, 937); Pittsburg & West Virginia Gas Company, formerly the Fairmont & Grafton Gas Company, an independent local company (Rec. 487, 511, 512, 1030), is a subsidiary of the Philadelphia Company of Pennsylvania (Rec., 509-513), a holding company with a number of other subsidiaries engaged in producing and distributing natural gas and owning and operating the street-railway system of Pittsburgh and various

other large enterprises; the Manufacturers Light & Heat Company is a merger of some twenty to twenty-five companies formerly in the natural gas business in Pittsburgh and many municipalities of Western Pennsylvania, and also along the Ohio River in West Virginia and Ohio (Rec., 1029, 65, 71, 73, 78); and the United Fuel Gas Company is presently owned by the Columbia Gas & Electric Company and Ohio Fuel Supply Company (Rec., 378-379), the former owning or controlling the lighting and heating systems in Cincinnati, Covington and other cities in Ohio and Kentucky, in addition to producing and distributing gas elsewhere, and the Ohio Fuel Supply Company being a producing and marketing company in Ohio, selling gas to consumers and local gas companies in Ohio.

STATUS OF THE SEVEN COMPANIES.

All of these seven companies, in common with the other public service gas companies, were chartered or authorized to carry on business in West Virginia in the light of the following pre-existing statute (*Code*, ch. 53, Sec. 8; Acts of 1867, ch. 5, Sec. 6; Acts of 1882, ch. 96, Sec. 8):

> "And the right is hereby reserved to the legislature to alter any charter or certificate of incorporation hereafter granted to a joint stock company and to alter or repeal any law applicable to such company."

As to the nature of the seven companies, when the Act of 1919, now in contest, was passed, we summarize the following:

(1) All seven companies were and are public-

service gas corporations of West Virginia in the sense hereinbefore defined. Five of them, the Hope Natural Gas Company, Reserve Gas Company, Pittsburg & West Virginia Gas Company, United Fuel Gas Company, and Columbia Gas & Electric Company, were chartered under the laws of West Virginia. The Manufacturers Light & Heat Company and Carnegie Natural Gas Company were chartered under the laws of Pennsylvania, but, as a condition precedent to doing business in West Virginia necessarily received from the State authorization to do business under the laws applicable to domestic corporations, and became and were to all intents and purposes, domestic corporations, insofar as concerned their property, business, rights and duties in the State (Rec., 1885; Code W. Va., ch. 54, Sec. 30). In addition, substantially all the gas territory, leases, pipe-line systems, rights of way, franchises and other property of the Manufacturers Light & Heat Company in West Virginia were acquired by absorption of the Wheeling Natural Gas Company and other public-service corporations theretofore chartered and serving the public under the laws of West Virginia (Rec., 63, 69, 1029).

The substance and effect of the charters of these seven companies, set forth with varying degrees of elaboration in their respective condemnation proceedings, sufficiently evidence their character. Thus the Reserve Gas Company and the Hope Natural Gas Company both allege (W. Va. Exs. Nos. 45 and 46, Rec., 1803, 1822) that their charter powers include:

> "The producing, dealing in, buying and selling, acquiring, storing, transporting by pipes and

> otherwise natural gas for its own use and for the selling and supplying of natural gas for industrial, commercial, domestic and other public and private uses for heat, light, fuel and power to persons, firms, partnerships, corporations and other consumers and other municipalities and places in the State of West Virginia as well as elsewhere, where the said natural gas may be discovered, purchased, stored or transported by the said * * * Gas Company," * * *

and

> "Also to have, exercise and enjoy the right of eminent domain, and in the exercise of such right to take, condemn, use and enjoy such lands, rights of way, easements and property as shall be necessary to enable it to lay and construct its mains, pipes and conduits, pump stations, telegraph and telephone lines, dams and other structures and appliances necessary and required or convenient to the producing, storing, cooling and transporting of natural gas."

And, though not obeyed or enforced (Rec., 312, 315, 352, 520, 1257, 1425, 1426), the public character of natural-gas pipe lines has been declared in West Virginia since the year 1891, under the provisions of its Code, Chapter 52, Section 24, extending the power of eminent domain to companies organized for the purpose of transporting such gas, and declaring that,—

> "Such company shall for the purpose of transporting natural gas, oils and water be considered and held to be a common carrier, and subject to all the duties and liabilities of such carrier under the laws of this State."

(2) The seven companies, and the constituent companies absorbed by them, pursuant to their charter powers, engaged in the service of natural gas to the people of West Virginia, and have at all times since served a large number of its people. Prior to the Act of 1919, here involved, and now, these companies, like other gas companies, were and are subject to the Public Service Commission Act (*Acts* of 1913, Ch. 9; *Acts* of 1915, Ch. 8; *United Fuel Gas Co. vs. Public Service Com.*, 73 W. Va., 571, 80 S. E. 931; *Randall Gas Co. vs. Star Glass Co.*, 78 W. Va., 252, 88 S. E. 840; *Clarksburg L. & H. Co. vs. Public Service Com.*, 84 W. Va., 638, 100 S. E. 551; *Kelly Axe Mfg. Co. vs. United Fuel Gas Co.*, 87 W. Va., 368, 105 S. E. 102; *Manufacturers L. & H. Co. vs. Ott*, 215 Fed., 940). They have acknowledged their character as public service corporations, and as such have filed their tariffs and schedules before the West Virginia Public Service Commission and accepted the rates and regulations prescribed by that body (Rec., 1365, 1922-1943).

From an application of the Hope Natural Gas Company, the largest of the seven companies, for leave to increase rates (W. Va. Ex. No. 53, Rec., 1923), we quote as an example the following typical averment:

> "That its principal place of business is in the following towns where it distributes natural gas and in the neighboring country districts and villages, viz: Belmont, Clarington, Colliers, Eureka, Fairview, Friendly, Glovers Gap, Littleton, Lima, Lost Creek, Mt. Clare, Mannington, Metz, Minora, Parkersburg, Paden City, Pine Grove, St. Marys, Sistersville, Smithfield, Williamstown and Wiley-

ville, West Virginia, and that it is a public-service corporation engaged in the management and operation of a natural-gas plant in said cities and towns and that as such public-service corporation in the service of natural gas to the domestic consumer it is subject to the provisions of Chapter 9, Acts of the Legislature of West Virginia for 1913 and 1915 and of the Code of West Virginia applicable to this class of corporations."

These seven companies, or some of them operate in thirty-seven counties of West Virginia, having a population of 1,065,980 in 1920, and supply gas in 49 municipalities with a population of 199,469 (Rec. 1012, 1037). Their pipe lines aggregate 7,618 miles (Rec., 1016). The extent of their gas territory and the volume of their gas are referred to elsewhere herein.

(3) The service to West Virginia consumers so authorized and undertaken by the seven companies embraces gas for domestic, industrial, commercial and other purposes. The public professions of the Hope Natural Gas Company and Reserve Gas Company as to such service are exemplified by the following quotation from the printed form used in their applications to the courts of the State for leave to condemn for pipe lines (Rec., 1823, 1804):

> "That since the granting of said new or amended and modified charter or certificate of incorporation, as well as for several years before, petitioner has been and is engaged in the business of selling and supplying natural gas for industrial, commercial, domestic and other public and private uses for heat, light, fuel and power

to persons, firms, partnerships, corporations and other consumers and purchasers for use in incorporated cities, towns, villages, districts and other municipalities and places in the State of West Virginia, and has been and is supplying natural gas to the public for fuel, illuminating and other purposes, and has been, and is still, at great expense and cost to it, erecting, laying, maintaining and operating pipes and lines of pipe, etc., for transporting natural gas with which to supply the public and said other purchasers and consumers with natural gas for fuel, illuminating, heat, power and other purposes; and that it has been and is transporting natural gas to be supplied to the public and said other purchasers and consumers for fuel, heat, illuminating, power and other purposes by and through its said pipes and pipe lines."

The attitude of the Pittsburgh & West Virginia Gas Company was expressed in the following language (Rec., 1843):

"1st. That petitioner is a corporation duly organized and existing under and by virtue of the laws of the State of West Virginia, for the purposes of transporting carbon oil and natural gas, or both, by means of pipe lines, or otherwise, for public use; that petitioner is now engaged in the business of producing, transporting and selling natural gas for public use and is now producing large quantities of natural gas within the State of West Virginia, and is transporting the same to market by means of certain pipe lines constructed and maintained by it; that the natural gas so transported

by said lines is being sold to the public in the following incorporated cities, towns and villages, to wit: Grafton, Enterprise, Shinnston, Lumberport, Haywood, Colfax, Worthington, Simpson, Pruntytown, Blueville, Thornton and Flemington, all within the State of West Virginia, and other places in the State of West Virginia not incorporated, and many persons not living in any city, town or village, are likewise being supplied with natural gas for domestic and industrial uses by this petitioner by means of its said system of pipe lines; that the transportation of said natural gas and the sale thereof is for the use of the public generally for the purpose of supplying light and heat to such public; and that your petitioner is ready and willing at all times, and has so held itself out, to sell said gas to the public, or any portion thereof, upon the payment of a reasonable price therefor."

Substantially the same assertions and professions were made by the constituent and predecessor companies, Fairmont & Grafton Gas Company (Rec. 1896) and The Philadelphia Company of West Virginia (Rec., 1857), while the Carnegie Natural Gas Company uses language even broader (Rec., 1876), containing the additional averment that it is a common carrier of natural gas under the laws of West Virginia.

(4) With respect to future consumption and extensions of service for domestic, industrial and other uses of gas, the seven companies expressed their sense of obligation to West Virginia consumers as follows:

The Pittsburgh & West Virginia Gas Company and

its predecessor, Fairmont & Grafton Gas Company, stated of record (Rec., 1843, 1896) that each was:

> "* * * ready and willing at all times, and has so held itself out, to sell said gas to the public or any portion thereof, upon the payment of a reasonable price therefor."

The Philadelphia Company of West Virginia, the other constituent company of Pittsburgh & West Virginia Gas Company, alleged (Rec., 1857):

> "Your petitioner is constantly increasing the number of its consumers and is desirous of largely increasing its sales of gas in the various counties of West Virginia traversed by its lines. Your petitioner is ready and willing to sell gas to all parties within reaching distance of its pipe lines who apply for the same, at reasonable rates. Your petitioner, being a public-service corporation, as hereinbefore stated, is ready and willing to furnish gas at all times to the public, as aforesaid."

The Carnegie Natural Gas Company alleged (Rec., 1876):

> "Your petitioner is constantly increasing the number of its consumers and it is desirous of largely increasing its sales of gas in the various counties of West Virginia traversed by its lines. Your petitioner is ready and willing to sell gas to all parties within reaching distance of its pipe lines who apply for the same at reasonable fixed rates which are in general effect throughout the State of West Virginia, and which rate is as follows: 25 cents per thousand cubic feet of gas; also

flat rate of $1.50 per month for one fire. Your petitioner, being a public-service corporation, as hereinbefore stated, is ready and willing to furnish gas at all times to the public, as aforesaid."

The Wheeling Natural Gas Company, the principal constituent through which the Manufacturers Light & Heat Company was doing business in West Virginia in the year 1906, alleged (Rec., 1905):

"That petitioner in the exercise of its rights, powers, and privileges and in the conducting of its business has been and is supplying the incorporated cities, towns, and villages of Benwood, Chester, McMechen, Moundsville, Newell, and other towns and vicinities and manufactories within the State of West Virginia, and the inhabitants of said cities, towns, and villages, with natural gas, for heating, fuel, illumination, power and other purposes, under ordinances of said several cities, towns, and villages, as well as a large number of unincorporated towns and villages in the said State of West Virginia, and persons residing in and inhabiting such unincorporated towns and villages, and any and all persons residing along the lines of your petitioner, desiring natural gas."

The Hope Natural Gas Company, after an extensive enumeration of the various cities, towns, and communities in West Virginia served by it and its other public services of gas, alleged (Rec., 1825):

"That petitioner, as is its bounden duty, furnishes, and is ready and willing to furnish, at uniform and reasonable rates, natural gas for heating, illuminating, fuel, power, and other purposes

to every inhabitant of the several incorporated cities and towns above named who applies therefor, and complies with the regulations prescribed by the ordinances of such of said cities and towns as have fixed ordinances authorizing the same, and who complies with the regulations fixed by the council of such of said towns as have not a specific ordinance, and also furnishes and is willing to furnish all other consumers therewith, at uniform and reasonable rates."

The Reserve Gas Company stated its attitude in language substantially identical with that of the Hope Natural Gas Company in the quotation immediately preceding (Rec., 1805).

(5) With respect to their pipe lines, the public professions of the seven companies are found in their many applications for leave to condemn made to the courts in the gas-producing counties, specimens of which are exhibited in the record at pages 1802 to 1916. In substance these applications set forth their extensive service of gas to West Virginia consumers; the necessity of obtaining a greater supply for them and the drilling of wells for that purpose; the necessity of laying a pipe line or lines for the purpose of transporting such additional gas to said West Virginia consumers and of condemning over the particular land described, and that the construction of said pipe line is necesary for public use and the same, when constructed, will be so used. Thus the form of application used by the Hope Natural Gas Company and Reserve Gas Company alleged (Rec., 1826):

"That it became necessary for petitioner in

order to supply natural gas to the said several incorporated cities and towns, and their inhabitants, as well as the several other [illegible]vns, individuals, firms, corporations, copartnerst[illegible]tc., for heating, fuel, illuminating, power, and [illegible]r purposes, and to keep up the required and necessary supply of such gas, that it discover and produce an additional supply of natural gas; that to discover and produce the same, it became necessary for petitioner to drill, at large cost and expense, new wells for the purpose in the county of Harrison and several other counties in the State of West Virginia, and to acquire other wells in said counties; and that petitioner has drilled several new wells in said several counties and has discovered and found a large supply of natural gas in the said wells, and has acquired sundry other wells producing natural gas. That from said wells so drilled by it, as well as from said wells so acquired by it, petitioner produces natural gas with which to supply the said incorporated cities and towns and the said inhabitants thereof, aforesaid, as well as said other purchasers and consumers. And that in order to supply said incorporated cities and towns and the inhabitants thereof, as well as other consumers and prospective consumers in Harrison County, and elsewhere, with such natural gas produced from said last-mentioned wells, for heating, illuminating, and other purposes, it is necessary that petitioner lay, construct, and maintain an additional line of pipe from some of the wells in said several counties, through a portion of said Harrison County and portions of other counties in the State of West Virginia, so as to

reach the above-mentioned incorporated cities and towns, and the inhabitants thereof, as well as said other consumers in Harrison County and elsewhere, with said pipe line for the purpose of transporting such natural gas; and it is also necessary that petitioner transport such natural gas through said pipe line, and supply the same for said purposes to said incorporated cities and towns, and the inhabitants thereof, and said other consumers in said Harrison County and elsewhere."

(6) Further urging their public service to the people of the State, the seven companies applied for and were given, in addition to their franchises for use of the streets and alleys of the cities, towns, and villages in West Virginia served by them, the right to lay, maintain and operate pipe lines, connections, boxes, valves and other fixtures, as well as telephone and telegraph lines, along and upon the highways (Rec., 70, 74, 246, 247, 382, 386, 519, 1016, 1017, 1174; *Hardman vs. Cabot*, 60 W. Va., 664, 55 S. E., 756). A large part of their several pipe-lines and transportation systems are thus construed and now used without charge or compensation whatsoever. For an example of the franchises for use of the public highways see W. Va. Ex. No. 52 (Rec. 1917), granting to Reserve Gas Company:

"License and permission to lay and maintain in any of the public roads of this county pipe lines for the conveyance of gas from any well or wells of the said company, said pipe lines to be so laid as not to interfere with the use of said public roads and for that purpose to be covered with a covering of not less than twelve inches above said pipe line and also to be laid in such manner as not to inter-

fere with any other pipe line, now laid in or along said road. If at any time, by reason of working the roads it should become necessary to lower said pipe, at any point, said company shall lower it at its own expense. This franchise is to expire in fifty years from the date hereof."

And in this connection it is pertinent to mention that many of these franchises, and special rights and privileges therewith, as well as the pipe lines constructed thereunder, were acquired by the seven companies through their absorption of local companies.

Violation of Seven Companies' Duties to West Virginia.

These seven companies, through which the plaintiff States derive West Virginia gas and whose alleged rights are so extensively relied on in assertion of the claims of the plaintiffs, have, in manifest disregard of their duties and obligations to West Virginia and its people:

(1) Engrossed the gas supply of the State.

(2) Absorbed important local companies, which, if independent, would have continued to serve West Virginia consumers.

(3) Deprived the remaining local companies of their ability to supply adaquately their localities.

(4) Failed and refused to furnish in later years, when the deficiency of the local companies became acute, gas to make good the deficiency, except out of any surplus remaining after satisfying consumption in other States.

(5) Failed and refused themselves to supply

needed gas to consumers in the territory of their production or their transportation lines.

(6) Subjected to suffering and inconvenience in homes and public institutions and to industrial loss the people of West Virginia.

(7) Transported for consumption out of West Virginia the gas required for reasonably adequate service therein.

(8) Transported their gas for consumption in other States under color of contracts which (except as to the theoretical provision in favor of West Virginia domestic consumers) subordinated the service of West Virginia consumers to the service of the out-of-state gas companies and consumers.

(9) Aided and abetted by the tenor and intent of their contracts and by their practices the unlimited increase of use of West Virginia gas in the other States by providing for the extension of service to additional consumers there.

(10) Arrogated their contracts to superiority over the pre-existing laws of West Virginia, to which they owed their existence and special rights and privileges.

(11) By the contracts and transportation above mentioned, renounced their obligations and duties to West Virginia and disabled themselves from the performance thereof.

Gas Control of the Seven Companies.

As already shown, in 1919 the total gross production in the State by all producers was 219,886,837 M. cubic feet, of which, after deducting the free gas to lessors, gas used in the field, and gas produced and con-

sumed by private industries (which items do not reach or benefit the consuming public), there was a residue of 183,687,047 M. cubic feet, constituting the net supply in the hands of the public service corporations of the State available for service to the public. Of this net public supply, the seven companies produced from their own wells or acquired under purchase contracts a total of 164,426,341 M. cubic feet, or 89.5 per cent. The following table (Rec., 996, 1736, insert p. 414) shows that the like control has existed since 1911:

Year	Net Supply for Public Service	Net Supply of Seven Companies	Per Cent.
	M. Cu. Ft.		
1911	173,132,353	147,431,246	85.1
1912	203,112,738	172,050,962	84.7
1913	209,131,295	167,897,746	80.3
1914	200,762,645	166,625,730	83.0
1915	207,777,882	170,694,495	82.1
1916	259,414,200	220,892,583*	85.1
1917	245,620,686	223,517,777	91.0
1918	227,649,823	201,685,702	88.6
1919	183,687,047	164,426,341	89.5

But the control of the West Virginia gas situation by the seven companies is still further manifest.

The total acreage of gas territory controlled by producers in West Virginia and the other States from 1910 to 1918, as shown by the United States Geological Sur-

*The figure 200,892,583, on Record page 996, is a typographical error. See Rec., 1736, insert p. 383.

vey (the figures for 1919 not being available when the evidence was taken), was (Rec., 1000):

	West Virginia	Ohio	Pennsylvania	Total
1910	3,348,286	1,423,351	1,949,733	6,721,370
1911	3,399,213	1,643,228	2,032,772	6,075,213
1912	3,019,316	1,756,167	2,187,388	6,962,875
1913	3,155,751	1,515,562	2,211,440	6,882,753
1914	3,091,506	1,361,778	2,153,119	6,606,403
1915	3,184,245	1,519,229	2,174,403	6,877,878
1916	3,866,373	1,558,231	2,398,118	7,822,722
1917	3,787,185	2,260,028	2,436,029	8,483,242
1918	3,318,896	2,561,423	2,410,310	8,290,630

The total acreage in West Virginia, operated and unoperated, held by all the sixty-seven public service companies in 1919, was 2,725,798 acres, of which the seven companies together held 2,566,798 acres, or 93.8 per cent., of which 1,866,720 acres were undeveloped and 739,184 acres developed, while the other public service companies held 169,733 acres, of which 119,894 acres were undeveloped and 49,879 acres developed (Rec., 1000-1005).

For the years 1910 to 1919, the aggregate acreage of the seven companies was as follows, (Rec., 1736, insert p. 390; 1003):

Year	Developed	Undeveloped	Total
1910	311,569	2,639,509	2,951,078
1911	351,428	2,382,846	2,734,274
1912	467,664	2,027,469	2,495,133
1913	533,593	2,055,968	2,589,561
1914	572,043	1,852,319	2,424,362
1915	509,414	2,045,032	2,554,446

1916	559,078	2,281,435	2,840,513
1917	618,559	2,152,500	2,771,059
1918	658,880	1,872,843	2,531,723
1919*	689,305	1,866,720	2,556,025

In addition to the acreage directly held under lease, the seven companies indirectly control much other territory by means of purchase contracts for the gas production of a great number of oil companies and other independent producers. Thus, in 1919, of the 245 independent producers selling their gas to the 67 West Virginia public-service corporations, the seven companies acquired the production of 202 of such producers, holding oil and gas leases upon an aggregate of 1,316,807 acres, while the remaining 60 public-service corporations acquired the production of 53 of such operators, holding leases upon 11,394 acres (Rec., 1471-1473).

The total number of producing gas wells in West Virginia at the beginning of 1919 (according to the United States Geological Report for 1918) was 9,687, of which the seven companies owned 7,086, or 73.2 per cent. The additional wells held under contracts with independent producers is not disclosed in the evidence, but a fair inference can be drawn from a con-

*An exhibit filed by the plaintiffs (Pa. Ex. 31, Rec., 1568) assigns to the seven companies 2,954,120 acres, of which 2,169,310 acres, or 73.43%, are unoperated, and 754,810 acres, or 26.57% operated; and to 20 small companies 27,619 acres, of which 10,317 acres, or 37.55% are unoperated and 17,302 acres, or 62.65% are operated. Another tabulation (Pa. Ex. 27, Rec., 1566, insert p. 142), assigns to the seven companies 2,534,673 acres, of which 1,875,437 acres are unoperated and 659,236 acres operated; to the other public service companies 191,015 acres, 142,245 acres operated, and 48,770 acres unoperated.

sideration of the number and extent of territory of the independent producers from whom they purchased, as stated in the preceding paragraph. The total of producing gas wells in the State and the number thereof owned by the seven companies during the years 1910 to 1918 was as follows (Rec., 1021):

Year ended Dec. 31	Total, All Producers	Seven Companies	Per Cent.
1910	4,052	2,890	71.3
1911	4,790	3,354	70.0
1912	5,604	3,897	69.6
1913	6,534	4,578	70.1
1914	7,194	5,037	70.0
1915	7,718	5,458	70.7
1916	8,542	6,161	72.1
1917	9,329	6,763	72.5
1918	9,687	7,086	73.2

For 1919, evidence of the plaintiffs gives a total of 8136 wells, of which the seven companies had 7220 wells and the other public service companies listed, 816 wells (Rec. 1566, insert p. 142).

Added to this control of the sources of supply, and accounting in a large degree for it, is the control of the gas markets built up by means of, and dependent on, the pipe line systems and the compressor stations essential for the transportation of gas to consumers at a distance from the place of production. These pipe lines and stations are themselves, in fact, a monopoly resulting from the command of the large capital, not available to everyone, required to erect them and from the holding of the large areas of gas territory and large amounts of gas production, tributary to the pipe lines

and withdrawn by the seven companies from acquisition by others (Rec., 1016, 1279, 1310, 1329-1336, *et seq.*).*

Nor is this situation altered by the statute, already quoted, of West Virginia, enacted in the year 1891 and yet in force, providing that any company organized for the purpose of transporting natural gas by pipe lines should be considered and held to be a common carrier (*Code W. Va.*, Chap. 52, Sec. 24). The seven companies at all times have refused to transport any gas except their own production and purchases, claiming that to do so would disable them from the public service of gas obligatory upon them as public-service corporations (Rec., 1425-1426, 312, 315, 352, 1257). In this regard the situation is pertinently described by a short passage from *United States vs. Ohio Oil Co.*, 234 U. S., 548, 559, the language there used in relation to oil being equally applicable to gas:

> "Availing itself of its monopoly of the means of transportation the Standard Oil Company refused, through its subordinates, to carry any oil unless the same was sold to it or to them, and through them to it, on terms more or less dictated by itself. In this way it made itself master of the fields without the necessity of owning them, and carries across half the continent a great subject of international commerce coming from many owners,

*The compressor stations of the Hope Natural Gas Company range from 60 to 22025 horse-power, and cost about $150 per horse-power. Its Hastings station cost over $1,000,000 (Rec., 307, 248, 249). The compressor stations of the Reserve Gas Company are from 1500 to 7600 horse-power (Rec., 325).

but, by the duress of which the Standard Oil Company was master, carrying it all as its own."

METHODS OF ACQUISITION OF CONTROL BY THE SEVEN COMPANIES.

In the early days gas territory, both proven and prospective, was available for whomsoever desired to lease. The great majority of the local companies, serving many municipalities and communities in the gas-producing counties, obtained an abundant supply from wells in the immediate vicinity, and acquired only relatively small areas of gas. The seven companies, however, with the foresight and ability to acquire and hold for future realization, common to such combinations of capital, acquired in the aggregate very large areas of gas territory, much of it proven to be productive of gas, and much of it appearing to be valuable in prospect. Much of this acreage was acquired and held as a reserve for future supply, and, although these reserves have since been depleted to a considerable extent, the seven companies yet held in 1919 an aggregate of 1,866,720 acres of undeveloped territory out of their total of 2,566,025 acres (Rec., 1736; insert, p. 390; 1003).

A large part of the gas territory was obtained by direct leases from the land-owners, but the seven companies also acquired a large part of their holdings by the acquisition of other West Virginia public-service gas corporations engaged in the marketing of natural gas, thus eliminating the competition of the latter companies and depriving them of their ability to supply the West Virginia public. This was particularly true of

the Hope Natural Gas Company, a gas subsidiary of the Standard Oil Company in West Virginia, which from time to time took over all of the Standard gas interests in northern and north-central West Virginia theretofore developed and marketed by four other subsidiaries, the South Penn Oil Company, Carter Oil Company, Flaggy Meadow Gas Company, and the Mountain State Gas Company, which had been formed to supply Parkersburg and Sistersville, West Virginia. (Rec., 322, 340-342 *et seq.*, 1173, 1329). The first two were extensively engaged in the oil business and held, especially the South Penn, very great acreages of oil and gas leases in many counties, and in the course of oil explorations had encountered and held many gas wells, while the last two companies were chartered and operated as West Virginia public-service corporations for the purpose of marketing the gas so developed, the Flaggy Meadow Gas Company serving consumers in various municipalities of Marion, Harrison, and Wetzel counties, and the Mountain State Gas Company serving consumers in municipalities of Harrison, Lewis, Doddridge, Wood, Pleasants, Tyler and possibly other counties. In this manner the gas territory, wells, pipe lines and other property of the other oil and gas subsidiaries passed into the hands of the Hope Natural Gas Company and formed part of, and a large nucleus around which were acquired and built up, its present system and immense holdings. In 1910, the Hope Natural Gas Company also purchased all of the gas territory, wells, pipe lines and gas-purchase contracts of the Wheeling Natural Gas Company and Tri-State Gas Company, both West Virginia public-service corporations, in Harrison, Lewis, Gilmer, Upshur, Brax-

ton, and part of Marion County (Rec., 1169-1172, 272-274), in return for a gas-sales contract to the Manufacturers Light & Heat Company, which had theretofore acquired control of the Wheeling and Tri-State Companies (Rec., 1712)*. To this day the Hope Natural Gas Company in northern West Virginia and the United Fuel Gas Company in the southern section receive substantially all the wells, or the gas from wells, discovered by these two large oil companies, the South Penn Oil Company and the Carter Oil Company (Rec., 999, 1019, 1445-7, 1467 *et seq.*), which together hold in West Virginia, 800,616 acres of oil and gas leases (Rec., 1467-1470). The Hope Natural Gas Company also purchased the properties of other smaller gas companies (Rec., 268-270).

The Pittsburgh & West Virginia Gas Company was originally incorporated under the laws of West Virginia as the Fairmont & Grafton Gas Company. It was one of the largest and earliest public-service corporations in the northern section of the State, serving Fairmont, Grafton, Shinnston, Lumberport, and other municipalities in Marion, Taylor and Harrison counties and having a very considerable acreage of gas territory, with many wells and pipe lines through those counties (Rec., 512-513, 1030, 1895-1898). In 1906 its capital stock was acquired by The Philadelphia Company of Pennsyl-

*The Hope Natural Gas Company in 1910 took over from the Mountain State Gas Company 23,610 acres of leases in Ritchie, Gilmer, Wirt and Tyler Counties, and franchises from Parkersburg, Sistersville, St. Marys and County Courts; and in 1911 from the Wheeling Natural Gas Company 65,000 acres of leases in Harrison, Lewis, Marion and Gilmer Countries, gas from 9,839 acres, 100 rights of way and 177,876 feet of pipe lines (Rec., 272-274, 1170, 1173).

vania, which had therefore entered the State through a West Virginia subsidiary chartered as The Philadelphia Company of West Virginia, and acquired territory, drilled wells, built pipe lines and engaged in the marketing of natural gas as a public-service corporation of the State. These two subsidiaries were connected and thence operated as one until 1913, when the name Fairmont & Grafton Gas Company was changed to Pittsburgh & West Virginia Gas Company, and to it the property of The Philadelphia Company of West Virginia was turned over (Rec., 512).

The Manufacturers' Light & Heat Company entered West Virginia through the acquisition of all or the controlling interest in the capital stock of West Virginia public-service corporations, whose property and marketing systems were thereupon connected with its general system. The companies so acquired were Wheeling Natural Gas Company, Ohio Valley Gas Company, Wetzel Gas Company, Tri-State Gas Company, Cameron Gas & Oil Company, New Cumberland Water & Gas Company, and Manufacturers' Gas Company of Wheeling; and until about 1910 all were operated as subsidiaries (Rec., 1029). In that year, all their outstanding stock having been acquired, they were merged into the parent company, which then for the first time formally entered the State (Rec., 65, 94).

In the southern section of the State the United Fuel Gas Company, a West Virginia corporation, was chartered in 1903 and leased a considerable gas territory. Until 1915 its stock was owned by the Standard Oil Company and Ohio Fuel Supply Company, the

Standard having control. Its chief expansion came in 1909 with its acquisition of the United States Natural Gas Company, a West Virginia corporation, which was itself a merger of a number of earlier West Virginia companies holding large acreages and engaged in the service of Charleston, Huntington and many other cities and municipalities in the southern section; and it also took over a great block of leases in that section from the Hope Natural Gas Company. In June, 1915, the Standard Oil Company disposed of its controlling stock interest in the United Fuel Gas Company to the Columbia Gas & Electric Company, and since then the two latter companies have been substantially operated together and under the same management (Rec., 382 *et seq.*; 1029-1033). The Ohio Fuel Supply Company owns the other stock in the United Fuel Company.

Contracts for the purchase of gas from independent operators were another means of engrossing the gas supply. But affording a powerful, and, in many cases, a compelling leverage in the negotiation of sales to the seven companies were the pipe-line systems and latterly the compressor stations. As the cost of pipe lines was practically prohibitive to the independent producer—and much the more so to the landowner himself—and as the independent producer and landowner could not hold their gas for future development or investment, because it was apt to be drained away through wells drilled on neighboring lands, operated by one of the seven companies, their only course was, in general, to sell or lease their gas to one of the seven companies upon terms and conditions made by it. (Rec., 307, 248, 249; 1019, 1020, 1254-1257, 1270, 1273, 1300, 1308, 1330-1334, 1338-

1340, 1346, 1360-1362). As already stated, the condition was like that shown to exist in *United States vs Ohio Oil Co.*, 234 U. S., 548, 559.

The pipe-line systems thus became the market for the independent producers, substantially all of whom sold to the seven companies.* The same liability to loss by drainage through neighboring wells likewise deterred independent operators and local public-service corporations from taking up and carrying leases for future development or investment, while the landowner, moved by the same considerations, could not withhold his land from leasing. Thus the seven companies were enabled at once to discourage competitive leasing and to build up their reserves and control of the available territory. Nor was this condition changed by the subsequently increased demand for gas and increased prices paid therefor in many of the West Virginia cities located in the gas territory; for, insofar as the gas was not held by the seven companies, the increased demands and prices were met and overcome by the increased cost of transportation, due to the decline in rock pressure to the point where the gas ceased to be self-transporting, thus necessitating the additional and prohibitive cost of compressor stations (Rec., 1254-1257, 1269, 1270, 1300, 1330-1334, 1339-1340, 1346, 1359).

In the case of the oil companies which are included in the category of independent producers, even if possessed of the means to build and operate pipe lines and compressors, the scope of the enterprise and the prox-

*The seven companies bought of 202 independent producers, and the other 60 public service companies from 43 independent producers in 1919 (Rec., 1471-1473, 1019).

imity of the pipe lines have occasioned the same result. Such companies incidentally discovering gas while operating for oil, but not being engaged in the business of transporting gas, their only market has generally been the pipe lines of the seven companies in the vicinity of production. Substantially all the oil companies sell most of their gas to the seven companies, and many of them operate upon an extensive scale and hold large acreages. For example, the South Penn Oil Company (Rec., 1444, 1445), Carter Oil Company, Ohio Fuel Oil Company (Rec., 1079), and Pure Oil Company (formerly Ohio Cities Gas Company), Commonwealth Petroleum Company, Fisher Oil Company and Southern Oil Company, all of which sell to the seven companies and most of which are allied in interest with them, together hold 1,147,637 acres, primarily for oil development, but upon which gas is frequently discovered (Rec., 998, 1467-1474).

Instrumentalities of Gas Exports.

Although limited quantities had been from early days marketed along the border lines from West Virginia into Ohio and Pennsylvania, and *vice versa*, especially in the Northern Panhandle of West Virginia, the business of exporting seems not to have reached an extensive scale until about 1902 or 1903. At and for some years before that time the defined gas fields of West Virginia afforded a large surplus over and beyond the demand of its people, and explorations had indicated the probability of productive territory to the southward (Rec., 322). In the meantime the gas fields of Western Pennsylvania had been developed and util-

ized generally for domestic and industrial fuel at an earlier date and to a larger extent than those of West Virginia, chiefly by reason of the larger cities and population and the greater quantities consumed by the steel plants and other industries of Pittsburgh and that section of Pennsylvania. As already stated, these fields began to decline and their production became insufficient to supply Pennsylvania consumers. In like manner the smaller and somewhat scattered gas fields of Ohio, never sufficient to supply more than a small part of the local consumers, also began to decline. In addition to which there were in Ohio many large cities and centers of industry served by local plants with artificial gas, to which the more efficient fuel of natural gas was attractive (Rec., 60-63, 438, 521-524, 543-557, 669, 719, 726, 749, 947). The Indiana fields were depleted. And thereupon commenced the process of expansion of the West Virginia gas industry, which later assumed the proportions of wholesale exploitation.

In disposing of their gas in the other States, the financial resources of the seven companies and their allied or controlling interests played an important part. The deficiency in its own supply in Pennsylvania provided a direct and ready market for the supply of the West Virginia companies acquired by the Manufacturers Light & Heat Company. The Carnegie Natural Gas Company extended its lines through West Virginia to the Pennsylvania line to connect with its system in that State and marketed its surplus production into the steel plants of its parent company, the United States Steel Corporation. The Pittsburg & West Virginia Gas

Company, or its predecessor companies of earlier years, all owned by The Philadelphia Company, laid lines to the Pennsylvania border and there sold and delivered its surplus to the Equitable Gas Company, another subsidiary, which in turn transported to and supplemented the waning supply of the various other subsidiaries marketing to Pittsburgh and elsewhere in Western Pennsylvania.

The West Virginia companies owned or controlled by the Standard Oil Company, viz., the Hope Natural Gas Company and the Reserve Gas Company, adopted a different method. The gas was sold under long-term contracts and delivery made at the State line to purchasing companies in Ohio and Pennsylvania, such as the Peoples Natural Gas Company, the East Ohio Gas Company and the Northwestern Ohio Natural Gas Company, which laid lines from those States to the West Virginia boundary and thence transported and sold the gas, in some instances directly to consumers, and in other cases to local distributing companies, generally subsidiaries, which in turn distributed to consumers in Ohio, Pennsylvania and as far west as Indinana. In part, these purchasing companies were theretofore engaged in the natural-gas business in said other States and had established markets, as was the case with the Peoples Natural Gas Company, and the Manufacturers Light & Heat Company, which had extensive markets in Pennsylvania and with which the Hope Natural Gas Company contracted in 1910 for future deliveries of large quantities of gas, substantially all of which went to Ohio and Pennsylvania consumers.

Markets were created by the incorporation of subsidiaries of the larger interests controlling certain of the seven companies, which subsidiaries constructed pipe lines to the West Virginia border and transported the gas there purchased and received from the West Virginia companies to municipalities in Ohio, Indiana and Kentucky not theretofore using natural gas. This last was the case with the East Ohio Gas Company, an Ohio corporation owned by the Standard Oil Company, which first acquired the franchises and distributing plants of the artificial gas companies serving the cities of Akron and Canton, in the State of Ohio, and later in Cleveland. It built pipe lines to the West Virginia State line to receive deliveries from the Hope Natural Gas Company, also a subsidiary, and transported and served the gas there received to consumers through the artificial gas distributing plants so acquired, and also to consumers in other municipalities in the territory through which its pipe lines were constructed. So also, through the relationship of the United Fuel Gas Company, Columbia Gas & Electric Company and Ohio Fuel Supply Company, and of the Union Natural Gas Corporation, Reserve Gas Company and Logan Fuel and Supply Company, the use of West Virginia gas was introduced into Cincinnati and other cities in Ohio and Indiana, as well as into Louisville and Covington and other municipalities in Kentucky. Further supplies from West Virginia were used to supplement the insufficient production of local companies theretofore serving Dayton, Columbus, Springfield, Toledo and other cities of Ohio and Indiana.

The purchasing companies, thus supplied with West Virginia gas, seeking to increase their business, em-

barked upon a career of ill-regulated extension of their service. (Rec. 21, 424, 431, 486, 800). The statistics of consumers and consumption of these companies, contained in the record, afford repeated illustrations. It is enough to refer to the increase of the consumers of the Peoples Natural Gas Company from 43,315 in 1910 to 79,112 in 1919 (Rec. 614-616), and the threefold expansion of its area of service from 1903 to 1919 (Rec. 431); the increase of the East Ohio Gas Company's consumers from 161,580, using 26,445,512 M cubic feet, in 1910, to 329,005 consumers using 43,469,893 M in 1919; and the increase of the Philadelphia Company's consumers from 16,000 to 144,963, between 1899 and 1919 (Rec. 486, 497).

The various transporting, distributing subsidiary and allied corporations involved in the contracts and arrangements under which transportation and service were made, and the numerous cities and municipalities included in the upbuilding of these markets, in Ohio, Pennsylvania, Kentucky and Indiana, are too numerous and complex to justify further detail here. They are partly referred to elsewhere in this brief. It suffices to say that between the year 1902 and the winter of 1916-17, when the shortages of West Virginia consumers commenced, the seven companies, in addition to the large amounts directly transported out of the State by certain of them, delivered an enormous aggregate of natural gas from the West Virginia fields to many purchasing companies, who transported and sold the same, either directly or through other companies, to consumers in municipalities and communities in Ohio, Pennsylvania, Kentucky and Indiana, under contracts

severally made by the seven companies with the other companies to whom they delivered the gas.

Gas-Sales Contracts.

The principal gas sale contracts above mentioned were and are as follows:

The *Hope Natural Gas Company* so contracted with the following:

1. The Northwestern Ohio Natural Gas Company, which serves Toledo and other cities in Ohio (Rec., 1509). This contract covers the majority share of the production of the Reserve Gas Company, which is sold or taken over by the Hope Natural Gas Company, its allied company. The remaining export gas of the Reserve Gas Company is sold and delivered by its other stockholder, the Union Natural Gas Corporation, to its subsidiary, the Logan Natural Gas & Fuel Company, which serves or sells to local companies serving Athens, Chillicothe, Dover, Logan, Newark, Dayton, and other municipalities in Ohio, and Richmond, Muncie and other places in Indiana (Rec., 319, 321, 749 *et seq*).

2. The Peoples Natural Gas Company, which serves a portion of Pittsburgh and other cities in Western Pennsylvania (Rec., 1524).

3. The East Ohio Gas Company, which serves Akron, Dayton, Cleveland and other cities in Ohio (Rec., 1544).

4. The River Gas Company, which serves Marietta and other Ohio cities (Rec., 1554), this contract being made by the Mountain State Gas Company and subsequently assumed by the Hope Natural Gas Company on its taking over the former company.

5. The Fayette County Gas Company, which serves Uniontown, Connellsville, and other cities in Western Pennsylvania (Rec., 1560).

The *Pittsburgh & West Virginia Gas Company* so contracted with the Equitable Gas Company, which serves consumers in Pittsburgh and other cities in Western Pennsylvania (Rec., 1729).

The *United Fuel Gas Company* so contracted with:

1. The Louisville Gas & Electric Company, which serves the City of Louisville, Kentucky, and vicinity (Rec., 1738).

2. The Portsmouth Gas Company, which serves the City of Portsmouth, Ohio (Rec., 1745).

3. The Central Kentucky Natural Gas Company, which serves Frankfort and other municipalities in Kentucky (Rec., 1752).

4. The Ohio Fuel Supply Company, which serves Columbus, Cincinnati, Toledo, Zanesville and other Ohio municipalities (Rec., 1761).

5. The Columbia Gas & Electric Company, which serves Cincinnati, in Ohio, and Covington, in Kentucky, and their vicinities (Rec., 1791).

In addition to the foregoing, there were and are a number of similar contracts for sales and deliveries within the State of West Virginia of large quantities of gas by certain of the seven companies to others of the seven, the major portion of which deliveries is either transported and sold directly, or sold and delivered to other companies at the State line under the contracts above listed, which transport to consumers in Ohio, Pennsylvania and Kentucky. Thus the Hope Natural

Gas Company so contracted with the Manufacturers Light & Heat Company for a large supply, the major portion whereof the latter company transports and markets in Pennsylvania, with a small part in Ohio and another small part in West Virginia (Rec., 1712). The United Fuel Gas Company so contracted with the Hope Natural Gas Company (Rec., 1769, 1776, 1777) and with the Pittsburgh & West Virginia Gas Company (Rec., 1780-1788), which vendee companies in turn sell and deliver the major portion of the quantities so purchased to other companies at the State line under the contracts above mentioned.

These contracts contain a number of provisions more or less common, though in varying language. Among the most important in their bearing on this litigation may be pointed out the provision, found in most of them, that the amount of gas delivered shall be sufficient to supply all the then domestic consumers of the purchasing companies, as well as all those which may be thereafter acquired, throughout the term of the contracts, together with a frequently added covenant by the purchasing companies to use their best efforts to extend their service; the provision for payment, in some cases, in the form of a percentage of the gross receipts of the purchasing companies from their consumers, thus directly interesting the vendor companies in the marketing in other States; and especially the provision whereby the vendor companies are compelled to deliver the contract quantities in preference to all other purchasers or consumers, save only the domestic consumers of the vendor company then on its lines in West Virginia, thereby disabling themselves from serving gas

for the other public uses of heating and lighting schools, churches, hotels, hospitals, municipal and other governmental buildings, and all industrial use. (See, for example, Rec., 1533, 1546). And in this connection it is important to remark that all of the companies purchasing from the seven companies market a portion of the gas for industrial use, and that, as we shall later observe, the contracts of purchase contemplate industrial consumption by consumers of the distributing companies.

In the light of the contention of the plaintiffs that the obligation of these contracts is impaired by the Act of 1919, and also as manifesting the anticipation of the contracting parties that the decline and ultimate exhaustion of West Virginia gas was inevitable, further elements of these contracts are important:

1. The reserved priority to West Virginia domestic consumers and in some instances to domestic consumers in other States. (Rec., 1533, 1534, 1546, 1547, 1556, 1565, 1744, 1748, 1759, 1764, 1773, 1796).

2. The apportionment of gas between certain purchasing companies, in case of insufficiency of the vendor's gas. (Rec., 1553, 1547).

3. The preference of supply reserved to some purchasing companies over others. (Rec., 296, 2971, 1533, 1546, 1547, 1565, 1744, 1748, 1759, 1764, 1774, 1785, 1786).

4. The limitation of the vendor's obligation to the extent of its gas supply and against liability for failure of supply not due to its fault. (Rec., 1510, 1511, 1520, 1522, 1539, 1541, 1546, 1555, 1564, 1565, 1743, 1744, 1748, 1750, 1758, 1759, 1763, 1764, 1773, 1774, 1785, 1795, 1796).

PIPE LINE SYSTEMS AND COMMINGLING OF GAS.

The gas of the seven companies going to Ohio, Pennsylvania and other States is transported by, and delivered out of, their general pipe-line systems, which, in general, are not confined to interstate transportation. These systems, which are more or less welded into one by the connections of the seven companies among themselves, constitute a reservoir, both to receive gas and to transport and distribute it. Throughout the gas-producing counties, from the interior of the State to its boundaries, the gas is fed into the main pipe lines by smaller lines leading mediately or immediately from the wells, and gas is fed out through distributing lines leading to the consumers or communities served along the lines. Whether consumed in West Virginia or in other States, the gas is commingled and carried in the same trunk lines. And the process of feeding by gathering lines and feeding out by distributing lines continues substantially to the limits of the State. (Rec., 33, 70, 99, 108, 110, 245, 246, 309, 310, 380, 381, 383, 387, 392, 394, 466, 518).

When fed into the pipe-line system from a particular well, or from wells in a particular section, the gas is at once commingled into a common and homogeneous stock. From its very nature, no mark of identification can ever be placed upon, nor is it possible to identify, any atom or specific quantity thereof. And so it is that, until in the progress of the gas through the trunk lines the last connection of a pipe devoted to local service in West Virginia has been passed, it is not and cannot be ascertained whether any particular part of the gas,

in the aspect of a physical entity, will be consumed in West Virginia or will pass to and be consumed in another State (Rec., 381, 384, 933).

The situation is sufficient set forth in the following excerpt from the testimony of the plaintiffs' engineer Wyer (Rec., 933, 934):

"Q. In the case of a well feeding into a line, which line in turn carries gas partly to points of consumption in West Virginia, and partly to points of consumption in Pennsylvania and Ohio, does that gas have any label on it?

A. It does not. There is no original package, no identity, nothing to distinguish ownership, all intermingled.

Q. Well, how do you find out then where this gas is going when it comes out of the well and finds its way into a line?

A. Well, for any particular well in West Virginia, it might be very difficult—in many cases absolutely impossible—to tell, the way the well is connected to some of these large trunk lines, whether that gas is ultimately going to get to Pennsylvania, or Ohio, or, in other cases, whether it is going to get to Ohio or Indiana.

Q. In a company like the Hope Natural Gas Company, which is supplying gas partly in West Virginia, and supplying it partly to companies which in turn supply the other States, can you tell when that gas starts on its continuous journey, as you call it, from the well, where that gas is going?

A. No, sir.

Q. Can anybody?

A. No, sir. That is, I mean, you could not state that this particular thousand feet of gas is going to be used in West Virginia, and this particular thousand feet of gas in the Hope property, will be used through the Peoples Company in Pennsylvania, and this one through the East Ohio Company in Ohio. The gas is all intermingled, without any chance for identity.

Q. And where does the opportunity first occur for identifying the gas which is going into Pennsylvania or Ohio or any other States?

A. There would be no chance for identifying the gas from particular individual wells. The only gas that you could identify would be the gas passing the measuring station at the State line, and that would be merely a total volume measurement giving you the total volume passing that point, without any relation as to whether it came from any particular well in West Virginia."

The main pipe lines of some of the seven companies extend only to the State boundary (Rec., 190, 196, 210, 317, 319, 394, 514), while in other instances the pipe lines reach into the adjacent States. The West Virginia gas furnished by the Hope Natural Gas Company, Reserve Gas Company and Pittsburgh & West Virginia Gas Company, no one of which operates outside of West Virginia, is all delivered to the purchasing companies at, or practically at, the State line. (Rec., 303,

304, 317, 318, 514, 1529, 1524, and see 1555). Of the total amount sold under contract by the United Fuel Gas Company to other companies, about one-fifth is delivered just across the State line in Kentucky and Ohio and the remaining four-fifths are delivered in part to the Ohio Fuel Supply Company at the State line (Rec., 1762), but in the much greater part at points within the State to others of the seven companies, viz., the Columbia Gas & Electric Company (Rec., 1793), Hope Natural Gas Company (Rec., 1770, 1772), and Pittsburgh & West Virginia Gas Company (Rec., 1780-1782), which receive such deliveries into their general system. The Manufacturers Light & Heat Company (Rec., 1712, 1716) and Columbia Gas & Electric Company, while both producing and marketing in West Virginia, acquire much the greater part of their respective supplies in West Virginia under their purchase contracts from the Hope Natural Gas Company and United Fuel Gas Company, above mentioned, and thereupon transport out of the State; the Manufacturers Light & Heat Company about four-fifths of its entire net supply, and the Columbia Gas & Electric Company substantially all (Rec., 1736; insert, 380, 415). The Carnegie Natural Gas Company has no contracts for out-of-state deliveries, but transports and markets directly to the steel works of its parent company in Pennsylvania.

USE OF GAS IN OTHER STATES.

In all the States here involved, West Virginia, Ohio and Pennsylvania, as well as in Kentucky and Indiana, gas is used for both domestic and industrial consumption.

Of the West Virginia gas exported to the other States, much was and is furnished directly to manufacturers and other industrial consumers. In other cases, West Virginia gas was and is utilized to supply the domestic consumption of purchasing companies, whose own production was and is diverted to industrial service. This diversion is expressly contemplated under the contracts made by the Hope Natural Gas Company with Manufacturers Light & Heat Company and Peoples Natural Gas Company, above mentioned, and is impliedly contemplated and fully effectuated under the provisions of a number of the other contracts requiring the vendor companies to deliver all the natural gas needed to supply all of the present and future domestic consumers of the vendee companies (Rec., 1524, 1544, 1560, 1712, 1761).

Of the gas companies furnishing gas in the other States, substantially all supply gas for industrial consumption therein. The record embraces the following examples for the year 1919:

Manufacturers Light & Heat Company (Rec., 86, 87): In Pennsylvania, domestic, 7,966,544 M cubic feet; public institutions, 192,354 M; industrial, 5,757,124 M. In Ohio, domestic, 2,614,181 M cubic feet; public institutions, 54,800 M; industrial, 3,679,143 M. In West

Virginia, domestic, 1,084,023 M cubic feet; public institutions, 31,854 M; industrial, 3,293,747 M.

United Fuel Gas Company (Rec. 367, 377): Outside of West Virginia, (evidently by direct service, see Rec. 367, 377, 393), domestic, 1,491,447 M cubic feet; industrial, 2,507,654 M. In West Virginia, domestic, 4,336,112 M cubic feet; industrial, 6,986,926 M.

Peoples Natural Gas Company (Rec., 418): In Pennsylvania, domestic, 9,654,042 M cubic feet; industrial, 12,264,921 M.

Union Gas & Electric Company (Rec., 457): In Ohio and Kentucky, domestic, 12,400,000 M cubic feet; industrial, 1,800,000 M.

Philadelphia Company Subsidiaries (Rec., 513, 514, 527): In Pennsylvania, domestic, 18,569,553 M cubic feet; industrial, 13,758,717 M. In West Virginia, domestic, 554,350 M cubic feet; industrial, 3,123,804 M.

Fayette County Gas Company (Rec., 551): In Pennsylvania, domestic, 1,205,622 M cubic feet; industrial, 702,748 M.

East Ohio Gas Company (Rec., 625): In Ohio, domestic, 36,969,772 M cubic feet; industrial, 6,630,987 M.

Northwestern Ohio Natural Gas Company (Rec., 721): In Ohio, domestic, 5,689,621 M cubic feet; industrial, 313,948 M.

Columbus Gas & Fuel Company and allied companies in year ended March 31, 1920 (Rec., 740): In

Ohio, domestic, 13,310,970 M cubic feet; industrial, 1,790,396 M.

Hope Natural Gas Company (Rec. 234): In West Virginia, domestic, 2,512,816 M cubic feet; industrial, 3,869,729 M.

Reserve Gas Company (Rec. 411, 412, 414): In West Virginia, domestic, 78,429 M cubic feet; industrial (which includes field gas for itself and sold to other companies), 1,235,769 M.

Logan Natural Gas & Fuel Company (Rec., 794): In Ohio and Indiana, domestic, 8,895,399 M cubic feet; industrial, 4,545,050 M.

Carnegie Natural Gas Company (Rec., 172, 173, 849, 850, 925, 926): While no figures are given, substantially all of its gas is consumed by steel mills in the Pittsburgh district.

The following affords a comparison of the industrial consumption of some of these companies with their supplies produced and purchased in the States in 1919:

Manufacturers Light & Heat Company (Rec., 80, 81): In Pennsylvania, industrial consumption, 5,757,124 M cubic feet; Pennsylvania gas, 7,737,722. In Ohio, industrial, 3,679,143 M; Ohio gas, 100,679 M. In West Virginia, industrial consumption, 3,293,747 cubic feet; West Virginia gas, 19,385,381 M.

Peoples Natural Gas Company (Rec., 417): In Pennsylvania, industrial consumption, 12,264,921 M cubic feet; Pennsylvania gas, 14,699,552.

Philadelphia Company Subsidiaries (Rec., 494-496): In Pennsylvania, industrial consumption, 13,-758,717 M cubic feet; Pennsylvania gas, 9,134,864 M. In West Virginia, industrial consumption, 3,123,804 M cubic feet; West Virginia gas, 26,871,560 M.

Fayette County Gas Company (Rec., 551): In Pennsylvania, industrial consumption, 702,748 M; Pennsylvania gas (including all not purchased from Hope Natural Gas Company), 470,917 M.

East Ohio Gas Company (Rec., 539): In Ohio, industrial consumption, 6,630,987 M cubic feet; Ohio gas, 8,201,376 M

Northwestern Ohio Natural Gas Company (Rec., 718, 719): In Ohio, industrial consumption, 313,948 M cubic feet; Ohio gas, substantially none.

Columbus Gas & Fuel Company and allied companies (Rec., 629): In Ohio, industrial consumption, 1,700,396 M cubic feet; Ohio gas, 11,127,809 M.

Logan Natural Gas & Fuel Supply Company (Rec. 773, 794): In Ohio and Indiana, industrial consumption, 4,545,050 M cubic feet; Ohio gas, apparently 11,929,421 M.

Hope Natural Gas Company (Rec. 233, 234): In West Virginia, industrial consumption, 3,869,729 M cubic feet; West Virginia gas, 67,945,432 M.

Reserve Gas Company (Rec. 411, 412, 414): In West Virginia, industrial consumption (which includes field gas for itself and sold to other companies), 1,235,-769 M cubic feet; West Virginia gas, 22,178,819 M.

United Fuel Gas Company (Rec. 367, 377): Outside of West Virginia, industrial consumption, 2,507,654 M cubic feet; Ohio and Kentucky gas purchased (production not stated), 689,848 M. In West Virginia, industrial consumption 6,265,795 M cubic feet; West Virginia gas purchased (production not stated), 11,456,842 M.

The statistics for the importing States at large from 1915 to 1918, yield results similar to that of 1919. (Rec., 1103-1112; 1736, insert pages, 440-447). It suffices to refer to 1918.

In Pennsylvania (Rec., 1103, 1104), the entire consumption was 177,139,804 M cubic feet; domestic consumption, 59,839,730 M or 32.72%; and industrial consumption, 117,300,074 M or 66.28%. The amount transported into the State was 53,326,446 M, or 30.11% of the whole; produced in the State, 123,813,358 M, or 69.89%. The industrial consumption in Pennsylvania (exclusive of gas for field purposes) was 73.74% of the Pennsylvania production, and almost 15,000,000 M in excess of the 52,985,173 M supplied to West Virginia by all public service corporations.

In Ohio (Rec., 1105, 1106), the entire consumption was 143,585,260 M cubic feet; domestic consumption, 98,023,666 M. or 68.27%; and industrial consumption, 45,561,595 M, or 31.73%. The amount transported into the State was 82,324,191 M, or 57.34% of the whole; produced in the State, 61,261,069 M, or 42.66%. The industrial consumption (exclusive of field gas) was 34.81% of the Ohio production.

In Indiana (including, however, Chicago, Illinois), the entire consumption was 4,516,585 M cubic feet; domestic consumption, 2,428,003 M, or 53.76%; and industrial, 2,088,580 M, or 46.24%. The amount transported into the State was 2,849,761 M, or 63.10% of the whole; produced in the State, 1,666,822 M, or 36.90%. The industrial consumption (exclusive of field gas) was 48.23% of the Indiana production. (Rec., 1108, 1109).

In Kentucky (Rec., 1110-1112), the entire consumption was 12,200,190 M cubic feet; domestic consumption, 7,922,941 M, or 64.94%; and industrial consumption, 4,277,249 M, or 35.06%. The amount transported into the State was 9,177,751 M, or 75.23% of the whole; produced in the State, 3,022,439 M, or 24.77%. The industrial consumption (exclusive of field gas) was 104.33% of the Kentucky production.

The statistics for earlier years (Rec., 1103-1112; 1736, insert pages 440-447) indicate still higher proportions of industrial consumption by the four States.

For comparison we add West Virginia (Rec. 1092-1097): Based on figures of the United States Geological Survey (which vary from the figures of the statistician of the Public Service Commission heretofore given), the entire consumption for all purposes was 107,587,945 M cubic feet; domestic consumption 20,399,914 M, or 18.91%; industrial consumption 87,248,031 M, or 81.09%. Based on the same figures, the total production of West Virginia in 1918 was 265,160,917 M (Rec. 1093); and the industrial consumption (includ-

ing carbon-black, but excluding field gas) was 23.52% of the West Virginia production.

We do not overlook that much of the industrial consumption above occurs in the summer months, when domestic use is diminished. Rec., 289, 350). We recognize, also, the concurring statements of the officials of the principal gas companies that the industrial consumption is "the life of the business" (Rec., 698, 151, 289, 327, 328), and that its discontinuance would necessitate greatly increased domestic rates (Rec., 151, 289, 290, 526). But we think that the character of this consumption, and the application of the production of the other States, become highly material, when those States, making no attempt to restrict their own use of gas. (*Walls vs. Midland Carbon Co.*, 254 U. S., 300; *Ohio Oil Co. vs. Indiana*, 177 U. S., 190), appeal to this Court in the name of their domestic consumers, and rail at the industrial consumption of West Virginia.

LOCAL COMPANIES—SERVICE AND SUPPLY.

We have referred to the shortage of gas in West Virginia, resulting from the control of the seven companies and the transportation of gas to other States. Recurrence must be had to the situation of the local companies.

The seven transporting companies supply gas by direct service to forty-nine municipalities, with an aggregate population of 199,469 (Rec., 1011, 1012). Other cities and towns formerly served by local companies, whose properties were acquired by the seven companies, or one of them, have been abandoned by the latter.

In some of the oldest and richest gas counties, where one or more of the seven companies hold ample supplies and facilities, they furnish either substantially no gas or none at all by direct service.*

Clarksburg, Fairmont, Huntington, Morgantown, Weston, Buckhannon, Shinnston, Lumberport, Weston, Glenville, South Charleston, St. Albans, and other cities and towns, are supplied in whole or in part by local companies. (Rec., 842, 1026, 1034-1036, 1039, 1041, 1203, 1220).

The local companies operated contemporaneously with the development and expansion of the seven companies, produced from the same pools, and transported and marketed to consumers in the same West Virginia territory in which the seven companies produced and marketed; and in some instances the same community was partially served by both. In the earlier years the volume of the wells was large, the rock pressure great, and the gas easily marketed through its own native force; and, having an abundant supply and no present

*In Harrison County, with an area of 266,240 acres, in 1919, five of the seven companies owned and operated an aggregate of 171,996 acres of territory 1,674 wells, and 1,157 miles of pipe line and bought the gas of 161 wells from 57 independent producers. These five companies served not more than 900 domestic consumers and no industries in that county although their pipe-line systems, gas territory and production surrounded, and in some cases extended into, the cities of Clarksburg and Salem, Shinnston and other municipalities, which have been without an adequate supply of gas since 1916. In Lewis County, having an area of 251,520 acres, in the same year, four of the seven companies owned and operated an aggregate of 176,739 acres, of territory, 1,106 wells, and 795 miles of pipe line and bought the gas from 66 wells owned by 16 independent producers. These four companies sell gas to no industries and no local utilities, nor serve any incorporated cities or towns in that county, their service being limited to approximately 1,200 consumers in rural communities, chiefly lessors receiving free gas as rental (Rec., 1026-1028).

or prospective market other than the particular communities then served, these smaller companies in most cases acquired and held only a limited territory, close to the place of consumption, and acquired little or no reserve territory (Rec., 38, 136, 212-213, 1001-1003, 1020, 1021, 1568). While the opportunity to obtain reserve acreage was open to them equally with the seven companies, before and at the time when the latter began their activities in this direction, yet it was neither wise nor financially possible to acquire extensive territory. To have developed additional acreage for which they had no market, would have defeated the very object of a reserve; and to hold such acreage in reserve until an additional supply was needed rendered it probable that the gas would be drained away through the operations of the seven companies in surrounding territory. And when later they required additional gas by reason of the decline of the supply from their own wells or the growth of the communities served, the smaller companies found not only that substantially all available territory had been acquired by the seven companies, but also that such occasional and isolated tracts of gas territory as could be secured were worthless; for the cost of pipe lines to reach these scattered parcels was beyond their financial resources and out of proportion to the value of the project, and the enormous quantities of gas theretofore extracted from the pool by the seven companies had reduced the rock pressure of all wells in the field to the point where compressor stations were necessary adjuncts to transmission of the gas through the lines. In like manner the local companies were unable to reach out into the field to secure the production of the independent producers, for the

amount of such production not held under contracts of sale to the seven companies were small and scattered and entailed the like disproportionate and prohibitive cost of lines and compressor stations (Rec., 1254, 1256. 1269, 1270, 1272, 1278, 1279, 1290, 1291, 1308, 1312, 1330, 1334, 1338, 1361-1362).

PREVIOUS SUPPLY TO LOCAL COMPANIES BY THE SEVEN COMPANIES.

Until the gas shortage of 1916-1917, the lack of reserve territory by the local companies and the diminishing volume of the gas occasioned no practical difficulty in West Virginia; for, notwithstanding the export business of the seven companies and the contracts under which that business was carried on, the local companies, whose own stocks of gas became insufficient, were able to, and did, make up the deficiency by purchases from one or more of the seven companies. (Rec., 1034-1036, 1724, 1728; 1736, at insert pp. 402, 414, 280, 297, 314, 345, 349). The quantities so purchased were readily and easily furnished, since the seven companies were possessed of an ample surplus, and one or more of their trunk lines lay within the immediate vicinity of, or traversed, the areas of service of the smaller companies, and often served consumers in the same community or territory (Rec., 275-277, 1011, 1012, 1037). It was thus a mere matter of connecting the lines of the two companies and discharging gas from the one to the other. Sales by the seven companies to local companies were thus customarily affected for some years prior to the commencement of the shortages to West Virginia

consumers in 1916-1917. The Hope Natural Gas Company was connected with and supplied deficiencies of the several local companies serving Fairmont, Clarksburg, Weston, Pennsboro and elsewhere (Rec., 186, 210, 237, 238, 1035, 1209, 1210). The Carnegie Natural Gas Company was connected with and supplied the several local companies serving Fairmont and Morgantown (Rec., 1034, 1912, 1220). The Pittsburgh & West Virginia Gas Company was connected with and supplied the deficiency of the local companies serving Fairmont and Glenville (Rec., 1034). The United Fuel Gas Company was connected with and supplied the deficiency of the local company serving Dunbar, South Charleston and St. Albans (Rec., 395, 400, 1036).

Many of these sales yet continue during the milder periods of the year, but since the demands in other States have equalled or exceeded the supply, the seven companies have asserted priority of their sales contracts and their obligations to the consumers abroad, and have declined and refused to sell to the local companies during the winter periods, when the requirements of the domestic consumers are greatest, both in amount and necessity (Rec., 276, 277, 1209, 1210, 1230, 1231, 1724, 1728). This refusal has been one of the chief causes of the suffering, inconvenience and losses by West Virginia consumers.

As a result of the foregoing the local companies and the consumers supplied by them are dependent upon the seven companies for a part of their supply. As the production of the local companies decreases, this dependency will necessarily become greater. And if and when the seven companies resort to the process

of suction (to which the compressor stations are readily applicable) to increase the output of their West Virginia wells, the wells and territory of the local companies will be so far depleted as to render their dependence substantially complete (Rec., 1279, 1310-1312). This suction is now a common practice in Pennsylvania, has already begun in West Virginia, and eventually will be resorted to by all the companies (Rec., 345, 346, 1311, 1312). This, of course, means the suction of gas from the entire territory surrounding the pump station, and that no well therein will be capable of producing except by the employment of the like suction or other artificial means of extracting the gas; and, as a necessary result, all local companies dependent upon natural pressure to market and distribute their supply will be effectually driven out of business unless supplied by the seven companies.

PRESENT AND FUTURE GAS SUPPLY.

It is uncontroverted that the gas fields in Ohio, Pennsylvania and Indiana are either exhausted or in progressive process of exhaustion; and that the West Virginia production has passed its peak and for several years has declined rapidly; that no other gas fields are known or in prospect in Ohio, Pennsylvania, West Virginia or neighboring States; that the aggregate production is insufficient to meet the requirements of the consumers in all the States; and that the shortage will increase. (Rec. 132, 210, 296, 327, 328, 335, 431, 458, 459, 558, 701, 702). One of the witnesses for the plaintiffs quotes Dr. I. C. White, a leading authority, to the effect that seventy-five per cent. of the West Vir-

ginia and Ohio gas is gone. (Rec. 607). This witness refers to gas as "a vanishing product." (Rec. 698). He says, "We are approaching the end;" that the termination of the gas business will come "ultimately, just as we know every man will die some time." (Rec. 702, 703).

As already pointed out it was from the very beginning of the use of West Virginia gas by the people of the plaintiff States, inevitable that the production of the West Virginia fields would decline and the gas supply therefrom become insufficient for all consumers. The day came in the winter of 1916-1917. It is now admitted by the seven companies, and by the companies purchasing from them, that their present supplies of gas, including the production in the other States, have been for several years insufficient in winter periods to furnish fuel for the heating of dwellings or otherwise to supply their consumers in Ohio, Pennsylvania, Kentucky and Indiana; and that their ability to serve such consumers has become less and less with each succeeding year. Hence, taking as true the testimony for the plaintiffs, the predicted lack of sufficient West Virginia gas to heat the dwellings and otherwise serve these consumers in the plaintiff States, so elaborately and gloomily charged in the bills of complaint as the necessary result of enforcing the statute in controversy, has already come to pass, has existed for several years, and this lack will certainly increase in the future. This has resulted, and will result, by the process of nature, and not as an effect of the statute, which has never been put into force.

At Columbus, Ohio, there is already a shortage of fifty per cent. in the winter (Rec. 635). A shortage

of twenty-five per cent. on the lines of the Ohio Fuel Supply Company in the winter of 1920-1921, was predicted in testimony given in 1920. (Rec. 697, 698). At Cleveland, served by the East Ohio Gas Company, there was a shortage of over 50,000,000 feet a day in the winter of 1918-1919 (Rec. 577).

The vice-president of the Hope Natural Gas Company fixes the maximum life of the present gas supply at ten or fifteen years (Rec. 349). The president of The Philadelphia Company states that at the present rate of consumption he will be very much surprised if it lasts ten years (Rec. 507). The record contains other estimates of similar character, with some variation in estimated periods (Rec. 481, 943).

The seven companies have an aggregate territory in West Virginia, which, since the year 1910, at all times has exceeded 2,400,000 acres with only 689,205 acres thereof developed up to 1920 (Rec. 1736, insert p. 391). The required quantity of gas for all consumers probably could be provided by the drilling of additional wells. In 1919, the last year for which statistics are available, the seven companies drilled fewer wells than during any other year in the ten years covered by the statistical table (Rec. 1023); and there was a marked decrease in the number drilled in 1918 as compared with those drilled in 1917. The United Fuel Gas Company, holding the second largest acreage and the least developed territory of the seven companies in 1919, drilled only 15½ producing gas wells and abandoned the same number (Rec. 1736; insert p. 313). A managing officer of the Hope Natural Gas Company and Reserve Gas Company frankly recognizes that the required sup-

ply could be had if enough wells were drilled, and that it is merely a question of whether the residuum of gas in the West Virginia fields is to be produced and utilized over a shorter or longer period. He says, "It is just up to the people what they are going to do with it;" that the companies "can use it up in two or three years," or "can extend it over a period of ten or fifteen years." (Rec. 349). If development is to proceed as before, in the known fields and sands, and the rate of well drilling is to go on as previously, so that the natural decline will be overcome, the exhaustion of the West Virginia gas will only be hastened.

There remain, aside from the complete development of the presently commercial sands by the customary methods of drilling and operation, the tenuous hope (Rec. 713), none too confidently expressed, that additional paying gas sands may be discovered by the highly expensive and yet unsuccessful drilling of deeper wells (Rec. 135, 325, 433, 435); and the application of suction to the wells in the known sands, which process will but hasten the depletion of the sands and the exhaustion of the gas (Rec. 345, 346, 1311, 1312).

Remedies for Gas Shortage.

What is a reasonably adequate supply of gas to the individual consumer is better expressed by description than by definition.

The consumption of gas has its distinguishing characteristics. Its supply has been aptly described in the record as the rendition of a service rather than the delivery of a commodity (Rec. 1434, 1435, 1652). For cooking, hot water heating and the heating of dwelling-

houses, stores, office buildings, churches, schools and other public and private buildings, as well as for the conduct of industries, gas is valuable according to its constant availability and adequacy. No reserve can be stored on the consumers' premises, as with coal, oil or wood. When needed it is needed immediately and the cost of equipping the premises for the occasional use of other fuel is as great as for a complete change. An intermittent service is undesirable, and unless the service of gas can be made constant and dependable, the value of its use is substantially destroyed. Continuity and dependableness of supply are essential, especially to domestic service. (Rec. 48, 214, 674, 675, 677, 525). This feature, admitted throughout the testimony, is well expressed by Judge Reed, president of The Philadelphia Company, in testifying as to the practicability of apportioning an inadequate supply. He says (Rec. 525):

"A. * * * You can't satisfy a man by giving him 50 per cent. of his requirements. His wife can't cook with it, and his house is cold. He either wants all or nothing.

Q. * * * The fact is, that to properly supply a thousand consumers is better than to improperly supply 2,000; is that the fact?

A. That is the fact; yes, sir."

To the same effect is the testimony of the witness Wyer (Rec. 1437, 1668), who says "that usable service to a limited number is better than poor or no service to a large number," and recognizes this feature to be one of "the inherent characteristics and natural limitations of the natural gas industry."

This being the character of gas consumption and service, if the volume is insufficient for all, it is obvious that a remedy devised and enforced by someone is essential, and that if man does not voluntarily provide the remedy nature will compel it. The manifest course, in view of what has been said, is the limitation of consumption either in respect of the purpose of use or by restriction of the area of service. And it appears that ultimately the restriction of area of service must come, even in the absence of the statute. The witnesses for the plaintiffs admit that in any event, in time of shortage, the shortage is first and most severely felt at the points farthest from the sources of supply, and that consumers nearest those sources obtain relatively the better service. (Rec. 392, 393, 1436). It is also admitted that service to remote consumers is more costly and subject to losses by leakage in transportation. The contracts already referred to show that the gas companies themselves have theoretically recognized the paramount claims of the domestic consumers of West Virginia. (And see Rec. 50, 51).

But without anticipating the argument, our present purpose is to point out that though the seven companies oppose the legislative remedy, they and their officers are in the main wedded to the doctrine of *laissez faire*, with the corollary of uncontrolled discretion of themselves. And, where in cross-examination these specialists have been driven to suggest a remedy, they are at sea and disagree among themselves, agreeing only that West Virginia consumers are getting too great a share of West Virginia gas. Certain of them advocate restriction of the use to cooking and hot water heating for domestic purposes (Corrin, 348); others sug-

gest limiting the quantity allowed to each consumer (Tonkin, 441-3); others are positive the real remedy lies in increasing the price to the point where the consumer will himself cut down the amount used (Daly, 608; Freeman, 475-477); others say that eventually the number of consumers must be decreased and the area of service contracted toward the source of supply (Quay, 134, 163-9; Denning, 698, 703, 704; McMahon, 732; Whitcomb, 805; Anderson, 855, 856). One suggests that the constantly increasing inadequacy of service will eventually remedy itself by driving many consumers to the use of other fuel, leaving the small volume of gas to fewer and more persistent customers (Rec. 134). Some of the officials of gas companies frankly confess that they do not know what can be done (Judge Reed, 525; Sullivan, 297).

All of these witnesses, officers of gas companies, declare necessary the use of gas for industrial purposes whenever there is a surplus over the needs of the domestic consumers, and state that the industrial consumption is financially necessary to the gas company and aids to keep down domestic rates (Rec. 288, 328, 437, 476, 525-526). One witness for the plaintiffs (Wyer, 942), advocates the complete elimination of gas for industrial use and the limitation of the classes of domestic use, as a matter of conservation, and eventually the cutting off of consumers in the remote areas of service. This, he says, will diminish the volume transported from West Virginia to other States. (Rec. 942, 943, 967, 968).

The enrichment of natural gas with artificial gas has been suggested, with ultimate resort to artificial

gas alone. (Rec. 803). But it is stated that the combination of artificial with natural gas has not yet been successful. (Rec. 506, 507). The substitution of artificial gas in the pipe-line systems is still in an experimental stage. (Rec. 428).

Since, then, the major portion of the gas used by consumers in the plaintiff States comes from West Virginia through its public service corporations, the necessary result of each of these suggestions, except that of contraction of area of service, is the same; that the adjustments of West Virginia consumers must be made, and their uses of gas must be regulated and restricted, according to the requirements of the consumers in Ohio, Pennsylvania, Indiana and Kentucky, and without regard to the character or extent of the public service undertaken by these corporations in West Virginia and their duties to that State.

The reasonable anticipation, if regulation were to be left to the gas companies, is accurately gauged by the denial of the plaintiffs of West Virginia's regulatory power, if and when its regulations affect the quantity of gas transported to the other States, regardless of consequences in and to West Virginia; by the predictions of injury to the other States and gas companies operating therein, by the withdrawal of any West Virginia gas from export (Rec. 222, 447, 526, 587, 605, 606, 673, 729, 854, 972, 973); by the insistence by an officer of one of Ohio gas companies on his company's peak load requirement in time of shortage (Rec. 697); and by the thought expressed by some witnesses for the plaintiffs, exemplified by Anderson, another engineer of these companies, that, irrespective of the

statute, any increased consumption in West Virginia, even because of increased population, would prejudice the other States (Rec. 854):

"Q. Would any increase of consumption in West Virginia have the result of depriving Pennsylvania and Ohio consumers?

A. It would have the result of depriving them to that extent, I think.

Q. That is, for every 1,000 feet of added consumption in West Virginia, consumers in Pennsylvania and Ohio will be deprived to that extent?

A. I think so.

Q. And to the extent that the gas companies are prevented from furnishing that 1,000 feet in Pennsylvania or Ohio, those companies will suffer a loss in their plants, or the operation of their plants?

A. And profits.

Q. I want to ask you whether the inconvenience in Pennsylvania and Ohio, resulting from the consumption of this extra 1,000 cubic feet of gas in West Virginia, would occur, whether that extra consumption were brought about by the enforcement of this statute, or brought about by additional consumers, or some other cause?

A. It would occur in the same way and to the same extent.

Q. In other words, if some citizen of New York or New Jersey should move to Clarksburg, West Virginia, and add to the population that way, and consume gas for domestic purposes, some Pennsylvania or Ohio consumer, or the consumers in those States in the aggregate,

would be deprived and inconvenienced to that extent?

A. Providing he was located on the lines of some of these interstate companies.

Q. That is what I mean.

A. Where he could obtain some of their supply, or possible supply."

And see, in similar strain, the testimony of Wyer (Rec. 972, 973):

"Q. It is, however, your idea, regardless of the class of consumption that, to the extent of the increase of every thousand feet of consumption in West Virginia, there would be a corresponding diminution of supply in the other States?

A. If the act in question were enforced, there would be no supply in the other States coming from West Virginia.

Q. Suppose we forget about the act and answer the question in the light of the fact that you have declared it unconstitutional?

* * * * * * *

Q. Putting the thing in this way: Suppose that for some unknown reason a resident and citizen of Massachusetts moves to Clarksburg, West Virginia, with his family, and by reason of the added population, theoretically assumed to be five, you have one more gas consumer and a matter of consumption of 5,000 cubic feet of gas a month. Would the effect of that added 5,000 cubic feet of consumption be to diminish the supply in Pennsylvania and Ohio and that regardless of this statute?

A. It would not affect the supply in Pennsyl-

vania or Ohio, but it would reduce the amount of gas that could be transported out of the State by the amount that would be used in West Virginia. * * *

Q. Put it at 1,000 instead of 5,000. There would be in principle and in effect a corresponding diminution and increase?

A. Yes, an increased demand which must, of course, be met from the local gas supply. I think you misunderstood my former answer. The thing I wanted to drive home was that the consumption per domestic consumer would not be very greatly increased unless there were a very radical reduction in prices from the condition you have now.

Q. You would expect to cut down the domestic consumption by raising the price?

A. A raise in price will cut it down. The increased price is the only thing that will adequately conserve natural gas."

EFFECT OF THE STATUTE.

Many predictions are made by witnesses for the plaintiffs as to the injurious effect on the gas supply of the other States, if the statute here involved, is enforced. These, of course, are "mere prophesies which are ventured" (*Tanner vs. Little*, 240 U. S., 369, 385). The statute has not been tested in operation. "The fact must be tested by the actual transaction" (*Western Union T. Co. vs. Speight*, 254 U. S., 17).

Some of the witnesses for the plaintiffs admitted that a reasonably adequate supply of gas for domestic

use in West Virginia would permit "a fairly adequate service" in Pennsylvania and Ohio, "a reasonably adequate service" to domestic consumers along the lines of their companies in the other States (Rec. 145, 146, 406, 407).

The stress of the contention of the plaintiffs is directed to West Virginia industrial consumption, and to the carbon-black industry. The facts concerning the relatively small and uninfluential carbon-black business are referred to in the margin.*

Gas Used by Carbon Companies.—Carbon-black manufacturing companies in West Virginia consumed in 1919 approximately nine per cent. of the production of the State. An engineer for some of the seven companies, testifying for the plaintiffs, argues the alleged wastefulness of this use of gas, and points out that the quantities so used would provide the deficiency in supply of West Virginia consumers. It is shown by West Virginia that gas for carbon making has never been a customary or public use of gas; that no tariff or provision therefor has been made by the Public Service Commission, and that no public service corporation uses or serves gas for such purpose, except the United Fuel Gas Company, which operates a carbon plant for the utilization of isolated, low-pressure gas (Rec., 991-993, 1060, 1061, 1075). A like plant is operated by the South Penn Oil Company, an oil subsidiary of the Standard Oil Company owning the Hope Natural Gas Company, to which the South Penn markets most of its gas.

In addition to the private character of these carbon companies and their gas supply, their product can only be made from natural gas, and is an essential element of important manufactured products (Rec., 1100, 1101, 1130, 1131, 1137). Generally their gas territory and production are located at remote points. They are rapidly going out of business because of the increase in value of the gas for other purposes (Rec., 993, 1040, 1060, 1098, 1151, 1137, 1327, 1349). And since the lines of the seven companies afford practically the only market therefor, the gas of the carbon companies now marketed does not materially aid West Virginia consumers; nor would the entire diversion thereof from carbon-black add appreciably to the supply of West Virginia consumers (Rec., 1349). Aside from the questionable right of the plaintiff States to dictate the employment of West Virginia gas, compare the practically exclusive use by Carnegie Natural Gas Company of its supply from both West Virginia and Pennsylvania fields for steel making, in which other fuel is readily usable; the amount of West Virginia gas so used by this one company averaging three-fourth of the annual quantity used for carbon-black in West Virginia during the last decade (Rec., 925, 926, 992; also W. Va. Exhibit No. 19, Rec., 1736, insert pp. 414-423).

In the light of what has already been said, and the concurring views of the officials of the seven companies, already referred to, that the industrial use is advantageous both to the companies and the domestic consumers, and that gas always has been, and is still used in large volumes in the plaintiff States and elsewhere, no special reference to the past use seems requisite.

As to the present it is to be observed that many of the factories in West Virginia have already been altered so as to consume coal and produce gas artificially manufactured from coal (Rec., 1229, 1230, 1345), thus reducing the industrial gas requirements of the State.

In respect of the future, the high price of natural gas, constantly rising, prevents profitable competition with producer gas, except in the few processes to which natural gas is more especially adapted (Rec., 1226-1227, 1230, 1345, 1346, 509), and when once an industry has installed producer gas, even a temporary seasonal supply of natural gas—as in the summer—would not compensate for the disorganization consequent on the change from producer to natural gas (Rec., 1228).

Testimony was given on behalf of the plaintiffs to the effect that the enforcement of the statute would absorb for West Virginia its entire gas production. This, as already said, lies in assertion and prophecy, based largely on speculation and hearsay, coupled with the erroneous assumption that the statute compels not reasonably adequate service to the particular consumers and distributing companies in specified territory,

but that the whole production of the State is to be pooled and all consumers are to receive all the gas they may choose to demand (Rec., 123, 300-302, 446, 840, 841, 970, 971). These general forecasts, of course, also leave out of view the circumstances already detailed, diminishing the probable industrial consumption in West Virginia and the jurisdiction of the Public Service Commission to limit consumption to reasonable adequacy, as well as to compel reasonably adequate service.

The character of the plaintiffs' evidence on the point may be summarized by reference to the testimony of their witness Anderson, an engineer employed by several of the seven companies, who supplies alternative estimates of increased industrial consumption in West Virginia, in case of the enforcement of the statute, as follows: on one theory, 98,628,380 M cubic feet; on another, 55,017,359 M cubic feet; on another, 38,468,334 M cubic feet, and on still another, 32,959,471 M cubic feet (Rec., 824, 825, 836-839).

The fallacy of Anderson's figures, as well as the speculative general forecasts of other witnesses seems sufficiently to appear from the fact that in the year of its largest consumption, the whole consumption of gas available for public service, was only 59,409,460 M cubic feet out of a total supply of 259,414,200 M cubic feet in the hands of the public service companies (Rec., 996). Witnesses for West Virginia testify, and the industrial conditions already stated are persuasive, that even this 1916 consumption will, insofar as the industrial element is concerned, be greatly reduced (Rec., 1345-1346).

CONTENTIONS OF WEST VIRGINIA.

It is the contention of West Virginia:

1. That these cases present no controversy between States, but are in reality controversies between West Virginia and its public-service gas companies, in attempted vindication of whose alleged rights the plaintiffs have become nominal suitors.

2. That these suits are premature, since at the time of their commencement the statute in controversy had not been tested in practice; and there was no threatened injury of serious magnitude, clearly or convincingly proved or susceptible of such proof.

3. That the West Virginia gas companies, and especially the seven companies controlling the West Virginia gas supply and transporting the major part of the gas to or for consumption in other States, while a shortage exists in West Virginia, are West Virginia public service corporations, owing their existence and their ability to transport gas to other States to the special rights and privileges granted by West Virginia upon the condition that a reasonable adequate service would be rendered to West Virginia consumers.

4. That the business of the gas companies and their gas, in the existing condition of shortage, are affected with the public interest of West Virginia.

5. That the duty to render a reasonably adequate service to West Virginia consumers extends alike to domestic users, public buildings and institutions and industrial users.

6. That under the conditions of existence of the gas companies, both implied and expressly reserved, and in the exercise of the police power, it was within

the province of West Virginia to enact the statute in contest, and that the statute was and is necessary and reasonable in its provisions.

7. That the requirement of reasonable adequacy of service to industrial consumers, and the clauses requiring in certain circumstances (and under the safeguards of a hearing and determination before the Public Service Commission, with opportunity for judicial review) the furnishing of gas deficits to local companies, were and are justified and proper.

8. That the gas companies cannot by engagement in interstate commerce, or the desire so to do, evade or abandon their duty to render reasonably adequate service in West Virginia, and that if interstate commerce is engaged in by them, it is and must be in subordination of their duty to West Virginia and the regulating power of that State.

9. That interstate commerce is not regulated, nor was it intended so to be; that any effect on such commerce would be only indirect and incidental.

10. That the statute does not infringe upon any guaranty of the Federal Constitution.

11. And that the plaintiffs have no just ground for complaint against West Virginia and have established no case against it.

Argument.

I.

THE BILL IN EITHER CASE DOES NOT PRESENT A CAUSE JUSTICIABLE BETWEEN THE TWO STATES PARTIES TO THE ACTION.

In the motions to dismiss contained in the answers we have assigned, among other grounds, that these cases present no controversy between States within the meaning of Article 3, Section 2, of the Constitution. The general trend of the evidence has fortified in fact the objection in law. The jurisdictional objection is emphasized by the fact, not to be blinked, that while sovereign States have sued, these cases are controversies between West Virginia and certain gas companies. Respecting the plaintiff States and their dignity, West Virginia shrinks from impugnment of their motives. But without intimating any unworthy design, we have no alternative except to question the jurisdiction—the preliminary question in every case. And, indeed, in *Kansas vs. United States,* 204 U. S., 331, this Court said:

> "In these circumstances we think it apparent that the name of the State is being used simply for the prosecution in this Court of the claim of the railroad company, and our original jurisdiction cannot be maintained."

The substantial ground upon which the plaintiffs sue is the individual grievances of their citizens sought

to be redressed by the plaintiffs in their character of *parens patriae.*

The statute complained of is local in character and applies to gas produced within West Virginia, while yet within its borders and in the hands of its public service corporations. The plaintiffs have no ownership of, or property interest in, the gas in its original character as a natural resource of West Virginia, or at any time thereafter during the successive stages of production, transportation or marketing thereof to the ultimate consumer. Neither does the statute in anywise affect, modify or trench upon any governmental or corporate power of the plaintiffs; nor does its operation impair the integrity of, or exert any force upon, or prejudicially affect any land, stream or other property within the territorial jurisdiction of the plaintiffs. The thing most clamorously complained of is the assumed interference with the export of the gas in interstate commerce, and the consequential interference with the ultimate delivery thereof to citizens of Ohio and Pennsylvania. Subsidiary and trifling in comparison are the complaints of shortage of gas in municipalities and public institutions,—a matter aptly characterized in the language of Mr. Justice Holmes in *Georgia vs. Tennessee Copper Co.*, 206 U. S., 230, 237, as "merely a make-weight." A further grievance sought to be appropriated by the plaintiffs as their own, is the alleged injury to the companies and persons engaged in West Virginia gas operations, the property and business of which, it is predicted, will be prejudiced by the enforcement of the statute.

The mere fact that States are named as parties does not conclude the question of jurisdiction, or characterize a cause as justiciable between States.

Kentucky vs. Dennison, 24 How., 66;
New Hampshire vs. Louisiana, 108 U. S., 76, 89;
New York vs. Louisiana, 108 U. S., 76, 89;
Wisconsin vs. Pelican Ins. Co., 127 U. S., 265, 287;
Missouri vs. Illinois, 180 U. S., 208, 239;
Kansas vs. United States, 204 U. S., 331, 341;
Oklahoma vs. Atchison, T. & S. F. R. Co., 220 U. S. 277, 289;
Oklahoma vs. Gulf, C. & S. F. R. Co., 220 U. S. 290, 298.

Whether a suit is against a State, in the constitutional sense, is a matter of substance and effect, not to be determined by the names of the parties.

Louisiana vs. Jumel, 107 U. S., 711, 726;
Hagood vs. Southern, 117 U. S., 52, 69;
Minnesota vs. Hitchcock, 185 U. S., 373, 387;
Murray vs. Wilson Distilling Co., 213 U. S., 151, 158;
Louisiana vs. McAdoo, 234 U. S., 627, 629, 632.

In *New Hampshire vs. Louisiana*, and *New York vs. Louisiana*, *supra*, it was considered that as the plaintiffs had no interest in the bonds sued on, they were mere nominal parties, and that no controversy between States was involved.

As remarked by Mr. Justice Gray in *Wisconsin vs. Pelican Ins. Co.*, *supra*:

"Yet notwithstanding the comprehensive

> **words of the Constitution, the mere fact that a State is the plaintiff is not a conclusive test that the controversy is one in which this Court is authorized to grant relief against another State or her citizens."**

Conceding that no hard and fast line has yet been drawn delimiting the justiciable and the non-justiciable between States (*Missouri vs. Illinois*, 180 U. S., 208, 241), we think that a brief survey of the cases and the mode of their disposition (*Wisconsin vs. Pelican Ins. Co.*, 127 U. S., 265, 287, 297) readily marks the present litigation as falling within the latter category. It is not the "subject of judicial cognizance" (*Hans vs. Louisiana*, 134 U. S., 1, 15; *Louisiana vs. Texas*, 176 U. S., 1, 15; *Missouri vs. Illinois*, 180 U. S., 208, 233) or "susceptible of judicial solution" (*Louisiana vs. Texas*, 176 U. S., 1, 18, 22; *Missouri vs. Illinois*, 180 U. S., 208, 233, 234).

Of the cases of which this Court has taken original jurisdiction the most numerous have been those relating to the boundaries or territorial integrity.

> *Virginia vs. West Virginia*, 11 Wall., 39;
> *Wisconsin vs. Pelican Ins. Co.*, 127 U. S., 265, 288;
> *Louisiana vs. Mississippi*, 202 U. S., 1, 35, 36;
> *Virginia vs. West Virginia*, 246 U. S., 565, 591, note.

In another class of cases jurisdiction was exercised because of a nuisance by the invasion of the plaintiff States by sewerage or disease germs polluting their waters and soil, to the injury, actual or threatened, of the

lives, health and property of the citizens of those States. Examples are *Missouri vs. Illinois,* 180 U. S., 208, 200 U. S., 496; and *New York vs. New Jersey,* U. S., Adv. Ops., 1920-21, p. 544. Falling within the same category is *Georgia vs. Tennessee Copper Co.,* 206 U. S., 230, 237, in which it was remarked by Mr. Justice Holmes that in the capacity of quasi-sovereign:

> "A state has an interest independent of and behind the titles of its citizens in all the earth and air within its domains."

These nuisance cases are identical in principle with the boundary cases. The sovereign rights and territorial integrity of a State may be as effectually invaded or infringed by the casting or precipitation thereon of intangible, but nevertheless noxious, bacteria or gases as by visible seizure of its lands. In *Kansas vs. Colorado,* 206 U. S., 46, 97, the case of *Missouri vs. Illinois* was referred to by Mr. Justice Brewer as one in which "the action of one State reaches, through the agency of natural laws, into the territory of another State."

Kansas vs. Colorado, 185 U. S., 125, 206 U. S., 46, in which jurisdiction was sustained, was similar in aspect. Not only was the territorial integrity of Kansas affected by Colorado's diversion of the waters of the Arkansas River, which in the course of nature would have flowed into Kansas; but also Kansas claimed to be injured in its capacity as the owner of a "large tract of land bordering on the Arkansas River." (206 U. S., 99).

In *Pennsylvania vs. Wheeling & B. Bridge Co.,* 13 How., 518, the suit was treated "as brought to protect

the property of the State of Pennsylvania." (*Wisconsin vs. Pelican Ins. Co.*, 127 U. S., 265, 296). Mr. Justice McLean said, at pages 559 and 561:

> "The State of Pennsylvania is not a party in virtue of its sovereignty. It does not come here to protect the rights of its citizens. The sovereign powers of a State are adequate to the protection of its citizens and no other jurisdiction can be exercised over them, or in their behalf, except in a few specified cases. Nor can the State prosecute this suit, on the ground of any remote or contingent interest in itself. It assumes and claims, not an abstract right, but a direct interest in the controversy. * * * It asks from the Court a protection of its property, on the same ground and to the same extent that a corporation or individual may ask it."

Another class of cases has been those of contract,—of indebtedness from one State to another, or to the creditors of the latter, from the debts to whom the plaintiff was entitled to exoneration at the hands of the defendant.

South Dakota vs. North Carolina, 192 U. S., 286;

Virginia vs. West Virginia, 206 U. S., 290; 220 U. S., 1, 26-28; 238 U. S., 202, 208;

United States vs. North Carolina, 136 U. S., 211;

United States vs. Michigan, 190 U. S., 379.

Comparison of *South Dakota vs. North Carolina* and *Virginia vs. West Virginia* with *New Hampshire*

vs. Louisiana, supra, indicates that jurisdiction in the former cases was predicated upon the property rights in the plaintiff States or the protection of their corporate credit.

In all of the foregoing cases in which jurisdiction was upheld, the object was to maintain the territorial integrity of the plaintiff (as in the boundary cases and in *Kansas vs. Colorado*), or to prevent the invasion of its territory (even though the invasion may have been by the intangible instrumentality of disease germs, as in *Missouri vs. Illinois* and *New York vs. New Jersey,* or a noxious gas, as in *Georgia vs. Tennessee Copper Co.*), or to recover the property or uphold the credit of the plaintiff (as in *South Dakota vs. North Carolina* and *Virginia vs. West Virginia*).

But neither in those cases nor elsewhere have we found an instance in which this Court has entertained original jurisdiction predicated solely upon the right of the plaintiff State as *parens patriae,* or as the representative of its citizens, to enforce their private grievances or to protect their private claims arising out of the enforcement of the law of another State, in the absence of a special or additional right of the character above indicated in the plaintiff State itself.

In *New Hampshire vs. Louisiana*, 108 U. S., 76, 89, 90, and the companion case of *New York vs. Louisiana,* it was strongly pressed that the plaintiffs might prosecute the suits "because, as the sovereign and trustee of its citizens, a State is 'clothed with the right and faculty of making an imperative demand upon another independent State for the payment of debts which it

owes to citizens of the former.' " But jurisdiction was denied on the ground that the plaintiffs had no interest in the bonds sought to be collected.

In *Louisiana vs. Texas,* 176 U. S., 1, the plaintiff sought to enjoin enforcement of quarantine laws of the defendant, because of their discrimination against and injurious effect on citizens of Louisiana engaged in commerce between the two States. In declining jurisdiction, Mr. Chief Justice Fuller said:

> "It is in this aspect that the bill before us is framed. Its gravamen is not a special and peculiar injury such as would sustain an action by a private person, but the State of Louisiana presents herself in the attitude of *parens patriae*, trustee, guardian, or representative of all her citizens.
>
> "She does this from the point of view that the State of Texas is intentionally absolutely interdicting interstate commerce as respects the State of Louisiana by means of unnecessary and unreasonable quarantine regulations. Inasmuch as the vindication of the freedom of interstate commerce is not committed to the State of Louisiana, and that State is not engaged in such commerce, the cause of action must be regarded, not as involving any infringement of the powers of the State of Louisiana, or any special injury to her property, but as asserting that the State is entitled to seek relief in this way because the matters complained of affect her citizens at large. Nevertheless, if the case stated is not one presenting a controversy between these States, the exercise of original jurisdiction by this Court as against the State of Texas cannot be maintained."

In a concurring opinion Mr. Justice Harlan said:

"But I am of opinion that the State of Louisiana, in its sovereign or corporate capacity, cannot bring any action in this Court on account of the matters set forth in its bill. The case involves no property interest of that State. Nor is Louisiana charged with any duty, nor has it any power, to regulate interstate commerce. Congress alone has authority in that respect. When the Constitution gave this Court jurisdiction of controversies between States, it did not thereby authorize a State to bring another State to the bar of this Court for the purpose of testing the constitutionality of local statutes or regulations that do not affect the property or the powers of the complaining State in its sovereign or corporate capacity, but which at most affect only the rights of individual citizens or corporations engaged in interstate commerce. The word 'controversies' in the clauses extending the judicial powers of the United States to controversies 'between two or more States' and to controversies 'between a State and citizen of another State,' and the word 'party' in the clause declaring that this Court shall have original jurisdiction of all cases 'in which a State shall be a party,' refer to controversies or cases that are justiciable as between the parties thereto, and not to controversies or cases that do not involve either the property or powers of the State which complains in its sovereign or corporate capacity that its people are injuriously affected in their rights by the legislature of another State. The citizens of the com-

plaining State may, in proper cases, invoke judicial protection of their property or rights when assailed by the laws and authorities of another State; but their State cannot, even with their consent, make their case its case and compel the offending State and its authorities to appear as defendants in an action brought in this Court. If this be not so, we were wrong in *New Hampshire vs. Louisiana*, 108 U. S., 76, in which case it was held that one State could not, by taking charge of demands or debts held by its citizens against another State, acquire the right to bring a suit in its name in this Court against the debtor State."

The principle of *Louisiana vs. Texas* was still later applied in a case all the more forcible because it did not involve interstate commerce, *Oklahoma vs. Atchison, T. & S. F. R. Co.*, 220 U. S., 277. There Oklahoma sought to invoke the original jurisdiction in a suit to enjoin a foreign railroad company from charging more than specified rates on domestic shipments of lime, cement, plaster, brick, stone and crude and refined oil, in violation of an Act of Congress granting rights of way, passed while Oklahoma was a territory and the benefit of which statute the State claimed. In the bill it was alleged that these commodities were essential to the growth of the State; that the violation by the railroad company was a menace to the future of the State; and that if the railroad company was permitted further to operate the railroad in violation of the conditions of the grant contained in the Act of Congress it would be a hindrance to the growth of the State, as well as

an injury to the property rights of its inhabitants. In holding jurisdiction not to exist, Mr. Justice Harlan referred with approval to *Louisiana vs. Texas,* and said that if illegal rates were charged a controversy would exist between each shipper and the Company. He then says in the opinion:

> "But, plainly, the state, in its corporate capacity, would have no such interest in a controversy of that kind as would entitle it to vindicate and enforce the rights of a particular shipper or shippers, and, incidentally, of all shippers, by an original suit brought in its own name, in this court, to restrain the company from applying the Kansas rates, as such, to shippers generally in the local business of Oklahoma. * * * In the present case, the state seeks to enjoin the defendant company from charging more than the Kansas rates on the transportation of lime, cement, plaster, brick, stone, crude and refined oil. But the state, as such, in its governmental capacity, is not engaged in their sale or transportation, and has no property interest in such commodities. It seeks only, as between the railway company and shippers, by a general, comprehensive decree to enforce certain rates, and to compel the railway company to respect the rights of all of the people of Oklahoma who may have occasion to ship such commodities over the railway."

In the same opinion it is further said:

> "These doctrines, we think, control this case, and require its dismissal as not being within the original jurisdiction of this court, as defined by

the Constitution. Under a contrary view that jurisdiction could be invoked by a state, bringing an original suit in this court against foreign corporations and citizens of other states, whenever the state thought such corporations and citizens of other states were acting in violation of its laws to the injury of its people generally or in the aggregate; although an inquiry in violation of law, to the property or rights of particular persons through the action of foreign corporations or citizens of states, could be reached, without the intervention of the state, by suits instituted by the persons directly or immediately injured.

We are of opinion that the words in the Constitution conferring original jurisdiction on this court in a suit 'in which a state shall be a party' are not to be interpreted as conferring such jurisdiction in every cause in which the state elects to make itself strictly a party plaintiff of record, and seeks not to protect its own property, but only to vindicate the wrongs of some of its people, or to enforce its own laws or public policy against wrongdoers generally."

A like conclusion was reached in *Oklahoma vs. Gulf C. & S. F. R. Co.*, 220 U. S., 290, 301, refusing jurisdiction of a suit to enjoin citizens of other States from violation of the prohibition laws of Oklahoma, it being held that the case was not "a suit to which a State shall be a party;" and that a State could not maintain a suit on its behalf, "where the primary purpose of the suit was to protect its citizens *generally* against the violation of its laws by the corporations or persons sued."

And see:

North Dakota vs. Chicago & N. W. R Co., U. S. Adv. Ops., 1921-22, p. 199;

Pennsylvania vs. Wheeling & B. Bridge Co., 13 How., 518, 559;

Cherokee Nation vs. Georgia, 5 Pet., 1, 20, per Marshall, C. J.

From the foregoing it is evident that a suit by one State against another cannot be predicated upon the mere relation of *parens patriae;* that something more than a willingness or desire to vindicate the supposed rights of the plaintiff's citizens is requisite; and that the multiplicity or unanimity of complaints by the citizens of the one State against the acts of the other cannot, by a process of aggregation or combination, be erected into a controversy between States or present a cause justiciable between such States.

If we are correct in the foregoing views, it then follows that no justiciable cause arises by reason of the alleged threatened deprivation or shortage of gas supply to the inhabitants of the plaintiff States. And much the more is this true in respect of the alleged infringement of constitutional guaranties of companies engaged in gas transportation, or of citizens of the plaintiff States alleged to have made investments in West Virginia, "since it is a well settled rule of this Court that it only hears objections to the constitutionality of a law from those who are affected by its alleged unconstitutionality in the features complained of." "The plaintiffs must show that their own rights are infringed."

Jeffrey Mfg. Co. vs. Blagg, 235 U. S., 571, 576;

New York Central R. Co. vs. White, 243 U. S., 188, 199;
Plymouth Coal Co. vs. Pennsylvania, 232 U. S., 531, 545;
Arkadelphia Mill Co. vs. St. Louis S. W. R. Co., 249 U. S., 134, 149;
Dahnke-Walker M. Co. vs. Bondurant, U. S. Adv. Ops., 1921-1922, p. 114.

If original jurisdiction is attempted to be sustained because of the supply of West Virginia gas to municipalities or public institutions in Ohio and Pennsylvania, the jurisdiction is equally negatived by the above cited cases. In *Louisiana vs. Texas,* 176 U. S., 1, 18, it was remarked by Mr. Chief Justice Fuller, in regard to controversies between states,—

"there must be a direct issue between them, and the subject matter must be susceptible of judicial solution."

And again at page 22, it is said that,—

"a controversy between states does not arise unless the action complained of is state action, and acts of state officers in abuse or excess of their powers cannot be laid hold of *as in themselves committing one state to a distinct collision with a sister state.*" (Italics ours).

Later it was said by the same Chief Justice, with the concurrence of Harlan and White, JJ., in their dissent in *Missouri vs. Illinois,* 180 U. S. 208, 249, and not denied in the prevailing opinion of Mr. Justice Shiras, that,—

"it must be made to appear that the States are in direct antagonism as states."

And in *Kansas vs. Colorado,* 185 U. S. 125, 145, the Chief Justice again said:

> "The gravamen of the bill is that the state of Colorado, acting directly herself, as well as through private persons thereto licensed, is depriving and threatening to deprive the State of Kansas and its inhabitants of the water heretofore accustomed to flow in the Arkansas River through its channel on the surface and through a subterranean course across the State of Kansas." * * *

The alleged right to West Virginia gas claimed by the plaintiffs for themselves and their inhabitants, if such right exists, is a right, not against the State of West Virginia, but against the gas companies to whom the plaintiffs and their inhabitants look for their gas supply. If the right exists against the West Virginia public service gas companies by whom the gas is furnished, either directly or remotely, it is manifest that the right can rise no higher than that of the companies themselves. As against the State of West Virginia the claim in substance is, not that West Virginia has directed its action against the plaintiffs, but that by the exercise of governmental power against the public service companies within the boundaries of West Virginia, the plaintiffs are, or may be, affected consequentially.

If, as against some of these companies, as citizens of West Virginia, a suit might conceivably be brought in this Court to compel them to furnish gas to or for the use of the plaintiffs in a sovereign or corporate capacity, it would, at best, involve a controversy between the plaintiff States and such companies and not a controversy between the plaintiffs and West Virginia. This

is a basis of jurisdiction not invoked in the present cases. Whether, if such a suit were brought, it would be necessary for West Virginia to intervene to uphold its statute, and in the interest of a full hearing upon the validity of the statute under which the gas companies ought properly to justify, we need not discuss. But it is apparent that:

(a) On the one hand, whether the West Virginia companies shall furnish gas to or for the plaintiffs, is at most, a matter of controversy between such companies and the plaintiffs, and not a controversy between the plaintiffs and West Virginia, within the meaning of the contitution; and,

(b) The question whether West Virginia may validly regulate its public service corporations in the manner attempted by the statute in litigation, involves a controversy between West Virginia and such corpora tions, and is not a controversy between States within the meaning of the constitution.

In either view,—and both views extend to the full scope of these cases—there is no original jurisdiction in this Court.

II

THE SUITS WERE NOT NECESSARILY PREMATURE MERELY BECAUSE NO ACTION WAS TAKEN BY WEST VIRGINIA OR ITS PUBLIC SERVICE COMMISSON UNDER THE STATUTE. THE SUITS WERE PREMATURE IN THE SENSE THAT AT THE TIME OF THE COMMENCEMENT OF THE SUITS, THE PRACTICAL OPERATION OF THE STATUTE HAD NOT BEEN TESTED, AND NO THREATENED INJURY OF SERIOUS MAGNITUDE WAS CLEARLY OR CONVINCINGLY PROVED OR SUSCEPTIBLE OF CLEAR OR CONVINCING PROOF.

The statute was passed February 10, 1919, and, apart from the injunctions herein, became effective under the West Virginia Constitution (Art. 6, sec. 30), ninety days after its passage, May 11, 1919. The bills were filed later in May, 1919, and the injunctions to prevent enforcement of the statute were issued June 3, 1919. So that no real opportunity occurred to test the statute in actual practice.

By the enactment of the statute, West Virginia imposed on the gas companies referred to the unconditional and mandatory duty to furnish to the specified consumers a reasonably adequate supply of gas (Acts of 1919, Ch. 71, sec. 1), and provided suitable procedure to coerce the performance of that duty by order of the Public Service Commission, which order could be enforced by penalties. (Secs. 2, 3, 4; and see Public Service Commission Act,—Acts of 1913, secs. 11, 17). Re-

covery of damages from disobedient companies was also provided for (sec. 5).

The bills charged, in substance, that, in addition to the infringement of other alleged constitutional rights, the enforcement of the statute would prohibit interstate transportation, and confine to West Virginia and absorb in local consumption the gas which otherwise would have been transported to the other States.

The answers aver, the progressively increasing shortage of gas, the enormous quantities of the gas transported to and for consumption in other States; the inadequacy of the supply to West Virginia consumers, resultant from the diminished production of West Virginia gas and its out-of-state consumption; and the purpose of the statute to compel the public service gas companies to perform their duties. The answers admit that by the furnishing of a reasonably adequate supply of gas for the use of the public in West Virginia, as required by the statute, the volume of West Virginia gas available for transportation to, or for consumption in, the other States, and the quantity of gas so transported, will be indirectly or incidentally diminished, unless the gas companies shall increase gas production in West Virginia. But it is alleged that in case of the failure to increase the production of West Virginia gas, whether or not the quantity transported to the other States will be appreciably decreased will depend in a large degree upon the apportionment of the gas transported from West Virginia by the seven large companies named among the several States desiring to consume the same. It is among other things denied that enforcement of the statute will require all, or substan-

tially all, of the West Virginia gas; or that the transportation of gas from West Virginia to the other States will be prohibited; or that the furnishing of a reasonably adequate supply to the West Virginia public, will require or consume any large proportion of the gas transported to, or for consumption in, other States. (Answer to Ohio bill, pp, 33, 34; answer to Pennsylvania bill, pp. 33, 34.) Aside from the manifest intention of West Virginia to enforce the statute, its purpose to impose fines, penalties and imprisonment in accordance with the statute, for disobedience of the authorized orders of the Public Service Commission, is specifically alleged. (Answer to Ohio bill, p. 40; answer to Pennsylvania bill, p. 44).

The proofs to which we have already sufficiently referred, showed the shortage of gas, which was to be anticipated from the beginning; that no further sources of supply were known or probable; that prior to the enactment of the statute the apportionment of West Virginia gas as between the consumers in that State and elsewhere was in fact determined by the gas companies, to the detriment of the West Virginia consumers; and that augmentation of the supply to West Virginia consumers would correspondingly subtract from the volume apportionable to consumers in the other States.

We think that the bills were timely in a single aspect, involving the broadest concessions in favor of the plaintiffs. Assuming that justiciable claims are presented by the plaintiffs in the character of *parens patriae* or as representatives of the whole body of gas consumers or inhabitants of the plaintiff States; and assuming further that any diminution of the quantity of

gas transported to those States, as a result of West Virginia's legislative action, affords ground for a more than frivolous contention that their gas consumers or inhabitants in the aggregate will be unconstitutionally deprived of gas or interfered with in the carrying on of interstate commerce—the bills were not premature.

With the foregoing assumptions, we think that if ever the plaintiffs, in the capacity of *parens patriae*, were to possess a justiciable right to contest the validity of the statute—though we deny the justiciable right—the right existed as well on the day of the filing of the bills as it could or would at any future time, insofar as they could supply the proof requisite in a controversy between States. The West Virginia public service gas companies were then subject to legislation which threatened a multiplicity of actions at law and proceedings before the Commission, calculated to enforce obedience (see *Smyth vs. Ames*, 169 U. S., 466, 518; *Ex parte Young*, 209 U. S., 123, 163).

Smyth vs. Ames, 169 U. S., 446;
Ex parte Young, 209 U. S., 123;
Public Service Co. vs. Corboy, 250 U. S., 153;
Bacon vs. Rutland R. Co., 232 U. S., 135;
Coal & Coke R. Co. vs. Conley, 67 W. Va., 129, 138, 67 S. E., 613;

That West Virginia, after enacting the statute and providing appropriate procedure and sanctions, or its Public Service Commission, has taken no additional action, does not appear to us to affect the question of prematurity from this standpoint. If further action by the State or Commission were requisite, what action must it be? Would it be enough that one aggrieved con-

sumer should complain to the Commission? Or must the Commission proceed to final order in his case? Would it suffice that the order should affect a few thousand cubic feet of gas, the deprivation of which would be inappreciable in the other States; or must there be a multiplication of proceedings, until, and under such circumstances that, the aggregate of deprivation becomes appreciable or of serious magnitude?

In *Ex Parte Young*, 209 U. S., 123, the injunction suits out of which the contempt proceeding arose were instituted on the day preceding that on which the statute was to become a law, the plaintiffs being stockholders of railroad companies again seeking to enjoin compliance with a State law fixing rates, alleged to be confiscatory. The question of prematurity of suit was urged in the contention that the constitutionality of the statute should be tested by disobeying it "at least once,' and defending against the consequences. But this Court refused to adopt this point of view.

While, therefore, we think that the suits were not premature as an attempt to show, in advance of further action on the part of West Virginia, that the statute is invalid on the ground that its enforcement would or might diminish the volume of West Virginia gas available for transportation to other States, the suits in every other aspect were premature.

Despite the argument of the plaintiffs to the contrary, it is hardly deniable that West Virginia possesses at least some right and power of regulation of its public service gas companies, to compel them to furnish gas to West Virginia consumers. The statute of Ohio, pre-

scribing "necessary and adequate service and facilities, which shall be reasonable and just," and the Pennsylvania law, requiring service "reasonably adequate and practically sufficient for accommodation of its patrons, employes and public," are substantially identical with the primary requirement of the statute now in question.

Ohio Gen. Code, sec. 614-12;

Penn. Public Laws of 1913, p. 1374; *Pub. Service Com. Laws*, Art. I, sec. 1.

Assuming, then, the possession by West Virginia of some power in the premises, and keeping in mind the established fact that an inadequate service is equivalent to none, the right and power of West Virginia must logically extend to something more than the compulsion of a worthless service. They must embrace the requirement of a reasonably adequate service.

And assuming the right and power of West Virginia to require a reasonably adequate service to its consumers, the effects of that requirement upon the plaintiffs and their citizens will necessarily depend upon the manner and extent of the application of the statute. To decide now, once and for all, the validity of the statute, would call upon the Court to determine from conflicting evidence,—much of it entirely conjectural,—the amount of gas requisite to afford a reasonably adequate supply for the designated West Virginia consumers; the probable action of the Public Service Commission; the reasonableness and effect of that action; the varying circumstances of the individual gas companies and the localities in the plaintiff States deriving gas from or through them; the extent of the diminution of the gas transported to the other States, by

reason of the operation of the statute, and the apportionment which the gas companies would make among the other States. These and other matters, readily occurring to the mind, rest as yet in the domain of either the disputable or the speculative. It is, of course, settled that "a statute may be invalid as applied to one state of facts, and yet valid as applied to another." (*Dahnke-Walker Mill Co. vs. Bondurant,* U. S. Adv. Ops., 1921-1922, p. 114, decided December 12, 1921).

Unless in this situation of the case this Court can now definitely anticipate and determine that the administration of the statute by West Virginia will necessarily and under all circumstances be in excess of the legitimate right and power of that State and constitute an abuse of that right and power, and that as a result an injury of serious magnitude will be inflicted on the plaintiffs or their citizens, these suits are premature.

In *Prentis vs. Atlantic Coast L. Co.,* 211 U. S., 210, in which the question of prematurity of the suit arose, the decision turned upon the fact that the rates fixed by the Virginia Corporation Commission were subject to review and change upon an appeal to the Court of Appeals of that State. It was thought by this Court that the railroad companies, in filing their bills in advance of application to the Court of Appeals, did not "make sure that the State, in its final legislative action, would not respect what they think their rights to be, before resorting to the Courts of the United States." And it was added that when, upon application to the Court of Appeals, "the rate is fixed, a bill against the Commission to restrain the members from enforcing it, will not be bad as an attempt to enjoin legislation, or

as a suit against a State, and will be the proper form of remedy." (211 U. S., 230).

Subsequently, in *Bacon vs. Rutland R. Co.*, 232 U. S., 135, it was said that in the *Prentis Case* it was held proper, before resorting to the Circuit Court of the United States, "to make sure that the officers of the State would try to establish an unconstitutional rule." (232 U. S., 137).

In *Wadley S. R. Co. vs. Georgia*, 235 U. S., 651, it was held that an order of the railroad commission could not be assailed in a suit to recover penalties for its violation, where the defendant has not proceeded in the manner prescribed by the statute to test the validity of the order.

The recent decision in *Oklahoma Nat. Gas Co. vs. Russell*, U. S. Adv. Ops. 1922-23, p. 395, concerned only a *pendente lite* remedy, during appropriate procedure in the State court.

But irrespective of the non-action of West Virginia or its Public Service Commission, the result is the same, unless it be held that any and every act of enforcement of the statute, and any and every subtraction from the West Virginia gas transported to the other States, must inevitably injure the plaintiffs, whether in their sovereign character or as mere consumers of gas.

The presumption being in favor of the validity of the statute and the burden being on the plaintiffs to show a violation of constitutional guaranties, even in a suit between litigants other than States there could

be no declaration of unconstitutionality upon mere loose opinion or conjecture. "The fact must be tested by the actual transaction." (*Western U. T. Co. vs. Speight,* 254 U. S., 17). The repeated refusal to declare public service rates confiscatory in advance of actual test is illustrative. It has been held frequently that an attack upon a rate prescribed by State statute is premature in the absence of clear and convincing proof that the rate will have the alleged effect.

Smyth vs. Ames, 169 U. S., 466;
Knoxville vs. Knoxville Water Co., 212 U. S., 1, 18, 19;
Willcox vs. Consolidated Gas Co., 212 U. S., 19, 54;
Northern Pacific R. Co., vs. North Dakota, 216 U. S., 579;
Des Moines Gas Co. vs. Des Moines, 238 U. S., 153, 173;
Missouri vs. Chicago, B. & Q. R. Co., 241 U. S., 533, 539, 540.

In *Grand Trunk R. Co. vs. Michigan R. Com.,* 231 U. S., 457, an order requiring railroad companies to allow joint use of trackage was attacked as an interference with interstate commerce. The case was heard upon conflicting affidavits as to the effect of the enforcement of the order. Mr. Justice McKenna, after pointing out on page 464 that "the contention is premature," proceeds on page 465 as follows:

> "It is too late in the day to question the competency of a state to create a commission and to give it the power of regulating railroads, and necessarily of investigating the conditions upon

> which regulation may be directed. If a judicial interference is sought with the exercise of such power, it must be clearly shown to have been transcended, not left as a conclusion from the balancing of conflicting affidavits, or even, it may be, as held by the district court, on *ex parte* affidavits. Courts are reluctant to interfere with the laws of a state or with the tribunals constituted to enforce them. Doubts will not be resolved against the law, nor the decision of its tribunals prevented or anticipated unless the necessity for either be demonstrated."

This being true in ordinary litigation, much the more is it true in a controversy between States.

In *Kansas vs. Colorado*, 206 U. S., 46, 117, the bill was dismissed, after hearing on the merits, for the reason, among other things, that while perceptible injury to portions of the Arkansas Valley in Kansas had been shown, the right of Colorado to divert water from the Arkansas River for irrigation purposes had not yet reached the point at which it could be held that the diversion was in excess of Colorado's rights, and that the injury to Kansas had not attained a scope sufficiently great to sustain a suit between the two States.

In *Missouri vs. Illinois*, 200 U. S., 496, 521, it was said by Mr. Justice Holmes in rendering an opinion, followed by a dismissal of the bill without prejudice:

> "Before this court ought to intervene, the case should be of serious magnitude, clearly and fully proved, and the principle to be applied should be one which the court is prepared deliberately to

maintain against all considerations on the other side."

In *New York vs. New Jersey*, 256 U. S., 296, involving the effect of the Passaic sewerage project on New York, it was said by Mr. Justice Clarke:

"With the record in this state we come to consider the evidence introduced, but subject to the rule that the burden upon the state of New York of sustaining the allegations of its bill is much greater than that imposed upon a complainant in an ordinary suit between private parties. Before this court can be moved to exercise its extraordinary power under the Constitution to control the conduct of one state at the suit of another, the threatened invasion of rights must be of serious magnitude, and it must be established by clear and convincing evidence. *Missouri vs. Illinois*, 200 U. S., 496."

To the same effect, see:

Kansas vs. Colorado, 185 U. S., 125;
Missouri vs. Illinois, 180 U. S. 208.

III.

THESE CASES MUST BE CONSIDERED IN THE LIGHT OF THE PECULIAR NATURE OF GAS AND OF THE GAS COMPANIES, AND THE EXCEPTIONAL RULES OF LAW APPLICABLE THERETO.

We premise discussion of the merits by reference to the fundamental fallacy which underlies the contentions of the plaintiffs. Basing their claim of right to West Virginia gas produced by West Virginia gas companies, they overlook the peculiar nature of the commodity itself and the exceptional status of the corporations, through and under which the plaintiffs seek to maintain their supply.

The previous narrative has sufficed to mark natural gas and the natural-gas industry as peculiar, because of the inherent and antecedently known limitations upon the sources of supply and the inevitability and proximate approach of decline and exhaustion. In this regard natural gas differs essentially from other commodities, and even from those dealt in by ordinary public-service corporations supplying water, artificial gas or electricity. The waters of a water company are continually replenished from seemingly undiminished natural reservoirs; an artificial-gas company can always manufacture new gas; an electric company can generate new power indefinitely. And in the instance of a public utility supplying services, as distinguished from a commodity, such as a railroad or a telephone line, the rendition of the service operates in no degree to diminish the volume of future service. Such instrumen-

talities may wear out, but they can be duplicated from an abundance of materials.

It is a result that natural gas, and rights therein, are in many respects governed by exceptional rules of law. Illustrations are found in *Brown vs. Spilman,* 155 U. S., 665, 669, 670, holding that "decisions in ordinary cases of mining, for * * * minerals which have a fixed *situs* cannot be applied to contracts concerning" gas "without some qualification;" in *Ohio Oil Co. vs. Indiana,* 177 U. S., 190, holding valid a statute prohibiting the escape of gas in the air longer than two days, and *Walls vs. Midland Carbon Co.,* 254 U. S., 300, sustaining the prohibition, in certain circumstances, of the manufacture of carbon-black from gas, it being said that in both instances the power of regulation was "dependent upon the natures of oil and gas;" and *Westmoreland & C. Nat. Gas. vs. Dewit,* 130 Pa., 235, 18 Atl., 724. (And see *Bacon vs. Walker,* 204 U. S., 311, 316). Consequent on this follows the inadmissibility of the indiscriminate application to natural gas and to public service corporations engaged in its production, transportation or supply, of legal principles applicable to ordinary commodities and to individuals and corporations dealing in or with ordinary commodities.

IV.

THE STATUTE DOES NO MORE THAN TO DECLARE, AND TO PRESCRIBE APPROPRIATE PROCEDURE FOR THE ENFORCEMENT OF, THE OBLIGATION OF EACH PUBLIC SERVICE GAS COMPANY TO FURNISH REASONABLY ADEQUATE SERVICE WITHIN REASONABLE TERRITORIAL LIMITS. IT DOES NOT REQUIRE UNREASONABLE SERVICE OR UNREASONABLE EXTENSION BY ANY COMPANY.

We postpone the question of power to statement of the substance of the principal clauses of the statute. In pronouncing upon its constitutionality, the Court will not declare it invalid "on surmise or on the barren letter of the statute" (*Bacon vs. Walker*, 204 U. S., 311, 317; and see *Walls vs. Midland Carbon Co.*, 250 U. S., 300). It is to be accorded a constitutional construction, if permitted by a fair interpretation of its language. (*Hooper vs. California*, 155 U. S., 648, 657.)

Section 1.

This section, the dominant provision of the statute, has the following scope:

(a) *The persons to whom the statute applies*:

They are those persons, natural or corporate, who are actually engaged in the service of natural gas to the public, or who are required by law so to do. The language of description is, "Every person engaged in furnishing, or required by law (whether statutory or common law) to furnish, natural gas for public use, or for the use of the public, or any part of the public,

whether for domestic, industrial or other consumption, within this State." * * *

"Person" as above used is defined by Section 7 to include "persons, firms and corporations." Because in the great majority of cases the supply of gas to the public is by corporations, we generally refer in this brief to the entire class as public service corporations. (*Van Dyke vs. Geary*, 244 U. S., 39; *Hardman vs. Cabot*, 60 W. Va., 664, 55 S. E., 756.)

The persons "engaged in furnishing natural gas for public use," can be no more clearly defined than by the phrase itself.

As to those "required by law" so to do, the legal obligation may arise from the terms of corporate charters, or, irrespective thereof, as a necessary implication from the acceptance of municipal franchises, the use of public highways, by permission of the public authorities, for the transportation of gas, and the exercise of the right of eminent domain.

In *Charleston Nat. Gas. Co. vs. Lowe*, 52 W. Va., 662, 671, 44 S. E., 410, involving a city franchise to supply gas, it was asked and answered:

> "But have the citizens of Charleston an absolute and indefeasible right to the use of the gas upon reasonable and equal terms? Is the company bound to furnish gas to all who apply for it without an express legislative imposition of that duty upon it? Undoubtedly. The courts have so held in many of the States, and their decisions are grounded upon both reason and the best of authority."

And *Gibbs vs. Consolidated Gas Co.*, 130 U. S., 396, was quoted as follows:

> "These gas companies entered the streets of Baltimore, under their charters, in the exercise of the equivalent of the power of eminent domain, and are to be held as assuming an obligation to fulfill the public purposes to subserve which they are incorporated."

And see *Franke vs. Johnstown Fuel Supply Co.*, 70 Pa. Super. Ct., 446, 457.

In *Hardman vs. Cabot*, 60 W. Va., 664, 55 S. E., 756, it was stated by the Court:

> "The legislature, in expressly authorizing the use of highways, under permission of the county courts, by corporations, engaged in the service of the public, for the location and operation of their gas pipes, has declared that such use is proper."

And again:

> "To hold the contrary, as regards pipe lines for conveying gas, water and other supplies, would be most disastrous to cities, towns and counties of this State, in which hundreds, possibly thousands, of miles of such pipes have been laid in the highways, without any thought on the part of the fee owner of any right in him to prevent it, until payment of compensation should be made."

And still further, on page 669:

> "What has just been said, it must be observed, assumes that the grantee of this permission will use the pipe line in the service of the public."

In *Carnegie Nat. Gas Co. vs. Swiger*, 72 W. Va., 557, 571, 79 S. E., 3, involving one of the seven companies already mentioned, it was said:

> "We observe that the Legislature, by general law, has conferred upon pipe-line companies, organized for transporting oil and natural gas, the right of eminent domain, and has thereby necessarily imposed upon them, as public-service corporations, the right and duty of performing a public service. That right and duty is fixed as firmly as if written into the statute. * * * Pipe-line companies organized for transporting gas must serve the public with gas, under reasonable and proper regulations, along the entire line traversed, and for reasonable rates fixed by themselves, or by statute, or by contracts or ordinances of municipalities. * * * The rights of the people are thus protected in nearly every case where the public is served by public service corporations, furnishing water, gas, electricity, or transportation."

The category to which the statute thus applies, embraces all of the persons, natural or corporate, about sixty-seven in number, supplying gas to the public (Rec. 982); and it will embrace all others who, in the future, shall similarly engage or obligate themselves to engage in such supply.

But the statute does not include, among those on whom it imposes the duty of reasonably adequate supply, persons, natural or corporate, not engaged, or obligated to engage, in the supply of gas to the public. This exclusion is based on the obvious absence of legislative power to affect with a public use property not

devoted to the public use by the act or consent of a private owner. (*Producers Transp. Co. vs. Railroad Commission*, 251 U. S., 228, 230; *Weems Steamboat Co. vs. Peoples Steamboat Co.*, 214 U. S., 345; *Munn vs. Illinois*, 94 U. S., 113, 126.)

In 1919, the total gas production of West Virginia was, as previously stated, 219,886,837 M cubic feet, of which 183,687,047 M was in the hands of the public service companies, leaving 36,199,790 M feet in the possession of private owners, an amount largely in excess of the 29,360,811 M supplied to West Virginia consumers by the seven companies.

Nothing in the statute now involved or any other law of West Virginia, affects the disposition of this privately owned gas, whether in interstate commerce or otherwise. The owner, not obligated to supply gas to the public in West Virginia by his voluntary engagement, or the acceptance of special rights and privileges, such as franchises, user of highways under public permission, or the exercise of eminent domain, may, if he sees fit, construct or operate a pipe line without the aid of such special rights and privileges. His ownership of the gas, his ownership or operation of the pipe line, or the transportation of the gas, or all combined, would impose on him no duty of public gas supply in the State.

(b) *The area of service and persons to be supplied*:

The area of service of each gas company is the territory within which that company produces, or through which it transports, or within which it serves its gas. The persons to be supplied are those within the above

limited territory, who desire and apply for gas and are ready and willing to pay for it at lawful rates.

The language of the statute is that these public service companies shall "furnish for public use within the territory of this State, and for the use of the public and every part of the public within the territory of this State, in or from which such gas is produced, or through which said gas is transported, or which is served *by such person.*" And that the area of service is confined to the particular territory of the production, transportation and service of that particular public service company, is reiterated and emphasized in the later clauses of the section, where, in defining the purposes for which the reasonably adequate supply may be required, the consumption is restricted to "the public, or any part of the public, within *said* territory of this State." The delimitation of area is again emphasized in Section 2, under which a gas company seeking to make good its own deficiency of supply, must be engaged in furnishing gas to the public in the same territory in which the other company, from whom gas is to be obtained, produces the gas, or through which the latter transports it, or in which the latter serves it.

The assertion persistently thrust forward by the plaintiffs, that all of the people of West Virginia must be served adequately before the public service companies can transport to other states, and involving the assumption that each company is severally obligated to service in every part of West Virginia, is wholly unwarranted, and contrary to the plain terms of the Act. Had this fantastic result been intended, the appropriate requirement would have been to furnish gas to all inhabitants

of the state, without qualification, a meaning not attributable to the phrase "within the territory of this State." But the possibility of ambiguity is removed by the qualifying clause immediately following, defining and limiting "the territory of this State" to that particular area "in or from which such gas is produced, or through which said gas is transported, or which is served *by such person;*" the last three words, "by such person," relating to and yet further qualifying and limiting this territory to the locality in which the particular company produces, transports or serves.

Stating the matter concretely, the Hope Natural Gas Company is required to supply reasonably adequate service in the territory in which it produces, or through which it transports or in which it supplies gas. If in other territory, in which the Manufacturers Light & Heat Company or the United Fuel Gas Company operates, a shortage of gas exists, it is of no concern to the Hope Natural Gas Company. The latter must supply its own territory in reasonable adequacy, and is bound to do no more.

The designation of the area of duty as the territory of production, transportation and service, requires little comment. In this respect it does not expand the duty which existed before. The object of the statute, indeed, was to declare and enforce the duty of reasonably adequate service in the localities which the companies were theretofore obligated to serve.

The holders of municipal franchises, irrespective of this statute, are compellable to supply gas to consumers along their lines. The companies owning pipe lines are

under a similar obligation. In *Carnegie Nat. Gas Co. vs. Swiger,* 72 W. Va., 557, 571, 79 S. E., 3, it was said.

> "Pipe-line companies organized for transporting gas must serve the people with gas, under reasonable and proper regulations, along the entire line traversed and for reasonable rates fixed by themselves, or by statute, or by contracts or ordinances of municipalities."

But in order to entitle a consumer to service, it is unnecessary that he should dwell in immediate contact with an existing gas main. In 1 *Wyman, Public Service Corp.*, Sec. 281, the writer says:

> "Certainly all premises situated within the network of the existing mains and within *convenient connecting distance* of their lines should be served. All of these premises come within the sphere of influence, already established, differing slightly from premises abutting."

In condemnation petitions some of the seven gas companies, in not dissimilar terms, profess a readiness and willingness to "sell and deliver gas to all parties *within reaching distance of its pipe lines,* who apply for the same at reasonable rates." (Rec. 1857, 1876.)

A gas company, moreover, is under the duty, even in the absence of a statute, to extend its mains or lines "so as to meet the reasonable requirements of the community."

Russell vs. Sebastian, 233 U. S., 195, 208, 209.
New York vs. McCall, 245 U. S., 343.
People ex rel. Woodhaven Gas Light Co. vs. Dechan, 153 N. Y., 528, 533, 47 N. E., 787.

Lukrawcka vs. Spring Valley Water Co., 169 Cal., 318, 146 Pa., 640.

United States Tel. Co. vs. Central Union Tel. Co., 202 Fed., 66, 71.

The question in every instance, as pointed out in the *Lukrawcka Case*, is one of reasonableness, to be determined as a question of fact. That was the view taken in *New York vs. McCall*, 245 U. S., 345, 351, where, in sustaining an order requiring an extension of about one and one-half miles by a gas company, Mr. Justice Clarke said:

> "Corporations which devote their property to a public use may not pick and choose, serving only the portions of the territory covered by their franchises which it is presently profitable for them to serve, and restricting the development of the remaining portions by leaving their inhabitants in discomfort without the service which they alone can render."

And it was added that the determination of such questions,—

> "Is one of the important purposes for which these administrative commissions, with large powers, were called into existence, with an organization and with duties which peculiarly fit them for dealing with problems such as this case presents." * * *

So in the present instance, the area of service in each case is left for the determination of the Public Service Commission, as a question of reasonableness, in the light of the particular facts and circumstances.

The Commission must consider the consumer's needs, the company's gas supply, and the cost and remunerativeness of the service. The decision of the Commission is subject to judicial review.

(c) *The quantity of gas to be furnished*:

The volume of gas required to be furnished is a reasonably adequate supply. And this involves both quantity and economy of consumption. In the precise words of the statute, it is "a supply of natural gas reasonably adequate" for the public uses specified.

The requirement of reasonably adequate service is no greater than that at common law. In *Cumberland Tel. & T. Co. vs. Kelly*, 160 Fed. 316, 324, Judge Lurton, in the Circuit Court of Appeals, said:

> "Telephone companies, like similar quasi-public corporations, are under a general common law obligation to supply reasonably adequate facilities for supplying the service which they hold themselves out to do."

In *Russell vs. Sebastian*, 233 U. S., 195, 208, in speaking of a gas company, it was said by Mr. Justice Hughes, with citation of authorities:

> "Incident to the undertaking in response to the State's offer was the obligation to provide facilities that were reasonably adequate."

And see *United States Tel. Co. vs. Central Union Tel. Co.*, 202 Fed., 66, 71.

In *Oklahoma Nat. Gas Co. vs. Oklahoma,* U. S. Adv. Ops., 1921-22, p. 331, it was said as against the claim of unconstitutionality by a gas company:

> "Both the commission and the Supreme Court decided, construing the charter of the company, that it, the company, was required to render *efficient service,* and we concur in that view, and that it was competent for the State to compensate the deficiency in the service—deficiency in the supply of gas—by a rebate of payments to the company. The percentage of reduction, and its adequate relation to the deficiency in service were necessarily determined by the commission from the case as presented to it, and the Supreme Court, upon consideration, affirmed the determination as a just and supported relation." (*Italics ours.*)

The duty of reasonably adequate service, in identical or equivalent words, is imposed by the statutes in numerous States dealing with public utilities, including natural gas companies.

Pennsylvania Pub. Service Com. Law, Art 2, sec. 1 (*Pa. Pub. Laws of 1913,* p. 1374);

New York Pub. Service Com. Law, sec. 65 (*Laws of 1910,* ch. 480);

Pennsylvania Gas Co. vs. Pub. Service Com., 252 U. S., 23, 27;

Indiana Public Utility Law, sec. 7 (*Acts of 1913,* Ch. 76);

Ohio General Code, sec. 614-12.

As previously stated, reasonable adequacy of supply is more easily described than defined. In order to have value gas must be dependable, ready and constant. The whole matter is summed up in the statement of

Judge James H. Reed, President of the Philadelphia Company, heretofore quoted (Rec. 525), that a man cannot be satisfied by giving him fifty per cent. of his requirements, that "his wife can't cook with it, and his house is cold. He either wants all or none."

(d) *The purpose or use for which gas is to be furnished*:

The gas is required to be supplied for the domestic, industrial and other public uses for which gas is consumed or desired to be consumed, within the territory already mentioned. The exact languarge of the statute is: "for the purposes, whether domestic, industrial or otherwise, for which natural gas is consumed or desired to be consumed by the public, or any part of the public, within said territory in this State, and for which said consumer or consumers therein shall apply and be ready and willing to make payment at lawful rates."

The specification of domestic and industrial purposes needs no explanation. The phrase "or otherwise" is of course to be construed in harmony with the associated words. *(2 Sutherland, Stat. Const.—Lewis 2 Ed.,* sec. 422.)

The corporate charters and condemnation petitions quoted or referred to in the Statement of facts, mention "other" classes of consumption in words similar to those of the statute.

Aside from domestic and industrial consumption, the gas companies have ordinarily recognized and pro-

vided separately for other classes of consumption, such as those of public buildings and institutions, churches, hospitals and the like; street lighting, and oil and gas field work.

This is reflected, for example, by the division of the gas sales by the Manufacturers Light & Heat Company into domestic, industrial, public institution and miscellaneous consumption (Rec. 84-87). So in the case of the Ohio Fuel Supply Company, where the division is among domestic, public building, industrial and other uses (Rec. 661, 662). Similar differentiation is found in the rate schedule of the Pittsburgh & West Virginia Gas Company (Rec. 1935). The words 'desired to be consumed" do not enlarge the category of consumption embraced by the phrase "domestic, industrial or otherwise." The words had in view the condition which the statute sought to remedy, to-wit, that the public or part of the public entitled to gas might be without it, and though entitled and desiring to have it, could not be said to be consuming it presently. It is to be observed, also, that the necessity of application to the Public Service Commission in case of refusal of service by a gas company sufficiently guards against the abuse of the statute.

(e) *The extent of the gas supply from which the reasonably adequate service is to rendered*:

The requirement is that each gas company shall render reasonably adequate service to the extent of that company's gas supply produced in West Virginia. The exact words of the statute are: "to the extent of

his supply of said gas produced in this State, (whether produced by such person or by any other person)."

The clause is at once a definition and a limitation. Some of the gas companies, such as the Manufacturers Light & Heat Company and the United Fuel Gas Company, produce and buy gas in other States; the Manufacturers Light & Heat Company in Pennsylvania and Ohio, and the United Fuel Gas Company in Kentucky. Some of the West Virginia companies are in intimate corporate relation with companies in the other States, which produce and buy gas in those States. The relationships of the Hope Natural Gas Company with the Peoples Natural Gas Company and the East Ohio Gas Company, of the Pittsburgh & West Virginia Gas Company with the Philadelphia Company and the Equitable Gas Company, and of the United Fuel Gas Company with the Ohio Fuel Supply Company are examples. It was recognized that the West Virginia gas companies could not in reason be expected to import from other States gas to supply West Virginia. The other States themselves, equally with West Virginia, might require their gas companies to apply the gas produced in those States to the reasonably adequate service of the consumers therein. Having this in view, the statute confines its requirement of adequate service by any gas company to the extent of the supply of that company produced in West Virginia.

But subject to the limitation above, it is the intention of the statute that each gas company shall render reasonably adequate service to the consumers in the prescribed territory of that gas company, even though such service appropriates that company's entire

supply of gas produced in West Virginia. For if it is true that the public service gas companies of the State are obligated to furnish a reasonably adequate gas service, it logically follows that they must devote thereto the quantity of gas requisite for the rendition of the service.

The evidence in these cases establishes what is inherently manifest,—that an inadequate gas service is substantially equivalent to no service; that the diminishing stock of gas renders it impossible to render adequate service to everyone, wherever situate; that the reasonable and practical remedy is to contract the area of service and to diminish the number of consumers; that, other things being equal, in time of shortage the better supply, by physical necessity, is and will be received by the consumers nearest the sources of production (Rec. 50, 51, 392, 393); that the worst service is and will be obtained by the consumers farthest from such sources, and their service will inevitably grow worse from year to year as the available gas diminishes; and that in the elimination of consumers, both the nature of the service and economy of operation by the gas companies, point to the consumers at the greatest distance from the sources of production as those whose gas supply should be cut off.

In enacting this statute, therefore, West Virginia had regard not only to its legal right to priority of adequate service at the hands of its public service corporations, but also to the fact that there can be no such thing as a parity of right to, or equality of service of, a commodity by nature limited in quantity and unrenewable, constantly diminishing, valuable when ade-

quately supplied and valueless when rendered inadequate by excessive partition. The solution accorded by West Virginia to the problem is sufficiently explained and justified by the following quotation from an exhibit filed by the plaintiffs (Rec. 1668-1669):

"In considering the question of the desirability of making new extensions after a natural gas supply has become depleted, so as to make satisfactory service for all impossible, two distinct viewpoints have been developed, namely:

"The Indiana Supreme Court in 1901 held that:

'A natural gas company * * * can not refuse to permit connections with its mains by unsupplied citizens because the gas pressure has fallen so low that existing customers can not be adequately supplied, and that the court should compel the company to permit participation in the supply of gas furnished by it, although it can not furnish enough to satisfy the needs of its existing customers.' (*State of Indiana ex. rel. Wood vs. Consumers Gas Trust Co.*, 55 Lawyers Reports, 245).

"The New York Public Service Commission, second district, in 1915, held that:

'Consideration must be given to a safe and adequate service on the part of the company, within its means and facilities, and if service of this character is being given to a comparatively few customers in a certain locality, with the eliminated (*sic*) amount of gas available for such purpose, it is manifestly the duty of this commission to permit the continuance of such service rather than order

the company to turn its gas into a larger field where a safe and adequate service could not be given.' (New York Public Service Commission, second district, North Tonawanda case No. 4478, Feb. 25, 1915.)

"The Indiana viewpoint is merely a blind following of obsolete precedent. Furthermore, it is based on the erroneous theory that it is a matter of no consequence whether adequate service can be given to any customers, so long as all of the customers stand on an exact equality, and fails to recognize that there is a clear distinction between equity and equality, and that the two are not synonymous.

"The New York viewpoint is in accordance with the spirit and letter of up-to-date public utility regulation and recognizes the inherent characteristics and natural limitations of the natural gas industry, and that usable service to a limited number is better than poor or no service to a large number. *This New York viewpoint is the just and equitable one to apply to all new service extension problems, as well as to the inevitable problem that will arise in the near future, of limiting or discontinuing the service entirely in certain localities, because the available supply as furnished by nature will not permit the continuance of a usable service to all.*"

See, also, *People ex rel. Pennsylvania Gas Co. vs. Public Service Com.*, 189 N. Y. Supp., 478.

The doctrine of *State vs. Consumers Gas Trust Co.*, 57 Ind., 345, 61 N. E., 674, above cited, is referred to by *Wyman on Public Service Corporations*, Vol. 1, Sec. 553, where the author, after saying that the rule of equal division there sanctioned is opposed to that applied in irrigation cases, continues as follows:

> "Logical though it may be, it seem to the writer to be lacking in appreciation of the situation as a whole. A rule which may result in satisfactory service to none, not even to the applicant in question, is hardly consistent with service at all. Certainly where the supply now available is not sufficient to meet the proper demands of present customers, it would seem that later applicants could not demand the reduction of the undertakings of older customers."

And see also, as bearing generally upon the subject, the following authorities relating to irrigation companies having a water supply inadequate for the service of all applicants.

1 *Wyman on Pub. Serv. Corp.*, Sec. 252;

San Diego Flume Co. vs. Souther, 112 Fed., 228;

McDermont vs. Anaheim Union Water Co., 124 Cal., 112, 56 Pac., 779;

Bardsley vs. Boise Irr. & Land Co., 8 Idaho. 155, 67 Pac., 428;

Brown vs. Farmers &c. Co., 26 Col., 66, 56 Pac., 183.

SECTION 2.

This section provides for the sale of gas in certain instances by a public service gas company having a surplus of gas to another public service gas company engaged in the furnishing of gas in the same territory, but having a production or supply which is, or probably will be, insufficient for the supply of its consumers in that territory. This is merely an alternative method of service given to the gas company having the surplus, whereby in lieu of direct service to those consumers which it is obligated to supply under section 1, it may perform its obligation to those consumers through the medium of another public service company (generally a local distributing company) engaged in serving the same consumers in the same territory.

The requirement to sell gas to another public service company is neither mandatory nor self-executing. The company having the surplus may, if it sees fit, furnish gas by direct service to the consumers in its own territory, to supply whom gas is proposed to be purchased by the company suffering the deficiency. If this direct service is undertaken and performed, the sale of gas to another gas company cannot be compelled.

If the company having the surplus does not undertake the direct service of consumers in its territory inadequately supplied, even then it cannot be compelled to sell gas to the company having the shortage, except after an order of the Public Service Commission, entered upon due notice and after hearing and proof, and which order is subject to judicial review. Before an order for sale can be made by the Commission, it must be proved:

(a) That the selling company is furnishing or obligated to furnish gas in the territory served by the purchasing company, and in which the latter has, or probably will have, insufficient gas.

(b) That the selling company has a supply of gas in excess of that required for the reasonably adequate service of its own consumers in West Virginia;

(c) That the selling company is producing or furnishing gas for public use in, or transporting the same through, the territory in which the purchasing company is engaged in the public service; and

(d) That the selling company has failed or refused to furnish direct service to the insufficiently supplied consumers, as required under section 1.

If the foregoing matters are proved, the Commission must determine whether "public convenience and necessity" require the sale of gas by the selling company to the purchasing company, and whether a physical connection between the lines of the two companies shall be made. Having so determined, the Commission may order the sale of gas by the selling company to the purchasing company and the establishment of the physical connection. The Commission is to prescribe the times and amounts of the gas to be sold, fixing just and reasonable terms, conditions and rates; and is to fix just and reasonable terms and conditions for such physical connection, including just and reasonable rules and regulations and provision for the payment or apportionment of the cost and expense of making the same.

This alternative provision for the sale of gas, with physical connection for its delivery, in pursuance of an order of the Commission, requires a service which the voluntary acts of the companies have shown to be reasonable and practicable. Sales of gas by many of the seven companies to local companies, with necessarily accompanying physical connections, have occurred in numerous instances (Rec. 275-277, 842, 843, 1028, 1034-1036, 1209, 1220, 1227, 1724, 1728; 1736, insert pp. 280, 297, 314, 345, 349, 402, 414). Most of the seven companies sell to, or purchase from, one or more of the others, by means of physical connections. The necessity for legislation sprang up not because such sales and physical connections are impracticable or unreasonable, but because since the development of the gas shortage some of the seven companies have refused to sell gas to local companies in their own territories whose supplies were insufficient; while another has refused to do more than to sell from any surplus existing after the performance of other contracts, and without obligation as to amount or time, and with the contract subject to cancellation on brief notice (Rec. 1209, 1230, 1231).

SECTIONS 3 AND 4.

These sections expressly confer on the Public Service Commission jurisdiction over the subject matter of the statute, and by reference to the Public Service Commission Act adopt its procedure, including the right of appeal to the Supreme Court of the State. The scope of review upon such an appeal is the same as that accorded upon judicial review of orders of the Interstate Commerce Commission, as stated in *Inter-*

state Commerce Commission vs. Union Pac. R. Co., 222 U. S., 551, 557. The Supreme Court may inquire into the evidence in order to determine whether the order of the Commission is "beyond the power which it could constitutionally exercise; or beyond its statutory power; or passed upon a mistake of law;" or whether a "rate is so low as to be confiscatory and in violation of the constitutional prohibition against taking property without due process of law;" or whether the Commission has acted so arbitrarily and unjustly as to make an order contrary to evidence or without evidence to support it; or whether the authority involved has been exercised in such an unreasonable manner as to cause it to be within the elementary rule that the substance, and not the shadow, determines the validity of the exercise of the power.

United Fuel Gas Co. vs. Public Service Com., 73 W. Va., 571, 583, 80 S. E., 931;

Clarksburg Light & H. Co. vs. Public Service Com., 84 W. Va., 638, 100 S. E., 551.

Kelley Axe Mfg. Co. vs. Public Service Com., 87 W. Va., 368, 373, 105 S. E., 152.

SECTION 5.

This section prescribes penalties, not for violation of the provisions of the statute, but for failure or refusal "to comply with any requirement of the Commission hereunder." The ample opportunity for hearing before the Commission before a penalty can attach, brings the secton within the analogy of *Wadley S. R. Co. vs. Georgia,* 235 U. S.,652. In any event section 8 of the statute renders the penal section separable, if for

any reason invalid or unenforcible. Still further, under the settled constructions of the West Virginia Supreme Court, such a penalty would not be incurred during judicial contest of the constitutionality of the statute.

Coal & Coke R. Co. vs. Conley, 67 W. Va., 129, 67 S. E., 613.

Wadley Southern R. Co. vs. Georgia, 235 U. S., 651, 668.

Chesapeake & O. R. Co. vs. Conley, 230 U. S., 513, 521.

SECTION 6.

This section confers a right of action for the recovery of compensatory damages by suit in a court of competent jurisdiction, where full defense may be made.

SECTION 7.

This section defines the word "person" as meaning and including "persons, firms and corporations."

SECTION 8.

This section is as follows:

"That the sections, provisions, and clauses of this act shall be deemed separable each from the other, and also in respect to the persons, firms, corporations, and consumers mentioned therein or affected thereby, and if any separable part of this act be, or be held to be unconstitutional or for any reason invalid or unforcible, the remaining parts thereof shall be and remain in full force and effect."

V.

THE WEST VIRGINIA PUBLIC SERVICE GAS COMPANIES, INCLUDING THE SEVEN COMPANIES, WERE AND ARE OBLIGATED, IRRESPECTIVE OF THE STATUTE IN CONTEST, TO FURNISH WEST VIRGINIA CONSUMERS A REASONABLY ADEQUATE SUPPLY OF GAS, AND THEY CANNOT LAWFULLY ABANDON OR DISABLE THEMSELVES FROM PERFORMING THE OBLIGATION.

SPECIAL RIGHTS AND PRIVILEGES OF GAS COMPANIES.

All of the incorporated gas companies, including the seven, are West Virginia corporations, or corporations of other States, admitted to carry on business in West Virginia, under the statute extending to foreign corporations so admitted "the same rights, powers and privileges that are conferred on domestic corporations created for the same purpose," and subjecting them "to the same regulations, restrictions and liabilities that are imposed upon like corporations" created by West Virginia.

Hydro Electric Co. vs. Liston, 70 W. Va., 83, 91; 73 S. E., 86.

Carnegie Nat. Gas Co. vs. Swiger, 72 W. Va., 557, 572, 79 S. E., 3.

Precedent to the statute in controversy, these companies were at common law and by statute denominated as public service corporations, and were subject to the Public Service Commission Act.

Charleston Nat. Gas Co. vs. Lowe, 52 W. Va., 662, 44 S. E., 410.

Hardman vs. Cabot, 60 W. Va., 664, 55 S. E., 756.

Carnegie Nat. Gas Co. vs. Swiger, 72 W. Va., 557, 79 S. E., 3.

W. Va. Acts of 1913, Ch. 9, Sec. 3.

W. Va. Acts of 1915, Ch. 8.

United Fuel Gas Co. vs. Public Service Com., 73 W. Va., 571, 80 S. E., 931.

Clarksburg Light & H. Co. vs. Public Service Com., 84 W. Va., 638, 100 S. E., 551.

Kelley Axe Mfg. Co. vs. Public Service Com., 87 W. Va., 368, 105 S. E., 152.

Manufacturers Light & Heat Co. vs. Ott, 215 Fed., 940.

Those owning pipe lines were, in their capacity of pipe-line companies, common carriers, "subject to all the duties and liabilities of such carriers under the laws" of West Virginia.

Code of W. Va. (1913), Ch. 32, Sec. 24.

W. Va. Acts of 1891, Ch. 113.

Charleston Nat. Gas Co. vs. Lowe, 52 W. Va., 662, 665, 44 S. E., 410.

Hardman vs. Cabot, 60 W. Va., 664, 55 S. E., 756.

By the nature of the business in which they were actually engaged and by their express professions and their practice (*Producers Transp. Co. vs. Railroad Commission*, 251 U. S., 228, 232; *United States vs. Ohio Oil Co.*, 234 U. S., 548, 561), they held themselves out as public-service corporations, supplying, and ready and willing to supply, gas to the public in West Virginia,

and desirous of extending their business in the State (Rec., 1804, 1823, 1843, 1857, 1876, 1896).

They received and hold franchises from municipalities, authorizing the public distribution of gas therein, and franchises or permits in the nature thereof, obtained from municipalities and counties, enabling them to lay and maintain pipe lines and other appliances in the public streets and highways. The details are referred to in the statement.

They have long enjoyed and exercised the right of eminent domain, and in respect of pipe lines an exceptionally expeditious procedure for that exercise. The power of eminent domain, even when not actually called into use, is potentially ever present in aid of the acquisition of rights of way and other property by private contract.

Code of W. Va. (1913), Ch. 42, Secs. 1 and 20; Ch. 52, Sec. 24.
W. Va. Acts of 1881, Ch. 18, Sec. 2.
W. Va. Acts of 1891, Ch. 113.

That these companies would have received the above special rights and privileges except upon the terms of affording adequate service to the public of West Virginia, or in contemplation of the subordination of that service to that of the people of other States, is unthinkable. (See *Western Union Tel. Co. vs. Call Pub. Co.*, 181 U. S., 92, 100; *Postal Cable Tel. Co. vs. Cumberland Tel. & T. Co.*, 177 Fed., 726, 732.)

And yet it is true that the companies transporting the greater part of the West Virginia gas to or for use in other States, their pipe lines and compressor stations,

owe their existence to these special rights and privileges. For as the pipe lines and compressor stations enabled these companies to acquire their own holdings of gas territory, which thereby were withdrawn from acquisition by others, so the pipe lines and stations constitute them, except under special circumstances, the only purchasers from, or market of, the independent producer of gas. And by the pipe lines and stations, which are the only means of transporting the gas to distant points of consumption, these companies are enabled to convey their gas, near or far, to the destination of their choice, within the range of their lines.

Regardless of the law already cited, which in the same breath by which it confers on them the power of eminent domain makes them common carriers (*Code, W. Va.*, Ch. 52, Sec. 24), these companies, as was the case in *United States vs. Ohio Oil Co.*, 234 U. S., 548, refuse to transport for other producers gas which might serve the public in West Virginia. The independent producer must, in general, either stand by and see his gas withdrawn through adjoining operations, or must sell it to one of these companies.

The monopoly thus held by these large companies is described by a short passage from *United States vs. Ohio Oil Co.*, 234 U. S., 548, 559, the language there used in relation to oil being equally applicable to gas:

> "Availing itself of its monopoly of the means of transportation the Standard Oil Company refused, through its subordinates, to carry any oil unless the same was sold to it or to them, and through them to it, on terms more or less dictated by itself. In this way it made itself master of the

fields without the necessity of owning them, and carried across half the continent a great subject of international commerce coming from many owners, but, by the duress of which the Standard Oil Company was master, carrying it all as its own."

And the resulting evil is akin to that referred to by the Hepburn Act of June 29, 1906 (34 U. S. Stat. at L., 584, rendering it illegal for interstate carriers to transport commodities owned by them or in which they were interested. (See *United States vs. Delaware & H. R. Co.*, 213 U. S., 366; *Delaware, L. & W. Co. vs. United States*, 231 U. S., 363.)

DUTIES OF GAS COMPANIES TO SERVE WEST VIRGINIA PUBLIC.

The duties assumed and undertaken by these corporations have already been referred to. We repeat the following passage from *Carnegie Natural Gas Co. vs. Swiger*, 72 W. Va., 557, 571, 79 S. E., 3:

"We observe that the Legislature, by general law, has conferred upon pipe-line companies, organized for transporting oil and natural gas, the right of eminent domain, and has thereby necessarily imposed upon them, as public-service corporations, the right and duty of performing a public service. That right and duty is fixed as firmly as if written into the statute. * * * Pipe-line companies organized for transporting gas must serve the public with gas, under reasonable and proper regulations, along the entire line traversed, and for reasonable rates fixed by themselves, or by statute, or by contracts

or ordinances of municipalities. * * * The rights of the people are thus protected in nearly every case where the public is served by public service corporations, furnishing water, gas, electricity, or transportation." (Citing *Charleston Gas Co. vs. Lowe*, 52 W. Va., 662; *Hydro-Electric Co. vs. Liston*, 70 W. Va., 83; *Calor Oil & Gas Co. vs. Franzell* (Ky.), 109 S. W., 328; *Olmstead vs. Morris Aqueduct*, 47 N. J. L., 311; *Gibbs vs. Consolidated Gas Co.*, 130 U. S., 396; *Munn vs. Illinois*, 94 U. S., 133.)

In *Western Union Tel. Co. vs. Call Pub. Co.*, 181 U. S., 92, 100, Mr. Justice Brewer said of common carriers:

"They are endowed by the State with some of its sovereign powers, such as the right of eminent domain, and so endowed by reason of the public service they render. As a consequence of this, all individuals have equal rights both in respect to services and charges."

In *Gibbs vs. Consolidated Gas Co.*, 130 U. S., 396, quoted in *Charleston Nat. Gas Co. vs. Lowe*, 52 W. Va., 662, 44 S. E., 410; *People vs. Chicago Gas Trust Co.*, 130 Ill., 393, 22 N. E., 803, and in many other cases, it was said:

"These gas companies entered the streets of Baltimore, under their charters, in the exercise of the equivalent of the power of eminent domain, and are to be held as assuming an obligation to fulfill the public purposes to subserve which they are incorporated."

And see:

Franke vs. Johnstown Fuel Supply Co., 70 Pa. Super. Ct., 446, 457.

Kelley Axe Mfg. Co. vs. Public Service Com., 87 W. Va., 368, 105 S. E., 152.

It thus appears that the right of eminent domain is delimited by, and coincides with, the public use which it is intended to aid. And that public use is shortly expressed in *Hydro-Electric Co. vs. Liston*, 70 W. Va., 83, 91, 73 S. E., 86, where, holding that a foreign corporation, authorized to do business in West Virginia, may enjoy the right of eminent domain, it is said:

> "This gives the right of eminent domain, to be exercised, however, *for the public use of the citizens of West Virginia.*"

In *Kohl vs. United States*, 91 U. S., 367, it was said:

> "The proper view of the right of eminent domain seems to be, that it is a right belonging to a sovereignty to take private property *for its own public uses, and not for those of another.*"

And see *Trombley vs. Humphrey*, 18 Wend., 9.

In *Lewis, Em. Dom.* (3 ed.), Sec. 310, it is said:

> "The public use for which property may be taken is a public use within the State from which the power is derived. It seems to be an admitted fact generally, that the power inheres in a State *for domestic uses only, to be exercised for the benefit of its own people,* and cannot be extended merely to promote the public uses of a foreign State."

See also *Grover, &c., Land Co. vs. Lovella, &c., Irr. Co.*, 21 Wyo., 204, 131 Pac., 43, elaborately discussing this point, and 1 *Nichols, Em. Dom.*, Sec. 29.

The duty of serving the public of West Virginia being plain, it follows that the gas companies were and are obligated to furnish that public within the territory of their operations or along their pipe lines a supply of gas, and this apart from the Act of 1919, now in contest.

In *Charleston Nat. Gas Co. vs. Lowe*, 52 W. Va., 662, 671, 44 S. E., 410, it was said:

> "But have the citizens of Charleston an absolute and indefeasible right to the use of the gas upon reasonable and equal terms? Is the company bound to furnish gas to all who apply for it without an express legislative imposition of that duty upon it? Undoubtedly. The courts have so held in many of the States, and their decisions are grounded upon both reason and the best of authority."

In *Carnegie Nat. Gas Co. vs. Swiger*, 72 W. Va., 557, 571, 79 S. E., 3, it was stated:

> "Pipe-line companies organized for transporting gas must serve the people with gas, under reasonable and proper regulations, along the entire line traversed, and for reasonable rates fixed by themselves, or by statute, or by contracts or ordinances of municipalities."

See:

Kelley Axe Mfg. Co. vs. Public Service Com., 87 W. Va., 368, 105 S. E., 152.

In *New York vs. McCall*, 245 U. S., 345, 351, Mr. Justice Clarke said:

> "Corporations which devote their property to a public use may not pick and choose, serving only the portions of the territory covered by their franchises which it is presently profitable for them to serve, and restricting the development of the remaining portions by leaving their inhabitants in discomfort without the service which they alone can render."

And, as already pointed out, the measure of that supply was and is reasonable adequacy.

Russell vs. Sebastian, 233 U. S., 195, 208;

Cumberland Tel. & T. Co. vs. Kelly, 160 Fed., 316, 324, per Lurton, J.;

United States Tel. Co. vs. Central Union Tel. Co., 202 Fed., 66, 71;

Oklahoma Nat. Gas Co. vs. Oklahoma, U. S. Adv. Ops. 1921-22, p. 331;

Pennsylvania Pub. Service Com. Law, Art 2, sec. 1 (*Pa. Pub. Laws of 1913*, p. 1374;

New York Pub. Service Com. Law, sec. 65 (Laws of 1910, Ch. 480);

Indiana Public Utility Law, sec. 7 (Acts of 1913, Ch. 76).

It is relevant in this relation, though perhaps unnecessary in view of the professions and practice of the gas companies (*Producers Transp. Co. vs. Railroad Com. of California*, 251 U. S., 228, 232; *United States vs. Ohio Oil Co.*, 234 U. S., 548, 561), both in West Virginia and the plaintiff States, to mention that the

scope of the public duty includes not merely the supply of domestic consumers, but also the furnishing of gas for public buildings and for industrial consumption. This relevancy arises because of the contention of one of the witnesses for the plaintiffs (Rec., 942) that the industrial consumption of gas is wasteful, and the prophecy of other witnesses for the plaintiffs that the enforcement of the statute in question will divert to West Virginia the entire gas production of the State. In the statement of facts it has already been indicated that both by representations of readiness and willingness to supply gas for industrial use, and by their actual engagement in the business of furnishing such gas, these companies have stamped such service as a public service. The industrial consumption occurs in large volumes in the other States, and particularly in Pennsylvania.

Laying aside the professions and practice of the gas companies operating in West Virginia and the other States and apart from the statute now in controversy, it has been held by the highest court of West Virginia that the furnishing of gas for industrial purposes is a public service, and that the business of a gas company in this regard is affected with a public interest.

Clarksburg Light & H. Co. vs. Public Service Com., 84 W. Va., 638; 100 S. E., 551;
Kelly Axe Mfg. Co. vs. Public Service Com. 87 W. Va., 368, 105 S. E., 152.

The same rule prevails in Pennsylvania. In *Shriver vs. Manufacturers Light & Heat Co.*, and *Craig vs. Same*, Complaints Nos. 3563 and 3585, decided June 27,

1921, the Public Service Commission of Pennsylvania held as follows:

> "All service rendered by a natural gas company in Pennsylvania, be it industrial or domestic, comes within the jurisdiction of the Commission, and respondent doing business under the Natural Gas Act of 1885 cannot be permitted, in the manner proposed, to render industrial service by making special contracts without filing rates therefor. A rule of a natural gas company, which limits the amount of gas used for household purposes to 40,000 cubic feet per month, is unjust and unreasonable when it appears that respondent, even in winter months when the limitation would become effective, is rendering much greater service for industrial purposes than to household patrons affected by the rule, and doing this without submitting itself to State control."

Recognition of the public character of the service, though not the subject of direct decision, is to be found in *Pennsylvania Gas Co. vs. Public Service Com.*, 252 U. S., 23, 31. And the same view is contained in principle in the negative answer in *Interstate Commerce Com. vs. Baltimore & O. R. Co.*, 225 U. S., 326, 342, to the inquiry, "May a carrier look beyond the service it is called upon to render to the attitude and interest of the shippers before, or their attitude and interest after, transportation?"

See also:

Hydro Electric Co. vs. Liston, 70 W. Va., 83, 88, 73 S. E., 86.

Mill Creek Coal & C. Co. vs. Public Service Com., 84 W. Va., 662, 100 S. E., 557.

Bailey vs. Fayette Gas Fuel Co., 193 Pa., 175, 44 Atl., 251.

THE GAS BUSINESS AND WEST VIRGINIA GAS ARE AFFECTED WITH A PUBLIC INTEREST.

That the business of a gas company is affected with the public interest, within the meaning of the cases reaching from *Munn vs. Illinois*, 94 U. S., 113, to *Union Dry Goods Co. vs. Georgia Pub. Service Corp.*, 248 U. S., 372, 374, 375, is commonplace.

Charleston Gas Co. vs. Lowe, 52 W. Va., 662, 671, 44 S. E., 410.

Clarksburg Light & H. Co. vs. Public Service Com., 84 W. Va., 638, 100 S. E., 551.

Franke vs. Johnstown Fuel Supply Co., 70 Pa., Super. Ct., 446, 456.

Pennsylvania Gas Co. vs. Public Service Com., 252 U. S., 23.

Manufacturers Light & H. Co. vs. Ott, 215 Fed., 940.

But we may justifiably go further. Given a commodity of peculiar attributes, local in its origin, exhaustible, and, in fact, approaching the point of exhaustion, as is West Virginia gas, so that on the one hand it has become a public necessity at home and is, or may be, insufficient both to supply that necessity and to furnish it to consumers abroad, in the hands of corporations owing public duties, in the performance of which the public has an interest, *the gas itself is in a just sense to be regarded as affected by a public interest.*

In *German Alliance Ins. Co. vs. Lewis*, 233 U. S., 389, it was held that even the making of personal contracts, such as contracts of fire insurance, might be affected by the public interest. Mr. Justice McKenna there said in reply to the suggestion that only tangible property could be so affected:

> "The distinction is artificial. It is, indeed, but the assertion that the cited examples embrace all cases of public interest. The complainant explicitly so contends, urging that the test it applies excludes the idea that there can be a public interest which gives the power of regulation as distinct from a public use, which, necessarily, it is contended, can only apply to property, not to personal contracts. The distinction, we think, has no basis in principle (*Noble State Bank vs. Haskell*, 219 U. S., 104), nor has the other contention that the service which cannot be demanded cannot be regulated."

In *Wilson vs. New*, 243 U. S., 332, it was held that the personal services of the employees of interstate railroads were so far affected with a public interest as to justify the regulation of hours of labor and in consequence a wage standard.

That the public interest may extend to property itself, as distinguished from a business, considered merely as an institution, is illustrated by the instance of the grain elevators in *Munn vs. Illinois*, 94 U. S., 113. The same idea is conveyed in *Union Dry Goods Co. vs. Georgia Pub. Service Com.*, 248 U. S., 372, 374, where it was said "that capital invested in an electric light and power plant to supply electricity to the inhabitants of a city is devoted to a use in which the public has an

interest." In *Block vs. Hirsh*, 256 U. S., 135, involving the District of Columbia rent law, cases were cited as sustaining the point "that the public interest may extend to the use of land."

In *Franke vs. Johnstown Fuel Supply Co.*, 70 Pa. Super. Ct., 446, 456, this view is expressed as follows:

> "What the company did was from the beginning subject to the conditions under which it existed at all. The public had no interest in, or right to, the gas of the promoters of the Peoples Natural Gas Company until the latter, for the purpose of obtaining the advantages accorded to them under the statute, organized their company. The owners were not compelled to give to the public an interest in their supply of gas, but they became under obligation to the laws of the commonwealth if they used it in the manner prescribed by that law. When the shareholders accepted the charter of the company and proceeded to exercise the franchises thereby granted they invested the public or such limited portion of the public with a use or right of use in the commodity which they supplied. This constitutes a public use—such a use as might have been in the contemplation of the parties when the company was organized."

See also *Bacon vs. Walker*, 204 U. S., 311, 315.

And in *Walls vs. Midland Carbon Co.*, 254 U. S., 300, regulating the consumption of gas in carbon-black manufacture, it was referred to as "a determining consideration" that the State had "an interest to adjust

and preserve, natural gas being one of the resources of the State."

We need not go so far as to say that the whole quantity of gas existing in a State at any time is affected by the public interest; for if there is an abundance wherewith to serve all present requirements, it may well be that the public cannot be said to have an interest in any particular part of it. But if the whole quantity of gas is so far reduced, or in prospect of reduction, that all who at the time desire to consume it cannot be served, and the very gas which is being produced by corporations, themselves affected by the public interest, is immediately necessary for consumption by the people of the State, that very gas may in a correct sense be deemed to be affected with the public interest of the State, and to fall within a different rule. For as said in *Block vs. Hirsh, supra*: "Plainly, circumstances may so change in time or so differ in space as to clothe with such an interest what at other times or in other places would be a matter of purely private concern;" and then referring to previous decisions it was remarked: "They dispel the notion that what in its immediate aspect may be only a private transaction may not be raised by its class or character to a public affair."

Walls vs. Midland Carbon Co., supra, is, indeed, an example of these observations in *Block vs. Hirsh*; for the *Walls Case* related to a failing gas supply, in respect of which it was said:

> "The determining consideration is the power of the State over, and its regulation of, a property in which others besides the companies may have rights, and in which the State has an interest to ad-

> just and preserve, natural gas being one of the resources of the State."

And again it was said of previous cases that,—

> "the State of Wyoming has the same power to prevent the use of natural gas in the production of carbon black, the tendency of which is (it may be the inevitable effect of which is) the exhaustion of the supply of natural gas, and the consequent detriment of other uses."

These considerations would, we believe, sufficiently distinguish *West vs. Kansas Nat. Gas Co.*, 221 U. S., 229, even if the legislation now in contest directly acted on interstate commerce. There the whole volume of gas produced in Oklahoma was more than sufficient to serve the then gas-consuming public of that State, and only the surplus, required by no present necessity in the State, was being transported out of it. Still further, the companies and individuals attacking the validity of the statute there involved were, as more fully appears in the report of the case below (*Kansas Nat. Gas Co. vs. Haskell*, 172 Fed., 545), not engaged, and apparently not obligated to engage, in the public supply of gas in Oklahoma. Therefore, neither they by their business, nor their surplus product, by any existing need, could be said to be affected by any immediate public use. We shall refer to this decision again, in relation to the commerce clause of the Federal Constitution.

LACK OF POWER OF GAS COMPANIES TO DISABLE THEMSELVES FROM PERFORMING PUBLIC DUTY.

The duty of serving the public of West Virginia appearing, upon no pretext, (even though, as we shall point out later, it were the desire to engage in interstate commerce—*Hudson County Water Co. vs. McCarter*, 209 U. S., 348; *Erie R. Co. vs. Board of Public Com.*, 254 U. S., 394; *South Covington & C. S. R. Co. vs. Kentucky*, 252 U. S., 399, 403; *Browning vs. Waycross*, 233 U. S., 16, 23; *Manufacturers Light & H. Co. vs. Ott*, 215 Fed., 940, 951), could or can these companies renounce or abandon the duty of furnishing gas to that public to the extent of their ability to do so, within the measure of reasonable adequacy and the territorial limits prescribed by law. In *Gibbs vs. Consolidated Gas Co.*, 130 U. S., 396, Mr. Chief Justice Fuller said:

> "It is also too well settled to admit of doubt that a corporation cannot disable itself by contract from performing the public duties which it has undertaken, and by agreement compel itself to make public accommodation or convenience subservient to its private interests.
>
> "'Where,' says Mr. Justice Miller, delivering the opinion of the court in *Thomas vs. Railroad Co.*, 101 U. S., 71, 83, 'a corporation, like a railroad company, has granted to it a franchise intended in large measure to be exercised for the public good, the due performance of those functions being the consideration of the public grant, any contract which disables the corporation from performing those functions, which undertakes without the consent of the State to transfer to others the rights and powers conferred by the charter, and to relieve the grantees

of the burden which it imposes, is a violation of the contract with the State and is void as against public policy.'

"These gas companies entered the streets of Baltimore, under their charters, in the exercise of the equivalent of the power of eminent domain, and are to be held as having assumed an obligation to fulfill the public purposes to subserve which they are incorporated."

In *Attorney-General vs. Haverhill Gas L. Co.*, 215 Mass., 394; 101 N. E., 1061, it was said of the gas company:

"The respondent is a corporation, organized to exercise a public franchise of importance to the community in which it conducts its business. It is its duty to exercise this franchise for the benefit of the public, with a reasonable regard for the rights of individuals who desire to be served, and without discrimination between them. It cannot relieve itself from this duty so long as it retains its charter. It enjoys public rights in the streets, which are derived from the Commonwealth, through action of the board of aldermen under authority of the Legislature. It is a quasi-public corporation, and as such it owes duties to the public. * * * Without legislative authority it cannot sell its property and franchise to another party, in such a way as to take away its power to perform its public duties."

See also:

Oregon R. & N. Co. vs. Oregonian R. Co., 130 U. S., 1, 23;

Central Transp. Co. vs. Pullman P. C. Co., 139 U. S., 24, 42-44;

South Covington & C. S. R. Co. vs. Kentucky, 252 U. S., 399, 403, 404;

Visalia Gas & El. Co. vs. Sims, 104 Cal., 326; 37 Pac., 1044;

Charleston Nat. Gas Co. vs. Lowe, 52 W. Va., 622, 671; 44 S. E., 410;

Town of Gassaway vs. Gassaway Gas Co., 75 W. Va., 60; 83 S. E., 189.

The principle of the foregoing authorities is applicable. Instead of disposing of their plants, as has been often attempted, the seven gas companies have attempted to disable themselves from the performance of their duty of serving the people of West Virginia by disposing elsewhere of the very subject matter of the service. The disability equally exists, and would be no greater if they sold their pipe-lines, or the entire body of their gas territory.

VI.

IT WAS WITHIN THE RIGHT AND POWER OF THE STATE TO REGULATE THE GAS COMPANIES. THE RIGHT AND POWER ARE BASED ON SEVERAL GROUNDS AND THEIR EXERCISE WAS NECESSARY.

The nature of the gas companies and the relation of their service to the West Virginia public having been adverted to, the legislative right of the State to regulate them, in order to compel the performance of their duties, is manifest and well established. That right, and its due expression, rest upon a triple foundation:

(1) *The Implied Condition Accompanying the Grant of Rights and Privileges to the Companies.*

The implied condition of public service accompanied the grant of the corporate powers and special rights and privileges, and subject to such condition those powers, rights and privileges were accepted by these companies.

Charleston Gas Co. vs. Lowe, 52 W. Va., 662, 671; 44 S. E., 410;

Carnegie Nat. Gas Co. vs. Swiger, 72 W. Va., 557, 571; 79 S. E., 3;

Farmers Loan & T. Co. vs. Galesburg, 133 U. S., 156;

Lake Shore & M. S. R. Co. vs. Ohio, 173 U. S., 285;

New Orleans Waterworks Co. vs. Louisiana, 185 U. S., 336, 346;

Missouri P. R. Co. vs. Kansas, 216 U. S., 262;

Chesapeake & O. R. Co. vs. Public Service Com., 242 U. S., 603, 607;
New York El. L. Co. vs. Empire City S. Co., 235 U. S., 179, 194, 195.

In *Lake Shore & M. S. R. Co. vs. Ohio, supra*, it was said:

> "The plaintiff in error accepted its charter subject necessarily to the condition that it would conform to such reasonable regulations as the State might from time to time establish, that were not in violation of the supreme law of the land."

In *Missouri P. R. Co. vs. Kansas, supra*, in upholding the validity of an order of a State Railroad Commission requiring an interstate railroad to operate an additional train within the State, it was said, quoting in part from *Atlantic Coast Line R. Co. vs. North Carolina Corp. Com.*, 206 U. S., 1:

> "But where a duty which a corporation is obliged to render is a necessary consequence of the acceptance and continued enjoyment of its corporate rights, those rights not having been surrendered by the corporation, other considerations are, in the nature of things, paramount, since it cannot be said that an order compelling the performance of such a duty at a pecuniary loss is unreasonable. To conclude to the contrary would be but to declare that a corporate charter was purely unilateral; that is, was binding in favor of the corporation as to all rights conferred upon it, and was devoid of obligation as to duties imposed, even although such duties were the absolute correlative of the rights conferred."

(2) *The Reserved Power to Alter or Repeal Corporation Charters and Laws.*

The Legislature at the outset had the power to impose such conditions as it saw fit upon the grant of corporate charters, franchises, rights of condemnation and other privileges to gas companies.

Ashley vs. Ryan, 153 U. S., 436, 441-444;
Home Ins. Co. vs. New York, 134 U. S., 594, 600;
New Jersey vs. Anderson, 203 U. S., 483, 493.

In authorizing the incorporation of such companies, or such rights and privileges, the Legislature might, in the public interest, have imposed as conditions every provision of the statute assailed. And a corporation accepting a charter upon such conditions would have been estopped to rebel against them.

Ashley vs. Ryan, 153 U. S., 436, 441, 443;
Interstate Consol. S. R. Co. vs. Massachusetts, 207, U. S., 79, 84.

If at the outset West Virginia, in consideration of the exhaustible nature of the commodity, and the local character of the public gas supply (*Pennsylvania Gas Co. vs. Public Service Com.*, 252 U. S., 23; *Public Utilities Com. vs. Landon*, 249 U. S., 236), had by express enactment imposed on corporations, or even individuals as a condition of permission to engage in the public service in West Virginia, or some municipality thereof, that they should sell gas only in or for the State or the particular municipality, we submit that nothing would have forbade the condition.

When the gas companies were incorporated or admitted to do business in West Virginia, and ever since,

it has been within the reserved power of the Legislature "to alter the charter or certificate of incorporation * * * granted to any joint-stock company, and to alter or repeal any law applicable to such company."

Code of W. Va., Ch. 53, Sec. 8;
W. Va. Acts of 1867, Ch. 5, Sec. 6;
W. Va. Acts of 1882, Ch. 96, Sec. 8;
St. Mary's, &c., Petroleum Co. vs. West Virginia, 203 U. S., 183;
Manufacturers Light & H. Co. vs. Ott, 215 Fed., 940.

This being true, when the Legislature enacted the statute in question it was equally within its power to prescribe that they should render reasonably adequate service to West Virginia, and to provide for the supply of local companies experiencing a shortage, to the extent which the present statute contemplates.

Stanislaus Co. vs. San Joaquin & K. R. & I. Co., 192 U. S., 201, 211;
Erie R. Co. vs. Williams, 233 U. S., 685, 700-704;
Sutton vs. New Jersey, 244 U. S., 258, 260;
Fair Haven & W. R. Co. vs. New Haven, 203 U. S., 379, 288;
San Antonio T. Co. vs. Altgelt, 200 U. S., 304;
New York & N. E. R. Co. vs. Bristol, 151 U. S., 556, 567, 568;
Hamilton Gaslight & C. Co. vs. Hammond, 146 U. S., 258, 269-271;
Spring Valley Water Co. vs. Schottler, 110 U. S., 347, 353;
Greenwood vs. Union Freight Co., 105 U. S., 13;

Hammond Packing Co. vs. Arkansas, 212 U. S., 322, 345, 346.

(3) *The Police Power.*

The general police power, apart from any implication of conditions annexed to the grant, embraces the settled right of the State to compel its creatures to perform the public duties for which they were created.

Munn vs. Illinois, 94 U. S., 113;

New Orleans Gas L. Co. vs. Louisiana Light, &c. Co., 115 U. S., 650;

Stone vs. Farmers L. & T. Co., 116 U. S., 307;

Reagan vs. Farmers L. & T. Co., 154 U. S., 362;

Prentis vs. Atlantic Coast Line Co., 211 U. S., 210;

Erie Railroad Co. vs. Board of Public Utility Com., 254 U. S., 394;

United Fuel Gas Co. vs. Public Service Commission, 73 W. Va., 571, 80 S. E., 931;

Mill Creek Coal & C. Co. vs. Public Service Com., 84 W. Va., 662; 100 S. E., 557.

VII.

THE STATUTE IS A LEGITIMATE EXERCISE OF THE POLICE POWER.

Were these provisions a legitimate exercise of the power of the State? The question must be answered in the light of the known characteristics of gas production and its originally inevitable and present decline in West Virginia and elsewhere; the nature of the gas companies as public-service corporations; the relation of the public interest to their business and gas; the absorption by the seven companies of other West Virginia companies; the gas shortage and its effects in West Virginia; the inability of local companies to supply the deficiency, because of the control by the seven companies of gas and gas territory, obtained through the possession of large capital, pipe lines owing their existence to special rights and privileges, and the compressor stations (*1 Wyman, Public Service Corp.*, Sec. 91); the conditions attaching to the enjoyment of such special rights and privileges; the reserved statutory power to alter or repeal charters and laws affecting corporations, and the nature and purposes of the police power.

From the social and economic dependency on gas in reasonably adequate volume, the domestic and industrial evils resulting from the lack of such service, and the "fact accomplished" that there is now, and for several years has been, insufficient West Virginia gas to permit at once the full measure of service in West Virginia and the other States to which it was and is transported, admittedly there must be, in the nature of things, a limitation upon the service and consumption of gas,

in respect of either the purposes of the consumption or the territorial area of supply. This much is admitted by all the witnesses for the plaintiffs, as we have shown in the statement of facts, and in the reference, under Title IV, to the construction of the statute.

In this situation, it was and is incumbent on some one to formulate and enforce suitable regulations. And the Congress not having acted, even in respect of the interstate transportation of gas (*Act of June 18, 1910*, Ch. 309, Sec. 7; 36 Stat. at L., 539, 544; *Pennsylvania Gas Co. vs. Public Service Com.*, 252 U. S., 23, 30), the exercise of a regulatory power must emanate either from the State or from the gas companies. And the question is, which should it be?

But we have also shown that the managing officers of six out of the seven gas companies, and others experienced in the gas business or thrust forward as experts, and appearing as witnesses for the plaintiffs, are submerged in perplexity and disagree as to the appropriate remedy, agreeing only that West Virginia gas is declining and that West Virginia consumers are getting too great a share of it. The reasonable anticipation, if regulation were to be left to the gas companies, is accurately gauged by the denial of West Virginia's regulatory power, if and when its regulations affect the quantity of gas transported to the other States, regardless of consequences in and to West Virginia; by the insistence upon peak load requirements in time of shortage (Rec. 697); by the predictions of injury to the other States and gas companies therein, through the withdrawal of any West Virginia gas from export (Rec., 526, 605, 606, 854, 972, 973), and by the thought expressed by some

witnesses for the plaintiffs, already quoted, that, irrespective of the statute, any increased consumption in West Virginia, even because of increased population, would prejudice the other States (Rec., 854, 972, 973).

In the diversity of opinion of specialists, mainly effective to "darken counsel," we think that by the process of elimination, if nothing more—aside from the aspect of legislative power and duty—it necessarily fell to the State of West Virginia to enact fitting regulations. And the only question is, whether it had the power, and whether that power has been exercised within the limits of legislative discretion.

Under Title IV we have discussed the construction of the statute and its reasonableness. And we approach the question of power.

POLICE POWER AS TO THE GENERAL SUBJECT.

In *Ohio Oil Co. vs. Indiana,* 177 U. S., 190, legislation to prevent wasteful escape of gas from wells was upheld, in view of the peculiar nature of gas and the right of the State to "consider the relation of rights, and accommodate their co-existence, and, in the interest of the community, limit one that others may be enjoyed" (*Walls vs. Midland Carbon Co.,* 254 U. S., 300).

In *Lindsley vs. Nat. Carbonic Gas Co.,* 220 U. S., 61, relating to a statute prohibiting the pumping of mineral waters for the extraction of carbonic-acid gas, or the production of the unnatural flow of such gas, for commercial purposes otherwise than in conjunction with the mineral waters, it was said of *Ohio Oil Co. vs. Indiana,*

"were the question an open one, we should still solve it in the same way."

More recently, in *Walls vs. Midland Carbon Co.*, 254 U. S., 300, it was held that in order to conserve gas, shown to be declining in certain fields where, or in the vicinity of which it was needed for more economical consumption, the State of Wyoming could constitutionally restrict the use of gas for carbon-black manufacture. And it was said, after citing *Ohio Oil Co. vs. Indiana* and *Lindsley vs. Nat. Carbonic Gas Co.*:

> "By reverting to these cases it will be immediately observed that the power of regulation over natural gas is possessed by a State, and in the first case (*Ohio Oil Co. vs. Indiana*) it was exercised to prohibit the employment of the gas as a means or agency in the production of oil against an asserted right of property in the ownership of the land upon which the oil was produced, and, therefore, of the oil and gas as incidents of such ownership, and which could be used in such manner and quantity as the land owner might choose."

And in respect of the State's power to protect and preserve gas as a natural resource, it was remarked:

> "And there is great disproportion between the gas and the product, and necessarily there was presented to the judgment and policy of the State a comparison of utilities which involved as well the preservation of the natural resources of the State and the equal participation in them by the people of the State. And the duration of this utility was for the consideration of the State, and we do not think that the State was required by the Constitu-

tion of the United States to stand idly by while these resources were disproportionately used, or used in such way that tended to their depletion, having no power of interference.

The cited cases determine otherwise; and that, as the State of Indiana could prevent the exhaustive use of gas in the production of oil, and as the State of New York could prevent the owner of land from using artificial means to obtain the carbonated waters under his land, the State of Wyoming has the same power to prevent the use of natural gas in the production of carbon black, the tendency of which is (it may be the inevitable effect of which is) the exhaustion of the supply of natural gas, and the consequent detriment of other uses."

Apart from the cases dealing especially with gas, and the particular considerations affecting public-service corporations, the more general authorities dealing with the police power fortify their principles and their application to the cases now at bar.

Of the police power it has been said it is—

"One of the most essential of powers, at times the most insistent, and always one of the least limitable of the powers of government.' '

District of Columbia vs. Brooke, 214 U. S., 138, 149;

Eubank vs. Richmond, 226 U. S., 137, 142;

Sligh vs. Kirkwood, 237 U. S., 50, 59;

Hall vs. Geiger-Jones Co., 242 U. S., 539.

And, as said in *Chicago & A. R. Co. vs. Tranbarger,* 238 U. S., 66, 77:

"This power can neither be abdicated nor bar-

gained away, and is inalienable even by express grant; and * * * all contract and property rights are held to its fair exercise. *Atlantic Coast Line R. Co. vs. Goldsboro,* 232 U. S., 548, 558, and cases cited."

The public welfare to which the protection of the power extends, embraces not only public health, morals, and safety, but also the public convenience and the general prosperity.

Chicago, B. & Q. R. Co. vs. Illinois, 200 U. S., 561, 592;
Bacon vs. Walker, 204 U. S., 311, 317;
Eubank vs. Richmond, 226 U. S., 137, 142;
Sligh vs. Kirkwood, 237 U. S., 52, 59;
Chicago & A. R. Co. vs. Tranbarger, 238 U. S., 66, 77.

In *Sligh vs. Kirkwood, supra,* it was said:

"It is not subject to definite limitations, but is co-extensive with the necessities of the case and the safeguards of public interest. *Canfield vs.* United States, 167 U. S., 518, 524. It embraces regulations designed to promote public convenience or the general prosperity or welfare, as well as those specifically intended to promote the public safety or the public health. *Chicago, B. & Q. R. Co. vs. Illinois,* 200 U. S., 561, 592. In one of the latest utterances of this court upon the subject, it was said: 'Whether it is a valid exercise of the police power is the question in the case, and that power we have defined, as far as it is capable of being defined by general words, a number of times. It is not susceptible of circumstantial precision. It ex-

tends, we have said, not only to regulations which promote the public health, morals, and safety, but to those which promote the public convenience or the general prosperity.' * * * And, further: 'It is the most essential of powers, at times the most insistent, and always one of the least limitable of the powers of government.' *Eubank vs. Richmond*, 226 U. S., 137."

The scope of this power, and its flexibility in meeting and dealing with modern conditions, are illustrated in *German Alliance Insurance Co. vs. Lewis*, 233 U. S., 389, where State regulation of fire-insurance rates was upheld, and, again, *Hall vs. Geiger-Jones*, 242 U. S., 539; *Caldwell vs. Sioux Falls Stockyards Co.*, 242 U. S., 599, and *Merrick vs. Halsey*, 242 U. S., 568, upholding the "Blue Sky laws." In *Merrick vs. Halsey*, Mr. Justice McKenna said:

"Every new regulation of business or conduct meets challenge, and, of course, must sustain itself against challenge and the limitations that the Constitution imposes. But it is to be borne in mind that the policy of a State and its expression in laws must vary with circumstances. And this capacity for growth, and adaptation we said, through Mr. Justice Matthews, in *Hurtado vs. California*, 110 U. S., 516, 530, is the 'peculiar boast and excellence of the common law.' It may be that constitutional law must have a more fixed quality than customary law, or, as was said by Mr. Justice Brewer in *Muller vs. Oregon*, 208 U. S., 412 420, that 'it is the peculiar value of a written constitution that it places in unchanging form limitations upon legislative action.' This, however, does not mean that the form is so

> rigid as to make government inadequate to the changing conditions of life, preventing its exertion, except by amendments to the organic law."

The application of the police power to the protection of the public health, as in the prevention of the adulteration of food (*Plumley vs. Massachusetts*, 155 U. S., 461; *Capital City Dairy Co. vs. Ohio*, 183 U. S., 238; *Price vs. Illinois*, 238 U. S., 446); or the limitation of the hours of labor (*Muller vs. Oregon*, 208 U. S., 412; *Miller vs. Wilson*, 236 U. S., 373; *Holden vs. Hardy*, 169 U. S., 366), are commonplace.

Measures to safeguard the business prosperity of the State are exampled by the prohibition of monopolies and combinations in restraint of trade (*Waters-Pierce Oil Co. vs. Texas*, 212 U. S., 86; *Grenada Lumber Co. vs. Mississippi*, 217 U. S., 433; *Standard Oil Co. vs. Missouri*, 224 U. S., 270; *International Harvest. Co. vs. Kentucky*, 234 U. S., 199); of unfair competition (*Central Lumber Co. vs. South Dakota*, 226 U. S., 157), and of the sale or shipment of products detrimental to the business reputation of an important industry (*Sligh vs. Kirkwood*, 237 U. S., 50).

If it be true that in any instance the State may legislate in the interest of the health and general business prosperity of its inhabitants, it must follow that health may be preserved against injury by cold as well as by disease or adulteration of food, and that the industry of the State may be protected as well from destruction by deprivation of necessary fuel as from mere injury by practices hurtful to its trade or reputation. Upon this ground, aside from any peculiar relations or obligations

affecting public-service corporations, it is plain that the State may legislate in defense of its people and its industries in prevention of a real and present danger arising from deprivation of gas.

Nor is it an answer that the State did not interpose earlier. While the gas supply was adequate there was no occasion for the exertion of the State's power. And regardless of this, the delay did not detract from the power. In *German-Alliance Ins. Co. vs. Lewis*, 233 U. S., 389, 416, Mr. Justice McKenna, in upholding an exercise of the police power, said by way of illustration drawn from the enactment of the Interstate Act a century after the power to regulate commerce was created:

> "It was exerted only when the size, number and influence of those agencies had so increased and developed as to seem to make it imperative. Other illustrations readily occur which repel the intimation that the inactivity of a power, however prolonged, militates against its legality when exercised. *United States ex rel. Atty.-Gen. vs. Delaware & H. Co.*, 213 U. S., 366. It is oftener the existence of necessity rather than the prescience of it which dictates legislation."

And in *Thornton vs. Duffy*, 254 U. S., 361, 369, it was said that,—

> "An exercise of public policy cannot be resisted because of conduct or contracts done or made upon the faith of former exercises of it, upon the ground that its later exercises deprive of property or invalidate those contracts. *Louisville & N. R. Co. vs. Motley*, 219 U. S., 467."

179

INDUSTRIAL USE OF GAS.

We do not understand it to be contended seriously that the enforcement of the statute in respect of domestic users would materially add to the volume of West Virginia gas consumption (Rec., 972).

We anticipate, however, special reference on the other side to two features of the statute: (1) the provision made for industrial gas supply and (2) the provision made for the sale of gas to other gas companies not themselves possessed of a reasonably adequate supply.

In regard to the objection to the requirement of a reasonably adequate supply for industrial use, several answers at once appear. They have already been stated in the reference to industrial gas in the statement of facts, and under Title IV, subdivision (d), and under Title V, "*Duties of Gas Companies to Serve West Virginia Public.*"

Assuming, as we have already shown, that the supply of industrial gas is, by the holding out by the gas companies of their readiness and willingness to furnish such gas (subject only to the needs of domestic consumers) and by the settled law of West Virginia, a public service (*Clarksburg Light & H. Co. vs. Public Service Com.*, 84 W. Va., 638, 100 S. E., 551; *Kelley Axe Mfg. Co. vs. Public Service Com.*, 87 W. Va., 105, S. E., 152; *Mill Creek Coal & C. Co. vs. Public Service Com.*, 84 W. Va., 662, 100 S. E., 557), there is no distinction in principle between that service and the domestic service. Between the supply of gas for domestic

purposes and for industrial use there is but one difference. The service differs only in degree of necessity because the hardship is personally more acute in case of failure of the domestic supply than where the failure pertains to the industrial supply. This, of course, constitutes a sufficient basis for classification, preferential to the domestic consumer. But the fact that classification may be justified, proves nothing in regard to the nature of the subordinate service. The latter is still a public service.

The plaintiffs disagree with the policy of West Virginia in denominating the industrial service as public and in requiring its fulfillment, though they inconsistently permit industrial use within their own confines —even of West Virginia gas—and the gas companies in general emphasize the necessity of such use. We pursue this no further, because, however the plaintiffs may disagree, the uses to which gas may be applied in West Virginia was and is a local question for the determination of the Legislature of that State; and the objections of the plaintiffs go, as said in *Ohio Oil Co. vs. Indiana,* 177 U. S., 190, 211, "not to the power to make the regulations, but to their wisdom," and "with the lawful discretion of the legislature of the State" there can be no judicial interference.

And see:

Lindsley vs. Nat. Carbonic Gas Co., 220 U. S., 61, 76, 77;

Walls vs. Midland Carbon Co., 254 U. S., 300.

As to the dismal foreboding, the asertion that the enforcement of the statute as to industrial consumers

will absorb all the West Virginia gas, it may be sufficient to remark that these are wholly speculative, and "mere prophecies which are ventured" (*Tanner vs. Little*, 240 U. S., 369, 385).

The provisions of Section 4 and the correlation of the Public Service Commission Act, by appropriate administrative hearing and determination, with judicial review, effectually guard against the requirement by the consumer, domestic or industrial, of more than a reasonably adequate supply. If a decision of the Commission as to reasonable adequacy, in respect of either volume or economy of consumption, is deemed erroneous, the gas companies will have their day in court. Such questions can be answered "when they arise" (*Noble State Bank vs. Haskell*, 219 U. S., 104, 112). This Court is not called upon to sit in "anticipatory judgment" (*Tanner vs. Little*, 240 U. S., 369, 385).

But in this day the mantle of prophecy ordinarily yields to probabilities based on known facts. The industrial changes as to fuel which have taken place in West Virginia, as a result of the gas shortage, and the constantly increasing rates, competing unfavorably with producer gas (Rec., 1229-1230), afford subtsantial evidence to this Court, as they may well have done to the Legislature, that no such result would happen.

Still further, in this relation, the presumption being in favor of the validity of the statute and the burden being on the plaintiffs to show a violation of constitutional guaranties, there can be no declaration of unconstitutionality upon mere loose opinion or conjecture. The repeated refusal to declare public-service rates confiscatory in advance of actual test, is illustrative.

Knoxville vs. Knoxville Water Co., 212 U. S., 1, 18, 19;
Willcox vs. Consolidated Gas Co., 212 U. S., 19, 54;
Northern Pacific R. Co. vs. North Dakota, 216 U. S., 579; 236 U. S., 585;
Des Moines Gas Co. vs. Des Moines, 238 U. S., 153, 173;
Missouri vs. Chicago, B. & Q. R. Co., 241 U. S., 533, 539, 540.

SUPPLY OF GAS TO LOCAL COMPANIES.

What has been said as to industrial consumption, applies still more fully to Section 2 of the statute relative to the supply in amounts to be fixed by the Commission of deficits to gas companies having a shortage, when the supplying company has gas in excess of the amount necessary for the reasonably adequate supply of its own consumers in the State, and providing for physical connection of lines after due hearing, and the fixing of reasonable terms, conditions and rates; to which is added the proviso that the company having the surplus may itself, in the alternative, furnish the consumers within the territory a reasonably adequate supply.

It is shown by the proofs that the supply of gas to local companies having a deficit, is precisely what has been done by most of the seven companies in the past (Rec., 1034-1026), what in the present they do among themselves (Rec., 1712, 1769, 1780, 1791), and what they do, and desire to do, in respect of companies out of the State (Rec., 1509, 1524, 1544, 1554, 1560, 1729, 1738, 1745, 1752, 1761). It is shown also that the

shortage of the West Virginia local companies is due in large measure to the control, amounting to a virtual monopoly, of the West Virginia gas supply and fields, acquired in their character as West Virginia public-service corporations obligated to serve the public of that State. We have referred to this in the statement of facts and under Title IV.

There is no savor of constitutional infringement, nor unreasonableness, in requiring the companies to perform acts of the precise character habitually performed by them in the past, nor in enacting that they shall, in the alternative, supply, either directly or indirectly through local companies, consumers whom the companies were legally compellable to supply in advance of the passage of the statute.

The rule against discrimination in itself amply justifies the requirement that a public-service gas company which "wholesales" gas to another company, shall equally supply it to other companies.

People ex rel. Western Union Tel. Co. vs. Public Service Com., 230 N. Y., 95, 129 N. E., 220;

North Carolina Pub. Service Co. vs. Southern Power Co., 282 Fed., 837, 844;

Louisville & N. R. Co. vs. United States, 238 U. S., 1;

Postal Cable Tel. Co. vs. Cumberland Tel. & T. Co., 177 Fed., 726.

The requirement by the State, in the exercise of the police power, of co-operation in the public interest, among persons or corporations engaged in business, is

no new thing in the law. *Noble State Bank vs. Haskell,* 219 U. S., 104, 110, 112, sustaining a statute establishing a depositors' guaranty fund by the involuntary contributions of banks, is an example. There it was said "that an ulterior public advantage may justify a comparatively insignificant taking of private property for what, in its immediate purpose, is a private use." The Workmen's Compensation Acts are an added illustration (*New York Central R. Co. vs. White,* 243 U. S., 188; *Mountain Tie & T. Co. vs. Washington,* 243 U. S., 219).

The alternative compulsion of physical connections with local companies having a deficit is no different from the common requirement of physical connections or interchange of facilities in the case of railroads and other public utilities.

W. Va. Acts of 1913, Ch. 9, Sec. 8;
W. Va. Acts of 1915, Ch. 8, Sec. 24;
Ohio General Code, Secs. 522, 614-63;
Pennsylvania Pub. Laws of 1913, p. 1374, *Pub. Service Com. Law,* Art. I, Sec. 1.

Such connections already exist in many instances (Rec., 1034-1036; 1736 at pp. 402-414).

The validity of such requirements has often been sustained.

Wisconsin, M. & P. R. Co. vs. Jacobson, 179 U. S., 287;
Grand Trunk R. Co. vs. Michigan R. Com., 231 U. S., 457, 468;

Pacific Teleph. & Teleg. Co. vs. Wright-Dickinson H. Co., 214 Fed., 666;
Pioneer Teleph. & Teleg. Co. vs. State, 38 Okla., 554; 134 Pac., 398;
Hooper Teleph. Co. vs. Nebraska Teleph. Co., 96 Neb., 245; 147 N. W., 674.

VIII.

THE PLAINTIFFS CLAIM THROUGH THE GAS COMPANIES, AND HAVE NO HIGHER RIGHT OR TITLE TO RELIEF.

Various clauses of the Federal Constitution are invoked by the plaintiffs, as invalidating the statute. Much was said in the bills and evidence, and doubtless more will be said, as to the property, rights, and contracts of the gas companies, and losses from the predicted uselessness of pipe lines leading to, and distributing plants located within, the other States, and the inability of the gas companies to perform their contracts and to supply West Virginia gas to or in the other States.

As to the gas companies, and especially the seven companies operating in West Virginia, as well as the citizens of the plaintiff States, a short answer may be made. If the statute unconstitutionally injures them in property or contract rights, that would not entitle the plaintiffs to complain, "since it is a well-settled rule of this Court that it only hears objections to the constitutionality of laws from those who are affected by its alleged unconstitutionality in the features complained of." "The plaintiffs must show that their own rights are infringed."

Jeffery Mfg. Co. vs. Blagg, 235 U. S., 571, 576;
New York Central R. Co. vs. White, 243 U. S., 188, 199;
Plymouth Coal Co. vs. Pennsylvania, 232 U. S., 531, 545;
Arkadelphia Mill. Co. vs. St. Louis S. W. R. Co., 249 U. S., 134, 149.

Before passing to particular consideration, one general observation is applicable. The alleged rights claimed by the plaintiffs for themselves and their inhabitants are alleged rights to West Virginia gas, derived and derivable, directly or remotely, through gas companies, public-service corporations of West Virginia, obligated from the beginning to serve the public of that State, subject to that primary duty of public service, and from the outset amenable to the laws of the State. And thus mediately deriving their alleged rights, the rights of the plaintiffs can rise no higher than those of the gas companies, and the wrongs complained of are in reality alleged wrongs to the companies, which, if non-existent, leave the plaintiffs with cases of *damnum absque injuria.*

But still further, insofar as the plaintiffs receive gas from gas companies of their own State, who purchase their supplies from the West Virginia companies, they are in worse case. We have already shown that in the majority of instances the West Virginia companies transporting through pipe lines gas to or for consumption in other States, have by their express contracts agreed to furnish gas for the other States only to the extent of their supply (Rec., 1509, 1524, 1544, 1712, 1738, 1745, 1769, 1780), that in some of the contracts West

Virginia domestic consumption is abstractly given a preference (Rec., 1509, 1524, 1544, 1712, 1738, 1745, 1769, 1780), and that in some instances, notably the Hope Natural Gas Company and United Fuel Gas Company, the contracts provide for apportionment or priority of supply as among the purchasing companies (Rec., 1560, 1565, 1738, 1752), so that by the contracts themselves in time of shortage, whether periodic or in the ultimately permanent condition, some companies in the plaintiff States may be supplied, while others are cut off.

Let it be supposed that in time of shortage the territory served by the East Ohio Gas Company receives insufficient gas from the Hope Natural Gas Company, due to the apportionment with the Peoples Natural Gas Company, contemplated by their contracts (Rec., 1544, 1524). Will Ohio, or its inhabitants affected, have cause for complaint or a legal remedy against the Hope Natural Gas Company, or the Peoples Natural Gas Company; or against the State of Pennsylvania, because the laws of that State require its gas companies to give reasonably adequate service? Or will there be a right or remedy against the United Fuel Gas Company, who subordinates its supply to the Hope Company to the preexisting contracts of the United Fuel Company (Rec., 1769, 1776)? If the Hope Company, as under its contract with the Fayette County Gas Company it may, diverts its entire stock of gas to the East Ohio Gas Company and the Peoples Natural Gas Company (Rec., 1560), has the Fayette County Company or the State of Pennsylvania a justicable grievance, and if so, against whom? The East Ohio Gas Company contracts to supply municipalities in Ohio only to the extent of its ability to obtain gas (Rec., 596). Have those munici-

palities, or the consumers therein, or the State of Ohio, a right of action against the Hope Natural Gas Company, on which the East Ohio Company is dependent, or against the Peoples Natural Gas Company, which is contractually entitled to an apportionment, or against West Virginia or Pennsylvaia?

View the case from the standpoint of the vendor companies which, in general, limit their contract obligations to the extent of their gas supply, and are exempted from liability in case of insufficient gas or interruption of service from causes beyond their control, among which causes would be a change of law by West Virginia (*Louisville & N. R. Co. vs. Mottley*, 219 U. S., 467, 484-486). Can the plaintiffs erect into a grievance that for which the vendor companies are not liable?

We think these questions answer themselves.

IX.

LEAVING FOR SEPARATE CONSIDERATION THE COMMERCE CLAUSE, THE STATUTE DOES NOT VIOLATE OTHER CONSTITUTIONAL GUARANTEES.

The constitutional objections pressed by the plaintiffs are these:

(1) Impairment of the obligation of contracts.

(2) Deprivation of property without due process of law.

(3) Denial of the equal protection of the laws.

(4) Abridgment of the privileges or immunities of citizens of the plaintiff States or of the United States.

(5) Violation of the interstate commerce clause.

IMPAIRMENT OF OBLIGATION OF CONTRACTS, DUE PROCESS OF LAW, AND EQUAL PROTECTION OF THE LAWS.

The constitutionality of the State's exercise of power in the manner of the statute is not successfully impugned by the circumstances that the gas companies have expended money in the construction of pipe lines and pump stations, and that for the supply of gas in foreign States they have made contracts with other companies or consumers there, or that consumers in other States have made contracts or mechanical arrangements for the consumption of gas. The plaintiffs and their citizens, and the gas companies in West Virginia and in the plaintiff States, knew, one and all, from the outset, the peculiar exhaustible nature of gas, the status of the West Virginia companies, and their subordination to West Virginia laws, present or prospective, enacted in the exercise of the police power. If it be true that the State may validly compel the rendition of adequate service to its people by public-service corporations operating within its borders, the State's authority cannot be defeated by expenditures in aid of evasion of that service, or contracts or arrangements having that result.

The contention that the seven companies engaged in business, and that their pipe lines and pump stations were constructed and are used as facilities for the service of consumers in foreign States, is fallacious. These instrumentalities were built and are employed for the transportation of an available volume of gas presently consumed in part within West Virginia and in a greater part outside of the State. So long as these lines and stations are employed for the transportation of this

quantity of gas, their owners are entitled to a fair return upon the reasonable value of their property so employed for the public convenience (*San Diego L & T. Co. vs National City,* 174 U. S., 739; *Cotting vs. Goddard,* 183 U. S., 79; *San Diego L. & T. Co. vs Jasper,* 189 U. S., 439; *Stanislaus Co. vs. San Joaquin & K. R. C. & I. Co.,* 192 U. S., 201; *Knoxville vs. Knoxville Water Co.,* 212 U. S., 1; *Willcox vs. Consolidated Gas Co.,* 212 U. S., 19; *Railroad Com. vs. Cumberland T. & T. Co.,* 212 U. S., 414; *Lincoln Gas & El. Co. vs. Lincoln,* 223 U. S., 345; *Simpson vs. Shepherd,* 230 U. S., 352). And the right would be as clear if an increased quantity, or even the whole, of the gas were consumed in West Virginia as if apportioned to the advantage of other States, as now. The consumption in West Virginia of an augmented amount of gas would, of course, result in an enlarged aggregate of the rates paid by the consumers therein. And it might be that as a consequence of increased devotion of lines and stations to the service of the West Virginia consumers, or a not improbable influence on operating costs, an upward adjustment of rates in West Virginia would be proper. But this, after all, is but a matter of rates. If fairly compensated, the gas companies are not entitled to refuse to West Virginia an adequate service merely because a greater remuneration can be obtained elsewhere.

If in the case of some of these companies contraction of the volume of gas conveyed to other States should result in the impairment and ultimate destruction of the usefulness of transportation or distributing facilities serving only those States, the injury to the owners of these facilities would be more apparent than

real. The tendency of the gas supply to exhaustion, and the obligation to render adequate service to West Virginia consumers, was as well known on the first day of their career as on the last; and all of the gas companies, both in West Virginia and elsewhere, had the right and opportunity to anticipate in charges against consumers the depreciation or obsolescence resulting from diminished usefulness of these facilities (*Knoxville vs. Knoxville Water Co.*, 212 U. S., 1, 11; *Railroad Com. vs. Cumberland Tel. & Teleg. Co.*, 212 U. S., 414, 424; *Simpson vs. Shepherd*, 230 U. S., 352, 458; *Kansas City S. R. Co. vs. United States*, 231 U. S., 423, 446). Whether all of the companies have disinterestedly refrained from exercising this right to compensate themselves we do not stop to inquire; but we perceive no reason for assuming the case to be in their favor on this point. And the affirmative proof, in a number of instances, shows depreciation allowances and reserves (Rec., 263-265, 443-444).

Whatever may be the result in reference to property devoted to the service of consumers in other States or to contracts made with them, or consequentially affecting their service, the constitutional power of West Virginia, nevertheless, remains clear and certain. The expenditures for that property and those contracts were made subject to the police power of the State and find no protection in the constitutional provisions against the impairment of the obligation of a contract or the deprivation of property without due process of law or any other guaranty of the State or Federal Constitution. In *Chicago, B. & Q. R. Co. vs McGuire*, 219 U. S.,

549, 568, referring to the right to make contracts, Mr. Justice Hughes said:

> "It is subject, also, in the field of State action, to the essential authority of government to maintain peace and security, and to enact laws for the promotion of the health, safety, morals, and welfare of those subject to its jurisdiction. This limitation has had abundant illustration in a variety of circumstances."

In *Chicago & A. R. Co. vs. Tranbarger*, 238 U. S., 67, it was said:

> "But a more satisfactory answer to the argument under the contract clause, and one which at the same time refutes the contention of plaintiff in error under the due process clause, is that the statute in question was passed under the police power of the State for the general benefit of the community at large and for the purpose of preventing unnecessary and widespread injury to property.
>
> It is established by repeated decisions of this Court that neither of these provisions of the Federal Constitution has the effect of overriding the power of the State to establish all regulations reasonably necessary to secure the health, safety, or general welfare of the community; that this power can neither be abdicated nor bargained away, and that all contract and property rights are held subject to its fair exercise. *Atlantic Coast Line R. Co. vs. Goldsboro*, 232 U. S., 548, 558, and cases cited."

In *Hudson County Water Co. vs. McCarter,* 209 U. S., 348, a statute of New Jersey prohibiting the diversion of the water from fresh-water streams of the State to other States was upheld as against the owner of water mains laid for the purpose of carrying water from New Jersey to New York. Overruling the argument that the statute impaired the obligation of contracts, took property without due process of law, and denied the equal protection of the laws, it was said by Mr. Justice Holmes:

> "The defense under the 14th Amendment is disposed of by what we have said. That under Article 1, Section 10, needs but a few words more. One whose rights, such as they are, are subject to State restriction, cannot remove them from the power of the State by making a contract about them. The contract will carry with it the infirmity of the subject matter. *Knoxville Water Co. vs. Knoxville*, 189 U. S., 434, 438; *Manigault vs. Springs*, 199 U. S., 473, 480."

In *Rast vs. Van Deman*, 240 U. S., 342, 363, Mr. Justice McKenna said:

> "Besides, as the business is subject to regulation, the contracts made in its conduct are subject to such regulation. *Louisville & N. R. R. Co. vs. Mottley*, 219 U. S., 467, and *New York C. & H. R. R. Co. vs. Gray*, 239 U. S., 583."

As already pointed out, the fact that the exercise of the powers of the State was delayed, does not militate against its legality when exercised.

German-Alliance Ins. Co. vs. Lewis, 233 U. S., 389, 416;

Thornton vs. Duffy, 254 U. S., 361, 369.

Against the application of the foregoing principles, public-service corporations are not immune. The opinion of Mr. Justice Clarke in *Union Dry Goods Co. vs. Georgia Pub. Service Corp.*, 248 U. S., 372, fully demonstrates this. The following cases also, by express adjudication and concrete illustration, show that the requirement from a public-service corporation of adequate service to the public violates no constitutional provision, even though the rendition of such service is attended with pecuniary loss:

Wisconsin M. & P. R. Co. vs. Jacobson, 179 U. S., 287;

Atlantic Coast Line R. Co. vs North Carolina Corp. Com., 206 U. S., 1;

Missouri P. R. Co. vs. Kansas, 216 U. S., 262;

Washington vs. Fairchild, 224 U. S., 510.

So in *Erie R. Co. vs. Board of Public Utility Com.*, 254 U. S., 394, in refuting an argument against the change of elevation of tracks at crossings, ordered by the Board, it was said:

"That the States might be so foolish as to kill a goose that lays golden eggs for them has no bearing on their constitutional rights. If it reasonably can be said that safety requires the change, it is for them to say whether they will insist upon it, and neither prospective bankruptcy nor engagement in interstate commerce can take away this fundamental right of the sovereign of the soil. *Denver & R. G. Co. vs Denver*, 250 U. S., 241, 246. To engage in interstate commerce the railroad must get on to the land; and, to get on to it, must comply with the conditions imposed by the State for the safety

of its citizens. Contracts made by the road are made subject to the possible exercises of the sovereign right. * * * If the burdens imposed are so great that the road cannot be run at a profit, it can stop, whatever the misfortunes the stopping may produce."

ABRIDGEMENT OF PRIVILEGES AND IMMUNITIES.

What has been said above applies equally to the claim of abridgement of privileges and immunities of citizens of other States or of the United States. In *Barbier vs. Connolly*, 113 U. S., 27, 32, the whole matter was summed up by Mr. Justice Field as follows:

"But neither the amendment as a whole, broad and comprehensive as it is, nor any other amendment was designed to interfere with the power of the State, sometimes termed its police power, to prescribe regulations to promote the health, peace, morals, education and good order of the people, and to legislate so as to increase the industries of the State, develop its resources and add to its wealth and prosperity."

And see:

Slaughter House Cases, 16 Wall., 36;
Re Kemmler, 136 U. S., 436, 448, 449;
Giozza vs. Tiernan, 148 U. S., 657, 661, 662.

In *Western Union Tel Co. vs. Commercial Mill Co.*, 218 U. S., 406, 418, it was dryly intimated that it was "rather late in the day" to contend that the Fourteenth Amendment, either in the privileges and immunities

clause or the other clauses, prevented "the regulation of public-service corporations" by a State.

We stay for a moment to remark that the plaintiff States are not citizens of any State or of the United States:

Stone vs. South Carolina, 117 U. S., 430, 433;
Postal Tel. Cable Co. vs. Alabama, 155 U. S., 487;
Title Guaranty & S. Co. vs. Idaho, 240 U. S., 136;

and that the gas companies are not citizens within the privileges and immunities clauses of the Federal Constitution:

Blake vs. McClung, 172 U. S., 239, 259;
Western Turf Assoc. vs. Greenberg, 204 U. S., 359, 363;
Selover vs. Walsh, 226 U. S., 112, 126.

X.

THE STATUTE DOES NOT REGULATE INTERSTATE COMMERCE.

It is urged against the statute that it amounts to an unconstitutional regulation of interstate commerce for the reason that if an adequate amount of gas is furnished to West Virginia the volume of gas transported to other States will be diminished. And this objection is argued as if the gas companies held no peculiar relation to West Virginia and were bound by no peculiar obligations to it, and as if the gas affected were a mere ordinary subject of barter and sale, like other commodi-

ties. The contention would be the same in principle, and not more startling in form, if the Consolidated Gas Company of New York City, engaged in supplying artificial gas in the metropolitan territory, should assert the right to abandon its obligations to the citizens of New York upon the plea that it was entitled to enter into interstate commerce by selling its gas to New Jersey or Philadelphia. Indeed, the proposition, when based on the claim of freedom of interstate commerce, would equally support a contention that these companies have the right to export from West Virginia to other States the entire stock of gas at their command. For, as testified by witnesses for the plaintiffs, already quoted, every addition to consumption in West Virginia lessens to that extent the volume of gas available for transport to the other States. And the ultimate conclusion would be that no supply whatever to West Virginia could be compelled.

We think that to the objection, based on the commerce clause, there are several answers:

(1) That the West Virginia public-service corporations have no right to engage in interstate commerce, except in subordination to the performance of their duties to the State;

(2) That if interstate commerce is affected, the effect is only indirect and incidental, and therefore, in the absence of congressional enactment, the effect is not violative of the commerce clause; and

(3) That the duties of these corporations to the State in respect of their gas exist not only during interstate commerce therein, but also before the entry of the gas into that commerce; and the gas enters inter-

state commerce subject to those duties and the operation of the statute.

INTERSTATE COMMERCE BY PUBLIC-SERVICE CORPORATIONS.

At the outset let us say that we do not in the least doubt that the sale and transportation of gas may be, and often are, interstate commerce. The decisions of this Court foreclose that question in the circumstances then in judgment. *West vs. Kansas Nat. Gas Co.*, 221 U. S., 229; *Haskell vs. Kansas Nat. Gas Co.*, 224 U. S., 217; *Public Utilities Com. vs. Landon*, 249 U. S., 236; *United Fuel Gas Co. vs. Hallanan*, U. S. Adv. Ops, 1921-22, p. 130). It is established also that interstate commerce is not a technical legal conception, but a practical one (*Swift & Co. vs. United States*, 196 U. S., 375, 398, 399; *Public Utilities Com. vs Landon, supra; Stafford vs. Wallace*, U. S. Adv. Ops., 1921-22, 469); and that the free flow of established interstate commerce may not be directly interfered with. (*Lemke vs. Farmers Grain Co.*, U. S. Adv. Ops., 1920-21, p. 273; *Stafford vs. Wallace, supra; United Fuel Gas Co. vs. Hallanan, supra; Eureka Pipe Line Co. vs. Hallanan*, U. S. Adv. Ops., 1921-22, p. 127).

But anterior to sale and transportation, arises the inquiry whether, and to what extent, the person engaging, or desiring to engage, in interstate commerce is lawfully entitled to do so. No doubt the transportation of lottery tickets, prize-fight films, intoxicating liquors and stolen automobiles from one State to another is interstate commerce; but there is no right to carry it on.

The question here is, not whether a State may prohibit or restrict the transportation of natural gas from its territory into another State, but *whether the State may require companies—owing to its people the obligation of adequate service—to perform that service,* even though the performance may involve the intrastate consumption of gas which otherwise might be transported to another State.

If the gas companies owe a duty to the people of West Virginia, the performance of that duty cannot be evaded merely because they prefer to enter into interstate commerce rather than to perform it. In *Hudson County Water Co. vs. McCarter*, 209 U. S., 348, in upholding the validity of a New Jersey statute prohibiting the transportation of water from any fresh-water stream in the State to a place out of the State, Mr. Justice Holmes said:

> "A man cannot acquire a right to property by his desire to use it in interstate commerce. Neither can he enlarge his otherwise limited and qualified right to the same end."

The same principle is asserted in somewhat different form by three judges sitting in the District Court for the Northern District of West Virginia, in *Manufacturers Light & H. Co. vs. Ott*, 215 Fed., 940, 951. Although the question before the court was primarily one of rates, its language is equally applicable to the question of adequacy of service, since the regulatory authority of the State in respect to rates and service rests upon the same basis, the police power. Judge Woods, delivering the opinion, said:

> "The testimony is undisputed that the main

source of natural-gas supply is in West Virginia, and that the cost of supplying gas to consumers in that State is necessarily much less than in the other States. It seems obvious that West Virginia corporations supplying gas to the citizens of that State from wells in the State cannot say the rates fixed to consumers in West Virginia are confiscatory, because at the same rates the companies would lose money on business which they had chosen to conduct in other States in association with corporations of those States. Even if it be conceded that interstate commerce is involved, the principle must be regarded as settled beyond dispute."

And, on page 952, it was further said:

"The fact that the Manufacturers Light and Heat Co. may have improvidently accepted franchises from municipalities in Ohio and Pennsylvania requiring gas to be furnished at the same rates charged in West Virginia, and that reductions at these points would require gas to be furnished there at less than cost, may be worthy of consideration by the Commission in prescribing the rates in West Virginia.

But it cannot be controlling, for to hold so would be to enable the gas companies to contract away the police power of the State of West Virginia to require reasonable rates to its own citizens."

In *South Covington & C. S. R. Co. vs. Kentucky*, 252 U. S., 399, 403, the principal business of the company was the carriage of passengers between Cincinnati, Ohio, and Kentucky cities across the Ohio River. A subsidiary corporation through which the South Cov-

ington company operated in part had its termini in Kentucky, though many of the passengers traveled by continuous passage to Cincinnati. The Kentucky statute requiring separate cars or compartments for white and negro passengers was held constitutional, it being said that the effect of the statute, insofar as it touched interstate commerce, was merely incidental. Mr. Justice McKeenna said:

> "There was a distinct operation in Kentucky. An operation authorized and required by the charters of the companies, and it is that operation the act in question regulates, and does no more, and therefore is not a regulation of interstate commerce. This is the effect of the ruling in *South Covington & C. Street R. Co. vs. Covington*, 235 U. S., 537. The regulation of the act affects interstate business incidentally, and does not subject it to unreasonable demands.
>
> The cited case points out the equal necessity, under our system of government, to preserve the power of the States within their sovereignties as to prevent the power from intrusive exercise within the national sovereignty, and an interrurban railroad company deriving its power from the State, and subject to obligations under the laws of the State, should not be permitted to exercise the powers given by the State, and escape its obligations to the State, under the circumstances presented by this record, by running its coaches beyond the State lines."

In *Erie R. Co. vs. Board of Public Com.*, 254 U. S., 394, it was said in regard to an order of the board requiring the change of elevation of tracks at crossings:

> "If it reasonably can be said that safety requires the change, it is for them to say whether they will insist upon it, and neither prospective bankruptcy nor engagement in interstate commerce can take away this fundamental right of the sovereign of the soil. *Denver & R. G. R. Co. vs. Denver*, 250 U. S., 241, 246. To engage in interstate commerce the railroad must get on to the land; and, to get on to it, must comply with the conditions imposed by the State for the safety of its citizens. Contracts made by the road are made subject to the possible exercise of the sovereign right. * * * If the burdens imposed are so great that the road cannot be run at a profit, it can stop, whatever the misfortunes the stopping may produce."

If it be true, as previously pointed out, that a gas company, or its business, or the commodity in which it deals, is affected by the public interest, precedents are not wanting to show that the principles relating to interstate commerce in ordinary goods and chattels are inapplicable. In *Geer vs. Connecticut*, 161 U. S., 519, and *New York vs. Hesterberg*, 211 U. S., 31, it was held that a State could prohibit the exportation of game killed within its boundaries, and also prohibit the sale therein of game imported from another State. While in these instances the public interest attained the dignity of public ownership, the cases establish that generalizations from authorities referring to ordinary subjects of interstate commerce are inapplicable to a

business or commodity affected with a public interest, and that interstate commerce in a commodity so affected may be restricted, or even prohibited, though such commerce in ordinary merchandise could not be.

It is no answer to what has been said that if a State can compel a supply of gas to its citizens and thereby prevent its exportation to another State, the other State may impose a similar restriction on the interstate shipment of corn, wheat, lumber or other commodities. Those commodities lack entirely the exhaustibility and other peculiarities of gas. Until their production or distribution shall become affected with a public interest in the sense that the gas business is so affected, no such case will occur. In *Tanner vs. Little*, 240 U. S., 369, 385, in sustaining the validity of a statute imposing a heavy license tax on merchants using trading stamps or redeemable coupons, Mr. Justice McKenna said:

> "Nor is there support of the system or obstruction to the statute in declamation against sumptuary laws, nor in the assertion that there is evil lesson in the statute, nor in the prophecies which are ventured of more serious intermeddling with the conduct of business. Neither the declamation, the assertion, nor the prophecies can influence a present judgment. As to what extent legislation should interfere in affairs political philosophers have disputed and always will dispute. It is not in our province to engage on either side, nor to pronounce anticipatory judgments. We must wait for the instance. Our present duty is to pass upon the statute before us, and if it has been enacted upon a belief of evils that is not arbitrary we cannot

measure their extent against the estimate of the Legislature."

In *Noble State Bank vs. Haskell*, 219 U. S., 104, where a law requiring banks to maintain a guaranty fund for the protection of depositors was held valid, Mr. Justice Holmes said:

> "It is asked whether the State could require all corporations or all grocers to help to guarantee each other's solvency, and where we are going to draw the line. But the last is a futile question, and we will answer the others when they arise."

And see also *German Alliance Ins. Co. vs. Lewis*, 233 U. S., 389, 415.

The case of *West vs. Kansas Nat. Gas Co.*, 221 U. S., 229, already referred to, is not inconsistent with the above views, and does not militate against the statute. In that case, as already noted, neither the corporations and individuals who were plaintiffs, nor their gas, could be said to be affected with a public use, since the persons themselves were not engaged in the business of public gas supply in Oklahoma, and their gas was required by no present necessity in that State. The bills of complaint alleged (as stated in the opinion by Mr. Justice McKenna, p. 244) that the production of that State was "more than 1,000,000,000 cu. ft. of gas per day; that such amount is more than necessary for the demands of the people of the State, and the excess of supply is required to meet the wants of those residing in Missouri and Kansas." Accordingly, the Oklahoma statute was not in substance, or even ostensibly, enacted in regulation of a public utility, so as to render merely indirect or incidental any decrease in the volume of gas trans-

ported out of the State. On the contrary, the principal and direct design of the Oklahoma statute was to prevent exportation of gas. This was the more manifest from the discrimination in respect to the use of highways and the right of eminent domain, made between persons engaged in transporting gas within the State and those transporting it to other States, as pointed out in *Haskell vs. Kansas Nat. Gas. Co.*, 224 U. S., 217, 221, a second appeal of the *West case*. And this dominant design to prohibit interstate transportation is referred to by Mr. Justice McKenna in 221 U. S., 229, 257, where, after citing *Manufacturers' Gas & O. Co. vs. Indiana Gas & O. Co.*, 155 Ind., 545; 58 N. E., 706, he says:

> "The case is valuable because the court, through the same justice who wrote the opinion, distinguished between an exercise of the police power to regulate the taking of natural gas and its prohibition in interstate commerce."

And, at page 262, Mr. Justice McKenna adds:

> "We repeat again there is no question in the case of the regulating power of the State over natural gas within its borders."

The later decisions in *Public Utilities Com. vs. Landon*, 249 U. S., 236, and *Pennsylvania Gas Co. vs. Public Service Com.*, 252 U. S., 23, as well as *Franke vs. Johnstown Fuel Supply Co.*, 70 Pa. Super. Ct., 446, recognize the local character of gas supply and its regulation, even though the gas has therefore been in interstate commerce. And we submit that in the latter aspect the local element equally inheres when by the public interest with which its owner's business or the gas itself is affected, or by the physical process by which

the gas is transported, the gas remains subject to the local use in advance of its last journey across the State line.

INTERFERENCE, IF ANY, WITH INTERSTATE COMMERCE IS INDIRECT AND INCIDENTAL.

If by the statute interstate commerce is affected, the effect is indirect and incidental and does not invalidate the law. The direct purpose of the law is to compel the performance of a public duty by those obligated to perform it, and by a legitimate exercise of the police power to protect against the injury to persons and property consequent on the failure to perform the public duty. Conceivably, interstate commerce might not be affected at all, and this is presently true, if, as the evidence indicates, the gas companies hold in reserve sufficient territory to supply the deficit without subtracting from the quantity of gas transported to other States. But even if the quantity of gas entering into interstate commerce should be diminished as a consequence of the statute, the authorities well establish that the commerce clause would not stand in the way. To argue to the contrary would be to contend that the State would stand powerless to relieve its citizens from the most flagrant discrimination, or even against *a total deprivation of gas,* at the hands of its public-service corporations, which, for gain, preferred to serve consumers in other States.

That the supply of gas for local consumption, even though it may previously have been transported in interstate commerce, or is derived from a common stock, part of which is destined for such transportation, is

essentially a matter of local concern and subject to regulation by the States, in the absence of interference by Congress, is clear.

Pennsylvania Gas Co. vs. Public Service Com., 252 U. S., 23;

Public Utilities Com. vs. Landon, 249 U. S., 236;

Manufacturers Light & Heat Co. vs. Ott, 215 Fed., 940;

Franke vs. Johnstown Fuel Supply Co., 70 Pa. Super. Ct., 446;

State vs. Flannelly, 96 Kan., 372; 152 Pac., 22;

Union Dry Goods Co. vs. Georgia Public Service Com., 248 U. S., 372;

Mill Creek Coal & Coke Co. vs. Public Service Com., 84 W. Va., 662; 100 S. E., 557.

In *Pennsylvania Gas Co. vs. Public Service Com.*, 252 U. S., 23, 30, Mr. Justice Day said:

"The thing which the State Commission has undertaken to regulate, while part of an interstate transmission, is local in its nature, and pertains to the furnishing of natural gas to local consumers within the city of Jamestown, in the State of New York. The pipes which reach the customers served are supplied with gas directly from the main of the company, which brings it into the State; nevertheless, the service rendered is essentially local, and the sale of gas is by the company to local consumers, who are reached by the use of the streets of the city in which the pipes are laid, and through which the gas is conducted to factories and residences as it is required for use. The service is

similar to that of a local plant furnishing gas to consumers in a city.

This local service is not of that character which requires general and uniform regulation of rates by congressional action, and which has always been held beyond the power of the States, although Congress has not legislated upon the subject. While the manner in which the business is conducted is part of interstate commerce, its regulation in the distribution of gas to the local consumers is required in the public interest, and has not been attempted under the superior authority of Congress.

"It may be conceded that the local rates may affect the interstate business of the company. But this fact does not prevent the State from making local regulations of a reasonable character. Such regulations are always subject to the exercise of authority by Congress, enabling it to exert its superior power under the commerce clause of the Constitution."

The validity of State legislation incidentally or indirectly affecting interstate commerce, even though it diverts to the local need commodities or facilities which otherwise might go into or aid interstate commerce, has been upheld by repeated adjudications. The principle is clearly stated by Mr. Justice Hughes in the *Minnesota Rate Cases* (*Simpson vs. Shepard*, 230 U. S., 352), where, after saying that the States cannot directly tax interstate commerce or prohibit interstate trade in legitimate articles of commerce, he says:

"But within these limitations there necessarily remains to the States until Congress acts, a wide

range for the permissible exercise of power appropriate to their territorial jurisdiction, although interstate commerce may be affected. It extends to those matters of a local nature as to which it is impossible to derive from the constitutional grant an intention that they should go uncontrolled pending Federal intervention. Thus, there are certain subjects having the most obvious and direct relation to interstate commerce, which nevertheless, with the acquiescence of Congress, have been controlled by State legislation from the foundation of the government, because of the necessity that they should not remain unregulated, and that their regulation should be adapted to varying local exigencies; hence, the absence of regulation by Congress in such matters has not imported that there should be no restriction, but rather that the States should continue to supply the needed rules until Congress should decide to supersede them. Further, it is competent for a State to govern its internal commerce, to provide local improvements, *to create and regulate local facilities*, to adopt protective measures of a reasonable character in the interest of the health, safety, morals and welfare of its people, although interstate commerce may incidentally or indirectly be involved. Our system of government is a practical adjustment by which the national authority as conferred by the Constitution is maintained in its full scope without unnecessary loss of local efficiency. Where the subject is peculiarly one of local concern, and from its nature belongs to the class with which *the State appropriately deals in*

making reasonable provision for local needs, **it cannot be regarded as left to the unrestrained will of individuals because Congress has not acted, although it may have such a relation to interstate commerce as to be within the reach of the Federal power. In such case, Congress must be the judge of the necessity of Federal action." (Italics ours).**

And again, on page 410, is set forth the exact principle for which we contend, stated as follows:

"In the intimacy of commercial relations much that is done in the superintendence of local matters may have an indirect bearing upon interstate commerce. *The development of local resources and the extension of local facilities may have a very important effect upon communities less favored,* and to an appreciable degree alter the course of trade. The freedom of local trade may stimulate interstate commerce, while restrictive measures within the police power of the State, enacted exclusively with respect to internal business, as distinguished from interstate traffic, may in their reflex or indirect influence *diminish the latter and reduce the volume of articles transported into or out of the State.* It was an objection of this sort that was urged and overruled in *Kidd vs. Pearson,* 128 U. S., 1, to the law of Iowa prohibiting the manufacture and sale of liquor within the State, save for limited purposes. See also *Geer vs. Connecticut,* 161 U. S., 519, 534; *Austin vs. Tennessee;* 179 U. S., 343; *Capital City Dairy Co. vs. Ohio,* 183 U. S., 238, 245; *Missouri P. R. Co. vs. Kansas,* 216 U. S., 261." (Italics ours.)

The principle that interstate commerce may constitutionally be affected indirectly or incidentally by the State in the exercise of its police power has been asserted in many cases, wherein the inevitable result of the regulation within the State has been to subtract from the quantity of a commodity entering into interstate commerce. Examples are readily afforded by the instance of the prohibition of the manufacture and sale of intoxicating liquors (*Kidd vs. Pearson*, 128 U. S., 1); the prevention of the sale of oleomargarine, colored so as to imitate butter (*Plumley vs. Massachusetts*, 155 U. S., 461; *Capital City Dairy Co. vs. Ohio*, 183 U. S., 238); the shipment of game out of the State or the sale of imported game within the State (*Geer vs. Connecticut*, 161 U. S., 519; *New York vs. Hesterberg*, 211 U. S., 31); the transportation of water out of the State (*Hudson County Water Co. vs. McCarter*, 209, U. S., 348), and the shipment of immature citrus fruit from a State largely engaged in the production thereof (*Sligh vs. Kirkwood*, 237 U. S., 52). And it has been held that a general restriction of pipe-line pressure which in practical result would prevent transportation of gas out of a State was valid (*Jamieson vs. Indiana Natural Gas & O. Co.*, 128 Ind., 555; 28 N. E., 76).

The police power of the State embraces, to this extent of indirect or incidental interference, commodities which are actually in interstate commerce. The fact that they are in such commerce does not necessarily withdraw them from the operation of reasonable State laws. The repeatedly held valid State inspection and labelling laws, designed to promote public health

and safety, though applied to commodities in original packages, are a commonplace example.

Plumley vs. Massachusetts. 155 U. S., 461;
Patapsco Guano Co. vs. Board of Agriculture, 171 U. S., 345;
Schollenberger vs. Pennsylvania, 171 U. S., 1;
Crossman vs. Luiman, 192 U. S., 189;
Savage vs. Jones, 225 U. S., 501;
Standard Stock Food Co. vs. Wright, 225 U. S., 540.

The rule is the same as to the instrumentalities of interstate commerce.

Smith vs. Alabama, 124 U. S., 465;
Nashville C. & St. L. R. Co. vs. Alabama, 128 U. S., 96;
New York, N. H. & H. R. Co. vs. New York, 165 U. S., 628;
Erb vs. Morasch, 177 U. S., 584;
Davis vs. Cleveland, C. C. & St. L. R. Co., 177 U. S., 157;
Southern R. Co. vs. King, 217 U. S., 324;
Chicago, R. I. & P. R. Co. vs. Arkansas, 219 U. S., 453;
Atlantic Coast Line R. Co. vs. Georgia, 234 U. S., 280;
St. Louis, I. M. & S. R. Co. vs. Arkansas, 240 U. S., 518.

Though interstate commerce be incidentally or indirectly affected, the police power of the State includes the authority to compel a reasonably adequate service to the communities within it at the hands of a public-service corporation, though it is engaged in interstate

commerce; and *up to the point where reasonably adequate local facilities are afforded by a public-service corporation, the State may exercise a free hand. Until that point is passed, interstate commerce is not unconstitutionally infringed.*

In *Chicago, B. & Q. R. Co. vs. Railroad Commission*, 237 U. S., 220, 226, it was said:

> "In reviewing the decision we may start with certain principles as established: (1) It is competent for a state to require adequate local facilities, even to the stoppage of interstate trains or the rearrangement of their schedules. (2) Such facilities existing—that is, the local conditions being adequately met,—the obligation of the railroad is performed, and the stoppage of interstate trains becomes an improper and illegal interference with interstate commerce."

The proposition is negatively stated in *Mobile, J. & K. C. R. Co. vs. Mississippi*, 210 U. S., 187, wherein it was said:

> "It is enough to add to that which we have said, that the decree of the Supreme Court does not work an interference with, or cast a direct burden upon, interstate commerce. The cases of the *Illinois C. R. Co. vs. Illinois*, 163 U. S., 142; *Cleveland, C., C. & St. L. R. Co. vs. Illinois*, 177 U. S., 514, and *Mississippi R. Commission vs. Illinois C. R. Co.*, 203 U. S., 335, cited by the companies to sustain their contentions, are not apposite. In those cases there was an interference with interstate trains for local purposes, though local needs had been adequately supplied."

And see:

Gladson vs. Minnesota, 166 U. S., 427;
Lake Shore & M. S. R. Co. vs. Ohio, 173 U. S., 285;
Wisconsin & P. R. Co. vs. Jacobson, 179 U. S., 287;
Atlantic Coast Line R. Co. vs. North Carolina Corp. Com., 206 U. S., 1;
Missouri P. R. Co. vs. Larabee Flour Mills Co., 211 U. S., 612;

Washington vs. Fairchild, 224 U. S., 510;
Grand Trunk R. Co. vs. Michigan R. Com., 231 U. S., 457;
Chicago, M. & St. P. R. Co. vs. Iowa, 233 U. S., 334;
Michigan C. R. Co. vs. Michigan Railroad Commission, 236 U. S., 615;
Illinois Central R. Co. vs. Mulberry Hill Coal Co., 238 U. S., 275;
Seaboard Air Line R. Co. vs. Railroad Com., 240 U. S., 324.

LOCAL CHARACTER OF GAS SUPPLY AND POINT OF ENTRY OF GAS INTO INTERSTATE COMMERCE.

We have already argued that the seven gas companies and others similarly situated, from their legal status, were and are incapacitated from engaging in interstate commerce, except in subordination to the fulfillment of their duty to consumers in West Virginia and to the extent of the surplus remaining after the fulfillment of that duty. Stated in another way, the gas

in the pipe lines remains subject to the public interest and the duty of these companies as long as that duty remains unperformed, or until the public interest and the duty are effectually evaded by the escape of the gas over the State boundary.

But the objection that interstate commerce is interfered with, fails entirely when the transaction is analyzed in point of time. The duty of reasonably adequate service rests on the gas company in its character of a public service corporation. It exists prior to and contemporaneously with its acquisition of the gas, wherewith it is to perform its duty.

That the production of gas, or coal, or any other commodity, though intended for interstate commerce, is not interstate commerce, is now settled. The point was lately involved in the Pennsylvania Anthracite Tax Case.

Heisler vs. Thomas Colliery Co., U. S. Adv. Ops., 1922-23, p. 119;
Hammer vs. Dagenhart, 247 U. S., 251, 272;
Delaware, L. & W. R. R. Co. vs. Yurkonis, 238 U. S., 439;
United Mine Workers vs. Coronado Coal Co., U. S. Adv. Ops., 1921-22, p. 643.

In *Heisler vs. Thomas Colliery Co.*, it was said, referring to *Coe vs. Errol*, 116 U. S., 517:

> "To express it, as the court did, 'there must be a point of time when they cease to be governed exclusively by the domestic law and begin to be governed and protected by the national law of commercial regulation; and that moment seems to us to

be a legitimate one for this purpose, in which they commence their final movement for transportation from the State of their origin to that of their destination.'

And again: 'Nor is exportation begun until they are committed to the common carrier for transportation out of the State to the State of their destination, or have started on their ultimate passage to that State.' Until then, it was said that they were a part of the general mass of property of the

State, and subject to its jurisdiction."

American Steel & W. Co. vs. Speed, 192 U. S., 500, 520;

General Oil Co. vs. Crain, 209 U. S., 211;

Bacon vs. Illinois, 227 U. S., 502;

Susquehanna Coal Co. vs. South Amboy, 228 U. S., 665;

McCluskey vs. Marysville & N. R. Co., 243 U. S., 36;

Arkadelphia Mill. Co. vs. St. Louis S. W. R. Co., 249 U. S., 134;

Crescent Cotton Oil Co. vs. Mississippi, U. S. Adv. Ops., 1921-22, p. 55.

Though applied at the destination, the following in regard to gas are similar in principle:

Public Utilities Co. vs. Landon, 249 U. S., 236;

Pennsylvania Gas Co. vs. Public Service Com., 252 U. S., 23;

Franke vs. Johnstown Fuel Supply Co., 70 Pa., Super. Ct., 446.

Before gas can enter into interstate commerce, it must become property susceptible of such commerce. Until it is reduced to possession by being brought into the well or to the surface of the earth, there is no property in it, save as a qualified right thereto as part of the land. In *Walls vs. Midland Carbon Co.*, 254 U. S., 300, 316, it was remarked, referring to *Ohio Oil Co. vs. Indiana*, 177 U. S., 190:

> "We said, citing a case, 'possession of the land is not necessarily possession of the gas,' and again, on the authority of cases, 'that the property of the owner of lands in oil and gas is not absolute until it is actually in his grasp, and brought to the surface.'"

In *West vs. Kansas Nat. Gas Co.*, 221 U. S., 229, 254, it was said:

> "Gas, when reduced to possession, is a commodity; it belongs to the owner of the land; and when reduced to possession, is his individual property, subject to sale by him, and may be a subject of intrastate commerce and interstate commerce."

The same principle was announced in *Ohio Oil Co. vs. Indiana*, 177 U. S., 190, as the law of Indiana, and *Peoples Gas Co. vs. Tyner*, 131 Ind., 281, 31 N. E., 59, was quoted as follows:

> "It has been settled in this state that natural gas, when brought to the surface of the earth and placed in pipes for transportation is property, and may be the subject of interstate commerce."

This is the law of West Virginia. In *Hall vs. Vernon,* 47 W. Va., 295, 34 S. E., 764, it was said:

> "Natural gas is incapable of being absolute property, and is the subject of qualified property only. *Wood Co. Petroleum Co. vs. West Virginia Transp. Co.,* 28 W. Va., 210. * * * 'There can be no property in rock or mineral oil, nor can title thereto be divested or acquired, until it has been taken from the earth.'"

Until reduced to possession, the gas is part of the real estate.

Brown vs. Spilman, 155 U. S., 665;
Carter vs. Tyler Co. Court, 45 W. Va., 806, 810, 32 S. E., 216;
Preston vs. White, 57 W. Va., 278, 282, 50 S. E., 236;
Warren vs. Boggs, 83 W. Va., 89, 96, 97 S. E., 589.

And see:

Kelly vs. Ohio Oil Co., 57 Ohio St., 317, 49 N. E., 399;
Nonamaker vs. Amos, 73 Ohio St., 163, 76 N. E., 949;
Brown vs. Vandergrift, 80 Pa., 142;
Westmoreland & C. Nat. Gas Co. vs. De Witt, 130 Pa., 235, 18 Atl., 724;
Jones vs. Forest Oil Co., 194 Pa., 379, 44 Atl., 1074.

It follows, therefore, that at the very moment when gas produced by or for a public service gas company becomes property, and the subject of commerce, it finds the

gas company incumbered with the obligation of public service, and subject to the statute. This is true, even though the gas is straightway discharged into the pipe-line. It is the more clearly true of those wells which are shut in either upon completion of the drilling or in order to rest them after a period of use. (Rec. 331, 332, 437, 439, 322.)

ERRATUM:

Page 220. This paragraph, beginning "In conclusion," should be stricken out.

In this aspect there is no distinction between the gas produced by the gas company itself and that purchased from other producers. The situation of gas purchased at the well (Rec. 1263) is identical with that of gas produced by the purchasing company. And as to gas delivered into the pipe line of the purchasing company elsewhere than at the producer's well, it cannot be said that it has commenced its final movement for transportation from the State of its origin to that of its destination, or started its ultimate passage to the other State prior to such delivery to the purchasing company. (*Coe vs. Errol*, 116 U. S., 517; *Heisler vs. Thomas Colliery Co.*, U. S. Adv. Ops., 1922-23, p. 119; *Champaign Realty Co. vs. Brattleboro*, U. S. Adv. Ops., 1922-23, p. 165, and other cases above cited.) But whatever the point of delivery to the gas company,

if the gas enters interstate commerce prior thereto, it is because its transit before the delivery to the gas company transporting it out of the State is in conjunction with, and forms a part of, the interstate commerce of the latter company. And being so, the gas company's obligation of public service exists before and at the beginning of the interstate commerce no less than thereafter, and the gas received finds the gas company encumbered with the obligation of public service and subject to the statute.

It follows from the foregoing that, as the obligation of the gas company and the operation of the statute exist at the moment when the gas first enters interstate commerce, such commerce is subject to the condition that reasonably adequate service shall be rendered in West Virginia.

Before the decision of *Hallanan vs. United Fuel Gas Co.*, U. S. Adv. Ops., 1921-22, p. 130, we argued that the owner of the pipe line being subject to the duty of public service, and the gas in the pipe line being commingled and subject to drafts for supply in West Virginia, the gas is not in interstate commerce until after the last point has been passed at which it is drawn on for the local supply. We do not argue against that decision; but we think that as it did not directly involve the question of adequacy of public service in West Virginia by the United Fuel Gas Company, the holding is not fully applicable to the cases at bar. We think that with the added element of the duty of public service on the part of the owner of the pipe line, the

pipe line is properly viewed, not only as an instrumentality of transportation, but also as a reservoir for the distribution of the gas, both that supplied within the State and that destined for other States. And in this light a situation is presented more nearly like that involved in the following cases, as explained in *Champaign Realty Co. vs. Battleboro*, U. S. Adv. Ops., 1922-23, p. 165:

Bacon vs. Illinois, 227 U. S., 504;

General Oil Co. vs. Crain, 209 U. S., 211;

American Steel & W. Co. vs. Speed, 192 U. S., 500;

Diamond Match Co. vs. Ontonagon, 188 U. S., 82.

We think, too, the fact that in the *Hallanan Case* much the greater part of the gas was destined to other States, as was the condition of most of the grain in *Lemke vs. Farmers Grain Co.*, U. S. Adv. Ops., 1921-22, p. 275, creates a distinction. These cases may apply when most of a commodity is to be taken to another State. But the question remains whether they apply to gas in a pipe line, most of which is intended for consumption within the State; and whether they will govern even in the ultimate time when by reason of the continuing depletion of the gas ninety-nine per cent. of the gas in a particular pipe line remains in West Virginia and one per cent. goes elsewhere. A holding that the statute is invalid and an injunction against its enforcement on the ground of interference with

interstate commerce, would equally apply to the extreme, but probable, situation last suggested.

	Page.
Act of Legislature	1
Its purposes	9
Its necessity and history	10
Acreages controlled	35
Argument:	
I. These cases present no controversy between States.	75
II. These cases must be considered in the light of the peculiar nature of gas and of the gas industry, and the exceptional rules of law applicable thereto	82
III. The West Virginia public service gas companies, including the seven companies, were and are obligated, irrespective of the statute in contest, to furnish West Virginia consumers a reasonably adequate supply of gas	85
IV. It was within the right and power of the State to regulate the gas companies. The right and power are based on several grounds and their exercise was necessary	103
V. West Virginia had the power to enact the statute, and the exercise of the power was reasonable and within the legislative discretion	114
VI. The plaintiffs claim through the West Virginia gas companies, have no higher right, and have no title to relief	130
VII. Leaving for separate consideration the commerce clause, the statute does not violate other constitutional guaranties	133
VIII. The statute does not regulate interstate commerce	140

SUPREME COURT OF THE UNITED STATES.

OCTOBER TERM, 1921.

Nos. 20-21, Original.

THE COMMONWEALTH OF PENNSYLVANIA,
COMPLAINANT,

vs.

THE STATE OF WEST VIRGINIA, DEFENDANT.

THE STATE OF OHIO, COMPLAINANT,

vs.

THE STATE OF WEST VIRGINIA, DEFENDANT.

BRIEF FOR DEFENDANT, THE STATE OF WEST VIRGINIA.

Statement of the Cases.

On February 10, 1919, the Legislature of West Virginia enacted the following statute (*W. Va. Acts of* 1919, Ch. 71):

> "An Act in relation to persons, firms and corporations engaged in furnishing, or required by law to furnish, natural gas for public use within this

State, to provide remedies for the enforcement of this act and penalities and punishment for violations thereof, and to extend the jurisdiction of the public service commission and of the courts of this State with respect thereto.

Be it enacted by the Legislature of West Virginia:

SECTION 1. That every person engaged in furnishing, or required by law (whether statutory or common law) to furnish, natural gas for public use, or for the use of the public, or any part of the public, whether for domestic, industrial or other consumption, within this State, shall to the extent of his supply of said gas produced in this State, (whether produced by such person or by any other person), furnish for public use within the territory of this State, and for the use of the public and every part of the public within the territory of this State, in or from which such gas is produced, or through which said gas is transported, or which is served by such person, a supply of natural gas reasonably adequate for the purposes, whether domestic, industrial or otherwise, for which natural gas is consumed or desired to be consumed by the public, or any part of the public, within said territory in this State, and for which said consumer or consumers therein shall apply and be ready and willing to make payment at lawful rates.

SECTION 2. That in case any person engaged in furnishing or required by law (whether statutory or common law) to furnish, natural gas for public use within this State, or for the use of the public or any part of the public within this State, shall have a production or supply of natural gas which is, or probably will be, insufficient to furnish for such use, (for

the purposes, whether domestic, industrial or otherwise, for which natural gas is consumed by the public or any part of the public), within the territory in this State served by such person, then and in that event the public service commission shall have authority, and the same is hereby conferred on it, upon the application of any such person or any of his consumers within this State and after due hearing upon notice and proof to the satisfaction of the commission that public convenience and necessity so require, to order any other person engaged in furnishing, or required by law (whether statutory or common law), to furnish natural gas for public use within this State, and producing or furnishing natural gas for public use in said territory or transporting the same through said territory, to furnish to such person having such insufficient production or supply, natural gas for the purpose of supplying such deficiency, at and during such times, upon and at such just and reasonable terms, conditions and rates, and in such amounts, as the commission shall prescribe. And whenever, after such hearing upon notice and proof, the commission shall determine that public convenience and necessity so require, the commission shall have authority to provide for and compel the establishment of a reasonable physical connection or connections between the lines, pipes or conduits of such person having such excess supply of gas and the lines, pipes or conduits of the person having such deficiency of supply, and to require the laying and construction of such reasonable extensions of lines, pipes or conduits as may be necessary for the establishment of such physical connection or connections, and to ascertain, determine and fix the just and reasonable terms and conditions of such connection or connections, including just and reasonable

State, to provide remedies for the enforcement of this act and penalities and punishment for violations thereof, and to extend the jurisdiction of the public service commission and of the courts of this State with respect thereto.

Be it enacted by the Legislature of West Virginia:

SECTION 1. That every person engaged in furnishing, or required by law (whether statutory or common law) to furnish, natural gas for public use, or for the use of the public, or any part of the public, whether for domestic, industrial or other consumption, within this State, shall to the extent of his supply of said gas produced in this State, (whether produced by such person or by any other person), furnish for public use within the territory of this State, and for the use of the public and every part of the public within the territory of this State, in or from which such gas is produced, or through which said gas is transported, or which is served by such person, a supply of natural gas reasonably adequate for the purposes, whether domestic, industrial or otherwise, for which natural gas is consumed or desired to be consumed by the public, or any part of the public, within said territory in this State, and for which said consumer or consumers therein shall apply and be ready and willing to make payment at lawful rates.

SECTION 2. That in case any person engaged in furnishing or required by law (whether statutory or common law) to furnish, natural gas for public use within this State, or for the use of the public or any part of the public within this State, shall have a production or supply of natural gas which is, or probably will be, insufficient to furnish for such use, (for

the purposes, whether domestic, industrial or otherwise, for which natural gas is consumed by the public or any part of the public), within the territory in this State served by such person, then and in that event the public service commission shall have authority, and the same is hereby conferred on it, upon the application of any such person or any of his consumers within this State and after due hearing upon notice and proof to the satisfaction of the commission that public convenience and necessity so require, to order any other person engaged in furnishing, or required by law (whether statutory or common law), to furnish natural gas for public use within this State, and producing or furnishing natural gas for public use in said territory or transporting the same through said territory, to furnish to such person having such insufficient production or supply, natural gas for the purpose of supplying such deficiency, at and during such times, upon and at such just and reasonable terms, conditions and rates, and in such amounts, as the commission shall prescribe. And whenever, after such hearing upon notice and proof, the commission shall determine that public convenience and necessity so require, the commission shall have authority to provide for and compel the establishment of a reasonable physical connection or connections between the lines, pipes or conduits of such person having such excess supply of gas and the lines, pipes or conduits of the person having such deficiency of supply, and to require the laying and construction of such reasonable extensions of lines, pipes or conduits as may be necessary for the establishment of such physical connection or connections, and to ascertain, determine and fix the just and reasonable terms and conditions of such connection or connections, including just and reasonable

rules and regulations and provision for the payment of the costs and expense of making the same or for the apportionment of such cost and expense as may appear just and reasonable. *Provided, however,* that no person shall, by virtue of this section, be ordered to furnish natural gas to any other person so engaged in furnishing, or required by law to furnish, natural gas for public use, except to the extent that the person so ordered to furnish natural gas shall, at the time, have a production or supply of natural gas in excess of the quantity sufficient to furnish a reasonably adequate supply to his consumers within this State; nor shall any person, by virtue of this section, be ordered to furnish natural gas to any other person so engaged in furnishing or required by law to furnish, natural gas for public use in a territory within this State, if and when the said person having said excess shall, to the extent of such excess, be ready and willing to furnish, and within such time as the commission shall prescribe, shall actually furnish, to the consumers within said territory a reasonably adequate supply of natural gas.

Section 3. That insofar as the same shall not be in conflict with this act, all of the authority, powers, jurisdiction and duties conferred and imposed on the public service commission by the act entitled, "An act to create a public service commission and to prescribe its powers and duties, and to prescribe penalties for the violations of the provisions of this act," passed February twenty-first, one thousand nine hundred and thirteen, as amended by the act entitled "An act to amend and re-enact sections one, two, three, four, five, nine, ten, fourteen, fifteen and twenty-two, of chapter nine of the acts of one thousand nine hundred and thirteen, creating a public

service commission, prescribing its powers and duties, and penalties for violation of the provisions of said chapter, and to add thereto six sections to be known as sections twenty-three, twenty-four, twenty-five, twenty-six, twenty-seven, twenty-eight, enlarging the powers and duties of said public service commission, prescribing additional penalties and giving to the commission power to punish for contempt," passed February tenth, one thousand nine hundred and fifteen, are hereby conferred and imposed on the public service commission in respect to the subject matter of this act, or any part thereof.

SECTION 4. That in case of violation of any provision of this act any person aggrieved or affected thereby may complain thereof to the public service commission in like manner, and thereupon such procedure shall be had, as is provided in respect to other complaints to or before said commission, and all such proceedings and remedies may be taken or had for the enforcement or review of the order or orders of said commission, and for the punishment of the violation of such order or orders, as are provided by law in respect to other orders of said commission. In case of the violation of any provision of this act, the public service commission, or any person aggrieved or affected by such violation, in his own name, may apply to any court of competent jurisdiction by a bill for injunction, petition for writ of mandamus or other appropriate action, suit or proceeding, to compel obedience to and compliance with this act, or to prevent the violation of this act, or any provision thereof, pending the proceedings before said commission, and thereafter until final determination of any action, suit or proceeding for the enforcement or review of the final order of said

commission; and such court shall have jurisdiction to grant the appropriate order, judgment or decree in the premises.

SECTION 5. That if any person subject to the provisions of this act shall fail or refuse to comply with any requirement of the commission hereunder, such person shall be subject to a fine of not less than one hundred dollars nor more than five hundred dollars for each offense; and such person, or the officers of the corporation, where such person is a corporation, may be indicted for their failure to comply with any requirement of the commission under the provisions of this act, and upon conviction thereof, may be fined not to exceed five hundred dollars, and in the discretion of the court, confined in jail not to exceed thirty days. Every day during which any person, or any officer, agent or employee of such person, shall fail to observe and comply with any order or direction of the commission, or to perform any duty enjoined by this act, shall constitute a separate and distinct violation of such order or direction of this act, as the case may be.

SECTION 6. That any person claiming to be damaged by any violation of this act may bring suit in his own behalf for the recovery of the damage from the person or persons so violating the same in any circuit court having jurisdiction. In any such action the court may compel the attendance of the person or persons against whom said action is brought, or any officer, director, agent, or employee of such person or persons, as a witness, and also require the production of all books, papers and documents which may be useful as evidence, and in the trial thereof such witness may be compelled to testify, but any such witness shall not be prosecuted for any offense concerning which he is compelled hereunder to testify.

SECTION 7. That the word "person" within the meaning of this act shall be construed to mean, and to include, persons, firms, and corporations.

SECTION 8. That the sections, provisions, and clauses of this act shall be deemed separable each from the other, and also in respect to the persons, firms, corporations, and consumers mentioned therein or affected thereby, and if any separable part of this act be, or be held to be unconstitutional or for any reason invalid or unforceable, the remaining parts thereof shall be and remain in full force and effect.

SECTION 9. That all acts and parts of acts in conflict with this act are hereby repealed."

This statute was preceded by the Public Service Commission Act, set forth as Exhibit "B," with the answers of West Virginia, which Act was designed to require reasonableness of rates, service and practices, and to prevent unjust preferences and discrimination, by public-service corporations, including natural-gas companies, and to that end provided an administrative commission, to whose jurisdiction the due administration of the Act of 1919, here involved, was confided.

The States of Ohio and Pennsylvania, by their respective bills of complaint, complain that the enforcement of the Act of 1919 will necessarily prevent the transportation of West Virginia gas into Ohio and Pennsylvania, thereby destroying the investment of many of their citizens in natural-gas properties in West Virginia and also affecting the health and comfort, and endangering the lives, of numerous inhabitants of the plaintiff States who are presently consuming West Virginia gas; and thereupon the statute is attacked as

unconstitutional and violative of those provisions of the Federal Constitution relating to interstate commerce, impairment of contract obligations, due process of law, equal protection of the laws, and abridgment of the privileges and immunities of citizens of the plaintiff States and of the United States.

Preliminary injunctions, awarded June 3, 1919, prior to answer by West Virginia, and in advance of any test of the statute's actual operation, have prevented its enforcement.

By its motion to dismiss and answer filed in each case, the State of West Virginia first challenges the right of the plaintiff States to maintain these suits, and then answers upon the merits, giving the history of the statute, the local causes and conditions leading to its enactment, and denies that the statute in anywise contravenes the Federal Constitution.

The issues before the court are, therefore:

(1) Whether the plaintiff States can maintain their suits in original jurisdiction as controversies between two States.

(2) Whether the West Virginia statute in question is violative of the Federal Constitution:

(*a*) As an interference with interstate commerce;

(*b*) As an impairment of contract obligations;

(*c*) As depriving the plaintiffs, or their citizens, of property without due process of law;

(*d*) As denying to the plaintiff States, or their citizens, the equal protection of the laws;

(*e*) As abridging the privileges and immunities of citizens of the plaintiff States and of the United States.

Purpose of the Statute.

The statute is the culmination of the effort of West Virginia to compel by express and unmistakable enactment its public-service corporations, engaged in the natural gas industry within its borders—and endowed by it with special rights and privileges—to fulfill their public duties and the conditions of their existence, by rendering a reasonably adequate service, out of the abundance of West Virginia gas, to those consumers of that State designated in the statute. It was not aimed at Ohio or Pennsylvania, or at their inhabitants, although it is true that consumers in those States may be incidentally and indirectly affected by the possible reduction in the quantity of West Virginia gas which they have hitherto used. It does not prohibit, or seek to prohibit, the exportation of gas from West Virginia.

And since in suits ostensibly maintained in this Court in the exercise of its original jurisdiction of controversies between States, the tenor of the evidence, with its reference to the investments, properties and conditions of particular gas companies, and the personnel of the witnesses for the plaintiffs, have stamped these cases as litigation between those companies and West Virginia, it is proper to stress at the outset what a mere reading of the statute makes manifest: that the statute embraces in its purview all public-service gas companies alike, and in no respect singles out the exporting companies—not even the seven companies hereinafter specially mentioned.

Necessity and History of the Statute.

In a record of the present bulk, even condensed narrative wears the color of prolixity. And where contemporary causes and conditions combine to produce an ultimate consequence, strict observance of chronological sequence and the avoidance of repetition in the separate chapters concurring to produce the whole are hardly practicable. With these qualifications we proceed to state, as shortly as the record and the importance of the cases seem to admit, the facts and circumstances in the legislative view, and the causes and conditions which created the necessity for, and justify the reasonableness of, the statute and brought about its passage.

Natural gas is produced by drilling wells into gas-containing strata or sands in the earth. The known fields in and from which gas is derived are, as a rule, comparatively few and restricted in area, the outstanding exception being those of West Virginia, which are in size and number so great as to constitute a more or less connected field extending across the State from north to south. As the number of gas wells in any field or other given area increases and the time during which the extraction of gas therefrom lengthens, the volume of the gas and the natural or rock pressure, upon which the output depends, gradually diminish, not only in the individual wells, but also in the entire field. The constant tendency, therefore, is in the direction of depletion of the field and exhaustion of the gas supply therefrom. And while for a considerable period the aggregate quantity of gas produced from a specific field may be increased or maintained at substantial uniformity, this can only be accom-

plished by the drilling of new wells, the added extraction of gas from which still further accelerates the depletion of the field. For this reason it becomes necessary to sustain the output by exploration for new gas territory, and the development thereof when discovered. But even this extension of territory cannot be continued indefinitely, and the later-discovered territories themselves are subjected to the same process of depletion and to the exhaustion of their gas. And so it occurs ultimately that the supply of gas, once adequate to the needs of the population dependent thereon, becomes insufficient for the service of all, and the uses of the gas, or the extent of its distribution and consumption, must be correspondingly curtailed.

The foregoing was the experience in Ohio, Pennsylvania and Indiana, where the extensive development and utilization of their own gas, and the manifest tendency thereof to exhaustion, preceded the transportation of West Virginia gas to the other States. And this experience, now in course of duplication in West Virginia, was well known to the gas companies and producers before and at the time of the commencement of their business. And it was equally known to the people of those States, for whose consumption the gas from West Virginia was and is so transported.

West Virginia Gas Development and Utilization.

West Virginia is, and for more than twenty years last past has been, one of the principal gas-producing States. The volume of its production is, and for twelve years last past has been, the largest in the United States. At present gas is produced in large quantities in and from the counties

of Boone, Braxton, Brooke, Cabell, Calhoun, Clay, Doddridge, Gilmer, Hancock, Harrison, Kanawha, Lewis, Lincoln, Logan, Marion, Marshall, Mingo, Monongalia, Nicholas, Ohio, Pocahontas, Pleasants, Putnam, Ritchie, Roane, Taylor, Tyler, Upshur, Wayne, Wetzel, Wirt and Wood, being thirty-two of the fifty-five counties; while gas has been found in paying quantities, and large areas are leased and held as prospective gas territory, in six other counties (Rec., 980). The earliest West Virginia development was in the northern section. Originally considered a nuisance in the oil operations, with which it was first produced, the gas was blown into the air and wasted; but later its value for domestic heating and lighting, as well as for factory fuel and general industrial use, was recognized. Wells were then drilled for gas. The enormous production and very great rock pressure (sometimes called natural pressure) in the early wells enabled the gas to be transported through pipe lines for considerable distances without the assistance of compressors; and aside from the cost of leases and drilling, the mere laying of a pipe line to the point of distribution was practically all of the investment required for local use.

In many instances small companies or individual operators obtained franchises and furnished gas to a municipality or community near at hand. Other and larger concerns connected their gas wells and lines into systems serving under franchises a number of separate municipalities and localities. As early as 1892 and 1893 the largest and most important cities and towns in the northern and north-central sections of West Virginia were being thus served with gas by local companies, viz., Wheeling, Moundsville, Morgantown, Fairmont, Clarksburg, Grafton, Weston, West

, Parkersburg, Sistersville, St. Marys, and many other
cipalities in the Panhandle section and throughout the
ies of Marshall, Wetzel, Monongalia, Marion, Harri-
Lewis, Doddridge, Ritchie, Tyler, Pleasants and Wood
., 1117 *et seq.* 1173-4, 1218, 1343).

abundance, cleanliness, convenience and economy over
forms of fuel were so great that the use of gas spread
lly, and it soon became the universal and exclusive fuel
e northern and north-central sections of West Virginia
dwelling-houses, business buildings, churches, schools,
ges, hospitals, asylums, court-houses, electric light and
r plants, water works, municipal street lighting and
y other purposes. In the then existing dwellings and
lings, the means and appliances for consumption of
r fuel were generally discarded. New houses and build-
were in general constructed and equipped with a view
he exclusive use of gas for heating, and, in many in-
ces, for illumination (Rec., 1119-1122, 1220-1223,
3). The existing industries adopted gas for fuel, and a
t number of new factories and other industries to which
p fuel was important were established. The local gas
panies in many instances, in order to upbuild the munic-
ities served by them, and thereby to stimulate the con-
ption of their gas, pursued for many years the policy of
ouraging the establishment of new industries by the offer
gas at low prices during long periods of time. The in-
tries thus established were located and constructed for,
their processes and products especially adapted to, the
of gas as fuel. They employed many workmen and
orers, both skilled and unskilled, who were dependent
employment and the livelihood of themselves and their

families on the existence and continued operation of the gas-using industries. The population and wealth of the cities, towns and communities so supplied with gas, and of the State as a whole, thus increased; and the added population at once profited the gas companies by adding to the consumption of their gas, and promoted the general prosperity.

This history was duplicated in the south-central and southern sections as the discovery and development of gas extended southward. In Charleston, Huntington, Spencer, Glenville, Point Pleasant, St. Albans, Kenova, and many other places in the gas-producing counties gas likewise became the universal and exclusive fuel, and the use thereof brought to pass the like development and growth of population, wealth and general prosperity (Rec., 1117 *et seq.*).

From this it followed that the domestic life and the business of a majority of the people of West Virginia were and are modified and their adjustments made with reference to the continued use of gas as fuel; and gas in reasonably adequate quantities for domestic and industrial use became, was and is a necessity throughout the greater part of the State.

According to the United States Geological Survey statistics for 1918 (Rec., 1566, insert p. 145, Pa. Exhibit No. 45), the West Virginia gas consumers in that year were divided into 127,168 domestic and 1,873 industrial users. The domestic users in 1919 were 130,780 (Rec., 849). Estimating, as is usually done, an average of four and one-half or five persons in the family of each domestic consumer, would show from 585,000 to 650,000 West Virginians dependent on domestic service alone.

Rights and Special Privileges of Gas Companies.

From the inception of the industry West Virginia adopted and maintained a policy of liberality toward the natural-gas industry, and especially toward those persons and corporations engaged in marketing to the public. No restrictions, such as prevail in some other States, were imposed; there was no limitation as to the area of gas territory which might be held, the number of wells which might be drilled, or the amount of gas which might be taken from the common gas pools. No restrictions were imposed upon the pressure at which gas might be extracted from the wells or maintained in the transporting lines, or upon the purposes for which it might be taken and used. And even an early statute, constituting the natural-gas pipe lines common carriers, fell into innocuous desuetude in view of the full and satisfactory supply.

To those engaged in the public service of gas, the State extended broad charter powers and gave special rights and privileges, including the power of eminent domain, without which the construction of the great pipe-line systems hereinafter mentioned would not have been possible. This power was often exercised, and where not exercised was obviously potential in negotiations for the purchase of rights of way for pipe lines and other facilities. County courts granted to them franchises for the free use of the public highways, upon and along which they constructed and maintain pipe lines, boxes, connections, and telegraph and telephone lines. Under like franchises from cities and towns they were given and enjoyed the like use of streets and alleys. The various pipe lines for gathering, transmission and service of gas spread in a network, not unlike a spider's web, over the gas

fields and gas producing counties. And while its liberal policy toward those engaged in the public service of gas was primarily dictated by the motive to provide for its own people, West Virginia was not illiberal toward consumers in other States. No program of conservation was adopted or attempted, nor were efforts made to restrict the enormous and continually increasing volume of gas which, in later years, certain of its public service corporations transported, or sold for transportation, to consumers in other States. The right of these public service corporations so to dispose of their surplus in other States was not only recognized, but substantially sanctioned by permitting them to exercise the power of eminent domain for the construction of pipe lines transporting chiefly for foreign consumption, subject only to the duty of first serving West Virginia consumers in the territory through which such lines extended.

Gas Shortage in West Virginia.

Until the winter of 1916-1917, all consumers in the State were adequately served. The extent of the West Virginia fields and the quantity of production until that time were greater than ever before known in the gas industry. The supply in the hands of the public utilities, produced within the State, was at all times from four to five times greater than the total amount used by the domestic and industrial consumers of the State (Rec., 996). Under these circumstances West Virginia and its gas consumers rested in security.

In the winter of 1916-1917, however, the people of West Virginia were rudely disillusioned. Early in that winter began an inadequate service of gas, which, by midwinter, developed into an extensive shortage (Gov. Cornwell, Rec.,

1194-5; 1139 *et seq.*, 1223-4; 1343-1345). In an effort to meet the situation, and under a rule of the West Virginia Public Service Commission, all industrial gas was shut off; but yet the supply was inadequate to warm the homes of domestic consumers. For a long period of extremely cold weather, the shortage deprived dwelling-houses, hotels, stores, and public and private buildings of sufficient heat, and in some instances, of any heat. In the homes and hotels, cooking was prevented, and in many cases illness was caused or accentuated by the cold. Public schools were closed and churches compelled to forego their customary exercises. Factories were shut down with great loss to their owners, and their workmen thrown out of employment. An extreme example was the State Tuberculosis Sanitarium, at Terra Alta, where the supply failed utterly, and in order to keep the patients from freezing, the officials were compelled in zero weather to build fires and erect stoves with funnels of stovepipe projecting from the windows (Rec., 1153). The State Penitentiary at Moundsville in Marshall county, the West Virginia University at Morgantown in Monongalia County, the State Hospital for Insane at Weston in Lewis County, the Industrial School for Girls at Salem in Harrison county, and the Industrial School for Boys at Pruntytown in Taylor county, all State institutions, situate within developed gas territory, were likewise affected and driven to the use of other fuel. Distress or inconvenience to domestic consumers, and the shutting down of industries, occurred practically in all sections of the State where gas was used, from the northern Panhandle southward to Charleston (Rec., 1195). The severity was as great in the sections lying in the most prolific fields as elsewhere.

Causes of Shortages.

The causes of this gas shortage are not far to seek. The various statements in the record, too numerous and intricate to set out in detail, and not capable of precise reconciliation in some instances, concur in showing that the shortage in West Virginia, was and is due to the enormous volumes of West Virginia gas exported to other States by certain public service corporations of West Virginia, and the consumption of that gas in the other States without regard to present or future needs of West Virginia, or the duties of the exporters to the latter State.

The earliest figures available are for the year 1908. The following, from reports of the United States Geological Survey (Rec., 1603), shows the total amounts exported from West Virginia to and including the year 1919 as compared with the total production of the State:

Year.	Total production.	Exported from State.	Per cent.
	M cu. ft.		
1908	112,181,278	61,644,618	55
1909	166,435,092	96,074,387	58
1910	190,705,869	120,508,811	63
1911	206,890,576	132,867,059	64
1912	239,006,682	151,144,250	63
1913	245,453,985	155,501,876	63
1914	236,489,175	150,161,936	63
1915	244,004,159	154,630,164	63
1916	299,318,907	200,004,740	67
1917	289,898,967	196,679,263	68
1918	280,289,044	174,664,650	62
1919	219,886,837	139,939,062	64

But while, for example, in 1916 the total production of the State by all operators and for all purposes was 299,318,907 M cubic feet, and there was in the hands of the public-service corporations of the State a net supply of 259,414,200 M cubic feet available for service to the public and disposed of by said corporations (Rec., 992), yet of this latter volume the total served to all West Virginia consumers was only 59,409,460 M cubic feet, or 22.9 per cent. The figures for nine years show that the maximum used by West Virginia consumers never exceeded 25.6 per cent of the net supply so available for public service (Rec., 996)*:

Year.	Net supply for public service.	Sales to W. Va. consumers.	Per cent to W. Va. consumers.	Per cent exported.
	M cu. ft.			
1911	173,132,353	40,265,294	23.3	76.7
1912	203,112,738	51,968,488	25.6	74.4
1913	209,131,295	53,629,419	25.6	74.4
1914	200,762,645	50,600,709	25.2	74.8
1915	207,777,882	53,147,718	25.6	74.4
1916	259,414,200	59,409,460	22.9	77.1
1917	245,620,686	48,942,388	19.9	80.1
1918	227,649,823	52,985,173	23.3	76.7
1919	183,687,047	46,654,098	25.4	74.6

**Statistics on Production and Consumption.*—In the statistics, West Virginia has used as a basis the net supply available for service to the public. Before the gas is available for public use, the producer must deliver to the landowner the free-gas service uniformly reserved in gas leases as part of the rental, the ordinary individual consumption whereof has largely exceeded that of the average domestic consumer, and the aggregate amount of which has been very considerable.

Of the gas thus available for public service, a proportion ranging from 80.3 per cent to 91 per cent, has, by the means hereafter explained, been controlled by the seven companies later mentioned, the quantities and percentages being as follows (Rec., 996):

Large quantities of gas are consumed for field purposes, namely, for fuel used in drilling and cleaning out wells, the operation of compressor or pump stations to transport the gas, and the various other purposes necessary to the production and transportation of gas to market. The quantities so used amount to approximately 7 per cent of the annual production (Rec., 949, 989, 990, 992).

Again, in West Virginia, as in other States, certain producers (consisting for the most part in West Virginia of carbon-black manufacturers, but also including a few other industries) hold and produce gas from their own territory and for their own consumption and are not public-service corporations (Rec., 989, 990, 992).

None of the free gas delivered in payment for leases, nor that used for field purposes or consumed by such private enterprises, reaches the public. To include the free or field gas as a part of the West Virginia consumption would at once charge West Virginia consumers with what they do not in fact receive, and at the same time free consumers in other States from the proportion chargeable to the production and transportation of the much greater quantities of exported gas. The total of these three items in the past ten years has averaged approximately 15 per cent of the annual production. (See statistics, Rec., 992.) This gas should be eliminated from the public gas-service gas supply, thus confining the statistics and discussion to the remaining 85 per cent as the net supply of the public-service corporations available for service (*Pittsburgh & W. Va. Gas Co. vs. Nicholson* (W. Va.), 105 S. E., 784). Statisticians for the plaintiffs, however, include these three items in the supply of West Virginia consumers, and thereby have produced percentages to show that they use more gas *per capita* than the consumers in other States (Rec., 899-901; 948-950).

Year.	Net supply for public service.	Net supply of seven companies.	Per cent.
	M cu. ft.		
1911	173,132,353	147,431,246	85.1
1912	203,112,738	172,050,962	84.7
1913	209,131,295	167,897,746	80.3
1914	200,762,645	166,625,730	83.0
1915	207,777,882	170,694,495	82.1
1916	259,414,200	220,892,583	85.1
1917	245,620,686	223,517,777	91.0
1918	227,649,823	201,685,702	88.6
1919	183,687,047	164,426,341	89.5

And out of the abundance of the supply of the seven companies, the proportion granted to West Virginia consumers extended from 11 per cent to 17.9 per cent, as shown by the following (Rec., 997):

Year.	Net supply of the seven companies.	Sales to West Virginia consumers.	Per cent.
	M cu. ft.		
1911	147,431,246	17,200,747	11.7
1912	172,050,962	21,101,443	12.3
1913	167,897,746	22,297,677	13.3
1914	166,625,730	20,612,599	12.4
1915	170,694,495	18,860,867	11.0
1916	220,892,583	24,526,859	11.1
1917	223,517,777	26,889,876	12.0
1918	201,685,702	30,120,273	14.9
1919	164,426,341	29,360,811	17.9

The entire balance of their net supply for these years was marketed by the seven companies for consumption in other States.

The Seven Companies.

We desire to emphasize again that the statute in question applies equally to all public-service gas companies. But it is nevertheless true that the marvelous disparity of the gas supply to West Virginia and the manifest discrimination against it in the distribution of its own product were brought about by the seven public-service gas corporations (in practical interest and effect, five only), whose rights are so strongly sought to be vindicated by the plaintiffs. And this was effected by the domination by the seven companies of the major part of the gas territory and gas supply of the State, vesting in them a virtual monopoly, and by the enormous sales of West Virginia gas for consumption in other States, already evidenced by the statistics above presented. While, therefore, the seven companies have not been singled out for hostile legislation, their relation to the present litigation and to the West Virginia gas shortage require special mention of their circumstances.

The seven companies, either in their original form or in the aspect later assumed by them, were and are, the Hope Natural Gas Company, Reserve Gas Company, Pittsburg & West Virginia Gas Company, Carnegie Natural Gas Company, Manufacturers Light & Heat Company, United Fuel Gas Company, and Columbia Gas & Electric Company. While seven in number and referred to throughout these causes as "the seven companies," they are, in effect, only five in interest and operation, because of the identity of control of the Hope Natural Gas Company and the Reserve Gas Company and of the United Fuel Gas Company and the Columbia Gas & Electric Company.

The Hope Natural Gas Company is wholly owned, and the Reserve Gas Company is controlled, by Standard Oil Company of New Jersey (Rec., 322); the minority stockholding of the Reserve is presently owned by Union Natural Gas Corporation, a holding corporation controlling a number of companies engaged in producing and marketing natural gas to various cities in Ohio (Rec., 323); Carnegie Natural Gas Company is a subsidiary of the United States Steel Corporation (Rec., 925, 926, 937); Pittsburg & West Virginia Gas Company is a subsidiary of the Philadelphia Company of Pennsylvania (Rec., 509-513), a holding company with a number of other subsidiaries engaged in producing and distributing natural gas and owning and operating the street-railway system of Pittsburgh and various other large enterprises; the Manufacturers Light & Heat Company is a merger of some twenty to twenty-five companies formerly in the natural-gas business in Pittsburgh and many municipalities of Western Pennsylvania, and also along the Ohio River in West Virginia and Ohio (Rec., 1029), and the United Fuel Gas Company is presently owned by the Columbia Gas & Electric Company and Ohio Fuel Supply Company (Rec., 378-379), the former owning or controlling the lighting and heating systems in Cincinnati, Covington and other cities in Ohio and Kentucky, in addition to producing and distributing gas elsewhere, and the Ohio Fuel Supply Company being a producing and marketing company in Ohio, selling gas to consumers and local gas companies in Ohio.

Legal Status of the Seven Companies.

All of these seven companies were chartered or authorized to carry on business in West Virginia in the light of the following pre-existing statute (Code, ch. 53, Sec. 8; Acts of 1882, ch. 96):

> "And the right is hereby reserved to the legislature to alter any charter or certificate of incorporation hereafter granted by a joint stock company and to alter or repeal any law applicable to such company."

The nature of these companies, when the Act of 1919, now in contest, was passed is amply set forth in the record, from which we summarize the following:

(1) All seven companies were and are public-service gas corporations of West Virginia. Five of them, the Hope Natural Gas Company, Reserve Gas Company, Pittsburg & West Virginia Gas Company, United Fuel Gas Company, and Columbia Gas & Electric Company, were chartered under the laws of West Virginia. The Manufacturers Light & Heat Company and Carnegie Natural Gas Company were chartered under the laws of Pennsylvania, but, as a condition precedent to doing business in West Virginia necessarily received from the State authorization to do business under the laws applicable to domestic corporations, and became and were, to all intents and purposes, domestic corporations, insofar as concerned their property, business, rights and duties in the State (Rec., 1885; Code W. Va., ch. 54, Sec. 30). In addition, substantially all the gas territory, leases, pipe-line systems, rights of way, franchises, and other property of the

Manufacturers Light & Heat Company in West Virginia were acquired by absorption of the Wheeling Natural Gas Company and other public-service corporations theretofore chartered and serving the public under the laws of West Virginia (Rec., 63, 69, 1029).

The substance and effect of the charters of these seven companies, set forth with varying degrees of elaboration in their respective condemnation proceedings, sufficiently evidence their character. Thus the Reserve Gas Company and the Hope Natural Gas Company both allege (W. Va. Exs. Nos. 45 and 46, Rec., 1803, 1822) that their charter powers include:

> "The producing, dealing in, buying and selling, acquiring, storing, transporting by pipes and otherwise natural gas for its own use and for the selling and supplying of natural gas for industrial, commercial, domestic and other public and private uses for heat, light, fuel and power to persons, firms, partnerships, corporations and other consumers and other municipalities and places in the State of West Virginia as well as elsewhere, where the said natural gas may be discovered, purchased, stored or transported by the said * * * Gas Company," * * *

and

> "Also to have, exercise and enjoy the right of eminent domain, and in the exercise of such right to take, condemn, use and enjoy such lands, rights of way, easements and property as shall be necessary to enable it to lay and construct its mains, pipes and conduits, pump stations, telegraph and telephone lines, dams and other structures and appliances necessary and required or convenient to the producing, storing, cooling and transporting of natural gas."

And, though not enforced, the public character of natural-gas pipe lines has been declared in West Virginia since the year 1891, under the provisions of its Code, Chapter 52, Section 24, extending the power of eminent domain to companies organized for the purpose of transporting such gas, and declaring that

> "Such company shall for the purpose of transporting natural gas, oils and water be considered and held to be a common carrier, and subject to all the duties and liabilities of such carrier under the laws of this State."

(2) The seven companies, and the constituent companies absorbed by them, pursuant to their charter powers, engaged in the service of natural gas to the people of West Virginia, and have at all times since served a large number of its people. They have acknowledged their character as public-service corporations, and as such have filed their tariffs and schedules before the West Virginia Public Service Commission and accepted the rates and regulations prescribed by that body (Rec., 1365, 1922-1943). From the application of the Hope Natural Gas Company, the largest of the seven companies, for leave to increase rates (W. Va. Ex. No. 53, Rec., 1923), we quote as an example the following typical averment:

> "That its principal place of business is in the following towns where it distributes natural gas and in the neighboring country districts and villages, viz: Belmont, Clarington, Colliers, Eureka, Fairview, Friendly, Glovers Gap, Littleton, Lima, Lost Creek, Mt. Clare, Mannington, Metz, Minora, Parkersburg, Paden City, Pine Grove, St. Marys, Sistersville,

Smithfield, Williamstown and Wileyville, West Virginia, and that it is a public-service corporation engaged in the management and operation of a natural-gas plant in said cities and towns and that as such public-service corporation in the service of natural gas to the domestic consumer it is subject to the provisions of Chapter 9, Acts of the Legislature of West Virginia for 1913 and 1915 and of the Code of West Virginia applicable to this class of corporations."

(3) The service to West Virginia consumers so authorized and undertaken by the seven companies embraces gas for domestic, industrial, commercial and other purposes. The public professions of the Hope Natural Gas Company and Reserve Gas Company as to such service are exemplified by the following quotation from the printed form used in their applications to the courts of the State for leave to condemn for pipe lines (Rec., 1823, 1804):

"That since the granting of said new or amended and modified charter or certificate of incorporation, as well as for several years before, petitioner has been and is engaged in the business of selling and supplying natural gas for industrial, commercial, domestic and other public and private uses for heat, light, fuel and power to persons, firms, partnerships, corporations and other consumers and purchasers for use in incorporated cities, towns, villages, districts and other municipalities and places in the State of West Virginia, and has been and is supplying natural gas to the public for fuel, illuminating and other purposes, and has been, and is still, at great expense and cost to it, erecting, laying, maintaining and operating pipes and lines of pipe, etc., for transporting natural gas with which to supply the public and said other

purchasers and consumers with natural gas for fuel, illuminating, heat, power and other purposes; and that it has been and is transporting natural gas to be supplied to the public and said other purchasers and consumers for fuel, heat, illuminating, power and other purposes by and through its said pipes and pipe lines."

The attitude of the Pittsburg & West Virginia Gas Company was expressed in the following language (Rec., 1843):

"1st. That petitioner is a corporation duly organized and existing under and by virtue of the laws of the State of West Virginia, for the purposes of transporting carbon oil and natural gas, or both, by means of pipe lines, or otherwise, for public use; that petitioner is now engaged in the business of producing, transporting and selling natural gas for public use and is now producing large quantities of natural gas within the State of West Virginia, and is transporting the same to market by means of certain pipe lines constructed and maintained by it; that the natural gas so transported by said lines is being sold to the public in the following incorporated cities, towns and villages, to-wit: Grafton, Enterprise, Shinnston, Lumberport, Haywood, Colfax, Worthington, Simpson, Pruntytown, Blueville, Thornton and Flemington, all within the State of West Virginia, and other places in the State of West Virginia not incorporated and many persons not living in any city, town or village, are likewise being supplied with natural gas for domestic and industrial uses by this petitioner by means of its said system of pipe lines; that the transportation of said natural gas and the sale thereof is for the use of the public generally for the purpose of supplying light and heat to such pub-

lic; and that your petitioner is ready and willing at all times, and has so held itself out, to sell said gas to the public, or any portion thereof, upon the payment of a reasonable price therefor."

Substantially the same assertions and professions were de by the constituent and predecessor companies, Fairnt & Grafton Gas Company (Rec. 1896) and The Philaphia Company of West Virginia (Rec., 1857), while the rnegie Natural Gas Company uses language even broader Rec., 1876), containing the additional averment that it is common carrier of natural gas under the laws of West rginia.

(4) With respect to future consumption and extensions service for domestic, industrial and other uses of gas, the ven companies expressed their sense of obligation to West irginia consumers as follows:

The Pittsburg & West Virginia Gas Company and its redecessor, Fairmont & Grafton Gas Company, stated of cord (Rec., 1843, 1896) that each was:

> "* * * ready and willing at all times, and has so held itself out, to sell said gas to the public or any portion thereof, upon the payment of a reasonable price therefor."

The Philadelphia Company of West Virginia, the other onstituent company of Pittsburg & West Virginia Gas Comany, alleged (Rec., 1857):

> "Your petitioner is constantly increasing the number of its consumers and is desirous of largely increasing its sales of gas in the various counties of West

> Virginia traversed by its lines. Your petitioner is ready and willing to sell gas to all parties within reaching distance of its pipe lines who apply for the same, at reasonable rates. Your petitioner, being a public-service corporation, as hereinbefore stated, is ready and willing to furnish gas at all times to the public, as aforesaid."

The Carnegie Natural Gas Company alleged (Rec., 1876):

> "Your petitioner is constantly increasing the number of its consumers and it is desirous of largely increasing its sales of gas in the various counties of West Virginia traversed by its lines. Your petitioner is ready and willing to sell gas to all parties within reaching distance of its pipe lines who apply for the same at reasonable fixed rates which are in general effect throughout the State of West Virginia, and which rate is as follows: 25 cents per thousand cubic feet of gas; also flat rate of $1.50 per month for one fire. Your petitioner, being a public-service corporation, as hereinbefore stated, is ready and willing to furnish gas at all times to the public, as aforesaid."

The Wheeling Natural Gas Company, the principal constituent through which the Manufacturers Light & Heat Company was doing business in West Virginia in the year 1906, alleged (Rec., 1905):

> "That petitioner in the exercise of its rights, powers, and privileges and in the conducting of its business has been and is supplying the incorporated cities, towns, and villages of Benwood, Chester, McMechen, Moundsville, Newell, and other towns and

vicinities and manufactories within the State of West Virginia, and the inhabitants of said cities, towns, and villages, with natural gas, for heating, fuel, illumination, power and other purposes, under ordinances of said several cities, towns, and villages, as well as a large number of unincorporated towns and villages in the said State of West Virginia, and persons residing in and inhabiting such unincorporated towns and villages, and any and all persons residing along the lines of your petitioner, desiring natural gas."

The Hope Natural Gas Company, after an extensive enumeration of the various cities, towns, and communities in West Virginia served by it and its other public services of gas, alleged (Rec., 1825):

> "That petitioner, as is its bounden duty, furnishes, and is ready and willing to furnish, at uniform and reasonable rates, natural gas for heating, illuminating, fuel, power, and other purposes to every inhabitant of the several incorporated cities and towns above named who applies therefor, and complies with the regulations prescribed by the ordinances of such of said cities and towns as have fixed ordinances authorizing the same, and who complies with the regulations fixed by the council of such of said towns as have not a specific ordinance, and also furnishes and is willing to furnish all other consumers therewith, at uniform and reasonable rates."

The Reserve Gas Company stated its attitude in language substantially identical with that of the Hope Natural Gas Company in the quotation immediately preceding (Rec., 1805).

(5) With respect to their pipe lines, the public professions of the seven companies are found in their many applications for leave to condemn made to the courts in the gas-producing counties, specimens of which are exhibited in the record at pages 1802 to 1916. In substance these applications set forth their extensive service of gas to West Virginia consumers; the necessity of obtaining a greater supply for them and the drilling of wells for that purpose; the necessity of laying a pipe line or lines for the purpose of transporting such additional gas to said West Virginia consumers and of condemning over the particular land described, and that the construction of said pipe line is necessary for public use and the same, when constructed, will be so used. Thus the form of application used by the Hope Natural Gas Company and Reserve Gas Company alleged (Rec., 1826):

> "That it became necessary for petitioner in order to supply natural gas to the said several incorporated cities and towns, and their inhabitants, as well as the several other towns, individuals, firms, corporations, copartnerships, etc., for heating, fuel, illuminating, power, and other purposes, and to keep up the required and necessary supply of such gas, that it discover and produce an additional supply of natural gas; that to discover and produce the same, it became necessary for petitioner to drill, at large cost and expense, new wells for the purpose in the county of Harrison and several other counties in the State of West Virginia, and to acquire other wells in said counties; and that petitioner has drilled several new wells in said several counties and has discovered and found a large supply of natural gas in the said wells, and has acquired sundry other wells producing natural gas. That from said wells so drilled by it, as

well as from said wells so acquired by it, petitioner produces natural gas with which to supply the said incorporated cities and towns and the said inhabitants thereof, aforesaid, as well as said other purchasers and consumers. And that in order to supply said incorporated cities and towns and the inhabitants thereof, as well as other consumers and prospective consumers in Harrison County, and elsewhere, with such natural gas produced from said last-mentioned wells, for heating, illuminating, and other purposes, it is necessary that petitioner lay, construct, and maintain an additional line of pipe from some of the wells in said several counties, through a portion of said Harrison County and portions of other counties in the State of West Virginia, so as to reach the above-mentioned incorporated cities and towns, and the inhabitants thereof, as well as said other consumers in Harrison County and elsewhere, with said pipe line for the purpose of transporting such natural gas; and it is also necessary that petitioner transport such natural gas through said pipe line, and supply the same for said purposes to said incorporated cities and towns, and the inhabitants thereof, and said other consumers in said Harrison County and elsewhere."

(6) Further urging their public service to the people of the State, the seven companies applied for and were given, in addition to their franchises for use of the streets and alleys of the cities, towns, and villages in West Virginia served by them, the right to lay, maintain and operate pipe lines, connections, boxes, valves and other fixtures, as well as telephone and telegraph lines, along and upon the highways (Rec., 1016). A large part of their several pipe-line and transportation systems are thus constructed and now

used without charge or compensation whatsoever. For an example of the franchises for use of the public highways see W. Va. Ex. No. 52 (Rec., 1917), granting to Reserve Gas Company:

> "License and permission to lay and maintain in any of the public roads of this county pipe lines for the conveyance of gas from any well or wells of the said company, said pipe lines to be so laid as not to interfere with the use of said public roads and for that purpose to be covered with a covering of not less than twelve inches above said pipe line and also to be laid in such manner as not to interfere with any other pipe line, now laid in or along said road. If at any time, by reason *or* working the roads it should become necessary to lower said pipe, at any point, said company shall lower it at its own expense. This franchise is to expire in fifty years from the date hereof."

And in this connection it is pertinent to mention that many of these franchises, and special rights and privileges therewith, as well as the pipe lines constructed thereunder, were acquired by the seven companies through their absorption of local companies.

Gas Control of the Seven Companies.

As already shown, in 1919 the total gross production in the State by all producers was 219,886,837 M cubic feet, of which, after deducting the free gas to lessors, gas used in the field, and gas produced and consumed by private industries (which items do not reach or benefit the consuming public), there was a residue of 183,687,047 M cubic feet,

constituting the net supply in the hands of the public-service corporations of the State available for service to the public. Of this net public supply, the seven companies produced from their own wells or acquired under purchase contracts a total of 164,426,341 M cubic feet, or 89.5 per cent. The following table (Rec., 996, 997, 1736, insert p. 383) shows that the like control has existed since 1911:

Year.	Net supply for public service.	Net supply of seven companies.	Per cent.
	M cu. ft.		
1911	173,132,353	147,431,246	85.1
1912	203,112,738	172,050,962	84.7
1913	209,131,295	167,897,746	80.3
1914	200,762,645	166,625,730	83.0
1915	207,777,882	170,694,495	82.1
1916	259,414,200	220,892,583*	85.1
1917	245,620,686	223,517,777	91.0
1918	227,649,823	201,685,702	88.6
1919	183,687,047	164,426,341	89.5

But the control of the West Virginia gas situation by the seven companies is still further manifest.

The total acreage of gas territory, operated and unoperated, held under lease by all the sixty-seven public-service corporations of the State in 1919, was 2,725,798 acres, of which the seven companies together held 2,566,798 acres, or 93.8 per cent (Rec., pp. 1001-1003). For the years 1910 to 1919, the aggregate acreage of the seven companies was as follows (Rec., p. 1736; insert, p. 390):

*The figure 200,892,583, on record page 996, is a typographical error.

Year.	Developed.	Undeveloped.	Total.
1910	311,569	2,639,509	2,951,078
1911	351,428	2,382,846	2,734,274
1912	467,664	2,027,469	2,495,133
1913	533,593	2,055,968	2,589,561
1914	572,043	1,852,319	2,424,362
1915	509,414	2,045,032	2,554,446
1916	559,078	2,281,435	2,840,513
1917	618,559	2,152,500	2,771,059
1918	658,880	1,872,843	2,531,723
1919	689,305	1,866,720	2,556,025

In addition to the acreage directly held under lease, the seven companies indirectly controlled much other territory by means of purchase contracts for the gas production of a great number of oil companies and other independent producers. Thus, in 1919, of the 245 independent producers selling their gas to the 67 West Virginia public-service corporations, the seven companies acquired the production of 202 of such producers, holding oil and gas leases upon an aggregate of 1,316,807 acres, while the remaining 60 public-service corporations acquired the production of 43 of such operators, holding leases upon 11,394 acres (Rec., pp. 1471-1473).

The total number of producing gas wells in West Virginia at the beginning of 1919 (according to the United States Geological Report for 1918) was 9,687, of which the seven companies owned 7,086, or 73.2 per cent. The additional wells held under contracts with independent producers is not disclosed in the evidence, but a fair inference can be drawn from a consideration of the number and extent of territory of the independent producers from whom they

purchased, as stated in the preceding paragraph. The total of producing gas wells in the State and the number thereof owned by the seven companies during the years 1910 to 1919 was as follows (Rec., 1021):

Year ended Dec. 31—	Total, all producers.	Seven companies.	Per cent.
1910	4,052	2,890	71.3
1911	4,790	3,354	70.0
1912	5,604	3,897	69.6
1913	6,534	4,578	70.1
1914	7,194	5,037	70.0
1915	7,718	5,458	70.7
1916	8,542	6,161	72.1
1917	9,329	6,763	72.5
1918	9,687	7,086	73.2

Added to this control of the sources of supply, and accounting in a large degree for it, is the control of the gas markets built up by means of, and dependent on, the pipe-line systems and the compressor stations essential for the transportation of gas to consumers at a distance from the place of production. These pipe lines and stations are themselves, in fact, a monopoly resulting from the command of the large capital, not available to everyone, required to erect them and from the holding of the large areas of gas territory and large amounts of gas production, tributary to the pipe lines and withdrawn by the seven companies from acquisition by others (Rec., 1016, 1279, 1310, 1329-1336, *et seq.*).

Nor is this situation altered by the statute, already quoted, of West Virginia, enacted in the year 1891 and yet in force,

37

providing that any company organized for the purpose of transporting natural gas by pipe lines should be considered and held to be a common carrier (Code W. Va., Chap. 52, Sec. 24). The seven companies at all times have refused to transport any gas except their own production and purchases, claiming that to do so would disable them from the public service of gas obligatory upon them as public-service corporations (Rec., 1425-1426). In this regard the situation is pertinently described by a short passage from *United States vs. Ohio Oil Co.*, 234 U. S., 548, 559, the language there used in relation to oil being equally applicable to gas:

> "Availing itself of its monopoly of the means of transportation the Standard Oil Company refused, through its subordinates, to carry any oil unless the same was sold to it or to them, and through them to it, on terms more or less dictated by itself. In this way it made itself master of the fields without the necessity of owning them, and carried across half the continent a great subject of international commerce coming from many owners, but, by the duress of which the Standard Oil Company was master, carrying it all as its own."

Methods of Acquisition of Control by the Seven Companies.

In the early days gas territory, both proven and prospective, was available for whomsoever desired to lease. The great majority of the local companies, serving many municipalities and communities in the gas-producing counties, obtained an abundant supply from wells in the immediate vicinity, and acquired only relatively small areas of gas. The seven companies, however, with the foresight and ability to

quire and hold for future realization, common to such mbinations of capital, acquired in the aggregate very rge areas of gas territory, much of it proven to be produc- e of gas, and much of it appearing to be valuable in ospect. Much of this acreage was acquired and held as reserve for future supply, and, although these reserves ve since been depleted to a considerable extent, the seven mpanies yet held in 1919 an aggregate of 1,866,720 acres undeveloped territory out of their total of 2,566,025 acres Rec., 1736; insert, p. 391).

A large part of the gas territory was obtained by direct ases from the land-owners, but the seven companies also quired a large part of their holdings by the acquisition of her West Virginia public-service gas corporations engaged the marketing of natural gas, thus eliminating the compe- ion of the latter companies and depriving them of their ility to supply the West Virginia public. This was particu- rly true of the Hope Natural Gas Company, the last of the ree gas subsidiaries of the Standard Oil Company in West irginia, which from time to time took over all of the andard gas interests in northern and north-central West irginia theretofore developed and marketed by four other bsidiaries, the South Penn Oil Company, Carter Oil Com- ny, Flaggy Meadow Gas Company, and Mountain State as Company (Rec., 322, 340-342 *et seq.*, 1173, 1329). he first two were extensively engaged in the oil business and ld, especially the South Penn, very great acreages of oil d gas leases in many counties, and in the course of oil plorations had encountered and held many gas wells, hile the last two companies were chartered and operated West Virginia public-service corporations for the purpose

of marketing the gas so developed, the Flaggy Meadow Gas Company serving consumers in various municipalities of Marion, Harrison, and Wetzel counties, and the Mountain State Gas Company serving consumers in municipalities of Harrison, Lewis, Doddridge, Wood, Pleasants, Tyler, and possibly other counties. In this manner the gas territory, wells, pipe lines and other property of the other oil and gas subsidiaries passed into the hands of the Hope Natural Gas Company and formed part of, and a large nucleus around which were acquired and built up, its present system and immense holdings. In 1910, the Hope Natural Gas Company also purchased all of the gas territory, wells, pipe lines and gas-purchase contracts of the Wheeling Natural Gas Company and Tri-State Gas Company, both West Virginia public-service corporations, in Harrison, Lewis, Gilmer, Upshur, Baxton, and part of Marion County (Rec., 1169-1172), in return for a gas-sales contract to the Manufacturers Light & Heat Company, which had theretofore acquired control of the Wheeling and Tri-State Companies (Rec., 1712). And to this day the Hope Natural Gas Company in northern West Virginia and the United Fuel Gas Company in the southern section receive substantially all the wells, or the gas from wells, discovered by these two large oil companies (Rec., 999, 1019, 1445-7, 1467 *et seq.*), which together hold in West Virginia 800,616 acres of oil and gas leases (Rec., 1467-1470).

The Pittsburg & West Virginia Gas Company was originally incorporated under the laws of West Virginia as the Fairmont & Grafton Gas Company. It was one of the largest and earliest public-service corporations in the northern section of the State, serving Fairmont, Grafton, Shinns-

on, Lumberport, and other municipalities in Marion, Taylor and Harrison counties and having a very considerable acreage of gas territory, with many wells and pipe lines through those counties (Rec., 512-513, 1895-1898). In 1906 its capital stock was acquired by The Philadelphia Company of Pennsylvania, which had heretofore entered the State through a West Virginia subsidiary chartered as The Philadelphia Company of West Virginia, and acquired territory, drilled wells, built pipe lines and engaged in the marketing of natural gas as a public-service corporation of the State. These two subsidiaries were connected and thence operated as one until 1913, when the name Fairmont & Grafton Gas Company was changed to Pittsburg & West Virginia Gas Company, and to it the property of The Philadelphia Company of West Virginia was turned over (Rec., 512).

The Manufacturers' Light & Heat Company entered West Virginia through the acquisition of all or the controlling interest in the capital stock of West Virginia public-service corporations, whose property and marketing systems were thereupon connected with its general system. The companies so acquired were Wheeling Natural Gas Company, Ohio Valley Gas Company, Wetzel Gas Company, Tri-State Gas Company, Cameron Gas & Oil Company, New Cumberland Water & Gas Company, and Manufacturers' Gas Company of Wheeling; and until about 1910 all were operated as subsidiaries (Rec., 1029). In that year, all their outstanding stock having been acquired, they were merged into the parent company, which then for the first time formally entered the State (Rec., 65, 94).

In the southern section of the State the United Fuel Gas

Company, a West Virginia corporation, was chartered in 1903 and leased a considerable gas territory. Until 1915 its stock was owned by the Standard Oil Company and Ohio Fuel Supply Company, the Standard having control. Its chief expansion came in 1909 with its acquisition of the United States Natural Gas Company, a West Virginia corporation, which was itself a merger of a number of earlier West Virginia companies holding large acreages and engaged in the service of Charleston, Huntington and many other cities and municipalities in the southern section; and it also took over a great block of leases in that section from the Hope Natural Gas Company. In June, 1915, the Standard Oil Company disposed of its controlling stock interest in the United Fuel Gas Company to the Columbia Gas & Electric Company, and since then the two latter companies have been substantially operated together and under the same management (Rec., 386 *et seq.*; 1029-1033).

Contracts for the purchase of gas from independent operators were another means of engrossing the gas supply. But affording a powerful, and, in many cases, a compelling leverage in the negotiation of sales to the seven companies were the pipe-line systems and latterly the compressor stations. As the cost of pipe lines was practically prohibitive to the independent producer—and much the more so to the landowner himself—and as the independent producer and landowner could not hold their gas for future development or investment, because it was apt to be drained away through wells drilled on neighboring lands, operated by one of the seven companies, their only course was, in general, to sell or lease their gas to one of the seven companies upon terms and conditions made by it.

The pipe-line systems thus became the market for the independent producers, substantially all of whom sold to the seven companies. The same liability to loss by drainage through neighboring wells likewise deterred independent operators and local public-service corporations from taking up and carrying leases for future development or investment, while the landowner, moved by the same considerations, could not withhold his land from leasing. Thus the seven companies were enabled at once to discourage competitive leasing and to build up their reserves and control of the available territory. Nor was this condition changed by the subsequently increased demand for gas and increased prices paid therefor in many of the West Virginia cities located in the gas territory; for, insofar as the gas was not held by the seven companies, the increased demands and prices were met and overcome by the increased cost of transportation, due to the decline in rock pressure to the point where the gas ceased to be self-transporting, thus necessitating the additional and prohibitive cost of compressor stations (Rec., 1254-1257, 1269, 1270, 1300, 1330-1334, 1339-1340, 1346, 1359).

In the case of the oil companies which are included in the category of independent producers, even if possessed of the means to build and operate pipe lines and compressors, the scope of the enterprise and the proximity of the pipe lines have occasioned the same result. Such companies incidentally discovering gas while operating for oil, but not being engaged in the business of transporting gas, their only market has generally been the pipe lines of the seven companies in the vicinity of production.

Substantially all the oil companies sell their gas produc-

tion to the seven companies, and many of them operate upon an extensive scale and hold large acreages. For example, the South Penn Oil Company, Carter Oil Company, Ohio Fuel Oil Company and Pure Oil Company (formerly Ohio Cities Gas Company), Commonwealth Petroleum Company, Fisher Oil Company and Southern Oil Company, all of which sell to the seven companies and most of which are allied in interest with them, together hold 1,147,637 acres, primarily for oil development, but upon which gas is frequently discovered (Rec., 998, 1467-1474).

Exports of the Seven Companies.

We have already set forth the volume and proportions of West Virginia gas exported from the State, as given by the United States Geological Survey reports, showing the great preponderance of the exports. But confining the calculation, for the reasons already explained, to the net amount of gas available for public use, the percentage of exports is still greater, ranging from 74.4 per cent to 80.1 per cent as exhibited by the following tabulation (Rec., 996):

Year.	Net supply for public service.	Sales to W. Va. consumers.	Per cent to W. Va. consumers.	Per cent exported.
	M cu. ft.			
1911....	173,132,353	40,265,294	23.3	76.7
1912....	203,112,738	51,968,488	25.6	74.4
1913....	209,131,295	53,629,419	25.6	74.4
1914....	200,762,645	50,600,709	25.2	74.8
1915....	207,777,882	53,147,718	25.6	74.4
1916....	259,414,200	59,409,460	22.9	77.1
1917....	245,620,686	48,942,388	19.9	80.1
1918....	227,649,823	52,985,173	23.3	76.7
1919....	183,687,047	46,654,098	25.4	74.6

And as it is to be borne in mind that almost all of the public-service gas supplied by the local gas companies is supplied to West Virginia consumers, and that this gas is credited to West Virginia in the last preceding figures, it is apparent that the exports are to be attributed, almost in entirety, to the seven companies. And the true comparative treatment of consumers in West Virginia and elsewhere is to be found in apportionment of the gas of the seven companies. The following statement (deduced from the tabulation at Rec., 997) shows that of the West Virginia gas of the seven companies from 82.1 per cent to 89 per cent went to other States in the nine years from 1911 to 1919:

Year.	Net supply of seven companies.	Amount exported.	Per cent.
	M cu. ft.		
1911	147,431,246	130,230,499	88.3
1912	172,505,962	150,949,519	87.7
1913	167,897,746	145,600,069	86.7
1914	166,625,730	146,013,131	87.6
1915	170,694,495	151,833,628	89.0
1916	220,892,583	196,365,724	88.9
1917	223,517,777	196,627,901	88.0
1918	201,685,702	171,565,429	85.1
1919	164,426,341	134,065,530	82.1

Circumstances of Gas Exports.

Although limited quantities had been from early days marketed along the border lines from West Virginia into Ohio and Pennsylvania, and *vice versa*, especially in the Northern Panhandle of West Virginia, the business of exporting seems not to have reached an extensive scale until about the period from 1902 to 1905. At and for some years

before that time the defined gas fields of West Virginia afforded not only a large surplus over and beyond the demands of its people, but explorations had indicated the probability of the extension of productive territory to the southward (Rec., 322). In the meantime the gas fields of western Pennsylvania had been developed and utilized generally for domestic and industrial fuel at an earlier date and to a larger extent than those of West Virginia, chiefly by reason of the larger cities and population and the greater quantities consumed by the steel plants and other industries of Pittsburgh and that section of Pennsylvania. These fields began to decline and their production became insufficient to supply Pennsylvania consumers. In like manner the smaller and somewhat scattered gas fields of Ohio, never sufficient to supply more than a small part of the local consumers, also began to decline; in addition to which there were in Ohio many large cities and centers of industry served by local plants with artificial gas, to which the more efficient fuel of natural gas was attractive (Rec., 6063, 438, 521-524, 543-557, 699, 719, 726, 749, 947). And thereupon commenced the process of expansion of the West Virginia gas industry, which later assumed the proportions of wholesale exploitation.

In securing markets in the other States, the financial resources of the seven companies and their allied or controlling interests played an important part. Thus the deficiency in its own supply in Pennsylvania provided a direct and ready market for the supply of the West Virginia companies acquired by the Manufacturers Light & Heat Company; the Carnegie Natural Gas Company had only to extend its lines through West Virginia to the Pennsylvania line to connect

with its system in that State and market its surplus production into the steel plants of its parent company, the United States Steel Corporation; and the Pittsburg & West Virginia Gas Company, or its predecessor companies of earlier years, all owned by The Philadelphia Company, laid lines to the Pennsylvania border and there sold and delivered its surplus to the Equitable Gas Company, another subsidiary, which in turn transported to and supplemented the waning supply of the various other subsidiaries marketing to Pittsburgh and elsewhere in western Pennsylvania.

The West Virginia companies owned or controlled by the Standard Oil Company, viz., the Hope Natural Gas Company and the Reserve Gas Company, adopted a somewhat different method. The gas was sold under long-term contracts and delivery made at the State line to purchasing companies in Ohio and Pennsylvania, which laid lines from the interior of said States to the West Virginia boundary and thence transported and sold the gas, in some instances directly to consumers, but in the majority of cases to local distributing companies, generally subsidiaries, which in turn distributed to consumers in Ohio, Pennsylvania, and as far west as Indiana. In part, these purchasing companies were theretofore engaged in the natural-gas business in said other States and had established markets, as was the case with the Peoples Natural Gas Company, a producing and marketing company in Pennsylvania, acquired by the Standard Oil Company in 1903 (Rec., 424), and also with the Manufacturers Light & Heat Company, which had extensive markets in Pennsylvania and with which the Hope Natural Gas Company contracted in 1910 for future deliveries of large quantities of gas, substantially all of which went to Ohio and Pennsylvania consumers.

In another part, markets were created by the incorporation of subsidiaries of the larger interests controlling certain of the seven companies, which subsidiaries constructed pipe lines to the West Virginia border and transported the gas there purchased and received from the West Virginia companies to municipalities in Ohio, Indiana and Kentucky not theretofore using natural gas. This last was the case with the East Ohio Gas Company, an Ohio corporation organized by the Standard Oil Company, which first acquired the franchises and distributing plants of the artificial gas companies serving the cities of Akron and Canton, in the State of Ohio, and thereupon built pipe lines to the West Virginia State line to receive deliveries from the Hope Natural Gas Company, also a subsidiary, and transported and served the gas there received to consumers in the last-mentioned cities through the distributing plants so acquired, in lieu of artificial gas, and also distributed to consumers in other municipalities in the territory through which its pipe lines were constructed; and still later these lines were extended to Cleveland, where also the artificial-gas plants and distributing systems were acquired through a deal in which the Columbia Gas & Electric Company became the minority stockholder of the East Ohio Gas Company. So also the use of West Virginia gas was introduced into Cincinnati and other cities in Ohio and Indiana, as well as into Louisville and Covington and other municipalities in Kentucky, while further supplies from West Virginia were used to supplement the insufficient production of local companies theretofore serving Dayton, Columbus, Springfield, Toledo and other cities of Ohio and Indiana.

The various transporting, distributing, subsidiary and

allied corporations involved in the contracts and arrangements under which transportation and service was made, and the numerous cities and municipalities included in the upbuilding of these markets and the supplementing of markets insufficiently served, in the States of Ohio, Pennsylvania, Kentucky and Indiana, are too numerous and complex to justify further detail here. It suffices to say that between the year 1908 and the winter of 1916-17, when the shortages to West Virginia consumers commenced, the seven companies, in addition to the large amounts directly transported out of the State by certain of them, delivered an enormous aggregate of natural gas from the West Virginia fields to many purchasing companies, who transported and sold the same, either directly or through other companies, to consumers in municipalities and communities in Ohio, Pennsylvania, Kentucky and Indiana, under contracts severally made by the seven companies with the other companies to whom they delivered the gas.

Gas-Sale Contracts.

The gas-sale contracts above mentioned were and are as follows:

The *Hope Natural Gas Company* so contracted with the following:

1. The Northwestern Ohio Natural Gas Company, which serves Toledo and other cities in Ohio (Rec., 1509). This contract covers the majority share of the production of the Reserve Gas Company, which is sold or taken over by the Hope Natural Gas Company, its allied company. The re-

maining exportation of the Reserve Gas Company is sold and delivered by its other stockholder, the Union Natural Gas Corporation, to its subsidiary, the Logan Natural Gas & Fuel Company, which serves or sells to local companies serving Athens, Chillicothe, Dover, Logan, Newark, Dayton, and other municipalities in Ohio, and Richmond, Muncie and other places in Indiana (Rec., 749 *et seq.*).

2. The Peoples Natural Gas Company, which serves a portion of Pittsburgh and other cities in Western Pennsylvania (Rec., 1524).

3. The East Ohio Gas Company, which serves Akron, Dayton, Cleveland and other cities in Ohio (Rec., 1544).

4. The River Gas Company, which serves Marietta and other Ohio cities (Rec., 1554), this contract being made by the Mountain State Gas Company and subsequently assumed by the Hope Natural Gas Company on its taking over the former company.

5. The Fayette County Gas Company, which serves Uniontown, Connellsville, and other cities in Western Pennsylvania (Rec., 1560).

The *Pittsburg & West Virginia Gas Company* so contracted with the Equitable Gas Company, which serves consumers in Pittsburgh and other cities in Western Pennsylvania (Rec., 1729).

The *United Fuel Gas Company* so contracted with:

1. The Louisville Gas & Electric Company, which serves the City of Louisville, Kentucky, and vicinity (Rec., 1738).

2. The Portsmouth Gas Company, which serves the City of Portsmouth, Ohio (Rec., 1745).

3. The Central Kentucky Natural Gas Company, which serves Frankfort and other municipalities in Kentucky (Rec., 1752).

4. The Ohio Fuel Supply Company, which serves Columbus, Cincinnati, Toledo, Zanesville and other Ohio municipalities (Rec., 1761).

5. The Columbia Gas & Electric Company, which serves Cincinnati, in Ohio, and Covington, in Kentucky, and their vicinities (Rec., 1791).

In addition to the foregoing, there were and are a number of similar contracts for sales and deliveries within the State of West Virginia of large quantities of gas by certain of the seven companies to others of the seven, the major portion of which deliveries is either transported and sold directly, or sold and delivered to other companies at the State line under the contracts above listed, which transported to consumers in Ohio, Pennsylvania and Kentucky. Thus the Hope Natural Gas Company so contracted with the Manufacturers Light & Heat Company for a large supply, the major portion whereof the latter company transports and markets in Pennsylvania, with a small part in Ohio and another small part in West Virginia (Rec., 1712). The United Fuel Gas Company so contracted with the Hope Natural Gas Company (Rec., 1769, 1776, 1777) and with the Pittsburg & West Virginia Gas Company (Rec., 1780-1788), which vendee companies in turn sell and deliver the major portion

of the quantities so purchased to other companies at the State line under the contracts above mentioned.

These contracts contain a number of provisions more or less common, though in varying language. Among the most important in their bearing on this litigation may be pointed out the provision, found in most of them, that the amount of gas delivered shall be sufficient to supply all the then domestic consumers of the purchasing companies, as well as all those which may be thereafter acquired, throughout the term of the contracts, together with a frequently added covenant by the purchasing companies to use their best efforts to extend their service; the provision for payment for the gas in the form of a percentage of the gross receipts of the purchasing companies from their consumers, thus directly interesting the vendor companies in the marketing in other States; and especially the provision whereby the vendor companies are compelled to deliver the contract quantities in preference to all other purchasers or consumers, save only the domestic consumers of the vendor company then on its lines in West Virginia, thereby disabling themselves from serving gas for the other public uses of heating and lighting schools, churches, hotels, hospitals, municipal and other governmental buildings, and all industrial use. (See, for example, Rec., 1533, 1546). And in this connection it is important to remark that all of the companies purchasing from the seven companies market a portion of the gas for industrial use, and that, as we shall later observe, the contracts of purchase contemplate industrial consumption by consumers of the distributing companies.

Pipe Line Systems and Commingling of Gas.

The gas of the seven companies going to Ohio, Pennsylvania and other States is transported by, and delivered out of, their general pipe-line systems. These systems, which are more or less welded into one by the connections of the seven companies among themselves, constitute a vast reservoir, both to receive gas and to transport and distribute it. Throughout the gas-producing counties, from the interior of the State to its boundaries, the gas is fed into the main pipe lines by smaller lines leading mediately or immediately from the wells, and gas is fed out through distributing lines leading to the consumers or communities served along the lines. Whether consumed in West Virginia or in other States, the gas is commingled and carried in the same trunk lines. And the process of feeding in by gathering lines and feeding out by distributing lines continues substantially to the limits of the State.

When fed into the pipe-line system from a particular well, or from wells in a particular section, the gas is at once commingled into a common and homogeneous stock. From its very nature, no mark of identification can ever be placed upon, nor is it possible to identify, any atom or specific quantity thereof. And so it is that, until in the progress of the gas through the trunk lines the last connection of a pipe devoted to local service in West Virginia has been passed, it is not and cannot be ascertained whether any particular part of the gas, in the aspect of a physical entity, will be consumed in West Virginia or will pass to and be consumed in another State (Rec., 933).

The main pipe lines of some of the seven companies extend only to the State boundary, while in other instances the pipe lines reach into the adjacent States. The West Virginia gas furnished by the Hope Natural Gas Company, Reserve Gas Company, and Pittsburg & West Virginia Gas Company, no one of which operates outside of West Virginia, is all delivered to the purchasing companies at, or practically at, the State line. Of the total amount sold under contract by the United Fuel Gas Company to other companies, about one-fifth is delivered just across the State line in Kentucky and Ohio and the remaining four-fifths are delivered in part to the Ohio Fuel Supply Company at the State line (Rec., 1762), but in the much greater part at points within the State to others of the seven companies, viz., the Columbia Gas & Electric Company (Rec., 1793), Hope Natural Gas Company (Rec., 1770, 1772), and Pittsburg & West Virginia Gas Company (Rec., 1780-1782), which receive such deliveries into their general system. The Manufacturers Light & Heat Company (Rec., 1712, 1716) and Columbia Gas & Electric Company, while both producing and marketing in West Virginia, acquire much the greater part of their respective supplies in West Virginia under their purchase contracts from the Hope Natural Gas Company and United Fuel Gas Company, above mentioned, and thereupon transport out of the State; the Manufacturers Light & Heat Company about four-fifths of its entire net supply, and the Columbia Gas & Electric Company substantially all (Rec., 1736; insert, 380, 415). The Carnegie Natural Gas Company has no contracts for out-of-state deliveries, but transports and markets directly to the steel works of its parent company in Pennsylvania.

Service by Local Companies.

Many of the larger local companies were absorbed by the seven companies, as heretofore pointed out, and a number of others have gone out of business. The present list (Rec., 982) of natural-gas public-service corporations in West Virginia, including the seven companies, is sixty-seven.* A considerable number of these are survivors from the early days, and yet are engaged in the production and supply of gas, particularly in northern West Virginia. The important municipalities of Morgantown, Fairmont, Clarksburg, Weston, Salem, Shinnston, Lumberport, Pennsboro, and others are so served and supplied, in whole or in part (Rec., 1026).

In some of the oldest and richest gas counties, where one or more of the seven companies hold ample supplies and facilities, they furnish either substantially no gas or none at all by direct service.†

*The sixty-seven companies include a number only incidentally serving gas, such as oil companies and certain carbon-making and manufacturing plants, which utilize their production in their own private enterprises and whose consumers are limited to their employees or to lessors entitled to free gas. Of this character are the South Penn Oil Company (Rec., 1447), Ohio Fuel Oil Company (Rec., 1004), Columbian Carbon Company, Imperial Oil & Gas Products Company, and Owens Bottle Machine Company, none of which in fact supplies gas to the public, nor do they profess or hold themselves out to be public-service corporations (Rec., 998, 1004 *et seq.*).

†In Harrison County, in 1919, five of the seven companies owned and operated an aggregate of 127,996 acres of territory, 1,674 wells, and 1,157 miles of pipe line and bought the gas of 161 wells from 57 independent producers. These five companies served not more than 900 domestic consumers and no industries in that county, although their pipe-line systems, gas territory and production surrounded, and in some cases extended into, the cities of Clarksburg and Salem,

The local companies operated contemporaneously with the development and expansion of the seven companies, produced from the same pools, and transported and marketed to consumers in the same West Virginia territory in which the seven companies produced and marketed; and in some instances the same community was partially served by both. In the earlier years the volume of the wells was large, the rock pressure great, and the gas easily marketed through its own native force; and, having an abundant supply and no present or prospective market other than the particular communities then served, these smaller companies in most cases acquired and held only a limited territory, close to the place of consumption, and acquired little or no reserve territory (Rec., 212-213, 1001-1003, 1020, 1021, 1568). While the opportunity to obtain reserve acreage was open to them equally with the seven companies, before and at the time when the latter began their activities in this direction, yet it was neither wise nor financially possible to acquire extensive territory. To have developed additional acreage for which they had no market, would have defeated the very object of a reserve; and to hold such acreage in reserve until an additional supply was needed rendered it probable that the gas would be drained away through the operations of the seven

---

Shinnston and other municipalities, which have been without an adequate supply of gas since 1916. In Lewis County, in the same year, four of the seven companies owned and operated an aggregate of 176,739 acres of territory, 1,106 wells, and 795 miles of pipe line and bought the gas from 66 wells owned by 16 independent producers. These four companies sell gas to no industries and no local utilities, nor serve any incorporated cities or towns in that county, their service being limited to approximately 1,200 consumers in rural communities, chiefly lessors receiving free gas as rental (Rec., 1026-1028).

companies in surrounding territory. And when later they required additional gas by reason of the decline of the supply from their own wells or the growth of the communities served, the smaller companies found not only that substantially all available territory had been acquired by the seven companies, but also that such occasional and isolated tracts of gas territory as could be secured were worthless; for the cost of pipe lines to reach these scattered parcels was beyond their financial resources and out of proportion to the value of the project, and the enormous quantities of gas theretofore extracted from the pool by the seven companies had reduced the rock pressure of all wells in the field to the point where compressor stations were necessary adjuncts to transmission of the gas through the lines. In like manner the local companies were unable to reach out into the field to secure the production of the independent producers, for the amount of such production not held under contracts of sale to the seven companies was small and scattered and entailed the like disproportionate and prohibitive cost of lines and compressor stations (Rec., 1278, 1279, 1308-1310, 1361-1362).

Previous Supply to Local Companies by the Seven Companies.

Until the gas shortage of 1916-1917, the lack of reserve territory by the local companies and the diminishing volume of the gas occasioned no practical difficulty in West Virginia; for, notwithstanding the export business of the seven companies and the contracts under which that business was carried on, the local companies, whose own stocks of gas be-

came insufficient, were able to, and did, make up the deficiency by purchases from one or more of the seven companies. (Rec., 1034-1036, 1724, 1728; 1736, at insert pp. 402, 414, 280, 297, 314, 345, 349.) The quantities so purchased were readily and easily furnished, since the seven companies were possessed of an ample surplus, and one or more of their trunk lines lay within the immediate vicinity of, or traversed, the areas of service of the smaller companies, and often served consumers in the same community or territory (Rec., 1011, 1012, 1037). It was thus a mere matter of connecting the lines of the two companies and discharging gas from the one to the other. Sales by the seven companies to local companies were thus customarily effected for some years prior to the commencement of the shortages to West Virginia consumers in 1916-1917. The Hope Natural Gas Company was connected with and supplied the deficiency of the several local companies serving Fairmont, Clarksburg, Weston, and Pennsboro (Rec., 1035); the Carnegie Natural Gas Company was connected with and supplied the several local companies serving Fairmont and Morgantown (Rec., 1034); the Pittsburgh & West Virginia Gas Company was connected with and supplied the deficiency of the local companies serving Fairmont and Glenville (Rec., 1034), and the United Fuel Gas Company was connected with and supplied the deficiency of the local company serving Dunbar, South Charleston and St. Albans (Rec., 1036). Many of these sales yet continue during the milder periods of the year, but since the demands in other States have equalled and exceeded the supply the seven companies have asserted priority of their sales contracts and their obligations to the consumers abroad, and have declined and refused to sell to the

local companies during the winter periods, when the requirements of the domestic consumers are greatest, both in amount and necessity (Rec., 276, 277, 1209, 1210, 1230, 1231, 1724, 1728). This refusal has been one of the chief causes of the suffering, inconvenience and losses by West Virginia consumers.

As a result of the foregoing conditions and circumstances, the local companies and the consumers supplied by them became, were and are dependent upon the seven companies for a part of their supply. As the production of the local companies decreases, this dependency will necessarily become greater. And if and when the seven companies resort to the process of suction (to which the compressor stations are readily applicable) to increase the output of their West Virginia wells, the wells and territory of the local companies will be so far depleted as to render their dependence substantially complete (Rec., 1279, 1310-1312). An official of the Reserve Gas Company and Hope Natural Gas Company says (Rec., 345-6) that this suction is now a common practice in Pennsylvania and eventually will have to be resorted to in West Virginia. This, of course, means the suction of gas from the entire territory surrounding the pump station, and that no well therein will be capable of producing except by the employment of the like suction or other artificial means of extracting the gas; and, as a necessary result, all local companies dependent upon natural pressure to market and distribute their supply will be effectually put out of business unless supplied by the seven companies.

Violation of Seven Companies' Duties to West Virginia Consumers.

From the foregoing it appears that the seven companies, through which the plaintiff States derive West Virginia gas and whose alleged rights are so extensively relied on in assertion of the claims of the plaintiffs, have, in manifest disregard of their duties and obligations to West Virginia and its people:

(1) Engrossed the gas supply of the State.

(2) Absorbed the most important local companies, which, if independent, would have continued to serve West Virginia consumers.

(3) Deprived the remaining local companies of their ability to supply adequately their localities.

(4) Failed and refused to furnish in later years, when the deficiency of the local companies became acute, gas to make good the deficiency, except out of any surplus remaining after satisfying consumption in other States.

(5) Failed and refused themselves to supply needed gas to consumers in the territory of their production or their transportation lines.

(6) Subjected to suffering and inconvenience in homes and public institutions and to industrial loss the people of West Virginia.

(7) Transported for consumption out of West Virginia the gas required for reasonably adequate service therein.

(8) Transported their gas for consumption in other States under color of contracts which (except as to the theoretical provision in favor of West Virginia domestic consumers) subordinated the service of West Virginia consumers to the service of the out-of-state gas companies and consumers.

(9) Aided and abetted by the tenor and intent of their contracts and by their practices the unlimited increase of use of West Virginia gas in the other States by providing for the extension of service to additional consumers there.

(10) Arrogated their contracts to superiority over the pre-existing laws of West Virginia, to which they owed their existence and special rights and prvileges.

(11) By the contracts and transportation above mentioned, renounced their obligations and duties to West Virginia and disabled themselves from the performance thereof.

Causes of Increased Exports.

The causes of the augmented export of West Virginia gas are apparent. Partly applied to substitution for the declining production of Ohio, Pennsylvania, and Indiana, the consumption of West Virginia gas has been gradually increased by the expansion of the distributing gas companies, especially in Ohio, Pennsylvania, and Kentucky; the extension of lines of service; the growth in the number of consumers; and the substitution of natural gas for artificial gas in many places. Much of this is already embraced in this statement, and the record contains many instances and numerous statistics illustrating the growth of the out-of-state companies and their consumers, without regard to the

needs of West Virginia or the inevitable day when even the West Virginia gas would diminish. It will, however, be of interest to cite the following:

Since the year 1903 the Peoples Natural Gas Company, by expansion of its area of service, has increased its consumption threefold (Rec., 431), and during the period 1910 to 1919, the number of consumers increased from 43,315 to 79,112 (Rec., 614-616). In the case of the East Ohio Gas Company the increase was from 161,580 consumers using 26,445,512 M cubic feet in 1910 to 329,005 consumers using 43,469,893 M cubic feet in 1919 (Rec., 621-626). From 1899 to 1919, the consumers of the Philadelphia Company increased from about 16,000 to over 140,000 (Rec., 486).

Uses of West Virginia Gas in Other States.

Much is said in the evidence, and doubtless more will be said as to the use of gas in West Virginia for industrial purposes. We shall refer to this in due order. But at this point it is to be noted that of the West Virginia gas exported to the other States, much was and is furnished directly to manufacturers and other industrial consumers. In other cases, West Virginia gas was and is utilized to supply the domestic consumption of purchasing companies, whose own production was and is diverted to industrial service. This diversion is expressly contemplated under the contracts made by the Hope Natural Gas Company with Manufacturers Light & Heat Company and Peoples Natural Gas Company, above mentioned, and is impliedly contemplated and fully effectuated under the provisions of a number of the other contracts requiring the vendor companies to deliver all the

natural gas needed to supply all of the present and future domestic consumers of the vendee companies (Rec., 1524, 1544, 1560, 1712, 1761). Statistics of the United States Geological Reports for the years 1914 to 1918, both inclusive, show that the amounts used for manufacturing purposes in Pennsylvania (being all industrial consumption except that used for field purposes) were between 92.84 per cent and 100.23 per cent of the entire production of that State (Rec., 1104); and that the amounts used for such manufacturing purposes as compared with the total production in the other importing States ranged during said years as follows: In Ohio, from 54.59 per cent to 93.90 per cent; in Indiana, from 28.37 per cent to 118.50 per cent; and in Kentucky from 122.92 per cent to 169.17 per cent (Rec., 1107, 1109, 1111-1112). Concretely illustrating these proportions, it may be noted that in 1916 Pennsylvania consumed industrially 131,571,641 M cubic feet (Rec., 1736; insert, W. Va. Ex. No. 23), which was more than the total production of that State and practically two-thirds of the total consumption therein for all purposes, and considerably more than double the entire amount furnished to West Virginia consumers by all of the public-service corporations thereof.

So also with the amounts used for such manufacturing purposes, as compared with the total consumption in the importing States. Thus in Pennsylvania the amounts used therefor have at all times during the years 1914 to 1918, both inclusive, exceeded the amounts served to domestic consumers, averaging double the domestic consumption. In the remaining importing States, the amounts used for such manufacturing, as compared with the total consumption during said years, have ranged as follows: In Ohio, from

23.29 per cent to 38.71 per cent; in Indiana, from 16.59 per cent to 35.06 per cent, and in Kentucky from 28.23 per cent to 36.04 per cent (Rec., 1107, 1109, 1111).

Future Prospects of Gas Supply.

It is uncontroverted that the gas fields in Ohio, Pennsylvania and Indiana are either exhausted or in progressive process of exhaustion; that the West Virginia production has passed its peak and for several years has been declining rapidly; that no other gas fields are known or in prospect in Ohio, Pennsylvania, West Virginia or neighboring States; and that the costly explorations to the deeper sands have not yet warranted belief that material increase in supply will result by such means. But, remarking in passing that the statute in question does not forbid or restrict export of gas and that all that is demanded is reasonably adequate service by its public-service corporations, if, by future discoveries of other fields or deeper sand development, a sufficient supply results to provide adequate service to West Virginia consumers concurrently with consumers in other States, nothing in the statute forbids. And some of the larger companies, the seven companies as well as those in Ohio and Pennsylvania, are yet exploring for new fields and profess the hope that the deeper sands will eventually be found profitable (Rec., 135).

But, as bearing on the available volume of gas of the seven companies and the consequential effects of the statute in the other states, is to be noted the capacity of the presently commercial gas sands in holdings in the known fields. The seven companies have an aggregate territory in West Vir-

ginia, which, since the year 1910, at all times has exceeded 2,400,000 acres, with only 689,205 acres thereof developed up to 1920 (Rec., 1736, insert p. 391). It cannot be supposed that this immense reserve has been carried at its great cost for more than a decade, unless they considered these lands to contain gas in profitable quantities.

It is relevant, also, that the required quantity of gas for all consumers probably could be provided by the drilling of additional wells. In 1919, the last year for which statistics are available, the seven companies drilled fewer wells than during any other year in the ten years covered by the statistical table (Rec., 1023); and there was a marked decrease in the number drilled in 1918 as compared with those drilled in 1917. The United Fuel Gas Company, holding the second largest acreage and the least developed territory of the seven companies in 1919, drilled only 15½ producing gas wells and abandoned the same number (Rec., 1736; insert p. 313). A managing officer of the Hope Natural Gas Company and Reserve Gas Company frankly recognizes that the required supply could be had if enough wells were drilled, and that it is merely a question of whether the residuum of gas in the West Virginia fields is to be produced and utilized over a shorter or longer period. He says "it is just up to the people what they are going to do with it;" that the companies "can use it up in two or three years," or "can extend it over a period of ten or fifteen years" (Rec., 349).

Let it be assumed, however, that development is to proceed as before, in the known fields and sands, and that the rate of well drilling is to go on as previously, so that the natural decline will not be overcome, the exhaustion of the West Virginia gas will not be presently retarded.

Mr. Corrin, vice-president of the Hope Natural Gas Company, fixes the maximum life of the present gas supply at ten or fifteen years (Rec., 349). Judge Reed, president of The Philadelphia Company, states that at the present rate of consumption he will be very much surprised if it lasts ten years (Rec., 507). The record contains other estimates of similar character, with some variation in estimated periods (Rec., 943).

From the very beginning of the use of West Virginia gas by the people of the plaintiff States, it was inevitable that some day the production of the West Virginia fields would decline and the gas supply therefrom become insufficient to serve all consumers. This day came in the winter of 1916-1917, and it is now admitted by the seven companies and also by the companies purchasing from them that their present supplies of gas, including the production in the other States, have been for several years insufficient in winter periods to furnish fuel for the heating of dwellings or otherwise to supply their consumers in Ohio, Pennsylvania, Kentucky and Indiana, and that their ability to serve such consumers has become less and less with each succeeding year. Hence it is that, taking as true the testimony for the plaintiffs, the predicted lack of sufficient West Virginia gas to heat the dwellings and otherwise serve these consumers in the plaintiff States, so elaborately and gloomily charged in the bills of complaint as the necessary result of enforcing the statute in controversy, has already come to pass, has existed for several years, and this lack will certainly increase in the future. This has resulted, and will result, by the process of nature, and not as an effect of the statute, which has never been put into force.

Remedies for Gas Shortage.

The consumption of gas has its distinguishing characteristics. Its supply has been aptly described in the record as the rendition of a service rather than the delivery of a commodity (Rec., 1434, 1435, 1652). For cooking, hot-water heating and the heating of dwelling-houses, stores, office buildings, churches, schools and other public and private buildings, as well as for the conduct of industries, gas is valuable according to its constant availability and adequacy. No reserve can be stored on the consumer's premises, as with coal, oil or wood. When needed it is needed immediately and the cost of equipping the premises for the occasional use of other fuel is as great as for a complete change. An intermittent service is undesirable, and unless the service of gas can be made constant and dependable, the value of its use is substantially destroyed. This essential feature, admitted throughout the testimony, is well expressed by Judge Reed, president of The Philadelphia Company, in testifying as to the practicability of apportioning an inadequate supply, who says (Rec., 525):

> "A. * * * You can't satisfy a man by giving him 50 per cent of his requirements. His wife can't cook with it, and his house is cold. He either wants all or nothing.
>
> Q. * * * The fact is, that to properly supply a thousand consumers is better than to improperly supply 2,000; is that the fact?
>
> A. That is the fact; yes, sir."

To the same effect is the testimony of the witness Wyer (Rec., 1437, 1668), who says "that usable service to a lim-

ited number is better than poor or no service to a large number", and recognizes this feature to be one of "the inherent characteristics and natural limitations of the natural gas industry."

This being the character of gas consumption and service, if the volume of gas is insufficient for all, it is obvious that a remedy devised and enforced by someone was and is essential, and that if man does not voluntarily provide the remedy nature will compel it. The manifest course, in view of what has been said, is the limitation of consumption either in respect of the purpose of use or by restriction of the area of service. And it appears that ultimately the restriction of area of service must come, even in the absence of the statute. The witnesses for the plaintiffs admit that in any event, in time of shortage, the shortage is first and most severely felt at the points farthest from the sources of supply, and that consumers nearest those sources obtain relatively the better service. It is also admitted that service to remote consumers is more costly and subject to losses by leakage in transportation. The contracts already referred to show that the gas companies themselves have theoretically recognized the paramount claims of the domestic consumers of West Virginia.

But without anticipating the argument, our present purpose is to point out that though the seven companies oppose the legislative remedy in the controverted statute, they and their officers are in the main wedded to the doctrine of *laissez faire*, with the corollary of uncontrolled discretion of themselves. And, where in cross-examination these specialists have been driven to suggest a remedy, they are at sea and disagree among themselves, agreeing only that West

Virginia consumers are getting too great a share of West Virginia gas. Certain of them advocate restriction of the use to cooking and hot water heating for domestic purposes (Corrin, 348); others suggest limiting the quantity allowed to each consumer (Tonkin, 441-3); others are positive the real remedy lies in increasing the price to the point where the consumer will himself cut down the amount used (Daly, 608; Freeman, 476); others say that eventually the number of consumers must be decreased and the area of service contracted toward the source of supply (Quay, 163-9; Denning, 698); while two others confess frankly that they do not know what can be done (Reed, 525; Sullivan, 297). All of these witnesses, officers of gas companies, declare necessary the use of gas for industrial purposes whenever there is a surplus over the needs of the domestic consumers, and state that the industrial consumption is financially necessary to the gas company and aids to keep down domestic rates (Rec., 288, 328, 437, 476, 525-526). One witness for the plaintiffs (Wyer, 942), advocates the complete elimination of gas for industrial use, as a matter of conservation, and eventually the cutting off of consumers in the remote areas of service.

Since the major portion of the gas used by consumers in the plaintiff States comes from West Virginia through its public service corporations, the necessary result of each of these suggestions, except that of contraction of area of service, is the same; that the adjustments of West Virginia consumers must be made, and their uses of gas must be regulated and restricted, according to the requirements of the consumers in Ohio, Pennsylvania, Indiana and Kentucky, and without regard to the character or extent of the public

service undertaken by these corporations in West Virginia, or their duties and obligations to the people thereof under the laws of that State.

Industrial Consumption in West Virginia.

Much is said in evidence as to the use of industrial gas in West Virginia. But in the light of what has already been said, and the concurring views of the officials of the seven companies, already referred to, that the industrial use is advantageous both to the companies and the domestic consumers, and that gas always has been, and is still used in large volumes in the plaintiff States and elsewhere, no special reference to the past use seems requisite.*

---

*Gas Used by Carbon Companies.—Carbon-black manufacturing companies in West Virginia consumed in 1919 approximately nine per cent of the production of the State. An engineer for some of the seven companies, testifying for the plaintiffs, argues the alleged wastefulness of this use of gas, and points out that the quantities so used would provide the deficiency in supply of West Virginia consumers. It is shown by West Virginia that gas for carbon making has never been a customary or public use of gas; that no tariff or provision therefor has been made by the Public Service Commission, and that no public service corporation uses or serves gas for such purpose, except the United Fuel Gas Company, which operates a carbon plant for the utilization of isolated, low-pressure gas (Rec., 991-993, 1060, 1061, 1075). A like plant is operated by the South Penn Oil Company, an oil subsidiary of the Standard Oil Company owning the Hope Natural Gas Company, to which the South Penn markets most of its gas.

In addition to the private character of these carbon companies and their gas supply, their product can only be made from natural gas, and is an essential element of important manufactured products (Rec., 1100, 1101, 1130, 1131, 1137). Generally their gas territory and production are located at remote points. They are rapidly going out of business because of the increase in value of the gas for other purposes (Rec., 1349). And since the lines of the seven companies

As to the present it is to be observed that many of the factories in West Virginia have already been altered so as to consume coal and producer gas artificially manufactured from coal (Rec., 1229, 1345), thus reducing the industrial gas requirements of the State.

In respect of the future, the high price of natural gas, constantly rising, prevents profitable competition with producer gas, except in the few processes to which natural gas is more especially adapted (Rec., 1226-1227, 1345), and when once an industry has installed producer gas, even a temporary seasonal supply of natural gas—as in the summer—would not compensate for the disorganization consequent on the change from producer to natural gas (Rec., 1228).

Testimony was given on behalf of the plaintiffs to the effect that the enforcement of the statute would absorb for West Virginia its entire gas production; but this lies in assertion and prophecy, based largely on speculation and hearsay, coupled with the erroneous assumption that the statute compels not reasonably adequate service to the particular consumers and distributing companies in specified territory, but that the whole production of the State is to be

---

afford practically the only market therefor, the gas of the carbon companies now marketed does not materially aid West Virginia consumers; nor would the entire diversion thereof from carbon-black add appreciably to the supply of West Virginia consumers (Rec., 1349). Aside from the questionable right of the plaintiff States to dictate the employment of West Virginia gas, compare the practically exclusive use by Carnegie Natural Gas Company of its supply from both West Virginia and Pennsylvania fields for steel making, in which other fuel is readily usable; the amount of West Virginia gas so used by this one company averaging three-fourths of the annual quantity used for carbon-black in West Virginia during the last decade (Rec., 996, also W. Va. Exhibit No. 19, Rec., 1736, insert pp. 414-423).

pooled and all consumers are to receive all the gas they may choose to demand (Rec., 123, 300-302, 446, 840, 841, 970, 971.) These general forecasts, of course, also leave out of view the circumstances already detailed, diminishing the probable industrial consumption in West Virginia and the jurisdiction of the Public Service Commission to limit consumption to reasonable adequacy, as well as to compel reasonably adequate service.

The character of the plaintiffs' evidence on the point may be summarized by reference to the testimony of their witness Anderson, an engineer employed by several of the seven companies, who supplies alternative estimates of increased industrial consumption in West Virginia, in case of the enforcement of the statute, as follows: on one theory, 98,628,380 M cubic feet; on another, 55,017,359 M cubic feet; on another, 38,468,334 M cubic feet, and on still another, 32,959,471 M cubic feet (Rec., 824, 825, 836-838).

The fallacy of Anderson's figures, as well as the speculative general forecasts of other witnesses seems sufficiently to appear from the fact that in the year of its largest consumption, the whole consumption of gas available for public service, was only 59,409,460 M cubic feet out of a total supply of 259,414,200 M cubic feet in the hands of the public service companies (Rec., 996). Witnesses for West Virginia testify, and the industrial conditions already stated are persuasive, that even this 1916 consumption will, insofar as the industrial element is concerned, be greatly reduced (Rec., 1345-1346).

Contentions of West Virginia.

It is the contention of West Virginia:

1. That these cases present no controversy between States, but are in reality controversies between West Virginia and its public-service gas companies, in attempted vindication of whose alleged rights the plaintiffs have become nominal suitors.

2. That the West Virginia gas companies, and especially the seven companies controlling the West Virginia gas supply and transporting the major part of the gas to or for consumption in other States, while a shortage exists in West Virginia, were and are West Virginia public-service corporations, owing their existence and their ability to transport gas to other States to the special rights and privileges granted by West Virginia upon the condition that a reasonably adequate service would be rendered to West Virginia consumers.

3. That the business of the gas companies and their gas, in the existing condition of shortage, are affected with the public interest of West Virginia.

4. That the duty to render a reasonably adequate service to West Virginia consumers extends alike to domestic users, public buildings and institutions and industrial users.

5. That under the conditions of existence of the gas companies, both implied and expressly reserved, and in the exercise of the police power, it was within the province of West Virginia to enact the statute in contest, and that the statute was and is necessary and reasonable in its provisions.

6. That the requirement of reasonable adequacy of service to industrial consumers, and the clauses requiring in certain circumstances (and under the safeguards of a hearing and determination before the Public Service Commission, with opportunity for judicial review) the furnishing of gas deficits to local companies, were and are justified and proper.

7. That the gas companies cannot by engagement in interstate commerce, or the desire so to do, evade or abandon their duty to render reasonably adequate service in West Virginia, and that if interstate commerce is engaged in by them, it is and must be in subordination of their duty to West Virginia and the regulating power of that State.

8. That interstate commerce is not regulated, nor was it intended so to be; that any effect on such commerce would be only indirect and incidental; and that under the conditions of gas production, transportation and distribution, the gas, commingled in the pipe lines and wholly incapable of identification, does not enter into interstate commerce until finally it ceases to be drawn on for local supply.

9. That the statute does not infringe upon any guaranty of the Federal Constitution.

10. And that the plaintiffs have no just ground for complaint against West Virginia and have established no case against it.

ARGUMENT.

I.

THE CASES PRESENT NO CONTROVERSY BETWEEN STATES.

In the motions to dismiss contained in the answers, we have assigned, among other grounds, that these cases present no controversy between States within the meaning of Article 3, Section 2, of the Constitution. And we think that the general trend of the evidence, as well as the personnel of the witnesses, has fortified in fact the objection in law. The jurisdictional objection is emphasized by the fact, not to be blinked, that while sovereign States have sued, these cases are controversies between West Virginia and certain gas companies. Respecting the plaintiff States and their dignity, West Virginia, in objecting to the jurisdiction, shrinks from impugnment of their motives. But without intimating any unworthy design, we have no alternative except to question the jurisdiction—the preliminary question in every case in this Court. And, indeed, in Kansas *vs.* United States, 204 U. S., 331, this Court said:

> "In these circumstances we think it apparent that the name of the State is being used simply for the prosecution in this Court of the claim of the railroad company, and our original jurisdiction cannot be maintained."

The substantial ground upon which the plaintiffs sue is the individual grievances of their citizens sought to be redressed by the plaintiffs in their character of *parens patriæ*. Subsidiary and trifling in comparison are their complaints

of shortage of gas in municipalities and public institutions. Much that could be said against the jurisdiction is contained in the argument on the merits, to which in the interest of brevity—in a brief already longer than we might wish—the Court is respectfully referred.

The statute of West Virginia here complained of is local in character and applies to a commodity produced within that State, while yet within its borders, and in the hands of its public service corporations. The plaintiffs have no ownership of or property interest in the gas in its original character as a natural resource of West Virginia or at any time thereafter during the successive stages of production, transportation, and marketing thereof to the ultimate consumer. Neither does the statute in anywise affect, modify or trench upon any governmental or sovereign power of the plaintiffs; nor does its operation exert any force upon or prejudicially affect any land, stream, or other property within the sovereign or territorial jurisdiction of the plaintiffs. The thing most clamorously complained of is the non-delivery of a West Virginia commodity, exported therefrom in interstate commerce and ultimately delivered to citizens of Ohio and Pennsylvania. And the question thus arises whether there is presented a controversy between States by the process of aggregating alleged rights of citizens of Ohio and Pennsylvania against West Virginia.

The nature of a controversy between two States, or a controversy to which a State is a party, has been thoroughly discussed and previous cases reviewed in *Louisiana vs. Texas*, 176 U. S., 1, and *Missouri vs. Illinois*, 180 U. S., 208. Neither in those cases nor elsewhere have we found an instance in which this Court has entertained original juris-

diction, predicated solely upon the right of the plaintiff State to sue as the representative of its citizens to enforce their private grievances, or to protect their private claims arising out of the enforcement of the law of another State, in the absence of some special or additional right in the State itself. The right to invoke original jurisdiction in the representative capacity was upheld in *Missouri vs. Illinois, supra,* where there was pollution of the Mississippi River, lying partly within the territorial limits of Missouri, and also in *Kansas vs. Colorado,* 185 U. S., 125, where the question was as to the right of Colorado to divert the waters of the Colorado River flowing through both States.

On the other hand, jurisdiction was denied in *Louisiana vs. Texas, supra,* where the plaintiff sought to enjoin enforcement of quarantine laws of the defendant because of their discrimination against and injurious effect on citizens of Louisiana engaged in commerce between the two States. Referring to the nature of the case Mr. Chief Justice Fuller says:

> "It is in this aspect that the bill before us is framed. Its gravamen is not a special and peculiar injury such as would sustain an action by a private person, but the State of Louisiana presents herself in the attitude of *parens patriæ,* trustee, guardian, or representative of all her citizens.
>
> "She does this from the point of view that the State of Texas is intentionally absolutely interdicting interstate commerce as respects the State of Louisiana by means of unnecessary and unreasonable quarantine regulations. Inasmuch as the vindication of the freedom of interstate commerce is not committed to the State of Louisiana, and that State is not engaged in such commerce, the cause of action

must be regarded, not as involving any infringement of the powers of the State of Louisiana, or any special injury to her property, but as asserting that the State is entitled to seek relief in this way because the matters complained of affect her citizens at large. Nevertheless, if the case stated is not one presenting a controversy between these States, the exercise of original jurisdiction by this Court as against the State of Texas cannot be maintained."

Mr. Justice Harlan, in a concurring opinion, further says:

"But I am of opinion that the State of Louisiana, in its sovereign or corporate capacity, cannot bring any action in this Court on account of the matters set forth in its bill. The case involves no property interest of that State. Nor is Louisiana charged with any duty, nor has it any power, to regulate interstate commerce. Congress alone has authority in that respect. When the Constitution gave this Court jurisdiction of controversies between States, it did not thereby authorize a State to bring another State to the bar of this Court for the purpose of testing the constitutionality of local statutes or regulations that do not affect the property or the powers of the complaining State in its sovereign or corporate capacity, but which at most affect only the rights of individual citizens or corporations engaged in interstate commerce. The word 'controversies' in the clauses extending the judicial powers of the United States to controversies 'between two or more States' and to controversies 'between a State and citizens of another State,' and the word 'party' in the clause declaring that this Court shall have original jurisdiction of all cases 'in which a State shall be a party,' refer to controversies or cases that are justiciable as between the parties thereto, and

> not to controversies or cases that do not involve either the property or powers of the State which complains in its sovereign or corporate capacity that its people are injuriously affected in their rights by the legislation of another State. The citizens of the complaining State may, in proper cases, invoke judicial protection of their property or rights when assailed by the laws and authorities of another State; but their State cannot, even with their consent, make their case its case and compel the offending State and its authorities to appear as defendants in an action brought in this Court. If this be not so, we were wrong in *New Hampshire vs. Louisiana*, 108 U. S., 76, in which case it was held that one State could not, by taking charge of demands or debts held by its citizens against another State, acquire the right to bring a suit in its name in this Court against the debtor State."

From the foregoing it is evident that a suit by one State against another cannot be predicated upon the mere relation of *parens patriæ*, and that the multiplicity or unanimity of complaints by the citizens of the one against the acts of the other cannot be erected into a controversy between States.

In *Oklahoma vs. Atchison, T. & S. F. R. Co.*, 220 U. S., 277, effort was made by Oklahoma to invoke the original jurisdiction in a suit to enjoin foreign railroad companies from breach of the covenants contained in rights of way for their railroad tracks through that State. The question arose as to whether this constituted a controversy to which a State was a party within the meaning of the constitutional provision conferring original jurisdiction. Upon the authority of *Louisiana vs. Texas, supra*, the Court dismissed the bill for lack of jurisdiction, saying:

> "These doctrines, we think, control this case, and require its dismissal as not being within the original jurisdiction of this Court, as defined by the Constitution. Under a contrary view that jurisdiction could be invoked by a State, bringing an original suit in this Court against foreign corporations and citizens of other States, whenever the State thought such corporations and citizens of other States were acting in violation of its laws to the injury of its people generally or in the aggregate; although an injury in violation of law, to the property or rights of particular persons through the action of foreign corporations or citizens of States, could be reached, without the intervention of the State, by suits instituted by the persons directly or immediately injured."

The like holding was made in the companion case of *Oklahoma vs. Gulf, C. & S. F. R. Co.*, 220 U. S., 290, refusing jurisdiction of a suit by Oklahoma to enjoin citizens of other States from violation of the prohibition laws of Oklahoma, as not presenting a controversy to which a State is a party within the meaning of the Constitution.

At the outset we noted that the argument on the merits contains much that could be said against the jurisdiction. This is particularly true in respect of the effort of the plaintiffs to assert the infringement of rights of the gas companies and citizens of the plaintiff States, as to which we respectfully refer the court to Section VI of this brief.

If the original jurisdiction of this Court is attempted to be sustained because of the supply of West Virginia gas to municipalities or public institutions of Ohio and Pennsylvania, we submit that the jurisdiction is equally negatived by the above-cited cases. It cannot be overlooked that the

alleged rights claimed by the plaintiffs for themselves, as well as for their inhabitants, are alleged rights to West Virginia gas derived and derivable through public-service gas companies of West Virginia. Thus mediately derived, the alleged rights of the plaintiffs, as consumers of West Virginia gas in their municipalities or public institutions, can rise no higher than the West Virginia gas companies. We do not ignore the distinction between a question of jurisdiction, and the question whether the alleged right, prosecuted in the particular forum, really exists. But if the plaintiffs have a right to West Virginia gas, it is a right against the seven public service gas companies operating in West Virginia. And if as against some of these companies, as citizens of West Virginia, a suit might conceivably be brought in this Court to compel such companies to furnish gas to or for the use of the plaintiffs in a sovereign or corporate capacity, it would, at best, involve a controversy between the plaintiff States and such companies, and not a controversy between the plaintiffs and West Virginia. This, of course, is a basis of jurisdiction not invoked in the present cases. Whether, if such a suit were brought, it would be necessary for West Virginia to intervene to uphold its statute, and in the interest of a full hearing upon the validity of the statute under which the gas companies ought properly to justify, we need not discuss. But it is apparent that:

(*a*) On the one hand, whether the West Virginia companies shall furnish gas to the plaintiffs, is at most, a matter of controversy between such companies and the plaintiffs, and not a controversy between the plaintiffs and West Virginia, within the meaning of the constitution; and,

(*b*) The question whether West Virginia may validly regulate its public service corporations in the manner attempted by the statute in litigation, involves a controversy between West Virginia and such corporations, and is not a controversy between States within the meaning of the constitution.

In either view,—and both views extend to the full scope of these cases—there is no original jurisdiction in this Court.

II.

These cases must be considered in the light of the peculiar nature of gas and of the gas industry, and the exceptional rules of law applicable thereto.

Passing the question of jurisdiction, we premise discussion of the merits by reference to the fundamental fallacy which underlies the contentions of the plaintiffs. Basing their claim of right to West Virginia gas produced by West Virginia gas companies, they overlook the peculiar nature of the commodity itself and the exceptional status of the corporations, through and under which the plaintiffs seek to maintain their supply.

It is unnecessary to repeat in detail what already has been set forth at large in the statement of facts, is undisputed in the evidence, and has received judicial recognition. Briefly summarizing, the sources of natural gas are limited; the supply itself is exhaustible; and consumption involves the destruction of the very corpus of gas territory. Used for many years for illumination and fuel for domestic and industrial

purposes in West Virginia, Ohio, Pennsylvania, Indiana and Kentucky, the limits of the known or prospectively available gas fields have been defined. Knowledge or belief of the existence of other fields or sources of supply is disclaimed by the witnesses for the plaintiffs, one and all (Rec., 132, 210, 327, 372, 506, 553, 572, 670-671, and 822). There remain, aside from the complete development of the presently commercial sands by the customary methods of drilling and operation: the tenuous hope, none too confidently expressed, that additional paying gas sands may be discovered by the highly expensive and yet unsucessful drilling of deeper wells (Rec., 135); and the application of suction to the wells in the known sands, which process will but hasten the depletion of the sands and the exhaustion of the gas (Rec., 345, 1311).

In the known fields in all of these States it is uncontroverted that the curve of production is downward. The tendency to decline became manifest many years ago in Indiana, Ohio and Pennsylvania, preceding the development for other than local use in West Virginia (Rec., 60-63, 438, 521-524, 699, 726, 947). It was a known incident of gas industry and consumption in those States, the consequences of which were temporarily overcome or held in check by the extension of older fields or the discovery of new fields in those States, as the earlier production fell away. But it ultimately came about that production in those States declined—in Indiana to the point of practical exhaustion; in Ohio to the condition of depletion in some fields and of vast deficiency in the aggregate; and in Pennsylvania to a great insufficiency to meet the increasing domestic and industrial demands of the grow-

ing population in its gas-using districts (Rec., 60-63, 438, 521-524, 699, 726, 947).

Duplication of this history is in progress in West Virginia. Originally possessed of enormous gas resources, yielding a great surplus over its local needs, consumers or gas companies in the other States were permitted to make good the deficit of their own declining production from the ample stores of West Virginia. Finally, between 1916 and 1917, the production of West Virginia itself took a downward course, ever since pursued (Rec., 1603, 996, 997). And so it resulted that with a receding production, subjected to heavy drafts for transportation to other States, the service of West Virginia consumers, subordinated to the wants of consumers elsewhere, became inadequate.

We do not follow narrative further at this point. That already said has sufficed to mark natural gas and the natural-gas industry as peculiar, because of the inherent and antecedently known limitations upon the sources of supply and the inevitability of decline and exhaustion. In this regard natural gas differs essentially from other commodities, and even from those dealt in by ordinary public-service corporations supplying water, artificial gas or electricity. The waters of a water company are continually replenished from seemingly undimished natural reservoirs; an artificial-gas company can always manufacture new gas; an electric company can generate new power indefinitely. And in the instance of a public utility supplying services, as distinguished from a commodity, such as a railroad or a telephone line, the rendition of the service operates in no degree to diminish the volume of future service. Such instrumentalities may

wear out, but they can be duplicated from an abundance of materials.

It is a result that natural gas, and rights therein, are in many respects governed by exceptional rules of law. Illustrations are found in *Brown vs. Spilman*, 155 U. S., 665, 669, 670, holding that "decisions in ordinary cases of mining, for * * * minerals which have a fixed *situs* cannot be applied to contracts concerning" gas "without some qualification;" in *Ohio Oil Co. vs. Indiana*, 177 U. S., 190, holding valid a statute prohibiting the escape of gas in the air longer than two days, and *Walls vs. Midland Carbon Co.*, 254 U. S., 300, sustaining the prohibition, in certain circumstances, of the manufacture of carbon-black from gas, it being said that in both instances the power of regulation was "dependent upon the natures of oil and gas;" and *Westmoreland & C. Nat. Gas Co. vs. Dewit*, 130 Pa., 235, 18 Atl., 724; and see *Bacon vs. Walker*, 204 U. S., 311, 316. Consequent on this follows the inadmissibility of the indiscriminate application to natural gas and to public-service corporations engaged in its production, transportation or supply, of legal principles applicable to ordinary commodities and to individuals and corporations dealing in or with such commodities.

III.

THE WEST VIRGINIA PUBLIC SERVICE GAS COMPANIES, INCLUDING THE SEVEN COMPANIES, WERE AND ARE OBLIGATED, IRRESPECTIVE OF THE STATUTE IN CONTEST, TO FURNISH WEST VIRGINIA CONSUMERS A REASONABLY ADEQUATE SUPPLY OF GAS.

As stated heretofore, upon the basis of the statistics of the United States Geological Survey the West Virginia gas

transported to other States increased between 1908 to 1916 from 61,664,618 M cubic feet to 200,004,740 M cubic feet, from which year there was a decline to 174,664,650 M cubic feet in 1918, and a sudden drop in 1919 (early in which year the statute in contest was passed) to 139,939,062 M cubic feet (Rec., 1603); that, based on the same statistics, from 1908 to 1919 the proportion of gas so transported to the total production ranged from 55 per cent to 68 per cent (Rec., 1603); that from 1911 to 1916, the net supply of West Virginia gas in the hands of the public-service corporations increased from 173,132,353 M cubic feet to 259,414,200 M cubic feet, with a decline to 227,649,823 M cubic feet in 1918 and 183,687,047 M cubic feet in 1919, during which period of years West Virginia consumers received from 19.9 per cent to 25.6 per cent of this gas, and the exports were from 74.4 per cent to 80.1 per cent (Rec., 996); that from 1911 to 1919, the seven companies, Hope Natural Gas Company, Reserve Gas Company, Pittsburg & West Virginia Gas Company, Carnegie Natural Gas Company, Manufacturers Light & Heat Company, United Fuel Gas Company and Columbia Gas & Electric Company, have controlled from 80.3 per cent to 91 per cent of this public-service gas and sold to West Virginia consumers only from 11 per cent to 17.9 per cent (Rec., 996, 997), the residue being transported for consumption in other States, and that since the winter of 1916-1917 there has been a shortage of gas supply in the very West Virginia districts in or through which these seven companies have been producing, transporting or selling gas; that smaller surviving local gas companies were and are without sufficient gas production or reserves by reason of the control of the seven companies; that the

gas shortage in West Virginia has caused suffering and inconvenience in homes, business buildings and public institutions (Rec., 1194-1195, 1343-1345), interruption of industry and expense of alteration of factories and their processes and public institutions, so as to consume other fuel (Rec., 1139 *et seq.*, 1223-1224, 1343-1345); and that these conditions have been confined to no single locality, but have been general throughout large and populous sections of West Virginia.

Is it within the power of the State to protect its inhabitants, and to remedy this evil? We can best answer the inquiry by a brief survey of the rights which these companies have acquired at its hands and of the concomitant duties which they assumed as conditions of the granted rights.

Special Rights and Privileges of Gas Companies.

All of the seven companies, except the Manufacturers Light & Heat Company and the Carnegie Natural Gas Company, are West Virginia corporations. The excepted two are Pennsylvania corporations, admitted to carry on business in West Virginia, under the statute extending to foreign corporations so admitted "the same rights, powers and privileges that are conferred on domestic corporations created for the same purpose," and subjecting them "to the same regulations, restrictions and liabilities that are imposed upon like corporations" created by West Virginia.

Hydro Electric Co. vs. Liston, 70 W. Va., 83, 91; 73 S. E., 86.

Carnegie Nat. Gas Co. vs. Swiger, 72 W. Va., 557, 572; 79 S. E., 3.

Precedent to the statute in controversy, these corporations were at common law and by statute denominated as public service corporations, and were subject to the Public Service Commission Act.

Charleston Nat. Gas Co. vs. Lowe, 52 W. Va., 662; 44 S. E., 410.

Hardman vs. Cabot, 60 W. Va., 664; 55 S. E., 756.

Carnegie Nat. Gas Co. vs. Swiger, 72 W. Va., 557; 79 S. E., 3.

W. Va. Acts of 1913, Ch. 9, Sec. 3.

W. Va. Acts of 1915, Ch. 8.

United Fuel Gas Co. vs. Public Service Com., 73 W. Va., 571; 80 S. E., 931.

Clarksburg Light & H. Co. vs. Public Service Com., 84 W. Va., 638; 100 S. E., 551.

Kelly Axe Mfg. Co. vs. Public Service Com. (W. Va.), 105 S. E., 152.

Manufacturers Light & Heat Co. vs. Ott, 215 Fed., 940.

They were constituted, in their capacity of pipe-line companies, common carriers, "subject to all the duties and liabilities of such carriers under the laws" of West Virginia.

Code of W. Va. (1913), Ch. 52, Sec. 24.

By the nature of the business in which they were actually engaged and by their express professions they held themselves out as public-service corporations, supplying, and ready and willing to supply, gas to the public in West Virginia, and desirous of extending their business in the State (Rec., 1804, 1823, 1843, 1857, 1876, 1896).

They received and hold franchises from municipalities, authorizing the public distribution of gas therein (Rec., 1016), and franchises or permits in the nature thereof, obtained from municipalities and counties, enabling them to lay and maintain pipe lines and other appliances in the public streets and highways (Rec., 1016, 1917).

They have long enjoyed and exercised the right of eminent domain, and in respect of pipe lines an exceptionally expeditious procedure for that exercise. The power of eminent domain, even when not actually called into use, is potentially ever present in aid of the acquisition of rights of way and other property by private contract.

Code of W. Va. (1913), Ch. 42, Secs. 1 and 20; Ch. 52, Sec. 24.

That these companies would have received the above special rights and privileges except upon the terms of affording adequate service to the public of West Virginia, or in contemplation of the subordination of that service to that of the people of other States, is unthinkable.

And yet it is true that the pipe lines and their appurtenances, the compressor stations, as well as the companies transporting the greater part of the West Virginia gas to or for use in other States, owe their existence to the foregoing special rights and privileges. For as the pipe lines and compressor stations enabled these companies to acquire their own holdings of gas territory, which thereby were withdrawn from acquisition by others, so the pipe lines and stations constitute them, except under special circumstances, the only purchasers from, or market of, the independent producer of gas. And by the pipe lines and stations, which

are the only means of transporting the gas to distant points of consumption, these companies are enabled to convey their gas, near or far, to the destination of their choice, within the range of their lines.

Regardless of the law already cited, which in the same breath by which it confers on them the power of eminent domain makes them common carriers (*Code*, W. *Va.*, Ch. 52, Sec. 24), these companies, as was the case in *United States vs. Ohio Oil Co.*, 234 U. S., 548, refuse to transport for other producers gas which might serve the public in West Virginia. The independent producer must, in general, either stand by and see his gas withdrawn through adjoining operations, or must sell it to one of these companies.

The monopoly thus held by these large companies is described by a short passage from *United States vs. Ohio Oil Co.*, 234 U. S., 548, 559, the language there used in relation to oil being equally applicable to gas:

> "Availing itself of its monopoly of the means of transportation the Standard Oil Company refused, through its subordinates, to carry any oil unless the same was sold to it or to them, and through them to it, on terms more or less dictated by itself. In this way it made itself master of the fields without the necessity of owning them, and carried across half the continent a great subject of international commerce coming from many owners, but, by the duress of which the Standard Oil Company was master, carrying it all as its own."

And the resulting evil is akin to that referred to by the Hepburn Act of June 29, 1906 (34 U. S. Stat. at L., 584), rendering it illegal for interstate carriers to transport com-

modities owned by them or in which they were interested. (See *United States vs. Delaware & H. R. Co.*, 213 U. S., 366; *Delaware, L. & W. Co. vs. United States*, 231 U. S., 363.)

Duties of Gas Companies to Serve West Virginia Public.

The duties assumed and undertaken by these corporations are well stated in *Carnegie Natural Gas Co. vs. Swiger*, 72 W. Va., 557, 571; 79 S. E., 3, as follows:

> "We observe that the Legislature, by general law, has conferred upon pipe-line companies, organized for transporting oil and natural gas, the right of eminent domain, and has thereby necessarily imposed upon them, as public-service corporations, the right and duty of performing a public service. That right and duty is fixed as firmly as if written into the statute. * * * Pipe-line companies organized for transporting gas must serve the public with gas, under reasonable and proper regulations, along the entire line traversed, and for reasonable rates fixed by themselves, or by statute, or by contracts or ordinances of municipalities. * * * The rights of the people are thus protected in nearly every case where the public is served by public service corporations, furnishing water, gas, electricity, or transportation." (Citing *Charleston Gas Co. vs. Lowe*, 52 W. Va., 662; *Hydro-Electric Co. vs. Liston*, 70 W. Va., 83; *Calor Oil & Gas Co. vs. Franzell* (Ky.), 109 S. W., 328; *Olmstead vs. Morris Aqueduct*, 47 N. J. L., 311; *Gibbs vs. Consolidated Gas Co.*, 130 U. S., 396; *Munn vs. Illinois*, 94 U. S., 133).

In *Gibbs vs. Consolidated Gas Co.*, 130 U. S., 396, quoted in *Charleston Nat. Gas Co. vs. Lowe*, 52 W. Va., 662; 44

S. E., 410; *People vs. Chicago Gas Trust Co.*, 130 Ill., 393; 22 N. E., 803, and in many other cases, it was said:

> "These gas companies entered the streets of Baltimore, under their charters, in the exercise of the equivalent of the power of eminent domain, and are to be held as assuming an obligation to fulfill the public purposes to subserve which they are incorporated."

And see:

Producers Transp. Co. vs. Railroad Com. of California, 251 U. S., 228, 231, 232.

Franke vs. Johnstown Fuel Supply Co., 70 Pa. Super. Ct., 446, 457.

It thus appears that the right of eminent domain is delimited by, and coincides with, the public use which it is intended to aid. And that public use is shortly expressed in *Hydro-Electric Co. vs. Liston*, 70 W. Va., 83, 91; 73 S. E., 86, where, holding that a foreign corporation, authorized to do business in West Virginia, may enjoy the right of eminent domain, it is said:

> "This gives the right of eminent domain, to be exercised, however, *for the public use of the citizens of West Virginia.*"

In *Lewis, Em. Dom.* (3 ed.), Sec. 310, it is said:

> "The public use for which property may be taken is a public use within the State from which the power is derived. It seems to be an admitted fact generally, that the power inheres in a State *for domestic uses only, to be exercised for the benefit of its*

own people, and cannot be extended merely to promote the public uses of a foreign State."

See also *Grover, &c., Land Co. vs. Lovella, &c., Irr. Co.,* 21 Wyo., 204; 131 Pac., 43, elaborately discussing this point, and 1 *Nichols, Em. Dom.,* Sec. 29.

The duty of serving the public of West Virginia being plain, it follows that the gas companies were and are obligated to furnish that public within the territory of their operations or along their pipe lines a reasonably adequate supply of gas, and this apart from the Act of 1919, now in contest.

In *Charleston Nat. Gas Co. vs. Lowe,* 52 W. Va., 662, 671; 44 S. E., 410, it was asked and answered:

> "But have the citizens of Charleston an absolute and indefeasible right to the use of the gas upon reasonable and equal terms? Is the company bound to furnish gas to all who apply for it without an express legislative imposition of that duty upon it? Undoubtedly. The courts have so held in many of the States, and their decisions are grounded upon both reason and the best of authority."

In *Carnegie Nat. Gas Co. vs. Swiger,* 72 W. Va., 557, 571; 79 S. E., 3, it was said:

> "Pipe-line companies organized for transporting gas must serve the people with gas, under reasonable and proper regulations, along the entire line traversed, and for reasonable rates fixed by themselves, or by statute, or by contracts or ordinances of municipalities."

And see:

Kelly Axe Mfg. Co. vs. Public Service Com. (W. Va.), 105 S. E., 152.

So in *New York vs. McCall*, 245 U. S., 345, 351, Mr. Justice Clarke said:

> "Corporations which devote their property to a public use may not pick and choose, serving only the portions of the territory covered by their franchises which it is presently profitable for them to serve, and restricting the development of the remaining portions by leaving their inhabitants in discomfort without the service which they alone can render."

And see:

Ohio General Code, Secs. 614-12.

Pennsylvania Pub. Laws of 1913, p. 1374; *Public Service Com. Law*, Art. 2, Sec. 1.

Industrial Gas a Public Service.

It is relevant in this relation, though perhaps unnecessary in view of the previous and present professions and practice of the gas companies (*Producers Transp. Co. vs. Railroad Com. of California*, 251 U. S., 228, 232; *United States vs. Ohio Oil Co.*, 234 U. S., 548, 561), both in West Virginia and the plaintiff States, to mention that the scope of the public duty includes not merely the supply of domestic consumers, but also the furnishing of gas for public buildings and for industrial consumption. This relevancy arises because of the contention of one of the witnesses for the plaintiffs (Rec., 942) that the industrial consumption of gas is wasteful, and the prophecy of other witnesses for the plaintiffs that the enforcement of the statute in question will divert to West Virginia the entire gas production of the State. In the statement of facts it has already been indi-

cated that both by representations of readiness and willingness to supply gas for industrial use, and by their actual engagement in the business of furnishing such gas, these companies have stamped such service as a public service. It appears, also, that the industrial consumption has occurred and is still in progress in large volumes and proportions in the other States, and particularly in Pennsylvania (Rec., 344, 349-350, 1104, 1106-1107). And it has been testified with substantial unanimity by the managing officers of the gas companies operating in West Virginia, and by some of those operating in the other States, that the industrial consumption is a financial necessity to the gas companies and an advantage to domestic consumers, because of its influence in preventing the higher domestic rates which would be required if the gas were confined to domestic use (Rec., 288, 328, 437, 476, 525–526). Though in justice to these witnesses, it should be added that in upholding the necessity of industrial consumption they admit the propriety of subordinating the industrial consumption to the domestic.

Laying aside the matter of the professions and practice of the gas companies operating in West Virginia, and apart from the statute now in controversy, it has been held by the highest court of that State that the furnishing of gas for industrial purposes is a public service, and that the business of a gas company in this regard is affected with a public interest.

Clarksburg Light & H. Co. v. Public Service Com., 84 W. Va., 638; 100 S. E., 551.

Kelly Axe Mfg. Co. v. Public Service Com. (W. Va.), 105 S. E., 152.

Recognition of the public character of the service, though not the subject of direct decision, is to be found in *Pennsylvania Gas Co. v. Public Service Com.*, 252 U. S. 23, 31. And the same view is contained in principle in the negative answer in *Interstate Commerce Com. v. Baltimore & O. R. Co.*, 225 U. S. 326, 342, to the inquiry, "May a carrier look beyond the service it is called upon to render to the attitude and interest of the shippers before, or their attitude and interest after, transportation?"

Bailey v. Fayette Gas Fuel Co., 193 Pa., 175; 44 Atl., 251.

Lack of Power of Gas Companies to Disable Themselves from Performing Public Duty.

The duty of serving the public of West Virginia appearing, upon no pretext could or can these companies renounce or abandon the duty of furnishing gas to that public to the extent of their ability to do so, within the measure of reasonable adequacy and the territorial limits prescribed by law. In *Gibbs v. Consolidated Gas Co.*, 130 U. S., 396, Mr. Chief Justice Fuller said:

> "It is also too well settled to admit of doubt that a corporation cannot disable itself by contract from performing the public duties which it has undertaken, and by agreement compel itself to make pub-

lic accommodation or convenience subservient to its private interests.

"'Where,' says Mr. Justice Miller, delivering the opinion of the court in *Thomas vs. Railroad Co.*, 101 U. S., 71, 83, 'a corporation, like a railroad company, has granted to it a franchise intended in large measure to be exercised for the public good, the due performance of those functions being the consideration of the public grant, any contract which disables the corporation from performing those functions, which undertakes without the consent of the State to transfer to others the rights and powers conferred by the charter, and to relieve the grantees of the burden which it imposes, is a violation of the contract with the State and is void as against public policy.'

"These gas companies entered the streets of Baltimore, under their charters, in the exercise of the equivalent of the power of eminent domain, and are to be held as having assumed an obligation to fulfill the public purposes to subserve which they are incorporated.'

In *Attorney-General vs. Haverhill Gas L. Co.*, 215 Mass., 394; 101 N. E., 1061, it was said of the gas company:

"The respondent is a corporation, organized to exercise a public franchise of importance to the community in which it conducts its business. It is its duty to exercise this franchise for the benefit of the public, with a reasonable regard for the rights of individuals who desire to be served, and without discrimination between them. It cannot relieve itself from this duty so long as it retains its charter. It enjoys public rights in the streets, which are derived from the Commonwealth, through action of the board of aldermen under authority of the Legislature. It

is a quasi-public corporation, and as such it owes duties to the public. * * * Without legislative authority it cannot sell its property and franchise to another party, in such a way as to take away its power to perform its public duties."

Oregon R. & N. Co. vs. Oregonian R. Co., 130 U. S., 1, 23.

Central Transp. Co. vs. Pullman P. C. Co., 139 U. S., 24, 42-44.

South Covington & C. S. R. Co. vs. Kentucky, 252 U. S., 399, 403, 404.

Visalia Gas & El. Co. vs. Sims, 104 Cal., 326; 37 Pac., 1044.

Charleston Nat. Gas Co. vs. Lowe, 52 W. Va., 622, 671; 44 S. E., 410.

Town of Gassaway vs. Gassaway Gas Co., 75 W. Va., 60; 83 S. E., 189.

The principle of the foregoing authorities is applicable to the present case. Instead of disposing of their plants, as has been often attempted, the seven gas companies have attempted to disable themselves from the performance of their duty of serving the people of West Virginia by disposing elsewhere of the very subject matter of the service. The disability equally exists, and would be no greater if they sold their pipe-lines.

The Gas Business and West Virginia Gas are Affected with a Public Interest.

The lack of power to disable themselves from the performance of their public duties, applicable to public-service corporations in general, is especially pertinent in the case of natural-gas companies. That the business of such a company is affected with the public interest, within the meaning of the cases reaching from *Munn vs. Illinois*, 94 U. S., 113, to *Union Dry Goods Co. vs. Georgia Pub. Service Corp.*, 248 U. S., 372, 374, 375, is commonplace.

Charleston Gas Co. vs. Lowe, 52 W. Va., 662, 671; 44 S. E., 410.

Clarksburg Light & H. Co. vs. Public Service Com., 84 W. Va., 638; 100 S. E., 551.

Franke vs. Johnstown Fuel Supply Co., 70 Pa., Super. Ct., 446, 456.

Pennsylvania Gas Co. vs. Public Service Com., 252 U. S., 23.

Manufacturers Light & H. Co. vs. Ott, 215 Fed., 940.

But we may justifiably go further. Given a commodity of peculiar attributes, local in its origin, exhaustible, and, in fact, approaching the point of exhaustion, as is West Virginia gas, so that on the one hand it has become a public necessity at home and is, or may be, insufficient both to supply that necessity and to furnish it to consumers abroad, in the hands of corporations owing public duties, in the performance of which the public has an interest, *the gas itself is in a just sense to be regarded as affected by a public interest.*

In *German Alliance Ins. Co. vs. Lewis,* 233 U. S., 38
it was held that even the making of personal contracts, suc
as contracts of fire insurance, might be affected by the publ
interest. Mr. Justice McKenna there said in reply to th
suggestion that only tangible property could be so affecte

> "The distinction is artificial. It is, indeed, but th
> assertion that the cited examples embrace all cases
> public interest. The complainant explicitly so co
> tends, urging that the test it applies excludes the id
> that there can be a public interest which gives th
> power of regulation as distinct from a public us
> which, necessarily, it is contended, can only apply
> property, not to personal contracts. The distinctio
> we think, has no basis in principle (*Noble State Ban*
> *vs. Haskell,* 219 U. S., 104), nor has the other co
> tention that the service which cannot be demande
> cannot be regulated."

In *Wilson vs. New,* 243 U. S., 332, it was held that th
personal services of the employees of interstate railroads we
so far affected with a public interest as to justify the regul
tion of hours of labor and in consequence a wage standard.

That the public interest may extend to property itself,
distinguished from a business, considered merely as an ins
tution, is illustrated by the instance of the grain elevators
Munn vs. Illinois, 94 U. S., 113. The same idea is co
veyed in *Union Dry Goods Co. vs. Georgia Pub. Servi*
Com., 248 U. S., 372, 374, where it was said "that capit
invested in an electric light and power plant to supply el
tricity to the inhabitants of a city is devoted to a use in whi
the public has an interest." In *Block vs. Hirsh,* U. S. Ad
Ops., 1920-'21, page 531, involving the District of Columb

rent law, cases were cited as sustaining the point "that the public interest may extend to the use of land."

In *Franke vs. Johnstown Fuel Supply Co.*, 70 Pa. Super. Ct., 446, 456, this view is expressed as follows:

> "What the company did was from the beginning subject to the conditions under which it existed at all. The public had no interest in, or right to, the gas of the promoters of the Peoples Natural Gas Company until the latter, for the purpose of obtaining the advantages accorded to them under the statute, organized their company. The owners were not compelled to give to the public an interest in their supply of gas, but they became under obligation to the laws of the commonwealth if they used it in the manner prescribed by that law. When the shareholders accepted the charter of the company and proceeded to exercise the franchises thereby granted they invested the public or such limited portion of the public with a use or right of use in the commodity which they supplied. This constitutes a public use—such a use as might have been in the contemplation of the parties when the company was organized."
>
> See also *Bacon vs. Walker*, 204 U. S., 311, 315.

And in *Walls vs. Midland Carbon Co.*, 254 U. S., 300, regulating the consumption of gas in carbon-black manufacture, it was referred to as "a determining consideration" that the State had "an interest to adjust and preserve, natural gas being one of the resources of the State."

We need not go so far as to say that the whole quantity of gas existing in a State at any time is affected by the public interest; for if there is an abundance wherewith to serve all present requirements, it may well be that the public

cannot be said to have an interest in any particular part of i
But if the whole quantity of gas is so far reduced, or in pro
pect of reduction, that all who at the time desire to consum
it cannot be served, and the very gas which is being pr
duced by corporations, themselves affected by the public in
terest, is immediately necessary for consumption by the pe
ple of the State, that very gas may in a correct sense b
deemed to be affected with the public interest of the State, an
to fall within a different rule. For as said in *Block vs. Hirsh, supra*: "Plainly, circumstances may so change in tim
or so differ in space as to clothe with such an interest wha
at other times or in other places would be a matter of purely
private concern;" and then referring to previous decision
it was remarked: "They dispel the notion that what in its
immediate aspect may be only a private transaction may not
be raised by its class or character to a public affair."

Walls vs. Midland Carbon Co., supra, is, indeed, an example of these observations in *Block vs. Hirsh*; for the Walls
case related to a failing gas supply, in respect of which it was
said:

> "The determining consideration is the power of the
> State over, and its regulation of, a property in which
> others besides the companies may have rights, and in
> which the State has an interest to adjust and preserve,
> natural gas being one of the resources of the State."

And again it was said of previous cases that,—

> "the State of Wyoming has the same power to prevent
> the use of natural gas in the production of carbon
> black, the tendency of which is (it may be the in-
> evitable effect of which is) the exhaustion of the
> supply of natural gas, and the consequent detriment
> of other uses."

These considerations would, we believe, sufficiently distinguish *West vs. Kansas Nat. Gas Co.*, 221 U. S., 229, even if the legislation now in contest directly acted on interstate commerce. There the whole volume of gas produced in Oklahoma was more than sufficient to serve the then gas-consuming public of that State, and only the surplus, required by no present necessity in the State, was being transported out of it. Still further, the companies and individuals attacking the validity of the statute there involved were, as more fully appears in the report of the case below (*Kansas Nat. Gas Co. vs. Haskell*, 172 Fed., 545), not engaged, and apparently not obligated to engage, in the public supply of gas in Oklahoma. Therefore, neither they by their business, nor their surplus product, by any existing need, could be said to be affected by any immediate public use. We shall refer to this decision again, in relation to the commerce clause of the Federal Constitution.

IV.

IT WAS WITHIN THE RIGHT AND POWER OF THE STATE TO REGULATE THE GAS COMPANIES. THE RIGHT AND POWER ARE BASED ON SEVERAL GROUNDS AND THEIR EXERCISE WAS NECESSARY.

The nature of the gas companies and the relation of their service to the West Virginia public having been adverted to, the legislative right of the State to regulate them, in order to compel the performance of their duties, is manifest and well established. That right, and its due expression, rest upon a triple foundation:

(1) *The Implied Condition Accompanying the Grant of Rights and Privileges to the Companies.*

The implied condition of public service accompanied the grant of the corporate powers and special rights and privileges, and subject to such condition those powers, rights and privileges were accepted by these companies.

Charleston Gas Co. vs. Lowe, 52 W. Va., 662, 671; 44 S. E., 410.

Carnegie Nat. Gas Co. vs. Swiger, 72 W. Va., 557, 571; 79 S. E., 3.

Farmers Loan & T. Co. vs. Galesburg, 133 U. S., 156.

Lake Shore & M. S. R. Co. vs. Ohio, 173 U. S., 285.

New Orleans Waterworks Co. vs. Louisiana, 185 U. S., 336, 346.

Missouri P. R. Co. vs. Kansas, 216 U. S., 262.

In *Charleston Gas Co. vs. Lowe, supra*, it was said, with passing reference to *Gibbs vs. Consolidated Gas Co.*, 130 U. S., 396:

> "But have the citizens of Charleston an absolute and indefeasible right to the use of the gas upon reasonable and equal terms? Is the company bound to furnish gas to all who apply for it without an express legislative imposition of that duty upon it? Undoubtedly. The courts have so held in many of the States, and their decisions are grounded upon both reason and the best of authority.
>
> * * * * * *
>
> "Occupying the streets of Charleston by permission of its council, first had, for the purpose of supplying to the inhabitants natural gas, the company is bound

to furnish gas to every citizen applying therefor and willing to pay the prices agreed upon between the company and the city. The occupancy of the streets by such a company can only be for purposes in which the public is concerned, and the obligations thus assumed by the company, whether expressly incorporated in the franchise or not, will be enforced.

* * * * * *

"The same has been held in cases concerning water companies, which as shown are so nearly akin to gas companies. In *Olmstead vs. Aq. Co.*, 47 N. J. L., 311, we find: 'Although the aqueduct charter contains no express provision requiring the company to supply all consumers, * * * in accepting such charter the company impliedly engages to use it in a manner that will accomplish the legislative design. It is thereby bound to supply on reasonable terms all who apply for water.'

"In *Lombard vs. Stearns*, 4 Cush. (Mass.), 60, the court held: 'By accepting the act of incorporation they undertook to do all the public duties required of it.'"

In *Carnegie Nat. Gas Co. vs. Swiger, supra*, the statement is made of the implied right of the public to service and the duty to serve the public:

"That right and duty is fixed as firmly as if written into the statute."

In *Farmers L. & T. Co. vs. Galesburg, supra*, the inadequacy of the water supplied under a municipal franchise was held to warrant the revocation of the franchise.

In *Lake Shore & M. S. R. Co. vs. Ohio, supra*, it was said:

"The plaintiff in error accepted its charter subject necessarily to the condition that it would conform

> to such reasonable regulations as the State might from time to time establish, that were not in violation of the supreme law of the land."

In *Missouri P. R. Co. vs. Kansas, supra*, in upholding the validity of an order of a State Railroad Commission requiring an interstate railroad to operate an additional train within the State, it was said, quoting in part from *Atlantic Coast Line R. Co. vs. North Carolina Corp. Com.*, 206 U. S., 1:

> "But where a duty which a corporation is obliged to render is a necessary consequence of the acceptance and continued enjoyment of its corporate rights, those rights not having been surrendered by the corporation, other considerations are, in the nature of things, paramount, since it cannot be said that an order compelling the performance of such a duty at a pecuniary loss is unreasonable. To conclude to the contrary would be but to declare that a corporate charter was purely unilateral; that is, was binding in favor of the corporation as to all rights conferred upon it, and was devoid of obligation as to duties imposed, even although such duties were the absolute correlative of the rights conferred."

(2) *The Police Power.*

The general police power, apart from any implication of conditions annexed to the grant, embraces the settled right of the State exists to compel its creatures to perform the public duties for which they were created.

Munn vs. Illinois, 94 U. S., 113.

New Orleans Gas L. Co. vs. Louisiana Light, &c. Co., 115 U. S., 650.

Stone vs. Farmers L. & T. Co., 116 U. S., 307.

Reagan vs. Farmers L. & T. Co., 154 U. S., 362.

Prentis vs. Atlantic Coast Line Co., 211 U. S., 210.
Erie Railroad Co. vs. Board of Public Utility Com., 254 U. S., 394.
United Fuel Gas Co. vs. Public Service Commission, 73 W. Va., 571.
Mill Creek Coal & C. Co. vs. Public Service Com., 84 W. Va., 662; 100 S. E., 557.

It is unnecessary to multiply cases; for almost all in which the State's regulatory power has been upheld might be cited in added example.

Of the nature of the police power and its application to the cases at bar, we say nothing more at this point, because we shall have occasion to refer to it later.

(3) *The Reserved Power to Alter or Repeal Corporation Charters and Laws.*

The Legislature at the outset had the power to impose such conditions as it saw fit upon the grant of corporate charters, franchises, rights of condemnation and other privileges to gas companies.

Ashley vs. Ryan, 153 U. S., 436, 441-444.
Home Ins. Co. vs. New York, 134 U. S., 594, 600.
New Jersey vs. Anderson, 203 U. S., 483, 493.

It follows that in authorizing the incorporation of such companies, or such rights and privileges, the Legislature might, in the public interest, have imposed as conditions every provision of the statute assailed. And a corporation accepting a charter upon such conditions would have been estopped to rebel against them.

Ashley vs. Ryan, 153 U. S., 436, 441, 443.
Interstate Consol. S. R. Co. vs. Massachusetts, 207 U. S., 79, 84.

Now it appears that when the seven gas companies were incorporated or admitted to do business in West Virginia, and ever since, it has been within the reserved power of the Legislature "to alter or repeal the charter or certificate of incorporation * * * granted to any joint-stock company, and to alter or repeal any law applicable to such company."

Code of W. Va., Ch. 53, Sec. 8.

W. Va. Acts of 1867, Ch. 5, Sec. 6.

W. Va. Acts of 1882, Ch. 96, Sec. 8.

St. Mary's, &c., Petroleum Co. vs. West Virginia, 203 U. S., 183.

Manufacturers Light & H. Co. vs. Ott, 215 Fed., 940.

This being true, when the Legislature enacted the statute in question it was equally within its power to prescribe that they should render reasonably adequate service to West Virginia, and to provide for the supply of local companies experiencing a shortage, to the extent which the present statute contemplates.

Stanislaus Co. vs. San Joaquin & K. R. C. & I. Co., 192 U. S., 201, 211.

Erie R. Co. vs. Williams, 233 U. S., 685, 700-704.

Sutton vs. New Jersey, 244 U. S., 258, 260.

Fair Haven & W. R. Co. vs. New Haven, 203 U. S., 379, 388.

San Antonio T. Co. vs. Altgelt, 200 U. S., 304.

New York & N. E. R. Co. vs. Bristol, 151 U. S., 556, 567, 568.

Hamilton Gaslight & C. Co. vs. Hammond, 146 U. S., 258, 269-271.

Spring Valley Water Co. vs. Schottler, 110 U. S., 347, 353.

Greenwood vs. Union Freight Co., 105 U. S., 13.

Hammond Packing Co. vs. Arkansas, 212 U. S., 322, 345, 346.

From the decline of West Virginia gas production, the shortage of gas supply in West Virginia, the social and economic dependency on gas in reasonably adequate volume, the domestic and industrial evils resulting from the lack of such service, the "fact accomplished" that there is now, and for several years has been, insufficient West Virginia gas to permit at once the full measure of service in West Virginia and the other States to which it was and is transported, admittedly there must be, in the nature of things, a limitation upon the service and consumption of gas, in respect of either the purposes of the consumption or the territorial area of supply. In this situation, it was and is incumbent on some one to formulate and enforce suitable regulations. And the Congress not having acted, even in respect of the interstate transportation of gas (*Act of June 18, 1910,* Ch. 309, Sec. 7; 36 Stat. at L., 539, 544; *Pennsylvania Gas Co. vs. Public Service Com.,* 252 U. S., 23, 30), the exercise of a regulatory power must emanate either from the State or from the gas companies. And the question is, which should it be?

Inability of Gas Companies to Formulate Regulations and Necessity of State Action.

Even in the absence of the exertion of the State's power, it is to be observed that the managing officers of a majority

of the seven gas companies, and others experienced in the gas business or thrust forward as experts, and appearing as witnesses for the plaintiffs, are entirely at sea and disagree among themselves as to the appropriate remedy, agreeing only that West Virginia gas is declining and that West Virginia consumers are getting too great a share of it. Certain of them advocate restriction of the use to cooking and hot-water heating for domestic purposes (Corrin, 348); others suggest limiting the quantity allowed to each consumer (Tonkin, 441-3); others are positive that the real remedy lies in increasing the price to the point where the consumer will himself cut down the amount used (Daly, 608; Freeman, 476); others say that eventually the number of consumers must be decreased and the area of service contracted toward the source of supply (Quay, 163-9; Denning, 698); while two others confess frankly that they do not know what can be done (Reed, 525; Sullivan, 297). All of these officers of gas companies declare necessary the use of gas for industrial purposes whenever there is a surplus over the needs of the domestic consumers, and state that the industrial consumption is financially necessary to the gas company and aids to keep down domestic rates (Rec., 288, 228, 437, 476, 525-526). One engineer employee of the plaintiffs (Wyer, 942) advocates the complete elimination of gas for industrial use, as a matter of conservation, and eventually the cutting off of consumers in the remote areas of service.

The reasonable anticipation, if regulation were to be left to the gas companies, is accurately gauged by the denial of the plaintiffs of West Virginia's regulatory power, if and when its regulations affect the quantity of gas transported

to the other States, regardless of consequences in and to West Virginia; by the predictions of injury to the other States and gas companies operating therein, by the withdrawal of any West Virginia gas from export (Rec., 526, 605, 606, 854, 972, 973), and by the thought expressed by some witnesses for the plaintiffs, exemplified by Anderson, another engineer of these companies, that, irrespective of the statute, any increased consumption in West Virginia, even because of increased population, would prejudice the other States (Rec., 854):

> "Q. Would any increase of consumption in West Virginia have the result of depriving Pennsylvania and Ohio consumers?
>
> "A. It would have the result of depriving them to that extent, I think.
>
> "Q. That is, for every 1,000 feet of added consumption in West Virginia, consumers in Pennsylvania and Ohio will be deprived to that extent?
>
> "A. I think so.
>
> "Q. And to the extent that the gas companies are prevented from furnishing that 1,000 feet in Pennsylvania or Ohio, those companies will suffer a loss in their plants, or the operation of their plants?
>
> "A. And profits.
>
> "Q. I want to ask you whether the inconvenience in Pennsylvania and Ohio, resulting from the consumption of this extra 1,000 cubic feet of gas in West Virginia, would occur, whether that extra consumption were brought about by the enforcement of this statute, or brought about by additional consumers, or some other cause?
>
> "A. It would occur in the same way and to the same extent.

"Q. In other words, if some citizen of New York or New Jersey should move to Clarksburg, West Virginia, and add to the population that way, and consume gas for domestic purposes, some Pennsylvania or Ohio consumer, or the consumers in those States in the aggregate, would be deprived and inconvenienced to that extent?

"A. Providing he was located on the lines of some of these interstate companies.

"Q. That is what I mean.

"A. Where he could obtain some of their supply, or possible supply."

And see, in similar strain, the testimony of Wyer (Rec., 972, 973):

"Q. It is, however, your idea, regardless of the class of consumption that, to the extent of the increase of every thousand feet of consumption in West Virginia, there would be a corresponding diminution of supply in the other States?

"A. If the act in question were enforced, there would be no supply in the other States coming from West Virginia.

"Q. Suppose we forget about the act and answer the question in the light of the fact that you have declared it unconstitutional?

* * * * * * *

"Q. Putting the thing in this way: Suppose that for some unknown reason a resident and citizen of Massachusetts moves to Clarksburg, West Virginia, with his family, and by reason of the added population, theoretically assumed to be five, you have one more gas consumer and a matter of consumption of

5,000 cubic feet of gas a month. Would the effect of that added 5,000 cubic feet of consumption be to diminish the supply in Pennsylvania and Ohio and that regardless of this statute?

"A. It would not affect the supply in Pennsylvania or Ohio, but it would reduce the amount of gas that could be transported out of the State by the amount that would be used in West Virginia. * * *

"Q. Put it at 1,000 instead of 5,000. There would be in principle and in effect a corresponding diminution and increase?

"A. Yes, an increased demand which must, of course, be met from the local gas supply. I think you misunderstood my former answer. The thing I wanted to drive home was that the consumption per domestic consumer would not be very greatly increased unless there were a very radical reduction in prices from the condition you have now.

"Q. You would expect to cut down the domestic consumption by raising the price?

"A. A raise in price will cut it down. The increased price is the only thing that will adequately conserve natural gas."

In this diversity of opinion of specialists in the gas business, mainly effective to "darken counsel," we think that by the process of elimination, if nothing more,—aside from the aspect of legislative power and duty,—it necessarily fell to the State of West Virginia to enact fitting regulations. And the only question is, whether it had the power, and whether that power has been exercised within the limits of legislative discretion.

V.

WEST VIRGINIA HAD THE POWER TO ENACT THE STATU AND THE EXERCISE OF THE POWER WAS REASONABLE A WITHIN THE LEGISLATIVE DISCRETION.

Scope of the Statute.

We pass the question of power to state the substance the principal clauses of the statute. In pronouncing up its constitutionality, the Court will not declare it invalid "surmise or on the barren letter of the statute" (*Bacon Walker,* 204 U. S., 311, 317; and see *Walls vs. Midla Carbon Co.,* 250 U. S., 300).

Section 1, the dominant provision of the statute, has t following scope:

(*a*) It applies only to public-service corporations, vi those persons, firms and corporations who are engaged furnishing or are required by law to furnish, gas to W Virginia consumers for domestic, industrial or other c tomary purposes.

(*b*) The amount to be supplied is a reasonably adequa supply.

(*c*) The purposes or uses for which the supply is to furnished are domestic, industrial and the other customa uses for which gas is consumed or desired by the public.

(*d*) The consumers to be supplied are those residi within the particular territory in which each such publ

service corporation is engaged in producing, transporting or marketing natural gas.

(*e*) The obligation of such public-service corporation is to so furnish said consumers to the extent of its supply of gas produced in the State.

Section 2 covers the situation where two or more such public-service corporations are engaged in producing, transporting or marketing in the same territory and one of them has an insufficient volume of gas for the reasonably adequate supply of its West Virginia consumers, while the other has a supply in excess of the requirements of its West Virginia consumers. In such case the latter company is required, at its election, either to serve these inadequately supplied consumers as its own, as provided by Section 1, or, out of its excess, to sell to the former company a sufficient amount to cover its deficiency, at such reasonable rates and upon such reasonable terms and conditions as may be fixed by the Public Service Commission.

Section 3 removes the mooted question as to the jurisdiction of the Commission, by expressly extending its powers and authority to the matters embraced in the statute. Section 4 provides for complaint and hearing before the Commission as to alleged violations; and for protection of consumers by appropriate procedure, pending such hearings. Section 5 provides for penalties for violation of orders of the Commission. Section 6 gives to any person injured by violation of the statute the remedy of damages, and provides for the attendance of witnesses and other procedural matters. Section 7 defines the word "person," as used in the statute,

to cover persons, firms, and corporations. Section 8 declares the separability of the statute, both as to the several sections, provisions and clauses thereof, and as to the various persons, firms, corporations and consumers affected thereby.

Thus condensed, and excluding the procedural and punitive provisions, the statute simply means that all public-service corporations of the State must, to the extent of their supply of West Virginia gas, render a reasonably adequate service thereof to those inhabitants of the State who reside in the vicinities or territories where such corporations respectively produce or market, or through which they transport, West Virginia gas.

We have already indicated sufficiently, with citation of authority, that the duties prescribed by this section were, in the main, pre-existing duties at common law and under earlier statutes, the neglect of performance of which by the gas companies instrumental in exporting inordinate quantities of West Virginia gas, rendered necessary the fresh declaration of the rights of West Virginia consumers.

While Section 2 provides for sales by these companies having an excess supply to those having a deficiency, yet this provision has application only where the inadequately served, or unserved, consumers of the local companies reside in the same territory in which the company possessed of a surplus supply produces and markets, or through which it transports, which consumers the last-mentioned company is obligated to serve directly at common law and under the provisions of Section 1; and the requirement of sale to such local companies is not brought into play, unless and until the company having such excess supply first declines or refuses to comply with its obligation to serve directly these inadequately

supplied consumers. The election given to the company having the excess supply is for its benefit and to spare it what might, under certain circumstances, be a burden in providing its own extension for service.

The Statute is a Legitimate Exercise of the Police Power.

Were these provisions a legitimate exercise of the power of the State? The question must be answered in the light of the known characteristics of gas production and its originally inevitable and present decline in West Virginia and elsewhere; the nature of the gas companies as public-service corporations; the relation of the public interest to their business and gas; the absorption by the seven companies of other West Virginia companies; the gas shortage and its effects in West Virginia; the inability of local companies to supply the deficiency, because of the control by the seven companies of gas and gas territory, obtained through the possession of large capital, pipe lines owing their existence to special rights and privileges, and the compressor stations; the conditions attaching to the enjoyment of such special rights and privileges; the reserved statutory power to alter or repeal charters and laws affecting corporations, and the existence of the police power. Pretermitting abstractions, we respectfully insist that the power to enact this legislation is supported by the precedents, which in the latest development would have sustained a still more ample exercise of the power.

The Police Power.

In *Ohio Oil Co. vs. Indiana*, 177 U. S., 190, legislation to prevent wasteful escape of gas from wells was upheld, in view

of the peculiar nature of gas and the right of the State to "consider the relation of rights, and accommodate their coexistence, and, in the interest of the community, limit one that others may be enjoyed" (*Walls vs. Midland Carbon Co.*, 254 U. S., 300).

In *Lindsley vs. Nat. Carbonic Gas Co.*, 220 U. S., 61, relating to a statute prohibiting the pumping of mineral waters for the extraction of carbonic-acid gas, or the production of the unnatural flow of such gas, for commercial purposes otherwise than in conjunction with the mineral waters, it was said of *Ohio Oil Co. vs. Indiana*, "were the question an open one, we should still solve it in the same way."

More recently, in *Walls vs. Midland Carbon Co.*, 254 U. S., 300, it was held that in order to conserve gas, shown to be declining in certain fields where, or in the vicinity of which it was needed for more economical consumption, the State of Wyoming could constitutionally restrict the use of gas for carbon-black manufacture. And it was said, after citing *Ohio Oil Co. vs. Indiana* and *Lindsley vs. Nat. Carbonic Gas Co.*:

> "By reverting to these cases it will be immediately observed that the power of regulation over natural gas is possessed by a State, and in the first case (*Ohio Oil Co. vs. Indiana*) it was exercised to prohibit the employment of the gas as a means of agency in the production of oil against an asserted right of property in the ownership of the land upon which the oil was produced, and, therefore, of the oil and gas as incidents of such ownership, and could be used in such manner and quantity as the landowner might choose."

And in respect of the State's power to protect and preserve gas as a natural resource, it was remarked:

> "And there is great disproportion between the gas and the product, and necessarily there was presented to the judgment and policy of the State a comparison of utilities which involved as well the preservation of the natural resources of the State and the equal participation in them by the people of the State. And the duration of this utility was for the consideration of the State, and we do not think that the State was required by the Constitution of the United States to stand idly by while these resources were disproportionately used, or used in such way that tended to their depletion, having no power of interference.
>
> "The cited cases determine otherwise; and that, as the State of Indiana could prevent the exhaustive use of gas in the production of oil, and as the State of New York could prevent the owner of land from using artificial means to obtain the carbonated waters under his land, the State of Wyoming has the same power to prevent the use of natural gas in the production of carbon black, the tendency of which is (it may be the inevitable effect of which is) the exhaustion of the supply of natural gas, and the consequent detriment of other uses."

Apart from the cases dealing especially with gas, and the particular considerations affecting public-service corporations, the more general authorities dealing with the police power fortify their principles and their application to the cases now at bar.

Of the police power it has been said it is,—

"One of the most essential of powers, at times the most insistent, and always one of the least limitable of the powers of government."

District of Columbia vs. Brooke, 214 U. S., 138, 149.

Eubank vs. Richmond, 226 U. S., 137, 142.

Sligh vs. Kirkwood, 237 U. S., 50, 59.

Hall vs. Geiger-Jones Co., 242 U. S., 539.

And, as said in *Chicago & A. R. Co. vs. Tranbarger*, 238 U. S., 66, 77:

"This power can neither be abdicated nor bargained away, and is inalienable even by express grant; and * * * all contract and property rights are held to its fair exercise. *Atlantic Coast Line R. Co., vs. Goldsboro*, 232 U. S., 548, 558, and cases cited."

The public welfare to which the protection of the power extends, embraces not only public health, morals, and safety, but also the public convenience and the general prosperity.

Chicago, B. & Q. R. Co. vs. Illinois, 200 U. S., 561, 592.

Bacon vs. Walker, 204 U. S., 311, 317.

Eubank vs. Richmond, 226 U. S., 137, 142.

Sligh vs. Kirkwood, 237 U. S., 52, 59.

Chicago & A. R. Co. vs. Tranbarger, 238 U. S., 66, 77.

In *Sligh vs. Kirkwood, supra*, it was said:

"It is not subject to definite limitations, but is coextensive with the necessities of the case and the safeguards of public interest. *Camfield vs. United States*, 167 U. S., 518, 524. It embraces regulations

designed to promote public convenience or the general prosperity or welfare, as well as those specifically intended to promote the public safety or the public health. *Chicago, B. & Q. R. Co. vs. Illinois,* 200 U. S., 561, 592. In one of the latest utterances of this Court upon the subject, it was said: 'Whether it is a valid exercise of the police power is the question in the case, and that power we have defined, as far as it is capable of being defined by general words, a number of times. It is not susceptible of circumstantial precision. It extends, we have said, not only to regulations which promote the public health, morals, and safety, but to those which promote the public convenience or the general prosperity.' * * * And, further: 'It is the most essential of powers, at times the most insistent, and always one of the least limitable of the powers of government.' *Eubank vs. Richmond,* 226 U. S., 137."

The scope of this power, and its flexibility in meeting and dealing with modern conditions, are illustrated in *German Alliance Insurance Co. vs. Lewis,* 233 U. S., 1011, where State regulation of fire-insurance rates was upheld, and, again, *Hall vs. Geiger-Jones,* 242 U. S., 539; *Caldwell vs. Sioux Falls Stockyards Co.,* 242 U. S., 599, and *Merrick vs. Halsey,* 242 U. S., 568, upholding the "Blue Sky laws." In *Merrick vs. Halsey,* Mr. Justice McKenna said:

"Every new regulation of business or conduct meets challenge, and, of course, must sustain itself against challenge and the limitations that the Constitution imposes. But it is to be borne in mind that the policy of a State and its expression in laws must vary with circumstances. And this capacity for growth, and adaptation we said, through Mr.

> Justice Matthews, in *Hurtado vs. California*, 110 U. S., 516, 530, is the 'peculiar boast and excellence of the common law.' It may be that constitutional law must have a more fixed quality than customary law, or, as was said by Mr. Justice Brewer in *Muller vs. Oregon*, 208 U. S., 412, 420, that 'it is the peculiar value of a written constitution that it places in unchanging form limitations upon legislative action.' This, however, does not mean that the form is so rigid as to make government inadequate to the changing conditions of life, preventing its exertion, except by amendments to the organic law."

The application of the police power to promotion of the public morality, as in the regulation or prohibition of the manufacture or sale of intoxicating liquors (*Mugler vs. Kansas*, 123 U. S., 623; *Kidd vs. Pearson*, 128 U. S., 1; *Crowley vs. Christensen*, 137 U. S., 86); the protection of the public health, as in the prevention of the adulteration of food (*Plumley vs. Massachusetts*, 155 U. S., 461; *Capital City Dairy Co. vs. Ohio*, 183 U. S., 238; *Price vs. Illinois*, 238 U. S., 446); or the limitation of the hours of labor (*Muller vs. Oregon*, 208 U. S., 412; *Miller vs. Wilson*, 236 U. S., 373; *Holden vs. Hardy*, 169 U. S., 366), are commonplace.

Measures to safeguard the business prosperity of the State are exampled by the prohibition of monopolies and combinations in restraint of trade (*Waters-Pierce Oil Co. vs. Texas*, 212 U. S., 86; *Grenada Lumber Co. vs. Mississippi*, 217 U. S., 433; *Standard Oil Co. vs. Missouri*, 224 U. S., 270; *International Harvest. Co. vs. Kentucky*, 234 U. S., 199); of unfair competition (*Central Lumber Co. vs. South Dakota*, 226 U. S., 157), and of the sale or shipment of products

detrimental to the business reputation of an important industry (*Sligh vs. Kirkwood*, 237 U. S., 50). In *Sligh vs. Kirkwood, supra*, Mr. Justice Day says:

> "We may take judicial notice of the fact that the raising of citrus fruits is one of the great industries of the State of Florida. It was competent for the Legislature to find that it was essential for the success of that industry that its reputation be preserved in other States wherein such fruits find their most extensive market. The shipment of fruits so immature as to be unfit for consumption, and consequently injurious to the health of the purchaser, would not be otherwise than a serious injury to the local trade, and would certainly affect the successful conduct of such business within the State. The protection of the State's reputation in foreign markets, with the consequent beneficial effect upon a great home industry, may have been within the legislative intent, and it certainly could not be said that this legislation has no reasonable relation to the accomplishment of that purpose."

If it be true that in any instance the State may legislate in the interest of the health and general business prosperity of its inhabitants, it must follow that health may be preserved against injury by cold as well as by disease or adulteration of food, and that the industry of the State may be protected as well from destruction by deprivation of necessary fuel as from mere injury by practices hurtful to its trade or reputation. Upon this ground, aside from any peculiar relations or obligations affecting public-service corporations, it is plain that the State may legislate in defense of its people

and its industries in prevention of a real and present danger arising from deprivation of gas.

Industrial Use of Gas.

We do not understand it to be contended seriously that the enforcement of the statute in respect of domestic users would materially add to the volume of West Virginia gas consumption. One of the plaintiffs' witnesses admitted as much (Rec., 972).

We anticipate, however, special reference on the other side to two features of the statute: (1) the provision made for industrial gas supply and (2) the provision made for the sale of gas to other gas companies not themselves possessed of a reasonably adequate supply.

In regard to the objection to the requirement of a reasonably adequate supply for industrial use, several answers at once appear:

(*a*) Assuming, as we have already shown, that the supply of industrial gas is, by the holding out by the gas companies of their readiness and willingness to furnish such gas (subject only to the needs of domestic consumers) and by the settled law of West Virginia, a public service, there is no distinction in principle between that service and the domestic service. The truth is, indeed, that between the supply of gas for domestic purposes and for industrial use there is but one difference. The service differs only in degree of necessity, because the hardship is personally more acute in case of failure of the domestic supply than where the failure pertains to the industrial supply. This, of course, constitutes a sufficient basis for classification, preferential to the

domestic consumer. But the fact that classification may be justified, proves nothing in regard to the nature of the subordinate service. The latter is still a public service, the obligation to render which may be suspended in time of shortage, but which revives whenever there is a surplus of gas which enables its performance.

The plaintiffs disagree with the policy of West Virginia in denominating the industrial service as public and in requiring its fulfillment, though they inconsistently permit industrial use within their own confines—even of West Virginia gas—and the gas companies in general emphasize the necessity of such use. We pursue this no further, because, however the plaintiffs may disagree, the uses to which gas may be applied in West Virginia was and is a local question for the determination of the Legislature of that State; and the objections of the plaintiffs go, as said in *Ohio Oil Co. vs. Indiana,* 177 U. S., 190, 211, "not to the power to make the regulations, but to their wisdom," and "with the lawful discretion of the legislature of the State" there can be no judicial interference.

And see:

Lindsley vs. Nat. Carbonic Gas Co., 220 U. S., 61, 76, 77.

Walls vs. Midland Carbon Co., 254 U. S., 300.

As to the dismal forebodings, the assertion that the enforcement of the statute as to industrial consumers will absorb all of the West Virginia gas, it may be sufficient to remark that these are wholly speculative, and "mere prophecies which are ventured" (*Tanner vs. Little,* 240 U. S., 369, 385).

But in this day the mantle of prophecy ordinarily yields to probabilities based on known facts.

The industrial changes as to fuel which have taken place in West Virginia, as a result of the gas shortage, and the constantly increasing rates, competing unfavorably with producer gas (Rec., 1229-1230), afford substantial evidence to this Court, as they may well have done to the Legislature, that no such result would happen.

Still further, in this relation, the presumption being in favor of the validity of the statute and the burden being on the plaintiffs to show a violation of constitutional guaranties, there can be no declaration of unconstitutionality upon mere loose opinion or conjecture. The repeated refusal to declare public-service rates confiscatory in advance of actual test, is illustrative.

Knoxville vs. Knoxville Water Co., 212 U. S., 1, 18, 19.

Willcox vs. Consolidated Gas Co., 212 U. S., 19, 54.

Northern Pacific R. Co. vs. North Dakota, 216 U. S., 579; 236 U. S., 585.

Des Moines Gas Co. vs. Des Moines, 238 U. S., 153, 173.

Missouri vs. Chicago, B. & Q. R. Co., 241 U. S., 533, 539, 540.

(*b*) The plaintiffs, overlooking the language of section 1, defining the territorial limits within which reasonably adequate service is required of each several company, imply the postulate, contrary to the fact, that the entire volume of gas is to be thrown into a vast hotchpot, to be drawn upon at will. Whereas by plain interpretation, the duty of each pipe-line

company severally is limited to the territory in which its gas supply is produced, or through which it is transported, or in which it is served by such company.

(*c*) Further, it is ignored by the plaintiffs that by the provisions of Section 4 and the correlation of the Public Service Commission Act, appropriate administrative hearing and determination, with judicial review, effectually guard against the requirement by the consumer, domestic or industrial, of more than a reasonably adequate supply. If a decision of the Commission as to reasonable adequacy, in respect of either volume or economy of consumption, is deemed erroneous, the gas companies will have their day in court. Such questions can be answered "when they arise" (*Noble State Bank vs. Haskell*, 219 U. S., 104, 112). This Court is not called upon to sit in "anticipatory judgment" (*Tanner vs. Little*, 240 U. S., 369, 385).

Supply of Gas to Local Companies.

What has been said as to industrial consumption, applies still more fully to Section 2 of the statute relative to the supply in amounts to be fixed by the Commission of deficits to gas companies having a shortage, when the supplying company has gas in excess of the amount necessary for the reasonably adequate supply of its own consumers in the State, and providing for physical connection of lines after due hearing, and the fixing of reasonable terms, conditions and rates; to which is added the proviso that the company having the surplus may itself, in the alternative, furnish the consumers within the territory a reasonably adequate supply.

In point of fact, it is shown by the proofs that the supply of gas to local companies having a deficit, is precisely what has been done by most of the seven companies in the past (Rec., 1034-1036), what in the present they do among themselves (Rec., 1712, 1769, 1780, 1791), and what they do, and desire to do, in respect of companies out of the State (Rec., 1509, 1524, 1544, 1554, 1560, 1729, 1738, 1745, 1752, 1761). It is shown also that the shortage of the West Virginia local companies is due in large measure to the control, amounting to a virtual monopoly, of the West Virginia gas supply and fields, acquired in their character as West Virginia public-service corporations obligated to serve the public of that State.

We submit that there is no savor of constitutional infringement, nor unreasonableness, in requiring the seven companies to perform acts of the precise character habitually performed by them in the past, nor in enacting that they shall, in the alternative, supply, either directly or indirectly through local companies, consumers whom the seven companies were legally compellable to supply in advance of the passage of the statute.

The requirement by the State, in the exercise of the police power, of co-operation in the public interest, among persons or corporations engaged in business, is no new thing in the law. *Noble State Bank vs. Haskell*, 219 U. S., 104, 110, 112, sustaining a statute establishing a depositor guaranty fund by the involuntary contributions of banks is an example. There it was said "that an ulterior public advantage may justify a comparatively insignificant taking of private property for what, in its immediate purpose, is a private use." The Workmen's Compensation Acts are a

added illustration (*New York Central R. Co. vs. White,* 243 U. S., 188; *Mountain Tie & T. Co. vs. Washington,* 243 U. S., 219).

The alternative compulsion of physical connections with local companies having a deficit is no different from the common requirement of physical connections or interchange of facilities in the case of railroads and other public utilities.

W. Va. Acts of 1913, Ch. 9, Sec. 8.

W. Va. Acts of 1915, Ch. 8, Sec. 24.

Ohio General Code, Secs. 522, 614-63.

Pennsylvania Pub. Laws of 1913, p. 1374, *Pub. Service Com. Law,* Art. I, Sec. 1.

And such connections already exist in most instances (Rec., 1034-1036; 1736 at pp. 402-414).

The validity of such requirements has often been sustained.

VI.

THE PLAINTIFFS CLAIM THROUGH THE WEST VIRGINI GAS COMPANIES, HAVE NO HIGHER RIGHT, AND HAVE NO TITL TO RELIEF.

Various clauses of the Federal Constitution are invoked b the plaintiffs, as invalidating the statute. Much was said i the bills and evidence, and doubtless more will be said, as t the property, rights, and contracts of the gas companies, an losses from the predicted uselessness of pipe lines leading to and distributing plants located within, the other States, an the inability of the gas companies to perform their contract and to supply West Virginia gas to or in the other States.

The constitutional objections pressed by the plaintiffs ar these:

(1) Impairment of the obligation of contracts.

(2) Deprivation of property without due process of law.

(3) Denial of the equal protection of the laws.

(4) Abridgment of the privileges or immunities of citi- zens of the plaintiff States or of the United States.

(5) Violation of the interstate commerce clause.

Before passing to particular consideration, one general ob- servation is applicable. The alleged rights claimed by the plaintiffs for themselves and their inhabitants are alleged rights to West Virginia gas, derived and derivable through

gas companies, public-service corporations of West Virginia, obligated from the beginning to serve the public of that State, subject in their other transactions to that primary duty of public service, and from the outset amenable to the laws of the State. And thus mediately deriving their alleged rights, the rights of the plaintiffs can rise no higher than those of the gas companies, and the wrongs complained of are in reality alleged wrongs to the companies, which, if non-existent, leave the plaintiffs with cases of *damnum absque injuria.*

Leaving out of view the pertinent circumstances that in the majority of instances the West Virginia companies transporting through pipe lines gas to or for consumption in other States, have by their express contracts agreed to furnish gas for the other States only to the extent of their supply (Rec., 1509, 1524, 1544, 1712, 1738, 1745, 1769, 1780), that in most of the contracts West Virginia domestic consumption is abstractly given a preference (Rec., 1509, 1524, 1544, 1712, 1738, 1745, 1769, 1780), and that in some instances, notably the Hope Natural Gas Company and United Fuel Gas Company, the contracts provide for priority of supply as among the purchasing companies (Rec., 1560, 1565, 1738, 1752), so that by the contracts themselves in time of shortage, whether periodic or in the ultimately permanent condition, some companies in the plaintiff States may be supplied, while others are cut off, *we submit for consideration in the analysis of the alleged rights of the plaintiffs the following question: Whether the plaintiff States have a direct right or direct remedy against the West Virginia public service companies to enforce the transportation or delivery of West Virginia gas to, or for use in, the plaintiff States?* Unless the

question can be answered affirmatively, the plaintiffs' title to relief against West Virginia is at an end.

Title of Plaintiffs to Allege Unconstitutionality.

As to the gas companies, and especially the seven companies operating in West Virginia, as well as the citizens of the plaintiff States, a short answer may be made. If the statute unconstitutionally injures them in property or contract rights, that would not entitle the plaintiffs to complain, "since it is a well-settled rule of this Court that it only hears objections to the constitutionality of laws from those who are affected by its alleged unconstitutionality in the features complained of." "The plaintiffs must show that their own rights are infringed."

New York Central R. Co. vs. White, 243 U. S., 188, 199.

Plymouth Coal Co. vs. Pennsylvania, 232 U. S., 531, 545.

Arkadelphia Mill. Co. vs. St. Louis S. W. R. Co., 249 U. S., 134, 149.

VII.

LEAVING FOR SEPARATE CONSIDERATION THE COMMERCE CLAUSE, THE STATUTE DOES NOT VIOLATE OTHER CONSTITUTIONAL GUARANTIES.

Impairment of Obligation of Contracts, Due Process of Law, and Equal Protection of the Laws.

The constitutionality of the State's exercise of power in the manner of the statute is not sucessfully impugned by the circumstances that the gas companies have expended money in the construction of pipe lines and pump stations, and that for the supply of gas in foreign States they have made contracts with other companies or consumers there, or that consumers in other States have made contracts or mechanical arrangements for the consumption of gas. The plaintiffs and their citizens, and the gas companies in West Virginia and in the plaintiff States, knew, one and all, from the outset, the peculiar exhaustible nature of gas, the status of the West Virginia companies, and their subordination to West Virginia laws, present or prospective, enacted in the exercise of the police power. If it be true that the State may validly compel the rendition of adequate service to its people by public-service corporations operating within its borders, the State's authority cannot be defeated by expenditures in aid of evasion of that service, or contracts or arrangements having that result.

The contention that the seven companies engaged in business, and that their pipe lines and pump stations were constructed and are used as facilities for the service of con-

sumers in foreign States, is fallacious. These instrumentalities were built and are employed for the transportation of an available volume of gas at present consumed in part within West Virginia and in a greater part outside of the State. So long as these lines and stations are employed for the transportation of this quantity of gas, their owners are entitled to a fair return upon the reasonable value of their property so employed for the public convenience (*San Diego L. & T. Co. vs. National City*, 174 U. S., 739; *Cotting vs. Goddard*, 183 U. S., 79; *San Diego L. & T. Co. vs. Jasper*, 189 U. S., 439; *Stanislaus Co. vs. San Joaquin & K. R. C. & I. Co.*, 192 U. S., 201; *Knoxville vs. Knoxville Water Co.*, 212 U. S., 1; *Willcox vs. Consolidated Gas Co.*, 212 U. S., 19; *Railroad Com. vs. Cumberland T. & T. Co.*, 212 U. S., 414; *Lincoln Gas & El. Co. vs. Lincoln*, 223 U. S., 345; *Simpson vs. Shepherd*, 230 U. S., 352). And the right would be as clear if an increased quantity, or even the whole, of the gas were consumed in West Virginia as if apportioned to the advantage of other States, as now. The consumption in West Virginia of an augmented amount of gas would, of course, result in an enlarged aggregate of the rates paid by the consumers therein. And it might be that as a consequence of increased devotion of lines and stations to the service of the West Virginia consumers, or a not improbable influence on operating costs, an upward adjustment of rates in West Virginia would be proper. But this, after all, is but a matter of rates. If fairly compensated, the gas companies are not entitled to refuse to West Virginia an adequate service merely because a greater remuneration can be obtained elsewhere.

If in the case of some of these companies contraction of

the volume of gas conveyed to other States should result in the impairment and ultimate destruction of the usefulness of transportation or distributing facilities serving only those States, the injury to the owners of these facilities would be more apparent than real. The tendency of the gas supply to exhaustion, and the obligation to render adequate service to West Virginia consumers, was as well known on the first day of their career as on the last; and all of the gas companies, both in West Virginia and elsewhere, had the right and opportunity to anticipate in charges against consumers the depreciation or obsolescence resulting from diminished usefulness of these facilities (*Knoxville vs. Knoxville Water Co.*, 212 U. S., 1, 11; *Railroad Com. vs. Cumberland Tel. & Teleg. Co.*, 212 U. S., 414, 424; *Simpson vs. Shepard*, 230 U. S., 352, 458; *Kansas City S. R. Co. vs. United States*, 231 U. S., 423, 446). Whether all of the companies have disinterestedly refrained from exercising this right to compensate themselves we do not stop to inquire; but we perceive no reason for assuming the case to be in their favor on this point. And the affirmative proof, in a number of instances, shows depreciation allowances and reserves (Rec., 263-265, 443-444).

Whatever may be the result in reference to property devoted to the service of consumers in other States or to contracts made with them, or consequentially affecting their service, the constitutional power of West Virginia, nevertheless, remains clear and certain. The expenditures for that property and those contracts were made subject to the police power of the State and find no protection in the constitutional provisions against the impairment of the obligation of a contract or the deprivation of property without due

process of law or any other guaranty of the State or Federal Constitution. In *Chicago, B. & Q. R. Co. vs. McGuire*, 219 U. S., 549, 568, referring to the right to make contracts, Mr. Justice Hughes said:

> "It is subject, also, in the field of State action, to the essential authority of government to maintain peace and security, and to enact laws for the promotion of the health, safety, morals, and welfare of those subject to its jurisdiction. This limitation has had abundant illustration in a variety of circumstances."

In *Chicago & A. R. Co. vs. Tranbarger*, 238 U. S., 67, it was said:

> "But a more satisfactory answer to the argument under the contract clause, and one which at the same time refutes the contention of plaintiff in error under the due process clause, is that the statute in question was passed under the police power of the State for the general benefit of the community at large and for the purpose of preventing unnecessary and widespread injury to property.
>
> "It is established by repeated decisions of this Court that neither of these provisions of the Federal Constitution has the effect of overriding the power of the State to establish all regulations reasonably necessary to secure the health, safety, or general welfare of the community; that this power can neither be abdicated nor bargained away, and that all contract and property rights are held subject to its fair exercise. *Atlantic Coast Line R. Co. vs. Goldsboro*, 232 U. S., 548, 558, and cases cited. And it is also settled that the police power embraces regulations designed

> to promote the public convenience or the general welfare and prosperity, as well as those in the interest of the public health, morals, or safety. *Lake Shore & M. S. R. Co. vs. Ohio*, 173 U. S., 285, 292; *Chicago, B. & Q. R. Co. vs. Illinois*, 200 U. S., 561, 592; *Bacon vs. Walker*, 204 U. S., 311, 317."

In *Hudson County Water Co. vs. McCarter*, 209 U. S., 348, a statute of New Jersey prohibiting the diversion of the water from fresh-water streams of the State to other States was upheld as against the owner of water mains laid for the purpose of carrying water from New Jersey to New York. Overruling the argument that the statute impaired the obligation of contracts, took property without due process of law, and denied the equal protection of the laws, it was said by Mr. Justice Holmes:

> "The defense under the 14th Amendment is disposed of by what we have said. That under Article 1, Section 10, needs but a few words more. One whose rights, such as they are, are subject to State restriction, cannot remove them from the power of the State by making a contract about them. The contract will carry with it the infirmity of the subject-matter. *Knoxville Water Co. vs. Knoxville*, 189 U. S., 434, 438; *Manigault vs. Springs*, 199 U. S., 473, 480."

In *Rast vs. Van Deman*, 240 U. S., 342, 363, Mr. Justice McKenna said:

> "Besides, as the business is subject to regulation, the contracts made in its conduct are subject to such regulation. *Louisville & N. R. R. Co. vs. Mottley*, 219 U. S., 467, and *New York C. & H. R. R. Co. vs. Gray*, 239 U. S., 583."

Against the application of the foregoing principles, public-service corporations are not immune. The opinion of Mr. Justice Clarke in *Union Dry Goods Co. vs. Georgia Pub. Service Corp.*, 248 U. S., 372, fully demonstrates this. The following cases also, by express adjudication and concrete illustration, show that the requirement from a public-service corporation of adequate service to the public violates no constitutional provision, even though the rendition of such service is attended with pecuniary loss:

Wisconsin M. & P. R. Co. vs. Jacobson, 179 U. S., 287.

Atlantic Coast Line R. Co. vs. North Carolina Corp. Com., 206 U. S., 1.

Missouri P. R. Co. vs. Kansas, 216 U. S., 262.

Washington vs. Fairchild, 224 U. S., 510.

So in *Erie R. Co. vs. Board of Public Utility Com.*, 254 U. S., 394, in refuting an argument against the change of elevation of tracks at crossings, ordered by the Board, it was said:

> "That the States might be so foolish as to kill a goose that lays golden eggs for them has no bearing on their constitutional rights. If it reasonably can be said that safety requires the change, it is for them to say whether they will insist upon it, and neither prospective bankruptcy nor engagement in interstate commerce can take away this fundamental right of the soverign of the soil. *Denver & R. G. R. Co. vs. Denver*, 250 U. S., 241, 246. To engage in interstate commerce the railroad must get on to the land; and, to get on to it, must comply with the conditions imposed by the State for the safety of its citizens. Contracts made by the road are made subject to the

> possible exercise of the sovereign right. * * * If the burdens imposed are so great that the road cannot be run at a profit, it can stop, whatever the misfortunes the stopping may produce."

Abridgement of Privileges and Immunities.

What has been said above applies equally to the claim of abridgement of privileges and immunities of citizens of other States or of the United States. In *Barbier vs. Connolly*, 113 U. S., 27, 32, the whole matter was summed up by Mr. Justice Field as follows:

> "But neither the amendment as a whole, broad and comprehensive as it is, nor any other amendment was designed to interfere with the power of the State, sometimes termed its police power, to prescribe regulations to promote the health, peace, morals, education and good order of the people, and to legislate so as to increase the industries of the State, develop its resources and add to its wealth and prosperity."

And see:

Slaughter House Cases, 16 Wall., 36.
Re Kemmler, 136 U. S., 436, 448, 449.
Giozza vs. Tiernan, 148 U. S., 657, 661, 662.

In *Western Union Tel. Co. vs. Commercial Mill Co.*, 218 U. S., 406, 418, it was dryly remarked that it was "rather late in the day" to contend that the Fourteenth Amendment, either in the privileges and immunities clause or the other clauses, prevented "the regulation of public-service corporations" by a State.

In leaving this point, we stay for a moment to remark that

the plaintiff States are not citizens of any State or of the United States:

Stone vs. South Carolina, 117 U. S., 430, 433;
Postal Tel. Cable Co. vs. Alabama, 155 U. S., 487;
Title Guaranty & S. Co. vs. Idaho, 240 U. S., 136;

and that the gas companies are not citizens within the privileges and immunities clauses of the Federal Constitution:

Blake vs. McClung, 172 U. S., 239, 259;
Western Turf Assoc. vs. Greenberg, 204 U. S., 359, 363;
Selover vs. Walsh, 226 U. S., 112, 126.

VIII.

THE STATUTE DOES NOT REGULATE INTERSTATE COMMERCE.

It is urged against the statute that it amounts to an unconstitutional regulation of interstate commerce for the reason that if an adequate amount of gas is furnished to West Virginia the volume of gas transported to other States will be diminished. And this objection is argued as if the gas companies held no peculiar relation to West Virginia and were bound by no peculiar obligations to it, and as if the gas affected were a mere ordinary subject of barter and sale, like other commodities. The contention would be the same in principle, and not more startling in form, if the Consolidated Gas Company of New York City, engaged in supplying artificial gas in the metropolitan territory, should assert the right to abandon its obligations to the citizens of New York upon the plea that it was entitled to enter into interstate commerce by selling its gas to New Jersey or Philadelphia. In-

deed, the proposition, when based on the claim of freedom of interstate commerce, would equally support a contention that these companies have the right to export from West Virginia to other States the entire stock of gas at their command. For, as testified by witnesses for the plaintiffs, already quoted, every addition to consumption in West Virginia lessens to that extent the volume of gas available for transport to the other States. And the ultimate conclusion would be that no supply whatever to West Virginia could be compelled.

We think that to the objection, based on the commerce clause, there are several answers:

(1) That the West Virginia public-service corporations have no right to engage in interstate commerce, except in subordination to the performance of their duties to the State;

(2) That if interstate commerce is affected, the effect is only indirect and incidental, and therefore, in the absence of congressional enactment, the effect is not violative of the commerce clause; and

(3) That under the conditions of gas production, transportation and supply, the gas does not enter into interstate commerce until the local consumption has been provided for.

Interstate Commerce by Public-Service Corporations.

At the outset let us say that we do not in the least doubt that the sale and transportation of gas may be, and often are, interstate commerce. The decisions of this Court foreclose that question in the circumstances then in judgment. But anterior to sale and transportation, arises the inquiry whether,

and to what extent, the person engaging, or desiring to engage, in interstate commerce is lawfully entitled to do so.

The question here is, not whether a State may prohibit or restrict the transportation of natural gas from its territory into another State, but *whether the State may require companies—owing to its people the obligation of adequate service—to perform that service*, even though the performance may involve the intrastate consumption of gas which otherwise might be transported to another State.

If the gas companies owe a duty to the people of West Virginia, the performance of that duty cannot be evaded merely because they prefer to enter into interstate commerce rather than to perform it. In *Hudson County Water Co. vs. McCarter*, 209 U. S., 348, in upholding the validity of a New Jersey statute prohibiting the transportation of water from any fresh-water stream in the State to a place out of the State, Mr. Justice Holmes said:

> "A man cannot acquire a right to property by his desire to use it in interstate commerce. Neither can he enlarge his otherwise limited and qualified right to the same end."

The same principle is asserted in somewhat different form by three judges sitting in the District Court for the Northern District of West Virginia, in *Manufacturers Light & H. Co. vs. Ott*, 215 Fed., 940, 951. Although the question before the court was primarily one of rates, its language is equally applicable to the question of adequacy of service, since the regulatory authority of the State in respect to rates and service rest upon the same basis, the police power. Judge Woods, delivering the opinion, said:

"The testimony is undisputed that the main source of natural-gas supply is in West Virginia, and that the cost of supplying gas to consumers in that State is necessarily much less than in the other States. It seems obvious that West Virginia corporations supplying gas to the citizens of that State from wells in the State cannot say the rates fixed to consumers in West Virginia are confiscatory, because at the same rates the companies would lose money on business which they had chosen to conduct in other States in association with corporations of those States. Even if it be conceded that interstate commerce is involved, the principle must be regarded as settled beyond dispute."

And, on page 952, it was further said:

"The fact that the Manufacturers Light and Heat Co. may have improvidently accepted franchises from municipalities in Ohio and Pennsylvania requiring gas to be furnished at the same rates charged in West Virginia, and that reductions at these points would require gas to be furnished there at less than cost, may be worthy of consideration by the Commission in prescribing the rates in West Virginia.

"But it cannot be controlling, for to hold so would be to enable the gas companies to contract away the police power of the State of West Virginia to require reasonable rates to its own citizens."

In *South Covington & C. S. R. Co. vs. Kentucky*, 252 U. S., 399, 403, the principal business of the company was the carriage of passengers in interstate commerce between Cincinnati, Ohio, and Kentucky cities across the Ohio River. A subsidiary corporation through which the South Covington

Company operated in part had its termini in Kentucky, though many of the passengers traveled by continuous passage to Cincinnati. The Kentucky statute requiring separate cars or compartments for white and negro passengers was held constitutional, it being said that the effect of the statute, insofar as it touched interstate commerce, was merely incidental. Mr. Justice McKenna said:

> "There was a distinct operation in Kentucky. An operation authorized and required by the charters of the companies, and it is that operation the act in question regulates, and does no more, and therefore is not a regulation of interstate commerce. This is the effect of the ruling in *South Covington & C. Street R. Co. vs. Covington*, 235 U. S., 537. The regulation of the act affects interstate business incidentally, and does not subject it to unreasonable demands.
>
> "The cited case points out the equal necessity, under our system of government, to preserve the power of the States within their sovereignties as to prevent the power from intrusive exercise within the national sovereignty, and an interurban railroad company deriving its powers from the State, and subject to obligations under the laws of the State, should not be permitted to exercise the powers given by the State, and escape its obligations to the State, under the circumstances presented by this record, by running its coaches beyond the State lines."

In *Erie R. Co. vs. Board of Public Com.*, 254 U. S., 394, it was said in regard to an order of the board requiring the change of elevation of tracks at crossings:

> "If it reasonably can be said that safety requires the change, it is for them to say whether they will in-

> sist upon it, and neither prospective bankruptcy nor engagement in interstate commerce can take away this fundamental right of the sovereign of the soil. *Denver & R. G. R. Co. vs. Denver,* 250 U. S., 241, 246. To engage in interstate commerce the railroad must get on to the land; and, to get on to it, must comply with the conditions imposed by the State for the safety of its citizens. Contracts made by the road are made subject to the possible exercise of the sovereign right. * * * If the burdens imposed are so great that the road cannot be run at a profit, it can stop, whatever the misfortunes the stopping may produce."

The authorities cited by the plaintiffs are not pertinent. If it be true, as previously pointed out, that a gas company, or its business, or the commodity in which it deals, is affected by the public interest, precedents are not wanting to show that the principles relating to interstate commerce in ordinary goods and chattels are inapplicable. In *Geer vs. Connecticut,* 161 U. S., 519, and *New York vs. Hesterberg,* 211 U. S., 31, it was held that a State could prohibit the exportation of game killed within its boundaries, and also prohibit the sale therein of game imported from another State. While in these instances the public interest attained the dignity of public ownership, the cases establish that generalizations from authorities referring to ordinary subjects of interstate commerce are inapplicable to a business or commodity affected with a public interest, and that interstate commerce in a commodity so affected may be restricted, or even prohibited, though such commerce in ordinary merchandise could not be.

It is no answer to what has been said that if a State can

compel an adequate supply of gas to its citizens and thereby prevent its exportation to another State, the other State may impose a similar restriction on the interstate shipment of corn, wheat, lumber or other commodities. Those commodities lack entirely the exhaustibility and other peculiarities of gas. Until their production or distribution shall become affected with a public interest in the sense that the gas business is so affected, no such case will occur. In *Tanner vs. Little*, 240 U. S., 369, 385, in sustaining the validity of a statute imposing a heavy license tax on merchants using trading stamps or redeemable coupons, Mr. Justice McKenna said:

> "Nor is there support of the system or obstruction to the statute in declamation against sumptuary laws, nor in the assertion that there is evil lesson in the statute, nor in the prophecies which are ventured of more serious intermeddling with the conduct of business. Neither the declamation, the assertion, nor the prophecies can influence a present judgment. As to what extent legislation should interfere in affairs political philosophers have disputed and always will dispute. It is not in our province to engage on either side, nor to pronounce anticipatory judgments. We must wait for the instance. Our present duty is to pass upon the statute before us, and if it has been enacted upon a belief of evils that is not arbitrary we cannot measure their extent against the estimate of the Legislature."

In *Noble State Bank vs. Haskell*, 219 U. S., 104, where a law requiring banks to maintain a guaranty fund for the protection of depositors was held valid, Mr. Justice Holmes said:

> "It is asked whether the State could require all corporations or all grocers to help to guarantee each other's solvency, and where we are going to draw the line. But the last is a futile question, and we will answer the others when they arise."

And see also *German Alliance Ins. Co. vs. Lewis,* 233 U. S., 389, 415.

The case of *West vs. Kansas Nat. Gas Co.,* 221 U. S., 229, already referred to, is not inconsistent with the above views, and does not militate against the statute. In that case, as already noted, neither the corporations and individuals who were plaintiffs, nor their gas, could be said to be affected with a public use, since the persons themselves were not engaged in the business of public gas supply in Oklahoma, and their gas was required by no present necessity in that State. Accordingly, the Oklahoma statute was not in substance, or even ostensibly, enacted in regulation of a public utility, so as to render merely indirect or incidental any decrease in the volume of gas transported out of the State. On the contrary, the principal and direct design of the Oklahoma statute was to prevent exportation of gas. This was the more manifest from the discrimination in respect to the use of highways and the right of eminent domain, made between persons engaged in transporting gas within the State and those transporting it to other States, as pointed out in *Haskell vs. Kansas Nat. Gas Co.,* 224 U. S., 217, 221, a second appeal of the *West case.* And this dominant design to prohibit interstate transportation is referred to by Mr. Justice McKenna in 221 U. S., 229, 257, where, after citing *Manufacturers' Gas & O. Co. vs. Indiana Gas & O. Co.,* 155 Ind., 545; 58 N. E., 706, he says:

> "The case is valuable because the court, through the same justice who wrote the opinion, distinguished between an exercise of the police power to regulate the taking of natural gas and its prohibition in interstate commerce."

And, at page 262, Mr. Justice McKenna adds:

> "We repeat again there is no question in the case of the regulating power of the State over natural gas within its borders."

The later decisions in *Public Utilities Com. vs. Landon*, 249 U. S., 236, and *Pennsylvania Gas Co. vs. Public Service Com.*, 252 U. S., 23, as well as *Franke vs. Johnstown Fuel Supply Co.*, 70 Pa. Super. Ct., 446, and the other State decisions hereinafter cited, recognized the local character of gas supply and its regulations, even though the gas had theretofore been in interstate commerce. And we submit that in the latter aspect the local element equally inheres when by the public interest with which its owner's business or the gas itself is affected, or by the physical process by which the gas is transported, the gas remains subject to the local use in advance of its last journey across the State line.

Interference, If Any, with Interstate Commerce is Indirect and Incidental.

If by the statute interstate commerce is affected, the effect is indirect and incidental and does not invalidate the law. The direct purpose of the law is to compel the performance of a public duty by those obligated to perform it, and by a legitimate exercise of the police power to protect against

the injury to persons and property consequent on the failure to perform the public duty. Conceivably, interstate commerce might not be affected at all, and this is presently true, if, as the evidence indicates, the gas companies hold in reserve sufficient territory to supply the deficit without subtracting from the quantity of gas transported to other States. But even if the quantity of gas entering into interstate commerce should be diminished as a consequence of the statute, the authorities well establish that the commerce clause would not stand in the way. To argue to the contrary would be to contend that the State would stand powerless to relieve its citizens from the most flagrant discrimination, or even against *a total deprivation of gas*, at the hands of its public-service corporations, which, for gain, preferred to serve consumers in other States.

That the supply of gas for local consumption, even though it may previously have been transported in interstate commerce, or is derived from a common stock, part of which is destined for such transportation, is essentially a matter of local concern and subject to regulation by the States, in the absence of interference by Congress, is now settled.

State vs. Flannelly, 96 Kan., 372; 152 Pac., 22.

Union Dry Goods Co. vs. Georgia Public Service Com., 248 U. S., 372.

Mill Creek Coal & Coke Co. vs. Public Service Com., 84 W. Va., 662; 100 S. E., 557.

In *Pennsylvania Gas Co. vs. Public Service Com.*, 252 U. S., 23, 30, Mr. Justice Day said:

> "The thing which the State Commission has undertaken to regulate, while part of an interstate transmission, is local in its nature, and pertains to the furnishing of natural gas to local consumers within the city of Jamestown, in the State of New York. The pipes which reach the customers served are supplied with gas directly from the main of the company, which brings it into the State; nevertheless, the service rendered is essentially local, and the sale of gas is by the company to local consumers, who are reached by the use of the streets of the city in which the pipes are laid, and through which the gas is conducted to factories and residences as it is required for use. The service is similar to that of a local plant furnishing gas to consumers in a city.
>
> "This local service is not of that character which requires general and uniform regulation of rates by congressional action, and which has always been held beyond the power of the States, although Congress has not legislated upon the subject. While the manner in which the business is conducted is part of interstate commerce, its regulation in the distribution of gas to the local consumers is required in the public interest, and has not been attempted under the superior authority of Congress.
>
> "It may be conceded that the local rates may affect the interstate business of the company. But this fact does not prevent the State from making local regulations of a reasonable character. Such regulations are always subject to the exercise of authority by Congress, enabling it to exert its superior power under the commerce clause of the Constitution."

The validity of State legislation incidentally or indirectly affecting interstate commerce, even though it diverts to the local need commodities or facilities which otherwise might go into or aid interstate commerce, has been upheld by repeated adjudications. The principle is clearly stated by Mr. Justice Hughes in the *Minnesota Rate Cases* (*Simpson vs. Shepard*, 230 U. S., 352), where, after saying that the States cannot directly tax interstate commerce or prohibit interstate trade in legitimate articles of commerce, he says:

> "But within these limitations there necessarily remains to the States until Congress acts, a wide range for the permissible exercise of power appropriate to their territorial jurisdiction although interstate commerce may be affected. It extends to those matters of a local nature as to which it is impossible to derive from the constitutional grant an intention that they should go uncontrolled pending Federal intervention. Thus, there are certain subjects having the most obvious and direct relation to interstate commerce, which nevertheless, with the acquiescence of Congress, have been controlled by State legislation from the foundation of the government, because of the necessity that they should not remain unregulated, and that their regulation should be adapted to varying local exigencies; hence, the absence of regulation by Congress in such matters has not imported that there should be no restriction, but rather that the States should continue to supply the needed rules until Congress should decide to supersede them. Further, it is competent for a State to govern its internal commerce, to provide local improvements, *to create and regulate local facilities*, to adopt protective measures of a reasonable character in the interest of the health, safety, morals, and welfare of its people,

> although interstate commerce may incidentally or indirectly be involved. Our system of government is a practical adjustment by which the national authority as conferred by the Constitution is maintained in its full scope without unnecessary loss of local efficiency. Where the subject is peculiarly one of local concern, and from its nature belongs to the class with which *the State appropriately deals in making reasonable provision for local needs*, it cannot be regarded as left to the unrestrained will of individuals because Congress has not acted, although it may have such a relation to interstate commerce as to be within the reach of the Federal power. In such case, Congress must be the judge of the necessity of Federal action." (Italics ours.)

And again, on page 410, is set forth the exact principle for which we contend, stated as follows:

> "In the intimacy of commercial relations much that is done in the superintendence of local matters may have an indirect bearing upon interstate commerce. *The development of local resources and the extension of local facilities may have a very important effect upon communities less favored*, and to an appreciable degree alter the course of trade. The freedom of local trade may stimulate interstate commerce, while restrictive measures within the police power of the State, enacted exclusively with respect to internal business, as distinguished from interstate traffic, may in their reflex or indirect influence *diminish the latter and reduce the volume of articles transported into or out of the State*. It was an objection of this sort that was urged and overruled in *Kidd vs. Pearson*, 128 U. S., 1, to the law of Iowa prohibiting the manufacture and sale of liquor within the State, save for limited purposes. See also *Geer vs. Connecticut*, 161

U. S., 519, 534; *Austin vs. Tennessee*, 179 U. S., 343; *Capital City Dairy Co. vs. Ohio*, 183 U. S., 238, 245; *Missouri P. R. Co. vs. Kansas*, 216 U. S., 261." (Italics ours.)

The principle that interstate commerce may constitutionally be affected indirectly or incidentally by the State in the exercise of its police power has been asserted in many cases, wherein the inevitable result of the regulation within the State has been to subtract from the quantity of a commodity entering into interstate commerce. Examples are readily afforded by the instance of the prohibition of the manufacture and sale of intoxicating liquors (*Kidd vs. Pearson*, 128 U. S., 1); the prevention of the sale of oleomargarine, colored so as to imitate butter (*Plumley vs. Massachusetts*, 155 U. S., 461; *Capital City Dairy Co. vs. Ohio*, 183 U. S., 238); the shipment of game out of the State or the sale of imported game within the State (*Geer vs. Connecticut*, 161 U. S., 519; *New York vs. Hesterberg*, 211 U. S., 31); the transportation of water out of the State (*Hudson County Water Co. vs. McCarter*, 209, U. S., 348), and the shipment of immature citrus fruit from a State largely engaged in the production thereof (*Sligh vs. Kirkwood*, 237 U. S., 52). And it has been held that a general restriction of pipe-line pressure which in practical result would prevent transportation of gas out of a State was valid (*Jamieson vs. Indiana Natural Gas & O. Co.*, 128 Ind., 555; 28 N. E., 76).

The police power of the State embraces to this extent of indirect or incidental interference, not merely commodities which are the subject of interstate commerce, but also the very instrumentalities of that commerce.

Smith vs. Alabama, 124 U. S., 465.

Nashville C. & St. L. R. Co. vs. Alabama, 128 U. S., 96.

New York, N. H. & H. R. Co. vs. New York, 165 U. S., 628.

Erb vs. Morasch, 177 U. S., 584.

Southern R. Co. vs. King, 217 U. S., 324.

Chicago, R. I. & P. R. Co. vs. Arkansas, 219 U. S., 453.

Atlantic Coast Line R. Co. vs. Georgia, 234 U. S., 280.

St. Louis, I. M. & S. R. Co. vs. Arkansas, 240 U. S., 518.

Though interstate commerce be incidentally or indirectly affected, the police power of the State includes the authority to compel a reasonably adequate service to the communities within it at the hands of a public-service corporation, though it is engaged in interstate commerce; and *up to the point where reasonably adequate local facilities are afforded by a public-service corporation, the State may exercise a free hand. Until that point is passed, interstate commerce is not unconstitutionally infringed.*

Illinois Central R. Co. vs. Mulberry Hill Coal Co., 238 U. S., 275.

Seaboard Air Line R. Co. vs. Railroad Com., 240 U. S., 324.

The substance of the foregoing authorities is negatively stated in *Mobile, J. & K. C. R. Co. vs. Mississippi*, 210 U. S., 187, wherein it was said:

> "It is enough to add to that which we have said, that the decree of the Supreme Court does not work an interference with, or cast a direct burden upon, interstate commerce. The cases of the *Illinois C. R. Co vs. Illinois*, 163 U. S., 142; *Cleveland, C., C. & St. L. R. Co. vs. Illinois*, 177 U. S., 514, and *Mississippi R. Commission vs. Illinois C. R. Co.*, 203 U. S, 335, cited by the companies to sustain their contentions, are not apposite. In those cases there was an interference with interstate trains for local purposes, though local needs had been adequately supplied."

The same proposition is affirmatively laid down in *Chicago, B. & Q. R. Co. vs. Railroad Commission*, 237 U. S., 220, 226, as follows:

> "In reviewing the decision we may start with certain principles as established: (1) It is competent for a state to require adequate local facilities, even to the stoppage of interstate trains or the rearrangement of their schedules. (2) Such facilities existing—that is, the local conditions being adequately met—the obligation of the railroad is performed, and the stoppage of interstate trains becomes an improper and illegal interference with interstate commerce."

Local Character of Gas Supply and Point of Entry of Gas Into Interstate Commerce.

We have already argued that the seven gas companies and others similarly situated, from their legal status, were and are incapacitated from engaging in interstate commerce, except in subordination to the fulfillment of their duty to consumers in West Virginia and to the extent of the surplus remaining after the fulfillment of that duty. Stated in another way, the gas in the pipe lines remains subject to the public interest and the duty of these companies as long as that duty remains unperformed, or until the public interest and the duty are effectually evaded by the escape of the gas over the State boundary.

Apart from the above legal contentions, we submit respectfully that by reason of the physical attributes of gas transportation and supply, it does not enter into interstate commerce until the State boundary is reached, or at least until the ultimate point where it is needed for reasonably adequate service in West Virginia has been passed.

Generalizing, though admitting that there may be exceptions in the great bulk of the record, it appears that the pipe

lines by which the gas is transported to other States are not confined to interstate transportation. The gas is fed into the pipe lines through innumerable subsidiary or field lines bringing the gas from the wells in West Virginia. The gas is commingled in the pipe lines, whether destined for consumption in West Virginia or whether it is proposed that a quantity thereof, definite or indefinite, shall cross the boundary and go into another State. Branching from the pipe lines are still other lines by which the gas supplied by these companies for use in West Virginia is withdrawn from the common stock and distributed directly or delivered to local companies for distribution.

While in the pipe line supplying at once the intrastate consumers and delivering gas to or for consumption in the other States, no mark or badge of identification is or can be placed upon any particular atom or larger volume of the gas. The situation is sufficiently set forth in the following excerpt from the testimony of the plaintiffs' engineer Wyer (Rec., 933, 934):

> "Q. In the case of a well feeding into a line, which line in turn carries gas partly to points of consumption in West Virginia, and partly to points of consumption in Pennsylvania and Ohio, does that gas have any label on it?
>
> "A. It does not. There is no original package, no identity, nothing to distinguish ownership, all intermingled.
>
> "Q. Well, how do you find out then where this gas is going when it comes out of the well and finds its way into a line?
>
> "A. Well, for any particular well in West Virginia, it might be very difficult—in many cases abso-

lutely impossible—to tell, the way the well is connected to some of these large trunk lines, whether that gas is ultimately going to get to Pennsylvania, or Ohio, or, in other cases, whether it is going to get to Ohio or Indiana.

"Q. In a company like the Hope Natural Gas Company, which is supplying gas partly in West Virginia, and supplying it partly to companies which in turn supply the other States, can you tell when that gas starts on its continuous journey, as you call it, from the well, where that gas is going?

"A. No, sir.

"Q. Can anybody?

"A. No, sir. That is, I mean, you could not state that this particular thousand feet of gas is going to be used in West Virginia, and this particular thousand feet of gas in the Hope property, will be used through the Peoples Company in Pennsylvania, and this one through the East Ohio Company in Ohio. The gas is all intermingled, without any chance for identity.

"Q. And where does the opportunity first occur for identifying the gas which is going into Pennsylvania or Ohio or any other States?

"A. There would be no chance for identifying the gas from particular individual wells. The only gas that you could identify would be the gas passing the measuring station at the State line, and that would be merely a total volume measurement giving you the total volume passing that point, without any relation as to whether it came from any particular well in West Virginia."

It may be fortuitous rather than influential that in some instances the deliveries of gas are made at measuring stations

located at, or as near as is practicable to, the State boundary line. An illustration is afforded by the Hope Natural Gas Company, which, professing not to operate outside of West Virginia (Rec., 184, 186, 187, 1736, insert p. 270) delivers gas to the Peoples Natural Gas Company, controlled as well as itself by the Standard Oil Company, at measuring stations situate at the West Virginia-Pennsylvania boundary (Rec., 303-304). The same is true of delivery by the Pittsburg & West Virginia Company to the Equitable Gas Company (Rec., 1730). The result of all which, it may be noted in passing, is to give room for insistence by the gas companies, on the one hand, that they are not subject to State regulation, because engaged in interstate commerce (as to which see *Franke vs. Johnstown Fuel Supply Co.,* 70 Pa. Super. Ct., 446, involving the Peoples Natural Gas Company and gas so derived from the Hope Natural Gas Company), and, on the other hand, that in the absence of Congressional action there can be no Federal regulation, the net result of which is the argument that these companies are free from any regulation. Not overlooking that interstate commerce is "a practical conception" (*Public Utilities Com. vs. Landon*, 249 U. S., 236, 245), it seems to us a necessary consequence of the character of the gas companies and the circumstances of gas transportation and supply, above detailed, that until the State boundary is reached, or until a reasonably adequate supply has been furnished to West Virginia consumers, or at least until the last branch line for service in West Virginia has been passed, so that the gas which will pass to the other State or States can be identified, the gas does not enter into interstate commerce.

The authorities supporting this principle, though dealing

with facts much more unfavorable to the States than the situation in the present case, have settled the rule that, as long as property intended for interstate commerce remains a part of the common mass of the property of the State, or when property which has been in such commerce becomes part of the common mass, it is not yet or longer in interstate commerce and is subject to the jurisdiction of the State like other property. It suffices to cite the following cases:

In *Brown vs. Houston*, 114 U. S., 622, it was held that coal arriving from Pennsylvania in Louisiana and there awaiting sale, still afloat in the Mississippi River on the barges on which it had been brought from Pennsylvania, and later sold for export, had entered into the common mass of property of the State, and was subject to its taxing power.

In *Coe vs. Errol*, 116 U. S., 517, 528, logs at the place of shipment, but not yet committed to the common carrier for carriage out of the State, were held subject to the taxing power of the State, it being said that they continued to be "part of the general property of the State," until they had "entered upon their final journey for leaving the State and going into another State."

In *Diamond Match Co. vs. Ontonagon*, 188 U. S., 82, 92, also relating to forest products, it was held that the property still remained a part of the general mass within the State, which had jurisdiction to tax it, and that this jurisdiction might be exercised at the village "nearest to the last boom or sorting gap of the stream in or bordering on the State in which said property naturally would be and was intended to be last floated during the transit thereof."

The same principle was involved in:

Pittsburgh & S. Coal Co. vs. Bates, 156 U. S., 577.

American Steel & W. Co. vs. Speed, 192 U. S., 500, 520.

General Oil Co. vs. Crain, 209 U. S., 211.

Bacon vs. Illinois, 227 U. S., 502.

McCluskey vs. Marysville & N. R. Co., 243 U. S., 36.

Arkadelphia Mill. Co. vs. St. Louis S. W. R. Co., 249 U. S., 134.

Public Utilities Co. vs. Landon, 249 U. S., 236.

Pennsylvania Gas Co. vs. Public Service Com., 252 U. S., 23.

The same rule was expressly applied by the plaintiff, Pennsylvania, in review of proceedings of its Public Service Commission in *Franke vs. Johnstown Fuel Supply Co.*, 70 Pa., Super. Ct. 446, having then before it the very system of delivery from the Hope Natural Gas Company to the Peoples Natural Gas Company disclosed in the case at bar. It being in evidence in the Pennsylvania case that after passing the measuring station at the State boundary gas from Pennsylvania wells became mingled with the West Virginia gas in the same pipe line, the court said:

> "When the gas was delivered by the Hope Gas Company at the State line there was no determinable destination or ascertained place of consumption in Pennsylvania. It was stored in the pipes of the Peoples Gas Company and in them distributed to various points where it was burned."

It was then said, at page 461 of the opinion:

> "Nothing has been said thus far of that aspect of the case with respect to which it is contended that

> the gas obtained from West Virginia was taken out of the operation of the Federal commerce law because it became mingled with the general body of property in the State. It is property of a peculiar character necessarily confined in tanks or pipes and distributed from place to place by pressure through diverging pipes. It was not consigned from one state to a terminus in another. It was delivered into the containers of the appellant in the State of Pennsylvania and controlled by the latter in its distribution from place to place and so mingled with the Pennsylvania gas that its identity as an imported product was entirely lost. It would seem to have as fully lost its distinctive character as an import as did the coal in the case of *Brown vs. Houston*, 114 U. S., 622, where a flat-boat loaded with coal at Pittsburgh and floated down the river to Louisiana was held to have become merged in the property of the State although it remained in the boat in the same condition in which it was shipped from Pittsburgh and was merely moored to the river bank. A like conclusion was reached in *Pittsburgh Coal Co. vs. Bates*, 156 U. S., 577."

We think it logically to follow, both from the cases in this Court and the *Franke case* (and that in view of the *Franke Case*, Pennsylvania, at least, is in no position to claim otherwise), that if gas thus intermingled after passing the West Virginia-Pennsylvania boundary has ceased to be in interstate commerce, gas thus confused before reaching the boundary, and applicable indiscriminately and without identification to local and out-of-state consumption, has not yet entered into interstate commerce.

In conclusion we submit that no ground exists for the exercise of the original jurisdiction of this Court herein; that upon the merits of the case the plaintiffs are not entitled to the relief prayed, or any part thereof; and that the restraining orders should be dissolved and the bills dismissed at the plaintiffs' costs.

EDWARD T. ENGLAND,
Attorney General of West Virginia;
FRED O. BLUE,
GEORGE M. HOFFHEIMER,
PHILIP P. STEPTOE,
WILLIAM S. JOHN,
Counsel for the State of West Virginia, Defendant.

quirements of justice.

COMMONWEALTH OF PENNSYLVANIA *v.* STATE OF WEST VIRGINIA.

STATE OF OHIO *v.* STATE OF WEST VIRGINIA.

IN EQUITY.

Nos. 15 and 16, Original. Argued December 8, 9, 1921; restored to docket for reargument January 9, 1922; reargued February 28, March 1, 1922; restored to docket for reargument November 13, 1922; reargued April 20, 1923.—Decided June 11, 1923.

1. A justiciable controversy between States, in the sense of the Judiciary Article, is presented when the plaintiff State, relying on the Commerce Clause of the Constitution, seeks to enjoin the defendant State from consummating a purpose, evinced by her statutory enactment, and about to be carried out by her officials, of withdrawing natural gas from an established current of commerce moving from her territory into that of the plaintiff, when such withdrawal is likely to be productive of great injury to the interests of the plaintiff as the proprietor of public institutions and schools in which the gas is largely used, and to private consumers, including most of the inhabitants of many urban communities and a substantial part of the population of the plaintiff State, whose health, comfort and welfare are seriously jeopardized by the threatened withdrawal of the gas from the interstate stream. P. 591.
2. Suits by Pennsylvania and Ohio to enjoin West Virginia from enforcing an act of her legislature (c. 71, Acts 1919,) intended, through regulation of pipe line companies, to compel the retention

within West Virginia of all natural gas there produced, that might be required for local needs, were not premature in not awaiting an actual test of the act or an order of the public service commission vested by it with functions for its enforcement, since the act contains procedural, penal and remedial provisions adequate to accomplish its purpose, and the situation when the suits were brought was such that, directly and immediately, it would work a large curtailment of the volume of gas moving into the complaining States and, in a few years, with increasing demand and decreasing production, would work a practical cessation of the interstate stream which it was the object of the suits to protect. P. 592.

3. In such suits, neither the pipe line companies transporting and supplying the gas, nor consumers in the defendant State who would be benefited by an enforcement of the act, were essential parties. P. 595.
4. A State wherein natural gas is produced and is a recognized subject of commercial dealings may not require of those producing and transporting it that, in its sale and disposal, consumers in that State shall be accorded a preferred right of purchase over consumers in other States, when the requirement necessarily will operate to withdraw a large volume of the gas from an established interstate current whereby it is supplied in other States, to consumers there. P. 595.
5. The purpose of the Commerce Clause is to protect commercial intercourse from invidious restraints, to prevent interference through conflicting or hostile state laws, and to insure uniformity of regulation. It means, that, in the matter of interstate commerce, we are a single Nation—one and the same people. P. 596.
6. The transmission of natural gas from one State to another, for sale and consumption in the latter, is interstate commerce, and a state law, whether of the State where the gas is produced or of that where it is to be sold, which by its necessary operation prevents, obstructs or burdens such transmission, is a regulation of interstate commerce—a prohibited interference. P. 596.
7. The power of a State to require gas pipe-line companies to furnish reasonably adequate service within reasonable territorial limits, will not enable her to enforce preference to local consumption at the expense of interstate business which has grown up with her sanction and encouragement. P. 597.
8. Interference with interstate commerce in natural gas cannot be justified upon the ground that it is a measure designed to conserve the gas, as a natural product of the State in the interest of her

people, because the gas has become a necessity and the supply is no longer sufficient to satisfy local needs and be used abroad. P. 598. *West* v. *Kansas Natural Gas Co.*, 221 U. S. 229.

9. The Court, on full consideration, having reached the conclusion that the West Virginia Act is unconstitutional, and that its intended enforcement will subject the complaining States to injury of serious magnitude, operating with obvious inequity against them,—the appropriate decree is one declaring the act invalid, and enjoining its enforcement, leaving any needed regulation of the interstate commerce involved to be sought elsewhere. P. 600.

Decrees for complainants.

THESE were two suits, brought originally in this Court, to enjoin the defendant State from enforcing an enactment of her legislature (c. 71, Acts 1919,) upon the ground that it would curtail or cut off the supply of natural gas produced within her territory and carried by pipe lines into the territory of the plaintiff States, and there sold and used for fuel and lighting purposes. The act, and the facts constituting the situation to which it applied, are fully analyzed in the opinion.[1]

Mr. John W. Davis and *Mr. George E. Alter,* Attorney General of the Commonwealth of Pennsylvania, with whom *Mr. John G. Price,* Attorney General of the State of Ohio, *Mr. A. Leo Weil, Mr. E. E. Corn, Mr. Freeman T. Eagleson* and *Mr. R. G. Altizer* were on the briefs, for plaintiffs.[2]

[1] After the first argument, the Court, on January 9, 1922, ordered the cases restored to the docket for reargument with special reference to the questions whether the suit was not prematurely brought and whether the bill presents a cause justiciable between the two States parties to the action. See 257 U. S. 620. After reargument, the cases were again, on November 13, 1922, restored to the docket for reargument before a full bench.

[2] At the first hearing, the case was argued by *Messrs. Alter* and *Weil* on behalf of the Commonwealth of Pennsylvania, and by *Messrs. Price* and *Eagleson* on behalf of the State of Ohio. At the second hearing, the case was argued by *Mr. Davis* on behalf of both States and by *Mr. Alter* on behalf of Pennsylvania.

The Act of West Virginia is an unconstitutional interference with established courses of interstate commerce.

The course of the gas from the well to the ultimate consumers in Pennsylvania and Ohio is determined by existing contract relations, public service duties in other States, long-established courses of business and the physical structures adapted thereto. The gas that goes into other States is actually in interstate commerce from the time it leaves the wells until it reaches the ultimate consumers. *United Fuel Gas Co.* v. *Hallanan*, 78 W. Va. 396; 257 U. S. 277; *Pennsylvania Gas Co.* v. *Public Service Comm.*, 252 U. S. 23.

The whole design of the West Virginia statute is to divert or retain for the benefit of West Virginia consumers natural gas that in the absence of the statute would go to consumers in the other States through these established channels of interstate commerce. This intention is made manifest:

(*a*) By the consideration of the extent and character of the industry to which it applies, from which it appears that the full supply of gas that the statute requires to be furnished can be furnished only at the expense of consumers in other States. (*b*) By the history of the efforts of other States and of West Virginia to secure for themselves the exclusive or preferential enjoyment of their natural products, of which the present act is the logical development. *West* v. *Kansas Natural Gas Co.*, 221 U. S. 229, and cases there cited; *United Fuel Gas Co.* v. *Hallanan, supra.* (*c*) By the very terms of the act, which in effect if not in words, require that all gas produced in West Virginia shall be supplied to West Virginia consumers so far as they want it for any purpose, domestic, industrial, or other. (*d*) By the admissions in the answers, which in effect state that the purpose of the act is to supply fully the requirements of West Virginia consumers out of the abundance of gas produced in the State now going to supply consumers in other States.

The statute, to the extent that it requires natural gas that otherwise would go to other States to be diverted or retained for the use of West Virginia consumers, is equivalent to a prohibition upon the transmission of such gas to such other States and is void as a discrimination against interstate commerce. *West* v. *Kansas Natural Gas Co.*, 221 U. S. 229, and cases there cited; *Ward* v. *Maryland*, 12 Wall. 418; *Woodruff* v. *Parham*, 8 Wall. 123; *Welton* v. *Missouri*, 91 U. S. 275; *Guy* v. *Baltimore*, 100 U. S. 434; *Walling* v. *Michigan*, 116 U. S. 446; *Minnesota* v. *Barber* 136 U. S. 313; *Brimmer* v. *Rebman*, 138 U. S. 78.

It may be conceded that state regulations that have to do primarily with matters of local concern, calling imperatively for regulation, and that do not discriminate against or burden interstate commerce, are unobjectionable. *Pennslyvania Gas Co.* v. *Public Service Commission*, 252 U. S. 23. It is an open question, not involved in this case, whether West Virginia, in the absence of congressional action, could prescribe regulations more directly affecting interstate commerce and designed to secure equality among consumers and the most advantageous use of the gas produced in her borders irrespective of state lines, for example, regulations designed to secure a preference for domestic consumers everywhere over industrial consumers. There is no discrimination in favor of consumers in Pennsylvania and Ohio and the act under consideration is not designed to prevent such discrimination. Its intention and necessary effect are to produce discrimination in favor of West Virginia.

The theory that there was an antecedent duty resting on the natural gas companies in West Virginia to supply fully the requirements of their West Virginia consumers before supplying gas for the use of consumers in other States does not rest on any special provisions contained in their charters, or on any contract obligations

into which they have entered. The preëxisting obligation, if any, must be inferred from the fact that the companies in question had the power of eminent domain under the West Virginia law and were engaged in the business of supplying gas to the public in West Virginia.

The obligations of the companies in West Virginia to supply gas for the use of consumers in Pennsylvania and Ohio were assumed before there was any question of the sufficiency of their supplies of gas both to meet fully the requirements of their West Virginia consumers and to meet fully the obligations assumed by them to furnish gas to or for the use of consumers in other States. If the order in time of the assumption of obligations were a matter of importance, the fact is that in large measure the obligations to furnish gas for use in other States antedated the obligations assumed to furnish gas in West Virginia. But it is believed that the order in time is of no consequence. The public service duties in West Virginia and elsewhere and the contract obligations were rightfully undertaken and were on a parity. When, by reason of subsequent events, the supply of gas has become insufficient to meet fully the wants of West Virginia consumers and the commitments for the supply of consumers in other States, the burden of the shortage must be borne on an equitable basis that recognizes this parity of obligation.

The fact that the companies in West Virginia were organized under the laws of that State, or were permitted to do business there and were given the power of eminent domain or were denominated common carriers, does not invalidate contracts made by them to deliver gas in interstate commerce or import into their interstate contracts and commitments a condition that they shall be subject to a prior obligation on the part of the West Virginia companies to supply fully the requirements of West Virginia consumers. A railroad organized under the laws

of a State and engaging in interstate commerce is not under an implied duty to devote its facilities to meeting fully the requirements of intrastate traffic in case they are insufficient to fully meet both intrastate and interstate requirements. Neither a public service corporation nor other corporation should assume obligations that it is unable to perform. But the situation here does not concern the propriety of a public service corporation's extending its service or entering into contracts and commitments that will interfere with its due performance of the public service duties to which it is already subject, but has to do with a system that already exists and has existed for many years and has supplied adequate service in all the States alike.

The act cannot be sustained on the ground that it is the exercise by West Virginia of a right to impose new duties on corporations of her creation or which she permits to do business within the State, or on any similar ground.

The question whether West Virginia might originally have imposed upon corporations of her creation or upon corporations which she permitted to do business within the State the condition that they should supply fully the requirements of West Virginia consumers before taking any gas out of the State is not involved. On principle the validity of such a statute may well be doubted. There is here, however, an existing system of interstate contracts, an established course and flow of interstate commerce, and West Virginia cannot under the guise of imposing new duties on corporations of her creation or new conditions on foreign corporations doing business within the State work a discrimination against or impose burdens upon this interstate commerce. *Western Union Tel. Co.* v. *Kansas*, 216 U. S. 1.

The statute in fact applies to individuals and partnerships as well as to corporations; it applies not only to

DARK PAGE BLEED THRU

those who are engaged in the business of furnishing gas to the public, but to all those who are furnishing or are required by the common law or by statute to furnish gas for the use of the public or any part of the public; it requires every person or corporation who is furnishing gas in any place to furnish it in every place that can be reached directly or indirectly by the lines of such person or corporation, and every person, firm or corporation who is furnishing gas for special purposes to furnish it for all purposes. It fastens not merely upon part but upon all the gas produced by any of the persons named, "to the extent of his supply produced in this state." It gives to the West Virginia consumer a preferential right which in times of scarcity must surely blossom into absolute monopoly. It can be sustained only on the theory that the right of all the persons and corporations to whom it applies to engage in interstate commerce in natural gas and all contracts entered into by them in furtherance of such commerce are subject to the prior performance by such persons and corporations of every obligation in favor of West Virginia consumers that the legislature of West Virginia may see fit at any time to impose. But such a theory substantially claims for West Virginia the right to refuse to allow her natural gas to be taken out of the State, which was the very right denied to Oklahoma in *West* v. *Kansas Natural Gas Co.*, 221 U. S. 229.

There is no time after the gas comes into the possession of the companies in West Virginia when it is not in interstate commerce. When it first comes out of the ground or is first purchased from the local producer it comes into the possession of the public utility company, dedicated, so far as concerns the proportion thereof necessary to fulfill interstate contracts and obligations, to interstate commerce. The proportion that has an interstate destination is fixed from the first moment by existing contracts and relations. *United Fuel Gas Co.* v. *Hallanan*, 87 W. Va. 396; 257 U. S. 277.

But it may be said that the obligation of the statute goes back of the production or purchase by the West Virginia utility company, so that the gas first comes into existence as a possible subject of interstate commerce already charged with the obligation created by the statute. The answer to this suggestion is that the commerce clause is not confined in its operation to commodities in transit in interstate commerce. It renders void legislation that would forbid the putting of property into interstate commerce or the acquisition of property for delivery in fulfillment of interstate commerce contracts just as effectively as it renders void legislation interfering with the transportation of goods after they are in interstate commerce. The State may put many restrictions upon the production of gas, or on the manufacture of beer or on any other subjects of production and manufacture; it may in the exercise of its police powers prohibit altogether the manufacture of things deemed noxious and any resulting effect on interstate commerce is indirect and incidential; but if the State permits the production, or creation, or acquisition of a subject of commerce, it cannot limit such subject of commerce to intrastate commerce. It can no more by discriminatory legislation forbid the creation of a subject of interstate commerce than it can forbid its transportation. *Ohio Oil Co.* v. *Indiana,* 177 U. S. 190; *Geer* v. *Connecticut,* 161 U. S. 519.

The bill of complaint in each case presents a cause justiciable between the two States parties to the action.

Pennsylvania and Ohio sue to protect themselves and their citizens in the enjoyment of the natural gas service that has grown up under the free flow of interstate commerce against interference with that service by the wrongful act of West Virginia. The right they assert is their right and the rights of their citizens to receive natural gas that would come to them in the ordinary course of

interstate commerce following its accustomed channels and unimpeded by any illegal obstruction. They do not set up any title by contract or grant in the gas produced in West Virginia but each State rests its cause on the fact that there has grown up and is established a definite course of interstate commerce through the pipe line companies of West Virginia and the distributing systems in the plaintiff State, on which its institutions and inhabitants are dependent for their supply of fuel and which course of interstate commerce is threatened by the act of West Virginia. In a broad sense, the unlawful obstruction of interstate commerce threatened by West Virginia would constitute a nuisance, which each State has the right to have enjoined. The cause presents all the elements necessary to sustain an ordinary cause of action between individuals, to wit, a wrongful and unlawful act and special injury. The relation of cause and effect between the act threatened by West Virginia and the injury to the plaintiff States and their citizens would be immediate, whether the gas passes from its source in West Virginia to the consumers in the plaintiff States through the lines of a single company, or successively through the lines of several companies, and whatever the arrangements may be between the successive companies through whose lines it may pass. It is sufficient that the course of the gas from its source in West Virginia to the consumers in the plaintiff States is so fixed by existing facilities, business arrangements, contracts and custom as to establish the relation of cause and effect between the threatened interference on the part of West Virginia and the apprehended injury to the plaintiff States and their citizens.

The cause falls within the class of controversies justiciable between States.

The decisions indicate that the jurisdiction embraces every controversy between States determinable by any

rule which may be deemed to fix
other words, every controversy
n independent States might be
and even controversies which

, 180 U. S. 208; 200 U. S.
do, 185 U. S. 125; 206 U. S. 46;
Tennessee Copper Co., 206 U. S. 230; 237 U. S.
New York v. *New Jersey*, 256 U. S. 296.

The controversies between Pennsylvania and West Virginia and between Ohio and West Virginia are clearly justiciable within the principles so established. In each case there is a controversy between two States, involving a grievance asserted by one against the other. The asserted grievance is that the State complained against is

threatening to do something that is forbidden by the Constitution governing the relations between the States and which will cause injury to the complaining State and its citizens. The Constitution itself and a long line of decisions interpreting the meaning of the Commerce Clause furnish the rules of law for the determination of the controversy.

To the suggestion that the suit cannot be maintained because it is brought to redress the grievance of individual citizens there are two answers: (1) Each of the plaintiff States sues as well in its own behalf in the capacity of owner and proprietor of its institutions, etc., and guardian of their inmates as in the capacity of representative or *parens patriæ* of its citizens. (2) In suing in a representative capacity the States do not represent individual citizens but the consuming public served by the public utilities companies that derive their gas from West Virginia.

While a State may not sue in this Court to promote purely private interests, it may properly sue to protect the health and comfort of its inhabitants and the value of their property, though in its sovereign capacity or in its capacity as proprietor it has no interest in the controversy, and though the danger it seeks to avert does not threaten all of its inhabitants, or does not threaten all of them in like degree. *Missouri* v. *Illinois*, 180 U. S. 208; 200 U. S. 496; *Kansas* v. *Colorado*, 185 U. S. 125; 206 U. S. 46; *New York* v. *New Jersey*, 256 U. S. 296. The line between the cases in which a State may bring suit as representative of its citizens and the cases in which it will be regarded as not a real party to the controversy is not hard to find. A State may not use its power of eminent domain or its taxing power for the benefit of an individual or for the benefit of defined individuals, however numerous. It may, however, use its power of eminent domain and its taxing power for the benefit of the public. But

the public does not mean necessarily all the people. So a State may maintain a suit for the benefit of the public though the public immediately concerned is less than all. The same principles that determine in other fields of action what are public and what are private purposes will serve to determine the cases in which a State may sue as representative of its citizens. Pennsylvania and Ohio sue for the benefit of all their citizens who are or may be dependent on the public service companies obtaining their supplies of natural gas from West Virginia. These citizens constitute the same public in whose behalf these States authorize their public service companies to exercise the power of eminent domain, and in whose behalf they assume the right to regulate the rates and service of the public service companies. This great class, including a great proportion of the population of each State, must be regarded not as the mere sum of the individuals of which it is at any given time composed, but as a part or factor of the community itself.

It is too late to question the right of a State to maintain a suit in this Court based on the Commerce Clause of the Constitution to protect its own proprietary rights. *Pennsylvania* v. *Wheeling and Belmont Bridge Co.*, 9 How. 647; 11 How. 528; 13 How. 518; 18 How. 421.

The Commerce Clause establishes, in the absence of congressional action to the contrary, the right to free trade between the States. It is a right which is the subject no less of judicial than of legislative protection. Whenever it is interfered with by state action, those injured, whether individuals or a State in its proprietary capacity, are entitled to resort to the courts for relief. In addition a State may sue as the representative of her citizens when there is special injury done or threatened to the special public whose interest and welfare it is the function of the State to safeguard.

The law of West Virginia is wrongful; through its effect upon an established and definite course of interstate

commerce it reaches into the territory of the plaintiff States, and there does injury to the plaintiff States and their citizens. The liability of West Virginia to suit rests upon the same principle declared in *Kansas* v. *Colorado*, 206 U. S. 46, 97, 98.

Rhode Island v. *Massachusetts*, 12 Pet. 657, determined for all time that controversies between States are not excluded from the cognizance of this Court because they involve questions that are political in their nature, and *Missouri* v. *Illinois*, 180 U. S. 208; 200 U. S. 496; *Kansas* v. *Colorado*, 185 U. S. 125; 206 U. S. 46, and *New York* v. *New Jersey*, 256 U. S. 296, are illustrations of the fact that a State is not immune from suit on account of the extra-territorial effect of its own laws, because such laws also immediately affect persons or property within its own jurisdiction, and have a final object which if sought to be attained by lawful means would be a proper aim for state legislation.

These suits are not prematurely brought.

Mr. George M. Hoffheimer, with whom *Mr. Edward T. England*, Attorney General of the State of West Virginia, *Mr. Fred O. Blue*, *Mr. Philip P. Steptoe* and *Mr. William S. John* were on the briefs, for defendant.[3]

In neither case does the bill present a cause justiciable between the two States.

Whether a suit is against a State, in the constitutional sense, is a matter of substance and effect, not to be determined by the names of the parties.

Conceding that no hard and fast line has yet been drawn delimiting the justiciable and the non-justiciable between States, *Missouri* v. *Illinois*, 180 U. S. 208, 241, we think that a brief survey of the cases and the mode of

[3] At the first hearing the case was argued on behalf of the State of West Virginia by *Messrs. Hoffheimer*, *Blue* and *Steptoe*. At the second hearing it was argued by *Messrs. Blue* and *Hoffheimer*.

DARK PAGE BLEE

their disposition, *Wisconsin* v. *Pelican Ins. Co.*, 127 U. S. 265, 287, 297, readily marks the present litigation as falling within the latter category. It is not the "subject of judicial cognizance," *Hans* v. *Louisiana*, 134 U. S. 1, 15; *Louisiana* v. *Texas*, 176 U. S. 1, 15; *Missouri* v. *Illinois*, 180 U. S. 208, 233, or "susceptible of judicial solution." *Louisiana* v. *Texas*, 176 U. S. 1, 18, 22; *Missouri* v. *Illinois*, 180 U. S. 208, 233, 234.

Of the cases of which this Court has taken original jurisdiction the most numerous have been those relating to the boundaries or territorial integrity.

In another class of cases jurisdiction was exercised because of a nuisance by the invasion of the plaintiff States by sewerage or disease germs polluting their waters and soil, to the injury, actual or threatened, of the lives, health and property of the citizens of those States. Examples are *Missouri* v. *Illinois*, 180 U. S. 208; 200 U. S. 496; and *New York* v. *New Jersey*, 256 U. S. 296. Falling within the same category is *Georgia* v. *Tennessee Copper Co.*, 206 U. S. 230.

These nuisance cases are identical in principle with the boundary cases. The sovereign rights and territorial integrity of a State may be as effectually invaded or infringed by the casting or precipitation thereon of intangible, but nevertheless noxious, bacteria or gases as by visible seizure of its lands. *Kansas* v. *Colorado*, 185 U. S. 125; 206 U. S. 46, was similar in aspect. In *Pennsylvania* v. *Wheeling and Belmont Bridge Co.*, 13 How. 518, the suit was treated "as brought to protect the property of the State."

Another class of cases has been those of contract,—of indebtedness from one State to another, or to the creditors of the latter, from the debts to whom the plaintiff was entitled to exoneration at the hands of the defendant. *South Dakota* v. *North Carolina*, 192 U. S. 286; *Virginia* v. *West Virginia*, 206 U. S. 290; 220 U. S. 1; 238 U. S. 202;

THRU

United States v. *North Carolina*, 136 U. S. 211; *United States* v. *Michigan*, 190 U. S. 379. Comparison of *South Dakota* v. *North Carolina*, and *Virginia* v. *West Virginia*, with *New Hampshire* v. *Louisiana*, 108 U. S. 76, indicates that jurisdiction in the former cases was predicated upon the property rights in the plaintiff States or the protection of their corporate credit.

But we have found no instance in which this Court has entertained original jurisdiction predicated solely upon the right of the plaintiff State as *parens patriae*, or as the representative of its citizens, to enforce their private grievances or to protect their private claims arising out of the enforcement of the law of another State, in the absence of a special or additional right of the character above indicated in the plaintiff State itself. Vide, *New Hampshire* v. *Louisiana*, 108 U. S. 76; *New York* v. *Louisiana*, 108 U. S. 76; *Louisiana* v. *Texas*, 176 U. S. 1; *Oklahoma* v. *Atchison, Topeka & Santa Fe Ry. Co.*, 220 U. S. 277; *Oklahoma* v. *Gulf, Colorado & Santa Fe Ry. Co.*, 220 U. S. 290. And see: *North Dakota* v. *Chicago & N. W. Ry. Co.*, 257 U. S. 485; *Pennsylvania* v. *Wheeling Bridge Co.*, 13 How. 518, 559; *Cherokee Nation* v. *Georgia*, 5 Pet. 1, 20.

From the foregoing it is evident that a suit by one State against another cannot be predicated upon the mere relation of *parens patriae;* that something more than a willingness or desire to vindicate the supposed rights of the plaintiff's citizens is requisite; and that the multiplicity or unanimity of complaints by the citizens of the one State against the acts of the other cannot, by a process of aggregation or combination, be erected into a controversy between States or present a cause justiciable between such States.

It follows that no justiciable cause arises by reason of the alleged threatened deprivation or shortage of gas supply to the inhabitants of the plaintiff States. And

much the more is this true in respect of the alleged infringement of constitutional guaranties of companies engaged in gas transportation, or of citizens of the plaintiff States alleged to have made investments in West Virginia, "since it is a well settled rule of this Court that it only hears objections to the constitutionality of a law from those who are affected by its alleged unconstitutionality in the features complained of." "The plaintiffs must show that their own rights are infringed." *Jeffrey Mfg. Co.* v. *Blagg*, 235 U. S. 571; *New York Central R. R. Co.* v. *White*, 243 U. S. 188; *Plymouth Coal Co.* v. *Pennsylvania*, 232 U. S. 531; *Arkadelphia Co.* v. *St. Louis S. W. Ry. Co.*, 249 U. S. 134; *Dahnke-Walker Co.* v. *Bondurant*, 257 U. S. 282.

If original jurisdiction is attempted to be sustained because of the supply of West Virginia gas to municipalities or public institutions in Ohio and Pennsylvania, the jurisdiction is equally negatived by the above cited cases. *Louisiana* v. *Texas*, 176 U. S. 1, 18; *Missouri* v. *Illinois*, 180 U. S. 208, 249; *Kansas* v. *Colorado*, 185 U. S. 125, 145.

The alleged right to West Virginia gas claimed by the plaintiffs for themselves and their inhabitants, if such right exists, is a right, not against the State of West Virginia, but against the gas companies to whom the plaintiffs and their inhabitants look for their gas supply. If the right exists against the West Virginia public service gas companies by whom the gas is furnished, either directly or remotely, it is manifest that the right can rise no higher than that of the companies themselves. As against the State of West Virginia the claim in substance is, not that West Virginia has directed its action against the plaintiffs, but that by the exercise of governmental power against the public service companies within the boundaries of West Virginia, the plaintiffs are, or may be, affected consequentially.

Whether the West Virginia companies shall furnish gas to or for the plaintiffs, is at most a matter of controversy between such companies and the plaintiffs, and not a controversy between the plaintiffs and West Virginia, within the meaning of the Constitution; and the question whether West Virginia may validly regulate its public service corporations in the manner attempted by the statute in litigation, involves a controversy between West Virginia and such corporations, and is not a controversy between States within the meaning of the Constitution.

The suits were not necessarily premature merely because no action was taken by West Virginia or its Public Service Commission under the statute. The suits were premature in the sense that, at the time of their commencement, the practical operation of the statute had not been tested, and no threatened injury of serious magnitude was clearly or convincingly proved, or susceptible of clear or convincing proof. *Grand Trunk Ry. Co.* v. *Michigan Railroad Comm.*, 231 U. S. 457; *Kansas* v. *Colorado*, 206 U. S. 46, 117; *Missouri* v. *Illinois*, 200 U. S. 496, 521; *New York* v. *New Jersey*, 256 U. S. 296; and other cases.

These cases must be considered in the light of the peculiar nature of gas and of the gas companies, and the exceptional rules of law applicable thereto. *Brown* v. *Spilman*, 155 U. S. 665; *Ohio Oil Co.* v. *Indiana*, 177 U. S. 190; *Walls* v. *Midland Carbon Co.*, 254 U. S. 300; *Westmoreland Gas Co.* v. *Dewit*, 130 Pa. St. 235; *Bacon* v. *Walker*, 204 U. S. 311.

The statute does no more than to declare, and to prescribe appropriate procedure for the enforcement of, the obligation of each public service gas company to furnish reasonably adequate service within reasonable territorial limits. It does not require unreasonable service or unreasonable extension by any company.

The public service gas companies were and are obligated, irrespective of the statute in contest, to furnish

DARK PAGE BLEE

West Virginia consumers a reasonably adequate supply of gas, and they cannot lawfully abandon or disable themselves from performing the obligation.

It was within the right and power of the State to regulate the gas companies. The right and power are based on: (1) The implied condition accompanying the grant of rights and privileges to the companies; (2) the reserved power to alter or repeal corporation charters and laws; and (3) the police power.

The statute is a legitimate exercise of the police power.

From the social and economic dependency on gas in reasonably adequate volume, the domestic and industrial evils resulting from the lack of such service, and the "fact accomplished" that there is now, and for several years has been, insufficient West Virginia gas to permit at once the full measure of service in West Virginia and the other States to which it was and is transported, admittedly there must be, in the nature of things, a limitation upon the service and consumption of gas, in respect of either the purposes of the consumption or the territorial area of supply.

In this situation, it was and is incumbent on some one to formulate and enforce suitable regulations. And the Congress not having acted, even in respect of the interstate transportation of gas (Act of June 18, 1910, c. 309, § 7, 36 Stat. 539, 544; *Pennsylvania Gas Co.* v. *Public Service Commission*, 252 U. S. 23, 30), the exercise of a regulatory power must emanate either from the State or from the gas companies.

As to the police power over the general subject, see *Ohio Oil Co.* v. *Indiana*, 177 U. S. 190; *Walls* v. *Midland Carbon Co.*, 254 U. S. 300; *Lindsley* v. *Natural Carbonic Gas Co.*, 220 U. S. 61.

The police power is "one of the most essential of powers, at times the most insistent, and always one of the least limitable of the powers of government." *District of*

D THRU

Columbia v. *Brooke*, 214 U. S. 138, 149. As said in *Chicago & Alton R. R. Co.* v. *Tranbarger*, 238 U. S. 66, 77, "this power can neither be abdicated nor bargained away, and is inalienable even by express grant; and . . . all contract and property rights are held subject to its fair exercise. *Atlantic Coast Line R. R. Co.* v. *Goldsboro*, 232 U. S. 548."

The public welfare to which the protection of the power extends, embraces not only public health, morals, and safety, but also the public convenience and the general prosperity. *Chicago, Burlington & Quincy R. R. Co.* v. *Illinois*, 200 U. S. 561; *Bacon* v. *Walker*, 204 U. S. 311; *Eubank* v. *Richmond*, 226 U. S. 137; *Sligh* v. *Kirkwood*, 237 U. S. 52; *Chicago & Alton R. R. Co.* v. *Tranbarger*, 238 U. S. 66.

The scope of this power, and its flexibility in meeting and dealing with modern conditions, are illustrated in *German Alliance Ins. Co.* v. *Lewis*, 233 U. S. 389, where state regulation of fire insurance rates was upheld; and, again, in *Hall* v. *Geiger-Jones Co.*, 242 U. S. 539; *Caldwell* v. *Sioux Falls Stockyards Co.*, 242 U. S. 599; and *Merrick* v. *Halsey*, 242 U. S. 568, upholding "Blue Sky laws."

Measures to safeguard the business prosperity of the State are exampled by the prohibition of monopolies and combinations in restraint of trade, *Waters-Pierce Oil Co.* v. *Texas*, 212 U. S. 86; *Grenada Lumber Co.* v. *Mississippi*, 217 U. S. 433; *Standard Oil Co.* v. *Missouri*, 224 U. S. 270; *International Harvester Co.* v. *Kentucky*, 234 U. S. 199; of unfair competition, *Central Lumber Co.* v. *South Dakota*, 226 U. S. 157; and of the sale or shipment of products detrimental to the business reputation of an important industry, *Sligh* v. *Kirkwood*, 237 U. S. 50.

If it be true that in any instance the State may legislate in the interest of the health and general business prosperity of its inhabitants, it must follow that health may be preserved against injury by cold as well as by disease

or adulteration of food, and that the industry of the State may be protected as well from destruction by deprivation of necessary fuel as from mere injury by practices hurtful to its trade or reputation. Upon this ground, aside from any peculiar relations or obligations affecting public service corporations, it is plain that the State may legislate in defense of its people and its industries in prevention of a real and present danger arising from deprivation of gas.

Nor is it an answer that the State did not interpose earlier. While the gas supply was adequate there was no occasion for the exertion of the State's power. And regardless of this, the delay did not detract from the power. *German Alliance Ins. Co.* v. *Lewis,* 233 U. S. 389; *Thornton* v. *Duffy,* 254 U. S. 361, 369.

Assuming, as we have already shown, that the supply of industrial gas is, by the holding out by the gas companies of their readiness and willingness to furnish such gas (subject only to the needs of domestic consumers) and by the settled law of West Virginia, a public service, *Clarksburg Light Co.* v. *Public Service Comm.,* 84 W. Va. 638; *Kelly Axe Mfg. Co.* v. *Public Service Comm.,* 87 W. Va. 105; *Mill Creek Coal Co.* v. *Public Service Comm.,* 84 W. Va. 662; there is no distinction in principle between that service and the domestic service. Between the supply of gas for domestic purposes and for industrial use there is but one difference. The service differs only in degree of necessity because the hardship is personally more acute in case of failure of the domestic supply than where the failure pertains to the industrial supply. This, of course, constitutes a sufficient basis for classification, preferential to the domestic consumer. The uses to which gas may be applied in West Virginia was and is a local question for the determination of the legislature of that State; and the objections of the plaintiffs go, as said in *Ohio Oil Co.* v. *Indiana,* 177 U. S. 190, 211, " not to the

power to make the regulations, but to their wisdom." *Lindsley* v. *Nat. Carbonic Gas Co.*, 220 U. S. 61, 76, 77; *Walls* v. *Midland Carbon Co.*, 254 U. S. 300.

As to forebodings that the enforcement of the statute as to industrial consumers will absorb all the West Virginia gas, these are wholly speculative, and "mere prophecies which are ventured." *Tanner* v. *Little*, 240 U. S. 369, 385.

If a decision of the Commission as to reasonable adequacy, in respect of either volume or economy of consumption, is deemed erroneous, the gas companies will have their day in court. Such questions can be answered when they arise.

The burden being on the plaintiffs to show a violation of constitutional guaranties there can be no declaration of unconstitutionality upon mere loose opinion or conjecture.

The plaintiffs claim through the gas companies, and have no higher right or title to relief.

The statute works no impairment of obligation of contracts, nor does it deprive of property without due process of law, nor deny equal protection of the laws.

If the State may validly compel the rendition of adequate service to its people by public service corporations operating within its borders, the State's authority cannot be defeated by expenditures in aid of evasion of that service, or contracts or arrangements having that result.

The contention that the seven companies engaged in business, and that their pipe lines and pump stations were constructed and are used as facilities for the service of consumers in foreign States, is fallacious.

If fairly compensated, the gas companies are not entitled to refuse to West Virginia an adequate service merely because a greater remuneration can be obtained elsewhere.

Whatever may be the result in reference to property devoted to the service of consumers in other States or to

contracts made with them, or consequentially affecting their service, the constitutional power of West Virginia, nevertheless, remains clear and certain. The expenditures for that property and those contracts were made subject to the police power of the State and find no protection in the constitutional provisions against the impairment of the obligation of a contract or the deprivation of property without due process of law or any other guaranty of the State or Federal Constitution. *Chicago, Burlington & Quincy R. R. Co.* v. *McGuire*, 219 U. S. 549; *Chicago & Alton R. R. Co.* v. *Tranbarger*, 238 U. S. 67; *Hudson County Water Co.* v. *McCarter*, 209 U. S. 348; *Rast* v. *Van Deman & Lewis Co.*, 240 U. S. 342; *Union Dry Goods Co.* v. *Georgia Public Service Corp.*, 248 U. S. 372; *Erie R. R. Co.* v. *Board of Public Utility Commissioners*, 254 U. S. 394.

What has been said above applies equally to the claim of abridgment of privileges and immunities of citizens of other States or of the United States. *Barbier* v. *Connolly*, 113 U. S. 27; *Western Union Tel. Co.* v. *Commercial Mill Co.*, 218 U. S. 406.

The plaintiff States are not citizens of any State or of the United States, *Stone* v. *South Carolina*, 117 U. S. 430; *Postal Tel. Cable Co.* v. *Alabama*, 155 U. S. 487; *Title Guaranty & Surety Co.* v. *Idaho*, 240 U. S. 136; and the gas companies are not citizens within the privileges and immunities clauses of the Federal Constitution. *Blake* v. *McClung*, 172 U. S. 239; *Western Turf Association* v. *Greenberg*, 204 U. S. 359; *Selover* v. *Walsh*, 226 U. S. 112.

The statute does not regulate interstate commerce.

We think that to the objection, based on the Commerce Clause, there are several answers:

(1) The West Virginia public service corporations have no right to engage in interstate commerce, except in subordination to the performance of their duties to the State;

(2) If interstate commerce is affected, the effect is only indirect and incidental, and therefore, in the absence of congressional enactment, the effect is not violative of the Commerce Clause; and

(3) The duties of these corporations to the State in respect of their gas exist not only during interstate commerce therein, but also before the entry of the gas into that commerce; and the gas enters interstate commerce subject to those duties and the operation of the statute.

The question here is, not whether a State may prohibit or restrict the transportation of natural gas from its territory into another State, but whether the State may require companies—owing to its people the obligation of adequate service—to perform that service, even though the performance may involve the intrastate consumption of gas which otherwise might be transported to another State.

If the gas companies owe a duty to the people of West Virginia, the performance of that duty cannot be evaded merely because they prefer to enter into interstate commerce rather than to perform it. *Hudson County Water Co.* v. *McCarter*, 209 U. S. 348; *Manufacturers Light Co.* v. *Ott*, 215 Fed. 940, 951; *South Covington Ry. Co.* v. *Kentucky*, 252 U. S. 399; *Erie R. R. Co.* v. *Public Commissioners*, 254 U. S. 394.

If it be true, that a gas company, or its business, or the commodity in which it deals, is affected by the public interest, precedents are not wanting to show that the principles relating to interstate commerce in ordinary goods and chattels are inapplicable. *Geer* v. *Connecticut*, 161 U. S. 519; *New York* v. *Hesterberg*, 211 U. S. 31.

It is no answer to what has been said that if a State can compel a supply of gas to its citizens and thereby prevent its exportation to another State, the other State may

impose a similar restriction on the interstate shipment of corn, wheat, lumber or other commodities. Those commodities lack entirely the exhaustibility and other peculiarities of gas. Until their production or distribution shall become affected with a public interest in the sense that the gas business is so affected, no such case will occur. *Tanner* v. *Little*, 240 U. S. 369; *Noble State Bank* v. *Haskell*, 219 U. S. 104; *German Alliance Ins. Co.* v. *Lewis*, 233 U. S. 389.

In *West* v. *Kansas Natural Gas Co.*, 221 U. S. 229, neither the corporations and individuals who were plaintiffs, nor their gas, could be said to be affected with a public use, since the persons themselves were not engaged in the business of public gas supply in Oklahoma, and their gas was required by no present necessity in that State. The Oklahoma statute was not in substance, or even ostensibly, enacted in regulation of a public utility, so as to render merely indirect or incidental any decrease in the volume of gas transported out of the State. On the contrary, the principal and direct design of the Oklahoma statute was to prevent exportation of gas. *Haskell* v. *Kansas Natural Gas Co.*, 224 U. S. 217, 221.

The later decisions in *Public Utilities Comm.* v. *Landon*, 249 U. S. 236, and *Pennsylvania Gas Co.* v. *Public Service Comm.*, 252 U. S. 23, as well as *Franke* v. *Johnstown Fuel Supply Co.*, 70 Pa. Super. Ct. 446, recognize the local character of gas supply and its regulation, even though the gas has been in interstate commerce.

Interference, if any, with interstate commerce is indirect and incidental. The direct purpose of the law is to compel the performance of a public duty by those obligated to perform it, and by a legitimate exercise of the police power to protect against the injury to persons and property consequent on the failure to perform the public duty. Conceivably, interstate commerce might not be affected at all, and this is presently true, if, as the evi-

dence indicates, the gas companies hold in reserve sufficient territory to supply the deficit without subtracting from the quantity of gas transported to other States. But even if the quantity of gas entering into interstate commerce should be diminished as a consequence of the statute, the authorities well establish that the Commerce Clause would not stand in the way. To argue to the contrary would be to contend that the State would stand powerless to relieve its citizens from the most flagrant discrimination, or even against a total deprivation of gas, at the hands of its public service corporations, which, for gain, preferred to serve consumers in other States.

The validity of state legislation incidentally or indirectly affecting interstate commerce, even though it diverts to the local need commodities or facilities which otherwise might go into or aid interstate commerce, has repeatedly been upheld. *Minnesota Rate Cases*, 230 U. S. 352; *Kidd* v. *Pearson*, 128 U. S. 1; *Plumley* v. *Massachusetts*, 155 U. S. 461; *Capital City Dairy Co.* v. *Ohio*, 183 U. S. 238; *Geer* v. *Connecticut*, 161 U. S. 519; *New York* v. *Hesterberg*, 211 U. S. 31; *Hudson County Water Co.* v. *McCarter*, 209 U. S. 348; *Sligh* v. *Kirkwood*, 237 U. S. 52; *Jamieson* v. *Indiana Natural Gas Co.*, 128 Ind. 555.

The police power of the State embraces, to this extent of indirect or incidental interference, commodities which are actually in interstate commerce. The fact that they are in such commerce does not necessarily withdraw them from the operation of reasonable state laws. The repeatedly held valid state inspection and labelling laws, designed to promote public health and safety, though applied to commodities in original packages, are a commonplace example. The rule is the same as to the instrumentalities of interstate commerce.

Though interstate commerce be incidentally or indirectly affected, the police power of the State includes the

authority to compel a reasonably adequate service to the communities within it at the hands of a public service corporation, though it is engaged in interstate commerce; and up to the point where reasonably adequate local facilities are afforded by a public service corporation, the State may exercise a free hand. Until that point is passed, interstate commerce is not unconstitutionally infringed. *Chicago, Burlington & Quincy R. R. Co.* v. *Railroad Commission*, 237 U. S. 220; *Mobile, etc. R. R. Co.* v. *Mississippi*, 210 U. S. 187; *Gladson* v. *Minnesota*, 166 U. S. 427; *Lake Shore, etc. Ry. Co.* v. *Ohio*, 173 U. S. 285; *Wisconsin, etc. R. R. Co.* v. *Jacobson*, 179 U. S. 287; *Atlantic Coast Line R. R. Co.* v. *North Carolina Corp. Comm.*, 206 U. S. 1; *Missouri Pacific Ry. Co.* v. *Larabee Flour Mills Co.*, 211 U. S. 612; *Missouri Pacific Ry. Co.* v. *Kansas*, 216 U. S. 262; *Washington* v. *Fairchild*, 224 U. S. 510; *Grand Trunk Ry. Co.* v. *Michigan R. R. Comm.*, 231 U. S. 457; *Chicago, M. & St. P. Ry. Co.* v. *Iowa*, 233 U. S. 334; *Michigan Central R. R. Co.* v. *Railroad Comm.*, 236 U. S. 615; *Illinois Central R. R. Co.* v. *Mulberry Hill Coal Co.*, 238 U. S. 275; *Seaboard Air Line Ry. Co.* v. *Railroad Comm.*, 240 U. S. 324.

But the objection that interstate commerce is interfered with, fails entirely when the transaction is analyzed in point of time. The duty of reasonably adequate service rests on the gas company in its character of a public service corporation. It exists prior to and contemporaneously with its acquisition of the gas, wherewith it is to perform its duty.

That the production of gas, or coal, or any other commodity, though intended for interstate commerce, is not interstate commerce, is now settled. See *Heisler* v. *Thomas Colliery Co.*, 260 U. S. 245; *Hammer* v. *Dagenhart*, 247 U. S. 251; *Delaware, Lackawanna & Western R. R. Co.* v. *Yurkonis*, 238 U. S. 439; *United Mine Workers* v. *Coronado Coal Co.*, 259 U. S. 344; *Public Utilities*

Co. v. *Landon*, 249 U. S. 236; *Pennsylvania Gas Co.* v. *Public Service Comm.*, 252 U. S. 23; *Franke* v. *Johnstown Fuel Supply Co.*, 70 Pa. Super. Ct. 446.

Before gas can enter into interstate commerce, it must become property susceptible of such commerce. Until it is reduced to possession by being brought into the well or to the surface of the earth, there is no property in it, save as a qualified right thereto as part of the land. *Walls* v. *Midland Carbon Co.*, 254 U. S. 300; *Ohio Oil Co.* v. *Indiana*, 177 U. S. 190; *West* v. *Kansas Natural Gas Co.*, 221 U. S. 229; *Peoples Gas Co.* v. *Tyner*, 131 Ind. 281; *Hall* v. *Vernon*, 47 W. Va. 295.

Until reduced to possession, the gas is part of the real estate. *Brown* v. *Spilman*, 155 U. S. 665; *Carter* v. *Tyler County Court*, 45 W. Va. 806; *Preston* v. *White*, 57 W. Va. 278; *Warren* v. *Boggs*, 83 W. Va. 89; and other cases.

It follows, therefore, that at the very moment when gas produced by or for a public service gas company becomes property, and the subject of commerce, it finds the gas company incumbered with the obligation of public service, and subject to the statute. This is true, even though the gas is straightway discharged into the pipe line. It is the more clearly true of those wells which are shut in either upon completion of the drilling or in order to rest them after a period of use.

In this aspect there is no distinction between the gas produced by the gas company itself and that purchased from other producers. *Coe* v. *Errol*, 116 U. S. 517; *Heisler* v. *Thomas Colliery Co.*, 260 U. S. 245; *Champlain Realty Co.* v. *Brattleboro*, 260 U. S. 366.

Hallanan v. *United Fuel Gas Co.*, 257 U. S. 277, did not directly involve the question of adequacy of public service in West Virginia by the United Fuel Gas Company. We think that with the added element of the duty of public service on the part of the owner of the pipe line, the pipe

line is properly viewed, not only as an instrumentality of transportation, but also as a reservoir for the distribution of the gas, both that supplied within the State and that destined for other States. And in this light a situation is presented more nearly like that involved in *Champlain Realty Co.* v. *Brattleboro,* 260 U. S. 366; *Bacon* v. *Illinois,* 227 U. S. 504; *General Oil Co.* v. *Crain,* 209 U. S. 211; *American Steel & Wire Co.* v. *Speed,* 192 U. S. 500; *Diamond Match Co.* v. *Ontonagon,* 188 U. S. 82.

We think, too, the fact that in the *Hallanan Case,* much the greater part of the gas was destined to other States, as was the condition of most of the grain in *Lemke* v. *Farmers Grain Co.,* 258 U. S. 50, creates a distinction. These cases may apply when most of a commodity is to be taken to another State. But the question remains whether they apply to gas in a pipe line, most of which is intended for consumption within the State; and whether they will govern even in the ultimate time when by reason of the continuing depletion of the gas ninety-nine per cent. of the gas in a particular pipe line remains in West Virginia and one per cent. goes elsewhere.

Mr. Justice Van Devanter delivered the opinion of the Court.

These are suits, one by the Commonwealth of Pennsylvania and the other by the State of Ohio, to enjoin the State of West Virginia from enforcing an act passed by her legislature (c. 71, Acts 1919) which the complainants believe will largely curtail or cut off the supply of natural gas heretofore and now carried by pipe lines from West Virginia into their territory and there sold and used for fuel and lighting purposes. Although distinct, the suits are so much alike that they have been presented at the bar substantially as a single case. They will be dealt with accordingly in this opinion.

The West Virginia Act is set forth at length in the margin.[1] The complainants challenge its validity on the ground that it directly interferes with interstate commerce and therefore contravenes the commerce clause of

[1] The Act was passed February 10, 1919, went into effect May 11, 1919, and reads as follows:

"Section 1. That every person engaged in furnishing, or required by law (whether statutory or common law) to furnish, natural gas for public use, or for the use of the public, or any part of the public, whether for domestic, industrial or other consumption, within this state, shall to the extent of his supply of said gas produced in this state, (whether produced by such person or by any other person), furnish for public use within the territory of this state, and for the use of the public and every part of the public within the territory of this state, in or from which such gas is produced, or through which said gas is transported, or which is served by such person, a supply of natural gas reasonably adequate for the purposes, whether domestic, industrial or otherwise, for which natural gas is consumed or desired to be consumed by the public, or any part of the public, within said territory in this state, and for which said consumer or consumers therein shall apply and be ready and willing to make payment at lawful rates.

"Sec. 2. That in case any person engaged in furnishing, or required by law (whether statutory or common law) to furnish, natural gas for public use within this state, or for the use of the public or any part of the public within this state, shall have a production or supply of natural gas which is, or probably will be, insufficient to furnish for such use, (for the purposes, whether domestic, industrial or otherwise, for which natural gas is consumed by the public or any part of the public), within the territory in this state served by such person, then and in that event the public service commission shall have authority, and the same is hereby conferred on it, upon the application of any such person or any of his consumers within this state and after due hearing upon notice and proof to the satisfaction of the commission that public convenience and necessity so require, to order any other person engaged in furnishing, or required by law (whether statutory or common law) to furnish, natural gas for public use within this state, and producing or furnishing natural gas for public use in said territory or transporting the same through said territory, to furnish to such person having such in-

the Constitution of the United States; and they rest their right to relief on the grounds that to enforce the act will subject them to irreparable injury in respect of many of their public institutions and governmental agencies, which

---

sufficient production or supply, natural gas for the purpose of supplying such deficiency, at and during such times, upon and at such just and reasonable terms, conditions and rates, and in such amounts, as the commission shall prescribe. And whenever, after such hearing upon notice and proof, the commission shall determine that public convenience and necessity so require, the commission shall have authority to provide for and compel the establishment of a reasonable physical connection or connections between the lines, pipes or conduits of such person having such excess supply of gas and the lines, pipes or conduits of the person having such deficiency of supply, and to require the laying and construction of such reasonable extensions of lines, pipes or conduits as may be necessary for the establishment of such physical connection or connections, and to ascertain, determine and fix the just and reasonable terms and conditions of such connection or connections, including just and reasonable rules and regulations and provisions for the payment of the costs and expense of making the same or for the apportionment of such cost and expense as may appear just and reasonable. *Provided, however,* that no person shall, by virtue of this section, be ordered to furnish natural gas to any other person so engaged in furnishing, or required by law to furnish, natural gas for public use, except to the extent that the person so ordered to furnish natural gas shall, at the time, have a production or supply of natural gas in excess of the quantity sufficient to furnish a reasonably adequate supply to his consumers within this state; nor shall any person, by virtue of this section, be ordered to furnish natural gas to any other person so engaged in furnishing or required by law to furnish, natural gas for public use in a territory within this state, if and when the said person having said excess shall, to the extent of such excess, be ready and willing to furnish, and within such time as the commission shall prescribe shall actually furnish, to the consumers within said territory a reasonably adequate supply of natural gas.

"Sec. 3. That insofar as the same shall not be in conflict with this act, all of the authority, powers, jurisdiction and duties conferred and imposed on the public service commission by the act entitled, 'An act to create a public service commission and to prescribe its powers

long have been and now are using this gas, and will subject them to further and incalculable injury in that (a) it will imperil the health and comfort of thousands of their people who use the gas in their homes and are largely

---

and duties, and to prescribe penalties for the violations of the provisions of this act,' passed February twenty-first, one thousand nine hundred and thirteen, as amended by the act entitled, 'An act to amend and re-enact sections one, two, three, four, five, nine, ten, fourteen, fifteen and twenty-two, of chapter nine of the acts of one thousand nine hundred and thirteen, creating a public service commission, prescribing its powers and duties, and penalties for violation of the provisions of said chapter, and to add thereto six sections to be known as sections twenty-three, twenty-four, twenty-five, twenty-six, twenty-seven, twenty-eight, enlarging the powers and duties of said public service commission, prescribing additional penalties and giving to the commission power to punish for contempt,' passed February tenth, one thousand nine hundred and fifteen, are hereby conferred and imposed on the public service commission in respect to the subject matter of this act, or any part thereof.

"Sec. 4. That in case of violation of any provision of this act any person aggrieved or affected thereby may complain thereof to the public service commission in like manner, and thereupon such procedure shall be had, as is provided in respect to other complaints to or before said commission, and all such proceedings and remedies may be taken or had for the enforcement or review of the order or orders of said commission, and for the punishment of the violation of such order or orders, as are provided by law in respect to other orders of said commission. In case of the violation of any provisions of this act, the public service commission, or any person aggrieved or affected by such violation, in his own name, may apply to any court of competent jurisdiction by a bill for injunction, petition for writ of mandamus or other appropriate action, suit or proceeding, to compel obedience to and compliance with this act, or to prevent the violation of this act, or any provision thereof, pending the proceedings before said commission, and thereafter until final determination of any action, suit or proceeding for the enforcement or review of the final order of said commission; and such court shall have jurisdiction to grant the appropriate order, judgment or decree in the premises.

"Sec. 5. That if any person subject to the provisions of this act shall fail or refuse to comply with any requirement of the commis-

dependent thereon, and (b) will halt or curtail many industries which seasonally use great quantities of the gas and wherein thousands of persons are employed and millions of taxable wealth are invested.

---

sion hereunder, such person shall be subject to a fine of not less than one hundred dollars nor more than five hundred dollars for each offense; and such person, or the officers of the corporation, where such person is a corporation, may be indicted for their failure to comply with any requirement of the commission under the provisions of this act, and upon conviction thereof, may be fined not to exceed five hundred dollars, and in the discretion of the court, confined in jail not to exceed thirty days. Every day during which any person, or any officer, agent or employee of such person, shall fail to observe and comply with any order or direction of the commission, or to perform any duty enjoined by this act, shall constitute a separate and distinct violation of such order or direction of this act, as the case may be.

"Sec. 6. That any person claiming to be damaged by any violation of this act may bring suit in his own behalf for the recovery of the damage from the person or persons so violating the same in any circuit court having jurisdiction. In any such action the court may compel the attendance of the person or persons against whom said action is brought, or any officer, director, agent or employee of such person or persons, as a witness, and also require the production of all books, papers and documents which may be useful as evidence, and in the trial thereof such witness may be compelled to testify, but any such witness shall not be prosecuted for any offense concerning which he is compelled hereunder to testify.

"Sec. 7. That the word 'person' within the meaning of this act shall be construed to mean, and to include, persons, firms and corporations.

"Sec. 8. That the sections, provisions and clauses of this act shall be deemed separable each from the other, and also in respect to the persons, firms, corporations and consumers mentioned therein or affected thereby, and if any separable part of this act be, or be held to be unconstitutional or for any reason invalid or un[en]forceable, the remaining parts thereof shall be and remain in full force and effect.

"Sec. 9. That all acts and parts of acts in conflict with this act are hereby repealed."

The conditions out of which the suits have arisen and the facts material to their disposal are as follows:

Natural gas is found at pronounced depths in [illegible] strata—usually sand rock—constituting a natu[illegible] ervoir and is brought to the surface and reduc[illegible] session through wells drilled into the contair[illegible] When a surface owner thus reduces it to p[illegible] becomes its owner and it becomes a subject [illegible] like any product of the forest, field or mine [illegible] closing strata it is under great pressure, ca[illegible] sure, which causes it to flow out rapidly w[illegible] are penetrated. If one surface owner drill[illegible] gins to draw off the gas, others desiring t[illegible] common right must take the same cours[illegible] the gas under their lands may be drain[illegible] wells. After the gas is drawn from the [illegible] there is no practicable mode of storing [illegible] It must be used promptly. Its chief u[illegible] ducing heat and light by burning it. [illegible] generally are in centers of population [illegible] or less remote from the places of pr[illegible] vening transmission is effected thr[illegible] normal rock pressure will carry t[illegible] tances and when that pressure [illegible] can be supplemented by using c[illegible]

In West Virginia the produ[illegible] as much as thirty years ago [illegible] has been greater than in ar[illegible] fields include thirty-two [illegible] first the gas was produc[illegible] tions, was regarded as [illegible] waste into the air. [illegible] valuable for heating [illegible] convenience attend[illegible] Its use within th[illegible] was far less than [illegible] the producers turned

to neighboring States, notably Pennsylvania and Ohio, for a further market.

West Virginia sanctioned that effort. She permitted the formation under her laws of corporations for the purpose of constructing pipe lines from her gas fields into other States and carrying gas into the latter and there selling it. She also permitted corporations of other States to come into her territory for that purpose. And she extended to all these companies the use of her power of eminent domain in acquiring rights of way for their pipe lines. In no way did she then require, or assert any power to require, that consumers within her limits be preferred over consumers elsewhere. The effort to find a further market succeeded, and the gas came to be extensively carried into Pennsylvania as far as Pittsburgh and into Ohio as far as Cleveland, Toledo and Cincinnati. In that way the entire production was made of value to the producers. Land owners and lessees in the gas fields were greatly benefited and the taxable wealth of the State was largely increased. Approximately $300,000,000 were invested in the business—fully one-half in West Virginia. More than 7,000 miles of the pipe lines are in that State,—2,000 miles being trunk lines.

Some of the pipe lines reach from the producing fields to the areas of consumption in Pennsylvania and Ohio. Some connect at or near the state line with others leading to the consuming areas. All are so operated that there is a continuous flow of gas from points of production to points of use. Branch lines divert some of the gas at intervening points, but without changing the general flow. Several lines cross and recross the state boundary repeatedly.

The pipe lines are all operated as public utilities, that is, in supplying gas to the public, and this is true in Pennsylvania and Ohio as well as in West Virginia. The lines long have been and now are supplying gas to the

three States for use in their charitable, educational and penal institutions, to their counties and municipalities for use in county, city and school buildings, to local utilities serving particular communities, to the people generally in many cities and towns for use in their homes, places of business and offices, and, in seasons when there is an adequate supply, to industrial plants for use in their operation. The predominant use is for fuel purposes, that for lighting being relatively small. All gas going into Pennsylvania and Ohio is carried and supplied under prior engagements respecting its disposal,—most of it under long time contracts exacted or preferred by the purchasers or consumers.

Experience in other gas fields has shown that multiplied and prolonged drafts on the natural supply will exhaust it. Since 1916 it has been apparent that the older portions of the West Virginia fields are approaching exhaustion and that production in those fields has reached and passed its maximum. The newer portions, however, in the judgment of informed operators, will make the fields commercially productive for several years more.

Latterly during the colder months—from November 1 to May 1—the combined needs of domestic and industrial consumers have been largely in excess of the production, and the pipe line companies generally have adopted and are pursuing the policy of preferring domestic consumers during those months. All the long time contracts contain provisions admitting of such a preference. During other months, when there is little occasion for heating homes and offices, the needs of domestic consumers drop so materially that much gas may be and is supplied for industrial use without affecting the domestic use. But increased population, enlarged industry—particularly in West Virginia—and the advantages inhering in the gas as a fuel have finally resulted in a gross demand, which cannot be satisfied even in the

summer months. The present actual consumption is all that the production will sustain. The pipe line companies cannot supply more gas in West Virginia without cutting down what they carry into Pennsylvania and Ohio; nor can they carry more into Pennsylvania and Ohio without cutting down what they supply in West Virginia. In short, the situation is such that to constrain the companies to supply more gas in any one of the three States necessarily will constrain them to supply less in the other two.

In 1918, 265 billion cubic feet of gas were produced in West Virginia, 38 billion were consumed within the State without becoming available to the public and 227 billion became available in the hands of the pipe line companies. The companies supplied 70 billion to consumers in the State and carried 157 billion to consumers outside. They also brought 4 billion into the State from gas fields outside and to that extent enlarged the amount supplied to local consumers. Of that amount, 21 billion went into domestic use and 53 billion into industrial use. The major part of the gas carried into Pennsylvania went to industrial consumers, and the major part of that carried into Ohio went to domestic consumers.

The gas carried outside the State is sold for more than that used therein, but this naturally would be so, considering the additional pipe lines, compressors and labor employed in the longer transmission. The proportion marketed beyond the State has not varied much. It now is practically what it was ten years ago. Nor has there been any discrimination against consumers inside the State. They have been dealt with on the same plane as others. The companies have declined to quit the existing service to communities and consumers outside and to serve only those inside, but there is nothing invidious in this. It is in the line of fair treatment rather than discrimination.

The gas carried into Pennsylvania and Ohio, respectively, and there supplied to the State and her municipal agencies for strictly public use is not negligible, but amounts to billions of cubic feet per year. It is the fuel with which food is cooked and water heated for thousands of dependents in charitable and penal institutions, with which hundreds of school houses are heated and made comfortable for thousands of children, and with which municipal water works are operated in several cities, notably Cincinnati and Toledo. The heating and other appliances have been adjusted to its use and to make the changes incident to substituting other fuel would involve an expenditure in each State of a very large sum of public money.

In Pennsylvania the gas is used by 300,000 domestic consumers caring for 1,500,000 people, and in Ohio by 725,000 domestic consumers caring for 3,625,000 people. This is where no other natural gas service is available. To change to other fuel would require an adjustment of heating and cooking appliances at an average cost of more than $100 for each domestic consumer, or an aggregate cost exceeding $30,000,000 in Pennsylvania and $72,500,000 in Ohio.

The act whose enforcement is sought to be enjoined was passed by the legislature of West Virginia February 10, 1919, and went into effect May 11th following.[2] These suits were brought eight days thereafter by direction of the legislatures of the complainant States, and by leave of this Court. Interlocutory injunctions were prayed and granted at the outset and are still in force.

Three questions bearing on the propriety of entertaining the suits were raised soon after the suits were begun

[2] Under the state constitution the act went into effect on the expiration of ninety days after its "passage" by the legislature as distinguished from its approval by the governor. *State* v. *Mounts*, 36 W. Va. 179.

DARK PAGE BLEED THRU

and consideration of them was postponed to the final hearing.

The first question is whether the suits involve a justiciable controversy between States in the sense of the Judiciary Article of the Constitution. We are of opinion that they do and that every element of such a controversy is present.

Each suit presents a direct issue between two States as to whether one may withdraw a natural product, a common subject of commercial dealings, from an established current of commerce moving into the territory of the other. The complainant State asserts and the defendant State denies that such a withdrawal is an interference with interstate commerce forbidden by the Constitution. This is essentially a judicial question. It concededly is so in suits between private parties, and of course its character is not different in a suit between States.

What is sought is not an abstract ruling on that question, but an injunction against such a withdrawal presently threatened and likely to be productive of great injury. The purpose to withdraw is shown in the enactment of the defendant State before set forth and is about to be carried into effect by her officers acting in her name and at her command. The State is the principal and the action of her officers rightly may be imputed to her, even though a suit for an injunction might lie against them.

The attitude of the complainant States is not that of mere volunteers attempting to vindicate the freedom of interstate commerce or to redress purely private grievances. Each sues to protect a two-fold interest—one as the proprietor of various public institutions and schools whose supply of gas will be largely curtailed or cut off by the threatened interference with the interstate current, and the other as the representative of the consuming public whose supply will be similarly affected. Both interests are substantial and both are threatened with serious injury.

Each State uses large amounts of the gas in her several institutions and schools,—the greater part in the discharge of duties which are relatively imperative. A break or cessation in the supply will embarrass her greatly in the discharge of those duties and expose thousands of dependents and school children to serious discomfort, if not more. To substitute another form of fuel will involve very large public expenditures.

The private consumers in each State not only include most of the inhabitants of many urban communities but constitute a substantial portion of the State's population. Their health, comfort and welfare are seriously jeopardized by the threatened withdrawal of the gas from the interstate stream. This is a matter of grave public concern in which the State, as the representative of the public, has an interest apart from that of the individuals affected. It is not merely a remote or ethical interest but one which is immediate and recognized by law.

In principle these views have full support in prior decisions, such as *Missouri* v. *Illinois*, 180 U. S. 208, 241; s. c. 200 U. S. 496, 518; *Kansas* v. *Colorado*, 185 U. S. 125, 141–143; s. c. 206 U. S. 46, 95–99; *Georgia* v. *Tennessee Copper Co.*, 206 U. S. 230, 237; *New York* v. *New Jersey*, 256 U. S. 296, 301, and *Wyoming* v. *Colorado*, 259 U. S. 419, 464. The defendant State relies on such cases as *New Hampshire* v. *Louisiana*, 108 U. S. 76; *Louisiana* v. *Texas*, 176 U. S. 1; *Kansas v. United States*, 204 U. S. 331; *Oklahoma* v. *Atchison, Topeka & Santa Fe Ry. Co.*, 220 U. S. 277, and *Texas* v. *Interstate Commerce Commission*, 258 U. S. 158, 162, but the facts on which they turned, as the opinions show, were so widely different from those here that they are not in point.

The second question is whether the suits were brought prematurely. They were brought a few days after the West Virginia act went into force. No order under it had been made by the Public Service Commission; nor

had it been tested in actual practice. But this does not prove that the suits were premature. Of course they were not so, if it otherwise appeared that the act certainly would operate as the complainant States apprehended it would. One does not have to await the consummation of threatened injury to obtain preventive relief. If the injury is certainly impending that is enough.

Turning to the act, we find that by its first section it lays on every pipe line company a positive duty,—to the extent of its supply of gas produced in the State, whether produced by it or others,—to satisfy the needs, whether for domestic, industrial or other use, of all intending consumers, whether old or new, who are willing to pay for the gas and want it for use within the section of the State in which it is produced, in that through which it is transported or in that wherein it is supplied to others. This is a substantive provision whose terms are both direct and certain, and to which immediate obedience is commanded. No order of the commission is required to give it precision or make it obligatory, and it leaves nothing to the discretion of those who are to enforce it. On the contrary, it prescribes a definite rule of conduct and in itself puts the rule in force. It imposes an unconditional and mandatory duty, as counsel for the State admit, and obviously is intended to enforce a preferred recognition and satisfaction of the needs of consumers within the State, present and prospective, regardless of the effect on the interstate stream or on consumers outside the State.

The second section invests the commission with authority,—on finding after notice and hearing that a company supplying gas for local needs is or probably will be without an adequate supply for the purpose,—to order another company having gas in excess of what is required for its "consumers within this State" to furnish

the company whose supply is or will be inadequate with gas to make up the deficiency, or in the alternative to undertake itself to supply such local needs " to the extent of such excess." This provision, like the first, shows the purpose to give local consumers, present and prospective, a preferred status and to permit surplus gas only to be carried into other States.

The fourth section empowers the commission to entertain complaints by persons aggrieved or affected by any " violation " of the act and to require that the violation be discontinued and the act obeyed, subject to a right of review in the courts, and also provides means of compelling obedience to the act pending the proceedings before the commission and until the decision on review.

Other sections contain penal and remedial provisions designed to make those just described effective. One in the fifth section declares that " every day " during which any company, or any of its officers, agents or employees, " shall fail to observe and comply with any order or direction of the commission, or to perform any duty enjoined by this act, shall constitute a separate and distinct violation." Another in the sixth section subjects any company violating the act to an action for damages by anyone claiming to have been wronged by the violation.

We regard it as entirely clear that the act is intended to compel the retention within the State of whatever gas may be required to meet the local needs for all purposes, and that its procedural, penal and remedial provisions are amply adequate to accomplish that result. And we think it equally clear from the allegations in the bills, now established by the evidence, that the situation when the suits were brought was such that the act directly and immediately would work a large curtailment of the volume of gas moving into the complainant States. Indeed, the conclusion is unavoidable that with the increasing demand in West Virginia and the decreasing production

the act in a few years would work a practical cessation of the interstate stream.

It must be held therefore that the suits were not brought prematurely.

The third question is whether the requisite parties have been brought into the suits. It is objected that the pipe line companies have not been brought in. But there is nothing which makes their presence essential. The complainant States make no complaint and seek no relief against them. They are supplying gas in those States and evidently will continue to do so, if not restrained or prevented by the defendant State. It is only with her that the complainant States are in controversy. It also is objected that the consumers in the defendant State who will be benefited if the act is enforced have no representation in the suits. But this is a misconception. They are represented by that State, and there is nothing in the situation requiring that they be specially represented or brought in. With equal basis it could be objected in a suit to prevent the enforcement of a statute reducing railroad freight rates, or in one to prevent the enforcement of a municipal ordinance reducing telephone or electric light rates, that shippers or users who would be benefited by the reduction must be specially represented or brought in. Such an objection would of course be untenable; and so of the objection here.

We turn now to the principal issue, whether a State wherein natural gas is produced and is a recognized subject of commercial dealings may require that in its sale and disposal consumers in that State shall be accorded a preferred right of purchase over consumers in other States,—when the requirement necessarily will operate to withdraw a large volume of the gas from an established interstate current whereby it is supplied in other States to consumers there. Of course, in the last analysis, the question is whether the enforced withdrawal for the bene-

fit of local consumers is such an interference with interstate commerce as is forbidden to a State by the Constitution. The question is an important one; for what one State may do others may, and there are ten States from which natural gas is exported for consumption in other States. Besides, what may be done with one natural product may be done with others, and there are several States in which the earth yields products of great value which are carried into other States and there used. But, notwithstanding the importance of the question, its solution is not difficult. The controlling principles have been settled by many adjudications,—some so closely in point that the discussion here may be relatively brief.

By the Constitution, Art. I, § 8, cl. 3, the power to regulate interstate commerce is expressly committed to Congress and therefore impliedly forbidden to the States. The purpose in this is to protect commercial intercourse from invidious restraints, to prevent interference through conflicting or hostile state laws and to insure uniformity in regulation. It means that in the matter of interstate commerce we are a single nation—one and the same people. All the States have assented to it, all are alike bound by it and all are equally protected by it. Even their power to lay and collect taxes, comprehensive and necessary as that power is, cannot be exerted in a way which involves a discrimination against such commerce. *Ward* v. *Maryland*, 12 Wall. 418, 430; *Welton* v. *Missouri*, 91 U. S. 275, 280; *Webber* v. *Virginia*, 103 U. S. 344, 350; *Coe* v. *Errol*, 116 U. S. 517, 525–526; *Guy* v. *Baltimore*, 100 U. S. 434, 442–443; *Robbins* v. *Shelby County Taxing District*, 120 U. S. 489, 498.

Natural gas is a lawful article of commerce and its transmission from one State to another for sale and consumption in the latter is interstate commerce. A state law, whether of the State where the gas is produced or that where it is to be sold, which by its necessary opera-

tion prevents, obstructs or burdens such transmission is a regulation of interstate commerce,—a prohibited interference. *West* v. *Kansas Natural Gas Co.*, 221 U. S. 229; *Public Utilities Commission* v. *Landon*, 249 U. S. 236, 245; *United Fuel Gas Co.* v. *Hallanan*, 257 U. S. 277; *Dahnke-Walker Milling Co.* v. *Bondurant*, 257 U. S. 282, 290–291; *Lemke* v. *Farmers Grain Co.*, 258 U. S. 50; *Western Union Telegraph Co.* v. *Foster*, 247 U. S. 105; *Minnesota* v. *Barber*, 136 U. S. 313; *Brimmer* v. *Rebman*, 138 U. S. 78. The West Virginia act is such a law. Its provisions and the conditions which must surround its operation are such that it necessarily and directly will compel the diversion to local consumers of a large and increasing part of the gas heretofore and now going to consumers in the complainant States, and therefore will work a serious interference with that commerce.

But it is urged that there are special considerations which take the act out of the general rule and sustain its validity, even though there be an interference.

One of these is that the pipe line companies are engaged in supplying the gas to the public in West Virginia, that this is a quasi-public business and that the act does no more than require the companies to furnish a reasonably adequate service within reasonable territorial limits. It is true that the business is of a quasi-public character, but it is so in Pennsylvania and Ohio as well as in West Virginia. The obligations inhering in it and the power to insist on an adequate service are the same in all three States. The supply of gas necessarily marks the extent of the service that can be rendered. Much of the business is interstate and has grown up through a course of years. West Virginia encouraged and sanctioned the development of that part of the business and has profited greatly by it. Her present effort, rightly understood, is to subordinate that part to the local business within her borders. In other words, it is in effect an attempt to

regulate the interstate business to the advantage of the local consumers. But this she may not do. A direction to one of her railroads when short of facilities for moving coal to haul intrastate coal to the exclusion of interstate coal would not be different in kind or force.

Another consideration advanced to the same end is that the gas is a natural product of the State and has become a necessity therein, that the supply is waning and no longer sufficient to satisfy local needs and be used abroad, and that the act is therefore a legitimate measure of conservation in the interest of the people of the State. If the situation be as stated, it affords no ground for the assumption by the State of power to regulate interstate commerce, which is what the act attempts to do. That power is lodged elsewhere. A contention, in essence the same, was presented and considered in *West* v. *Kansas Natural Gas Co.*, 221 U. S. 229, a case involving the validity of an Oklahoma statute designed to accomplish the retention of natural gas within the State. In the District Court the case had been heard on bill and answer, a proceeding in which the allegations of fact in the answer are taken as true. The hearing resulted in a decree adjudging the statute invalid and enjoining its enforcement. The decree was affirmed here. In the answer, as the opinion shows, it was alleged that physical conditions made it apparent that the gas field was of relatively short duration, that cities were near the field and their people needed the gas, that the State embodied only prairie land devoid of timber and there was no local fuel supply excepting coal and natural gas, that the production of coal was growing rapidly more costly, that "substantially, the only natural, practical, usable fuel, both for domestic and industrial use, is natural gas," and that if pipe lines, such as the plaintiffs were intending to construct and put in operation, were permitted to carry gas into other States the supply would be speedily ex-

hausted. Referring to these allegations and to a contention that the ruling principle of the statute was conservation of a needed natural resource, the Court said (p. 255):

"The results of the contention repel its acceptance. Gas, when reduced to possession, is a commodity; it belongs to the owner of the land, and, when reduced to possession, is his individual property subject to sale by him, and may be a subject of intrastate commerce and interstate commerce. The statute of Oklahoma recognizes it to be a subject of intrastate commerce, but seeks to prohibit it from being the subject of interstate commerce, and this is the purpose of its conservation. In other words, the purpose of its conservation is in a sense commercial—the business welfare of the State, as coal might be, or timber. Both of those products may be limited in amount, and the same consideration of the public welfare which would confine gas to the use of the inhabitants of a State would confine them to the inhabitants of the State. If the States have such power a singular situation might result. Pennsylvania might keep its coal, the Northwest its timber, the mining States their minerals. And why may not the products of the field be brought within the principle? Thus enlarged, or without that enlargement, its influence on interstate commerce need not be pointed out. To what consequences does such power tend? If one State has it, all States have it; embargo may be retaliated by embargo, and commerce will be halted at state lines. And yet we have said that 'in matters of foreign and interstate commerce there are no state lines.' In such commerce, instead of the States, a new power appears and a new welfare, a welfare which transcends that of any State. But rather let us say it is constituted of the welfare of all of the States and that of each State is made the greater by a division of its resources, natural and created, with every other State, and those of every

other State with it. This was the purpose, as it is the result, of the interstate commerce clause of the Constitution of the United States. If there is to be a turning backward it must be done by the authority of another instrumentality than a court."

Finally, it is urged that this Court can not prescribe and execute regulations respecting the apportionment and use of the gas among the three States, and therefore that the bills should be dismissed. The conclusion does not follow from the premise. The object of the suits is not to obtain decretal regulations, but to enjoin the enforcement of the West Virginia act on the ground that it is an unconstitutional enactment and its intended enforcement will subject the complainant States to injury of serious magnitude. On full consideration, we reach the conclusion that the act is unconstitutional, that the apprehensions of the complainant States respecting the injury which will ensue from its enforcement are well founded and that it obviously will operate most inequitably against those States. In this situation the appropriate decree is one declaring the act invalid and enjoining its enforcement. To dismiss the bills and leave the act to be enforced would be quite inadmissible. If there be need for regulating the interstate commerce involved, the regulation should be sought from the body in whom the power resides.

Decrees for complainants.

MR. JUSTICE HOLMES.

The statute seeks to reach natural gas before it has begun to move in commerce of any kind. It addresses itself to gas hereafter to be collected and states to what uses it first must be applied. The gas is collected under and subject to the law, if valid, and at that moment it is not yet matter of commerce among the States. I think that the products of a State until they are actually started to a point outside it may be regulated by the

State notwithstanding the commerce clause. In *Oliver Iron Mining Co.* v. *Lord,* 262 U. S. 172, it was held that the State might levy an occupation tax upon the mining of iron ore equal to six per cent. of the value of the ore produced during the previous year, although substantially all the ore left the State and was put upon cars for that purpose by the same single movement by which it was severed from its bed. There could not be a case of a State's product more certainly destined to interstate commerce. It was put upon the cars by the same act by which it was produced. But as it was not yet in interstate commerce the tax was sustained. I know of no relevant distinction between taxing and regulating in other ways. *McCulloch* v. *Maryland,* 4 Wheat. 316, 431.

But the States have been held authorized to regulate in other ways more closely resembling the present. In *Sligh* v. *Kirkwood,* 237 U. S. 52, a state law was sustained that made it criminal to sell or offer for shipment citrus fruits that were immature or otherwise unfit for consumption. That, upon grounds of local policy, intercepted before it got into the stream, what would have been an object of interstate commerce. The local interest in the present case is greater and more obvious than in that of green oranges. Again, the power of the State to preserve a food supply for its people by game laws notwithstanding an indirect interference with interstate commerce is established. *Geer* v. *Connecticut,* 161 U. S. 519, 534. *Silz* v. *Hesterberg,* 211 U. S. 31, 42. If there is any difference between the property rights of the State in game and in gas still in the ground it does not concern the plaintiffs and it is plain from the decisions cited that they do not depend upon a speculative view as to title. See *Missouri* v. *Holland,* 252 U. S. 416, 434. The right of the State so to regulate the use of natural gas as to prevent waste was sustained as against the

Fourteenth Amendment in *Walls* v. *Midland Carbon Co.*, 254 U. S. 300, and I do not suppose that the plaintiffs would have fared any better had they invoked the commerce clause. I need do no more than refer to prohibition of manufacture of articles intended for export, such as colored oleomargarine; *Capital City Dairy Co.* v. *Ohio*, 183 U. S. 238, 245; or spirits. The result of that and other cases has been expressed by this Court more than once in the form of a general recognition of the right of a State to make "reasonable provision for local needs"; *Minnesota Rate Cases*, 230 U. S. 352, 402, 410, 411; and the right has been recognized even when the interference with interstate commerce is direct, as when an interstate train is required to stop to accommodate passengers who do not leave the State. *Lake Shore & Michigan Southern Ry. Co.* v. *Ohio*, 173 U. S. 285. *Gulf, Colorado & Santa Fe Ry. Co.* v. *Texas*, 246 U. S. 58.

I see nothing in the commerce clause to prevent a State from giving a preference to its inhabitants in the enjoyment of its natural advantages. If the gas were used only by private persons for their own purposes I know of no power in Congress to require them to devote it to public use or to transport it across state lines. It is the law of West Virginia and of West Virginia alone that makes the West Virginia gas what is called a public utility, and how far it shall be such is a matter that that law alone decides. I am aware that there is some general language in *Oklahoma* v. *Kansas Natural Gas Co.*, 221 U. S. 229, 255, a decision that I thought wrong, implying that Pennsylvania might not keep its coal, or the northwest its timber, &c. But I confess I do not see what is to hinder. Certainly if the owners of the mines or the forests saw fit not to export their products the Constitution would not make them do it. I see nothing in that instrument that would produce a different result if the State gave the owners

motives for their conduct, as by offering a bonus. However far the decision in the case referred to goes it cannot outweigh the consensus of the other decisions to which I have referred and that seem to me to confirm what I should think plain without them, that the Constitution does not prohibit a State from securing a reasonable preference for its own inhabitants in the enjoyment of its products even when the effect of its law is to keep property within its boundaries that otherwise would have passed outside. *Hudson County Water Co.* v. *McCarter*, 209 U. S. 349, 357.

I agree substantially with my brothers McREYNOLDS and BRANDEIS, but think that there is jurisdiction in such sense as to justify a statement of my opinion upon the merits of the case. I think that the bill should be dismissed.

MR. JUSTICE McREYNOLDS, dissenting.

It seems to me quite clear that the record presents no justiciable controversy; certainly none within the original jurisdiction of this Court.

For the manifest purpose of protecting local consumers, West Virginia commanded her public service corporations not to transport natural gas beyond the borders of the State until they had satisfied the reasonable requirements of the people therein. Thereupon, complainants came here by original bills and alleged that if the statute were enforced they and their inhabitants could not obtain enough gas for their imperative demands from the divers pipe lines theretofore accustomed to supply them. They ask us to declare the enactment invalid because of conflict with the commerce clause of the Federal Constitution and to restrain its enforcement. If the pipe lines hereafter fail to comply with their contracts, of course, they may be proceeded against in a proper forum; but to say that they probably will fail because

of the statute and then to demand that the law-making power be enjoined is not to set up a real controversy cognizable in any court.

If West Virginia should prohibit the drilling of new gas wells, I hardly suppose complainants could demand an injunction here even if it were admitted that their supplies would be cut off. But why not, under the doctrine announced? Production has been permitted for years and appealing hardships would follow its cessation. And suppose West Virginia should repeal the charters of all her public service corporations now transporting gas and thereby disable them, could we interfere upon the demand of another State who claimed that she would suffer?

As originally adopted, the Constitution provided—"In all cases affecting ambassadors, other public ministers and consuls, and those in which a State shall be party, the Supreme Court shall have original jurisdiction." *Chisholm* v. *Georgia,* 2 Dall. 419, declared that a citizen of one State could proceed against another State by original action here. In *Louisiana* v. *Texas,* 176 U. S. 1, Mr. Chief Justice Fuller pointed out the character of controversies between States over which this Court has original jurisdiction. With emphasis he declared that vindication of the freedom of interstate commerce is not committed to any State as *parens patriae.* Unless this ruling is to pass into the discard, it follows that neither of the complainants has any higher standing than one of her citizens with a contract for gas would have if there were no Eleventh Amendment. It is unnecessary to argue that the framers of the Constitution never intended to empower this Court, at the suit of an individual, to enjoin a State from enforcing regulations prescribed for her own public service corporations. And yet, that possibility must be affirmed under the doctrine now announced.

Concluding his opinion in *Chisholm* v. *Georgia* (1793), Mr. Justice Iredell exclaimed—"I pray to God, that if the Attorney General's doctrine, as to the law, be established by the judgment of this Court, all the good he predicts from it may take place, and none of the evils with which, I have the concern to say, it appears to me to be pregnant." A like prayer seems not inappropriate here and now.

MR. JUSTICE BRANDEIS, dissenting.

The statement made by Mr. Justice Holmes seems to me unanswered. But, like Mr. Justice McReynolds, I think that there are reasons why the bills should be dismissed without passing upon the constitutional question presented.

Natural gas in quantity is produced in thirty-two of the fifty-five counties of West Virginia. One-half of the inhabitants of that State have for years been dependent upon it for domestic uses; and it has been supplied to nearly two thousand industrial establishments. Sixty-seven concerns are engaged in the business of distributing this natural gas to the public. Most of them are corporations organized under the laws of West Virginia. A few are organized under the laws of some other State. Some are unincorporated. Each had, prior to the Act of February 17, 1919, hereinafter referred to, been declared by statute to be a public service corporation [1] endowed with the power of eminent domain. Each was under the common-law duty of furnishing to the public,

[1] "The words 'Public Service Corporation' used in this act shall include all persons, associations of persons, firms, corporations, municipalities and agencies engaged or employed in any business herein enumerated, or in any other public service business whether above enumerated or not, whether incorporated or not." Acts, 1913, c. 9, § 3; Acts, 1915, c. 8, § 3; Acts, 1921, c. 150, § 3. See Acts 1919, c. 71, § 3.

throughout the West Virginia territory in which it does business, adequate service. *Carnegie Natural Gas Co.* v. *Swiger*, 72 W. Va. 557; *Clarksburg Light & Power Co.* v. *Public Service Commission*, 84 W. Va. 638. And as to each this duty has been confirmed by the legislation of that State.

Prior to the World War the production of natural gas in West Virginia and the demand were such that large quantities could be exported by its public service corporations to other States without thereby lessening the ability of these concerns to give adequate service to their West Virginia customers. During the war the demand, both within and without the State, increased greatly; and thereafter the supply became smaller. Of the net supply of West Virginia natural gas available for distribution by its public service corporations, 77.1 per cent. was exported in the year 1916; 80.1 per cent. in 1917; 76.7 per cent. in 1918.[2] The West Virginia consumers complained that the amount furnished them was inadequate; and that they were being discriminated against by West Virginia gas companies in the interest of residents of other States.[3]

[2] A large part of the gas produced is not available for distribution to the public. Much is consumed within the State for field purposes—such as drilling and cleaning out wells or the operation of compressor or pump stations to transport the gas. The producer must, also, under reservations in the leases, ordinarily deliver to the landowner free gas service.

[3] The temptation to discriminate may have been great. For Pennsylvania and Ohio communities formerly supplied from local production of natural gas could, if this is no longer possible, afford to pay a very high price for gas rather than to discard existing gas appliances and to instal new ones which would be required if oil or coal were to be substituted as fuel. In 1921 the average price per M cubic feet for domestic consumption was 26 cents in West Virginia, 44 cents in Pennsylvania and 42 cents in Ohio. For industrial consumption it was 16 cents in West Virginia; 32 cents in Pennsylvania; and 34 cents in Ohio. United States Geological Survey, "Natural Gas in 1919–1921," published May 22, 1923.

Some of the companies which exported gas sought to justify the inadequacy of their service to West Virginia customers by asserting that they were under contract, or other duty, to supply West Virginia gas to distributing companies or consumers in other States; and that the aggregate demand of their customers in the several States exceeded the available supply. Only twelve of the sixty-seven West Virginia public service corporations took part in the export business. The remaining fifty-five were engaged solely in distribution within the State; and many of these were dependent largely upon the other twelve for their gas supply. Some of these fifty-five companies sought to justify their inadequate service by the fact that, because of the demands for gas to be exported to the other States, the corporations on which they were dependent denied them their full supply.

West Virginia consumers insisted that the common law forbade its public service companies to so disable themselves from performing their duty to give adequate service within the State; and contended that the exporting public service corporations which habitually supplied the local distributing companies could not justify furnishing a reduced supply by setting up their contracts to furnish supplies to concerns in other States. These contentions were denied by the exporting companies; and it was asserted that they could not legally be controlled in this respect by the Public Service Commission of West Virginia. To remove all doubt concerning the statutory powers of the Commission and to ensure adequate service to West Virginia consumers, the legislature of the State enacted c. 71 of the Acts of 1919, approved on February 17 of that year, to take effect ninety days after its passage. That statute declared these rules of substantive law:

(a) That no public service corporation engaged in distributing natural gas produced within the State shall, by exporting its supply to other States, disable itself from

performing its duty to give adequate service within West Virginia.

(b) That any such public service corporation whose gas supply is insufficient to afford such service to its customers, may, under prescribed conditions, call upon any other public service corporation within the same territory which has a surplus supply, to furnish to it such part of this surplus as may be required to enable it to give adequate service.

Before the effective date of that act, the State of Pennsylvania and the State of Ohio each filed in this Court a bill in equity against the State of West Virginia, in which it prayed that the act be declared void, because obnoxious to the Federal Constitution, and that all West Virginia officials be enjoined from attempting in any way to enforce the statute. As a basis for the relief each bill set forth the extensive use of natural gas by state institutions, by their several municipalities, and by millions of residents; and it alleged that serious injury would result if these consumers were deprived of the West Virginia supply. The Ohio bill alleged also that cutting off the West Virginia supply of natural gas would greatly reduce the value of public service properties, would reduce taxable values of these and other properties, and would thereby deprive the State of important revenues. It prayed, specifically, that the plaintiff State, and its residents, be declared to have no adequate remedy at law; that West Virginia and its officials be enjoined from interfering with the transportation of natural gas for use in Ohio; and that pending the suit an injunction be granted against their instituting in any court of the State of West Virginia any suit under the statute against any "person, company or corporation which is engaged in the production or transportation of natural gas out of the State of West Virginia and into the State of Ohio." No public official or producer, exporter or distributor of gas or consumer (other than

these States) was made party plaintiff or defendant in either bill. A temporary injunction issued in each case upon the filing of the bill. In each a motion to dismiss, an answer, and a replication were filed. Without disposing of the motions to dismiss, the parties proceeded to take the evidence and, thereafter, submitted the cases for final hearing.

Several objections made to the maintenance of these suits may be passed without discussion. It will be assumed that the constitutional question submitted is not to be deemed merely a political one, as in *Georgia* v. *Stanton*, 6 Wall. 50, and *Massachusetts* v. *Mellon*, *ante*, 447. It will be assumed that the alleged right to acquire by purchase and to bring into a State natural gas produced elsewhere is—despite a fundamental difference [4]—to be treated as similar legally to the right asserted in *Kansas* v. *Colorado*, 185 U. S. 125; 206 U. S. 46, to have the water of an interstate stream continue to flow into a State; or the right recognized in *Missouri* v. *Illinois*, 180 U. S. 208; *New York* v. *New Jersey*, 256 U. S. 296, and *Georgia* v. *Tennessee Copper Co.*, 206 U. S. 230, to have the waters and the air within one State kept reasonably free from pollution originating in another. It will be assumed, further, that the use of natural gas in Pennsyl-

[4] The State has a property interest in running water naturally flowing into it and in the public waters and air within its boundaries. *Georgia* v. *Tennessee Copper Co.*, 206 U. S. 230, 237. If the running water is withheld, its property is taken. If the public waters or the air is polluted, its territorial integrity is invaded. But the alleged right to purchase in interstate commerce and to import a natural resource is, in no sense, a right of the State. It would be described appropriately as a privilege of citizens of the United States. Compare *Louisiana* v. *Texas*, 176 U. S. 1, 24, 25. Such privileges the State is not charged by the Federal Constitution with the duty to enforce; and the fact that the institution of these suits was specially authorized by the legislatures of Pennsylvania and of Ohio can be of no legal significance.

vania and in Ohio is shown to be so general as to bring these suits within the rule acted upon in the cases just cited and to render inapplicable the rule declared in *Kansas* v. *United States*, 204 U. S. 331, and *Oklahoma* v. *Atchison, Topeka & Santa Fe Ry. Co.*, 220 U. S. 277, 286, 289, where the suits were dismissed because brought in aid of interests deemed private. And finally it will be assumed—although this is still more doubtful—that a State which has permitted one of its natural resources to be freely dealt in as an article of interstate commerce may not thereafter prohibit all export thereof, although it appears that the whole of the remaining supply will be required to satisfy the needs of its own citizens. These objections raised by defendant will not be considered; because there are other objections which, in my opinion, present insuperable obstacles to the maintenance of the suits.

First. This Court is without jurisdiction of the subject-matter.

The bills present neither a "case," nor a "controversy," within the meaning of the Federal Constitution. *Marbury* v. *Madison*, 1 Cr. 137; *Muskrat* v. *United States*, 219 U. S. 346, 356, 359; *Texas* v. *Interstate Commerce Commission*, 258 U. S. 158. They are not proceedings "instituted according to the regular course of judicial procedure" to protect some right of property or personal right. They are, like *McChord* v. *Louisville & Nashville R. R. Co.*, 183 U. S. 483, 495, an attempt to enjoin, not executive action, but legislation. They are instituted frankly to secure from this Court a general declaration that the West Virginia Act of February 17, 1919, is unconstitutional. Compare *Giles* v. *Harris*, 189 U. S. 475, 486. The well settled rule that the Court is without power to entertain such a proceeding applies equally, whether the party invoking its aid is a State or a private person. And the rule cannot be overcome by giving to

pleadings the form of a bill in equity for an injunction. Compare *Fairchild* v. *Hughes*, 258 U. S. 126; *Atherton Mills* v. *Johnston*, 259 U. S. 13, 15; *Texas* v. *Interstate Commerce Commission*, *supra*.

Moreover, it is not shown that there is, in a legal sense, danger of invasion of the alleged rights. It is shown that the States of Pennsylvania and Ohio are, in their public institutions, themselves consumers of West Virginia gas—a "makeweight" as suggested in *Georgia* v. *Tennessee Copper Co.*, 206 U. S. 230, 237. And it is shown that these and many other consumers within the plaintiff States would suffer serious injury if the West Virginia supply were cut off. But it is not shown that discontinuance of the supply is threatened or that there is, in a legal sense, danger that the supply will be stopped. The mere enactment of the statute, obviously, does not constitute a threat to interrupt the flow of gas into the plaintiff States. The importation into Ohio and Pennsylvania is conducted, not by the State of West Virginia, but wholly by twelve privately owned public service corporations. If the importation ceases it will be, primarily at least, because of acts or omissions of these twelve corporations. Yet there is not even an allegation that these corporations threaten, or intend, to discontinue the importation; or that they will be compelled to do so unless the State of West Virginia is enjoined from enforcing the statute.

On the other hand, it clearly appears that, under the laws of West Virginia, there can be no present danger that any of these twelve corporations will be summarily prevented by that State from continuing in full volume the export of gas or will be compelled to reduce it. The only restriction, if any, imposed by the Act of 1919 upon exportation of gas is that which may result from the requirement that West Virginia public service corporations shall not, by means of export, disable themselves from performing their duties to consumers and to other dis-

tributing companies within the State. Before there can be, in a legal sense, danger that restriction will result, it must appear that one or more of the twelve exporting companies is disabling itself by such exportation, or is about to do so; and also that some state official is about to take effective action to prevent the exportation. But under the legislation of West Virginia many things would have to happen and much time must elapse before any of the exporting corporations would be under any legal duty to discontinue or lessen their exports, and still more time before it could actually be prevented from exporting gas. For, under West Virginia legislation, no executive officer and no court has power or jurisdiction to declare, or to enforce performance of, such alleged duty of a public service corporation until primary resort has been had to the Public Service Commission and the application to it has been acted upon, either by granting or by denying relief. *United Fuel Gas Co.* v. *Public Service Commission,* 73 W. Va. 571; *State* v. *Bluefield Water Works Co.,* 86 W. Va. 260; *Kelly Axe Manufacturing Co.* v. *United Fuel Gas Co.,* 87 W. Va. 368. The act establishing the Commission prescribes the methods and the remedies which are to be pursued in order to enforce the duty to give adequate service. C. 9, Acts of 1913, §§ 11 and 18; c. 8, Acts of 1915, §§ 23, 24; c. 71, Acts of 1919; c. 150, Acts of 1921; *Manufacturers' Light & Heat Co.* v. *Ott,* 215 Fed. 940. If it is claimed that there is failure to give adequate service, a petition may be filed before the Commission to secure it. After notice to and hearing of the corporation by the Commission an order may be made. Until the Commission issues some order which purports to restrict in some way the discretion theretofore exercised by a corporation in respect to exports, every such concern is, under the Act of 1919, legally as free to continue the transportation of gas to Pennsylvania and to Ohio as if that statute had not been passed.

It is possible that the Commission would never be called upon to act.[5] It is possible that if called upon, the Commission would refuse to make an order. It is possible that if the Commission made an order, the order would be of such a character as not to affect seriously the interests which plaintiffs seek to protect. And it is possible that if any order were made, the state court would suspend its operation and would eventually annul it. The act makes such careful provision for judicial review of the orders of the Commission and for postponing the incidence of penalties or other liabilities until

[5] The Attorney General of Ohio states in his brief: "The supply of gas was adequate, both for consumption inside the State of West Virginia and for transportation to other States, until during the time of the world war in 1917 and 1918. (Record, pages 331 and 334.) By reason of the vast demand for gas for industrial consumption, which occurred as a result of the war, and which drew upon the lines of the gas companies during the summer as heavily as, or more heavily than during the winter, the gas companies had no opportunity to rest their wells or to accumulate a surplus of gas, as they had been in the habit of doing, in accord with good practice, under normal conditions. The federal government, through the fuel administration, gave orders to the gas companies to supply essential industrial plants with all the gas possible. Wells were drilled and turned into lines which, under normal conditions, would have been held in reserve, to assure a future supply. (Record, pages 333, 334.) The supply of gas has never been adequate for all purposes, during periods of maximum demand, since that time."

It may be that production will increase. The war has closed. The excessive post war activities of 1919 and early 1920 ceased, and were followed by a period of industrial depression. There may again be opportunity for periodic rest which gas wells, as well as human beings, appear to need; and thus, seemingly exhausted wells may be restored. Furthermore, hitherto undeveloped gas areas may be worked or more wells may be drilled in areas already developed; or new areas may be opened. For of the 2,725,798 acres of the gas territory held by the sixty-seven public service corporations of the State in 1919, a large part are still undeveloped.

Moreover, the demand may lessen. Except in times of emergency, use of natural gas by the industries will be determined largely by

after such review can be had, that there could never be occasion for invoking in respect to this statute the doctrine of *Ex parte Young*, 209 U. S. 123.[6] For the Commission is without power to enforce an order or to impose a penalty. To overcome disobedience, or disregard, of an order, resort must, under the West Virginia statutes, be had to the courts; and to this end an original proceeding must be instituted. Whether the suit to enforce obedience is brought by the Commission or by others, the corporation is given opportunity to defend on the ground that the order is, for any rea-

---

its relative cost as compared with coal or oil. The demands of economy in manufacture may alone compel a reduction of its use in industry and thus, for some time, leave the supply ample for domestic purposes. In 1920 Pennsylvania used for manufacturing purposes three times as much natural gas as it imported from West Virginia in 1921. U. S. Geological Survey, "Natural Gas, 1919–1921," published May 22, 1923, pp. 347, 355. Domestic consumption amounts to only 30 or 40 per cent of the total consumption. U. S. Geological Survey, "Natural Gas, 1919–1921," *supra*, p. 352. Moreover, the present large waste may be stopped. The waste in Ohio in 1919 was 12 per cent.; in 1920 it was 18 per cent.; in 1921 it was 19 per cent. On the other hand in West Virginia the waste in 1919 was only 1 per cent.; in 1920 and 1921 only 2 per cent. "Natural Gas," *supra*, p. 352.

[6] The situation is wholly unlike that presented in *Savage* v. *Jones*, 225 U. S. 501, 520, 521, which is relied upon by plaintiffs. There the suit was against the State Chemist, the executive official vested with power to act, and he had "threatened the complainant that in default of such compliance he would cause the arrest and prosecution of every person dealing in the article within the State and had distributed broadcast throughout the State warning circulars."

Moreover, even if the West Virginia statute were construed as imposing penalties for disobedience so severe and menacing as to require the interposition of a federal court, it would be the public service corporations of West Virgnia—not the States of Pennsylvania and Ohio—which would thereby be denied due process of law under the doctrine of *Ex parte Young*. And it is those corporations which would have to sue, as in *Oklahoma Operating Co.* v. *Love*, 252 U. S. 331, here relied upon by plaintiffs.

son, invalid. Or it may itself inaugurate the proceeding by bringing suit to have the order annulled. *Randall Gas Co.* v. *Star Glass Co.*, 78 W. Va. 252, 256; *United Fuel Gas Co.* v. *Public Service Commission*, 73 W. Va. 571. Moreover, a final order of the Commission is not enforceable, even by a court, until thirty days after entry have elapsed. That period is allowed within which any party feeling aggrieved may apply to the court for suspension of the order; and if such application is made, a speedy hearing must be given (§ 16).

Up to the time when these suits were begun no action of any kind had been taken in relation to matters dealt with by the Act of February 17, 1919, either by the Commission, by any other board or official of the State, by any corporation, or by any other person who could ever be affected by any provision of the statute. And no action could have been taken; for the act was then not yet in effect. How then can it be said that, in any legal sense, the Pennsylvania and Ohio consumers were in present danger of irreparable injury? Plaintiffs' fears were at best premature. This Court held in *Oregon* v. *Hitchcock*, 202 U. S. 60, 70, that it would not, even at the instance of a State, take upon itself the decision of questions committed to another department of our Government and thus anticipate the action of the federal executive. The reasons are equally strong against our interfering, in advance of decision, with the executive of a State in a matter committed to its determination. If these were private suits relief would necessarily be denied. Compare *First National Bank of Albuquerque* v. *Albright*, 208 U. S. 548; *South Carolina* v. *Georgia*, 93 U. S. 4, 14. As the suit is that of one State against another, even greater caution should be exercised by this Court before assuming to act. *Missouri* v. *Illinois*, 200 U. S. 496, 520, 521; *Kansas* v. *Colorado*, 206 U. S. 46, 117; *New York* v. *New Jersey*,

256 U. S. 296, 309. The objection here is not, as in *Georgia* v. *Tennessee Copper Co.*, 206 U. S. 230, 238—that those interested should be left to an action at law for redress of any injuries which may be suffered. It is that the " judicial stage " of the controversy had not been reached when these suits were begun; and, indeed, has not been since. See *Prentis* v. *Atlantic Coast Line Co.*, 211 U. S. 210, 228; *Bacon* v. *Rutland R. R. Co.*, 232 U. S. 134, 137.

Second. There is a fatal lack of necessary parties. It is only by failure of the twelve exporting companies to continue the exportation of gas that the plaintiffs, and other consumers or the distributing companies in Pennsylvania or Ohio, can be injured. Primarily at least, it is the rights of these twelve corporations, if of anyone, which would be invaded by enforcing the statute; and rights of consumers and of distributing corporations of Pennsylvania and of Ohio are derivative merely. Whether the West Virginia corporations may furnish gas to the plaintiff States, and whether those corporations may be regulated as the statute attempts, are at most controversies between West Virginia and those corporations. They have not submitted their rights to adjudication in these suits. It is intimated that these corporations wish to have the act declared void. But we may not assume that such is their wish. Conceivably a decision holding the act valid might benefit them; since it might relieve them from improvident contracts with distributing companies in Pennsylvania and Ohio. Or it may be that some of the twelve corporations would be benefited and others injured by any decision made of the question presented. Unless the twelve corporations are legally represented either by the plaintiff or the defendant, they would not be bound by a decree in either of these suits. *New Orleans Water Works Co.* v. *New Orleans*, 164 U. S. 471, 480. That neither plaintiff nor defendant legally

represents them is clear.[1] And since they would not be bound, this Court should not entertain a suit to decide the question presented. For, as was held in *California* v. *Southern Pacific Co.*, 157 U. S. 229, and *Minnesota* v. *Northern Securities Co.*, 184 U. S. 199, 246, it does not comport with the gravity and finality which should characterize an adjudication in the exercise of the original jurisdiction of this Court to proceed, at the instance of a State, in the absence of parties whose rights would be actually passed upon and be in effect determined, even though they might not be technically bound in subsequent litigation in this, or some other tribunal. Compare *Texas* v. *Interstate Commerce Commission*, 258 U. S. 158.

The remaining fifty-five West Virginia gas corporations which do not export any gas are also vitally interested in the question submitted. So far as their interest is the general one *qua* consumer, it might be represented by the Public Service Commission; and to that end the Commission (not the State) should, perhaps, have been made party defendant. But many of these gas corporations appear to have specific interests which a decision might affect directly. They have contracts with the exporting companies for their supply of gas; and the obligations under these contracts would be different if the act is held valid than if it were held to be void. A decision to the effect that the prohibition of exports declared in the act is void might seriously impair their contract rights.

[1] "It is not sufficient to say that the Attorney General, or the Governor, or even the Legislature of the State, can be conclusively deemed to represent the public interests in such a controversy as that presented by the bill. Even a State, when it voluntarily becomes a complainant in a court of equity, cannot claim to represent both sides of the controversy." *Minnesota* v. *Northern Securities Co.*, 184 U. S. 199, 246.

Moreover, § 8 of the act provides:

"That the sections, provisions and clauses of this act shall be deemed separable each from the other, and also in respect to the persons, firms, corporations and consumers mentioned therein or affected thereby, and if any separable part of this act be, or be held to be unconstitutional or for any reason invalid or unenforceable, the remaining parts thereof shall be and remain in full force and effect."

Surely the statute may be valid as to some exporting companies; for the action in exporting may be *ultra vires*. Or certain West Virginia distributing companies may have acquired preferential rights to the supply of gas. How can the Court determine, in view of this provision, that the act is void, *in toto*, when it has not before it the parties to be affected thereby and the facts which only they as litigants would be able to present? Therefore, even if it appeared that rights of the plaintiffs—or of those whom they legally represent—were in present danger of irreparable injury resulting from wrongful acts of defendant, these suits should not be maintained.

Third. But if all other obstacles could be overcome, this Court, sitting as a court of equity, should dismiss the bills, because it would be unable to grant the only relief appropriate. This Court, sitting in equity, clearly should not lend its aid to enable West Virginia public service corporations to discriminate against West Virginia consumers in the interest of Ohio and Pennsylvania consumers. Therefore, an appropriate decree should be framed so as to require each of the West Virginia corporations to treat West Virginia customers at least as well as it does those outside of the State and the decree should not leave any West Virginia public service corporation free to export gas in disregard of the duty not to discriminate against the public in that State. But

natural gas is produced also in Pennsylvania and Ohio; and the local production furnishes a large part of the supplies consumed in those States.[8] Furthermore, West Virginia gas is exported also to Maryland, Indiana and Kentucky; and in two of those States natural gas is produced in quantity.[9] Clearly the Court should, in no event, go further than to compel West Virginia to share its production equitably with other States now dependent upon it for a part of their gas supply. But in order to determine what is equitable, (that is, what part of the West Virginia production that State might require its public service corporations to retain and what part they should be free to export to other States) it would obviously be necessary to marshal the resources and the demands, or needs, of the six States, and to consider, in respect to each, both the conduct of the business therein and the circumstances attending its development. The factors necessary to be considered in determining what division of the West Virginia production would be fair, the conditions under which the determination would have to be made, and the character of the questions to be decided are such that this Court would be obliged to refuse to undertake the task. For this reason, the bills should be dismissed, even if it were held both that rights legally represented by plaintiffs were in present danger of irreparable injury by wrongful acts of defendant and that there was not a fatal lack of necessary parties. To

[8] In 1920 the production in Pennsylvania was 125,787,000 M cubic feet, and the consumption 161,397,000 M. In 1920 Ohio production was 58,938,000 M cubic feet and the consumption 136,872,000 M. U. S. Geological Survey, "Natural Gas 1919–1921," p. 345, published May 22, 1923.

[9] The 1920 production in Kentucky was 3,345,000 M cubic feet; the consumption 15,297,000 M. The Indiana production 1,779,000 M; the consumption 4,435,000 M. The Maryland production is negligible. U. S. Geological Survey Bulletin, "Natural Gas in 1919–1921," *supra*, p. 345.

do justice as between the several States the following enquiries would be essential:

(a) The potential as well as the actual production in each State would have to be ascertained. The actual production during earlier years, and approximately the current production, could be ascertained from data which are regularly collected by the United States Geological Survey and by the public utility commissions of the several States. But to ascertain the potential production, searching enquiry would have to be made into the methods of production pursued; and, among other things, to what extent recent production has been secured by forcing the wells; what the likelihood is that production lessened by forcing wells will be restored by allowing periods of rest; and to what extent recent reduced outputs may have been attributable to failure to sink enough wells or to open additional territory.[10] It would be necessary to enquire also into the extent and character of the existing gas reserves, wherever situated and by whomsoever owned. In ascertaining the extent of the gas territory not yet developed, it would be necessary to enquire to what extent the reserve is controlled by, or is otherwise available to, the several public service corporations of the several States; the cost of developing particular fields and of marketing the supply therefrom; what the relation of such undeveloped territory is to that then being worked and to that already exhausted; and to what extent and how rapidly the development of new areas and new sources of supply should properly proceed.

(b) The demand, actual and potential, in each State would have to be determined. In determining the demand, the Court could not confine its enquiry to ascer-

[10] Some idea may be formed of the scope of this enquiry by examining the data concerning the natural gas operations collected by the United States Geological Survey.

taining the amount then used or called for. The rates charged in the several communities must also be considered. For upon these, as well as upon the relative cost of other kinds of fuel, would depend in large part the extent of the demand; particularly by the industries. The character of the use and the circumstances under which it had been developed would, likewise, be important factors in deciding what distribution would be equitable. Among other things, it would be necessary to determine to what extent there was, as in Ohio, a high percentage of waste; and what investment had been made in distributing mains and in customers' appliances and when and under what circumstances these investments had been made. For, while a long established local distributing company might reasonably be required to restrict its business to existing customers and even to the existing needs of such, a like restriction would be a great hardship, if applied to new companies which had not yet brought their business to a paying basis.

(c) No determination concerning production and none concerning demand could afford a stable basis for future action; for no factor entering into the determination would be constant. Investigations into supply and demand would have to be pursued continuously; and recurrent decisions as to distribution would be required. Thus, the estimate of the undeveloped gas territory must be ever changing; for new discovery may open territory theretofore unknown; and the sinking of test wells may establish the fact that territory previously deemed valuable will be wholly unproductive. In no other field of public service regulation is the controlling body confronted with factors so baffling as in the natural gas industry; and in none is continuous supervision and control required in so high a degree.

(d) The decisions to be made would be of the character which calls for the informed judgment of a board of

experts. The tribunal would have to determine, among other things, whether inadequate service was due in the several States to inadequate supply or to improvident use by some consumers; whether to overcome inadequacy of supply new territory should be developed or more wells be sunk in old territory; whether, in view of prospective needs of the several communities, it would not be better that the reserves should be husbanded and that the uses to which gas may be put be curtailed. It would, thus, be called upon to review—and perhaps to control—the business judgment of those managing the companies. Pro rata distribution among all users of the gas from time to time available would obviously not result in equitable distribution. For domestic users, and also many industrial ones, would, if their gas supply were uncertain, find it necessary to assure themselves of an adequate supply for heating, cooking and power, of either oil or some other kind of fuel; and the expense of producing the necessary alternative appliances would be large. The tribunal would have to decide, also, many other serious questions of the character usually committed for determination to public utility commissions, and the difficulties involved in these decisions would be much enhanced by differences in the laws, rules and practices of the several States regarding the duties of natural gas companies to furnish adequate service.[11]

[11] For instance: If it should appear that the potential supply in Pennsylvania is ample for all present needs, but that its concerns prefer to husband their resources for the remoter future, would it be unjust discrimination on the part of the West Virginia companies to deny to their customers within the State an adequate supply while supplying to Pennsylvania distributing companies an amount of gas which these might have produced from reserves within Pennsylvania? Or if Kentucky had ample supplies and undeveloped fields, but sought gas from West Virginia because the Kentucky companies did not have the funds, or the inclination, to make, at the time, a large investment required to secure a supply within that State, would, under those

Clearly, this Court could not undertake such determinations. To make equitable distribution would be a task of such complexity and difficulty that even an interstate public service commission with broad powers, perfected administrative machinery, ample resources, practical experience and no other duties, might fail to perform it satisfactorily. As this Court would be powerless to frame a decree and provide machinery by means of which such equitable distribution of the available supply could be effected, it should, according to settled practice, refuse to entertain the suits. Compare *Marble Co.* v. *Ripley*, 10 Wall. 339, 358; *Texas & Pacific Ry. Co.* v. *Marshall*, 136 U. S. 393, 406; *Giles* v. *Harris*, 189 U. S. 475, 487, 488.

COMMONWEALTH OF PENNSYLVANIA *v.* STATE OF WEST VIRGINIA.

STATE OF OHIO *v.* STATE OF WEST VIRGINIA.

IN EQUITY.

Nos. 15 and 16, Original. Decree entered June 11, 1923.

Decree, declaring c. 71, Laws of West Virginia of 1919, unconstitutional; enjoining that State and her officials from enforcing it; apportioning costs; and fixing the pay of the commissioner who took and reported the evidence.

---

circumstances, West Virginia companies be justified in supplying the Kentucky demand while leaving that of its West Virginia customers unsatisfied? Should distributing companies in Pennsylvania, Ohio, Kentucky and Indiana be permitted to extend their mains or add new customers after West Virginia had recognized the insufficiency of the supply to satisfy the needs of consumers within the State? And what shall be deemed the existing demand of a State? Is existing demand to be limited to customers already connected? And does it mean the amount theretofore taken by such customers or that which they may wish to take through existing appliances?

These suits having been heretofore submitted on the pleadings and the evidence, and the Court being now fully advised in the premises,

It is considered, ordered and decreed as follows:

1. That the Act passed by the Legislature of the defendant State February 10, 1919, which is set forth in the bills of complaint in these suits and known as Chapter 71 of the West Virginia Acts of 1919, is a void and inoperative enactment because it contravenes the limitations which the Constitution of the United States places upon state action in respect of commerce among the several States;

2. That the defendant State, and her several officers, agents and servants, are hereby severally enjoined from enforcing, or attempting to enforce, that Act;

3. That the aggregate costs in these suits be apportioned among and paid by the parties thereto as follows: The State of West Virginia one-half; the Commonwealth of Pennsylvania one-fourth and the State of Ohio one-fourth;

4. That Levi Cooke, Esquire, the commissioner by whom the evidence in these suits was taken and reported to this Court, shall receive and be paid the sum of six thousand dollars in full compensation for the services rendered and the expenses incurred by him in that connection, and that this sum be taxed as part of the aggregate costs in the two suits and be paid by the parties in the proportions just named;

5. That the Clerk of this Court transmit to the Chief Magistrates of the Commonwealth of Pennsylvania and the States of Ohio and West Virginia copies of this decree duly authenticated under the seal of this Court.
